SECTION 010000 - GENERAL REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Related Sections:

1. Referenced Sections: List of sections in “Related Sections” or “Related Requirements” is not intended to be exhaustive or mutually exclusive, it is meant for reference and guidance only by way of assistance.
2. Missing References: In case a section or part thereof is considered missing, this shall be brought to the attention of the Engineer.
3. The several documents forming the Contract are to be taken as mutually explanatory of one another; however, in case of ambiguities or discrepancies the same shall be explained and adjusted by the Engineer who shall thereupon issue to the Contractor instructions thereon and in such event, unless otherwise provided in the contract.
4. Liability for Missing References: A full understanding and appreciation of the full provisions included in all the specification sections and the interaction between these sections is required. References to related sections are provided for assistance only and no liability for any coordination issues related references which are deemed missing from “Related Sections” or “Related Requirements” parts of the Specification sections shall rest with the Employer.

1.2 DEFINITIONS

A. Specification sections use the terms "Engineer" in lieu of “Architect”, and "Employer" in lieu of “Owner”. In case the terms “Architect” and “owner” still exist in some sections, they are deemed to mean "Engineer" and "Employer” respectively.

1.3 QUALITY ASSURANCE

1. Industry Standards: When both U.S. and European, Industry Standards are applicable to this project and the standards are in conflict with each other, the most stringent of the industry standards shall govern.
2. Source Limitations: Obtain all system components and accessories from single source from single manufacturer. If some components are not produced by system manufacture, obtaining these components from other sources may be approved subject to recommendation in writing by system manufacturer provided it does not negate the warranty. Submit for Engineer’s approval.
3. Oversize Fire-Rated Doors: For units exceeding sizes of tested assemblies provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 010000

SECTION 011000 - SUMMARY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Particular Conditions and other Division 01 Specifications sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Project information.
2. Work covered by contract documents.
3. Phased construction / work sequence.
4. Work performed by employer.
5. Multiple work packages.
6. Work under employer's separate contracts.
7. Future work (not part of this project).
8. Employer's product purchase contracts.
9. Employer-Furnished / Contractor-Installed (EFCI) products.
10. Employer-Furnished / Employer-Installed (EFEI) products.
11. Contractor-Furnished / Employer-Installed (CFEI) products.
12. Access to site.
13. Contractor's use of site and premises.
14. Coordination with occupants.
15. Work restrictions.
16. Specification and drawing conventions.
17. Miscellaneous provisions.

B. Related Requirements:

1. Section 011200 “Multiple Contract Summary”.
2. Section 015000 "Temporary Facilities and Controls" for limitations and procedures governing temporary use of Employer's facilities.
3. Section 017300 "Execution" for coordination of Employer-installed products.

1.3 DEFINITIONS

A. Work Package: A group of specifications, drawings, and schedules prepared by the design team to describe a portion of the Project Work for pricing, permitting, and construction.

1.4 PROJECT INFORMATION

Project Identification: <The project comprises the construction of JKIA new terminal building. Known as Phase 2, the project focuses on the development of a new passenger terminal building with the associated airport support facilities and landside access.

The development is planned to accommodate up to 15 million passengers annually, with Phase 1 designed for 10 million passengers and Phase 2 expanding capacity to 15 million passengers, ensuring scalability and long-term operational resilience. The terminal building will manage the following passenger flows:

serve the optimized passenger terminal buildings in addition to improvements to the airfield to increase the existing runway capacity.

A. .Project Location: **Jomo Kenyatta International Airport, Nairobi, Kenya)** as more particularly shown on the Location Plan included in the Contract Drawings.

B. Employer: **Government of Kenya**.

C. Design-Builder::

1. Design-Builder has been engaged for this Project to provide architectural and engineering services and to serve as Project's constructor. In the specification sections, the terms "design-builder" and "Contractor" are synonymous. Other Employer Consultants: Employer has retained the following design professionals who have prepared designated portions of the Contract Documents.

1.5 WORK COVERED BY CONTRACT DOCUMENTS

A. The Work of Project is defined by the Contract Documents and includes, but is not limited to, the following:

1. The development of new passenger terminal and associated airside, landside and support facilities.
2. The development is planned to accommodate up to 15 million passengers annually, with Phase 1 designed for 10 million passengers and Phase 2 expanding capacity to 15 million passengers, ensuring scalability and long-term operational resilience. The terminal building will manage the following passenger flows:
   - Domestic Flights – Arrivals and Departures
   - International Flights – Arrivals and Departures
   - Transfer Flights – International Connections
3. The proposed Terminal Building adopts an X-shaped configuration, designed to efficiently serve 10 million passengers per annum (MPPA) in Phase I, with expansion capacity to 15 MPPA at the ultimate phase.
4. The new terminal will cater for Central Processing Area; International Piers (Front Piers); Domestic Piers (Side Piers); Arrivals Hall; Support and Service Areas; Public Facilities
5. The new terminal development at JKIA will include a range of support facilities to ensure efficient operations, passenger convenience, and compliance with international standards. These facilities include:
   - Administrative and Operational Offices
   - Aircraft Cleaning Facilities
   - Airport Maintenance Complex
   - Airside Bus Facilities
   - ARFF (Aircraft Rescue and Firefighting) Facilities
   - Catering Facility
   - GSE Maintenance Facility
   - AS/LS Gates (Airside/Landside Gates)
   - Aircraft Maintenance Hangar:
   - Data Centers:
6. Works include all Other Work indicated in the Employer's Requirements.
7. Where the Project, or any part thereof, is designated as pursuing a sustainability rating or certification, the Contractor shall develop, submit, and implement a Sustainability Construction Strategy that is fully aligned with and derived from the approved design sustainability requirements of the Project and aligned with the targeted sustainability rating. The Sustainability Construction Strategy shall translate the design-stage sustainability objectives, criteria, and commitments into construction-phase methods, controls, responsibilities, monitoring procedures, and documentation necessary to support achievement of the targeted sustainability certification. The Contractor shall not modify, dilute, or contradict the approved design sustainability requirements. Any proposed alternative measures shall be subject to prior written approval by the Employer.

B. Type of Contract:

1. Project will be constructed under a single prime contract.

1.6 WORK UNDER EMPLOYER'S SEPARATE CONTRACTS

A.]

B. Concurrent Work: Employer **has awarded** separate contract(s) for construction operations at Project site. Those operations will be conducted simultaneously with Work under this Contract.

C. Subsequent Work: Employer **will award** separate contract(s) for additional work to be performed at site following Substantial Completion. Completion of that work will depend on successful completion of preparatory Work under this Contract.

1.7 EMPLOYER'S PRODUCT PURCHASE CONTRACTS

A. Employer has negotiated Product Purchase contracts with suppliers of material and equipment to be incorporated into the Work. Employer will assign these Product Purchase contracts to Contractor. Include costs for purchasing, receiving, handling, storage if required, and installation of material and equipment in the Contract Sum unless otherwise indicated.

1. Contractor's responsibilities are same as if Contractor had negotiated Product Purchase contracts, including responsibility to renegotiate purchase and to execute final purchasing agreements.

1.8 EMPLOYER-FURNISHED / CONTRACTOR-INSTALLED (EFCI) PRODUCTS

A. Employer's Responsibilities: Employer will furnish products indicated and perform the following, as applicable:

1. Provide to Contractor Employer-reviewed Product Data, Shop Drawings, and Samples.
2. Provide for delivery of Employer-furnished products to Project site.
3. Upon delivery, inspect, with Contractor present, delivered items.

1.9 FUTURE WORK

A. Other Contracts: Cooperate fully and coordinate with separate contracts and program the Works so that work on those contracts may be carried out efficiently and effectively, without interfering with or delaying work under this Contract.

B. Future Contracts: Employer reserves the right to perform additional work and / or award further separate contracts for performance of additional work at the Project site; whether concurrently with, or after Substantial Completion of, Work under this Contract. Performance and completion of such additional work may depend on successful completion of preparatory work under this Contract.

C. Cooperate fully and coordinate with any future construction forces and / or separate contractors or any entity engaged by the Employer, including, but not limited to, operators andfacility managers as necessary, and program the Works so far as reasonably possible so that work on those contracts may be carried out efficiently and effectively, without interfering with or delaying work under this Contract.

1.10 EMPLOYER'S PRODUCT PURCHASE CONTRACTS

A. Employer has negotiated Product Purchase contracts with suppliers of material and equipment to be incorporated into the Work. Employer will assign these Product Purchase contracts to Contractor. Include costs for purchasing, receiving, handling, storage if required, and installation of material and equipment in the Contract Sum unless otherwise indicated.

1. Contractor's responsibilities are same as if Contractor had negotiated Product Purchase contracts, including responsibility to renegotiate purchase and to execute final purchasing agreements.

1.11 EMPLOYER-FURNISHED / CONTRACTOR-INSTALLED (EFCI) PRODUCTS

A. Employer's Responsibilities: Employer will furnish products indicated and perform the following, as applicable:

1. Provide to Contractor Employer-reviewed Product Data, Shop Drawings, and Samples.
2. Provide for delivery of Employer-furnished products to Project site.
3. Upon delivery, inspect, with Contractor present, delivered items.

    a. If Employer-furnished products are damaged, defective, or missing, arrange for replacement.

4. Obtain manufacturer's inspections, service, and warranties.
5. Inform Contractor of earliest available delivery date for Employer-furnished products.

B. Contractor's Responsibilities: The Work includes the following, as applicable:

1. Designate delivery dates of Employer-furnished products in Contractor's construction schedule, utilizing Employer-furnished earliest available delivery dates.
2. Review Employer-reviewed Product Data, Shop Drawings, and Samples, noting discrepancies and other issues in providing for Employer-furnished products in the Work.
3. Receive, unload, handle, store, protect, and install Employer-furnished products.
4. Make building services connections for Employer-furnished products.
5. Protect Employer-furnished products from damage during storage, handling, and installation and prior to Substantial Completion.
6. Repair or replace Employer-furnished products damaged following receipt.

1.12 ACCESS TO SITE

A. General: Contractor shall use the Project site for the execution of the Works and for access thereto. Contractor's use of Project site is limited only by Employer's right to perform work or to retain other contractors on portions of Project. The project site shall be shared with other contractors if employed directly by the Employer as required. Access to the project Site may need to be shared / coordinated with other contractors executing adjacent or related works.

1.13 CONTRACTOR'S USE OF SITE AND PREMISES

A. Unrestricted Use of Site: **Each** Contractor shall have full use of Project site for construction operations during construction period. Contractor's use of Project site is limited only by Employer's right to perform work or to retain other contractors on portions of Project.

B. Restricted Use of Site: **Each** Contractor shall have limited use of Project site for construction operations as indicated on Drawings by the Contract limits and as indicated by requirements of this Section.

C. Limits on Use of Site: Limit use of Project site to **Work in areas** indicated. Do not disturb portions of Project site beyond areas in which the Work is indicated.

1. Limits on Use of Site: Confine construction operations to to site boundaries.
2. Driveways, Walkways and Entrances: Keep driveways **parking garage, loading areas,** and entrances serving premises clear and available to Employer, Employer's employees, other contractors, and emergency vehicles at all times. Do not use these areas for parking or for storage of materials.

    a. Schedule deliveries to minimize use of driveways and entrances by construction operations.
    b. Schedule deliveries to minimize space and time requirements for storage of materials and equipment on-site.

3. Employer Occupancy: Allow for Employer occupancy of project site.

D. Condition of Existing Building: Maintain portions of existing building affected by construction operations in a weathertight condition throughout construction period. Repair damage caused by construction operations.

E. Condition of Existing Grounds: Maintain portions of existing grounds, landscaping, and hardscaping affected by construction operations throughout construction period. Repair damage caused by construction operations.

1.14 COORDINATION WITH OCCUPANTS

A. Full Employer Occupancy: Employer will occupy Project site and**adjacent** building(s) during entire construction period. Cooperate with Employer during construction operations to minimize conflicts and facilitate Employer usage. Perform the Work so as not to interfere with Employer's day-to-day operations. Maintain existing exits unless otherwise indicated.

1. Maintain access to existing walkways, corridors, and other adjacent occupied or used facilities. Do not close or obstruct walkways, corridors, or other occupied or used facilities without written permission from Employer and approval of authorities having jurisdiction.
2. Notify Employer not less than **72** hours in advance of activities that will affect Employer's operations.

B. Partial Employer Occupancy: Employer will occupy the premises during entire construction period, with the exception of areas under construction. Cooperate with Employer during construction

operations to minimize conflicts and facilitate Employer usage. Perform the Work so as not to interfere with Employer's operations. Maintain existing exits unless otherwise indicated.

1. Maintain access to existing walkways, corridors, and other adjacent occupied or used facilities. Do not close or obstruct walkways, corridors, or other occupied or used facilities without written permission from Employer and authorities having jurisdiction.
2. Provide not less than **72** hours' notice to Employer of activities that will affect Employer's operations.
3. Partial Owner occupancy of any completed portion of the Work shall not constitute or be construed as Sectional Completion as long as this partial occupation is for temporary reasons and provided that it does not preclude / hinder the Contractor's progress at these spaces.
4. No separate Sectional Taking-Over Certificate shall be issued in connection with such partial occupancy.

C. Employer Limited Occupancy of Completed Areas of Construction: Employer reserves the right to occupy and to place and install equipment in completed portions of the Work, prior to Substantial Completion of the Work, provided such occupancy does not interfere with completion of the Work. Such placement of equipment and limited occupancy shall not constitute acceptance of the total Work.

1. Engineer will prepare a Certificate of Substantial Completion for each specific portion of the Work to be occupied prior to Employer acceptance of the completed Work.
2. Obtain a Certificate of Occupancy from authorities having jurisdiction before limited Employer occupancy.
3. Before limited Employer occupancy, mechanical and electrical systems shall be fully operational, and required tests and inspections shall be successfully completed. On occupancy, Employer will operate and maintain mechanical and electrical systems serving occupied portions of Work.
4. On occupancy, Employer will assume responsibility for maintenance and custodial service for occupied portions of Work.

1.15 WORK RESTRICTIONS

A. Comply with restrictions on construction operations.

1. Comply with limitations on use of public streets, work on public streets, rights of way, and other requirements of authorities having jurisdiction.

B. On-Site Workday Restrictions: Do not perform work **resulting in utility shutdownsor resulting in noisy activity** on-site during work black-out days defined by the Employer.

C. Existing Utility Interruptions: Do not interrupt utilities serving facilities occupied by Employer or others unless permitted under the following conditions and then only after arranging for temporary utility services according to requirements indicated:

1. Notify **Engineer Construction Manager Employer** not less than [**two**] days in advance of proposed utility interruptions.
2. Obtain **Engineer's**] written permission before proceeding with utility interruptions.

D. Noise, Vibration, Dust, and Odors: Coordinate operations that may result in high levels of noise and vibration, dust, odors, or other disruption to Employer occupancy with Employer.

1. Notify **Engineer**not less than **two** days in advance of proposed disruptive operations.
2. Obtain **Engineer's** written permission before proceeding with disruptive operations.
3. Minimizing Noise levels
4. Eliminating water/air pollution.

E. Nonsmoking Building: Smoking is not permitted within the building or within 25 feet (8 m) of entrances, operable windows, or outdoor air intakes.

F. Smoking and Controlled Substance Restrictions: Use of tobacco products [**, alcoholic beverages,**] and other controlled substances **on Project site** is not permitted.

G. Employee Identification: **Provide**] identification tags for Contractor personnel working on Project site. Require personnel to use identification tags at all times.

H. Employee Screening: Comply with Employer's requirements for **drug and background** screening of Contractor personnel working on Project site.

1. Maintain list of approved screened personnel with Employer's representative.

1.16 SPECIFICATION AND DRAWING CONVENTIONS

A. Specification Content: The Specifications use certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. These conventions are as follows:

1. Imperative mood and streamlined language are generally used in the Specifications. The words "shall," "shall be," or "shall comply with," depending on the context, are implied where a colon (:) is used within a sentence or phrase.
2. Text Color: Text used in the Specifications, including units of measure, manufacturer and product names, and other text may appear in multiple colors or underlined as part of a hyperlink; no emphasis is implied by text with these characteristics.
3. Hypertext: Text used in the Specifications may contain hyperlinks. Hyperlinks may allow for access to linked information that is not residing in the Specifications. Unless otherwise indicated, linked information is not part of the Contract Documents.
4. Specification requirements are to be performed by the Contractor unless specifically stated otherwise.

B. General provisions of the Contract, including General, Particular and Supplementary Conditions, apply to all Sections of the Specifications.

C. Division 01 General Requirements: Requirements of Sections in Division 01 apply to the Work of all Sections in the Specifications.

D. Drawing Coordination: Requirements for materials and products identified on Drawings are described in detail in the Specifications. One or more of the following are used on Drawings to identify materials and products:

1. Terminology: Materials and products are identified by the typical generic terms used in the individual Specifications Sections.
2. Abbreviations: Materials and products are identified by abbreviations **scheduled on Drawingsandpublished as part of the U.S. National CAD Standard**.
3. Keynoting: Materials and products are identified by reference keynotes referencing Specification Section numbers found in this Project Manual.

SECTION 011200 - MULTIPLE CONTRACT SUMMARY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Particular Conditions and other Division 01 Specifications sections, apply to this Section.

1.2 SUMMARY

A. Section includes a summary of each contract, including responsibilities for coordination and temporary facilities and controls.

B. Specific requirements for Work of each contract are also indicated in individual Specification Sections and on Drawings.

C. Related Requirements:

1. Division 01, Section 011000 "Summary" for the Work covered by the Contract Documents, restrictions on use of Project site, phased construction, coordination with occupants, and work restrictions.
2. Division 01, Section 013100 "Project Management and Coordination" for general coordination requirements.
3. Division 01, Section 013200 "Construction Progress Documentation" for preparation and submittal of Construction Programs.
4. Division 01 Section 015000 "Temporary Facilities and Controls" for specific requirements for temporary facilities and controls.

1.3 DEFINITIONS

A. Permanent Enclosure: As determined by the Engineer, the condition at which roofing is insulated and weathertight; exterior walls are insulated and weathertight; and openings are closed with permanent construction or substantial temporary closures equivalent in weather protection to permanent construction.

1.4 PROJECT COORDINATOR

A. Project coordinator shall be responsible for coordination between the General Construction Contract and all other Contractors and Sub-Constractors onsite.

1.5 PROJECT COORDINATOR RESPONSIBILITIES

A. Project coordinator: The Contractor shall appoint a full-time Coordinator for the Works. Such coordinator shall be experienced in administration and supervision of civil and building construction, including mechanical and electrical work.

B. The project coordinator shall perform Project coordination activities for the multiple contracts, including, but not limited to, the following:

1. Provide typical overall coordination of the Work.

es

2. Coordinate shared access to workspaces.
3. Coordinate product selections for compatibility.
4. Provide overall coordination of temporary facilities and controls.
5. Coordinate, schedule, and approve interruptions of permanent and temporary utilities, including those necessary to make connections for temporary services.
6. Coordinate construction and operations of the Work with work performed by each Contract and the Employer's construction forces.
7. Prepare coordination drawings in collaboration with each contractor to coordinate work by more than one contract.
8. Coordinate sequencing and scheduling of the Work. Include the following:

    a. Initial Coordination Meeting: At earliest possible date, arrange and conduct a meeting with contractors for sequencing and coordinating the Work; negotiate reasonable adjustments to schedules.
    b. Prepare combined Contractors' Construction Schedule for entire Project in coordination with the Employer's scheduling consultant. Base schedule on preliminary construction schedule. Secure time commitments for performing critical construction activities from contractors. Show activities of each contract on a separate sheet. Prepare a simplified summary sheet indicating combined construction activities of contracts.

        1. Submit schedules for approval.
        2. Distribute copies of approved schedules to contractors.

9. Provide photographic documentation.
10. Provide quality-assurance and quality-control services specified in Section 014000 "Quality Requirements."
11. Coordinate sequence of activities to accommodate tests and inspections, and coordinate schedule of tests and inspections.
12. Provide information necessary to adjust, move, or relocate existing utility structures affected by construction.
13. Locate existing permanent benchmarks, control points, and similar reference points, and establish permanent benchmarks on Project site.
14. Provide field surveys of in-progress construction and site work and final property survey.
15. Provide progress cleaning of common areas and coordinate progress cleaning of areas or pieces of equipment where more than one contractor has worked.
16. Coordinate cutting and patching.
17. Coordinate protection of the Work.
18. Coordinate firestopping.
19. Coordinate completion of interrelated punch list items.
20. Coordinate preparation of Project Record Documents if information from more than one contractor is to be integrated with information from other contractors to form one combined record.
21. Print and submit Record Documents if installations by more than one contractor are indicated on the same Contract Drawing or Shop Drawing.
22. Collect record Specification Sections from contractors, collate Sections into numeric order, and submit complete set.
23. Coordinate preparation of operation and maintenance manuals if information from more than one contractor is to be integrated with information from other contractors to form one combined record.

C. Responsibilities of Project coordinator for temporary facilities and controls include, but are not limited to, the following:

    1. Provide common-use field office for use by all personnel engaged in construction activities.
    2. Provide telephone service for common-use facilities.

D. As soon as the Contractor becomes aware of any conflicts between his own program and the programs of any other contractor(s) or persons working on the Site, which cannot be reasonably and

immediately resolved directly between the parties concerned, the Contractor shall report the same to the Engineer for discussion at the Combined Contractors' Meeting. Where any conflict cannot be resolved by mutual agreement of the concerned parties at the Combined Contractors' Meeting, the Engineer shall, after further consultation with such parties, decide and issue his direction or, if necessary, instruction on the matter.

1.6 GENERAL REQUIREMENTS OF CONTRACTS

A. Extent of Contract: Unless the Agreement contains a more specific description of the Work of each Contract, requirements indicated on Drawings and in Specification Sections determine which contract includes a specific element of Project.

1. Unless otherwise indicated, the work described in this Section for each contract shall be complete systems and assemblies, including products, components, accessories, and installation required by the Contract Documents.
2. Trenches and other excavation for the work of each contract shall be the work of the General Construction Contract and each contract for its own work.
3. Blocking, backing panels, sleeves, and metal fabrication supports for the work of each contract shall be the work of the General Construction Contract or each contract for its own work.
4. Furnishing of access panels for the work of each contract shall be the work of each contract for its own work. Installation of access panels shall be the work of General Construction Contract or each contract for its own work.
5. Equipment pads for the work of each contract shall be the work of General Construction Contract or each contract for its own work.
6. Roof-mounted equipment curbs for the work of each contract shall be the work of General Construction Contract or each contract for its own work.
7. Painting for the work of each contract shall be the work of General Construction Contract or each contract for its own work.
8. Cutting and Patching: Provided by the General Construction Contract or under each contract for its own work. Each contract shall perform its own cutting; patching shall be under the General Construction Contract.
9. Through-penetration firestopping for the work of each contract shall be provided by General Construction Contract or each contract for its own work.
10. Taxiways, Aprons, roads, bridges, tunnels, utilities (pure infrastructure works)
12. Contractors' Startup Construction Schedule: Within five working days after startup horizontal bar-chart-type construction schedule and preliminary network diagram submittal has been received from Project coordinator, submit a matching startup horizontal bar-chart schedule and startup network diagram showing construction operations sequenced and coordinated with overall construction.

B. Substitutions: Each contractor shall cooperate with other contractors involved to coordinate approved substitutions with remainder of the work.

1. Project coordinator and/or The General Construction Contract shall coordinate substitutions.

C. Temporary Facilities and Controls: In addition to specific responsibilities for temporary facilities and controls indicated in this Section and in Section 015000 "Temporary Facilities and Controls," each contractor is responsible for the following:

1. Installation, operation, maintenance, and removal of each temporary facility necessary for its own normal construction activity, and costs and use charges associated with each facility, except as otherwise provided for in this Section.
2. Plug-in electric power cords and extension cords, supplementary plug-in task lighting, and special lighting necessary exclusively for its own activities.
3. Its own field office, complete with necessary furniture, utilities, and telephone service.
4. Its own storage and fabrication sheds.
5. Temporary enclosures for its own construction activities.

es

6. Staging and scaffolding for its own construction activities.
7. General hoisting facilities for its own construction activities, up to 2 tons.
8. Waste disposal facilities, including collection and legal disposal of its own hazardous, dangerous, unsanitary, or other harmful waste materials.
9. Progress cleaning of work areas affected by its operations on a daily basis.
10. Secure lockup of its own tools, materials, and equipment.
11. Construction aids and miscellaneous services and facilities necessary exclusively for its own construction activities.

D. Temporary Heating, Cooling, and Ventilation: The General Construction Contract is responsible for temporary heating, cooling, and ventilation, including utility-use charges, temporary meters, and temporary connections.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 011200

SECTION 012500 - SUBSTITUTION PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Particular Conditions and other Division 01 Specifications sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for substitutions.

B. Related Requirements:

1. Division 01 Section 011000 "Summary" for Contractor requirements related to Employer-furnished products.
2. Division 01, Section 014200 "References" for applicable industry standards for products specified.
3. Division 01 Section 016000 "Product Requirements" for requirements for submitting comparable product submittals for products by listed manufacturers.
4. Division 01, Section 017700 "Closeout Procedures" for submitting warranties.
5. Division 01 Sections 018113" Sustainable Design Requirements – LEED.
6. Specification Sections for specific requirements for warranties on products and installations specified to be warranted.

1.3 DEFINITIONS

A. Substitutions: Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents.

1. Substitutions for Cause: Changes proposed by Contractor that are required due to changed Project conditions, such as unavailability of product, regulatory changes, or unavailability of required warranty terms.
2. Substitutions for Convenience: Changes proposed by Contractor or Employer that are not required to meet other Project requirements but may offer advantage to Contractor or Employer.

1.4 ACTION SUBMITTALS

A. Substitution Requests: Submit three hard copies and a soft copy thru Web-Based Project Software of each request for consideration Submit documentation identifying product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.

1. Substitution Request Form: Use Project form as provided by the Engineer.
2. Documentation: Show compliance with requirements for substitutions and the following, as applicable:

a. Statement indicating why specified product or fabrication or installation method cannot be provided, if applicable.

es

b. Coordination of information, including a list of changes or revisions needed to other parts of the Work and to construction performed by Employer and separate contractors that will be necessary to accommodate proposed substitution.
c. Detailed comparison of significant qualities of proposed substitutions with those of the Work specified. Include annotated copy of applicable Specification Section. Significant qualities may include attributes, such as performance, weight, size, durability, visual effect, sustainable design characteristics, warranties, and specific features and requirements indicated. Indicate deviations, if any, from the Work specified.
d. Identify product to be replaced. Include detailed comparison in matrix form between specified materials and proposed ones.
e. Product Data, including drawings and descriptions of products and fabrication and installation procedures.
f. Samples, where applicable or requested.
g. Certificates and qualification data, where applicable or requested.
h. List of similar installations for completed projects, with project names and addresses as well as names and addresses of the Engineers and Employers.
i. Material test reports from a qualified testing agency, indicating and interpreting test results for compliance with requirements indicated.
j. Research reports evidencing compliance with building code in effect for Project, from a model code organization acceptable to authorities having jurisdiction.
k. Detailed comparison of Contractor's construction schedule using proposed substitutions with products specified for the Work, including effect on the overall Contract Time. If specified product or method of construction cannot be provided within the Contract Time, include letter from manufacturer, on manufacturer's letterhead, stating date of receipt of purchase order, lack of availability, or delays in delivery.
l. Cost information, including a proposal of change, if any, in the Contract Sum.
m. Contractor's certification that proposed substitution complies with requirements in the Contract Documents, except as indicated in substitution request, is compatible with related materials and is appropriate for applications indicated.
n. Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of failure of proposed substitution to produce indicated results.

3. Engineer's Action: If necessary, the Engineer will request additional information or documentation for evaluation within seven (7) days of receipt of a request for substitution. The Engineer will notify Contractor of acceptance or rejection of proposed substitution within fifteen (15) days of receipt of request, or seven (7) days of receipt of additional information or documentation, whichever is later.

a. Forms of Acceptance: Refer to the Conditions of Contract.
b. Use product specified if the Engineer does not issue a decision on use of a proposed substitution within time allocated.

1.5 QUALITY ASSURANCE

A. Compatibility of Substitutions: Investigate and document compatibility of proposed substitution with related products and materials. Engage a qualified testing agency to perform compatibility tests recommended by manufacturers.

1.6 PROCEDURES

A. Coordination: Revise or adjust affected work as necessary to integrate work of the approved substitutions.

es

1.7 SUBSTITUTIONS

A. Substitutions for Cause: Submit requests for substitution immediately on discovery of need for change, but not later than fifteen (15) days prior to time required for preparation and review of related submittals.

1. Conditions: The Engineer will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, the Engineer will return requests without action, except to record noncompliance with these requirements:

a. Requested substitution is consistent with the Contract Documents and will produce indicated results.
b. Requested substitution provides sustainable design characteristics that specified product provided for achieving sustainability certifications.
c. Substitution request is fully documented and properly submitted.
d. Requested substitution will not adversely affect Contractor's construction schedule.
e. Requested substitution has received necessary approvals of authorities having jurisdiction.
f. Requested substitution is compatible with other portions of the Work.
g. Requested substitution has been coordinated with other portions of the Work.
h. Requested substitution provides specified warranty.
i. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

2. Time for review and potential delays: Contractor remains responsible for any delays generated by substitution requests, should the substitution be approved or rejected.

B. Substitutions for Convenience: The Engineer will consider requests for substitution if received within sixty (60) days after commencement of the Work. Requests received after that time may be considered or rejected at discretion of the Engineer.

1. Conditions: The Engineer will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, the Engineer will return requests without action, except to record noncompliance with these requirements:

a. Requested substitution offers Employer a substantial advantage in cost, time, energy conservation, or other considerations, after deducting additional responsibilities Employer must assume. Employer's additional responsibilities may include compensation to the Engineer for redesign and evaluation services, increased cost of other construction by Employer, and similar considerations.
b. Requested substitution does not require extensive revisions to the Contract Documents.
c. Requested substitution is consistent with the Contract Documents and will produce indicated results.
d. Requested substitution provides sustainable design characteristics that specified product provided for achieving sustainability related certifications.
e. Substitution request is fully documented and properly submitted.
f. Requested substitution will not adversely affect Contractor's construction schedule.
g. Requested substitution has received necessary approvals of authorities having jurisdiction.
h. Requested substitution is compatible with other portions of the Work.
i. Requested substitution has been coordinated with other portions of the Work.
j. Requested substitution provides specified warranty.
k. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

es

2. Time for review and potential delays: Contractor remains responsible for any delays generated by substitution requests, should the substitution be approved or rejected.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 012500

SECTION 013100 - PROJECT MANAGEMENT AND COORDINATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Particular Conditions and other Division 01 Specifications sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative provisions for coordinating construction operations on Project, including, but not limited to, the following:

1. Informational Submittals.
2. General Coordination Procedures.
3. Coordination Drawings.
4. Requests for Information RFIs or (Site Clarification Requests (SCRs).
5. Digital Project Management Procedures.
6. Web-based Project Management Software.
7. Common Data Environment (CDE).
8. Project Meetings.

B. Each contractor shall participate in coordination requirements. Certain areas of responsibility are assigned to a specific contractor.

C. Related Requirements:

1. Division 01, Section 011200 "Multiple Contract Summary" for a description of the division of work among separate contracts and responsibility for coordination activities not in this Section.
2. Division 01, Section 013200 "Construction Progress Documentation" for preparing and submitting Contractor's construction schedule.
3. Division 01, Section 017300 "Execution" for procedures for coordinating general installation and field-engineering services, including establishment of benchmarks and control points.
4. Division 01, Section 017700 "Closeout Procedures" for coordinating closeout of the Contract.
5. Division 01, Section 019113 "General Commissioning Requirements" for coordinating the Work with the Employer's Commissioning Authority.
6. Specification sections related to the functionality and efficiency of the executed systems.

1.3 DEFINITIONS

A. BIM: Building Information Modeling.

B. RFI: Request for Information. Request from the Employer, Construction Manager, or Contractor seeking information required by or clarifications of the Contract Documents. Request For Information (RFI) is called also Site clarification Request (SCR).

C. DTRD (Digital Twin Ready Design): Digital Twin is a virtual model of a physical object or system that spans its lifecycle and uses real-time data sent from sensors on the object to simulation the behavior and monitor operation. Digital Twin lays the groundwork for the creation of a common data environment (CDE), a centralized database including technical documentation, maintenance

records, live data so on with 3d contextualization all accessible from the digital twin platform. It also includes the preparation of a strategy report which defines the features/ use cases that align with the client's vision and expectations.

1.4 INFORMATIONAL SUBMITTALS

A. Subcontract List: Prepare a written summary identifying individuals or firms proposed for each portion of the Work, including those who are to furnish products or equipment fabricated to a special design. Include the following information in tabular form:

1. Name, address, telephone number, and email address of entity performing subcontract or supplying products.
2. Number and title of related Specification Section(s) covered by subcontract.
3. Drawing number and detail references, as appropriate, covered by subcontract.

B. Key Personnel Names: Within fifteen (15) days of starting construction operations, submit a list of key personnel assignments, including superintendent and other personnel in attendance at Project site. Identify individuals and their duties and responsibilities, list addresses, cellular telephone numbers, and e-mail addresses. Provide names, addresses, and telephone numbers of individuals assigned as alternates in the absence of individuals assigned to Project.

1. Post copies of list in Project meeting room, in temporary field office, in web-based Project software directory, and in prominent location in each built facility. Keep list current at all times.

2. Attach curricula vitae for individuals assigned to the following or equivalent staff positions or to any other key positions assigned to the Project to include details of education and qualifications; a brief career history including employment, experience and present position; note special skills and abilities.

    a. Project Manager
    b. Design Manager
    c. Construction Manager
    d. HSSE Manager
    e. LEED Coordinator
    f. Coordinator
    g. BIM Manager
    h. BIM Coordinator(s)
    i. Interface Coordinator
    j. QA/QC Manager
    k. Procurement Manager
    l. Administration Manager
    m. Document Control Supervisor.
    n. Safety / Security Manager
    o. Site Superintendent(s)
    p. Deputy Superintendent(s)
    q. Supervising Engineers
    r. Construction Supervisors

3. The key personnel should not be replaced during the project’s duration, unless requested by the client. Any replacement should be provided within one month’s prior notice with the relevant qualifications and experience agreed by the Client.

1.5 GENERAL COORDINATION PROCEDURES

A. Coordination: Coordinate construction operations included in different sections of the Specifications to ensure efficient and orderly installation of each part of the Work. Coordinate construction

operations included in different Sections that depend on each other for proper installation, connection, and operation.

1. Schedule construction operations in sequence required to obtain the best results, whereas installation of one part of the Work depends on installation of other components, before or after its own installation.
2. Coordinate installation of different components to ensure maximum performance and accessibility for required maintenance, service, and repair.
3. Make adequate provisions to accommodate items scheduled for later installation.

B. Coordination of Multiple Contracts: Each contractor shall cooperate with Project coordinator, who shall coordinate its construction operations with those of other contractors and entities to ensure efficient and orderly installation of each part of the Work. Each contractor shall coordinate its own operations with operations included in different Sections that depend on each other for proper installation, connection, and operation.

1. Schedule construction operations in sequence required to obtain the best results, where installation of one part of the Work depends on installation of other components, before or after its own installation.
2. Coordinate installation of different components with other contractors to ensure maximum performance and accessibility for required maintenance, service, and repair.
3. Make adequate provisions to accommodate items scheduled for later installation.
4. Coordinate shared access to Site, staging areas and workspaces.
5. Coordinate provision of temporary facilities and controls.
6. Coordinate and schedule interruptions of temporary utilities, including those necessary to make connections for permanent services.
7. Coordinate sequence of activities to accommodate tests and inspections, and coordinate schedule of tests and inspections.
8. Coordinate progress cleaning of common areas.
9. Coordinate protection and security of the Works.
10. Coordinate preparation and submittal of Record (As-Built) Documents and BIM Model ready for integration with Digital Twin Platform.
11. Coordinate preparation and submittal of operation and maintenance manuals.
12. During the installation, testing and commissioning of the Works, cooperate fully with the other contractors' and operators' teams and provide guidance in respect of the planning and organization, as well as the implementation of the commissioning programme as a whole. Ensure that the programme for the Works and its associated commissioning obligations are compatible with those of other contractors.

C. Prepare memoranda for distribution to each party involved, outlining special procedures required for coordination. Include such items as required notices, reports, and list of attendees at meetings.

1. Prepare similar memoranda for the Employer and separate contractors if coordination of their Work is required.

D. Administrative Procedures: Coordinate scheduling and timing of required administrative procedures with other construction activities and scheduled activities of other contractors and direction of Project coordinator to avoid conflicts and to ensure orderly progress of the Work. Such administrative activities include, but are not limited to, the following:

1. Preparation of Contractor's construction schedule.
2. Preparation of the schedule of values.
3. Installation and removal of temporary facilities and controls.
4. Delivery and processing of submittals.
5. Progress meetings.
6. Preinstallation conferences.
7. Project closeout activities.
8. Startup and adjustment of systems.

E. Contractor shall, in continuation to the BIM Model prepared by the Engineer (if available), be responsible for enabling, creating and delivering project 3D models that increase in detail from a design status to shop drawings and as built status (LOD 400 & 500). Contractor's BIM deliverables shall be in line with requirements set in subsequent sections of the specifications. Among other requirements, Contractor's scope shall include to a minimum the following:

1. During construction, Contractor will be responsible for providing fully coordinated and assembled LOD 400 and LOD 500 models that are consistent with the EIR (Exchange Information Requirements) document and project specifications.
2. Contractor shall include BIM status in the progress meetings for the Engineer's review. BIM status must include clash detection, model view definitions and other requirements.
3. Contractor shall link all activities of the construction program to Model Elements using specialized software such as Revit or approved similar. The intent is to look ahead at Construction sequences within progress meetings to look at options and opportunities to optimize workflow and minimize risks.

F. During the design stage, Contractor shall submit a design BIM model to reflect the asset management strategy early on from the design stage. by following the below listed set of guidelines and considerations:

1. Classify and organize BIM digital assets (3D families) with relevant geometry / information as per defined DT use cases
2. Provide different virtual zoning entities and sub-entities (facilities, floors, zones, spaces, etc.). These zoning entities will be modeled as 3D volumes and assigned specific ID's for mapping with the digital platform for enhanced visualizations such as energy/lighting heatmaps for example
3. Modeling new elements/provisions for future Digital Twin applications.
4. Model preparation for COBie schema for flexibility of integration with different digital platforms. The COBie schema will also provide the asset grouping breakdown structure in a parent-child data link.

1.6 COORDINATION DRAWINGS

A. Coordination Drawings, General: Prepare coordination drawings according to requirements in individual sections and which have been analyzed, developed and extracted from the Composite BIM Models / Project Information Model (PIM) and additionally where installation is not completely indicated on Shop Drawings, where limited space availability necessitates coordination, or if coordination is required to facilitate integration of products and materials fabricated or installed by more than one entity.

1. Content: Project-specific information, drawn accurately to a scale large enough to indicate and resolve conflicts. Do not base coordination drawings on standard printed data. Include the following information, as applicable:

   a. Use applicable Federated BIM Model NWD format, Composite BIM Models and Drawings as a basis for preparation of coordination drawings. Prepare sections, elevations, and details as needed to describe the relationship of various systems and components.
   b. Use applicable Drawings as a basis for preparation of coordination drawings. Prepare sections, elevations, and details as needed to describe relationship of various systems and components.
   c. Coordinate the addition of trade-specific information to coordination drawings [by multiple contractors]in a sequence that best provides for coordination of the information and resolution of conflicts between installed components before submitting for review.
   d. Coordinate the addition of trade-specific information to coordination drawings [by multiple contractors] in a sequence with Federated BIM Model NWD format fully integrated with Digital Twin Model and drawings that best provides for coordination

of the information and resolution of conflicts between installed components before submitting for review.

e. Indicate functional and spatial relationships of components of architectural, structural, civil, mechanical, and electrical systems.
f. Indicate space requirements for routine maintenance and for anticipated replacement of components during the life of the installation.
g. Show location and size of access doors required for access to concealed dampers, valves, and other controls.
h. Indicate required installation sequences.
i. Indicate dimensions shown on Drawings. Specifically note dimensions that appear to be in conflict with submitted equipment and minimum clearance requirements. Provide alternative sketches to the Engineer indicating proposed resolution of such conflicts. Minor dimension changes and difficult installations will not be considered changes to the Contract.

B. Coordination Drawing Organization: Organize coordination drawings as follows:

1. Floor Plans and Reflected Ceiling Plans: Show architectural and structural elements, and mechanical, plumbing, fire-protection, fire-alarm, and electrical Work. Show locations of visible ceiling-mounted devices relative to acoustical ceiling grid. Supplement plan drawings with section drawings where required to adequately represent the Work. Floors / Screed Combined Carpet Plans to be coordinated with Architectural and ID layouts.
2. Plenum Space: Indicate sub framing for support of ceiling**,** raised access floor, and wall systems, mechanical and electrical equipment, and related Work. Locate components within plenums to accommodate layout of light fixtures and other components indicated on Drawings. Indicate areas of conflict between light fixtures and other components.
3. Mechanical Rooms: Provide coordination drawings for mechanical rooms, showing plans and elevations of mechanical, plumbing, fire-protection, fire-alarm, and electrical equipment.
4. Structural Penetrations: Indicate penetrations and openings required for all disciplines.
5. Slab Edge and Embedded Items: Indicate slab edge locations and sizes and locations of embedded items for metal fabrications, sleeves, anchor bolts, bearing plates, angles, door floor closers, slab depressions for floor finishes, curbs and housekeeping pads, and similar items.
6. Mechanical and Plumbing Work: Show the following:

    a. Sizes and bottom elevations of ductwork, piping, and conduit runs, including insulation, bracing, flanges, and support systems.
    b. Dimensions of major components, such as dampers, valves, diffusers, access doors, cleanouts and electrical distribution equipment.
    c. Fire-rated enclosures around ductwork.

7. Electrical Work: Show the following:

    a. Runs of vertical and horizontal conduit thirty-two (32)]mm in diameter and larger.
    b. Light fixture, exit light, emergency battery pack, smoke detector, and other fire-alarm locations.
    c. Panel board, switchboard, switchgear, transformer, busway, generator, and motor-control center locations.
    d. Location of pull boxes and junction boxes, dimensioned from column center lines.

8. Fire-Protection System: Show the following:

    a. Locations of standpipes, mains piping, branch lines, pipe drops, and sprinkler heads.

9. Review: The Engineer will review Federated BIM Model NWD format and coordination drawings to confirm that, in general, the Work is being coordinated, but not for the details of the coordination, which are Contractor's responsibility. If the Engineer determines that coordination drawings and the Federated BIM Model NWD format are not being prepared

in sufficient scope or detail, or are otherwise deficient, the Engineer will so inform Contractor, who shall make suitable modifications and resubmit.]

10. Coordination Drawing Prints: Prepare coordination drawing prints according to requirements in Section 013300 "Submittal Procedures."
11. Combined services drawings to include all services.

C. Coordination Drawing Process: Prepare coordination drawings in the following manner:

1. Schedule submittal and review of Fire Sprinkler, Plumbing, HVAC, and Electrical Shop Drawings to make required changes prior to preparation of coordination drawings.
2. Commence routing of coordination drawing files with HVAC Installer, who will provide drawing plan files denoting approved ductwork. HVAC Installer will locate ductwork and piping on a single layer, using orange color. Forward drawings to Plumbing Installer.
3. Plumbing Installer will locate plumbing and equipment on a single layer, using blue color.
4. Fire Sprinkler Installer will locate piping and equipment, using red color. Fire Sprinkler Installer shall forward drawing files to Electrical Installer.
5. Electrical Installer will indicate service and feeder conduit runs and equipment in green color. Electrical Installer shall forward drawing files to Communications and Electronic Safety and Security Installer.
6. Communications and Electronic Safety and Security Installer will indicate cable trays and cabling runs and equipment in purple color. Communications and Electronic Safety and Security Installer shall forward completed drawing files to Contractor.
7. Contractor shall perform the final coordination review. As each coordination drawing is completed, Contractor will meet with the Engineer to review and resolve conflicts on the coordination drawings.

D. Coordination Digital Data Files: Prepare coordination digital data files according to the following requirements:

1. File Preparation Format:

    a. Same digital data software program, version, and operating system as original Drawings and operating system.
    b. AutoCAD Version as advised by the Engineer.

2. File Submittal Format: Submit or post coordination BIM Models and drawing files using format same as original BIM Model file preparation format, in addition to NWD format and Portable Data File (PDF) format – as per section 013300 and its Annexes.
3. [File Submittal Format: Submit or post coordination drawing files using format same as file preparation format, in addition to PDF format.
4. [BIM File Incorporation: Develop, coordinate and extract Coordination Drawing files from Building Information Model (BIM) established for the Project in accordance with the Section's Annexes of Section 013300 and in the same digital data software program, version, and operating system as the original Drawings.]

    a. [Perform] [Construction Manager will perform] Federated BIM Model(s) three-dimensional component conflict analysis as part of preparation of coordination drawings. Resolve component conflicts prior to submittal. Extract all drawings from the BIM Model, unless otherwise agreed by Engineer. Indicate where conflict resolution requires modification of design requirements by the Engineer.]

5. Engineer will furnish the Contractor one set of digital data files of Drawings for use in preparing coordination digital data files.

    a. Engineer makes no representations as to the accuracy or completeness of digital data files as they relate to Drawings.
    b. Digital Data Software Program: Drawings are available in digital data software program

c. Contractor shall execute a data licensing agreement in the form of AIA Document C106 or Agreement included in this Project Manual or Agreement form acceptable to Employer and Engineer.

1.7 REQUEST FOR INFORMATION (RFI)

A. General: Immediately on discovery of the need for additional information, clarification, or interpretation of the Contract Documents, Contractor shall prepare and submit an RFI in the form specified.

1. Engineer will return without response those RFIs submitted to the Engineer by other entities controlled by Contractor.
2. Coordinate and submit RFIs in a prompt manner to avoid delays in Contractor's work or work of subcontractors.

B. Content of the RFI: Include a detailed, legible description of item needing information or interpretation and the following:

1. Project name.
2. The Employer names.
3. The Employer's Project number.
4. Name of the Engineer and Construction Manager
5. Engineer's Project number.
6. Date.
7. Name of Contractor.
8. RFI number, numbered sequentially.
9. RFI subject.
10. Specification Section number and title and related paragraphs, as appropriate.
11. Drawing number and detail references, as appropriate.
12. Field dimensions and conditions, as appropriate.
13. Contractor's suggested resolution. If Contractor's suggested resolution impacts the Contract Time or the Contract Sum, Contractor shall state impact in the RFI.
14. Contractor's signature.
15. Attachments: Include Federated BIM Model NWD Viewpoints, sketches, descriptions, measurements, photos, Product Data, Shop Drawings, coordination drawings, and other information necessary to fully describe items needing interpretation.

    a. Include dimensions, thicknesses, structural grid references, and details of affected materials, assemblies, and attachments on attached sketches.

C. RFI Forms: Software-generated form with substantially the same content as indicated above, acceptable to the Engineer.

1. Attachments shall be electronic files in PDF format.

D. Where applicable RFI forms shall include attachments and / or drawings extracted from BIM models for coordination and clarification purposes.

E. Engineer’s and Construction Manager's Action: The Engineer and Construction Manager will review each RFI, determine action required, and respond. Allow seven (7) days for the Engineer's response for each RFI. RFIs received by the Engineer or Construction Manager after one (1:00) p.m. will be considered as received the following working day.

1. The following Contractor-generated RFIs will be returned without action:

    a. Requests for approval of submittals.
    b. Requests for approval of substitutions.
    c. Requests for approval of Contractor's means and methods.

d. Requests for coordination information already indicated in the Contract Documents.
e. Requests for adjustments in the Contract Time or the Contract Sum.
f. Requests for interpretation of the Engineer's actions on submittals.
g. Incomplete RFIs or inaccurately prepared RFIs.

2. Engineer's action may include a request for additional information, in which case the Engineer's time for response will date from time of receipt by the Engineer or Construction Manager of additional information.
3. Engineer's action on RFIs that may result in a change to the Contract Period, or the Contract Sum may be eligible for Contractor to submit Change Proposal to the Employer or Engineer's approval.

a. If Contractor believes the RFI response warrants change in the Contract Period or the Contract Sum, notify the Engineer and Construction Manager in writing within five (5) days of receipt of the RFI response.

F. RFI Log: Prepare, maintain, and submit a tabular log of RFIs organized by the RFI number. Submit log weekly. Use software log that is part of web-based Project software. Include the following:

1. Project name.
2. Name and address of Contractor.
3. Name and address of the Engineer and Construction Manager
4. RFI number, including RFIs that were returned without action or withdrawn.
5. RFI description.
6. Date the RFI was submitted.
7. Date Engineer's and Construction Manager's response was received.
8. Identification of related Minor Change in the Work, Construction Change Directive, and Proposal Request, as appropriate.
9. Identification of related Field Order, Work Change Directive, and Proposal Request, as appropriate.

G. On receipt of the Engineer and Construction Manager's action, update the RFI log and immediately distribute the RFI response to affected parties. Review response and notify the Engineer and Construction Manager within seven (7) days if Contractor disagrees with response.

1.8 DIGITAL PROJECT MANAGEMENT PROCEDURES

A. The Data Files are not available: The Engineer / Employer will not provide BIM model/CAD drawing digital data files for Contractor's use during construction.

B. Use of the Digital Data Files: Digital data files of the BIM model/CAD drawings will be provided by the Engineer / Employer for Contractor's use during construction.

1. Digital data files may be used by Contractor in preparing coordination drawings, Shop Drawings, and Project Record Drawings.
2. Engineer makes no representations as to the accuracy or completeness of digital data files as they relate to Contract Drawings.
3. Digital Drawing Software Program: Contract Drawings are available in digital drawing software program and operating system.
4. Contractor shall execute a data licensing agreement in the form of AIA Document C106 Digital Data Licensing Agreement or Agreement included in Project Manual or Agreement form acceptable to the Employer and Engineer .

a. Subcontractors and other parties granted access by Contractor to the Engineer's digital data files shall execute a data licensing agreement in the form of AIA Document C106 or Agreement included in this Project Manual or Agreement acceptable to the Employer and the Engineer.

C. PDF Document Preparation: Where PDFs are required to be submitted to the Engineer, prepare as follows:

1. Assemble complete submittal package into a single indexed file, incorporating submittal requirements of a single Specification Section and transmittal form with links enabling navigation to each item.
2. Name file with submittal number or other unique identifier, including revision identifier.
3. Certifications: Where digitally submitted certificates and certifications are required, provide a digital signature with a digital certificate on where indicated.

1.9 WEB-BASED PROJECT MANAGEMENT SOFTWARE

A. Web-based Project Management Software Package: Provide, administer, and use Web-based Project Management software package for purposes of hosting and managing project communication and documentation until Final Completion.

1. Web-based Project management software includes, at a minimum, the following features:

a. Compilation of Project data, including Contractor, subcontractors, Engineer, Employer, and other entities involved in Project. Include names of individuals and contact information.
b. Access control for each entity for each workflow process, to determine entity's digital rights to create, modify, view, and print documents.
c. Document workflow planning, allowing customization of workflow between project entities.
d. Creation, logging, tracking, and notification for Project communications required in other Specification Sections, including, but not limited to, RFIs, submittals, Minor Changes in the Work, Construction Change Directives, and Change Orders.
e. Track status of each Project communication in real time, and log time and date when responses are provided.
f. Procedures for handling PDFs or similar file formats, allowing markups by each entity. Provide security features to lock markups against changes once submitted.
g. Processing and tracking of payment applications.
h. Processing and tracking of contract modifications.
i. Creating and distributing meeting minutes.
j. Document management for Drawings, Specifications, and coordination drawings, including revision control.
k. Management of construction progress photographs.
l. Mobile device compatibility, including smartphones and tablets.

2. Provide up to seven (7) Project management software user licenses for use of the Engineer and the Employer, Construction Manager. Provide eight (8) hours of software training at Employer’s office for web-based Project software users.
3. At completion of the Project, provide a complete digital archive of all [BIM,] engineering, communication, coordination, and project records / data in a format readable by common desktop software applications and acceptable to the Engineer / Employer. Submit the archive to the Employer and the Engineer as complete archive copy(ies) on a digital storage medium / format acceptable to the Engineer and provide the data in a locked (read-only) format to prevent further changes.

B. All communications done using the Employer’s authorized electronic platform shall be considered as official communications and shall be recognized as officially certified documents issued by the submitting party.

1. The Employer will provide all authorized personnel the required Credentials and Licenses to access any designated systems.

2. The Web-based Project Management platform Configuration and Access will be administered by the Employer in accordance with the communications protocols of the Contract, and strictly subject to Change Management Controls.
3. The Web-based Project Management and any designated platforms not mentioned here are the proprietary property of the Employer, and should be managed in accordance to the Employer's Security Policies and Practices.
4. All Authorized personnel shall use their individually assigned credentials and accounts to login and access the designated systems in accordance with the Employer's Security Policies and Practices.
5. All Stakeholder granted access to any platform shall be subject to a License Terms & Conditions Agreement in an acceptable format as proposed by the Engineer and Employer.

C. To facilitate the inspection process, the Contractor may be requested to utilize the Project Collaboration Website (PCW) adopted by the Engineer, or any other solution provided by the employer, for the Inspection activities. It is an online information system intended to facilitate project communication, streamlining and tracking of the project correspondence. The PCW is a property of the Engineer, it shall be accessible through the internet browser and secured as per the Engineers security policies and practices. The Contractor's authorized personnel shall use their assigned credentials to login and access the website at no cost to the Contractor. The PCW solution is mainly based on the Microsoft Office SharePoint Server platform.

D. Contractor, Subcontractors, and other parties granted access by the Contractor to Engineer's Web-based Project Management shall execute a data licensing agreement in the form of an Agreement acceptable to the Employer and the Engineer.

E. PDF Document Preparation: Where PDFs are required to be submitted to Engineer, prepare as follows:

1. Assemble complete submittal package into a single indexed file, incorporating submittal requirements of a single Specification Section and transmittal form with links enabling navigation to each item.
2. Name file with submittal number or other unique identifier, including revision identifier.
3. Certifications: Where digitally submitted certificates and certifications are required, provide a digital signature with digital certificate on where indicated.

1.10 COMMON DATA ENVIRONMENT (CDE)

A. Provide, administer, and use Common Data Environment (CDE) for the purpose of hosting and managing the project [BIM &] Design deliverables, Coordination, and Documentation during Construction, As-Built and handover phases.

1. All CDE platform Configuration and Access will be administered by the Employer in accordance with the communications protocols of the Contract, and strictly subject to Change Management Controls.
2. The CDE and any designated platforms not mentioned here are the proprietary property of the Employer, and should be managed in accordance to the Employer's Security Policies and Practices.
3. Employer's CDE will host only Shared, Published and Archived information in accordance with the BS EN ISO 19650 Guidance Part C.
4. At the closeout stage of each Project a complete archive of all BIM, Engineering, Communication and Coordination Data shall be available in the CDE platform in accordance with the Employer's requirements.
5. The Contractor must establish their own CDE for managing the Project Documentation and Communication during the Design, Construction, As-Built and Handover stages.
6. The aforementioned CDE shall be fully complied with the processes and standards defined in ISO 19650 series and fully integrated with the existing Employer's PIMS & CDE eco-system in coordination with the Engineer.
7. The Contractor is required to align their CDE structure and System to that of the Employer's CDE.

8. The Contractor is required to advise the Engineer on their particular requirements in the Employer's CDE ensuring correct change management procedures are followed subject to Engineer and Employer's approval.
9. The Contractor remains solely responsible to retain all logical Relationships, Structures and Configurations so as to reproduce the original plot at any time from the source in their own, and Employer's CDE.
10. The Contractor is required to supervise their direct and Sub-Contracted works, in accordance with section 013300 and its Annexes. It will be the Contractor's responsibility to oversee and ensure all related information is shared to stakeholders with correct suitability and required Metadata which approved by the Engineer and Employer. All coordination and Collaboration shall occur in the Designated CDE.
11. The Contractor's CDE should be in accordance to the Employer's Security Policies and Practices.
12. The Contractor is required to coordinate information exchanges flawlessly / uninterrupted.

1.11 PROJECT MEETINGS

A. General: Schedule and conduct meetings and conferences at Project site unless otherwise indicated.

1. Attendees: Inform participants and others involved, and individuals whose presence is required, of date and time of each meeting. Notify the Employer and the Engineer of scheduled meeting dates and times a minimum of seven (7) days prior to meeting.
2. Agenda: Prepare the meeting agenda. Distribute the agenda to all invited attendees.
3. Minutes: Entity responsible for conducting meetings will record significant discussions and agreements achieved. Distribute the meeting minutes to everyone concerned, including the Employer, Construction Manager,] and the Engineer, within three (3) days of the meeting.

B. Preconstruction Conference: the Engineer will schedule and conduct a preconstruction conference before starting construction, at a time convenient to the Employer and the Engineer, but no later than fifteen (15) days after execution of the Agreement.
1. Attendees: Authorized representatives of the Employer, the Employer's Commissioning Authority, Construction Manager, the Engineer, and their consultants; Contractor and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the conference. Participants at the conference shall be familiar with the Project and authorized to conclude matters relating to the Work.
2. Agenda: Discuss items of significance that could affect progress, including the following:

a. Responsibilities and personnel assignments.
b. Tentative construction schedule.
c. Phasing.
d. Critical work sequencing and long lead items.
e. Designation of key personnel and their duties.
f. Lines of communications.
g. Use of web-based Project software.
h. Procedures for processing field decisions and Change Orders.
i. Procedures for RFIs.
j. Procedures for testing and inspecting.
k. Procedures for processing Applications for Payment.
l. Distribution of the Contract Documents.
m. Submittal procedures.
n. Sustainable design requirements.
o. Preparation of Record Documents.
p. Use of the premises and existing building.
q. Work restrictions.
r. Working hours.
s. Employer's occupancy requirements.
t. Responsibility for temporary facilities and controls.
u. Procedures for moisture and mold control.

v. Procedures for disruptions and shutdowns.
w. Construction waste management and recycling.
x. Parking availability.
y. Office, work, and storage areas.
z. Equipment deliveries and priorities.
aa. First aid.
bb. Security.
cc. Progress cleaning.
dd. Safety & Health
ee. [BIM Submittals].

3. Minutes: Entity responsible for conducting meeting will record and distribute meeting minutes.

C. BIM Coordination Conference: A BIM coordination conference shall be scheduled before starting construction, at a time convenient to Employer, Engineer, and Contractor, and then conducted at a biweekly interval throughout the duration of the contract.

1. Attendees: Authorized representatives of Employer, Engineer and Contractor and its superintendent and BIM coordinators; designers, major subcontractors; suppliers; and other concerned parties shall attend the conference. Participants at the conference shall be familiar with the Project and authorized to conclude matters relating to the Works.
2. Agenda: Discuss items of significance in relation to the BIM requirements, including the following:

a. BIM Execution Plan.
b. BIM Model status and review
c. BIM deliverables
d. Clash report and resolutions
e. [4D animations and simulations showing actual versus planned construction sequences
f. 5D cost analysis
g. BIM interface coordination between the different Contractors and the Engineer
h. Role of BIM coordinators/managers.

3. Minutes: The Engineer will record and distribute meeting minutes.

D. Sustainable Design Requirements Coordination Conference: Employer will schedule and conduct] [Construction Manager will schedule and conduct] a sustainable design coordination conference before starting construction, at a time convenient to the Employer's Representative, the Engineer, and Contractor.

1. Attendees: Authorized representatives of the Employer, the Engineer, and their consultants; Contractor and its superintendent and sustainable design coordinator; major subcontractors; suppliers; and other concerned parties shall attend the conference. Participants at the conference shall be familiar with the project and authorized to conclude matters relating to the Work.
2. Agenda: Discuss items of significance that could affect meeting sustainable design requirements, including the following:

a. Sustainable design Project checklist.
b. General requirements for sustainable design-related procurement and documentation.
c. Project closeout requirements and sustainable design certification procedures.
d. Role of sustainable design coordinator.
e. Construction waste management.
f. Construction operations and sustainable design requirements and restrictions.

3. Minutes: Entity responsible for conducting meeting will record and distribute meeting minutes.

E. Preinstallation Conferences: Conduct a preinstallation conference at the Project site before each construction activity when required by other Sections and when required for coordination with other construction.

1. Attendees: Installer and representatives of manufacturers and fabricators involved in or affected by the installation and its coordination or integration with other materials and installations that have preceded or will follow, shall attend the meeting. Advise the Engineer, Construction Manager, and the Employer's Commissioning Authority of scheduled meeting dates.
2. Agenda: Review progress of other construction activities and preparations for the particular activity under consideration, including requirements for the following:

    a. Contract Documents.
    b. Options.
    c. Related RFIs.
    d. Related Change Orders.
    e. Purchases.
    f. Deliveries.
    g. Submittals.
    h. Sustainable design requirements.
    i. Review of mockups.
    j. Possible conflicts.
    k. Compatibility requirements.
    l. Time schedules.
    m. Weather limitations.
    n. Manufacturer's written instructions.
    o. Warranty requirements.
    p. Compatibility of materials.
    q. Acceptability of substrates.
    r. Temporary facilities and controls.
    s. Space and access limitations.
    t. Regulations of authorities having jurisdiction.
    u. Testing and inspecting requirements.
    v. Installation procedures.
    w. Coordination with other work.
    x. Required performance results.
    y. Protection of adjacent work.
    z. Protection of construction and personnel.
    aa. Health & Safety.
    bb. Security

3. Record significant conference discussions, agreements, and disagreements, including required corrective measures and actions.
4. Reporting: Distribute minutes of the meeting to each party present and to other parties requiring information.
5. Do not proceed with installation if the conference cannot be successfully concluded. Initiate whatever actions are necessary to resolve impediments to the performance of the Work and reconvene the conference at earliest feasible date.

F. Project Closeout Conference: The Engineer will conduct a project closeout conference, at a time convenient to the Employer and the Engineer, but no later than ninety (90) days prior to the scheduled date of Substantial Completion.

1. Conduct the conference to review requirements and responsibilities related to Project closeout.
2. Attendees: Authorized representatives of the Employer, the Employer's Commissioning Authority, the Engineer, and their consultants; Contractor and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the meeting. Participants

at the meeting shall be familiar with the Project and authorized to conclude matters relating to the Work.

3. Agenda: Discuss items of significance that could affect or delay Project closeout, including the following:

    a. Preparation of Record Documents.
    b. Preparation of As-Built Documents and BIM Model.
    c. Close-out / Handover procedure.
    d. Procedures required prior to inspection for Substantial Completion and for final inspection for acceptance.
    e. Procedures for completing and archiving web-based Project software site data files.
    f. Submittal of written warranties.
    g. Requirements for completing sustainable design documentation.
    h. Requirements for preparing operations and maintenance data.
    i. Requirements for delivery of material samples, attic stock, and spare parts.
    j. Requirements for demonstration and training.
    k. Preparation of Contractor's punch list.
    l. Procedures for processing Applications for Payment at Substantial Completion and for final payment.
    m. Submittal procedures.
    n. Coordination of separate contracts.
    o. The Employer's partial occupancy requirements.
    p. Installation of the Employer's furniture, fixtures, and equipment.
    q. Responsibility for removing temporary facilities and controls.

4. Minutes: Entity conducting meeting will record and distribute meeting minutes.

G. Progress Meetings: The Engineer will conduct progress meetings at weekly or fortnightly intervals; or more frequently whenever he considers it to be necessary.

1. Coordinate dates of meetings with preparation of payment requests.
2. Attendees: In addition to representatives of the Employer , the Employer's Commissioning Authority, Construction Manager, and the Engineer, each contractor, subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the meeting shall be familiar with the Project and authorized to conclude matters relating to the Work.
3. Agenda: Review and correct or approve minutes of previous progress meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.

    a. Contractor's Construction Schedule: Review progress since the last meeting. Determine whether each activity is on time, ahead of schedule, or behind schedule, in relation to Contractor's construction schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.

4. Review schedule for next period.

    a. Review present and future needs of each entity present, including the following:

        1) Interface requirements.
        2) Sequence of operations.
        3) Status of submittals.
        4) Status of sustainable design documentation.
        5) Deliveries.
        6) Off-site fabrication.
        7) Access.

8) Site use.
9) Temporary facilities and controls.
10) Progress cleaning.
11) Quality and work standards.
12) Status of correction of deficient items.
13) Field observations.
14) Status of RFIs.
15) Status of Proposal Requests.
16) Pending changes.
17) Status of Change Orders.
18) Pending claims and disputes.
19) Documentation of information for payment requests.
20) BIM Performance & BIM Model progression.
21) Reviewing federated BIM Model NWD and any clashes.

4. Minutes: Entity responsible for conducting the meeting will record and distribute the meeting minutes to each party present and to parties requiring information.

    a. Schedule Updating: Revise Contractor's construction schedule after each progress meeting, where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with the report of each meeting.

5. Reporting: The Engineer will record, prepare and distribute minutes of the meeting to each party present and to the Employer, together with a brief report summary in narrative form, of progress, actions required and other significant matters arising since the previous meeting and report.

H. Coordination Meetings: Conduct Project coordination meetings at weekly. Project coordination meetings are in addition to specific meetings held for other purposes, such as progress meetings and preinstallation conferences.

1. Attendees: In addition to representatives of the Employer, the Engineer, each contractor, subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the meetings should be familiar with Project and authorized to conclude matters relating to the Work.

2. Coordination Meetings: Attend Combined Contractor’s Meetings with other separate contractors or entities working as and when required by the Engineer. The meetings will be arranged and conducted by the Engineer for coordinating and sequencing purposes, and negotiating and agreeing delivery schedules, programs of work and interfacing activities, as necessary.
3. Agenda: Review and correct or approve minutes of the previous coordination meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.

    a. Combined Contractor's Construction Schedule: Review progress since the last coordination meeting. Determine whether each contract is on time, ahead of schedule, or behind schedule, in relation to combined Contractor's construction schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.
    b. Schedule Updating: Revise combined Contractor's construction schedule after each coordination meeting, where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with report of each meeting.
    c. Review present and future needs of each contractor present, including the following:

        1) Interface requirements.

2) Sequence of operations.
3) Status of submittals.
4) Deliveries.
5) Off-site fabrication.
6) Access.
7) Site use.
8) Temporary facilities and controls.
9) Work hours.
10) Hazards and risks.
11) Progress cleaning.
12) Quality and work standards.
13) Status of RFIs.
14) Proposal Requests.
15) Change Orders.
16) Pending changes.
17) Variations.
18) Sustainability requirements
19) BIM Performance & BIM Model progression.
20) Reviewing federated BIM Model NWD and any clashes.
21) Resolution of BIM component conflicts.

4. Reporting: Record meeting results and distribute copies to everyone in attendance and to others affected by decisions or actions resulting from each meeting.
5. Engineer will establish and chair a coordination Committee to ensure absolute coordination on all aspects of this Contract. Engineer will schedule and conduct Project coordination meetings at regular intervals, or whenever he considers it to be necessary. Project coordination meetings are in addition to specific meetings held for other purposes, such as progress meetings and pre-installation conferences.

    a. Engineer at his absolute discretion will determine the following:

        1) Committee members and representatives.
        2) Location and Frequency.
        3) Procedures and processes to be followed in the meetings.
        4) Actions and activities instigated by the meetings.

    b. The Committee and meetings will be a forum to table and resolve any co-ordination or co-ordination related matters. It is the Engineer's intention to resolve these issues by mutual agreement between the parties, however, should this not be possible the Engineer will make a determination on the issue, and it will become formal and contractually binding on the Contractor or other concerned contractor as the case may be.
    c. Contractor must identify a senior individual or individual to attend co-ordination meetings and act as a point of contact on all co-ordination issues. These individuals must be approved in writing by the Engineer who also has the right to remove them and have them replaced by further approved individuals at his discretion.
    d. It is noted that these meetings are in addition to other project meetings which will be occurring and that the determination from these higher level co-ordination meetings must manifest themselves into a series of further lower-level meetings to implement and ensure the practical application of co-ordination throughout the project. It is incumbent upon the Contractor to demonstrate to the satisfaction of the Engineer how co-ordination is actually being achieved on site.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 013100

SECTION 013200 - CONSTRUCTION PROGRESS DOCUMENTATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Particular Conditions, and other Division 01 Specifications sections, apply to this Section.

1. Refer to Conditions of Contract and Agreement for definitions and specific dates of Contract Time.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for documenting the progress of construction during performance of the Work, including the following:

1. Startup construction schedule.
2. Contractor's Construction Schedule.
3. Construction schedule updating reports.
4. Daily construction reports.
5. Material location reports.
6. Field condition reports.
7. Unusual event reports.
8. Submittals Schedule.
9. Monthly progress reports
10. Accident reports
11. Wage book and time sheet records.
12. Special reports.
13. Inspection test Procedures Report.
14. Variations requests.

B. Related Requirements:

1. Division 01 Section 011000 "Summary" for Work sequence and staged completion and occupation requirements.
2. Division 01 Section 011200 "Multiple Contract Summary" for preparing a combined Contractor's Construction Schedule.
3. Division 01 Section 013100 "Project Management and Coordination" for distributing meeting and conference minutes
4. Division 01 Section 013300 "Submittal Procedures" for submitting schedules and reports.
5. Division 01 Section 014000 "Quality Requirements" for submitting a schedule of tests and inspections.
6. Specifications sections for specific submittal requirements.

1.3 DEFINITIONS

A. Activity: A discrete part of a project that can be identified for planning, scheduling, monitoring, and controlling the construction Project. Activities included in a construction schedule consume time and resources.

1. Critical Activity: An activity on the critical path that must start and finish on the planned early start and finish times.

2. Predecessor Activity: An activity that precedes another activity in the network.
3. Successor Activity: An activity that follows another activity in the network.

B. Cost Loading: The allocation of the schedule of values for completing an activity as scheduled. The sum of costs for all activities must equal the total Contract Sum unless otherwise approved by the Engineer.

C. CPM: Critical path method, which is a method of planning and scheduling a construction project where activities are arranged based on activity relationships. Network calculations determine the critical path of the Project and when activities can be performed.

D. Critical Path: The longest connected chain of interdependent activities through the network schedule that establishes the minimum overall Project duration and contains no float.

E. Event: The starting or ending point of an activity.

F. Float: The measure of leeway in starting and completing an activity.

1. Float time is not for the exclusive use or benefit of either Employer or Contractor, but is a jointly owned, expiring Project resource available to both parties as needed to meet schedule milestones and Contract completion date.
2. Free float is the amount of time an activity can be delayed without adversely affecting the early start of the successor activity.
3. Total float is the measure of leeway in starting or completing an activity without adversely affecting the planned Project completion date.

G. Resource Loading: The allocation of manpower and equipment necessary for completing an activity as scheduled.

H. Network Diagram: A graphic diagram of a network schedule, showing activities and activity relationships

I. Fragnet: A partial or fragmentary network that breaks down activities into smaller activities for greater detail.

J. Major Area: A work area or storey of construction as applicable, a separate building as applicable, or a similar significant construction element.

K. Milestone: A key or critical point in time for reference or measurement, including for example, but not necessarily limited to:

1. Commencement Date.
2. Completion dates for specific Sections or parts of the Works.
3. Completion date for the whole of the Works.

L. Preliminary Construction Schedule: Startup Construction Schedule.

1.4 INFORMATIONAL SUBMITTALS

A. Format for Submittals: Submit required submittals in the following format:

1. Working electronic copy of schedule file and its layout displaying the required columns for the entire period.
2. PDF file.
3. [Three (3)] paper copies of sufficient size to display entire period or schedule, as required.
4. Arrange the following information in a tabular format, identifying corresponding program activity or event number for each scheduled date:

a. Scheduled date for first submittal.
b. Specification Part number and title.
c. Submittal type and category (action or informational).
d. Name of manufacturer and/or subcontractor, as applicable.
e. Description of the work covered.
f. Scheduled date for the Engineer's final release or approval.
g. Scheduled dates for Purchase Order and first delivery to Project site.
h. Scheduled date for commencement of installation.

B. Startup construction schedule.

1. Submittal of cost-loaded startup construction schedule will not constitute approval of schedule of values for cost-loaded activities.

C. Startup Network Diagram: Of size required to display entire network for entire construction period. Show logic ties for activities.

D. Contractor's Construction Schedule: Initial schedule, of size required to display entire schedule for entire construction period.
1. Submit a working digital copy of schedule, using software indicated, and labeled to comply with requirements for submittals.

E. CPM Reports: Concurrent with CPM schedule, submit each of the following reports. Format for each activity in reports shall contain activity number, activity description, cost and resource loading, original duration, remaining duration, early start date, early finish date, late start date, late finish date, and total float in calendar days.

1. Activity Report: List of activities sorted by activity number and then early start date, or actual start date if known.
2. Logic Report: List of preceding and succeeding activities for each activity, sorted in ascending order by activity number and then by early start date, or actual start date if known.
3. Total Float Report: List of activities sorted in ascending order of total float.
4. Earnings Report: Compilation of Contractor's total earnings from commencement of the Work until most recent Application for Payment.
5. Resource Allocation and Loading Report: List of all resources allocated to schedule activities, sorted in ascending order by activity number and then early start date, or actual start date if known, including but not necessarily limited to:
6. Number and trade classification of workmen.
7. Quantities of materials and products.
8. Contractor's Equipment.
9. Monetary Value Summaries (cash flow).

F. Construction Schedule Updating Reports: Submit with Applications for Payment.

G. Daily Construction Reports: Submit at daily interval, and no later than 4:00 pm on the day immediately following date of report.

H. Sub-contractor's daily report: Submit at daily interval and no later than 4:00 pm on the day immediately following date of report.

I. Material Location Reports: Submit at [**weekly**] [**monthly**] intervals.

J. Site Condition Reports: Submit at time of discovery of differing conditions.

K. Accident Reports: Submit at time of accident report.

L. Unusual Event Reports: Submit at time of unusual event.

M. Monthly Progress Reports: Submit at monthly intervals. Report progress status coincidental with cut-off date associated with each Monthly Statement payment application.

1.5 QUALITY ASSURANCE

A. Scheduling Specialist Consultant Qualifications: An experienced specialist in CPM scheduling and reporting, with capability of producing CPM reports and diagrams within 24 hours of the Engineer's request.

B. Prescheduling Conference: Conduct conference at Project site to comply with requirements in Section 013100 "Project Management and Coordination." Review methods and procedures related to the preliminary construction schedule and Contractor's Construction Schedule, including, but not limited to, the following:

1. Review software limitations and content and format for reports.
2. Verify availability of qualified personnel needed to develop and update schedule.
3. Discuss constraints, including phasing, work stages, area separations, interim milestones and partial Employer occupancy (where applicable).
4. Review delivery dates for the Employer-furnished products.
5. Review schedule for work of the Employer's separate contracts (if applicable).
6. Review submittal requirements and procedures.
7. Review time required for review of submittals and resubmittals.
8. Review requirements for tests and inspections by independent testing and inspecting agencies.
9. Review time required for Project completion and startup procedures.
10. Review and finalize list of construction activities to be included in schedule.
11. Review procedures for updating schedule.

1.6 COORDINATION

A. Coordinate the preparation and processing of schedules and reports with performance of construction activities and with programming scheduling and reporting of separate contractors.

B. Utilization of 4D Planning and Scheduling: The Contractor shall utilize 4D methods to develop and / or update the Project BIM Model(s) with the approved [Design and] Construction Program. The 4D Model shall be used to perform “Planned versus Actual” analysis and to demonstrate construction sequencing, phasing, and progress, as detailed in Section 013300 and its Annexes. Where applicable, and depending on the contract type, the Contractor shall incorporate both Design and Construction BIM Models into this process.

C. Utilization of 5D Cost analysis: The Contractor shall utilize 5D methods to extract and validate material quantities from the Project BIM Model(s), and integrate them with the approved Construction Program and cost data (BOQ, estimates, and / or payment items). The 5D Model shall be used to monitor the Construction progress, evaluate cost performance, and support reporting requirements, as detailed in Section 013300 and its Annexes. Where applicable, and depending on the contract type, the Contractor shall incorporate both Design and Construction BIM Models into this process.

D. Coordinate Contractor's Construction Schedule/program with the list of subcontracts**,** submittal schedule, progress reports, payment requests, and other required schedules and reports.

1. Secure time commitments for performing critical elements of the Work from entities involved.
2. Coordinate each construction activity in the network with other activities, and schedule them in proper sequence.

1.7 CONTRACTOR'S CONSTRUCTION SCHEDULE

A. Computer Scheduling Software: Prepare and update schedules using current version of a program that is capable of managing construction schedules.

1. Use a professional high-end, reputable Project Management software (Oracle Primavera P6 Professional, latest edition) that has been developed specifically to manage construction programming, scheduling and reporting indicated for Project.
2. Provide two (2) user licenses for use of the Employer and the Engineer.
3. Provide eight (8) hours of software training at the Engineer / Employer's office for software users.

B. Scheduling Consultant: Engage a consultant to provide planning, evaluation, and reporting, using CPM scheduling.

1. In-House Option: The Employer may waive requirement to retain a consultant if Contractor employs skilled personnel with experience in CPM scheduling and reporting techniques. Submit qualifications.
2. Meetings: Scheduling consultant shall attend all meetings related to Project progress, alleged delays, and time impact.

C. Time Frame: Extend schedule from date established for commencement of the Work, To Proceed to date of Final Completion.

1. Contract completion date shall not be changed by submission of a schedule that shows an early completion date, unless specifically authorized by Variation Order.

D. Calendar and Working Hours:

1. The normal working hours shall be in accordance with the labor laws of the country where the project is being executed. Any changes or exceptions to the working hours and official holidays must be approved by the Engineer and the Employer.
2. The Employer / Engineer or others with delegated authority shall approve the starting and finishing times, lunch and tea breaks of the dayshift proposed by the Contractor.
3. The Contractor is allowed, subject to the prior approval of the Employer / Engineer or others with delegated authority to work in multiple shifts as necessary to meet the construction schedule. Contractor to bear any additional cost due to this requirement.
4. The Contractor shall note that staggered work hours may be required to be adopted to ease congestion on the site, access road routes, security gates, and elsewhere on the Site or to avoid inconvenience to the existing neighbouring contractors, tenants and public as applicable.

E. Work Breakdown Structure (WBS):

1. The Work Breakdown Structure WBS, WBS dictionary and levels shall be prepared and developed by the Contractor in consultation with the Engineer and the Employer. This will help establishing a mapping of the codes in the Baseline schedule and its integration and provides consistency across all designer, contactor and subcontractor schedules, across all projects. It may be necessary to develop the WBS further as the project progresses, and as the Construction Program is developed. Any additions to the WBS will be proposed by the Contractor in writing and approved by the Engineer and the Employer.

F. Activities: Treat each floor or separate area as a separate numbered activity for each main element of the Work. Comply with the following:

1. Activity ID Numbering: Each activity should have a unique alphanumerical identifier which would be set together with the Engineer for consistency purpose and application in all Program of works.

2. Activity Duration: Define activities so no activity is longer than twenty (20) days, unless specifically allowed by the Engineer (i.e. procurement of materials especially long lead items).
3. Activity Lag Duration: Replace the lag duration with an activity if possible or justify the use of the lag that is longer than twenty (20) days, unless specifically allowed by the Engineer.
4. BIM Activities: Define the BIM activities and include the BIM models [and design], Shop and As-built drawings schedules within the [design and] construction program.
5. Temporary Facilities: Indicate start and completion dates for the following as applicable:

    a. Securing of approvals and permits required for performance of the Work.
    b. Temporary facilities.
    c. Construction of mock-ups, prototypes and samples.
    d. The Employer interfaces and furnishing of items.
    e. Interfaces with Separate Contracts.
    f. Regulatory agency approvals.
    g. Punch list.

6. Procurement Activities: Include procurement process activities for the following long lead-time items and major items, requiring a cycle of more than 60 days, as separate activities in schedule. Procurement cycle activities include, but are not limited to, submittals, approvals, purchasing, fabrication, and delivery.

7. Submittal Review Time: Include review and resubmittal times indicated in Section 013300 "Submittal Procedures" in schedule. Coordinate submittal review times in Contractor's Construction Schedule with submittal schedule.
8. Startup and Testing Time: Include no fewer than fifteen (15) days for startup and testing.
9. Commissioning Time: Include no fewer than fifteen (15) days for commissioning.
10. Substantial Completion: Indicate completion in advance of date established for Substantial Completion and allow time for the Engineer’s and Construction Manager's administrative procedures necessary for certification of Substantial Completion.
11. Punch List and Final Completion: Include not more than thirty (30) days for completion of punch list items and Final Completion.

G. Constraints: Include constraints and work restrictions indicated in the Contract Documents and as follows in schedule and show how the sequence of the Work is affected.

1. Phasing: Arrange list of activities on schedule by phase.
2. Work under More Than One Contract: Include a separate activity for each contract.
3. Work by the Employer: Include a separate activity for each portion of the Work performed by the Employer.
4. Products Ordered in Advance: Include a separate activity for each product. Include delivery date indicated in Section 011000 "Summary." Delivery dates indicated stipulate the earliest possible delivery date.
5. The Employer-Furnished Products: Include a separate activity for each product. Include delivery date indicated in Section 011000 "Summary." Delivery dates indicated stipulate the earliest possible delivery date.
6. Work Restrictions: Show the effect of the following items on the schedule:

    a. Coordination with existing construction.
    b. Limitations of continued occupancies.
    c. Uninterruptible services.
    d. Partial occupancy before Substantial Completion.
    e. Use-of-premises restrictions.
    f. Provisions for future construction.
    g. Seasonal variations.
    h. Environmental control.

7. Work Stages: Indicate important stages of construction for each major portion of the Work, including, but not limited to, the following:

a. Subcontract awards.
b. Submittals.
c. Purchases.
d. Mockups.
e. Fabrication.
f. Sample testing.
g. Deliveries.
h. Installation.
i. Tests and inspections.
j. Adjusting.
k. Curing.
l. Building flush-out.
m. Startup and placement into final use and operation.
n. Commissioning.

8. Construction Areas: Identify each major area of construction for each major portion of the Work. Indicate where each construction activity within a major area must be sequenced or integrated with other construction activities to provide for the following:

a. Structural completion.
b. Temporary enclosure and space conditioning.
c. Permanent space enclosure.
d. Completion of mechanical installation.
e. Completion of electrical installation.
f. Substantial Completion.

H. Sectional Completions and Milestones: Include in program, milestones and any and all sectional completion requirements, indicated in Contract Documents, including but not necessarily limited to Commencement Date, dates for Substantial Completion sections or parts of the Works, and date for Substantial Completion the whole of the Works, and any other milestone specified in the Conditions of Contract.

I. Milestones: Include milestones indicated in the Contract Documents in schedule, including, but not limited to, the Notice to Proceed, Substantial Completion and any interim milestones.

J. Cost Correlation: Superimpose a cost correlation timeline, indicating planned and actual costs. On the line, show planned and actual Monetary volume of the Work performed as of planned and actual dates used for preparation of payment requests.

K. Upcoming Work Summary: Prepare summary report indicating activities scheduled to occur or commence prior to submittal of next schedule update. Summarize the following issues:

1. Unresolved issues.
2. Unanswered Requests for Information.
3. Rejected or unreturned submittals.
4. Notations on returned submittals.
5. Pending modifications affecting the Work and the Contract Time.

L. Cash Flow Correlation: Provide a cash flow correlation line, indicating on the line, monetary value volume of the Works as planned and as actually performed.

M. Tabulate cash flow correlation, coincidental with cutoff dates associated with Monthly Statement payment applications and use as a basis for preparation of Cash Flow Estimate submittal.

N. Contract Variations: If and when requested by the Engineer in connection with any proposed or instructed contract Variation, prepare and submit a time-impact analysis, using fragnets if necessary, to demonstrate the effect of the proposed or instructed Variation on the overall program.

O. Contractor's Construction Schedule Updating: At monthly intervals, update schedule to reflect actual construction progress and activities. Issue schedule one week before each regularly scheduled progress meeting.

1. The Contractor shall organize a joint progress measurement and inspection with the Engineer to verify the actual start/finish dates and completed percentage of each activity in the Baseline Schedule and shall be updated in Primavera P6 latest released version every week or at any other frequency required by the Engineer.
2. Revise the program immediately after each meeting or other activity where revisions have been recognized and accepted by the Engineer. Issue and submit the revised program within three (3) days of such meetings or activities. Include a report with the revised program that indicates every change, including, but not limited to, changes in logic, durations, actual starts and finishes, and activity durations.
3. For completed Activities – Enter Actual Start and Actual Finish Dates, Actual Quantities and Actual Expenses.
4. For Activities in progress – Update Actual Start Dates, Forecast Completion Dates, Expense %, Actual Quantities, Actual Resources and Physical %.
5. Actual Physical Progress for activity should be equal to Expenses %.
6. Expense (Cost) Update – update % complete (as approved by the Engineer) for each Cost Account for activities. This information will be used for generating Contractor's Progress Payment Request.
7. Include a report with the updated schedule that indicates every change, including, but not limited to, changes in logic, durations, actual starts and finishes, and activity durations.
8. Each Updated Schedule shall be submitted to the Engineer for its acceptance as a record. It is possible (if the works have been delayed) that these Updated Schedules will show completion later than the contract completion dates. In this event the Engineer's acceptance of such schedules will not constitute acceptance of the delay(s).
9. The Contractor is deemed to provide the Engineer with detailed pricing and breakdowns of all activities (if required) for the updating purposes. Any missing information/details shall be as per the interpretation of the Engineer.

P. Revision and Extension of Time: Once the Engineer gives the consent on the Baseline the Contractor shall not revise the Activity Duration(s) or Network Logic of the Baseline Schedule without written approval.

Q. The Baseline Schedule may be changed and / or an Extension of Time may be granted when one or more of the following occurs and shall be reviewed and approved by the Engineer:

R. A Variation Order that significantly affects the duration/dates of completion or sequence of work and construction methodology.

S. The Engineer or the Employer (or Change Board, whichever applies) directs in writing a change that affects the milestone date(s) specified in the Contract and/or alters the length of the critical path

T. In the event of occurrence of one of the above, the Contractor may submit a request for Extension of Time and/or Revision of the Project Work Schedule. The submittal shall indicate changes required to the Contract completion date, proposed revised logic network and shall be accompanied by a narrative description and justification for the change.

U. Once consented the revised schedule shall be used as the Revised Baseline Schedule and the updates thereafter will be based on this aforementioned schedule.

V. Recovery Schedule:

1. When periodic update indicates the Work is twenty-one (21) or more calendar days behind the current approved schedule, meaning in the event of substantial schedule slippage or out of sequence of works relative to the consented Baseline Schedule, submit when necessary and as required by the Engineer, a separate recovery schedule indicating means by which Contractor intends to regain compliance with the schedule. The Recovery Schedule shall

identify which activities and milestones that are affected and demonstrate how the Contractor plans to recover his present delays and shall also indicate changes to working hours, working days, crew sizes, and equipment required to achieve compliance, and date by which recovery will be accomplished.

2. Recovery Schedule shall be strictly for the purpose of demonstrating to the Engineer how the Contractor plans to bring progress back to that projected in the consented Baseline Schedule. It shall also serve to allow the Engineer to monitor the Progress of the Contractor's recovery plan.
3. As the Recovery Schedule does not constitute an accepted revised baseline, the Contractor shall continue to report his progress against the consented baseline schedule. The Contractor shall also update the Engineer on the progress of his recovery against the recovery schedule.
4. As the Work progresses, indicate Final Completion percentage for each activity.

W. Distribution: Distribute copies of approved schedule to the Engineer , Construction Manager, the Employer, separate contractors, testing and inspecting agencies, and other parties identified by Contractor with a need-to-know schedule responsibility.

1. Post copies in Project meeting rooms and temporary field offices.
2. When revisions are made, distribute updated schedules to the same parties and post in the same locations. Delete parties from distribution when they have completed their assigned portion of the Work and are no longer involved in performance of construction activities.

X. As-Built Schedule and documentation:

1. Within fifteen (15) days after substantial completion, the Contractor shall submit for the Project's acceptance a final, as-built CPM Network Diagram.

1.8 STARTUP CONSTRUCTION SCHEDULE

A. Gantt-Chart Schedule: Submit startup, horizontal, Gantt-chart-type construction schedule within seven (7) days of date established for commencement of the Work.

B. Preparation: Indicate each significant construction activity separately. Identify first workday of each week with a continuous vertical line. Outline significant construction activities for first ninety (90) days of construction. Include skeleton diagram for the remainder of the Work and a cash requirement prediction based on indicated activities.

1.9 GANTT-CHART SCHEDULE REQUIREMENTS

A. Gantt-Chart Schedule: Submit a comprehensive, fully developed, horizontal, Gantt-chart-type, Contractor's Construction Schedule within thirty (30) days of date established for commencement of the Work.

1. Base schedule on the startup construction schedule and additional information received since the start of Project.

B. Preparation: Indicate each significant construction activity separately. Identify first workday of each week with a continuous vertical line.

1. For construction activities that require three months or longer to complete, indicate an estimated completion percentage in ten (10) percent increments within time bar.

1.10 CPM SCHEDULE REQUIREMENTS

A. Prepare network diagrams using AON (activity-on-node) format.

B. Startup Network Diagram:

1. Submit diagram within fourteen 14 days of date established for commencement of the Work. Outline significant construction activities for the first ninety (90) days of construction. Include skeleton diagram for the remainder of the Work and a cash requirement prediction based on indicated activities.

C. CPM Schedule:

1. Prepare and submit a Contractor's Construction Schedule not later than thirty (30) calendar days after letter of award, using a CPM network analysis diagram. for the Work. Base program on the Preliminary Program submitted with Tender and whatever updating and feedback received to date. Follow procedures and produce CPM schedule and reports in such form and detail as specified. Incorporate additional requirements, as the Engineer shall reasonably prescribe.
2. Develop, finalize and submit completed CPM schedule and reports for the Engineer's review and consent no later than fifty-six (56) days after the Letter of Award, unless specified otherwise in the Particular Conditions of Contract.

    a. Failure to include any work item required for performance of this Contract shall not excuse Contractor from completing all work within applicable completion dates.

3. Conduct educational workshops to train and inform key Project personnel, including subcontractors' personnel, in proper methods of providing data and using CPM schedule information.
4. Once consented, this Baseline Schedule will be used as per the Contract Clause – Program. No changes to Baseline Schedule are allowed without complying to schedule revision requirements described in below section herein.
5. The consented schedule shall then be used by the Contractor for planning, organizing and directing the Works and for reporting progress payment.
6. Establish procedures for monitoring and updating CPM schedule and for reporting progress. Coordinate procedures with progress meeting and payment request dates.
7. Use "one workday" as the unit of time for individual activities. Indicate nonworking days and holidays incorporated into the schedule to coordinate with the Contract Time.
8. Use calendar to identify and indicate holidays and other non-work days

D. CPM Schedule Preparation:

1. Prepare a list of all activities required to complete the Work. Using the startup network diagram, prepare a skeleton network to identify probable critical paths.
2. Activities: indicate for each activity which shall comprise of specific and measurable element of work, the estimated time duration which will be calculated using productivity rates, sequence requirements, resource requirements and relationship of each activity in relation to other activities and monetary value. No activity on the project work schedule shall have the duration exceeding twenty-one (21) calendar days and number of activities with duration of less than Seven (7) calendar days should be kept to a minimum and excessive amount of float should be avoided / rectified to make progress monitoring on the project more manageable.
3. The activities on the schedule shall be in accordance with the Work Breakdown Structure (WBS), Cost Breakdown Structure (CBS), Resource Breakdown Structure (RBS) and Activity Codes. As a minimum Activities shall cover and include dates and estimated time frames for the following:

    a. Preparation and processing of submittals.
    b. Mobilization and securing of permits and Demobilization.
    c. Engineering (Submittals and Approval of shop drawings and documents).
    d. Procurement and Purchase of materials and equipment.
    e. Delivery.
    f. Fabrication.

g. Accurate definition for the Long Lead Items and their Material Requirement Plans (MRP).
h. Utility interruptions.
i. Any activities for other Contractors including but not limited to site possession and access and in which affect progress or completion date of all or part of the works.
j. Installation.
k. Work by the Employer that may affect or be affected by Contractor's activities.
l. Testing and inspection.
m. Commissioning.
n. Punch list and Final Completion.
o. Activities occurring following Final Completion.

4. Critical Path Activities: Identify critical path activities, including those for interim completion dates. Scheduled start and completion dates shall be consistent with Contract milestone dates.
5. Processing: Process data to produce output data on a computer-drawn, time-scaled network. Revise data, reorganize activity sequences, and reproduce as often as necessary to produce the CPM schedule within the limitations of the Contract Time.
6. Format: Mark the critical path. Locate the critical path near center of network; locate paths with most float near the edges.

    a. Subnetworks on separate sheets are permissible for activities clearly off the critical path.

7. Logic Relationships:

    a. Logic of interdependencies shall be based on constructability and not on preferred working logic
    b. Float is an asset of the Project and NOT for the exclusive use/benefit of the Contractor
    c. Interference with all related packages should be clearly identified.

8. The schedule shall be prepared in sufficient detail (matching the method of handing over regarding zoning, flooring, trades, etc.) which would be discussed and agreed by the Engineer.to ensure adequate planning, execution and monitoring of the work.
9. The schedule shall consider all time risk allowances, including time for the weather conditions (rain, wind, etc.) reasonably to be anticipated by the Contractor.
10. Excessive leads and lags, negative lags or open/hanging activities, use of fixed dates and any other programming activities that can have the effect of creating false criticality or inhibiting the Schedule from reacting dynamically to change should be avoided.
11. Cost- and Resource-Loading of CPM Schedule:

    a. Resource loading: assign manpower, construction equipment and material quantities to activities. It should be reflected in the Resource Charts (Curve and Histogram)
    b. Cost loading: Assign monetary value / cost to construction activities on the CPM schedule as per the Contract Bill of Quantities, Unit Rates, Prices and Quantities (Expense Category on Primavera P6). Do not assign costs to submittal activities. Obtain Engineer's approval prior to assigning costs to fabrication and delivery activities
    c. Each activity cost shall reflect an appropriate value subject to approval by the Engineer.
    d. Total cost assigned to activities shall equal the total Contract Sum.

12. Submittal of CPM Detailed Construction Work schedule: to include but not limited to:

    a. Program Narrative and Method Statement highlighting the project constraints and assumptions made.
    b. Cost and Resource Loaded Baseline Schedule.
    c. Cash Flow Statement and Progress S-Curve.
    d. Resource Charts (distribution curve and histogram).

e. Others as required by the Engineer.

E. Contract Modifications: For each proposed contract modification and concurrent with its submission, prepare a time-impact analysis using a network fragment to demonstrate the effect of the proposed change on the overall Project schedule.

F. Initial Issue of Schedule: Prepare initial network diagram from a sorted activity list indicating straight "early start-total float." Identify critical activities. Prepare tabulated reports showing the following:

1. Contractor or subcontractor and the Work or activity.
2. Description of activity.
3. Main events of activity.
4. Immediately preceding and succeeding activities.
5. Early and late start dates.
6. Early and late finish dates.
7. Activity duration in workdays.
8. Calendar for each activity
9. Total float or slack time.
10. Average size of workforce.
11. Monetary value of activity (coordinated with the schedule of values).
12. Holidays and non-work days.
13. Schedule Updating: Concurrent with making updates and/or revisions to schedule, prepare (in addition to other specified CPM reports) tabulated reports showing the following:
14. Identification of activities that have changed.
15. Changes in early and late start dates.
16. Changes in early and late finish dates.
17. Changes in activity durations in workdays.
18. Changes in the critical path.
19. Changes in total float or slack time.
20. Changes in usage or availability of resources
21. Changes in the Contract Period.
22. Value Summaries: Prepare two cumulative value lists, sorted by finish dates. Indicate actual versus original planned progress.
23. Interface requirements, with prioritized completion of sections to achieve project hand-over in sequence as per the Employer’s requirements.
24. Coordination with other contractors.
25. Testing and commissioning of completed section considering continuity with other phases at interphase points.

G. Schedule Updating:

1. Updates shall consist of reflecting actual site data and implemented on the schedule to be consented by the Engineer without any changes or amendments or revisions whatsoever to the said schedule or activities or links therein. Any revisions to the schedule shall have to be submitted for the prior consent of the Engineer.
2. Concurrent with revising schedule, prepare tabulated reports showing the following:

a. Identification of activities that have changed.
b. Changes in early and late start dates.
c. Changes in early and late finish dates.
d. Changes in activity durations in workdays.
e. Changes in the critical path.
f. Changes in total float or slack time.
g. Changes in the Contract Time.

H. Value Summaries: Prepare two cumulative value lists, sorted by finish dates.

1. In first list, tabulate activity number, early finish date, Monetary value, and cumulative Monetary value.
2. In second list, tabulate activity number, late finish date, Monetary value, and cumulative Monetary value.
3. In subsequent issues of both lists, substitute actual finish dates for activities completed as of list date.
4. Prepare a list for ease of comparison with payment requests; coordinate timing with progress meetings.
5. In both value summary lists, tabulate "actual percent complete" and "cumulative value completed" with total at bottom.
6. Submit value summary printouts one week before each regularly scheduled progress meeting.

I. Execution Method Statement: Submit with the Contractor's Construction Program a method statement more detailed than that submitted with Tender, addressing all aspects of work and outlining the overall safety, health and environmental aspects, access, access to third parties, logistics, storage areas, security measures. The Method Statement shall be exhaustive and shall cover all major components of execution. Include in the Method Statement a description of the management and implementation methods for the engineering, procurement, transportation, installation, testing and commissioning of all major materials and equipment. Identify any specific coordination/interface requirements with other contractors' work. Give a description of all temporary construction requirements including detailed location of construction plant, equipment capacities, clearances, etc. supplemented by relevant sketches.

1.11 REPORTS AND DASHBOARDS

A. Daily Construction Reports: Prepare a daily construction report recording the following information concerning events at Project site:

1. List of subcontractors at Project site.
2. List of separate contractors at Project site.
3. Approximate count of personnel at Project site.
4. Equipment at Project site.
5. Material deliveries.
6. Weather record: High and low temperatures and general weather conditions, including presence of rain or snow.
7. Summary of completed activities for the previous day
8. Ongoing activities continuing today with the quantities achieved today and cumulatively
9. Activities started today
10. Activities scheduled for next day
11. Visitors Log
12. Testing and inspection.
13. Accidents log
14. Meetings and significant decisions.
15. Unusual events.
16. Stoppages, delays, shortages, and losses.
17. Meter readings and similar recordings.
18. Emergency procedures.
19. Orders and requests of authorities having jurisdiction.
20. Change Orders received and implemented.
21. Site Instructions received and implemented.
22. Services connected and disconnected.
23. Equipment or system tests and startups.
24. Partial completions and occupancies.
25. Substantial Completions authorized.
26. Problems encountered
27. Any other general or specific information requested by the Engineer to be reported.

B. Material Location Reports: At weekly intervals, prepare and submit a comprehensive list of materials delivered to and stored at Project site. List shall be cumulative, showing materials previously reported plus items recently delivered. Include with list a statement of progress on and delivery dates for materials or items of equipment fabricated or stored away from Project site. Indicate the following categories for stored materials:

1. Material stored prior to previous report and remaining in storage.
2. Material stored prior to previous report and since removed from storage and installed.
3. Material stored following previous report and remaining in storage.

C. Field Condition Reports: Immediately on discovery of a difference between site conditions and the Contract Documents, prepare and submit a detailed report. Submit with a Request for Information. Include a detailed description of the differing conditions, together with recommendations for changing the Contract Documents.

D. Accident Reports: On the occurrence of any accident which causes personal injury, or damage to the Works or any other property, prepare a detailed accident report and submit directly to Engineer within one day of occurrence. Include details of date and time, location, prevailing conditions, chain of events and causes leading up to accident, persons involved, response by Contractor's personnel and result or effect of accident. Obtain and attach witness statements, photographs and sketches as applicable.

1. On the occurrence of an accident or event which causes serious injury to any person, summon emergency services, notify appropriate authorities and inform Engineer immediately.

E. Project Risks: The Project Risks should be reported at the Project level on a monthly basis and should include at a minimum:

1. Risk Register

    a. Top 10 Risks (Scoring and Status).
    b. Top 10 Issues (Scoring and Status).

2. QSRA Results and required mitigation actions.

F. Unusual Event Reports: When an event of an unusual and significant nature occurs at Project site, whether or not related directly to the Work, prepare and submit a special report. List chain of events, persons participating, responses by Contractor's personnel, evaluation of results or effects, and similar pertinent information. Advise the Employer in advance when these events are known or predictable.

1. Submit unusual event reports directly to the Employer within **[one (1)]** day(s) of an occurrence. Distribute copies of report to parties affected by the occurrence.

G. Weekly Reports and Dashboards: The Contractor shall prepare weekly reports and dashboards, using excel spreadsheets and Power BI and submit to the Employer / Engineer or others with delegated authority on the designated day of each week as decided by the Employer / Engineer or others with delegated authority. Generally, the submission of weekly reports and dashboards shall be two days prior to the day of the progress meetings. The cut-off date of data date for this report shall be the Friday of the previous week. The weekly report shall consist as a minimum the following:

1. Updates of actual progress information.
2. Actual utilization of manpower.
3. Construction equipment.
4. Status of submissions.
5. Material procurement/delivery status.
6. Updated status and list of claims, variation orders and site instructions.
7. Safety record and statistics.

8. Quality Control statistics (i.e. Non-Conformance Report NCR, Request for Inspection RFI Report).
9. Weather record summary.
10. Update on problems encountered.
11. Other documents as required by the Engineer from time to time.

H. BIM Key performance Indicators (KPI's) and BIM Model progression matrix.

I. 4D & 5D simulations with relevant models.

J.]Monthly Progress Reports: Prepare and submit monthly progress reports, summarizing activities, achievements, advancements and significant events at Project site in month preceding, and reporting current progress status of Work; including but not necessarily limited to the following:

1. Executive Summary: detailing the planned versus actual progress, defining problem areas, risk items, anticipated delays and impact on the schedule. Provide delay analysis and the corrective action needed to recover the situation.
2. Summary of the information included in Daily Construction Reports for the month.
3. Summary of the information included in Material Location Reports for the month.
4. Latest update Submittals Schedule: Engineering Status, reports for Submittals overdue, held and rejected and Correspondence action log specially those requiring the Engineer's action or others. Same for Material procurement status.
5. Progress Review Statement: Refer to latest Update Contractor's Construction Program; include:

    a. Listing of all current month programmed activities and report whether each is on time, ahead of schedule or behind schedule in relation to original Contractor's Construction Program.
    b. On-going comparative line plot of Cash Flow Estimate against Interim Payment Certificates.
    c. Description of means, methods and actions to be taken in following month to expedite construction behind schedule and ensure current and subsequent activities will be completed within Time for Completion.

6. Status of Instructions/Information Requests: An updated list of RFI (Request for Information), NOV (Notice of Variation), EI (Engineer's Instruction), NCR (Non - Conformance Reports), indicating their status.
7. Updated Resource Charts (distribution curve and histogram).
8. Updated status and list of Claims, Variation Orders and Site Instructions/Memo.
9. Progress S-Curve (Planned/forecast against actual progress of works).
10. Primavera report showing activities planned for **[90]** days Look Ahead of Baseline Schedule, Updated Work Schedules and Recovery Schedule.
11. Primavera Report for Earned Value.
12. Primavera Schedule Reports for critical path, analysis and actions required to recover delay including updates on claims for Extension of Time submitted and approved.
13. Updated Manpower Loaded Schedule (including Histogram & 'S' curve): The Manpower Loaded Schedule included with the approved Schedule of Works shall be updated with actual expanded manpower and detailed with forecast manpower to be utilized. The Manpower Histogram shall be updated every week to compare and reflect the actual manpower at site. The histogram and 'S' curve shall show actual and forecast against planned.
14. Progress Photos: The Contractor shall note the requirements contained elsewhere in this Section.
15. Any other general or specific information, requested by the Engineer to be reported.

1.12 WAGE BOOK AND TIME SHEET RECORDS

A. Wage Books and Time Sheets: Keep and maintain accurate and proper wage books and time sheets of wages paid to and time worked by all workmen employed by Contractor and subcontractors at

Project site. Comply with regulations and requirements, if any, of authorities having jurisdiction. Store wage books and time sheets in field office and make available for Engineer's inspection and reference during normal working hours. If requested, produce and submit photocopies to Engineer.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 013200

es

SECTION 013233 - PHOTOGRAPHIC DOCUMENTATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Particular Conditions and other Division 01 Specifications sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for the following:

1. Preconstruction photographs.
2. Concealed Work photographs.
3. Periodic construction photographs.
4. Time-lapse sequence construction photographs
5. Final Completion construction photographs.
6. Preconstruction video recordings.
7. Periodic construction video recordings.
8. Time-lapse sequence construction video recordings
9. Construction webcam.

B. Related Requirements:

1. Division 01 Section 017700 "Closeout Procedures" for submitting photographic documentation as Project Record Documents at Project Closeout.
2. Division 01 Section 017900 "Demonstration and Training" for submitting video recordings of demonstration of equipment and training of the Employer's personnel.
3. Division 01 Section 024116 "Structure Demolition" for photographic documentation before building demolition operations commence.
4. Division 02 Section 024119 "Selective Demolition" for photographic documentation before selective demolition operations commence.
5. Division 03 Section 311000 "Site Clearing" for photographic documentation before site clearing operations commence.

1.3 DEFINITIONS

A. Taking Over: Substantial Completion.

1.4 INFORMATIONAL SUBMITTALS

A. Key Plan: Prior to the commencement date, submit for the approval of the Engineer a key plan of Project site and building with notation of vantage points marked for location and direction of each photograph and video recording. Indicate elevation or story of construction. Include same information as corresponding photographic documentation.

1. The key plan shall be reissued as part of the Contractor’s monthly report and shall indicate the elevation or story of construction of each photographic location.

B. Digital Photographs: Submit image files within three (3) days of taking photographs.

es

1. Submit photos by uploading image files for each photograph to the web-based project management software. Include copy of key plan indicating each photograph's location and direction.
2. Identification: Provide the following information with each image description:

    a. Name of Project.
    b. Name and contact information for photographer.
    c. Name of the Engineer and Construction Manager.
    d. Name of Contractor.
    e. Date photograph was taken.
    f. Description of location, vantage point, and direction.
    g. Unique sequential identifier keyed to accompanying key plan.

C. Printed Photographs: Submit [**two (2)**] sets of prints of each photographic view within [**seven (7)**] days of taking photographs.

1. Format: 203-by-254-mm smooth-surface matte prints on single-weight, paper; enclosed back to back in clear plastic sleeves punched for three-ring binder. Include copy of key plan indicating each photograph's location and direction. Provide one binder for each set of prints.
2. Identification: On back of each print, label with the following information:

    a. Name of Project.
    b. Name and contact information for photographer.
    c. Name of the Engineer and Construction Manager**.**
    d. Name of Contractor.
    e. Date photograph was taken if not date stamped by camera.
    f. Description of vantage point, indicating location, direction (by compass point), and elevation or story of construction.
    g. Unique sequential identifier keyed to accompanying key plan.

D. Video Recordings: Submit video recordings within three (3) days of recording.

1. Submit video recording by uploading to the web-based project management software. Include copy of key plan indicating each video's location and direction.
2. Identification: With each submittal, provide the following information:

    a. Name of Project.
    b. Name and contact information of photographer.
    c. Name of the Engineer [and Construction Manager].
    d. Name of Contractor.
    e. Date video recording was recorded.
    f. Description of vantage point, indicating location, direction (by compass point),
    g. and elevation or story of construction.
    h. Each video recording shall be narrated to explain the content.

E. Transcript: Prepare and submit a transcript of the narration with the submittal.

F. Time-Lapse Video: Submit time-lapse sequence video recordings within three (3) days of recording.

1. Submit time-lapse sequence video recordings monthly to the web-based project management software, as part of the monthly report.
2. Identification: For each recording, provide the following:

    a. Name of Project.
    b. Name and contact information for photographer.
    c. Name of the Engineer and Construction Manager.
    d. Name of Contractor.
    e. Date(s) and time(s) video recording was recorded.

es

f. Description of vantage point, indicating location, direction (by compass point), and elevation or story of construction.

1.5 QUALITY ASSURANCE

A. Photographer Qualifications: An individual who has been regularly engaged as a professional photographer of construction projects for not less than three years.

B. Construction Webcam Service Provider: A firm specializing in providing photographic equipment, web-based software, and related services for construction projects, with a record of providing satisfactory services similar to those required for Project.

1.6 FORMATS AND MEDIA

A. Digital Photographs: Provide color images in JPG format, produced by a digital camera with minimum sensor size of twelve (12) megapixels, and at an image resolution of not less than 3200 by 2400 pixels. Use flash in low light levels or backlit conditions.

B. Digital Video Recordings: Provide high-resolution, digital video in MPEG format, produced by a digital camera with minimum sensor resolution of twelve (12) megapixels and capable of recording in full high-definition mode with vibration-reduction technology. Provide supplemental lighting in low light levels or backlit conditions.

C. Digital Images: Submit digital media as originally recorded in the digital camera, without alteration, manipulation, editing, or modifications using image-editing software.

E. Metadata: Record accurate date and time and GPS location data from camera.

F. File Names: Name media files with date and Project area and sequential numbering suffix.

1.7 CONSTRUCTION PHOTOGRAPHS

A. Photographer: Engage a qualified photographer to take construction photographs.

B. General: Take photographs with maximum depth of field and in focus.

1. Maintain key plan with each set of construction photographs that identifies each photographic location and direction of view. The photographs shall be taken on the date coinciding with the cut-off date associated with each monthly statement. Following suggestions by the Engineer and Contractor, photographer shall select vantage points and directions from which the construction photographs should be taken.

C. Preconstruction Photographs: Before commencement of the Work, take photographs of Project site and surrounding properties, including existing items to remain during construction, from different vantage points, as directed by Engineer.

1. Flag construction limits before taking construction photographs.
2. Take a minimum of twenty (20) photographs to show existing conditions adjacent to property before starting the Work.
3. Take a minimum of twenty (20) photographs of existing buildings either on or adjoining property, to accurately record physical conditions at start of construction.
4. Take additional photographs as required to record settlement or cracking of adjacent structures, pavements, and improvements.

es

D. Concealed Work Photographs: Before proceeding with installing work that will conceal other work, take photographs sufficient in number, with annotated descriptions, to record nature and location of concealed Work, including, but not limited to, the following:

1. Underground utilities.
2. Under slab services.
3. Piping.
4. Electrical conduit.
5. Waterproofing and weather-resistant barriers.

E. Abortive Works Photographs: Before demolition of any Works made abortive due to the issuance of a Variation Order, take sufficient photographs with annotated descriptions, to record the nature and location of the abortive Work and to adequately record the condition and progress of the Works prior to demolition. Where applicable, the photographs should include a survey grade rod to provide scale and establish measurements.

F. Periodic Construction Photographs: Take a minimum of fifty (50) photographs weekly. Select vantage points to show status of construction and progress since last photographs were taken.

G. Time-Lapse Sequence Construction Photographs: Take a minimum of twenty (20) photographs as indicated, to show status of construction and progress since last photographs were taken.

1. Frequency: Take photographs weekly.
2. Vantage Points: Following suggestions by Engineer and Contractor, photographer shall select vantage points. During each of the following construction phases, take not less than [**two (2)**] of the required shots from same vantage point each time, to create a time-lapse sequence as follows:

    a. Commencement of the Work, through completion of subgrade construction.
    b. Above-grade structural framing.
    c. Exterior building enclosure.
    d. Interior Work, through date of Taking Over.

H. Fabrication Photographs: Take an appropriate number of photographs each month of Works being carried out off-site at fabrication yards, factories, etc. in order to demonstrate production progress of key components as instructed by the Employer's Representative.

I. Sectional Completion Construction Photographs: When a section or part of the Works are taken over by the Employer, take a minimum of one hundred (100) photographs as requested by the Employer's Representative immediately after the date of Taking-Over for submission as Project Record Documents. The Employer's Representative will inform the photographer of the desired vantage points

J. Final Completion Construction Photographs: Take a minimum of hundred (100) photographs after date of Taking Over for submission as Project Record Documents. Engineer will inform photographer of desired vantage points.

K. Additional Photographs: The Engineer may request photographs in addition to periodic photographs specified free of charge.

1. Three days' notice will be given, where feasible.
2. In emergency situations, take additional photographs within 24 hours of request.
3. Circumstances that could require additional photographs include, but are not limited to, the following:

    a. Special events planned at Project site.
    b. Immediate follow-up when on-site events result in construction damage or losses.
    c. Photographs shall be taken at fabrication locations away from Project site. These photographs are not subject to unit prices or unit-cost allowances.

es

d. Taking Over of a major phase or component of the Work.
e. Extra record photographs at time of final acceptance.
f. The Employer's request for special publicity photographs.

1.8 CONSTRUCTION VIDEO RECORDINGS

A. Video Recording Photographer: Engage a qualified videographer to record construction video recordings.

B. Narration: Describe scenes on video recording by audio narration by microphone while or dubbing audio narration off-site after video recording is recorded. Include description of items being viewed, recent events, and planned activities. At each change in location, describe vantage point, location, direction (by compass point), and elevation or story of construction.

1. Confirm date and time at beginning and end of recording.
2. Begin each video recording with name of Project, Contractor's name, videographer's name, and Project location.

C. Transcript: Provide a typewritten transcript of the narration. Display images and running time captured from video recording opposite the corresponding narration segment.

D. Preconstruction Video Recording: Before starting works, record video recording of Project site and surrounding properties from different vantage points, as directed by the Engineer .

1. Flag construction limits before recording construction video recordings.
2. Show existing conditions adjacent to Project site before starting the Work.
3. Show existing buildings either on or adjoining Project site to accurately record physical conditions at the start of any works onsite.
4. Show protection efforts by Contractor of existing structures and utilities.

E. Periodic Construction Video Recordings: Record video recording weekly. Select vantage points to show status of construction and progress since last video recordings were recorded. Minimum recording time shall be thirty (30) minutes(s).

F. Time-Lapse Sequence Construction Video Recordings: Record video recording to show status of construction and progress.

1. Appoint a suitably qualified and experienced subcontractor to install, monitor and maintain, two (2) time-lapse cameras. The time-lapse recordings must be taken on over the period coinciding with the cut-off date associated with each monthly Statement. Each video generated from the still photographs should cover one calendar month.
2. The cameras are to be located in positions that will not be disturbed by the works and the locations are to be maintained throughout construction. The Cameras are to be placed in elevated housings that are dust proof and weatherproof.
3. The position of the cameras, as well as the make and model of camera, resolution of the pictures, time interval between pictures, video frame rate and any other technical variables shall be approved by the Employer’s Representative prior to installation.
4. Final Completion Construction Video: When the Works are taken over by the Employer, the Contractor shall compile a time-lapse video of the entire construction period for each location for submission as Project Record Documents.
5. Frequency: During each of the following construction phases, set up video recorder to automatically record one frame of video recording every five (5) minutes, from same vantage point each time, to create a time-lapse sequence of thirty (30) minutes in length as follows:

a. Commencement of the Work, through completion of subgrade construction.
b. Above-grade structural framing.
c. Exterior building enclosure.

es

6. Timer: Provide timer to automatically start and stop video recorder, so recording occurs only during work hours.
7. Vantage Points: Following suggestions by the Engineer and Contractor, photographer shall select vantage points.

1.9 CONSTRUCTION WEBCAM

A. Webcam: Provide two (2) fixed-location camera(s) with weatherproof housing, mounted to provide unobstructed view of construction site from location approved by the Engineer, with the following characteristics:

1. Remotely controllable view with mouse-click user navigation for horizontal pan, vertical tile, and optical zoom of 500 percent minimum.
2. Capable of producing minimum Twelve (12) megapixel images.
3. Provide power supply, active high-speed data connection to service provider's network, and static public IP address for each camera.

B. Live Streaming Images: Provide web-accessible image of current site image, updated at fifteen (15) minute intervals during daytime operation.

C. Web-Based Interface: Provide online interface to allow viewing of each high-definition digital still image captured and stored during construction, from the Internet.

1. Access Control: Provide password-protected access for Project team administered by Contractor, providing current image access and archival image access by date and time, with images downloadable to viewer's device.
2. Software: Provide responsive software interface for use on computer, tablet, and mobile screens with accompanying iPhone/iPad app and Android apps.
3. Storage: Maintain images on the website for reference during entire construction period, and for not less than 30 days after Final Completion. Provide sufficient memory on remote server to store all Project images.
4. Online Interface: Provide website interface with Project and client information and logos, calendar-based navigation interface for selecting images, and pan and zoom capability within high-definition images.
5. Forward and Reverse: Provide capability to browse through images, moving forward and backward in time by individual image and by day.
6. Slideshow: Provide capability to automatically display current images from sites when there are three or more cameras used.
7. Time-Lapse: Provide capability for online display of project time-lapse.
8. Dashboard: Provide capability to view thumbnails of all cameras on one screen.
9. Weather: Provide corresponding weather data for each image captured.
10. Provide secure role-based access to online Project cameras to the predefined, based on project specific requirements, authorized viewers / users.
11. Provide public viewer open access to most recent Project camera image.

D. Maintain cameras and web-based access in good working order, according to web-based construction photographic documentation service provider's written instructions until Final Completion. Provide for service of cameras and related networking devices and software.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 013233

SECTION 013300 - SUBMITTAL PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Particular Conditions and other Division 01 Specifications sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Submittal schedule requirements.
2. Administrative and procedural requirements for design and construction submittals (product data, shop drawings. Samples, and others).

B. Related Requirements:

1. Division 01 Section 013100 "Project Management and Coordination" for submitting coordination drawings and subcontract list and for requirements for web-based Project software.
2. Division 01 Section 013200 "Construction Progress Documentation" for submitting schedules and reports, including Contractor's construction schedule.
3. Division 01 Section 013233 "Photographic Documentation" for submitting preconstruction photographs, periodic construction photographs, and Final Completion construction photographs.
4. Division 01 Section 014000 "Quality Requirements" for submitting test and inspection reports, and schedule of tests and inspections.
5. Division 01 Section 017700 "Closeout Procedures" for submitting closeout submittals and maintenance material submittals.
6. Division 01 Section 017823 "Operation and Maintenance Data" for submitting operation and maintenance manuals.
7. Division 01 Section 017839 "Project Record Documents" for submitting record Drawings, record Specifications, and record Product Data.
8. Division 01 Section 017900 "Demonstration and Training" for submitting video recordings of demonstration of equipment and training of Employer's personnel.
9. Division 01 Section 018113.14 - Sustainable Design Requirements
10. Division 25, Section 251521 “Integrated Automation Software - Digital Twin Platform and related Works”.
11. Specification sections related to the functionality and efficiency of the executed systems.

1.3 DEFINITIONS

A. Action Submittals: Written and graphic information and physical samples that require Engineer’s and Construction Manager's responsive action. Action submittals are those submittals indicated in individual Specification Sections as "action submittals."

B. Informational Submittals: Written and graphic information and physical samples that do not require Engineer’s and Construction Manager's responsive action. Submittals may be rejected for not complying with requirements. Informational submittals are those submittals indicated in individual Specification Sections as "informational submittals."

C. File Transfer Protocol (FTP): Communications protocol that enables transfer of files to and from another computer over a network and that serves as the basis for standard Internet protocols. An FTP site is a portion of a network located outside of network firewalls within which internal and external users are able to access files.

D. Portable Document Format (PDF): An open standard file format licensed by Adobe Systems used for representing documents in a device-independent and display resolution-independent fixed-layout document format.

E. Building Information Modeling (BIM): Refer to the Annexes of this Section.

1.4 SUBMITTAL SCHEDULE

A. Submittal Schedule: Submit, as an action submittal, a list of submittals, arranged in chronological order by dates required by construction schedule. Include time required for review, ordering, manufacturing, fabrication, and delivery when establishing dates. Include additional time required for making corrections or revisions to submittals noted by Engineer and Construction Manager and additional time for handling and reviewing submittals required by those corrections.

1. Coordinate submittal schedule with list of subcontracts, the schedule of values, and Contractor's construction schedule.
2. Initial Submittal Schedule: Submit concurrently with startup construction schedule. Include submittals required during the first 60 days of construction. List those submittals required to maintain orderly progress of the Work and those required early because of long lead time for manufacture or fabrication.
3. Final Submittal Schedule: Submit concurrently with the first complete submittal of Contractor's construction schedule.

    a. Update Submittals: Submit continuously revised submittal schedule as required to reflect changes in current status and timing for submittals. Submit an Update Submittals Schedule on the day before each regular Progress Meeting.

4. Format: Arrange the following information in a tabular format:

    a. Scheduled date for first submittal.
    b. Specification Section number and title.
    c. Submittal Category: Action; informational.
    d. Name of subcontractor.
    e. Description of the Work covered.
    f. Scheduled date for Engineer’s and Construction Manager's final release or approval.
    g. Scheduled dates for purchasing.
    h. Scheduled date of fabrication.
    i. Scheduled dates for installation.
    j. Activity or event number.

B. Project Design and Construction Building Information Modeling (BIM) ready for integration with Digital twin Platform Execution Plan: Submit for the Engineer's approval, not later than 14 days after the date of issue of the Letter of Acceptance, the Project Design and Construction BIM Execution Plan in accordance with the provisions of this Section. The Project Design and Construction BIM Execution Plan shall include, but is not limited to the following:

1. The Contractor’s and his sub-contractors and subconsultants’ roles, responsibilities and authorities.
2. Design and Construction BIM ready for integration with Digital twin Platform deliverables including but not limited to the Design and Construction BIM strategy and methodology.
1. The Master Information Delivery Plan (MIDP) listing the information deliverables for the project, including but not limited to models, drawings, specifications, equipment schedules, room data sheets. The MIDP shall be compiled by the Contractor and used to manage the

delivery of information during the project. The Contractor is expected to require all his Sub-Consultants, Sub-Contractors and project related team members, to compile their own Task Information Delivery Plans (TIDP), which will be used to communicate the responsibility for delivery of each party's scope of works. Milestones within each TIDP shall be aligned with the design and construction schedule and used to produce the MIDP. The TIPD's will be used to plan and communicate to all project related team members of the required sequence of model preparation for work packages used in the project. The Master Information Delivery Plan (MIDP) which consists of individual disciplines / Sub-Contractors Task Information Delivery Plans (TIDP) is to be held, managed, and regularly updated as per design and construction phases, milestones and submittals on the Common Data Environment by the Contractor.

2. Major project milestones consistent with the Contractor's design and construction schedule and the MIDP.
3. Project information model deliverable strategy, i.e. detailed strategy plans, diagrams, visual workflows describing the following:

    a. Project Design and Construction BIM Model ready for integration with Digital twin Platform collaboration after coordination with Sub-Contractors and other contractors on site.
    b. Clarification of all project's related team members ability and capability to develop, coordinate and submit their scope of works/services through a BIM Environment, and if not, to identify and detail a strategy to incorporate their required deliverables within the Project Design and Construction BIM Model.
    c. Process for Extraction of Design, Installation, Shop and other design and construction Drawings, Schedules, Details etc. for Engineer's approval and validation.
    d. Detailed workflows explaining and communicating the - subcontractors' coordination strategy between all various trades for clash detection, QA / QC of all submitted information against the Project Design and Construction BIM Model.
    e. Developing and Linking of the Project Design and Construction BIM Model ready for integration with Digital twin Platform with the Design and Construction schedule using 4D Planning and Scheduling software]in accordance with the requirements of this Section and Section 013200.
    f. Detailed strategy for the input and updating of As-Built conditions within the Project Design and Construction BIM Model and used tools.
    g. Details of Project BIM ready for integration with Digital twin Platform Uses through [Design and] Construction.
    h. The issuing and agreement of a Project BIM Protocol between all project related team members, detailing contractual roles, responsibilities and liabilities.
    i. Existing Survey strategy and existing legacy data use.
    j. eLOD / iLOD ready for integration with Digital twin Platform Matrices Tables in accordance with this section and annexes.

C. Project Design and Construction Execution Plan: Submit for the Engineer's approval, not later than 14 days after the date of issue of the Letter of Acceptance, the Project Design and Construction Execution Plan in accordance with the provisions of this Section. The Project Design and Construction Execution Plan shall include, but is not limited to the following:

1. The Contractor's and his sub-contractors and subconsultants' roles, responsibilities and authorities.
2. Design and Construction deliverables including but not limited to the Design and Construction methodology.
3. The list of deliverables listing the information deliverables for the project, including but not limited to drawings, specifications, equipment schedules, room data sheets. The list of deliverables shall be compiled by the Contractor and used to manage the delivery of information during the project. The Contractor is expected to require all his Sub-Consultants, Sub-Contractors and project related team members, to compile their own list of deliverables, which will be used to communicate the responsibility for delivery of each party's scope of works.
4. Major project milestones consistent with the Contractor's design and construction schedule.

5. Project delivery strategy, i.e. detailed strategy plans, diagrams, visual workflows describing the following:

    a. Shop and other design and construction Drawings, Schedules, Details etc. for Engineer's approval and validation.
    b. Detailed workflows explaining and communicating the subcontractors' coordination strategy between all various trades.
    c. Detailed strategy for the input and updating of As-Built conditions.
    d. Existing Survey strategy and existing legacy data use.

6. The Contractor's workflows during the Design and Construction process to capture and link all required record documents.

1.5 SUBMITTAL FORMATS

A. Submittal Information: Include the following information in each submittal:

1. Project name.
2. Date.
3. Name of Engineer.
4. **Name of Construction Manager.**
5.]Name of Contractor.
6. Name of firm or entity that prepared submittal.
7. Names of subcontractor, manufacturer, and supplier.
8. Unique submittal number, including revision identifier. Include Specification Section number with sequential alphanumeric identifier and alphanumeric suffix for resubmittals.
9. Category and type of submittal.
10. Submittal purpose and description.
11. Number and title of Specification Section, with paragraph number and generic name for each of multiple items.
12. Drawing number and detail references, as appropriate.
13. Indication of full or partial submittal.
14. Location(s) where product is to be installed, as appropriate.
15. Other necessary identification.
16. Remarks.
17. Signature of transmitter.

B. Options: Identify options requiring selection by Engineer.

C. Deviations and Additional Information: On each submittal, clearly indicate deviations from requirements in the Contract Documents, including minor variations and limitations; include relevant additional information and revisions, other than those requested by Engineer and Construction Manager on previous submittals. Indicate by highlighting on each submittal or noting on attached separate sheet.

D. Paper Submittals:

1. Place a permanent label or title block on each submittal item for identification; include name of firm or entity that prepared submittal.
2. Provide a space approximately 150 by 200 mm on label or beside title block to record Contractor's review and approval markings and action taken by Engineer and Construction Manager.
3. Action Submittals:

    a. Submit two (2) paper copies of each submittal unless otherwise indicated or instructed by the Engineer. The Engineer will return one (1) marked-up copy. The Contractor shall scan and provide a hard copy of the same.

4. Informational Submittals:

    a. Submit two (2) paper copies of each submittal unless otherwise indicated or instructed by the Engineer. The Engineer will not return copies unless deemed necessary by the Engineer.

5. Additional Copies: Unless additional copies are required for final submittal, and unless Engineer noncompliance with provisions in the Contract Documents, initial submittal may serve as final submittal.
6. Transmittal for Submittals: Assemble each submittal individually and appropriately for transmittal and handling. Transmit each submittal using AIA Document G810] [facsimile of sample form included in Project Manual transmittal form.

E. Electronic Submittals:

1. Prepare submittals as PDF package, incorporating complete information into each PDF file. Name each PDF file with corresponding submittal number.
2. Contractor's submissions shall be done on a readable and searchable PDF document (or on the applicable format in case of drawings). Scanned images are not acceptable.

F. Submittals Utilizing Web-Based Project Software:

1. Prepare submittals as PDF files or other format as agreed with the Engineer. All PDF formats shall be readable and searchable files.

G. Wherever the Specifications of this Contract refer to 'copy or copies' in whatsoever form it means the 'copy or copies' read, reproduced, communicated and stored through the Web-based Project Software as defined in Section 013100, unless otherwise specified.

1.6 **[BIM]** SUBMITTAL ADMINISTRATIVE REQUIREMENTS

A. The Contractor is required to abide by this Section and its Annexes for the definition and requirements of the Building Information Modeling (BIM) ready for integration with Digital twin Platform development and submissions.

B. The Contractor is required to share his BIM Model(s) with the Engineer for coordination with the Project's BIM model(s) as deemed necessary by the Engineer. Upon appending the Contractor's BIM models with the Engineer's, the Engineer may request the Contractor to undertake modifications to his model in order to align it with the surrounding structures and systems; the Contractor shall undertake these modifications.

C. Engineer's Digital Data Files: Electronic digital data files of the Contract Drawings will be provided by Engineer for Contractor's use in preparing submittals.

1. Pre-Contract Award: Tenderers will be provided with the design stage BIM Models in Navisworks (NWD) file format.
2. Post Contract Award: Awarded Contractor will be provided with the Engineer's Design Stage Project BIM Models in Native File Format and a Combined Navisworks (NWD) File Format to the level specified in the annexes of this Section, at the Commencement Date.

D. The Contractor shall follow the Contract drawings and Engineer's Design Stage Project BIM Model ready for integration with Digital twin Platform for the development of his Federated BIM Model(s). In case of discrepancy between the Contract drawings and the Engineer's Design Stage Project BIM Model, the following order of priority shall be followed:

1. Contract drawings.
2. Engineer's Design Stage Project BIM Model.

E. Engineer's Digital Data Files: Electronic digital data files of the Contract Drawings will be provided by Engineer for Contractor's use in preparing submittals.

1. Post Contract Award: Awarded Contractor will be provided with the Engineer's Design Stage Drawings at the Commencement Date.

F. The Contractor shall follow the Contract drawings and Engineer's Design Stage Drawings for the development of the Contractor's submittals.

1.7 SUBMITTAL PROCEDURES

A. Prepare and submit submittals required by individual Specification Sections. Types of submittals are indicated in individual Specification Sections.

1. Post electronic submittals as BIM models ready for integration with Digital twin Platform in their native file format and PDF electronic files via Employer's Project Management System, or any other Common Data Environment (CDE) designated by the Employer documentation as referenced below, for purposes of all project communication and submissions.

   a. The Engineer will return annotated file. Retain one copy of file as an electronic Project record document file.

2. Provide the Building Information Model(s) as listed in, and required by this Section (and Annexes) and individual Specification Sections, for each element of the project in native format, which should also include the Master Information Delivery Plan (MIDP) listing the information deliverables required for the project, including but not limited to models, drawings, specifications, equipment schedules, room data sheets etc. including software type and version used to create the models. Integrated Models submitted by the Contractor will demonstrate to the Engineer that model development has been fully completed for the related section, is fully coordinated, clash free, and complies with the Specification and the annexes to this Section.
3. Any design related data or submittals not extracted from BIM will be labelled as "Not from BIM", subject to Employer Approval. Any data drops not generated from BIM will be listed within the Contractors project BIM Execution Plan.
4. Email: Prepare submittals as PDF package and transmit to Engineer by sending via email. Include PDF transmittal form. Include information in email subject line as requested by Engineer.

   a. Engineer will return annotated file. Retain one copy of file as a digital Project Record Document file.

5. Web-Based Project Management Software: Prepare submittals in PDF form, and upload to web-based Project management software website. Enter required data in web-based software site to fully identify submittal.
6. Paper: Prepare submittals in paper form and deliver to Engineer.

B. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.

1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.
3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
4. Coordinate transmittal of submittals for related parts of the Work specified in different Sections, so processing will not be delayed because of need to review submittals concurrently for coordination.

a. Engineer reserves the right to reject action on a submittal requiring coordination with other submittals until related submittals are received.

5. Transmit each submittal sufficiently in advance of performance of related procurement and construction activities, allowing ample time for review and resubmittal if necessary, in order to prevent delays to the work.

C. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Engineer's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.

1. Initial Review: Allow fifteen (15) days for initial review of each submittal. Allow additional time if coordination between multiple trades and / or with subsequent submittals is required. Engineer will advise Contractor when a submittal being processed must be delayed for coordination.
2. Intermediate Review: If intermediate submittal is necessary, process it in same manner as initial submittal.
3. Resubmittal Review: Allow Seven (7) days for review of each resubmittal.
4. Sequential Review: Where sequential review of submittals by Engineer's consultants, Employer, or other parties is indicated, allow twenty-one (21) days for initial review of each submittal.

5. Concurrent Consultant Review: Where the Contract Documents indicate that submittals may be transmitted simultaneously to Engineer and to Engineer's consultants, allow twenty-one (21) days for review of each submittal. Submittal will be returned to Engineer before being returned to Contractor.

a. Submit one (1) copy of submittal to concurrent reviewer in addition to specified number of copies to Engineer.

D. Paper Submittal: Include the following information for processing and recording action taken:

a. Project name.
b. Date.
c. Name and address of Engineer.
d. Name and address of Contractor.
e. Name and address of subcontractor.
f. Name and address of supplier.
g. Name and address of manufacturer.
h. Submittal number or other unique identifier, including revision identifier.

1) Submittal number shall use Specification Section number followed by a decimal point and then a sequential number (e.g., 061000.01). Resubmittals shall include an alphabetic suffix after another decimal point (e.g., 061000.01.A) or as agreed upon with the Engineer.

i. Number and title of appropriate Specification Section.
j. Drawing number and detail references, as appropriate.
k. Location(s) where product is to be installed, as appropriate.
l. Other necessary identification.
m. Revision number.
n. Revision notes.
o. Company stamp.
p. Company representative signature.

E. Electronic Submittals: Identify and incorporate information in each electronic submittal file as follows:

1. Assemble complete submittal package into a single indexed file incorporating submittal requirements of a single Specification Section and transmittal form with links enabling navigation to each item.
2. Name file with submittal number or other unique identifier, including revision identifier.

    a. File name shall use project identifier and Specification Section number followed by a decimal point and then a sequential number (e.g., LNHS-061000.01). Resubmittals shall include an alphabetic suffix after another decimal point (e.g., LNHS-061000.01. A). or as agreed upon with the Engineer

3. Provide means for insertion to permanently record Contractor's review and approval markings and action taken by Engineer.
4. Include the following information on an inserted cover sheet:

    a. Project name.
    b. Date.
    c. Name of Engineer.
    d. Name of Employer.
    e. Name of Contractor.
    f. Name of firm or entity that prepared submittal.
    g. Name of subcontractor.
    h. Name of supplier.
    i. Name of manufacturer.
    j. Number and title of appropriate Specification Section.
    k. Drawing number and detail references, as appropriate.
    l. Location(s) where product is to be installed, as appropriate.
    m. Related physical samples submitted directly.
    n. Other necessary identification.

5. Include the following information as keywords in the electronic file metadata:

    a. Project name.
    b. Number and title of appropriate Specification Section.
    c. Manufacturer name.
    d. Product name.
    e. Insert additional required information.

F. Options: Identify options requiring selection by the Engineer.

G. Transmittal for Submittals: Assemble each submittal individually and appropriately for transmittal and handling. Transmit each submittal using a transmittal form. attached to a cover letter. The Engineer will discard, without review, submittals received from sources other than the Contractor.

1. Cover Letter: On attached, numbered, separate sheet(s), prepared on the Contractor's letterhead, record relevant information, requests for data, revisions other than those requested by the Engineer on previous submittals, and deviations from requirements of the Contract Documents, including minor variations and limitations. Include the same label information as the related submittal.

    a. Include Contractor's certification stating that information submitted complies with requirements of the Contract Documents.

2. Transmittal Form: Use a form acceptable to and approved by the Engineer Provide locations on form for the following information:

3. Transmittal Form: Provide locations on form for the following information:

    a. Contract name.
    b. Employer’s name.

c. Date.
d. Destination (To:).
e. Source (From:).
f. Name and address of Engineer.
g. Name and address of Contractor.
h. Name and address of firm or entity that prepared submittal.
i. Names of subcontractor, manufacturer, and supplier.
j. Category and type of submittal.
k. Submittal purpose and description.
l. Specification Section number and title.
m. Specification paragraph number or drawing designation and generic name for each of multiple items.
n. Indication of full or partial submittal.
o. Drawing number and detail references, as appropriate.
p. Location(s) where product is to be installed, as appropriate.
q. Submittal and transmittal distribution record.
r. Remarks.
s. Signature of transmitter.

H. Resubmittals: Make resubmittals in same form and number of copies as initial submittal.

1. Note date and content of previous submittal.
2. Note date and content of revision in label or title block, and clearly indicate extent of revision.
3. Resubmit submittals until they are marked with approval notation from Engineer’s action stamp.

I. Distribution: Furnish copies of final submittals to manufacturers, subcontractors, suppliers, fabricators, installers, authorities having jurisdiction, and others as necessary for performance of construction activities. Show distribution on transmittal forms.

J. Use for Construction: Retain complete copies of submittals on Project site. Use only final action submittals that are marked with approval notation from Engineer’s action stamp.

1.8 SUBMITTAL REQUIREMENTS

A. Product Data: Collect information into a single submittal for each element of construction and type of product or equipment.

1. Provide only copies of original manufacturer published or printed product information, catalogues, data, colour charts and the like.
2. If information must be specially prepared for submittal because standard published data are not suitable for use, submit as Shop Drawings, not as Product Data.
3. Mark each copy of each submittal to show which products and options are applicable.
4. Include the following information, as applicable:

a. Manufacturer's catalog cuts.
b. Manufacturer's written recommendations.
c. Manufacturer's product specifications.
d. Manufacturer's installation instructions.
e. Standard color charts.
f. Statement of compliance with specified referenced standards.
g. Testing by recognized testing agency.
h. Application of testing agency labels and seals.
i. Notation of coordination requirements.
j. Availability and delivery time information.

5. For equipment, include the following in addition to the above, as applicable:

a. Wiring diagrams showing factory-installed wiring.
b. Printed performance curves.
c. Operational range diagrams.
d. Mill reports.
e. Standard product operating and maintenance manuals.
f. Compliance with recognized trade association standards.
g. Compliance with recognized testing agency standards.
h. Application of testing agency labels and seals.
i. Notation of coordination requirements.
j. Clearances required to other construction, if not indicated on accompanying Shop Drawings.

6. Submit Product Data before shop drawings and before or concurrently with samples in the following format:

a. One PDF electronic file.
b. Two (2) paper copies of Product Data. The Engineer will return one (1) marked-up copy. The Contractor shall scan and provide a hard copy of the same.

B. BIM Model(s), Design, Installation, Coordination, Shop and Record (As-Built) Drawings: Prepare Project-specific information, drawn accurately to scale. Do not base Shop Drawings on reproductions of the Contract Documents or standard printed data.

1. BIM File Incorporation: Develop and submit the Project information Models (PIM) to the level specified in this section and its Annexes, and submit the extracted Drawing files in the following order:

a. The Contractor shall submit the Project information Models (PIM) to the Engineer to facilitate his coordination review of the drawings.
b. The Contractor shall extract the Drawings from the Project information Models (PIM) and submit them to the Engineer's approval, in the same digital data software program, version, and operating system as the original Drawings. The relevant Project information Models (PIM) is provided to the Engineer to facilitate his coordination review of the submitted drawings.

C. Shop Drawings: Prepare Project-specific information, drawn accurately to scale. Do not base Shop Drawings on reproductions of the Contract Documents or standard printed data unless submittal based on Engineer's digital data drawing files is otherwise permitted.

1. Preparation: Fully illustrate requirements in the Contract Documents. Include the following information, as applicable:

a. Identification of products.
b. Schedules.
c. Compliance with specified standards.
d. Notation of coordination requirements.
e. Notation of dimensions established by field measurement.
f. Relationship and attachment to adjoining construction clearly indicated.
g. Seal and signature of professional engineer if specified.
h. Design calculations

2. Wiring Diagrams: Differentiate between manufacturer-installed and field-installed wiring.
3. Sheet Size: Except for templates, patterns, and similar full-size drawings, submit Shop Drawings on sheets at least A2 size, and no larger than A0 size, unless otherwise approved.
4. Submittals:

a. PDF electronic files.
b. Two (2) opaque (bond) copies of each submittal.
c. PDF electronic files and one (1) opaque (bond) copies of each submittal.

5. BIM file Incorporation: Develop, coordinate and extract Installation Shop Drawings from Building Information Model ready for integration with Digital twin Platform established for the Project and in accordance with this Section's Annexes and in the same digital data software program, version, and operating system as the original Drawings.

    a. Refer to Section 013100 "Project Management and Coordination" for other requirements for coordination drawings.

D. Samples: Submit Samples for review of type, color, pattern, and texture for a check of these characteristics with other materials.

1. Transmit Samples that contain multiple, related components, such as accessories together in one submittal package.
2. Identification: Permanently attach label on unexposed side of Samples that includes the following:

    a. Project name and submittal number.
    b. Generic description of Sample.
    c. Product name and name of manufacturer.
    d. Sample source.
    e. Number and title of applicable Specification Section.
    f. Specification paragraph number and generic name of each item.

3. Email Transmittal: Provide PDF transmittal. Include digital image file illustrating Sample characteristics and identification information for record.
4. Web-Based Project Management Software: Prepare submittals in PDF form, and upload to web-based Project software website. Enter required data in web-based software site to fully identify submittal.
5. Paper Transmittal: Include paper transmittal, including complete submittal information indicated.
6. Disposition: Maintain sets of approved Samples at Project site, available for quality-control comparisons throughout the course of construction activity. Sample sets may be used to determine final acceptance of construction associated with each set.

    a. Samples that may be incorporated into the Work are indicated in individual Specification Sections. Such Samples must be in an undamaged condition at time of use.
    b. Samples not incorporated into the Work, or otherwise designated as Employer's property, are the property of Contractor.

7. Samples for Initial Selection: Submit manufacturer's color charts consisting of units or sections of units, showing the full range of colors, textures, and patterns available.

    a. Number of Samples: Submit one (1) full set(s) of available choices where color, pattern, texture, or similar characteristics are required to be selected from manufacturer's product line. The Engineer will return submittal with options selected.

8. Samples for Verification: Submit full-size units or Samples of size indicated, prepared from same material to be used for the Work, cured and finished in manner specified, and physically identical with material or product proposed for use, and that show full range of color and texture variations expected. Samples include, but are not limited to, the following: partial sections of manufactured or fabricated components; small cuts or containers of materials; complete units of repetitively used materials; swatches showing color, texture, and pattern; color range sets; and components used for independent testing and inspection.

    a. Number of Samples: Submit three (3) sets of Samples. Engineer will retain two (2) Sample sets. Remainder will be returned. Mark up and retain one returned Sample set as a project record Sample.

1) Submit a single Sample where assembly details, workmanship, fabrication techniques, connections, operation, and other similar characteristics are to be demonstrated.
2) If variation in color, pattern, texture, or other characteristic is inherent in material or product represented by a Sample, submit at least three (3) sets of paired units that show approximate limits of variations. Prepare physical units of materials or products comply with requirements in Section 014000 “Quality Requirements” for Mockup.

E. Product Schedule: As required in individual Specification Sections, prepare a written summary indicating types of products required for the Work and their intended location. Include the following information in tabular form:

1. Type of product. Include unique identifier for each product indicated in the Contract Documents or assigned by Contractor if none is indicated.
2. Manufacturer and product name, and model number if applicable.
3. Number and name of room or space.
4. Location within room or space.
5. Submit product schedule in the following format:

a. Electronic file in the format agreed upon by the Engineer.
b. Number of Copies: Two (2) paper copies of product schedule or list, unless otherwise indicated. The Engineer will return one marked-up copy.

F. Contractor's Construction Schedule: Comply with requirements specified in Division 01 Section "Construction Progress Documentation".

G. Subcontract List: Prepare and submit a list identifying subcontractor individuals or firms proposed for each portion of the Work, including those who are to furnish products or equipment fabricated to a special design. Include the following information in tabular form:

1. Name, address, and telephone number of entities performing subcontract or supplying products.
2. Number and title of related Specification Section(s) covered by subcontract.
3. Drawing number and detail references, as appropriate, covered by subcontract.

4. Submit subcontract list in the following format:

a. PDF Electronic file.
b. Number of Copies: Two (2) paper copies of subcontractor list, unless otherwise indicated. The Engineer will return one marked-up copy.

H. Sustainability Submittals: Comply with requirements specified in Division 01 Section "Sustainable Design Requirements."

1. Submit Sustainability submittals in the following format:

a. One PDF Electronic file.
b. Number of Copies: Two (2) paper copies of sustainability submittals, unless otherwise indicated. The Engineer will return one marked-up copy.

I. Coordination Drawings: Comply with requirements specified in Division 01 Section "Project Management and Coordination."

J. General: Prepare and submit Informational Submittals required by other Specification sections.

1. Certificates and Certifications: Provide a notarised statement that includes signature of the Contractor, testing agency, or design professional responsible for preparing certification. Certificates and certifications shall be signed by an officer or other individual authorized to sign documents on behalf of the company.
2. Test and Inspection Reports: Comply with requirements in Section 1 Part 10 "Quality Requirements.

K. Qualification Data: Prepare written information that demonstrates capabilities and experience of firm or person. Include lists of completed projects with project names and addresses, contact information of Engineers and Employers, and other information specified.

L. Design Data: Prepare and submit written and graphic information indicating compliance with indicated performance and design criteria in individual Specification Sections. Include list of assumptions and summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Number each page of submittal.

M. Certificates:

1. Certificates and Certifications Submittals: Submit a statement that includes signature of entity responsible for preparing certification. Certificates and certifications shall be signed by an officer or other individual authorized to sign documents on behalf of that entity. Provide a notarized signature where indicated.
2. Installer Certificates: Submit written statements on manufacturer's letterhead, certifying that Installer complies with requirements in the Contract Documents and, where required, is authorized by manufacturer for this specific Project.
3. Manufacturer Certificates: Submit written statements on manufacturer's letterhead, certifying that manufacturer complies with requirements in the Contract Documents. Include evidence of manufacturing experience where required.
4. Material Certificates: Submit written statements on manufacturer's letterhead, certifying that material complies with requirements in the Contract Documents.
5. Product Certificates: Submit written statements on manufacturer's letterhead, certifying that product complies with requirements in the Contract Documents.
6. Welding Certificates: Prepare written certification that welding procedures and personnel comply with requirements in the Contract Documents. Submit record of Welding Procedure Specifications and Procedures Qualification Record (PQR) on American Welding Society AWS B2.1/B2.1M forms. Include names of firms and personnel certified.
7. Material Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting test results of material for compliance with requirements in the Contract Documents.
8. Product Test Reports: Submit written reports indicating current product produced by manufacturer complies with requirements in the Contract Documents. Base reports on evaluation of tests performed by manufacturer and witnessed by a qualified testing agency, or on comprehensive tests performed by a qualified testing agency.

N. Test and Research Reports:

1. Compatibility Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of compatibility tests performed before installation of product. Include written recommendations for substrate preparation and primers required.
2. Field Test Reports: Submit written reports indicating and interpreting results of field tests performed either during installation of product or after product is installed in its final location, for compliance with requirements in the Contract Documents.
3. Material Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting test results of material for compliance with requirements in the Contract Documents.
4. Preconstruction Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of tests performed before

installation of product, for compliance with performance requirements in the Contract Documents.

5. Product Test Reports: Submit written reports indicating that current product produced by manufacturer complies with requirements in the Contract Documents. Base reports on evaluation of tests performed by manufacturer and witnessed by a qualified testing agency, or on comprehensive tests performed by a qualified testing agency.
6. Research Reports: Submit written evidence, from a model code organization acceptable to authorities having jurisdiction, that product complies with building code in effect for Project. Include the following information:

    a. Name of evaluation organization.
    b. Date of evaluation.
    c. Time period when report is in effect.
    d. Product and manufacturers' names.
    e. Description of product.
    f. Test procedures and results.
    g. Limitations of use.

O. Schedule of Tests and Inspections: Comply with requirements specified in Division 01 Section "Quality Requirements".

P. Maintenance Data: Comply with requirements specified in Division 01 Section "Operation and Maintenance Data".

Q. Manufacturer's Instructions: Prepare written or published information that documents manufacturer's recommendations, guidelines, and procedures for installing or operating a product or equipment. Include name of product and name, address, and telephone number of manufacturers. Include the following, as applicable:

1. Preparation of substrates.
2. Required substrate tolerances.
3. Sequence of installation or erection.
4. Required installation tolerances.
5. Required adjustments.
6. Recommendations for cleaning and protection.

R. Manufacturer's Field Reports: Prepare written information documenting factory-authorized service representative's tests and inspections. Include the following, as applicable:

1. Name, address, and telephone number of factory-authorized service representative making report.
2. Statement on condition of substrates and their acceptability for installation of product.
3. Statement that products at Site comply with requirements.
4. Summary of installation procedures being followed, whether they comply with requirements and, if not, what corrective action was taken.
5. Results of operational and other tests and a statement of whether observed performance complies with requirements.
6. Statement whether conditions, products, and installation will affect warranty.
7. Other required items indicated in individual Specification Parts.

S. Insurance Certificates and Bonds: Prepare written information indicating current status of insurance or bonding coverage. Include name of entity covered by insurance or bond, limits of coverage, amounts of deductibles, if any, and term of the coverage.

1.9 DELEGATED DESIGN SERVICES

A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.

1. If criteria indicated are insufficient to perform services or certification required, submit a written request for additional information to Engineer.

B. Delegated Design Services Certification: In addition to Shop Drawings, Product Data, and other required submittals, submit **digitally signed PDF file and three** paper copies of certificate, signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional.

1. Indicate that products and systems comply with performance and design criteria in the Contract Documents. Include list of codes, loads, and other factors used in performing these services.

C. BIM Incorporation: Incorporate delegated design drawing and data files into BIM ready for integration with Digital twin Platform established for Project.

1. Prepare delegated design drawings in the following format: Same digital data software program, version, and operating system as original Drawings.

1.10 CONTRACTOR'S REVIEW

A. Action Submittals and Informational Submittals: Review each submittal and check for coordination with other Work of the Contract and for compliance with the Contract Documents. Note corrections and field dimensions. Mark with approval stamp before submitting to Engineer.

B. In "Contractor's Approval" Paragraph below, retain first option for paper submittals and second option for digital submittals.

C. Contractor's Approval: Indicate Contractor's approval for each submittal with a uniform approval stamp indication in web-based Project management software. Include name of reviewer, date of Contractor's approval, and statement certifying that submittal has been reviewed, checked, and approved for compliance with the Contract Documents.

1. Engineer will not review submittals received from Contractor that do not have Contractor's review and approval.

D. Project Take Over and Maintenance / Material Submittals: Refer to requirements in Division 01 Section 017700 "Closeout Procedures".

E. Approval Stamp: Stamp and / or electronically stamp each submittal with a uniform, approval stamp. Include Contract name and location, submittal number, Specification Section title and number, name of reviewer, date of Contractor's approval, and statement certifying that submittal has been reviewed, checked, and approved for compliance with the Contract Documents.

1.11 ENGINEER'S REVIEW

A. Action Submittals: The Engineer will review each submittal, indicate corrections or revisions required.

1. PDF Submittals: Engineer will indicate, via markup on each submittal, the appropriate action as follows:

a. Code A: Where the submittal is marked "Code A", the work covered by the submittal may proceed provided it complies with the Contract Documents. Final acceptance of the work will depend on that compliance.
b. Code B: Where the submittal is marked "Code B", the work covered by the submittal may proceed provided it complies with both the Engineer's notations and corrections on the submittal and the Contract Documents. Final acceptance of the work will depend on that compliance.
c. Code C: Where the submittal is marked "Code C", do not proceed with the work covered by the submittal, including purchase, fabrication, delivery, or other activity for the product submitted. Revise according to the Engineer's notations and corrections and in compliance with the Contract Documents.
d. Code D: Where the submittal is marked "Code D", the submittal is considered “Rejected” and should be revised in its entirety or prepare a new submittal.
e. Code E: Where the submittal is marked "Code E". Submittal is considered “For information”.

2. Paper Submittals: Engineer will stamp each submittal with an action stamp and will mark stamp appropriately to indicate action as follows:

a. Code A: Where the submittal is marked "Code A", the work covered by the submittal may proceed provided it complies with the Contract Documents. Final acceptance of the work will depend on that compliance.
b. Code B: Where the submittal is marked "Code B", the work covered by the submittal may proceed provided it complies with both the Engineer's notations and corrections on the submittal and the Contract Documents. Final acceptance of the work will depend on that compliance.
c. Code C: Where the submittal is marked "Code C", do not proceed with the work covered by the submittal, including purchase, fabrication, delivery, or other activity for the product submitted. Revise according to the Engineer's notations and corrections and in compliance with the Contract Documents.
d. Code D: Where the submittal is marked "Code D", the submittal is considered “Rejected” and should be revised in its entirety or prepare a new submittal.
e. Code E: Where the submittal is marked "Code E". Submittal is considered “For information”.

3. Submittals by Web-Based Project Management Software: Engineer will indicate electronically, on Project management software website, the appropriate action as follows:

a. Code A: Where the submittal is marked "Code A", the work covered by the submittal may proceed provided it complies with the Contract Documents. Final acceptance of the work will depend on that compliance.
b. Code B: Where the submittal is marked "Code B", the work covered by the submittal may proceed provided it complies with both the Engineer's notations and corrections on the submittal and the Contract Documents. Final acceptance of the work will depend on that compliance.
c. Code C: Where the submittal is marked "Code C", do not proceed with the work covered by the submittal, including purchase, fabrication, delivery, or other activity for the product submitted. Revise according to the Engineer's notations and corrections and in compliance with the Contract Documents.
d. Code D: Where the submittal is marked "Code D", the submittal is considered “Rejected” and should be revised in its entirety or prepare a new submittal.
e. Code E: Where the submittal is marked "Code E". Submittal is considered “For information”.

B. Informational Submittals: Engineer will review each submittal and will not return it unless deemed necessary by the Engineer. Engineer will forward each submittal to appropriate party.

C. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Engineer.

D. Incomplete submittals are unacceptable, will be considered nonresponsive, and will be returned for resubmittal without review.

E. Engineer will discard submittals received from sources other than Contractor.

F. Submittals not required by the Contract Documents will be returned by Engineer without action.

G. The Engineer will not review submittals that do not bear the Contractor's approval stamp and will return them without action.

H. Engineer's Action: The Engineer's review is limited only to checking conformance with information given and the design concept expressed in the Contract Documents. It is not conducted for the purpose of determining the accuracy and completeness of details, dimensions or quantities, nor substantiating integrity or compatibility, nor confirming instructions for installation or performance. The Engineer’s approval does not in any way relieve the Contractor of responsibility for compliance with specified provisions and the Contract Document requirements.

1.12 MOCKUP REQUIREMENTS

A. General: Construct and erect complete mock-up in accordance with the directions of the Employer and Engineer, and in the location determined by the Engineer and as required in the Contract Documents.

B. Comply with the comments of the Employer and the Engineer with the respect to the product, colour scheme and workmanship.

C. Revise product submittal, if necessary, in accordance with the Employer and the Engineer Comments.

1.13 ATTACHMENTS

A. Employer’s Exchange Information Requirements (EIR).

B. Engineer’s Project’s BIM Execution Plan.

1.14 EMPLOYER'S EXCHANGE INFORMATION REQUIREMENTS (EIR)

1.15 ENGINEER'S PROJECT'S BIM EXECUTION PLAN

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 013300

SECTION 013510 - STRUCTURAL MONITORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes provisions for a structural monitoring system to measure loads and settlements under the foundations of high towers or highly loaded bridge piers, strains in selected members such as transfer slab, transfer beams, main columns and walls, highly post-tensioned bridge deck, at the soffit of bridge deck at long span mid span, monitor movements at the top of the tallest tower, critical expansion joint location, at the top of bridge long pier, at bridge deck expansion joint, monitoring acceleration of the tower or critical floor slab, monitoring vibration of critical long span and long cantilever structural members, at bridge flexible decks such as cable stay and suspended bridges, monitoring corrosion of critical structural steel members and reinforcement bars within critically exposed reinforced concrete elements at bridge structural elements that are subject to wetting and drying or at sea splash zones, or near the sea shoreline in substructures exposed to saline groundwater and monitoring crack widths of critically exposed concrete sections at the top of concrete section at continuous bridge decks at pier location, at the bottom face of the deck concrete section at midspans, at the face of abutment that is exposed to soil. This shall be implemented in close coordination and under the supervision of the Engineer. The scope also includes providing equipment for data collection, processing, interpretation, hardware and software that are required for a seamless interface to an integration platform or Cloud based solution, including Digital Twins, without the need for any additional licenses, in addition to training personnel designated by the Employer for the use and maintenance of the equipment.

B. Carry out the Work in such a manner that will not interfere with preset construction schedule.

C. Related Sections include the following:

1. Section 031000 "Concrete Reinforcing".
2. Section 033000 "Cast-in-place-concrete".

1.3 SUBMITTALS

A. Submit a detailed program and method statements to carry out the requested measurements and monitoring. This shall include the technical details of the proposed gages, equipment, and sensors devices together with the data acquisition technique and equipment, as well as the location where each probe is proposed to be fixed, interfacing components**,** and the digital twin platform and software. Arrangement for automated measuring and connection with GIS system are essential with provision for manual measuring.

B. Submit details (including samples) of the structural monitoring devices, including all technical data and manuals, for approval prior to installation.

C. Submit calibration certificates, installation procedures, and integration documentation with the Digital Twin platform.

D. Submit a layout for proposed location for installation of the structural monitoring devices for the Engineer's approval.

1. Prioritize placement under high-load or sensitive zones.
2. Ensure sensor layout integrates with the digital twin interface: real-time data feed, cloud storage, and automated alerts.
3.]Use a zoned deployment strategy: dense monitoring in high-value areas (e.g., major foundations, under major loads), and lower density elsewhere.

1.4 QUALITY ASSURANCE

A. Equipment shall demonstrate compliance with requirements specified in Section 016000.

PART 2 - PRODUCTS

2.1 PRESSURE CELLS

A. Pressure cells shall be manufactured from stainless steel, grade 316 S13 to BS EN 10088-3 or equivalent, and fixed to the blinding concrete face or to the soil underneath as per the standard procedures provided in writing by the manufacturer, subject to the approval of the Engineer.

B. The pressure cells shall include a thermistor for temperature measurement, in order to allow the computerized monitoring system that reads from the cells to make appropriate corrections of readings depending on temperature variations.

C. Pressure cells shall be able to measure the pressures under the foundation up to [**50**] <**Specify**> kg/cm2.

D. Computerized remote monitoring system, including monitoring equipment and instruments, capable of interfacing with integration platform or Cloud based solution, including Digital Twins, for the soil stresses under selected foundation related to selected structures] [the soil stresses under selected foundation related to high towers, the soil stresses under foundation related to highly loaded bridge piers, shall be installed at selected points, to enable the determination and evaluation of the soil stresses under foundations <insert description> during and after construction, in accordance with an agreed program in order to ensure that soil stresses are within the predicted range. The monitoring scheme is concerned with the acquisition of measurements required to determine the magnitude of soil stresses incurred under the structural foundation supporting the selected structures] <insert description as the structure loads are applied.

E. Selection of the locations of the points for soil stresses measurement shall be agreed upon among the Engineer, the Designer, and the Contractor.

2.2 SETTLEMENT MONUMENTS

A. Settlement of the foundation during construction shall be determined by repeated surveying of the elevation of monuments installed directly on the surface of the structural raft relative to a stationary bench mark. The stationary benchmark for monitoring shall be established and agreed upon before the commencement of construction.

B. The settlement of the top of the settlement markers shall be measured using precise leveling to an accuracy of plus or minus 0.5 mm.

C. The precise levels shall have robust tripods; leveling studs are to be provided for the purpose of precise leveling.

D. The leveling studs shall be:

1. Manufactured from stainless steel, grade 316 S13 to BS EN 10088-3 or equivalent;
2. Fixed to the concrete face by using a standard procedure subject to the approval of the Engineer;
3. Designed for use with precise leveling so as not to impair the accuracy specified above;
4. Designed such that the heads of the leveling studs can be easily leveled without the studs being vulnerable to damage.

E. Computerized remote monitoring system, including monitoring equipment and instruments, capable of interfacing with integration platform or Cloud based solution, including Digital Twins, for the foundation under selected structures, shall be installed at selected points, to enable the determination and evaluation of the foundation movement under gradual application of the building loads during and after construction in accordance with an agreed program in order to ensure that loads and settlement are within the predicted range. The monitoring scheme is concerned with the acquisition of measurements required to determine the magnitude of the settlement and load incurred on the structural foundation supporting the selected structures as the structure loads are applied. To that end, the monitoring scheme shall provide data to evaluate the two settlement parameters as defined below:

1. Maximum settlement: The maximum downward movement of any monitoring point from its initial position.
2. Differential settlement: The difference in vertical movement between any two adjacent settlement points.

F. Selection of the locations of the points for load and settlement measurement shall be agreed upon among the Engineer, the Designer, and the Contractor.

2.3 STEEL REINFORCEMENT AND CONCRETE STRAIN GAGES

A. Steel electrical strain gages mounted on the steel reinforcement by bonding using special epoxy at specified locations.

B. The gages shall be supplied with all necessary wiring and bonding agents. The strain gages shall not be adversely affected by temperature and shall satisfy the following as a minimum:

1. Standard range: 3000 micro-strain.
2. Sensitivity: 1 micro-strain.
3. Temperature range: 0 to 80 deg. C.

C. Embedded strain gages shall be especially designed for measuring mechanical strains in the concrete mass. The gage shall be attached to the steel reinforcement to measure concrete strain close to the steel reinforcement. The gage shall be supplied with all necessary wiring and necessary attachments. Technical specifications shall satisfy the following as a minimum:

1. Standard range: 3000 micro-strain.
2. Sensitivity: 1 micro-strain.
3. Temperature range: 0 to 80 deg. C.

D. Computerized remote monitoring system, including monitoring equipment and instruments, to ensure that strains, and hence loads and moments, are within the predicted range. The monitoring scheme is concerned with the acquisition of measurements required to determine the magnitude and disposition of the strains incurred on the structural element as the structure loads are applied. To that end, the monitoring scheme shall provide data to evaluate the two strain parameters defined below:

1. Concrete strains: Applicable for the vertical elements and the compression zone of the transfer slab, main columns and walls, highly post-tensioned bridge deck and other structural elements.
2. Steel strains: Applicable to the tension zone of at the soffit of bridge deck at long span mid span, transfer slab, transfer beams and other steel elements.

E. Selection of the locations of the points for strain measurement shall be agreed upon among the Engineer, the Designer, and the Contractor.

2.4 REAL TIME KINEMATICS - GLOBAL POSITIONING SYSTEM MOVEMENT MONITORING

A. The RTK-GPS system shall be especially designed for measuring the movements of the designated structural elements.

B. The sensor is to be installed as recommended by the manufacturer, and is to be supplied with all necessary wiring or hardware for wireless connectivity and necessary attachments and power source.

C. The system is to be composed of the following:

1. One base station comprising a dual-frequency, geodetic-grade GPS receiver installed at a nearby station, complete with mounting brackets, accessories, and battery backup for operation for up to one day without power.
2. One “rover” station comprising a dual-frequency GPS receiver to be installed on the agreed position at the topmost floor of the tower] [control locations within critical structures,[at the top of bridge long pier,at bridge deck expansion joint and other elements where applicable.
3. Control center PC running the real time monitoring software, with all associated communication links between the control center PC and the base and rover receivers.
4. One roof-mounted UVW anemometer.
5. One three-directional accelerometer with a suitable frequency range.
6. Data logging system to capture the data from the GPS system as well as signals from the other sensors, such as anemometers and accelerometers, and to compute, for predefined periods, statistics for each of the measuring components.
7. The system shall provide accurate positional information of up to10 samples per second.

D. Computerized remote monitoring system, including monitoring equipment and instruments, to monitor the effects of the natural phenomena on the buildings, mainly the wind and earthquake effects, and verify that the actual dynamic structural properties in terms of movements are within the predicted range throughout the life span of the project. The monitoring scheme is concerned with the acquisition of measurements required to determine the magnitude of movements of the tallest building, major parts of critical structures, specific critical tall building expansion joint location, the top of bridge long pier, the bridge deck expansion joint using RTK-GPS system.

E. Selection of the locations of the points for the RTK-GPS system shall be agreed upon between the Engineer, the Designer, and the Contractor.

2.5 ACCELERATION AND VIBRATION SENSOR

A. Acceleration/Vibration sensor shall be especially designed for measuring the acceleration/vibration of the designated structural elements.

B. The sensor is to be installed as recommended by the manufacturer, and is to be supplied with all necessary wiring or hardware for wireless connectivity and necessary attachments and power source.

C. Technical specifications shall satisfy the following as a minimum:

1. Sampling interval: adjustable between 50 to 500 samples/sec.
2. Sensitivity threshold: adjustable between 8 m.g to 500 m.g.

3. Resolution: 4 u.g (“g” is the acceleration due to gravity).
4. Shock survival: 1000g, 0.1s, no damage to the electronics.
5. Acceleration range: plus or minus 2.g.
6. Temperature range: minus 40 to plus 65 deg. C.
7. Protection: IP65.

D. Computerized remote monitoring system, including monitoring equipment and instruments, to monitor the effects of the natural phenomena on the buildings, mainly the wind and earthquake effects, the effect of man-made cyclic loads on large span floors and critical cantilever floors, and verify that the actual dynamic structural properties in terms of movements, vibrations, and accelerations are within the predicted range throughout the life span of the project. The monitoring scheme is concerned with the acquisition of measurements required to determine the magnitude of accelerations and vibrations of the tallest building, major parts of critical structures and long span slabs and beams, the tower or the selected critical floor slab, at bridge flexible decks such as cable stay and suspended bridges, using strain gauges, fiber optical sensors, 3D accelerators or accelerometers.

E. Selection of the locations of the points for strain measurement or 3D accelerators shall be agreed upon between the Engineer, the Designer, and the Contractor.

2.6 CORROSION SENSOR

A. Corrosion sensor is to consist of a set of individual sensors, especially designed to measure the ingress of corrosive agents through the concrete cover and detect early signs of corrosion at predefined locations

B. The sensors set is to be installed as recommended by individual or collective sensor manufacturer.

C. The sensor is to be supplied with all necessary wiring and interfaced with a data acquisition transmission hub for wireless connectivity to a cloud-based corrosion monitoring platform for real-time data access., and necessary attachments and power source.

D. Technical specifications shall satisfy the following as a minimum:

1. Measurement range: plus or minus 500mV.
2. Measurement Resolution: plus or minus 0.2mV.
3. Temperature range: minus 40 to plus 65 deg. C.
4. Protection: IP65 rated.

E. Computerized remote monitoring system, including monitoring equipment and instruments, to monitor the effects of the climate conditions and weathering exposure, in terms of steel corrosion, and implement reinstatement measures or intervene in an appropriate way to prevent the corrosion from reaching dangerous levels that jeopardize the stability and safety of the monitored structural elements. The monitoring scheme is concerned with the acquisition of measurements required to determine the magnitude of the steel corrosion of critical reinforced concrete member reinforcement, bridge structural elements that are subject to wetting and drying or at sea splash zones, or near the sea shoreline using integrated corrosion sensors.

F. Selection of the locations of integrated corrosion sensors shall be agreed upon between the Engineer , the Designer, and the Contractor.

2.7 CRACK WIDTH SENSOR

A. Crack-width sensor shall be especially designed for detection and measuring of cracks widths at concrete surface. types of sensors may vary from piezo-ceramic sensors, distributed fiber optic sensor based on optical frequency domain reflectometry, displacement/strain meters etc.

B. The sensor is to be applied as recommended by the manufacturer.

C. The sensor is to be supplied with all necessary wiring or hardware for wireless connectivity and necessary attachments and power source.

D. Technical specifications shall satisfy the following as a minimum:

1. Standard range: 25mm.
2. Resolution: 0.01 mm.
3. Temperature range: minus 40 to plus 65 deg. C.
4. Protection: IP65.

E. Computerized remote monitoring system, including monitoring equipment and instruments, to ensure that strains, and hence loads and crack-widths, are within the predicted range throughout the life span of the project, and implement reinstatement measures or intervene in an appropriate way to prevent further opening of cracks and related risk of corrosion of reinforcement and large deflections that jeopardize the stability, serviceability, and safety of the monitored structural elements. The monitoring scheme is concerned with the acquisition of measurements required to determine the magnitude crack-width at the critical concrete section, at the top of concrete section at continuous bridge decks at pier location, at the bottom face of the deck concrete section at midspans, at the face of abutment that is exposed to soil, using crack-width sensors.

F. Selection of the locations of the points for crack-width sensors shall be agreed upon among the Engineer, the Designer, and the Contractor.

PART 3 - EXECUTION

3.1 EQUIPMENT AND INSTRUMENTS

A. Equipment and instruments shall be installed as per the manufacturer's instructions and are to be calibrated and tested as appropriate. The monitoring scheme shall also include the installation, maintenance, replacement in case damaged, and observation of the equipment and instrumentation.

B. Observe, record, and analyze the readings to establish trends in movement and provide the Engineer with all recorded results. The Digital Twin platform shall be composed of a set of layers where data is captured, processed, stored, and made accessible to presentation layer interfacing directly with target audiences for monitoring and control.

C. All the monitoring devices, equipment, and wirings, shall be properly protected during construction from any source of damages, throughout their service life from environmental and other effects that would hinder their performance.

D. All gages, sensors, vibrating wires, and wiring shall be fixed as recommended by the manufacturer, using hot curing or cold curing adhesives, or by spot welding, on a surface that is treated, cleaned and prepared as recommended by the manufacturer. All equipment shall be protected from damage during all site activities such as installation of reinforcement bars, and pouring or compacting concrete. The equipment shall be tested before and after pouring of concrete and any damaged gages and sensors shall be reported and compensated at another location preapproved by the Engineer.

3.2 INSTRUMENTATION RECORDS AND REPORTING:

A. General Information: All records generated by the instrumentation, whether installation readings or monthly summaries, shall contain the following information:

1. Project name.

2. Contract name and number.
3. Instrument reference number and type.
4. Dates of installation, reading or summary.
5. Time of installation or reading.
6. Coordinates/designation of measurement point.
7. Personnel responsible.
8. Comments.

3.3 READINGS

A. For each measurement taken from an instrument or group of instruments, the values shall be recorded on a data sheet. The format of the output from each type of instrument shall be submitted to the Engineer for approval at least one week before commencement of readings. For readings that are recorded on a data logger, a record sheet shall be required indicating the references to the data stored[. A computer system including interfaces, plotter, printer and software shall be available to make data transfers, corrections of readings depending on temperature variations, listings and plots. The format of plotted results shall be submitted to the Engineer for approval.

B. Frequency of Measurement: The frequency of measurement shall be in accordance with the approved detailed program and method statements.

C. Anomalous Readings: Whenever sets of anomalous data are obtained from measurements, they shall be compared to previous sets of data. If anomalous readings are present which differ from the expected value or trend, then further readings shall be taken immediately and the Engineer shall be informed. If the anomalous values persist, then the Engineer shall be informed and an investigation carried out to explain the anomalous readings.

D. Submit to the Engineer each record sheet with necessary listings and graphs, make all captured, processed, and corrected data available to the Engineer in numerical and graphical formats within one working day of taking the readings unless otherwise directed by the Engineer.

3.4 MONITORING REPORT

A. Submit a monitoring report every month in case no anomalous readings are recorded. If irregular or anomalous observations are recorded, the Engineer shall be informed immediately. A proposal for the format of the report shall be submitted to the Engineer including all graphical presentations for approval at least one month before submission of the first report. Each monthly report is to include the following:

1. A description of the monitored works which have been in operation during the previous month.
2. Information on anomalous readings or corrective actions and factors which may influence measured data.
3. Observations/remarks.
4. Plan showing location of installed instruments.

END OF SECTION 013510

es

SECTION 013513.16 - SPECIAL PROJECT PROCEDURES FOR DETENTION FACILITIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Particular Conditions and other Division 01 Specifications sections, apply to this Section.

1.2 SUMMARY

A. Section includes special procedures for coordination of detention work.

B. Detention work required by, but not specified in, this Section includes the following:

C. Related Requirements:

1. Division 01 Section 013200 "Construction Progress Documentation" for submitting schedules and reports, including Contractor's construction schedule.
2. Division 01 Section 014000 "Quality Requirements" for submitting test and inspection reports, and schedule of tests and inspections.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Prepare and submit Project-specific coordination drawings, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved. Address the following, as applicable:

1. See individual Sections for specific coordination drawing requirements for products and equipment.
2. Show relationship of components indicated on separate Shop Drawings.
3. Show dimensions and clearances of interrelated detention work.
4. Provide templates and patterns.
5. Indicate required operation sequences of interrelated detention work.
6. Indicate required installation sequences.
7. Include information necessary for interface with other trades and building components.
8. See special construction, mechanical, plumbing, electrical, communications, and electronic safety and security Sections for specific coordination drawing requirements for required installations.

B. Qualification Data: For qualified Detention Specialist to demonstrate capabilities and experience. Include list of completed projects with project names and addresses; names, addresses, and telephone numbers of Engineers, Employers, and contractors; and date of occupancy by Employer.

C. Examination reports, documenting inspections of substrates, areas, and conditions.

D. Anchor inspection reports, documenting inspections of built-in and cast-in anchors.

E. Field quality-control reports.

F. Field quality-control certification, signed by Contractor and Detention Specialist.

es

1.4 QUALITY ASSURANCE

A. Detention Specialist Qualifications: An experienced installer of detention products and equipment who has completed detention work installations similar in material, design, and extent to that indicated for Project and whose work has resulted in construction with a record of successful in-service performance.

1. Experience: No fewer than five completed detention projects (jails or prisons) that have been in operation for a minimum of five years.

a. Experienced in administration and supervision of detention work, including mechanical and electrical detention work, and integration of its various components.

1.5 DETENTION SPECIALIST

A. Responsibilities:

1. Detention work coordination.
2. Administrative procedures.
3. Examination.
4. Field quality control.
5. Demonstration.

1.6 DETENTION WORK COORDINATION

A. Coordinate detention work to ensure efficient and orderly installation and proper operation of each part of detention work. Coordinate detention work that depends on separate entities for proper installation, connection, and operation.

1. Develop special procedures required for coordination of detention work.
2. Coordinate installation of different detention components to ensure maximum accessibility for required maintenance, service, and repair.

B. Coordinate selection of detention products and equipment and ensure compatibility.

C. Verify qualifications of detention lock Installer specified in other Sections.

D. Coordinate installation of products furnished by Employer.

E. Assemble and coordinate Shop Drawings, work submittals, and applicable coordination drawings for detention work provided by separate entities responsible for detention work. Submit all submittal items required for each Detention Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.

F. Detention Work Sub schedule: Coordinate sequencing and scheduling of detention work. Prepare a sub schedule to Contractor's Construction Schedule for detention work. Base sub schedule on preliminary construction schedule. Secure time commitments for performing critical construction activities from separate entities responsible for detention work.

1. Schedule construction operations in sequence required to obtain best results where installation of one part of detention work depends on installation of other components, before or after its own installation.
2. Coordinate sequence of detention work activities to accommodate tests and inspections.

G. Coordinate installation of anchorages and embedment’s for detention work. Obtain and distribute, to parties involved, setting drawings, templates, and directions for installing anchorages, including

sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

H. Coordinate type of security fasteners for detention work so no more than two different sets of tools are required to operate security fasteners for entire Project. Coordinate submittal of extra fasteners and tools for maintenance material submittals.

I. Check Shop Drawings of other related work to verify that adequate provisions are made for locating and installing detention work to comply with indicated requirements.

J. Coordinate temporary facilities and controls required by detention work.

K. Coordinate, schedule, and approve interruptions of existing utilities related to maintaining existing levels of security, including those necessary to make connections for temporary services.

1. Provide information necessary to adjust, move, or relocate existing detention utility structures affected by detention work.
2. Locate connection points to existing detention utility systems.

L. Coordinate protection of detention work.

M. Coordinate preparation of Project Record Documents for detention work and integrate information from entities responsible for detention work to form one combined record.

N. Coordinate preparation of operation and maintenance manuals for detention work and integrate information from entities responsible for detention work to form one combined record.

1.7 ADMINISTRATIVE PROCEDURES

A. Coordinate scheduling and timing of required administrative procedures with other construction activities to avoid conflicts and to ensure orderly progress of detention work. Such administrative activities include, but are not limited to, the following:

1. Preparation of detention work sub schedule for Contractor's Construction Schedule.
2. Installation and removal of temporary facilities and controls for detention work.
3. Delivery and processing of detention work submittals.
4. Preinstallation conferences for detention work.
5. Project closeout activities for detention work.

B. Notifications: Prepare memoranda for distribution to each party involved with detention work, outlining special procedures required for coordination of detention work. Include such items as required notices, reports, and attendance at meetings.

C. Coordination Meetings: Conduct coordination meetings specifically for detention work at weekly intervals. Coordination meetings are in addition to specific meetings held for other purposes, such as progress meetings and preinstallation conferences.

1. Attendees: In addition to representatives of Employer, Engineer, and Contractor, each subcontractor, supplier, installer, and other entity concerned with progress or involved in planning, coordination, or performance of detention work activities shall be represented at these meetings. All participants at meetings shall be familiar with Project and authorized to conclude matters relating to detention work.
2. Agenda: Review and correct or approve minutes of previous detention work coordination meetings. Review other items of significance that could affect progress of detention work. Include topics for discussion as appropriate to status of Project.

es

a. Contractor's Construction Detention Work Sub schedule: Review progress since last detention work coordination meeting. Determine whether each schedule item is on time, ahead of schedule, or behind schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.
b. Schedule Updating: Revise Contractor's construction detention work sub schedule after each detention work coordination meeting where revisions to schedule have been made or recognized. Issue revised schedule concurrently with report of each meeting.
c. Review present and future needs of each entity present, including the following:

1) Detention work interface requirements.
2) Sequence of detention work operations.
3) Status of detention work submittals.
4) Access to detention work.
5) Temporary facilities and controls required by detention work.
6) Quality and work standards of detention work.
7) Change Orders for detention work.

3. Reporting: Record meeting results and distribute copies to everyone in attendance and to others affected by decisions or actions resulting from each meeting.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of detention work.

B. Examine roughing-in for embedded conduits and tubing and built-in anchors to verify actual locations of detention work connections before detention work installation.

C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of detention work.

D. Inspect built-in and cast-in anchors after installation but before connection to detention work to verify that anchor installations comply with requirements. Prepare inspection reports.

1. Where inspections indicate that anchors do not comply with specified requirements, reinspect after repairs or replacements are made.
2. Perform additional inspections to determine compliance of replaced or additional work. Prepare inspection reports.

E. Verify locations of detention work with those indicated on coordination drawings.

F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 FIELD QUALITY CONTROL

A. Inspect installed detention work to verify compliance with requirements and that work is installed and connected according to the Contract Documents.

es

B. Verify that wiring installation has been installed according to manufacturer's submittal and written installation requirements in electrical, communications, and electronic safety and security Sections.

C. Observe installation and startup checks of detention work according to manufacturer's written instructions.

D. Testing: After installing electrified and pneumatic detention work and after electrical circuitry has been energized and compressed-air system is functional, test for compliance with requirements.

1. When testing reveals detention, work does not comply with requirements, perform additional random testing to determine extent of noncompliance.
2. Where test results indicate that detention work does not comply with specified requirements, retest after repairs or replacements are made.
3. Perform additional testing and inspecting, at Contractor's expense, to determine compliance of replaced or additional work.

E. Inspection Reports: Prepare inspection reports and indicate compliance with and deviations from the Contract Documents.

1. Perform additional inspections to determine compliance of replaced or additional work.

F. Field Quality-Control Certification: Prepare field quality-control certification endorsed by Detention Specialist that states installed detention work complies with requirements in the Contract Documents.

3.3 DEMONSTRATION

A. Engage a factory-authorized service representative to train Employer's maintenance personnel to adjust, operate, and maintain detention products and equipment.

END OF SECTION 013513.16

SECTION 013520 - HEALTH, SAFETY AND ENVIRONMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Particular Conditions, the Employer Health, Safety and Environment Manuals, and other Division 01 Specifications sections, apply to this Section.

1.2 SUMMARY

A. Section includes:

1. This document mandates that the Contractor is fully responsible for managing all on-site Health, Safety, and Environmental (HSE) aspects, ensuring subcontractors and visitors' compliance.
2. The Contractor must provide essential safety facilities, conduct regular safety meetings, and oversee site security and traffic management.
3. Additionally, environmental protection measures and strict adherence to COVID-19 protocols are required.
4. The Contractor must develop and submit an HSE policy and a comprehensive Project Health, Safety, and Environmental Plan (PSHEP).
5. Compliance with ISO standards is mandatory, with the ultimate goal of achieving zero accidents and incidents on the project.

B. RELATED REQUIREMENTS

1. Division 01 Section 018113 - Sustainable Design Requirements

1.3 SCOPE OF WORKS

A. The Scope of Works as defined in the Tender Documents shall, in addition to whatever is described therein, include responsibility for the management and control of all health, safety and environmental (HSE) protection including all other related aspects of the project and the site. Such responsibility shall not be limited to the project but shall extend to the works and activities of all Appointed Contractors, including nominated subcontractor, suppliers and other persons working on or visiting the Site. This shall include, but not be limited to the following:

1. Provision of suitable welfare / safety and security facilities including drinking water, drainage, and sanitary disposal with sufficient ventilation and lighting where practical.
2. Safety consultation and the conduct of regular toolbox meetings.
3. Emergency procedures including fire-fighting facilities, appliances and training.
4. Suitable first-aid provisions including training of staff in first-aid skills and the process for emergency rescue.
5. Site access control and site security in coordination with the emergency procedures.
6. Site traffic management which shall include site access routes / circulation and speed restriction / directional signage.
7. Environmental management and protection measures against pollution and habitat preservation.
8. Site communication systems including suitable audible alarm system.
9. Housekeeping duties and waste management.

10. Provision and distribution of temporary electrical services including RCD protection for mains powered tools. (RCD, or Residual Current Device, is a life-saving device which is designed to prevent you from getting a fatal electric shock if you touch something live, such as a bare wire. RCDs offer a level of personal protection that ordinary fuses and circuit-breakers cannot provide).
11. Allocation of space and control of contractors' Site facilities and storage areas.
12. Organisation of Site craneage, hoisting facilities and all lifting operations.
13. Provision and distribution of temporary utilities required for all works on the Project.
14. Organisation of final clean-up of the works prior to completion and handover.
15. Suitable storage and segregation of flammable materials.
16. Adherence to COVID safety requirements, protective gear, and screening of personnel as may be necessary further to the Employer's requirements and local authority regulations. This shall include, without limitation, routine PCR test, daily temperature checks, and implementation of social distancing measures. Contractor to provide evidence for all employees and workers on site vaccination program and its implementation.

B. In fulfilment of the above obligations and responsibilities the provisions and proposals of all Associated Contractors and Nominated Subcontractors including any others already working on the Site must be reviewed. Such provisions and proposals must be integrated into the HSE plan to ensure the overall management and control of the HSE aspects, facilities and activities of the Project on the Site are as defined above. Consult and coordinate with any Associated Contractors, etc. and identify and correct any deficiencies in their provisions and proposals relative to those functions of control and management of the HSE procedures on the Project and Site.

C. The Scope of Works shall in addition to the responsibility for the management and control of all occupational health, safety and environmental protection requirements, include all other related aspects of the Project and the Site. Such responsibility shall not be limited to the Project but shall extend to the works and activities of all Appointed Contractors, including nominated subcontractor, suppliers and other persons working on or visiting the Site.

1.4 HEALTH, SAFETY AND ENVIRONMENT INFORMATION

A. Formulate an HSE (Health, Safety and Environmental) policy. and submit to the Employer's representative for review and approval. The policy must be displayed at conspicuous locations on the worksite in English and any language understood by a significant number of the construction workforce.

B. Submit a Project Safety Health Environmental Plan (PSHEP) within fifteen (15) days after commencement of the Work, or as per agreed time frame. The issue of the Letter of Acceptance which should describe the Contractor's organization and resources which is proposed to be deployed; and undertake to safeguard the health and safety of operatives including those of associated contractors, nominated subcontractors and general visitors to site, including the employees of the Employer and the Engineer. All necessary local and international regulations and requirements must be included in the plan.

C. The Project, Safety, Health, and Environment Plan (PSHEP) shall include, but not limited to:

1. A copy of the health and safety policy, statement, proposals and commitment.
2. Records of training and training policies.
3. The numbers and type of staff to be responsible for health and safety on this Project with details of their qualifications and duties, and how the responsibility for health and safety management is devolved to the workforce.
4. Program of Implementation.
5. Roles and Responsibility of all involved within the project including a structured organogram.
6. Project specific risk assessments and method statements including assessments for controlling and storing hazardous substances (COSHH – Control of Substances Hazardous to Health).

7. Emergency arrangements for fire, explosions, and terrorist bomb threats that present life threatening situations.
8. Emergency preparedness and response including emergency rescue procedures.
9. Measures to reduce occupational health including noise, vibration, dust.
10. Details on the procedure for monitoring and measurement, workplace inspections, equipment inspections, health surveillance, incident investigation, corrective and preventative action, and records.
11. High risk working procedures covering excavations, work at height, confined space, hot works, ensuring that a suitable permit to work system is enforced.
12. Information regarding the selection and use of appointed subcontractors.
13. Information regarding the selection and use of plant and work equipment.
14. A strategic HSE induction program that entails all the above.
15. Contractor's Covid 19 management plan.

1.5 HEALTH, SAFETY AND ENVIRONMENT (HSE) PERSONNEL QUALIFICATIONS

A. The Contractor shall engage qualified professionals to complete requirements and processes related to HSE and inclusive of the specific site safety staff qualifications, requirements and processes required for acceptance ofthe Contractor's HSE applicants by the Employer.

B. The Contractor shall have a sufficient number of HSE personnel on-site to perform the day-to-day HSE site activities. as required by the Employer.

C. The Contractor shall submit HSE Personnel CVs' for the Employer's approval. Moreover, HSE Managers, Senior HSE Managers and senior HSE Representatives' appointment and qualifications would need to acquire approval from the Employer.

D. The Contractor's HSE Manager / Representative must report directly to Contractor's senior management according to their Corporate Organization.

E. The mandatory and desired qualifications criteria for the HSE staff shall all comply with approved and adopted HSE Manual.

1.6 HEALTH, SAFETY AND ENVIRONMENT RESPONSIBILITIES OF THE CONTRACTOR

A. Accept responsibility for overall control, coordination, supervision and administration of the whole of the Project in respect of health and safety management, including all associated contractors, nominated subcontractors, suppliers and visitors.

B. Prior to mobilization and commencement of site activities, the employer HSE manager will arrange a pre-construction meeting with the Contractor's project manager and HSE's representative to establish the Employer's HSE project requirements. Arrange and monitor a program for health, safety and environmental management with each associated contractor, and subcontractor, and supply all information as necessary for the safe coordination of all work activities relative to the health and safety on the Site.

C. Prepare a Health and Safety Program for the Project, covering times of working, partial handovers etc. and ensure this program considers the work of all associated contractors and subcontractors, whether nominated or otherwise.

1. In addition to the constant management and supervision of the Project and Site in respect of health and safety provided by the Contractor's person in charge, ensure all significant or hazardous / risky types of work are under the close control of competent safety supervisors to ensure maintenance of satisfactory safety standards
2. The Employer and the Engineer have set the following health and safety goals for the project in pursuit of Target Zero**:**

a. Zero Accident
b. Zero Incidents

D. Engage suitably competent and adequately resourced staff and ensure that associated contractors do likewise to their subcontractors by ensuring that HSE targets are met, and that sufficient training is reviewed, and that reports on a daily, weekly, monthly, six monthly and annual bases in respect of health and safety management are made available to the Employer's and the Engineer's safety personnel. Always ensure that all the workers have been provided with suitable health and safety information, instruction, and training in respect to their work activities.

E. Ensure the involvement of the entire workforce, as subcontractors and suppliers may need to make special arrangements for workers with different languages. This could include providing translation, using interpreters or replacing written notices with clearly understood symbols or diagrams.

F. Comply with all current legislation, regulations and local standards, both national and international i.e. ISO 45001:2018, ISO 14001:2015, and define how the requirements of these documents are being met. Ensure copies of these documents are readily available either in hard copies or for access via computer links.

G. Adequately safeguard the Site, its works, products, materials, plant and any existing buildings or structures from damage and theft. Take all reasonable precautions to prevent unauthorised access to the Site, the Works and any adjoining properties. Prepare and enforce all necessary site rules, provide relevant parts of the HSE plan and other information to subcontractors and suppliers in sufficient time for them to plan their work.

H. Take the reasonable steps to prevent access by unauthorized persons to the Site by displaying suitable signage around the site perimeter and main gate entrance. Only persons who are explicitly authorized, individually or collectively, should be allowed access. The authorization may cover the whole site, or to be restricted to certain areas. Authorized people should have relevant site rules explained to them and undertake any necessary site induction and should comply with site rules and co-operate with the stated requirements. Some authorized visitors may need to be supervised or accompanied while on site or when visiting specific areas.

I. Provide specific information about the risks associated with the Site and the arrangements made for their control. A site induction is not intended to provide general health and safety training, but it should include a site-specific explanation of senior management commitment to health and safety outlining the project, the individual's immediate line manager and any other key personnel, and any site-specific health and safety risks. In general, this site induction shall address access, transportation and storage of hazardous substances (COSHH), site contamination, manual handling, control measures on the site, arrangements for first aid, arrangements for reporting accidents and other incidents, details of any planned training, such as 'toolbox' talks, arrangements for consulting and involving workers in health and safety and information about the individual's responsibilities for health and safety.

J. Ensure that adequate measures are implemented on-site to ensure the stability and structural integrity of the Works during construction and provide support as necessary. Prevent overloading of structures. Check the adequacy and structural integrity and stability of all erected scaffolding and other temporary "work access" systems and sign-off prior to use.

1. Existing buildings or structures adjacent to the Site will be occupied and / or used during the Contract.
2. Ensure the works are carried out safely and without inconvenience or nuisance and without danger to occupants, users, equipment, or vehicles and provide for the safe operation of the existing facilities.
3. Passes may be required for access to all parts of the Site. If required by the Employer, submit a list of the names of all personnel requiring passes together with any other related information the Employer or Engineer may reasonably require. Ensure passes are carried at all times and returned to the Employer when requested and in any case on cessation of the work of the pass holder.

4. Ensure the interaction of local residents and pedestrians is minimized at all times and that contractors' vehicles do not obstruct access to property and residential areas.

K. Comply with all rules and regulations listed within the Tender and Contract Documents and the 'Site Safety Plan' issued with those Documents. Ensure these rules and regulations are made known to all employees and visitors at safety inductions, and that they are displayed where all may see them.

L. Comply with Occupational Health and Safety Management Standard ISO 45001:2018 and ISO 14001:2015 standards.

M. Inform the Employer and the Engineer in advance of all safety provisions and procedures that will require compliance from the Employer's and the Engineer's representatives when visiting the site.

N. Work notification / permit-to-work procedures will operate for all work carried out: Permits must be obtained in advance where deemed necessary from the Employer and / or the relevant authorities having jurisdiction: Ensure that a permit-to-work system is also in place for hazardous activities that may occur within the Site boundary as opposed to operational areas, this may include activities such as, but not restricted to:

1. Hot Work
2. Confined Spaces
3. Electrical (Live Working)
4. Excavations
5. Lone Working
6. Demolitions / Explosions.
7. Lifting Operations.
8. Etc.

O. Take all reasonable precautions to prevent pollution of the Site, its works, the adjacent facilities, the surrounding drainage and water supplies and the general environment. Provide within the Construction Project Health, Safety and Environment Plan (CPHSEP) a detailed method statement as to how this requirement will be undertaken and monitored including frequency of checks etc.

P. Remove waste, rubbish, debris, surplus materials, and spoil regularly and keep the Site and works clean and tidy. Ensure that all waste, rubbish, dirt and other residue are removed from voids and cavities in the construction before closure. Ensure that all roadways and pedestrian areas are always kept clean and clear and free from debris.

Q. Take all necessary measures to prevent personal injury, death and damage to the Works or other adjacent property or equipment from fire or explosion:

1. DO NOT: allow the burning of materials arising from the works on Site.
2. Designate safe "smoking" areas on the Site and ensure that smoking is prohibited in other areas.
3. Ensure suitable fire-fighting equipment is available on Site
4. Undertake frequent emergency drills and regular inspections

R. Take all necessary precautions to avoid excessive electromagnetic disturbance of apparatus outside the Site.

S. During work and inspections of all types provide temporary lighting, the intensity and direction of which closely resembles that provided by the permanent installation.

T. Install, use and store construction laser equipment in accordance with the manufacturers' instructions. Use either Class 1 or Class 2 laser equipment ensuring that the laser beam is not set at eye level, and that the beam is terminated at the end of its useful path.

U. Adequately maintain roads and footpaths both around the Site and adjacent to the Site and keep clear of dust, mud and debris.

V. Propose methods of work for effects on adjacent structures inside and outside the Site boundary. Ensure the provision and maintenance during the execution of the works of all incidental shoring, strutting, needling and other supports and dewatering installations as may be necessary to preserve the stability of existing structures on the Site or adjoining, that may be endangered or affected by the works. Support existing structure as necessary during cutting of new openings or replacement of structural parts. Monitor adjacent structures and immediately report excessive movement to the Engineer. Allow for the removal of supports only after new work is strong enough to support the existing structure. Prevent overstressing of completed work when removing supports.

W. Define and produce an overall Site-specific Project, Safety Health, and Environment Plan (PSHEP) for the Project, for review and approval by the Employer and the Engineer. This plan should not be generic in nature and must build on the information provided within the Tender and Contract Documents, specifically the 'Project Site Safety Plan' issued.

1. The plan must be prepared, submitted for review prior to the start of construction activities on the Works of the Contract and be available for review at any time during the construction period. It should be implemented and managed as an operational document throughout the Project and available for all who may be affected by its contents.
2. It must be clear in its purpose, well structured, relevant and easy for associated contractors and others to understand. It should not contain irrelevant material.
3. The plan should clearly identify the correct methods of operation and any associated risks therein.

X. Provide all own staff and all the Employer's and Engineer's staff and visitors for the duration of Project (including Mobilization & Defects Notification Period) with all PPE and other safety-related items sufficient for the construction of the Project as per the Health and Safety Plan and the Engineer's instructions in this respect.

1.7 HEALTH, SAFETY AND ENVIRONMENT PLAN

A. A specific Project , Safety, Health and Environment Plan (PSHEP) must be developed and submitted to the Employer's HSE Representative for review and approval prior to commencing the work within fifteen (15)] days after commencement of the Work. All necessary local and international regulations and requirements must be included in the plan.

B. The plan must include detailed policies, procedures and regulations that will ensure compliance with the contractor provisions when implemented.

C. The plan must Comply with any additional safety security requirements suggested by the Employer's Representative and as required by the authorities and international standards.

D. The HSE Plan must promote the prevention of injury, occupational hazard / illness and property damage.

E. Maintain a safe, hazard-free workplace for personnel, visitors and the public.

F. Review the HSE Plan at regular intervals and update it as required, considering changes on-site during the construction phases and, at a minimum, annually. The contractor must retain records of revisions.

G. Ensure site security compliance per agreement with the Employer which will be monitored for effective implementation by the Employer's Representative.

H. If at any time the HSE Plan is, in the employer Representative's opinion, insufficient or requires revision ormodification to ensure that the health and safety of all personnel is met, the Employer Representative may instruct the Contractor to revise the plan and the Contractor must submit the revised plan to the Employer Representative for review within an agreed timeframe.

I. The Contractor is obligated to perform their work using safe working methods and to comply with the Project SHE Plan consistently.

J. The plan is to follow the Employer Health, Safety and Environment Manuals. and to include as a minimum, the following:

1. Description of the Project

    a. Project Description and Program details, including health and safety management details.

2. Details of all Associated Contractors, including names and contact numbers of those responsible for health and safety affairs, type of work to be undertaken, etc.
3. Content & extent of all documents are to include but not restricted to the following:

    1. Locations and contact numbers of all emergency services
    2. Operational systems
    3. Plans (traffic management, emergency arrangements, transport logistics)
    4. Location of existing records and plans that are relevant to health and safety on site, including information about existing structures and buried services
    5. Method statements
    6. Risk assessments
    7. Inspection reports
    8. Training
    9. Emergency response and rescue information
    10. Partial and comprehensive evacuation plans

K. Arrangements for communication and management of the Works include:

a. Regular liaison between all persons and entities on site to discuss design information. Discussions on design changes during the project should be made available to all other parties on Site, particularly in respect of health and safety management, its operation and how information is to be disseminated to the other parties involved on the Project.
b. Monitoring and review health and safety performance and operational management systems.
c. Regularly reviewing the management structure and responsibilities related to health and safety goals for the project and arrangements for monitoring and review of health and safety performance.
d. Consultation with the workforce in respect of health and safety issues, taking in to account the diversity of cultures and languages in use on the Site. Define how the culture and language issues will be dealt with both at operational and management level.
e. The exchange of information between all parties particularly the control of and transfer of health and safety information between all types of contractors and all levels of employees on Site, and ensuring it is understood.
f. The selection and control of contractors, and sub-contractors, and the liaison methods in place in respect of health and safety.
g. The security of the defined Site, including access and egress controls, and site rules.
h. Site safety inductions and orientation for all employees and visitors, and further training of all employees in respect of activities requiring specialist health and safety training. These arrangements should indicate how the Contractor ensures all employees have understood their health and safety duties (tests and reviews).
i. The provision of welfare facilities and first aid at all times of activity.
j. Arrangements for recording, reporting and investigation of accidents and incidents, including application of systems for future prevention of accidents and incidents and near misses.

k. The production, reviewing, approval and monitoring of application of risk assessments and method statements and the process whereby these documents are providing for review by the necessary authorities.
l. The setting of, monitoring, inspection and application of both contractual and additional Site rules, including a disciplinary system for non-compliances.
m. Fire and emergency procedures, including call out procedures for out-of-hours incidents / accidents / dangerous occurrences.
n. The establishment of the need for personal protective equipment, and or clothing throughout the Site, including procedures for monitoring non-compliances with these procedures and a disciplinary system.
o. Inspection, monitoring and review of activities throughout the Project, including liaison systems between Associated Contractors, etc. affected by these activities at both management and operational levels.
p. The provision of necessary location and direction signage during construction, required to identify clearly all parts of the Site and the Project, in particular for the benefit of Employer and visitors. Such signage shall be modified and updated on a regular basis to reflect the progress and development of works on Site.

L. Arrangements for controlling significant Site risks:

a. The risks detailed may not be all of the significant risks associated with the work processes and are indicative of those that may become apparent on the Site. Identify significant hazards and undertake a risk assessment of those hazards based on the systems detailed within the Tender and Contract Documents, and ensure all associated contractors and subcontractors utilize the same system. These risks should, where necessary, be subject to the production of method statements for reviewing by the Engineer and any authority, having jurisdiction. The following risks must also be included within the Project Safety, Health, and Environmental Plan (PSHEP):

1. Services, including water, electricity and gas, including overhead power lines for both temporary and permanent electrical installations
2. Working at height including prevention of falls and falling materials
3. Ground conditions
4. Large numbers of personnel
5. Work with or near fragile materials
6. Control of lifting operations (cranes, hoists, mobile elevating working platforms)
7. The maintenance and use of plant and equipment
8. Unstable ground conditions
9. Unstable structures both during construction and demolition
10. Demolition and dismantling
11. Traffic routes and segregation of vehicles and pedestrians, particularly personnel movement around site
12. Storage and use of hazardous materials (COSHH)
13. Adjacent land use (operational airport, nearby highway)
14. Fuel storage
15. Fire and explosion
16. Manual handling and associated issues
17. Reducing noise and vibration
18. Dust
19. Radioactive isotopes and X-rays
20. Flying objects and debris (FOD)
21. Working below ground and at depth
22. Confined spaces, including wells, underground earthworks, and tunnels
23. Standing water (dewatering processes)
24. Weather (wind, rain, thunderstorms, heat, humidity etc.)
25. Transport of construction materials
26. Storage and removal of waste
27. Temporary works (scaffolding, formwork, false work etc.)
28. Stability of structures including temporary structures and existing unstable structures

29. Violent behaviour
30. Delivery and removal of materials (including waste) and any work equipment considering any risks to the public, for example during access and egress to and from the Site
31. Occupational health risks, including manual handling and the use of hazardous substances (COSHH) where there is a need for health monitoring which will include reducing noise and vibration levels, working with ionising radiation and exposure to UV radiation (from the sun)
32. Water, where there is a risk of drowning
33. Other specified or identified risks

M. Method Statements for inclusion within the submitted Health, Safety and Environment Plans

a. In order to ensure that the submitted Project Health, Safety and Environment Plan (PHSEP) is project specific, a number of method statements must be supplied with and as the first stage of this plan, for review prior to commencement of construction on the Works of the Contract. These statements must follow the format detailed within the Tender and Contract Documents.

b. Method Statements shall fully describe and define the construction task and activity and must be submitted to the Engineer for review.

c. Each method statement shall, notwithstanding the requirements of the Tender and Contract Documents, will be written clearly to enable those doing the work to understand fully the details of the specific task, and the necessary health and safety requirements and must contain the following details where applicable:

a. Heading & Documentation Layout

1) Company Details - Address, Tel & Fax No's & E-mail
2) Title - What task(s)? + Ref No
3) Employer / Main Contractor(s)
4) Location of Works - General & Specific
5) Name of Company Contact + Phone No
6) Start Date & Duration of Works
7) Page & Paragraph Numbers

b. Description

1) General Scope of Works
2) Sequence - Explanation of Operation(s) / Process('s)

c. Resources

1) No of Personnel - for Task(s) / Operation / Process
2) Plant / Equipment / Tools to be used (+ Task Lighting?)
3) Transportation - Delivery & Collection Procedure(s)
4) Materials - Delivery to Area(s) of Work(s) & Storage

d. Control Measures to be used

1) Induction Training + Task Specific Training
2) Permits - Hot Works, Areas of High Risk
3) Hazard Signage - Specific Tasks as required
4) Access & Egress - Security / Signing In & Out

e. PPE (Personal Protective Equipment) and Welfare & Temp Accommodation Facilities

1) Type(s) of PPE to be used
2) Office (if required), Canteen, Rest Room, Drying Room

f. Emergency Arrangements

1) First Aider - Name, Position + Contact Details
b. First Aid Kit - Availability & Location
c. Special / Specific Rescue Procedures required

g. Protective Systems / Measures

1) Temp Systems - What / Who provided by? *(Fire Points, Elec, Water)*
2) Safeguards - Barriers, Fencing, Screens, etc.
3) Others Site Personnel / Occupiers / Visitors / Public

h. Risk Assessment & Noise Monitoring

1) Individual Task(s) + Related Hazards
2) Persons affected
3) Risk Rating - Probability x Consequence
4) Control Measures - Each Individual Task(s)
5) Assessor's - Name, Position + Signed & Dated
6) Noise Monitoring Required for Task(s)?

i. COSHH Assessment + Storage & HF Liquids & Gases

1) Relevant Safety Data Sheets (Within 5 Years of issue) for all Hazardous Substances / Materials / Liquids / Gases
2) Designated Storage for COSHH items and Gas Cylinders

j. Monitoring & Compliance

1) Supervisor - Name, Position + Contact Details
2) Assessor's - Name, Position + Signed & Dated.

k. This does not however exclude the duties to manage health and safety on the Site after acceptance by the Employer and the Engineer of the plan; thus, the development and inclusion of further method statements for hazardous activities is a fundamental requirement.

d. The Method Statements required are detailed below:

1. Security of the Site
2. Health and Safety Induction Processes, including the means of dealing with the cultural and language issues
3. Segregation / protection of areas where work is in progress (Fencing)
4. Control of noise
5. Control of dust
6. Traffic management
7. Work at height
8. Confined spaces
9. Buried and overhead services
10. Hazardous substances (COSHH)
11. Fire Prevention
12. Working over / adjacent to watercourses
13. Housekeeping
14. Electrical Installations (including temporary installations)
15. Material storage
16. Excavations
17. Piling Works
18. Contaminated Land
19. Welfare

20. Lifting operations
21. Selection and use of PPE

1.8 MANAGEMENT OF RESIDUAL RISK

A. The purpose of this section is to include adequate information about the structure, or materials used which might affect the health or safety of anyone carrying out construction or cleaning work or of anyone who may be affected by such work.

B. Ensure the production and collation of information for management of the residual risks that remain to be dealt with by the Employer as a result of the design and construction process; this should include as a minimum the following:

1. Future maintenance.
2. Cleaning.
3. Access Requirements / Restrictions.
4. Working space requirements.
5. Details of key structural principles, including safe working floor and roof loads.
6. Details of construction methods and materials, including dated data sheets, which may present residual hazards with respect to cleaning, maintenance, repair, renovation or demolition.
7. General maintenance instructions including access provision and information about equipment provided for cleaning and maintaining the building fabric.
8. The nature, location and markings of utilities and services, including emergency and fire-fighting equipment.
9. Details of hazard substances (COSHH) associated with the materials used in the construction.
10. Any residual hazards which remain and how they have been dealt with (for example surveys or other information concerning asbestos; contaminated land; water bearing strata; buried services etc.).
11. Key structural principles (for example, bracing, sources of substantial stored energy – including pre- or post-tensioned members) and safe working loads for floors and roofs, particularly where these may preclude placing scaffolding or heavy machinery there.
12. Hazardous materials (COSHH) used (for example lead paint; pesticides; special coatings which should not be burnt off etc.).
13. Information regarding the removal or dismantling of installed plant and equipment (for example any special arrangements for lifting, order or other special instructions for dismantling etc.).
14. Health and safety information about the equipment provided for cleaning or maintaining the structure.
15. Information and as-built drawings of the structure, its plant and equipment (for example, the means of safe access to and from service voids, fire doors and compartmentalisation etc.).

C. The Management of Residual Risk Plan must be provided in a format and with sufficient detail that the Employer and the Engineer can identify hazards and risks for the Employer's employees and future contractors to enable work to be carried out safely without the requirement to undertake searches, surveys, etc. that may prove hazardous in themselves.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 013520

SECTION 014000 - QUALITY REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Particular Conditions and other Division 01 Specifications sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for quality assurance and quality control.

B. Testing and inspection services are required to verify compliance with requirements specified or indicated. These services do not relieve Contractor of responsibility for compliance with the Contract Document requirements.

1. Specific quality-assurance and quality-control requirements for individual work results are specified in their respective Specification Sections. Requirements in individual Sections may also cover production of standard products.
2. Specified tests, inspections, and related actions do not limit Contractor's other quality-assurance and quality-control procedures that facilitate compliance with the Contract Document requirements.
3. Requirements for Contractor to provide quality-assurance and quality-control services required by the Engineer, the Employer, Commissioning Authority, Construction Manager, or authorities having jurisdiction are not limited by provisions of this Section.

C. Related Requirements:

1. Division 01 Section "Construction Progress Documentation" for developing a schedule of required tests and inspections.
2. Specifications sections in addition to Division 01 Sections for specific test and inspection requirements.
3. Specification sections in addition to Division 01 for specific mock-up requirements not indicated in this Section.
4. Specification sections related to the functionality and efficiency of the executed systems.

1.3 DEFINITIONS

A. Experienced: When used with an entity or individual, "experienced," unless otherwise further described, means having successfully completed a minimum of five (5) previous projects similar in nature, size, and extent to this Project; being familiar with special requirements indicated; and having complied with requirements of authorities having jurisdiction.

B. Field Quality-Control Tests and Inspections: Tests and inspections that are performed on-site for installation of the Work and for completed Work.

C. Installer/Applicator/Erector: Contractor or another entity engaged by Contractor as an employee, subcontractor, or sub-subcontractor, to perform a particular construction operation, including installation, erection, application, assembly, and similar operations.

1. Use of trade-specific terminology in referring to a Work result does not require that certain construction activities specified apply exclusively to specific trade(s).

D. Mockups: Physical assemblies of portions of the Work constructed to establish the standard by which the Work will be judged. Mockups are not Samples.

1. Mockups are used for one or more of the following:

a. Verify selections made under Sample submittals.
b. Demonstrate aesthetic effects.
c. Demonstrate the qualities of products and workmanship.
d. Demonstrate successful installation of interfaces between components and systems.
e. Perform preconstruction testing to determine system performance.

2. Product Mockups: Mockups that may include multiple products, materials, or systems specified in a single Section.
3. In-Place Mockups: Mockups constructed on-site in their actual final location as part of permanent construction.
4. Laboratory Mockups: Full-size physical assemblies constructed at testing facility to verify performance characteristics.
5. Integrated Exterior Mockups: Mockups of the exterior envelope erected separately from the building but on Project site, consisting of multiple products, assemblies, and subassemblies.
6. Room Mockups: Mockups of typical interior spaces complete with wall, floor, and ceiling finishes, doors, windows, millwork, casework, specialties, furnishings and equipment, and lighting.

E. Preconstruction Testing: Tests and inspections performed specifically for Project before products and materials are incorporated into the Work, to verify performance or compliance with specified criteria. Unless otherwise indicated, copies of reports of tests or inspections performed for other than the Project do not meet this definition.

F. Product Tests: Tests and inspections that are performed by a testing agency qualified to conduct product testing and acceptable to authorities having jurisdiction, to establish product performance and compliance with specified requirements.

G. Source Quality-Control Tests and Inspections: Tests and inspections that are performed at the source (e.g., plant, mill, factory, or shop).

H. Testing Agency: An entity engaged to perform specific tests, inspections, or both. The term "testing laboratory" has the same meaning as the term "testing agency."

I. Quality-Assurance Services: Activities, actions, and procedures performed before and during execution of the Work, to guard against defects and deficiencies and substantiate that proposed construction will comply with requirements.

J. Quality-Control Services: Tests, inspections, procedures, and related actions during and after execution of the Work, to evaluate that actual products incorporated into the Work and completed construction comply with requirements. Contractor's quality-control services do not include contract administration activities performed by the Engineer or Construction Manager.

1.4 DELEGATED DESIGN SERVICES

A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.

1. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to the Engineer.

B. Delegated Design Services Statement: Submit a statement signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional, indicating that the products and systems are following performance and design criteria indicated. Include list of codes, loads, and other factors used in performing these services.

1.5 CONFLICTING REQUIREMENTS

A. Conflicting Standards and Other Requirements: If compliance with two or more standards or requirements is specified and the standards or requirements establish different or conflicting requirements for minimum quantities or quality levels, inform the Engineer regarding the conflict and obtain clarification prior to proceeding with the Work. Refer conflicting requirements that are different, but apparently equal, to the Engineer for clarification before proceeding.

B. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified is the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of requirements. Refer uncertainties to the Engineer for a decision before proceeding.

1.6 ACTION SUBMITTALS

A. Mockup Shop Drawings:

1. Include plans, sections, elevations, and details, indicating materials and size of mockup construction.
2. Indicate manufacturer and model number of individual components.
3. Provide axonometric drawings for conditions difficult to illustrate in two dimensions.

1.7 INFORMATIONAL SUBMITTALS

A. Contractor's Quality-Control Plan: For quality-assurance and quality-control activities and responsibilities.

B. Qualification Data: For Contractor's quality-control personnel.

C. Contractor's Statement of Responsibility: When required by authorities having jurisdiction, submit copy of written statement of responsibility submitted to authorities having jurisdiction before starting work on the following systems:

1. Seismic-force-resisting system, designated seismic system, or component listed in the Statement of Special Inspections.
2. Primary wind-force-resisting system or a wind-resisting component listed in the Statement of Special Inspections.

D. Testing Agency Qualifications: For testing agencies specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include proof of qualifications in the form of a recent report on the inspection of the testing agency by the authority having jurisdiction.

E. Schedule of Tests and Inspections: Prepare in tabular form and include the following:

1. Specification Section number and title.

2. Entity responsible for performing tests and inspections.
3. Description of test and inspection.
4. Identification of applicable standards.
5. Identification of test and inspection methods.
6. Number of tests and inspections required.
7. Time schedule or time span for tests and inspections.
8. Requirements for obtaining samples.
9. Unique characteristics of each quality-control service.

F. Reports: Prepare and submit certified written reports and documents as specified.

G. Permits, Licenses, and Certificates: For Employer's record, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, correspondence, records, and similar documents established for compliance with standards and regulations bearing on performance of the Work.

H. Delegated-Design Submittal: In addition to Shop Drawings, Product Data, and other required submittals, submit a statement, signed and sealed by the responsible design professional, for each product and system specifically assigned to the Contractor to be designed or certified by a design professional, indicating that the products and systems follow performance and design criteria indicated. Include list of codes, loads, and other factors used in performing these services.

1.8 CONTRACTOR'S QUALITY-CONTROL PLAN

A. Quality-Control Plan, General:

1. Submit quality-control plan within ten (10) days of Notice of Award, and not less than five (5) days prior to preconstruction conference. Submit in format acceptable to the Engineer. Identify personnel, procedures, controls, instructions, tests, records, and forms to be used to carry out Contractor's quality-assurance and quality-control responsibilities and to coordinate Employer's quality-assurance and quality-control activities. Coordinate with Contractor's Construction Schedule.
2. Notify the Engineer or his authorized representative in writing of any proposed change to the Quality Control Plan. Any proposed changes must not be implemented until prior approval has been received from the Engineer.
3. The Engineer shall have the right to perform quality audits to verify adherence of the Contractor and his sub-contractors or suppliers to the Quality Control Plan upon providing the Contractor with a 24-hour notice.

B. Contents of Quality Control Plan shall include as a minimum:

1. Identify the quality policy, methodology and framework adopted by the Contractor.
2. Identify quality objectives and define KPIs measured and compared against these objectives.
3. Include a quality organization chart showing the personnel; describe the quality organization including major reporting lines and relationships within and external to the organization. Authorities, duties and responsibilities within the said organization shall be stated.
4. Describe all quality assurance and quality control activities to be performed in relation to the works. Identify controls, key performance indicators and trend analysis mechanisms to be used to carry out Contractor's quality-assurance and quality-control responsibilities
5. Include procedures, processes and forms to be used and document control procedures.
6. Describe methods proposed to control the use of the various design documents, shop drawings, procedures, etc. to assure that only the latest reviewed documents are used and are distributed to the individuals performing the Work. Recall of documents which have been superseded or revised shall be implemented. Describe the process used to determine what submittals are required by the Contract and the system used to track these submittals and their current status.

7. Describe method of documenting quality control operations, inspections and testing. This shall include how various records originated and how they are maintained, received, filed, protected, and authenticated. Quality records required for submittal to the Engineer shall be described.
8. Describe methods for accomplishing quality control inspections addressing the how, what, where, when and why of these inspections, including that for subcontractor's work. Include as a minimum, three phases of inspection for all definable phases of the Works.
9. Identification and description of all mock-up items.
10. Detailed listing by Specification Section and paragraph designating all Quality Control requirements and tests to be performed and their frequency. Further indicate which tests will be performed by technicians or by an approved testing laboratory.
11. Methods to be employed when any Work is found not to meet Technical Specifications and the means to be implemented to document the items (non-conformance reports) and provide resolution.
12. A matrix of all Contract and Technical Specification requirements to enable monitoring of all items from start until acceptance and completion. This is to facilitate Contract closeout.

C. Quality-Control Personnel Qualifications: Engage qualified personnel trained and experienced in managing and executing quality-assurance and quality-control procedures similar in nature and extent to those required for Project.

D. Submittal Procedure: Describe procedures for ensuring compliance with requirements through review and management of submittal process. Indicate qualifications of personnel responsible for submittal review.

E. Testing and Inspection: In quality-control plan, include a comprehensive schedule of Work requiring testing or inspection, including the following:

1. Contractor-performed tests and inspections, including subcontractor-performed tests and inspections. Include required tests and inspections and Contractor-elected tests and inspections. Distinguish source quality-control tests and inspections from field quality-control tests and inspections.
2. Special inspections required by authorities having jurisdiction and indicated on the Statement of Special Inspections.
3. Employer-performed tests and inspections indicated in the Contract Documents, including tests and inspections indicated to be performed by Commissioning Authority.

F. Continuous Inspection of Workmanship: Describe process for continuous inspection during construction to identify and correct deficiencies in workmanship in addition to testing and inspection specified. Indicate types of corrective actions to be required to bring the Work into compliance with standards of workmanship established by Contract requirements and approved mockups.

G. Monitoring and Documentation: Maintain testing and inspection reports, including log of approved and rejected results. Include Work the Engineer has indicated as nonconforming or defective. Indicate corrective actions taken to bring nonconforming Work into compliance with requirements. Comply with requirements of authorities having jurisdiction.

1.9 REPORTS AND DOCUMENTS

A. Test and Inspection Reports: Prepare and submit certified written reports specified in other Sections. Include the following:

1. Date of issue.
2. Project title and number.
3. Name, address, telephone number, and email address of testing agency.
4. Dates and locations of samples and tests or inspections.
5. Names of individuals making tests and inspections.

6. Description of the Work and test and inspection method.
7. Identification of product and Specification Section.
8. Complete test or inspection data.
9. Test and inspection results and an interpretation of test results.
10. Record of temperature and weather conditions at time of sample-taking and testing and inspection.
11. Comments or professional opinion on whether tested or inspected Work complies with the Contract Document requirements.
12. Name and signature of laboratory inspector.
13. Recommendations on retesting and reinspecting.

B. Manufacturer's Technical Representative's Field Reports: Prepare written information documenting manufacturer's technical representative's tests and inspections specified in other Sections. Include the following:

1. Name, address, telephone number, and email address of technical representative making report.
2. Statement on condition of substrates and their acceptability for installation of product.
3. Statement that products at Project site comply with requirements.
4. Summary of installation procedures being followed, whether they comply with requirements and, if not, what corrective action was taken.
5. Results of operational and other tests and a statement of whether observed performance complies with requirements.
6. Statement of whether conditions, products, and installation will affect warranty.
7. Other required items indicated in individual Specification Sections.

C. Factory-Authorized Service Representative's Reports: Prepare written information documenting manufacturer's factory-authorized service representative's tests and inspections specified in other Sections. Include the following:

1. Name, address, telephone number, and email address of factory-authorized service representative making report.
2. Statement that equipment complies with requirements.
3. Results of operational and other tests and a statement of whether observed performance complies with requirements.
4. Statement of whether conditions, products, and installation will affect warranty.
5. Other required items indicated in individual Specification Sections.

1.10 QUALITY ASSURANCE

A. Qualifications paragraphs in this article establish the minimum qualification levels required; individual Specification Sections specify additional requirements.

B. Manufacturer Qualifications: A firm experienced in manufacturing products or systems similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce the required units. As applicable, procure products from manufacturers able to meet qualification requirements, warranty requirements, and technical or factory-authorized service representative requirements.

C. Fabricator Qualifications: A firm experienced in producing products similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

D. Installer Qualifications: A firm or individual experienced in installing, erecting, applying, or assembling work similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance.

E. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of the system, assembly, or product that is similar in material, design, and extent to those indicated for this Project.

F. Specialists: Certain Specification Sections require that specific construction activities be performed by entities who are recognized experts in those operations. Specialists will satisfy qualification requirements indicated and engage in the activities indicated.

1. Requirements of authorities having jurisdiction supersede requirements for specialists.

G. Testing and Inspecting Agency Qualifications: A recognized accredited agency and/or the authority having jurisdiction; or an independent agency with the experience and capability to conduct testing and inspection indicated, as documented in accordance with ASTM E329, and with additional qualifications specified in individual Sections; and, where required by authorities having jurisdiction, that is acceptable to authorities.

H. Manufacturer's Technical Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to observe and inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.

I. Factory-Authorized Service Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to inspect, demonstrate, repair, and perform service on installations of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.

J. Preconstruction Testing: Where testing agency is indicated to perform preconstruction testing for compliance with specified requirements for performance and test methods, comply with the following:

1. Contractor’s Responsibilities

a. Provide test specimens representative of proposed products and construction.
b. Submit specimens in a timely manner with sufficient time for testing and analyzing results to prevent delaying the Work.
c. Provide sizes and configurations of test assemblies, mockups, and laboratory mockups to adequately demonstrate capability of products to comply with performance requirements.
d. Build site-assembled test assemblies and mockups, using installers who will perform same tasks for Project.
e. When testing is complete, remove test specimens and test assemblies, and mockups; do not reuse products on Project.

2. Testing Agency Responsibilities: Submit a certified written report of each test, inspection, and similar quality-assurance service to the Engineer and Commissioning Authority, with copy to Contractor. Interpret tests and inspections, and state in each report whether tested and inspected Work complies with or deviates from the Contract Documents.

K. Mockups: Before installing portions of the Work requiring mockups, build mockups for each form of construction and finish required to comply with the following requirements, using materials indicated for the completed Work:

1. Build mockups of size indicated.
2. Build mockups in location indicated or, if not indicated, as directed by the Engineer
3. Notify the Engineer seven (7) days in advance of dates and times when mockups will be constructed.

4. Employ supervisory personnel who will oversee mockup construction. Employ workers who will be employed to perform same tasks during the construction at Project.
5. Demonstrate the proposed range of aesthetic effects and workmanship.
6. Obtain Engineer's approval of mockups before starting corresponding Work, fabrication, or construction.

    a. Allow **seven (7)** days for initial review and each re-review of each mockup.

7. Promptly correct unsatisfactory conditions noted by the Engineer's preliminary review, to the satisfaction of the Engineer, before completion of final mockup.
8. Approval of mockups by the Engineer does not constitute approval of deviations from the Contract Documents contained in mockups unless the Engineer specifically approves such deviations in writing.
9. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
10. Demolish and remove mockups when directed unless otherwise indicated.

L. Specialty Mockups: See Section 014339 "Mockups" for additional construction requirements for mockups.

M. Integrated Exterior Mockups: Construct integrated exterior mockup in accordance with approved Shop Drawings Coordinate installation of exterior envelope materials and products for which mockups are required in individual specification sections, along with supporting materials.

N. Room Mockups: Construct room mockups incorporating required materials and assemblies, finished in accordance with requirements. Provide required lighting and additional lighting where required to enable the Engineer to evaluate the quality of the Work.

1.11 QUALITY CONTROL

A. Employer Responsibilities: Where quality-control services are indicated as Employer's responsibility, Employer will engage a qualified testing agency to perform these services.

1. Employer will furnish Contractor with names, addresses, and telephone numbers of testing agencies engaged and a description of types of testing and inspection they are engaged to perform. The Contractor shall engage such services at his own cost.
2. Where the Specifications states that the Employer shall or reserves the right to, engage the services of a qualified testing Agency to carry out tests, etc., such tests shall be undertaken by a third-party QA/QC bodies and / or testing agencies, as specified for quality control testing and/or third-party inspections, the services of which are to be engaged by the Contractor at his own costs
3. Costs for testing, retesting and reinspection construction that replaces or is necessitated by Work that failed to comply with the Contract Documents will be charged to the Contractor.

B. Contractor Responsibilities: Tests and inspections not explicitly assigned to Employer are Contractor's responsibility. Perform additional quality-control activities, whether specified or not, to verify and document that the Work complies with requirements.

1. Unless otherwise indicated, provide quality-control services specified and those required by authorities having jurisdiction. Perform quality-control services required of Contractor by authorities having jurisdiction, whether specified or not.
2. Engage a qualified testing agency to perform quality-control services.

    a. Contractor will not employ same entity engaged by Employer, unless agreed to in writing by Employer.

3. Notify testing agencies at least twenty-four (24) hours in advance of time when Work that requires testing or inspection will be performed.

4. Where quality-control services are indicated as Contractor's responsibility, submit a certified written report, in duplicate, of each quality-control service.
5. Testing and inspection requested by the Contractor and not required by the Contract Documents are Contractor's responsibility.
6. Submit additional copies of each written report directly to authorities having jurisdiction, when they so direct.

C. Retesting / Reinspection: Regardless of whether original tests or inspections were Contractor's responsibility, provide quality-control services, including retesting and reinspection, for construction that replaced Work that failed to comply with the Contract Documents.

D. Testing Agency Responsibilities: Cooperate with the Engineer and Contractor in performance of duties. Provide qualified personnel to perform required tests and inspections.

1. Notify the Engineer, Commissioning Authority and Contractor promptly of irregularities or deficiencies observed in the Work during performance of its services.
2. Determine the locations from which test samples will be taken and in which in-situ tests are conducted.
3. Conduct and interpret tests and inspections, and state in each report whether tested and inspected Work complies with or deviates from requirements.
4. Submit a certified written report, in duplicate, of each test, inspection, and similar quality-control service through Contractor.
5. Do not release, revoke, alter, or increase the Contract Document requirements or approve or accept any portion of the Work.
6. Do not perform duties of Contractor.

E. Manufacturer's Field Services: Where indicated, engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including service connections. Report results in writing as specified in Section 013300 "Submittal Procedures."

F. Manufacturer's Technical Services: Where indicated, engage a manufacturer's technical representative to observe and inspect the Work. Manufacturer's technical representative's services include participation in preinstallation conferences, examination of substrates and conditions, verification of materials, observation of Installer activities, inspection of completed portions of the Work, and submittal of written reports.

G. Contractor's Associated Requirements and Services: Cooperate with agencies and representatives performing required tests, inspections, and similar quality-control services, and provide reasonable auxiliary services as requested. Notify agency sufficiently in advance of operations to permit assignment of personnel. Provide the following:

1. Access to the Work.
2. Incidental labor and facilities necessary to facilitate tests and inspections.
3. Adequate quantities of representative samples of materials that require testing and inspection. Assist agency in obtaining samples.
4. Facilities for storage and field curing of test samples.
5. Delivery of samples to testing agencies.
6. Preliminary design mix proposed for use for material mixes that require control by testing agency.
7. Security and protection for samples and for testing and inspection equipment at Project site.

H. Coordination: Coordinate sequence of activities to accommodate required quality-assurance and quality-control services with a minimum of delay and to avoid necessity of removing and replacing construction to accommodate testing and inspection.

1. Schedule times for tests, inspections, obtaining samples, and similar activities.

I. Schedule of Tests and Inspections: Prepare a schedule of tests, inspections, and similar quality-control services required by the Contract Documents as a component of Contractor's quality-

control plan. Coordinate and submit concurrently with Contractor's Construction Schedule. Update and submit with each Application for Payment.

1. Schedule Contents: Include tests, inspections, and quality-control services, including Contractor- and Employer-retained services, commissioning activities, and other Project-required services paid for by other entities.
2. Distribution: Distribute schedule to the Employer, the Engineer, Commissioning Authority testing agencies, and each party involved in performance of portions of the Work where tests and inspections are required.

1.12 SPECIAL TESTS AND INSPECTIONS

A. Special Tests and Inspections: Employer will engage a qualified testing agency and/or special inspector to conduct special tests and inspections required by authorities having jurisdiction as the responsibility of Employer and as follows:

1. Verifying that manufacturer maintains detailed fabrication and quality-control procedures and reviewing the completeness and adequacy of those procedures to perform the Work.
2. Notifying the Engineer and Contractor promptly of irregularities and deficiencies observed in the Work during performance of its services.
3. Submitting a certified written report of each test, inspection, and similar quality-control service to the Engineer with copy to Contractor and to authorities having jurisdiction.
4. Submitting a final report of special tests and inspections at Substantial Completion, which includes a list of unresolved deficiencies.
5. Interpreting tests and inspections and stating in each report whether tested and inspected Work complies with or deviates from the Contract Documents.
6. Retesting and reinspection corrected Work.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 TEST AND INSPECTION LOG

A. Test and Inspection Log: Prepare a record of tests and inspections. Include the following:

1. Date test or inspection was conducted.
2. Description of the Work tested or inspected.
3. Date test or inspection results were transmitted to the Engineer.
4. Identification of testing agency or special inspector conducting test or inspection.

B. Maintain log at Project site. Post changes and revisions as they occur. Provide access to test and inspection log for the Engineer’s reference during normal working hours.

1. Submit log at Project Take Over as part of Project Record Documents.

3.2 REPAIR AND PROTECTION

A. General: On completion of testing, inspection, sample-taking, and similar services, repair damaged construction and restore substrates and finishes.

1. Provide materials and comply with installation requirements specified in other Specification Sections or matching existing substrates and finishes. Restore patched areas

and extend restoration into adjoining areas with durable seams that are as invisible as possible. Comply with the Contract Document requirements for cutting and patching in Section 017300 "Execution."

B. Protect construction exposed by or for quality-control service activities.

C. Repair and protection are the Contractor's responsibility, regardless of the assignment of responsibility for quality-control services.

3.3 CONTRACTOR'S QUALITY CONTROL ORGANIZATION

A. General: The Contractor is responsible for quality assurance and quality control of the Works, including portions of the Works performed by his subcontractors and suppliers.

B. Staff: The Contractor shall appoint Site staff led by a Project Quality Control Manager dedicated to quality control of the Works. The Quality Control Manager shall have prior experience in the same capacity or on similar projects of comparable type and size. Qualified quality control engineers shall be employed as required to assure quality in accordance with the Contract Documents. Quality control engineers shall report to the Project Quality Control Manager.

C. Staff Authority: The quality control staff shall have full authority within the Contractor's organization to take action necessary to ensure compliance with the Contract Documents. The quality control staff and organization shall be subject to approval by the Engineer.

D. Engineer's Monitoring: The Engineer shall perform continuous inspections on Site to verify that the Contractor is providing the necessary quality assurance and quality control. Procedures and forms for inspection requests and inspections shall be established as required by the Engineer. The Engineer shall be notified via Request for Inspection (RFI) forms of all quality inspections. The Engineer's attendance at inspections and signature on inspection forms shall not relieve the Contractor of his responsibility to provide quality control and quality assurance and to complete the Works in accordance with the Contract Documents.

END OF SECTION 014000

es

SECTION 014200 - REFERENCES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Particular Conditions and other Division 01 Specifications sections, apply to this Section.

1.2 DEFINITIONS

A. General: Basic Contract definitions are included in the Conditions of the Contract.

B. "Approved": When used to convey Engineer's action on Contractor's submittals, applications, and requests, "approved" is limited to Engineer's duties and responsibilities as stated in the Conditions of the Contract.

C. "Directed": A command or instruction by Engineer. Other terms including "requested," "authorized," "selected," "required," and "permitted" have the same meaning as "directed."

D. "Indicated": Requirements expressed by graphic representations or in written form on Drawings, in Specifications, and in other Contract Documents. Other terms including "shown," "noted," "scheduled," and "specified" have the same meaning as "indicated."

E. "Regulations": Laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, and rules, conventions, and agreements within the construction industry that control performance of the Work.

F. "Furnish": Supply and deliver to Project site, ready for unloading, unpacking, assembly, installation, and similar operations.

G. "Install": Unload, temporarily store, unpack, assemble, erect, place, anchor, apply, work to dimension, finish, cure, protect, clean, and similar operations at Project site.

H. "Provide": Furnish and install, complete and ready for the intended use.

I. "Project Site": Space available for performing construction activities. The extent of Project site is shown on Drawings and may or may not be identical with the description of the land on which Project is to be built.

J. Taking Over: Substantial Completion

1.3 SPECIFICATION FORMAT AND CONTENT EXPLANATION

A. Specification Format: These Specifications are organized into Divisions and Sections based on the Construction Specifications Institute's latest version format and "Master Format" numbering system.

B. Specification Content: This division 1 of the Specification uses certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. These conventions are as follows:

1. Abbreviated Language: Language used is abbreviated. Words and meanings shall be interpreted as appropriate. Words implied, but not stated, shall be interpolated as the sense

requires. Singular words shall be interpreted as plural and plural words interpreted as singular where applicable as the context of the Contract Documents indicates.

2. Imperative mood and streamlined language are generally used. Requirements expressed in the imperative mood shall be performed by the Contractor. At certain locations in the Text, subjective language is used for clarity to describe responsibilities that shall be fulfilled indirectly by the Contractor or by others when so noted.

    a. The words "shall", "shall be", or "shall comply with", depending on the context, are implied where a colon (:) is used within a sentence or phrase.
    b. The word "per" means "in accordance with", "according to", "in compliance with", "complying with", and similar phrases.

1.4 INDUSTRY STANDARDS

A. Applicability of Standards: Unless the Contract Documents include more stringent requirements, applicable construction industry standards have the same force and effect as if bound or copied directly into the Contract Documents to the extent referenced. Such standards are made a part of the Contract Documents by reference.

B. Publication Dates: Comply with standards in effect as of date of the Contract Documents unless otherwise indicated.

    1. For standards referenced by applicable building codes, comply with dates of standards as listed in building codes.

C. Copies of Standards: Each entity engaged in construction on Project should be familiar with industry standards applicable to its construction activity. Copies of applicable standards are not bound with the Contract Documents.

    1. Where copies of standards are needed to perform a required construction activity, obtain copies directly from publication source.

D. If requested by the Engineer, the Contractor shall submit the equivalent to any standard referred to in the Specifications and the Contractor shall convert the parameters mentioned in the specifications to be comparable with the equivalent standard

E. Conflicting Requirements: Where compliance with 2 or more standards is specified and the standards establish different or conflicting requirements for minimum quantities or quality levels, comply with the most stringent requirement. Refer uncertainties and requirements that are different but apparently equal to the Engineer for a decision before proceeding.

    1. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of the requirements. Refer uncertainties to the Engineer for a decision before proceeding.

1.5 ABBREVIATIONS AND ACRONYMS

A. Industry Organizations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities indicated in Gale's "Encyclopedia of Associations: National Organizations of the U.S." or in Columbia Books' "National Trade & Professional Associations of the United States."

es

B. Industry Organizations, List: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they are to mean the recognized name of the entities in the following list. The information in this list is subject to change and is believed to be accurate as of the date of the Contract Documents.

1. AABC - Associated Air Balance Council; www.aabc.com.
2. AAMA - American Architectural Manufacturers Association; (see FGIA).
3. AAPFCO - Association of American Plant Food Control Officials; www.aapfco.org.
4. AASHTO - American Association of State Highway and Transportation Officials; www.transportation.org.
5. AATCC - American Association of Textile Chemists and Colorists; www.aatcc.org.
6. ABMA - American Bearing Manufacturers Association; www.americanbearings.org.
7. ABMA - American Boiler Manufacturers Association; www.abma.com.
8. ACI - American Concrete Institute;; www.concrete.org.
9. ACP - American Clean Power; (Formerly: American Wind Energy Association); www.cleanpower.org.
10. ACPA - American Concrete Pipe Association; www.concretepipe.org.
11. AEIC - Association of Edison Illuminating Companies, Inc. (The); www.aeic.org.
12. AF&PA - American Forest & Paper Association; www.afandpa.org.
13. AGA - American Gas Association; www.aga.org.
14. AHAM - Association of Home Appliance Manufacturers; www.aham.org.
15. AHRI - Air-Conditioning, Heating, and Refrigeration Institute (The); www.ahrinet.org.
16. AI - Asphalt Institute; www.asphaltinstitute.org.
17. AIA - American Institute of Architects (The); www.aia.org.
18. AISC - American Institute of Steel Construction; www.aisc.org.
19. AISI - American Iron and Steel Institute; www.steel.org.
20. AITC - American Institute of Timber Construction; (see PLIB).
21. AMCA - Air Movement and Control Association International, Inc.; www.amca.org.
22. AMPP - Association for Materials Protection and Performance; www.ampp.org.
23. ANSI - American National Standards Institute; www.ansi.org.
24. AOSA / SCST- Association of Official Seed Analysts, (The)/Society of Commercial Seed Technologists ; www. analyzeseeds.com.
25. APA - The Engineered Wood Association; www.apawood.org.
26. APA - Architectural Precast Association; www.archprecast.org.
27. API - American Petroleum Institute; www.api.org.
28. ARMA - Asphalt Roofing Manufacturers Association; www.asphaltroofing.org.
29. ASA - Acoustical Society of America; www.acousticalsociety.org.

1.6 CONTRACTOR'S REPONSIBILITY

A. All information provided in this Section is furnished for information only and is not a warranty of accuracy or completeness. The Contractor shall review and verify all such information and shall notify the Engineer, in writing, of any corrections, discrepancies, or required updates. Provide such notice within 28 days after the Commencement Date, or within 28 days after the Contractor becomes aware (or should have become aware) of such update, whichever occurs later.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 014200

SECTION 014339 - MOCKUPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Integrated exterior mockups (if required and as indicated on drawings).
2. Preconstruction laboratory mockups. (if required and as indicated on drawings).
3. Room mockups. (if required and as indicated on drawings).

1.3 DEFINITIONS

A. Integrated Exterior Mockups: Mockups of the exterior envelope constructed on-site as freestanding temporary built elements and part of permanent construction, consisting of multiple products, assemblies, and subassemblies.

B. Preconstruction Laboratory Mockups: Integrated exterior mockups constructed at testing facility to verify performance characteristics.

C. Room Mockups: Mockups of typical interior spaces complete with wall, floor, and ceiling finishes; doors; windows; millwork; casework; specialties; furnishings and equipment; and lighting as indicated.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Meet with Employer, Engineer, testing and inspecting agency representative, and installers of major systems whose Work is included in integrated exterior, preconstruction laboratory and room mockups.
2. Review coordination of equipment and furnishings provided by the Employer for room mockups.
3. Review locations and extent of mockups.
4. Review testing procedures to be performed on mockups.
5. Review and finalize schedule for mockups, and verify availability of materials, personnel, equipment, and facilities needed to complete mockups and testing and maintain schedule for the Work.

1.5 ACTION SUBMITTALS

A. Shop Drawings: For integrated exterior, preconstruction laboratory and room mockups.

1. Include plans, elevations, sections, and mounting and support details.

© Copyright Protected

2. Indicate manufacturer and model number of individual components, subassemblies, and assemblies.
3. Include site location drawing indicating orientation of mockup.
4. Revise and resubmit Shop Drawings to reflect approved modifications in details and component interfaces resulting from changes made during testing procedures.

B. Delegated Design Submittal: For temporary structural supports for mockups not attached to building structure, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.6 INFORMATIONAL SUBMITTALS

A. Room Mockup Coordination Drawings: and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

B. Qualification Data: For testing agency.

C. Preconstruction Test Reports: For integrated exterior and preconstruction laboratory mockups.

1.7 QUALITY ASSURANCE

A. Preconstruction Laboratory Mockup Testing Agency Qualifications: Qualif Accredited by IAS or ILAC Mutual Recognition Arrangement as complying with ISO/IEC 17025.

B. Testing Agency Qualifications: Accredited by IAS or ILAC Mutual Recognition Arrangement as complying with ISO/IEC 17025 and acceptable to Employer and Engineer.

C. Build mockups to do the following:

1. Verify selections made under Sample submittals.
2. Demonstrate aesthetic effects.
3. Demonstrate the qualities of products and workmanship.
4. Demonstrate acceptable coordination between components and systems.
5. Perform preconstruction testing, such as window air- and water-leakage testing.

D. Fabrication: Before fabricating or installing portions of the Work requiring mockups, build mockups for each form of construction and finish required. Use materials and installation methods as required for the Work.

1. Build mockups of size indicated.
2. Build mockups in location indicated or, if not indicated, as directed by Engineer.
3. Employ supervisory personnel who will oversee mockup construction. Employ workers who will be employed to perform same tasks during the construction at Project.
4. Demonstrate the proposed range of aesthetic effects and workmanship.
5. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
6. Demolish and remove mockups when directed unless otherwise indicated.

E. Notifications:

1. Notify Engineer seven days in advance of the dates and times when mockups will be constructed.
2. Notify Engineer 14 days in advance of the dates and times when mockups will be tested.
3. Allow seven days for initial review and each re-review of each mockup.

© Copyright Protected

F. Approval: Obtain Engineer's approval of mockups before starting fabrication or construction of corresponding Work.

1. Unless otherwise indicated, approved mockups establish the standard by which the Work will be judged.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Engineer specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 COORDINATION

A. Coordinate schedule for construction of mockups, so construction, testing, and review of mockups do not impact Project schedule.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Structural Performance:

1. Seismic Performance: Mockups and support structure to withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7 and as indicated in structural report
2. Wind Loads: As indicated in structural report.

B. Mockup Testing Performance Requirements: Perform tests using design pressures and performance criteria indicated for assemblies and products that are specified in other Sections and incorporated into integrated exterior and preconstruction laboratory mockups.

2.2 INTEGRATED EXTERIOR MOCKUPS (if required and as indicated on drawings).

A. Construct integrated exterior mockups according to approved mockup Shop Drawings and in accordance with the mockups specified in the Contract documents. Construct mockups to demonstrate constructability, coordination of trades, and sequencing of Work; and to ensure materials, components, subassemblies, assemblies, and interfaces integrate into a system complying with indicated performance and aesthetic requirements.

B. Design and construct foundation and superstructure to support free-standing integrated exterior mockups.

C. Build integrated exterior mockups using installers and construction methods that will be used in completed construction.

D. Use specified products that have been approved by Engineer. Coordinate installation of materials and products specified in individual Specification Sections that include Work included in integrated exterior mockups.

E. The Work of integrated exterior mockups includes, but is not limited to, the following:

1. Precast architectural concrete.
2. Stone cladding.
3. Cold-formed metal framing and sheathing.
4. Air and weather barriers.

© Copyright Protected

5. Thermal insulation.
6. Through-wall flashing.
7. Flashing and sheet metal trim.
8. Joint sealants.
9. Metal wall panels.
10. Aluminum-framed entrances and storefront.
11. Glazed curtain walls.
12. Aluminum windows.
13. Glazing.

F. Photographic Documentation: Document construction of integrated exterior mockups with photographs. Provide photographs showing details of interface of different materials and assemblies.

1. Document testing procedures, including water leakage and other deficiencies. Photograph modifications to component interfaces intended to correct deficiencies.

G. Provide and document modifications to construction details and interfaces between components and systems required to properly sequence the Work, or to pass performance testing requirements. Obtain Engineer's approval for modifications.

H. Retain approved mockups constructed in place. Incorporate fully into the Work.

2.3 PRECONSTRUCTION LABORATORY MOCKUPS (if required and as indicated on drawings)

A. Construct preconstruction laboratory mockups according to approved Shop Drawings in accordance with the mockups specified in the Contract documents. Construct mockups to demonstrate constructability, coordination of trades, and sequencing of Work; ensure materials, components, subassemblies, assemblies, and interfaces integrate into a system complying with indicated performance and aesthetic requirements; and conduct performance testing indicated.

B. Build preconstruction laboratory mockups at testing agency facility using installers and construction methods that will be used at Project site.

C. Use specified products that have been approved by Engineer. Coordinate installation of materials and products specified in individual Specification Sections that include Work included in preconstruction laboratory mockups.

D. The Work of preconstruction laboratory mockups includes, but is not limited to, the following:

1. Precast architectural concrete.
2. Stone cladding.
3. Cold-formed metal framing and sheathing.
4. Air and weather barriers.
5. Thermal insulation.
6. Through-wall flashing.
7. Flashing and sheet metal trim.
8. Joint sealants.
9. Metal wall panels.
10. Standing seam.
11. Skylight.
12. Aluminum-framed entrances and storefront.
13. Glazed curtain walls.
14. Aluminum windows.
15. Glazing.

E. Photographic Documentation: Document construction of preconstruction laboratory mockups with photographs. Provide photographs showing details of interface of different materials and assemblies.

© Copyright Protected

1. Document testing procedures, including water leakage and other deficiencies. Photograph modifications to component interfaces intended to correct deficiencies.

F. Provide and document modifications to construction details and interfaces between components and systems required to properly sequence the Work, or to pass performance testing requirements. Obtain Engineer's approval for modifications.

G. When testing is complete, remove test specimens and test assemblies, and preconstruction laboratory mockups; do not reuse products on Project.

2.4 ROOM MOCKUPS (if required and as indicated on drawings)

A. Build room mockups according to approved mockup Shop Drawings to evaluate constructability, demonstrate the coordination of trades and sequencing of Work, and to demonstrate aesthetic requirements. Include each visible finish, component, and equipment item within room mockups; include operable lighting.

B. Provide room mockups in accordance with the mockups specified in the Contract documents.

C. The Work of room mockups includes, but is not limited to, the following:

1. Millwork and casework.
2. Doors and frames.
3. Access doors and frames.
4. Glazing.
5. Metal framing.
6. Gypsum board.
7. Ceramic tiling.
8. Acoustical ceilings.
9. Resilient flooring.
10. Painting.
11. Registers and grilles.
12. Wiring devices.
13. Lighting.

PART 3 - EXECUTION

3.1 TESTING OF INTEGRATED EXTERIOR MOCKUPS

A. Integrated Exterior Mockup Testing Agency: Engage a qualified testing agency to perform tests and inspections.

1. Testing and inspecting agency will interpret tests and state in each report whether tested Work complies with or deviates from requirements.

B. Integrated Exterior Mockup Testing Services: Perform the following tests in the following order:

1. Water-Spray Test: Before installation of interior finishes has begun, test areas designated by Engineer in accordance with AAMA 501.2 for evidence of water penetration.

a. Perform a minimum of three tests in areas as directed by Engineer.

2. Air Leakage: Test in accordance with ASTM E783 at 1.5 times the rate specified in "Mockup Testing Performance Requirements" Paragraph in "Performance Requirements" Article, but not more than 0.45 L/s per sq. m at a static-air-pressure differential of 75 Pa.

© Copyright Protected

a. Perform a minimum of three tests in areas as directed by Engineer.

3. Water Penetration: Test in accordance with ASTM E1105 at a minimum uniform and cyclic static-air-pressure differential of 0.67 times the static-air-pressure differential specified for laboratory testing in "Mockup Testing Performance Requirements" Paragraph in "Performance Requirements" Article, but not less than 300 Pa, and verify no evidence of water penetration.

C. .

D. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and installations, including connections, and also to observe testing for the following systems and assemblies.

1. Curtain wall specified in:
   a. Section Curtain Walls."
   b. Section Metal wall panels.
   c. Standing seam.
   d. Skylight.
   e. Glazing assemblies related section.

E. Integrated exterior mockup will be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports.

3.2 TESTING OF PRECONSTRUCTION LABORATORY MOCKUPS

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

1. Testing and inspecting agency will interpret tests and state in each report whether tested Work complies with or deviates from requirements.

B. Testing Criteria: Where the following tests are indicated, use criteria indicated.

1. Air Leakage in Accordance with ASTM E283: Static-air-pressure differential of 600 Pa.
2. Water Penetration in Accordance with ASTM E331: Minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 720 Pa.

C. Unlock, open, and relock operable windows and doors five times. Perform necessary hardware adjustments, if any, and repeat cycling.

D. Preconstruction Laboratory Mockup Testing: Perform the following tests in the following order.

1. Structural, 50 Percent: ASTM E330/E330M at 50 percent of positive test load for not less than 10 seconds.
2. Air Leakage: ASTM E283.
3. Water Penetration under Static Pressure: ASTM E331.
4. Water Penetration under Dynamic Pressure: AAMA 501.1 at minimum air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 720 Pa.
5. Interstory Drift: AAMA 501.4 at 100 percent of design displacement. Repeat the following:

   a. Air Leakage: ASTM E283.
   b. Water Penetration under Static Pressure: ASTM E331.

6. Vertical Interstory Movement: AAMA 501.7 at 100 percent of design displacement. Repeat the following:

© Copyright Protected

a. Air Leakage: ASTM E283.
b. Water Penetration under Static Pressure: ASTM E331.

7. Thermal Cycling: AAMA 501.5. Repeat the following:

a. Air Leakage: ASTM E283.
b. Water Penetration under Static Pressure: ASTM E331.

8. Structural, 100 Percent: ASTM E330/E330M at 100 percent of positive and negative test loads for not less than 10 seconds. Repeat the following:

a. Air Leakage: ASTM E283.
b. Water Penetration under Static Pressure: ASTM E331.
c. Water Penetration under Dynamic Pressure: AAMA 501.1.

9. Structural, 150 Percent: ASTM E330/E330M at 150 percent of positive and negative test loads for not less than 10 seconds.
10. Interstory Drift: AAMA 501.4 at 150 percent of design displacement.

E. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and installations, including connections, and also to observe testing for the following systems and assemblies.

1. Curtain wall specified in Section:

a. Glazed Aluminum Curtain Wall.
b. Aluminum windows
c. Glazing assemblies related section.

F. Preconstruction laboratory mockup will be considered defective if it does not pass tests and inspections.

G. Prepare test and inspection reports.

3.3 MAINTENANCE

A. Maintain mockups during course of construction or until removal is directed.

B. Repair damage to mockups immediately upon occurrence. Maintain mockups and surrounding site in a safe and clean condition.

3.4 REMOVAL

A. Remove mockups at the completion of the work in a manner that shows no evidence of mock up's previous existence. Complete site work at area of mock up in accordance with Contract Drawings.

END OF SECTION 014339

© Copyright Protected

SECTION 015000 - TEMPORARY FACILITIES AND CONTROLS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Particular Conditions and other Division 01 Specifications sections, apply to this Section.

1.2 SUMMARY

A. Section includes requirements for temporary utilities, support facilities, and security and protection facilities.

B. Related Requirements

1. Division 01 Section 011000 "Summary" for work restrictions and limitations on utility interruptions.
2. Division 01 Section 011200 "Multiple Contract Summary" for responsibilities for temporary facilities and controls for projects utilizing multiple contracts.
3. Division 32 section 321313 "Concrete Paving" for construction and maintenance of cement concrete pavement for temporary roads and paved areas.

1.3 USE CHARGES

A. Installation, removal, and use charges for temporary facilities shall be included in the Contract Price unless otherwise indicated. Allow other entities engaged in the Project to use temporary services and facilities without cost, including, but not limited to the Employer's construction forces, Engineer, occupants of Project, testing agencies, and authorities having jurisdiction.

B. Sewer Service: Pay sewer-service use charges for sewer usage by all entities for construction operations. Arrange and pay for all temporary connections (installation, removal and reinstatement) and all associated administrative costs for permits, NOC’s etc. as necessary.

C. Water Service: Pay water-service use charges for water used by all entities for construction operations. Arrange and pay for all temporary connections (installation, removal and reinstatement) and all associated administrative costs for permits, NOC’s etc. as necessary.

D. Electric Power Service: Pay electric-power-service use charges for electricity used by all entities for construction operations. Arrange and pay for all temporary connections (installation, removal and reinstatement) and all associated administrative costs for permits, NOC’s etc. as necessary.

E. Telecom Services:

1. Pay for all connections, reconnections, service and user charges and other costs arising in connection with the continuation of all telecom facilities and services (Telephone and Internet) for the Engineer / Employer, other than the cost of international telephone calls not connected with the Works.
2. Obtain any permits / NOCS and provide all connections and extensions of services as necessary and metering at the Contractor’s own expense, to monitor the telecom service and maintain monthly records.
3. Remove all temporary connections and extensions and reinstate as before, as part of the Contractor’s demobilization from Site.

F. Water and Sewer Service from Existing System: Water from Employer's existing water system is available for use with metering**.** Provide connections and extensions of services and metering as required for construction operations, starting from the contract Commencement Date to the end of the Defects Liability Period. However, in case of metering, the following will be adopted:

1. If the Contract is delayed without an award of an Extension of Time or penalty waiver, the Contractor shall pay for the water consumption and sewer service for the temporary site facilities and any temporary or permanent works during the delayed period.
2. If any outstanding works and / or rectification of any defect works are not completed on time during the Defects Liability Period, the Contractor shall pay for the water consumption and sewer service for the temporary site facilities and completing any outstanding works and / or rectification of any defect works during the extended period.
3. Obtain any permits / NOCS and provide all connections and extensions of services as necessary and metering at the Contractor’s own expense, to monitor the water consumption and sewer service and maintain monthly records.
4. Use water services on Site in a conservative way, and strictly for construction purposes only for the Contract and no other locations.
5. Remove all temporary connections and extensions and reinstate as before, as part of the Contractor’s demobilization from Site.

G. Electric Power Service from Existing System: Electric power from Employer's existing system is available for use with metering. Provide connections and extensions of services and metering as required for construction operations, starting from the contract Commencement Date to the end of the Defects Liability Period. However, in case of metering, the following will be adopted:

1. If the Contract is delayed without an award of an Extension of Time or penalty waiver, the Contractor shall pay for the electric power consumption for the temporary site facilities and any temporary or permanent works during the delayed period.
2. If any outstanding works and / or rectification of any defect works are not completed on time during the Defects Liability Period, the Contractor shall pay for the electric power consumption for the temporary site facilities and completing any outstanding works and / or rectification of any defect works during the extended period.
3. Obtain any permits / NOCS and provide all connections and extensions of services as necessary and metering at the Contractor’s own expense, to monitor the electric power consumption and maintain monthly records.
4. Use electric power services on Site in a conservative way, and strictly for construction purposes only for the Contract and no other locations.
5. Remove all temporary connections and extensions and reinstate as before, as part of the Contractor’s demobilizations from Site.

H. Sewer, Water, and Electric Power Service: Use charges are specified in Section 011200 "Multiple Contract Summary."

I. Telephone Service: Pay telephone service use charges, for telephones installed at Site.

1.4 INFORMATIONAL SUBMITTALS

A. Site Utilization Plan: Show temporary facilities, temporary utility lines and connections, staging areas, construction site entrances, staging areas, vehicle circulation, and parking areas for construction personnel. Seek approval or changes as desired by the Employer.

B. Implementation and Termination Schedule: Within fifteen (15) days of date established for commencement of the Work, submit schedule indicating implementation and termination dates of each temporary utility.

C. Project Identification and Temporary Signs: Show fabrication and installation details, including plans, elevations, details, layouts, typestyles, graphic elements, and message content.

D. Erosion and Sedimentation Control Plan: Show compliance with requirements of EPA Construction General Permit or authorities having jurisdiction, whichever is more stringent.

E. Fire-Safety Program: Show compliance with requirements of Fire and Life Safety Code of Practice, NFPA 241 and authorities having jurisdiction. Indicate Contractor personnel responsible for management of fire-prevention program.

F. Moisture- and Mold-Protection Plan: Describe procedures and controls for protecting materials and construction from water absorption and damage and mold. Describe delivery, handling, storage, installation, and protection provisions for materials subject to water absorption or water damage.

1. Indicate procedures for discarding water-damaged materials, protocols for mitigating water intrusion into completed Work, and requirements for replacing water-damaged Work.
2. Indicate sequencing of work that requires water, such as sprayed fire-resistive materials, plastering, and terrazzo grinding, and describe plans for dealing with water from these operations. Show procedures for verifying that wet construction has dried sufficiently to permit installation of finish materials.
3. Indicate methods to be used to avoid trapping water in finished work.

G. Dust and HVAC Control Plan: Submit coordination drawing and narrative that indicates the dust- and HVAC-control measures proposed for use, proposed locations, and proposed time frame for their operation. Include the following:

1. Locations of dust control partitions at each phase of work.
2. HVAC system isolation schematic drawing.
3. Location of proposed air-filtration system discharge.
4. Waste-handling procedures.
5. Other dust-control measures.

H. Noise and Vibration Control Plan: Identify construction activities that may impact the occupancy and use of existing spaces within the building or adjacent existing buildings, whether occupied by others, or occupied by the Employer. Include the following:

1. Methods used to meet the goals and requirements of the Employer.
2. Concrete cutting method(s) to be used.
3. Location of construction plant and machinery on the site.
4. Show compliance with the use and maintenance of quieted construction plant and machinery for the duration of the Project.
5. Indicate activities that may disturb building occupants and that are planned to be performed during non-standard working hours as coordinated with the Employer.
6. Indicate locations of sensitive research, patient, and equipment areas or other areas requiring special attention as identified by Employer. Indicate means for complying with Employer's requirements.

I. Temporary Utility Reports: Submit reports of tests, inspections, maintenance, meter readings, and similar procedures performed on temporary utilities.

J. Insert requirements for submitting installation Drawings of critical temporary utilities if required.

K. Temporary Utilities: Submit detailed proposals including drawings and product data as requested; obtain the Engineer’s approval prior to purchase, delivery, installation or implementation, as applicable, of the following:

1. Sewers and drainage.
2. Water service and distribution.
3. Sanitary facilities, including toilets, wash facilities, and drinking-water facilities.
4. Electric power service.
5. Telecom service.

L. Support Facilities: Submit detailed proposals including drawings and product data as requested for the layout area for the location of the support facilities not later than two weeks of issuance of the Notice to Commence; obtain the Engineer's approval prior to purchase, delivery, equipping, installation or implementation, without limitation, of the following: :

1. Identification of the Works and temporary signs.
2. Temporary Site offices and site laboratory, including laboratory equipment.
3. Site canteen including kitchen equipment
4. Site medical clinic including medical equipment for emergency cases.
5. Site mosque including ablution area
6. Storage and fabrication sheds.
7. Construction aids and miscellaneous services and facilities:

    a. Exterior scaffold system, including ladders, walkways, platforms and guardrails.
    b. Protective screens and chutes.
    c. Tower cranes.
    d. Lifts and hoists for materials and workmen.

M. The Engineer's site offices shall be completely detached from that of the Contractor's and shall be at a location as approved by the Engineer.

N. Drawings showing the plans and elevations shall be submitted to the Engineer for approval.

1. Any reasonable changes or modifications suggested by the Engineer shall be incorporated at no additional cost to the Employer.

O. Security and Protection Facilities: Submit detailed proposals including drawings, layout, details, and product data as requested; obtain the Engineer's approval prior to purchase, delivery, installation or implementation, as applicable, of the following:

1. Fire protection.
2. First Aid and Medical protection
3. Fences and Entrance Gates

1.5 QUALITY ASSURANCE

A. Electric Service: Comply with NECA, NEMA, and UL standards and regulations for temporary electric service. Install service to comply with NFPA 70.

B. Tests and Inspections: Arrange for authorities having jurisdiction to test and inspect each temporary utility before use. Obtain required certifications and permits.

C. Accessible Temporary Egress: Comply with applicable provisions in the United States Access Board's ADA-ABA Accessibility Guidelines and] ICC/ANSI A117.1.

D. Regulations: Comply with industry standards and applicable laws and regulations of authorities having jurisdiction including, but not limited to, the following:

1. Building code requirements.
2. Utility company regulations.
3. Police and fire department regulations.
4. Environmental protection regulations.
5. Fire and Life Safety Code of Practice.
6. Health and Safety regulations.
7. Airport Fire Fighting and Rescue Services.

E. Standards: Comply with Local Regulations, IEE, NEC, IEC and NFPA.

1.6 PROJECT CONDITIONS

A. Temporary Use of Permanent Facilities:

1. If required, engage Installer of each permanent service to assume responsibility for operation, maintenance, and protection of each permanent service during its use as a construction facility before Employer's acceptance, regardless of previously assigned responsibilities.
2. Take full responsibility for operation, maintenance, and protection of each permanent service during its use as a construction facility before Taking Over, regardless of previously assigned responsibilities.

B. Temporary Utilities: At earliest feasible time, when accepted by the Engineer, change over from use of temporary service to use of permanent service.

C. Conditions of Use: The following conditions apply to use of temporary services and facilities by all parties engaged in the Works:

1. Keep clean and neat.
2. Operate in a safe and efficient manner.
3. Do not overload or permit them to interfere with progress.
4. Take appropriate fire prevention measures.
5. Do not allow hazardous, dangerous, or unsanitary conditions, or public nuisance to develop or persist on Site.
6. Relocate as required by progress of the Works.
7. Contractor's personnel and workmen, including subcontractors, are not permitted to use permanent toilet facilities or wash facilities.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General: Provide new materials suitable for use intended.

B. Construction Materials and Products: Comply with standards and applicable requirements in appropriate sections of the Specification.

C. Tarpaulins: Waterproof, fire-resistive, with low flame-spread rating.

D. Chain-Link Fencing: Minimum 50-mm, 3.8-mm thick, galvanized-steel, chain-link fabric fencing; minimum 1.8 m high with galvanized-steel pipe posts; minimum 60-mm OD line posts and 73-mm-OD corner and pull posts, with 42-mm OD top rails, with galvanized barbed-wire top strand.

E. Portable Chain-Link Fencing: Minimum 50-mm, 3.8-mm thick, galvanized-steel, chain-link fabric fencing; minimum 1.8 m high with galvanized-steel pipe posts; minimum 60-mm OD line posts and 73-mm OD corner and pull posts, with 42-mm OD top and bottom rails. Provide concrete bases for supporting posts.

F. Fencing Windscreen Privacy Screen: Polyester fabric scrim with grommets for attachment to chain-link fence, sized to height of fence, in color selected by the Engineer from manufacturer's standard colors.

G. Wood Enclosure Fence: Plywood**,** 1.8 m high, framed with four 50-by-100-mm rails, with preservative-treated wood posts spaced not more than 2.4 m apart.

H. Hoarding Fencing: Include minimum characteristics.

I. Polyethylene Sheet: Reinforced, fire-resistive sheet, 0.25-mm minimum thickness, with flame-spread rating of 15 or less in accordance with ASTM E84 and passing NFPA 701 Test Method 2.

J. Dust-Control Adhesive-Surface Walk-Off Mats: Provide mats, minimum 914 by 1524 mm.

K. Insulation: Unfaced mineral-fiber blanket, manufactured from glass, slag wool, or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.

L. Temporary Enclosures:

1. Translucent, fire-retardant, nylon-reinforced laminated polyethylene or polyvinyl chloride tarpaulins.
2. Only noncombustible panels, flame-resistant tarpaulins or approved materials of equivalent fire-retardant characteristics shall be used.
3. Any other fabrics or plastic films used shall be certified as conforming to the requirements of Test Method #2 contained in NFPA 701, Standard Methods of Fire Tests for Flame Propagation of Textiles and Films.
4. Where used to enclose structures, forming equipment and similar items, the enclosing material shall be fastened securely or guarded by construction so it cannot be blown by the wind against heaters or other sources of ignition.
5. Temporary enclosures shall be equipped with at least one fire extinguisher suitable for all classes of Fires that are expected in that enclosure. Extinguishers shall comply with Fire and Life Safety Code of Practice.

M. Equipment / Motorized Equipment:

1. Internal combustion engines and associated equipment, such as air compressors, hoists, derricks, generators, pumps and similar devices shall be located so that the exhausts discharges well away from combustible materials, and shall be maintained regularly.
2. Where the exhausts are piped outside the structure under construction, alteration, or demolition, a clearance of at least 230 mm shall be maintained between such piping and combustible material.
3. Internal combustion engines and associated equipment shall be shut down and allowed to cool sufficiently prior to refueling.
4. Service areas for equipment shall not be located within structures under construction, alteration, or demolition.
5. Fuel for internal combustion engines shall not be stored within structures under construction, alteration, or demolition.

2.2 TEMPORARY FACILITIES

A. General:

1. Temporary Site Facilities shall be made of non-combustible material.
2. Separation distances between buildings under construction and construction-related structures, such as field offices, trailers, sheds, and other facilities for the storage of tools and materials having combustible construction or contents, shall be considered as per codes and standards.
3. Facilities shall not be stacked with one over the other, in whole or in part, unless the structure is designed and approved for such installation and permitted by the Engineer and the authority having jurisdiction.
4. Adequate detachment between temporary structures shall be provided to minimize spread of fire.
5. Adequate temporary fire detection, fixed fire protection systems and portable firefighting equipment shall be provided as required by Fire and Life Safety Code of Practice.
6. Only safely installed cooking appliances and methods shall be used in field offices and sheds.
7. Clearance shall be provided around stoves, heaters, and all chimney and vent connectors to prevent ignition of adjacent combustible materials.

8. The location of underground electrical cables, gas piping, water piping, and sewer lines that are buried within 1.2 m of the perimeter of the site's largest planned manufactured facility and shall be indicated by an aboveground sign(s) or underground marker tapes identifying the proximity of the lines.
9. A plot plan showing the “as built” location of underground utility lines shall be available for installations in multiple-site facilities.

B. Field Offices:

1. Prefabricated or mobile units with serviceable finishes, temperature controls, and foundations adequate for normal loading.
2. Employer will provide conditioned interior space for field offices for duration of Project.

C. Common-Use Field Office:

1. Of sufficient size to accommodate needs of Employer, the Engineer, and construction personnel office activities and to accommodate Project meetings specified in other Division 01 Sections. Keep office well maintained, clean and orderly. Furnish and equip offices as follows:

    a. Furniture required for Project-site documents, including file cabinets, plan tables, plan racks, and bookcases.
    b. Conference room of sufficient size to accommodate meetings of ten (10) individuals. Provide electrical power service and 230 V ac or 240 V ac duplex receptacles, with no fewer than one receptacle on each wall. Furnish room with conference table, chairs, and 1.2-m- square tack and marker boards.
    c. Drinking water and private toilets for the use of Employer, the Engineer, and construction personnel.
    d. Heating and cooling equipment necessary to maintain a uniform indoor temperature 20 to 22 deg C.
    e. Lighting fixtures capable of maintaining average illumination of 215 lx at desk height.

2. Employer / Engineer Field Offices: Provide new office furniture and equipment suitable for use intended.

D. Temporary Site Offices:

1. Prefabricated, mobile units or job-built construction, with lockable entrances, operable windows, serviceable finishes and robust and secure fittings; insulated, weather tight, heated and air-conditioned.
2. Incorporate sanitary facilities to the extent required for the number and gender of personnel accommodated.
3. Support on foundations adequate for loading.
4. Provide and maintain all necessary and required services and utilities, including but not necessarily limited to:

    a. Sewers and drainage.
    b. Water service and distribution.
    c. Sanitary facilities, including toilets, wash facilities, and drinking-water facilities.
    d. Air-conditioner heating and cooling.
    e. Ventilation.
    f. Electric power service.
    g. Lighting.
    h. Telephone service.
    i. Firefighting appliances.

E. Janitorial services and facilities, and general attendance.

F. Computers for the Employer / Engineer:

1. New computer equipment and peripheral hardware, licensed software, Internet connection and associated accessories, including local area networking, computer workstations, mouse and keyboard and all necessary cabling as required.

2. PC: Acceptable Brand Name; each with:

    a. Processor: Intel Core i7 processor 14th Generation.
    b. Graphics: RTX 2000 ADA (16GB).
    c. Memory: 64GB RAM (2x32GB), DDR5, upgradable to 128GB.
    d. Storage: 1TB SSD.
    e. External I/O Ports: RJ45, HDMI, DP, USB-C, 4xUSB-A, combo jack for headphone/mic.
    f. Formfactor: Tower.
    g. Keyboard: English/Arabic, USB.
    h. Mouse: Optical, USB, scroll wheel.
    i. H/W Security features: TPM2.0.
    j. Operating System: Windows 11 Pro 64.
    k. Warranty/SLA: 3-years next business day response onsite desktop hardware support.

3. Monitor: Acceptable Brand Name; each with:

    a. Size: 24"
    b. Refresh Rate: 60 Hz or higher
    c. Panel Type: IPS
    d. Backlight: LED
    e. Aspect Ratio: 16:09
    f. Resolution: 1920x1080 pixel
    g. Contrast Ratio: 1000:01:00
    h. Response Time: 5ms or lower
    i. Input: DP, HDMI & DVI
    j. Brightness: 250 cd/m2
    k. Viewing Angle (H, V): 178° / 178°
    l. Speaker: Yes
    m. USB: Yes
    n. Maximum Power Consumption: 45w to 50 w
    o. Color Black
    p. Category Professional

4. Laptop: Acceptable Brand Name; each with:

    a. Processor: Intel Core i7 processor 14th Generation
    b. Graphics: Integrated
    c. Memory: 32 GB RAM (2 x 16 GB), upgradable to 64 GB
    d. Storage: 1TB PCIe NVMe 2 SSD
    e. Display: 14” touch screen
    f. Pen: Digital pen
    g. External I/O Ports: HDMI, USB-C Thunderbolt 4, USB-A, RJ45, fingerprint, combo jack for headphone/mic
    h. Webcam: Full HD webcam with privacy shutter
    i. Keyboard: English/Arabic backlit keyboard
    j. Wireless Technology: Intel Wi-Fi 6E AX211 (2x2) and Bluetooth 5.x latest wireless card (supporting gigabit data rate)
    k. Security Lock port: Yes. Combination cable lock to be quoted separately.
    l. H/W Security features: TPM2.0
    m. Operating System: Windows 11 Pro 64
    n. Weight: Below 1.4Kg
    o. Power Adapter: Slim Power Adapter
    p. Warranty/SLA: 3-years next business day response onsite notebook hardware support

5. Software: Original, latest Arabic / English version, multi-user licensed copies of the following software programs for specified operating system, together with user manuals:

    a. Windows 10 Professional
    b. MS Office 2019
    c. Adobe Reader
    d. 7 Zip
    e. Autodesk True view 2019
    f. Autodesk Navisworks freedom 2019
    g. PD Fill (File conversion)
    h. Anti-virus
    i. AUTODESK / Bently & other engineering software (upon request)

6. Printer / Photocopy machine (Multi-Function Printer):

    a. Function: Copying, faxing, printing, scanning & network scanning black & color
    b. Media size: A4 / A3
    c. Print Color speed: 40 -50 ppm
    d. Required monthly volume: 25000 or more
    e. Print resolution: 600x600 dpi minimum
    f. Duplex printing: Yes
    g. Trays Input: 100 sheets multi-purpose, 2x500 A4/A3
    h. RAM: 2 GB RAM minimum
    i. Hard drive: Yes
    j. Printer Language: HP PCL 5, HP PCL 6, Postscript Level 3
    k. Scanner type: Flatbed, Duplex ADF
    l. Scan resolution, optical: 600 dpi
    m. Scan size, maximum (flatbed & ADF): 11.7 x 17 in
    n. Scan speed: 40 ppm
    o. Digital sending features: Scan to Network Shared Folder, Send to Email
    p. File Formats: PDF, JPEG, TIFF
    q. Copy resolution: 600 x 600 dpi
    r. Copy reduce/enlarge settings: 25 to 400%
    s. Maximum number of copies: Up to 999 copies
    t. Connectivity, standard: USB 2.0, 10/100/1000 LAN
    u. Compatible operating systems: Windows (32Bit and 64-bit), Mac OS X; Linux
    v. Touch screen panel: Yes
    w. Print Management: Support Ringdale follow me print management solution - Support Pin code
    x. Card Reader Technology: Contact less
    y. Warranty & Support: 3 years Onsite

7. UPS Equipment to accommodate all the devices.

8. Computer Workstation, comprising:

    a. Desking with wire management; to accommodate PC, monitor, keyboard and mouse.
    b. Operator's swivel chair.

G. Vehicles for the Engineer:

1. New air-conditioned motor vehicles. Vehicles provided for the Engineer are the property of the Contractor and shall be returned to the Contractor at the times as indicated.
2. Vehicles: four-wheel drive 4WD.
3. Arrange for and pay all charges and costs arising in connection with the delivery, maintenance and running of vehicles, including but not limited to:

    a. Delivery charges, license fees, road taxes and certificates.
    b. Fully comprehensive insurance cover for any driver at all times.

c. Regular service maintenance and repairs as necessary to keep the vehicles at all times in good roadworthy condition.
d. Supply of fuel, lubricants, replacement parts and other consumables.

4. Provide an acceptable similar type of replacement vehicle during any period that a vehicle is unavailable for any reason, including maintenance and/or repair.

H. Vehicles for the Employer:

1. New air-conditioned motor vehicles. Vehicles provided for the Employer are the property of the Contractor and shall be returned to the Contractor at the times as indicated.
2. Vehicles: four-wheel drive 4WD.
3. Arrange for and pay all charges and costs arising in connection with the delivery, maintenance and running of vehicles, including but not limited to:

a. Delivery charges, license fees, road taxes and certificates.
b. Fully comprehensive insurance cover for any driver at all times.
c. Regular service maintenance and repairs as necessary to keep the vehicles at all times in good roadworthy condition.
d. Supply of fuel, lubricants, replacement parts and other consumables.

4. Provide an acceptable similar type of replacement vehicle during any period that a vehicle is unavailable for any reason, including maintenance and/or repair.

I. Storage and Fabrication Sheds: Provide sheds sized, furnished, and equipped to accommodate materials and equipment for construction operations.

1. Store combustible materials apart from building.

2.3 EQUIPMENT

A. Fire Extinguishers: Portable, UL rated; with class and extinguishing agent as required by locations and classes of fire exposures.

1. Comply with NFPA 10 and NFPA 241 for classification, extinguishing agent, and size required by location and class of fire exposure.

B. HVAC Equipment: Unless Employer authorizes use of permanent HVAC system, provide vented, self-contained, liquid-propane-gas or fuel-oil heaters with individual space thermostatic control.

1. Use of gasoline-burning space heaters, open-flame heaters, or salamander-type heating units is prohibited.
2. Heating, Cooling, and Dehumidifying Units: Listed and labeled for type of fuel being consumed, by a qualified testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.
3. Permanent HVAC System: If Employer authorizes use of permanent HVAC system for temporary use during construction, provide filter with MERV of Eight (8) at each return-air grille in system and remove at end of construction and clean HVAC system as required in Section 017700 "Closeout Procedures".

C. Air-Filtration Units: Primary and secondary HEPA-filter-equipped portable units with four-stage filtration. Provide single switch for emergency shut off. Configure to run continuously.

D. Electrical Outlets: 240 V properly configured British Standard with 3 pins; equipped with ground-fault circuit interrupters, switch, and pilot light.

E. Power Distribution System Circuits: The wires, conduits, containment, and protection for sockets, air-conditioning units and other miscellaneous equipment shall comply with local regulations.

F. Temporary Site Toilets: Prefabricated, self-contained, single-occupant units of chemical, aerated recirculation, or combustion type; vented; fully enclosed with a glass-fiber-reinforced polyester shell or similar non-absorbent material.

G. Drinking-Water Fixtures: Containerized, tap-dispenser, bottled-drinking-water units, including paper cup supply.

1. Where power is accessible, provide electric water coolers to maintain dispensed water temperature at 7.2 to 12.7 deg C.

H. Hand Tools and Power Tools; Provide new tools. Check continuously their safe operation. Provide continuous maintenance. Remove from Site any suspiciously operating tool.

PART 3 - EXECUTION

3.1 TEMPORARY FACILITIES, GENERAL

A. Conservation: Coordinate construction and use of temporary facilities with consideration given to conservation of energy, water, and materials. Coordinate use of temporary utilities to minimize waste.

1. Salvage materials and equipment involved in performance of, but not actually incorporated into, the Work. See other Sections for disposition of salvaged materials that are designated as Employer's property.

3.2 INSTALLATION, GENERAL

A. Locate facilities where they will serve Project adequately and result in minimum interference with performance of the Work. Relocate and modify facilities as required by progress of the Works.

1. Locate facilities to limit site disturbance as specified in Section 011000 "Summary".

B. Provide each facility ready for use when needed to avoid delay. Do not remove until facilities are no longer needed or are replaced by authorized use of completed permanent facilities.

C. Isolation of Work Areas in Occupied Facilities: Prevent dust, fumes, and odors from entering occupied areas.

1. Prior to commencing work, isolate the HVAC system in area where work is to be performed according to coordination drawings.
2. Disconnect supply and return ductwork in work area from HVAC systems servicing occupied areas.
3. Maintain negative air pressure within work area, using HEPA-equipped air-filtration units, starting with commencement of temporary partition construction, and continuing until removal of temporary partitions is complete.
4. Maintain dust partitions during the Work. Use vacuum collection attachments on dust-producing equipment. Isolate limited work within occupied areas using portable dust-containment devices.
5. Perform daily construction cleanup and final cleanup using approved, HEPA-filter-equipped vacuum equipment.

3.3 TEMPORARY UTILITY INSTALLATION

A. Engage an appropriate local utility company to install temporary service or connect to existing service. Where the utility company provides only part of the service, provide the remainder with matching, compatible materials and equipment. Comply with utility company requirements and recommendations.

1. Arrange with the utility company, the Engineer, and existing users for time when service can be interrupted, if necessary, to make connections for temporary services.
2. Provide for adequate capacity and peak-demand or special load requirements at each stage of construction. Before temporary utility is available, provide trucked-in services if necessary.
3. Obtain any necessary easements to bring temporary utilities to Site.
4. Charges and Costs: Pay for all connections, service and user charges and costs arising in connection with the provision of temporary utilities.

B. Sewers and Drainage:

1. If sewers are available, provide temporary connections to remove effluent that can be discharged lawfully. If sewers are not available or cannot be used, provide drainage ditches, dry wells, stabilization ponds, and similar facilities. If neither sewers nor drainage facilities can be lawfully used for discharge of effluent, provide containers to remove and dispose of effluent off-site in a lawful manner.
2. Filter out excessive soil, construction debris, chemicals, oils, and similar contaminants that might clog sewers or pollute waterways before discharge.
3. Connect temporary sewers to the municipal system as directed by sewer department officials.
4. Maintain temporary sewers and drainage facilities in a clean, sanitary condition. After heavy use, restore normal conditions promptly.

C. Water Service:

1. Connect to Employer's existing water service facilities. Clean and maintain water service facilities in a condition acceptable to Employer. At Taking Over, restore these facilities to condition existing before initial use.
2. Install water service and distribution piping in sizes and pressures adequate for construction.
3. Sterilize temporary water piping before use.
4. Provide storage tanks and / or rubber hoses as necessary to serve Site.
5. If at any time, temporary water service supply is interrupted or inadequate for requirements, provide back-up storage and truck-in water supplies as necessary.
6. If water pressure is inadequate, provide pumps to supply a minimum of 200-kPa static pressure at highest point. Equip pumps with surge and storage tanks and automatic controls to supply water uniformly at reasonable pressures.

D. Sanitary Facilities:

1. Provide temporary toilets, wash facilities, safety shower and eyewash facilities and drinking-water fixtures. Comply with regulations, health codes and the Engineer directions for type, number, location, operation, and maintenance of facilities and fixtures.
2. Provide separate toilet facilities for male and female personnel.
3. Install where facilities will best serve the needs of the Works, including relocation whenever necessary.
4. Service and maintain, and keep clean, sanitary and orderly for use.
5. Provide toilet tissue, paper towels, paper cups, and similar disposable materials for each facility. Maintain adequate supply. Provide covered waste containers for disposal of used material.
6. Temporary Site Toilets: Install self-contained toilet units. Shield toilets to ensure privacy.
7. Wash Facilities: Install wash facilities supplied with potable water at convenient locations for personnel who handle materials that require wash-up. Dispose of drainage properly. Supply cleaning compounds appropriate for each type of material handled.

8. Drinking-Water Facilities: Install containerized, tap-dispenser, bottled-drinking-water units, including paper cup supply.
9. Toilets:

    a. Install toilet facilities connected to local water and sewer lines. Provide lavatories, mirrors, and water closets. Provide only potable-water connections. Provide individual compartments for water closets. Provide suitable enclosure with non-absorbent sanitary finish materials and adequate ventilation and lighting.

10. Wash Facilities:

    a. Install wash facilities supplied with potable water at convenient locations for personnel who handle materials that require wash-up. Dispose of drainage properly. Supply cleaning compounds appropriate for each type of material handled.

11. Drinking Water Facilities:

    a. Install containerized, tap-dispenser, bottled-drinking-water units, including paper cup supply and water bottles supply as needed.

E. Use of Permanent Toilets:

1. Use of Employer's existing or new toilet facilities is not permitted, unless if expressly stated otherwise by Employer upon certain conditions.

F. Temporary Heating and Cooling:

1. Select equipment from that specified that will not have a harmful effect on completed installations or elements being installed.

G. Ventilation and Humidity Control:

1. Provide temporary ventilation required by construction activities for curing or drying of completed installations or for protecting installed construction from adverse effects of high humidity. Select equipment from that specified that will not have a harmful effect on completed installations or elements being installed. Coordinate ventilation requirements to produce ambient condition required and minimize energy consumption.
2. Provide dehumidification systems when required to reduce substrate moisture levels to level required to allow installation or application of finishes.

H. Electric Power Service:

1. Provide weatherproof, grounded electric power service and distribution system of appropriate and sufficient size, capacity, and power characteristics required for use during construction, including necessary start-up, testing and commissioning of building operating systems and equipment. Include meters, transformers, overload-protected disconnecting means, automatic ground-fault interrupters, and main distribution switchgear.
2. Install power distribution wiring overhead and underground if required and rise vertically where least exposed to damage.
3. If at any time, temporary electric power service supply is interrupted or inadequate for requirements, provide and operate back-up electric generators as necessary.
4. Connect temporary service to Employer's existing power source, as directed by Employer and maintain equipment in a condition acceptable to Employer.

I. Electric Distribution:

1. Provide receptacle outlets adequate for connection of power tools and equipment.

2. Provide waterproof connectors to connect separate lengths of electrical power cords if single lengths will not reach areas where construction activities are in progress. Do not exceed safe length-voltage ratio.

J. Lighting:

1. Provide temporary lighting with appropriate control and local switching to facilitate safe and proper execution of the Works. Provide adequate illumination to internal areas during finishing operations and for construction operations, observations, inspections, and traffic conditions.
2. Install and operate temporary lighting that fulfills security and protection requirements without operating the entire system.
3. Install lighting for Works identification sign.

K. Telecom Service:

1. Provide and maintain adequate temporary telecom facilities and services in all common-use facilities for the duration of the Contract including Defects Liability Period, for all personnel accommodated in temporary field offices.
2. Install one (1) land-based telephone line(s) for each field office.
3. Provide and install a PABX in Engineer field offices and provide handsets in every office or occupied space.
4. Provide the following telephone facilities, line connections and services for the exclusive use of the Engineer and his staff.

    a. Two (2) land lines dedicated to PABX in Engineer field offices.
    b. One (1) land line dedicated to fax machine or modem in Engineer field offices.
    c. Twenty (20) cellular telephone lines and related smart phones.

5. Provide the following telephone facilities, line connections and services for the exclusive use of the Employer and his staff.

    a. One (1) land lines dedicated to PABX in Employer field office.
    b. One (1) land line dedicated to fax machine or modem in Employer field offices.
    c. Five (5) cellular telephone lines and related smart phones.

6. At each telephone, post a list of important telephone numbers.

    a. Police and fire departments.
    b. Ambulance service.
    c. Contractor's home office.
    d. Contractor's emergency after-hours telephone number.
    e. Engineer's office.
    f. Construction Manager's home office.
    g. Engineers' offices.
    h. Employer's office.
    i. Principal subcontractors' field and home offices.

7. Internet Service:

    a. Provide Multi-user high-speed internet subscription from an approved local Internet Service Provider (ISP).
    b. Ensure the setup includes a broadband modem and a router with a business-grade hardware firewall.
    c. Provide a minimum upload and download speed of 30Mbps / 30Mbps for shared use by up to 15 employees for basic internet browsing service. The baseline speed must be reviewed and increased as necessary based on the additional internet services required (collaboration tools, file transfer, cloud applications, etc.). Services requiring

dedicated bandwidth should be identified, and appropriate Quality of Service (QoS) settings must be implemented to ensure reliable performance.

d. Provide a hardware firewall that must include advanced security features, such as intrusion detection and prevention systems (IDS/IPS), Web Filter, certificate inspection, etc.

e. Provide a reliable and secure WiFi network for all temporary facilities, accessible to both the Engineer and the Employer. The WiFi system should ensure strong signal coverage throughout all areas, eliminating any connectivity dead zones. WiFi security must be maintained with WPA3 encryption, strong passwords that are regularly updated, and network segregation to create separate networks for contractor personnel and Engineer / Employer users, ensuring privacy and security.

L. Project Computer:

1. Provide One (1) desktop computer in the primary field office adequate for use by the Engineer and Employer to access Project electronic documents and maintain electronic communications.
2. Backup: External hard drive, minimum 1000 gigabyte, with automated backup software providing daily backups.

3.4 SUPPORT FACILITIES INSTALLATION

A. Comply with the following:

1. Provide construction for temporary field offices, shops, and sheds located within construction area or within 9 m of building lines that is noncombustible in accordance with ASTM E136. Comply with NFPA 241.
2. Utilize designated area within existing building for temporary field offices.
3. Maintain support facilities until the Engineer schedules Substantial Completion inspection. Remove before Substantial Completion. Personnel remaining after Substantial Completion will be permitted to use permanent facilities, under conditions acceptable to Employer.

B. Temporary Roads and Paved Areas: Construct and maintain temporary roads and paved areas adequate for construction operations and able to withstand heavy construction vehicles load. Provide road signs and safety barriers as needed. Locate temporary roads and paved areas as indicated on Drawings.

1. Provide dust-control treatment that is nonpolluting and noncracking. Reapply treatment as required to minimize dust.

C. Temporary Use of Planned Permanent Roads and Paved Areas: Locate temporary roads and paved areas in same location as permanent roads and paved areas. Construct and maintain temporary roads and paved areas adequate for construction operations. Extend temporary roads and paved areas, within construction limits indicated, as necessary for construction operations.

1. Coordinate elevations of temporary roads and paved areas with permanent roads and paved areas.
2. Prepare subgrade and install subbase and base for temporary roads and paved areas in accordance with Section 312000 "Earth Moving."
3. Recondition base after temporary use, including removing contaminated material, regrading, proof rolling, compacting, and testing.
4. Delay installation of final course of permanent hot-mix asphalt pavement until immediately before Substantial Completion. Repair hot-mix asphalt base-course pavement before installation of final course in accordance with Section 321216 "Asphalt Paving."

D. Traffic Controls: Comply with requirements of authorities having jurisdiction.

1. Protect existing site improvements to remain, including curbs, pavement, and utilities.

2. Maintain access for fire-fighting equipment and access to fire hydrants.

E. Parking: Comply with the following:

1. Provide temporary offsite parking areas for construction personnel, unless otherwise stated by Employer.
2. Provide shaded parking locations for all Engineer’s vehicles.
3. Provide shaded parking locations for all Employer’s vehicles.
4. Temporary car-port shade structures for [five (5)] vehicles adjacent to the Employer / Engineer field offices, including temporary paved vehicular access, car-port hard-standing and walkways.

F. Storage and Staging: Provide temporary offsite area for storage and staging needs.

G. Dewatering Facilities and Drains: Comply with requirements of authorities having jurisdiction. Maintain Project site, excavations, and construction free of water.

1. Dispose of rainwater in a lawful manner that will not result in flooding Project or adjoining properties or endanger permanent Work or temporary facilities.
2. Remove snow and ice as required to minimize accumulations.

H. Project Signs: Provide Project signs as indicated. Unauthorized signs are not permitted.

1. Identification Signs: Provide Project identification signs as indicated on Drawings.
2. Temporary Signs: Provide other signs as indicated and as required to inform public and individuals seeking entrance to Project.
3. Provide temporary, directional signs for construction personnel and visitors.
4. Maintain and touch up signs, so they are legible at all times.

I. Waste Disposal Facilities: Comply with requirements specified in Section 017419 "Construction Waste Management and Disposal."

J. Waste Disposal Facilities: Provide waste-collection containers in sizes adequate to handle waste from construction operations. Comply with the requirements of authorities having jurisdiction. Comply with progress cleaning requirements in Section 017300 "Execution."

K. Lifts and Hoists: Provide facilities necessary for hoisting materials and personnel.

L. Temporary Elevator Use: Use of elevators is not permitted.

M. Existing Elevator Use: Use of Employer's existing elevators will be permitted, provided elevators are cleaned and maintained in a condition acceptable to Employer. At Substantial Completion, restore elevators to condition existing before initial use, including replacing worn cables, guide shoes, and similar items of limited life.

1. Do not load elevators beyond their rated weight capacity.
2. Provide protective coverings, barriers, devices, signs, or other procedures to protect elevator car and entrance doors and frame. If, despite such protection, elevators become damaged, engage elevator Installer to restore damaged work, so no evidence remains of correction work. Return items that cannot be refinished in field to the shop, make required repairs and refinish entire unit, or provide new units as required.

N. Temporary Stairs: Until permanent stairs are available, provide temporary stairs where ladders are not adequate.

O. Existing Stair Usage: Use of Employer's existing stairs will be permitted, provided stairs are cleaned and maintained in a condition acceptable to Employer. At Substantial Completion, restore stairs to condition existing before initial use.

1. Provide protective coverings, barriers, devices, signs, or other procedures to protect stairs and to maintain means of egress. If stairs become damaged, restore damaged areas, so no evidence remains of correction work.

P. Temporary Use of Permanent Stairs: Use of new stairs for construction traffic will be permitted, provided stairs are protected and finishes restored to new condition at time of Substantial Completion.

Q. Site Field Offices - General: comply with the following:

1. Provide continued maintenance, support and service, including final removal.
2. Supplement, extend, relocate, modify, alter and adapt as necessary to comply with requirements indicated and specified, and accommodate construction operations under this Contract.
3. Locate field offices, site laboratory, site clinic, mosque canteen, storage and fabrication sheds, workshops, sanitary facilities, and other temporary construction and support facilities for easy access.
4. Maintain support facilities until six months after Substantial Completion. Unless otherwise directed, remove after six months after Substantial Completion, but retain adequate support facilities to accommodate personnel remaining on Project site during defect liability period and after six months of Substantial Completion, including relocating if necessary and under conditions acceptable to Employer.

R. Contractor's Field Offices: Provide and maintain temporary field offices and facilities of sufficient size, number and type to accommodate required office personnel, including sub-contractors, at the Project site. Furnish and equip as necessary. Keep clean and orderly for use.

S. Site Laboratory: Provide temporary site laboratory facility of sufficient size to accommodate, conduct, perform and report on-site sampling and testing of materials as prescribed and specified in various Sections of the Project Specification. Furnish and equip as necessary. Keep clean and orderly for use.

1. Employ qualified laboratory technicians familiar with specified industry standards and skilled in the testing of construction materials and associated administrative procedures.

T. Temporary Site Medical Clinic: Provide, maintain, and equip a medical clinic of appropriate area for providing basic and emergency medical treatment for work force expected for the construction of the Contract. The clinic shall be fully furnished with appropriate furniture with all electromechanical works including telephones and Data network and sockets in all appropriate locations. Provide and maintain medical equipment and accessories. [Provide shaded parking for one (1) Ambulance and for ten (10) vehicles.]

1. The following is an indicative space program:

   a. Reception area, Waiting area, Doctor rooms, Patient rooms, Medical inspection room, Pharmacy, Ambulance staff room, Ambulance parking area Electro-Mechanical area.

2. Employ qualified doctors, personnel’s familiar and skilled in the medical field.
3. Provide continued services, maintenance, support and provide continued medical services with medicine, first aid, including final removal.

U. Site Mosque: Provide, maintain, and equip a temporary field mosque of sufficient size, number and type to accommodate around 100 persons, Furnish and equip as necessary. Keep clean and orderly for use. The mosque shall include an appropriate number of toilets ablution facilities,

V. Site Canteen: Provide, maintain, and equip site canteen of sufficient size to serve meals and snack for workers and management staff. Design, construct, and furnish two (2) canteens one for senior management staff and general workers (respectively) the size of the canteen shall be appropriate to accommodate his workers staff.

1. The following is an indicative space program:

    a. Dining area, Kitchen and food preparation area, Food serving area (self-service), storage areas, Dry storage area, cold storage area, deep, freezer area, Services, Electro-Mechanical areas.

W. Employer / Engineer Field Offices: Provide and maintain temporary offices, and facilities for the exclusive use of the Employer / Engineer and his staff, sized, arranged, furnished and equipped to the approval of the Engineer.

1. Provide continued maintenance, support and service, including final removal.
2. Supplement, extend, relocate, modify, alter and adapt as necessary to comply with requirements indicated and specified, and accommodate construction operations under this Contract.

X. Employer / Engineer Temporary Offices: Provide and maintain temporary offices, and facilities for the exclusive use of the Employer / Engineer and his staff, sized, arranged, furnished and equipped to the approval of the Employer/Engineer. The Contractor shall provide a layout for the Employer's / Engineer's field offices showing the design layout with the necessary circulation areas and the proposed furniture and equipment for the approval of the Engineer. The following are the minimum requirements.

1. One (1) General Reception area sized and arranged to receive visitors; with:

    a. 1 reception desk and 1 swivel armchair.
    b. 4 office armchairs.
    c. 2 side coffee tables
    d. 2 pin boards.
    e. 2 wastepaper baskets.

2. One (1) Engineer Office, approximately 4 m x 6 m; with:

    a. 1 double pedestal desk with lockable drawers and 1 swivel armchair.
    b. 1 conference table and 6 office armchairs.
    c. 1 layout reference table.
    d. 2 lockable steel filing cabinets.
    e. 1 lockable drawing hanger for 10 sets.
    f. 1 shelf unit.
    g. 2 pin boards.
    h. 2 wastepaper baskets.

3. One (1) Employer Office, approximately 4 m x 6 m; with:

    a. 1 double pedestal desk with lockable drawers and 1 swivel armchair.
    b. 1 conference table and 6 office armchairs.
    c. 1 layout reference table.
    d. 2 lockable steel filing cabinets.
    e. 1 lockable drawing hanger for 10 sets.
    f. 1 shelf unit.
    g. 2 pin boards.
    h. 2 wastepaper baskets.

4. Three (3) Staff Offices, each approximately 4 m x 4 m; each with:

    a. 1 desk with lockable drawers and 2 swivel armchairs.
    b. 1 office chairs.
    c. 1 layout reference tables.
    d. 1 lockable steel filing cabinets.
    e. 1 lockable drawing hanger for 10 sets.

f. 2 shelf units.
g. 1 pin boards.
h. 1 wastepaper baskets.

5. Four (4) Staff Offices, each approximately 4 m x 5 m; each with:

a. 2 desks with lockable drawers and 2 swivel armchairs.
b. 2 office chairs.
c. 2 layout reference tables.
d. 2 lockable steel filing cabinets.
e. 1 lockable drawing hanger for 10 sets.
f. 2 shelf units.
g. 2 pin boards.
h. 2 wastepaper baskets.

6. One (1) Secretarial Office, approximately 4 m x 6 m; with:

a. 1 secretary's workstation desk and 1 swivel armchair.
b. 6 office chairs.
c. 2 layout reference tables.
d. 2 large lockable steel filing cabinets.
e. 2 shelf units.
f. 2 pin boards.
g. 2 wastepaper baskets.
h. 10 desktop calculators.
i. 1 photocopy machine with A3 / A4 enlargement / reduction facility, automatic document feeder and collator.
j. 1 plain paper fax machine.
k. Regularly service and maintain office machines and equipment in good serviceable condition. Provide and continuously stock offices with all associated consumables, and supplies as and when required or requested, including stationery and papers.

7. One (1) Conference Room, sized to accommodate Project meetings for 14 people; with:

a. 1 conference table to seat 14 people.
b. 16 office armchairs.
c. 2 layout reference tables.
d. 2 shelf units.
e. 4 pin boards.
f. 1 blackboard.
g. 2 wastepaper baskets.

8. One (1) Multi-Purpose Room, 8 m x 4 m; with:

a. 10 office chairs.
b. 10 layout reference tables.
c. 6 shelf units.
d. 6 pin boards.
e. 10 wastepaper baskets.

9. One (1) Store Rooms; 4 m x 4 m; with:

a. Heavy duty shelf racking units.
b. Drawing hangers and racks.

10. Two (2) Toilets; each with:

a. WC suite.
b. Toilet roll holder.

c. Lavatory basin.
d. Mirror and shelf.
e. Paper towel dispenser.
f. Soap dispenser.
g. Waste bin with cover.
h. Service, maintain and clean toilets on a daily basis. Provide and continuously stock with all associated consumable and supplies as and when required or requested, including soaps, toilet paper and paper towels.

11. One (1) Kitchen; with:

a. 1 refrigerator 14 cu.ft. capacity.
b. 2 electric boiling rings.
c. 1 water filter and 1 twenty litre bottled-drinking-water dispenser — hot / cold.
d. 1 large waste bin with cover.
e. Kitchen base cabinets incorporating heat resistant worktop and stainless-steel sink / drainer.
f. Kitchen wall cabinets.
g. Sets of crockery and cutlery sufficient for number of the Employer / Engineer staff and visitors.
h. Service, maintain and clean kitchens on a daily basis. Provide and continuously stock with all associated consumables and supplies as and when requested or required, including drinking water, milk, sugar, tea and coffee beverages.

Y. Computers for the Employer / Engineer: Locate in the Employer / Engineer field offices. Install, connect and configure hardware and install software as directed, including interface with existing computer installations to provide a complete and fully operational, single network, computer system installation, to the satisfaction of the Employer / Engineer:

1. Ten (10) PC's.
2. Two (2) Laptop's.
3. UPS Equipment: Supplement and extend existing UPS as required to provide minimum Eight (8)) hour back-up for the entire computer system installation, new and existing.
4. Software: As specified.
5. Internet Connection: As specified.
6. Ten (10) computer workstations.
7. Regularly service, and maintain new computer equipment and combined system installations in serviceable and operable condition.

Z. Vehicles for the Employer / Engineer: Deliver to the Employer / Engineer within 7 days of the Commencement Date, together with spare keys, registration papers, insurance certificate and other related documentation:

1. Three (3)Vehicles four-wheel drive 4WD.
2. Employ and assign a full-time competent driver to each vehicle during normal working hours. Outside the working hours, the vehicles shall remain under the Contractor’s custody.
3. Vehicles shall, unless otherwise indicated, be returned to the Contractor within one month after the date of issue of the Taking-Over Certificate for the whole of the Work.

AA. Temporary Roads and Paved Areas: Construct and maintain temporary asphalted roads and paved areas adequate to support loads and to withstand exposure to traffic during construction period. Submit proposals and obtain prior approval from the Engineer for the proposed location of temporary roads and paved areas. Coordinate elevation of temporary roads and paved areas. Provide and prepare sub-grade. Install subbase and base and hot mixed asphalt pavement. Comply with applicable requirements in appropriate sections of the Specification for sub-grade, sub-base, and base course. Finish asphalted courses construction of temporary road and paving areas.

1. Extend temporary roads and paved areas, within construction limits indicated, as necessary for construction operations, including delivery and storage of materials, equipment usage, administration and supervision.

BB. Traffic Controls: Comply with the requirements of authorities having jurisdiction. Include warning signs for public traffic and "STOP" signs for entrance onto public roads. Comply with the requirements of authorities having jurisdiction.

1. Protect existing site improvements to remain including curbs, pavement, and utilities.
2. Maintain access for fire-fighting equipment and access to fire hydrants.

CC. Dewatering Facilities and Drains: Comply with requirements of authorities having jurisdiction. in applicable specification Sections for temporary drainage and dewatering facilities and operations not directly associated with construction activities included in individual sections. Where feasible, use same facilities Maintain Project site, excavations, and construction free of water.

1. Dispose of rainwater in a lawful manner that will not result in flooding Project or adjoining properties nor endanger permanent Work or temporary facilities.

DD. Project Identification and Temporary Signs: Provide and install Project identification name board, size and lettering and supports are subject approval of the Engineer. Install signs to inform public generally and persons seeking entrance to Project. Do not permit the installation of unauthorized signs.

1. Design, fabricate and erect two (2) project identification signs in approved locations. Support on posts or framing of finished paint, preservative-treated wood or galvanized steel.
2. Engage an experienced sign manufacturer to apply graphics for Project identification signs related to this package. Write sign in English and use as applicable , and include:

    a. Project name.
    b. Employer's name, style and logo.
    c. Engineer name, style and logo
    d. Contractor's name, style and logo.
    e. Such other names, details and information as permitted and/or directed.

3. Provide other appropriate temporary signs to provide directional and safety information to construction personnel and visitors.
4. Maintain and touchup signs so they are legible at all times.

EE. Waste Disposal Facilities: Provide waste-collection containers in sizes adequate to handle waste from construction operations. Comply with the requirements of authorities having jurisdiction. Comply with Division 01 Section "Execution" for progress cleaning requirements.

FF. Lifts and Hoists: Provide facilities necessary for hoisting materials and personnel.

1. Truck cranes and similar devices used for hoisting materials are considered tools and equipment and not temporary facilities.

GG. Janitorial Services: Provide janitorial cleaning services on a daily basis for all field offices, toilets, wash facilities, and similar areas.

HH. Storage and Fabrication Sheds: Provide sheds sized, furnished, and equipped to accommodate materials and equipment involved, including temporary utility services. Sheds may be open shelters or fully enclosed spaces within building or elsewhere on-site.

II. Construction Aids and Miscellaneous Facilities: Provide all necessary aids and miscellaneous facilities incidental and ancillary to the safe and efficient execution of construction operations and the carrying out of work in a proper workmanlike manner, including but not necessarily limited to:

1. Individual Project circumstances may require use of other aids and facilities, such as swing stages, ramps and bridges, incidental sheeting and shoring, and demolition waste chutes.
2. Scaffolds, ladders, walkways, platforms and guardrails.

    a. Protective screens, chutes, coverings and roofs.
    b. Small tools; hand and power operated.
    c. Mechanical plant, machinery and equipment; stationary and mobile.
    d. Tower cranes.
    e. Truck mounted cranes.
    f. Transportation equipment and vehicles; on and off Site.
    g. Lifts and hoists for materials and workmen.
    h. Protective clothing, including helmets, goggles, ear protectors and steel-toed safety boots.

JJ. Individual Project circumstances may require use of other construction aids and miscellaneous facilities, such as scaffolds, platforms, swing stages, ramps and bridges, incidental sheeting and shoring, and demolition waste chutes.

3.5 SECURITY AND PROTECTION FACILITIES INSTALLATION

A. Protection of Existing Facilities: Protect existing vegetation, equipment, structures, utilities, and other improvements at Project site and on adjacent properties, except those indicated to be removed or altered. Repair damage to existing facilities.

1. Where access to adjacent properties is required in order to affect protection of existing facilities, obtain written permission from adjacent property Employer to access property for that purpose.

B. Environmental Protection: Provide protection, operate temporary facilities, and conduct construction as required to comply with environmental regulations and that minimize possible air, waterway, and subsoil contamination or pollution or other undesirable effects. Avoid using tools and equipment that produce harmful noise. Restrict use of noisemaking tools and equipment to hours that will minimize complaints and nuisance to persons or establishments near Site.

1. Comply with work restrictions specified in Section 011000 "Summary."

C. Temporary Erosion and Sedimentation Control: Comply with requirements of EPA Construction General Permit or authorities having jurisdiction, whichever is more stringent and requirements specified in Section 311000 "Site Clearing."

D. Temporary Erosion and Sedimentation Control: Provide measures to prevent soil erosion and discharge of soil-bearing water runoff and airborne dust to undisturbed areas and to adjacent properties and walkways, according to erosion and sedimentation-control Drawings.

1. Verify that flows of water redirected from construction areas or generated by construction activity do not enter or cross tree- or plant-protection zones.
2. Inspect, repair, and maintain erosion- and sedimentation-control measures during construction until permanent vegetation has been established.
3. Clean, repair, and restore adjoining properties and roads affected by erosion and sedimentation from Project site during the course of Project.
4. Remove erosion and sedimentation controls, and restore and stabilize areas disturbed during removal.

E. Stormwater Control: Comply with requirements of authorities having jurisdiction. Provide barriers in and around excavations and subgrade construction to prevent flooding by runoff of stormwater from heavy rains.

F. Tree and Plant Protection: Install temporary fencing located as indicated or outside the drip line of trees to protect vegetation from damage from construction operations. Protect tree root systems from damage, flooding, and erosion. Comply with requirements specified in Section 015639 "Temporary Tree and Plant Protection."

G. Pest Control: Engage pest-control service to recommend practices to minimize attraction and harboring of rodents, roaches, and other pests and to perform extermination and control procedures at regular intervals, so Project will be free of pests and their residues at Substantial Completion. Perform control operations lawfully, using materials approved by authorities having jurisdiction.

H. Site Enclosure Fence: Prior to commencing earthwork, furnish and install site enclosure fence in a manner that will prevent people from easily entering site except by entrance gates.

1. Extent of Fence: As required to enclose entire Project site or portion determined sufficient to accommodate construction operations.
2. Option in subparagraph below is only for projects connected to existing construction.
3. Maintain security by limiting number of keys and restricting distribution to authorized personnel. Furnish one set of keys to Employer.

I. Security Enclosure and Lockup: Install temporary enclosure around partially completed areas of construction. Provide lockable entrances to prevent unauthorized entrance, vandalism, theft, and similar violations of security. Lock entrances at end of each workday.

1. Secure Storage: Where materials and/or equipment are of high value or attractive for theft, provide a secure lockup. Enforce discipline in connection with the installation and release of such materials and / or equipment to minimize the opportunity for theft.
2. Vertical Openings: Close openings of 2.5 m² or less with plywood or similar materials.
3. Horizontal Openings: Close openings in floor or roof decks and horizontal surfaces with load bearing, wood-framed construction.
4. Install tarpaulins securely using fire-retardant-treated wood framing and other materials.

J. Barricades, Warning Signs, and Lights: Comply with requirements of authorities having jurisdiction for erecting structurally adequate barricades, including warning signs and lighting.

K. Temporary Egress: Provide temporary egress from existing occupied facilities as indicated and as required by authorities having jurisdiction. Provide signage directing occupants to temporary egress.

L. Covered Walkway: Erect protective, covered walkway for passage of individuals through or adjacent to Project site. Coordinate with entrance gates, other facilities, and obstructions. Comply with regulations of authorities having jurisdiction and requirements indicated on Drawing**s.**

1. Provide overhead decking, protective enclosure walls, handrails, barricades, warning signs, exit signs, lights, safe and well-drained walkways, and similar provisions for protection and safe passage.
2. Paint and maintain appearance of walkway for duration of the Work.

M. Temporary Enclosures: Provide temporary enclosures for protection of construction, in progress and completed, from exposure, foul weather, other construction operations, and similar activities. Provide temporary weathertight enclosure for building exterior.

1. Where heating or cooling is needed and permanent enclosure is incomplete, insulate temporary enclosures.

N. Temporary Partitions: Provide floor-to-ceiling dustproof partitions to limit dust and dirt migration and to separate areas occupied by Employer and tenants from fumes and noise.

1. Construct dustproof partitions with gypsum wallboard, with joints taped on occupied side, and fire-retardant-treated plywood on construction operations side.

2. Construct dustproof partitions with two layers 0.14-mm polyethylene sheet on each side. Cover floor with two layers of 0.14-mm polyethylene sheet, extending sheets 460 mm up the sidewalls. Overlap and tape full length of joints. Cover floor with fire-retardant-treated plywood.
3. Construct vestibule and airlock at each entrance through temporary partition with not less than 1219 mm between doors. Maintain water-dampened foot mats in vestibule.
4. Where fire-resistance-rated temporary partitions are indicated or are required by authorities having jurisdiction, construct partitions according to the rated assemblies.
5. Insulate partitions to control noise transmission to occupied areas.
6. Seal joints and perimeter. Equip partitions with gasketed dustproof doors and security locks where openings are required.
7. Protect air-handling equipment.
8. Provide walk-off mats at each entrance through temporary partition.

O. Temporary Fire Protection: Until fire-protection needs are supplied by permanent facilities, install and maintain temporary fire-protection facilities of types needed to protect against reasonably predictable and controllable fire losses. Comply with NFPA 241; manage fire-prevention program. Strictly observe all requirements and recommendations pertaining to fire safety on construction sites.

1. Provide fire extinguishers, installed on walls on mounting brackets, visible and accessible from space being served, with sign mounted above.

    a. Field Offices: Class A stored-pressure water-type extinguishers.
    b. Other Locations: Class ABC dry-chemical extinguishers or a combination of extinguishers of NFPA-recommended classes for exposures.

2. Locate fire extinguishers where convenient and effective for their intended purpose. Provide not less than one extinguisher on each floor at or near each usable.
3. Prohibit smoking in construction areas. Comply with additional limits on smoking specified in other Sections.
4. Supervise welding operations, combustion-type temporary heating units, and similar sources of fire ignition in accordance with requirements of authorities having jurisdiction.
5. Develop and supervise an overall fire-prevention and protection program for personnel at Project site. Review needs with local fire department and establish procedures to be followed. Instruct personnel in methods and procedures. Post warnings and information.
6. Provide temporary standpipes and hoses for fire protection. Hang hoses with a warning sign, stating that hoses are for fire-protection purposes only and are not to be removed. Match hose size with outlet size and equip with suitable nozzles.

3.6 MOISTURE AND MOLD CONTROL

A. Contractor's Moisture-Protection Plan: Avoid trapping water in finished work. Document visible signs of mold that may appear during construction.

B. Moisture and Mold Protection: Protect stored materials and installed Work in accordance with Moisture and Mold Protection Plan.

C. Exposed Construction Period: Before installation of weather barriers, when materials are subject to wetting and exposure and to airborne mold spores, protect as follows:

1. Protect porous materials from water damage.
2. Protect stored and installed material from flowing or standing water.
3. Keep porous and organic materials from coming into prolonged contact with concrete.
4. Remove standing water from decks.
5. Keep deck openings covered or dammed.

D. Partially Enclosed Construction Period: After installation of weather barriers but before full enclosure and conditioning of building, when installed materials are still subject to infiltration of moisture and ambient mold spores, protect as follows:

1. Do not load or install drywall or other porous materials or components, or items with high organic content, into partially enclosed building.
2. Keep interior spaces reasonably clean and protected from water damage.
3. Periodically collect and remove waste containing cellulose or other organic matter.
4. Discard or replace water-damaged material.
5. Do not install material that is wet.
6. Discard and replace stored or installed material that begins to grow mold.
7. Perform work in a sequence that allows wet materials adequate time to dry before enclosing the material in gypsum board or other interior finishes.

E. Controlled Construction Period: After completing and sealing of the building enclosure but prior to the full operation of permanent HVAC systems, maintain as follows:

1. Control moisture and humidity inside building by maintaining effective dry-in conditions.
2. Use temporary or permanent HVAC system to control humidity within ranges specified for installed and stored materials.
3. Comply with manufacturer's written instructions for temperature, relative humidity, and exposure to water limits.
4. Hygroscopic materials that may support mold growth, including wood and gypsum-based products, that become wet during the course of construction and remain wet for forty-eight (48) hours are considered defective and require replacing.
5. Measure moisture content of materials that have been exposed to moisture during construction operations or after installation. Record readings beginning at time of exposure and continuing daily for forty-eight (48) hours. Identify materials containing moisture levels higher than allowed. Report findings in writing to the Engineer.
6. Remove and replace materials that cannot be completely restored to their manufactured moisture level within forty-eight (48) hours.

3.7 OPERATION, TERMINATION, AND REMOVAL

A. Supervision: Enforce strict discipline in use of temporary facilities. To minimize waste and abuse, limit availability of temporary facilities to essential and intended uses.

B. Maintenance: Maintain facilities in good operating condition until removal.

1. Maintain operation of temporary enclosures, heating, cooling, humidity control, ventilation, and similar facilities on a 24-hour basis where required to achieve indicated results and to avoid possibility of damage.

C. Temporary Facility Changeover: Do not change over from using temporary security and protection facilities to permanent facilities until Substantial Completion.

D. Termination and Removal: Remove each temporary facility when need for its service has ended, when it has been replaced by authorized use of a permanent facility, or no later than Substantial Completion. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with temporary facility. Repair damaged Work, clean exposed surfaces, and replace construction that cannot be satisfactorily repaired.

1. Materials and facilities that constitute temporary facilities are property of Contractor. Employer reserves right to take possession of Project identification signs.
2. Remove temporary roads and paved areas not intended for or acceptable for integration into permanent construction. Where area is intended for landscape development, remove soil and aggregate fill that do not comply with requirements for fill or subsoil. Remove materials contaminated with road oil, asphalt and other petrochemical compounds, and other

substances that might impair growth of plant materials or lawns. Repair or replace street paving, curbs, and sidewalks at temporary entrances, as required by authorities having jurisdiction.

3. At Substantial Completion, repair, renovate, and clean permanent facilities used during construction period. Comply with final cleaning requirements specified in Section 017700 "Closeout Procedures".

3.8 WILD AIR

A. Provision of Wild Air: Execute of part of the HVAC installations, such as the chillers, pumps, piping, main air handling units and main ductwork, to ensure sufficient elements of the HVAC installations can be operated to provide conditioned air to control the environment during the period when internal finishing works and decorations, susceptible to environmental temperature and humidity variations, are being executed prior to the Works being considered substantially complete. The HVAC equipment required to provide this Wild Air shall utilize temporary power sources if permanent power is not available during the period when the Wild Air is required.

B. Provision of Wild Air shall be executed in the following sequence:

1. Pressure testing of pipework and ductwork as specified.
2. Inspection of installations including power termination and safety control devices.
3. Energizing power supply panels.
4. Chemical flushing of chilled water system.
5. Internal cleaning of air handling equipment and ductwork to remove dust and debris.
6. Startup air handling equipment with necessary safety controls.
7. Startup chilled water plant with necessary safety controls.
8. Operate and maintain all equipment in good operating condition including routine maintenance and provision of all necessary spares and consumables.

C. Provide Wild Air by alternative means and methods, as required to suit Contractor’s scheduling and sequencing, where the specified sequence cannot reasonably be followed. Implement such alternatives at no additional time and cost to the Employer, and without relieving Contractor of any obligations under the Contract Documents.

D. Provide Wild Air supply, complete, including all temporary modifications to permanent systems and all required temporary power and power sources. Include all associated labor, materials, equipment, and incidentals as part of the Works.

END OF SECTION 015000

es

SECTION 015639 - TEMPORARY TREE AND PLANT PROTECTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, and Division 01 Specification Sections, apply to this Section.

B. EIS/EISA and any similar or related Environmental and Ecological surveys, studies, and reports available such as CEMP and the like including the need to consider both flora and fauna in any site assessment and planning.

C. Geotechnical studies and reports that may provide useful information and data concerning soil profiles, composition, and analysis as well as the presence of ground water.

1.2 SUMMARY

A. Section includes general protection, and retention as required of existing trees and plants that are affected by execution of the Work, whether temporary or permanent construction. It provides guidance for owners, developers, architects, landscape architects, designers, advisors, engineers, planners, contractors, surveyors, botanists, ecologists, arborists, and horticultural professionals concerned with the care and protection of trees and other significant vegetation, and any parties interested in the integration between trees and construction.

B. Related Requirements:

1. Division 01 Section 015000 "Temporary Facilities and Controls" for temporary controls, utilities, support facilities, temporary site fencing, and, if applicable, temporary erosion- and sedimentation-controls if not specified in Section 311000 "Site Clearing".
2. Division 31 Section 311000 "Site Clearing" for removing existing trees and shrubs and for temporary erosion- and sedimentation-control measures if not specified in Section 015000 "Temporary Facilities and Controls".
3. Division 32 Section 329600 "Transplanting" for relocating existing trees and plants.

1.3 DEFINITIONS

A. Caliper: Diameter of a trunk measured by a diameter tape at a height 150 mm above the ground for trees up to and including 100-mm size at this height and as measured at a height of 300 mm above the ground for trees larger than 100-mm size.

B. Caliper (DBH): Diameter breast height; diameter of a trunk as measured by a diameter tape a height 1372 mm above the ground line for trees with caliper of 200 mm or greater as measured at a height of 300 mm above the ground.

C. Plant-Protection Zone: Area surrounding individual trees, groups of trees, shrubs, or other vegetation to be protected prior to, during, and after construction and indicated on Drawings.

D. Tree-Protection Zone: Area surrounding individual trees or groups of trees to be protected prior to, during, and after construction and indicated on Drawings or defined by a circle concentric with each tree with a radius 1.5 times the diameter of the drip line unless otherwise indicated or defined by a circle concentric with each tree with a radius 12 times the tree's caliper size and with a minimum radius of 2400 mm unless otherwise indicated.

es

E. Vegetation: Trees, shrubs, groundcovers, grass, and other plants.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site

1. Review methods and procedures related to temporary tree and plant protection including, but not limited to, the following:

    a. Tree-service firm’s personnel, and equipment needed to make progress and avoid delays.
    b. Arborist's responsibilities.
    c. Quality-control program.
    d. Coordination of Work and equipment movement with the locations of protection zones.
    e. Enforcing requirements for protection zones.
    f. Trenching by hand or with air-spade within protection zones.
    g. Field quality control.
    h. No objection or Authority permits and approvals.

B. Prior to meeting, mark all trees and plants to remain and or to be removed, for review and approval by Employer’s Representative.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. Include plans, elevations, sections, and locations of protection-zone fencing and signage, showing relation of equipment-movement routes and material storage locations with protection zones.
2. Detail fabrication and assembly of protection-zone fencing and signage.
3. Indicate extent of trenching by hand or with air-spade within protection zones.

C. Samples: For each type of the following:

1. Organic Mulch: 0.5-L or 1-L (as required by Engineer) volume of organic mulch; in sealed plastic bags labeled with composition of materials by percentage of weight and source of mulch.
2. Protection-Zone Fencing: Assembled Samples of manufacturer's standard size made from full-size components
3. Protection-Zone Signage: Full-size Samples of each size and text, ready for installation.

D. Tree Pruning Schedule: Written schedule detailing scope and extent of approved pruning of trees to remain that interfere with or are affected by construction.

1. Species and size of tree.
2. Location on site plan. Include unique identifier for each.
3. Reason for pruning.
4. Description of pruning to be performed.
5. Description of maintenance following pruning.

es

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified arborist and tree service firm.

B. Certification: From arborist, certifying that trees indicated to remain have been protected prior to, during, and after construction in accordance with recognized standards, and that trees were promptly and properly treated and repaired when damaged.

C. Maintenance Recommendations: From arborist, for care and protection of trees affected by construction during and after completing the Work.

D. Existing Conditions: Documentation of existing trees and plantings indicated to remain, which establishes preconstruction conditions, to be considered by all other site contractors.

1. Use sufficiently detailed photographs or video recordings.
2. Label each photograph or video with both plant botanical and common names, location on site, and date of photograph or video recordings.
3. Include plans and notations to indicate specific wounds and damage conditions of each tree or other plants designated to remain.

E. Quality-control program.

1.7 QUALITY ASSURANCE

A. Product and Equipment shall demonstrate compliance with requirements specified in Division 01 Section 016000 "Product Requirements", and with sustainability targets and requirements specified in Division 01 Sections and in other Divisions' related Sections for Sustainability Design Requirements, as applicable.

B. Arborist Qualifications: Certified Arborist as certified by ISA

C. Tree-Service Firm Qualifications: A qualified and experienced landscaping contractor approved by the Authority Having Jurisdiction where Project is located, with a minimum 15 years of documented experience in similar types of projects, including undertaking at least 5 successful temporary tree and plant protection works of similar scope, complexity, and environmental condition to that required for this Project, within the past [**5**] years, and that will assign an experienced, qualified arborist to the Project site during execution of the Works.

D. Tree Workers Qualifications: Pruning shall be performed only by qualified experienced, and competent arborist.

E. Quality-Control Program: Prepare a written program to systematically demonstrate the ability of personnel to properly follow procedures and handle materials and equipment during the Works without damaging trees and plantings. Include dimensioned diagrams for placement of protection zone fencing and signage, the arborist and tree-service firm's responsibilities, instructions given to workers on the use and care of protection zones, and enforcement of requirements for protection zones.

1.8 FIELD CONDITIONS

A. The following practices are prohibited within protection zones:

1. Storage or stockpiling of construction materials, debris, or excavated material.
2. Dumping of poisonous materials on or around trees and plants' roots. Such material includes but is not limited to paint, petroleum products, cement and concrete products,

contaminated water, or any material that may be harmful to tree health and/or result in permanent soil contamination.
3. Moving, parking or storing vehicles or equipment.
4. Damage to roots, bark, trunk, limbs, or foliage.
5. Soils disturbance, compaction, topsoil removal, surface treatment, construction activity, or grade change.
6. Foot traffic.
7. Erection of sheds or structures, or location of temporary facilities including trailers or portable toilets.
8. Excessive unintended water, or applications of untreated water.
9. Wash down and cleaning of equipment.
10. Changes to natural overland water flow or drainage.
11. Alteration of the water table; either raising or lowering.
12. Excavation, trenching, or other digging unless otherwise indicated and methodology approved by Employer based on arborist advice.
13. Attachment of signs to or wrapping materials around trees or plants, or use of trees as support, backstops, poles, unless otherwise indicated.
14. Cultivation.
15. Refueling.
16. Preparation of chemicals, including preparation of cement products.

B. Do not direct vehicle or equipment exhaust toward protection zones, or discharge air borne dust, particulate matter, and air pollutants from construction activities.

C. Prohibit heat sources, flames, ignition sources, lighting of fires, and smoking within or near protection zones and organic mulch.

1.9 WARRANTY

A. Special Warranty: Contractor agrees to repair or replace plantings and accessories that fail in materials, workmanship, or growth within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Death of tree, unsatisfactory growth, or permanent damage to tree health due to injury of roots, bark, trunk, branches, or foliage, except for defects resulting from abuse, lack of adequate maintenance, or neglect by Employer.
b. Structural failures including plantings falling or blowing over due to destabilized or compromised root systems.
c. Faulty performance of excavation, root pruning, crown pruning, etc..
d. Deterioration or failure of any protective fencing during the specified maintenance period.

B. Warranty Period: Subject to contract terms and conditions with liability for the retained trees' health and survival not to exceed any formal Substantial Completion Certificate Date.

C. Any item installed or executed requiring maintenance even before the Substantial Completion Certificate is issued shall be part of the Contractor's obligation.

es

PART 2 - PRODUCTS

2.1 MATERIALS

A. Backfill Soil: planting soil of suitable moisture holding capacity and granular texture for placing around tree; free of stones, roots, plants, sod, clods, clay lumps, pockets of coarse sand, concrete slurry, concrete layers or chunks, cement, plaster, building debris, and other extraneous and deleterious materials harmful to plant growth.

1. Mixture: Well-blended mix of two parts stockpiled soil to one-part planting soil
2. Planting Soil: Planting soil as specified in project specifications or by Engineer.

B. Organic Mulch: Free from deleterious materials and suitable as a top dressing for trees and shrubs, consisting of one of the following:

1. Type: Shredded hardwood or Ground or shredded bark orr Wood and bark chips , as required by Engineer.
2. Size Range: 76 mm maximum, 13 mm minimum
3. Color: Natural.

C. Protection-Zone Fencing: Fencing fixed in position and meeting **one of** the following requirements:

1. Chain-Link Protection-Zone Fencing: Galvanized-steel or Polymer-coated steel or Polymer-coated galvanized-steel fencing fabricated from minimum 50-mm opening, 3.76-mm-diameter wire chain-link fabric; with pipe posts, minimum 60-mm-OD line posts, and 73-mm-OD corner and pull posts; with 42-mm-OD top rails ; with 4.5-mm-diameter top tension wire and 4.5-mm-diameter bottom tension wire; with tie wires, hog ring ties, and other accessories for a complete fence system.

   a. Height: 1800 mm
   b. Polymer-Coating Color: [Dark green] [Olive green] [Brown] [Black] <Insert color>.

2. Plywood Protection-Zone Fencing: Plywood framed with four 50-by-100-mm rails, with [100-by-100-mm] preservative-treated wood posts spaced not more than 2400 mm apart.

   a. Height: 1800 mm

   c. plywood and Lumber: Comply with requirements in specifications

3. Wood Protection-Zone Fencing: Constructed of two 50-by-100-mm horizontal rails, with 100-by-100-mm preservative-treated wood posts spaced not more than 2400 mm apart, and lower rail set halfway between top rail and ground.

   a. Height: 1200 mm
   b. Lumber: Comply with requirements in specifications.

4. Plastic Protection-Zone Fencing: Plastic construction fencing constructed of high-density extruded and stretched polyethylene fabric with 50-mm maximum opening in pattern and weighing a minimum of 0.6 kg/m; remaining flexible from minus 16 to plus 93 degree Celsius; inert to most chemicals and acids; minimum tensile yield strength of 13.8 MPa and ultimate tensile strength of 18.5 MPa; secured with plastic bands or galvanized-steel or stainless-steel wire ties; and supported by tubular or T-shape galvanized-steel posts spaced not more than 2400 mm apart.

   a. Height: 1200 mm
   b. Color: High-visibility orange, nonfading.

es

5. Gates: Lockable Double swing access gates matching material and appearance of fencing, to allow for maintenance activities within protection zones; leaf width As indicated

D. Protection-Zone Signage: Shop-fabricated, rigid plastic or metal sheet with attachment holes pre-punched and reinforced; legibly printed with nonfading lettering and as follows:

1. Size and Text: As shown on Drawings
2. Lettering: 75-mm high minimum, white characters on colored background.
3. Language: If more than one language is required, include translated text and its placement.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Erosion and Sedimentation Control: Examine the site to verify that temporary erosion- and sedimentation-control measures are in place. Verify that flows of water redirected from construction areas or generated by construction activity do not enter or cross protection zones.

B. Prepare written report, endorsed by arborist, listing conditions detrimental to tree and plant protection.

3.2 PREPARATION

A. Locate and clearly identify trees, shrubs, and other vegetation to remain or to be relocated or to be relocated. Tie a 25-mm blue vinyl tape around each tree trunk at 1372 mm above the ground.

B. Protect tree root systems from damage caused by runoff or spillage of noxious materials prior to and while mixing, placing, or storing construction materials. Protect root systems from ponding, eroding, or excessive wetting caused by dewatering operations.

3.3 TREE PROTECTION

A. Tree-Protection Zones: Mulch areas inside tree-protection zones and other areas indicated. Do not exceed indicated thickness of mulch.

1. Apply 100 mm uniform thickness of organic mulch unless otherwise indicated. Do not place mulch within 150 mm of tree trunks.
2. Install temporary root protection matting over mulch to the extent indicated.

B. Trunk Protection: Protect the trunk of each tree to remain as follows:

1. Install 50 x 150-mm wood planks around trunk at maximum 75 mm apart. Minimum three planks per tree. Band together with no less than three steel bands, stapled to the planks to hold them securely in place. Wrap orange plastic construction fencing to a minimum of three layers outside slats. Fasten wrap with wire.

   a. Height: 300 mm from lowest branch]

2. Wrap trunk with orange plastic construction fencing to 50 mm in thickness, minimum 6-mm closed-cell foam pads. Install 50 x 150-mm wood planks around trunk over wrap at maximum 75 mm apart. Minimum three planks per tree. Band together with no less than three steel bands, stapled to the planks to hold them securely in place.

   a. Height: (300 mm) from lowest branch

es

3. Trunk protection to remain in place no longer than 12 months. If construction exceeds timeframe indicated, inspect trunk protection at 12-month intervals and loosen if necessary.

3.4 PROTECTION ZONES

A. Protection-Zone Fencing: Install protection-zone fencing along edges of protection zones before materials or equipment are brought on the site and construction operations begin in a manner that will prevent people and animals from easily entering protected areas except by entrance gates. Construct fencing so as not to obstruct safe passage or visibility at vehicle intersections where fencing is located adjacent to pedestrian walkways or in close proximity to street intersections, drives, or other vehicular circulation.

1. Chain-Link Fencing: Install to comply with ASTM F567 and with manufacturer's written instructions.
2. Posts: Set or drive posts into ground one-third the total height of the fence without concrete footings. Where a post is located on existing paving or concrete to remain, provide appropriate means of post support acceptable to Engineer.
3. Access Gates: Install where indicated, adjust to operate smoothly, easily, and quietly; free of binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction throughout entire operational range. Confirm that latches and locks engage accurately and securely without forcing or binding.
4. Plastic Fencing: Stretch fabric taut and secure to posts without bows or sags.

B. Protection-Zone Signage: Install protection-zone signage in visibly prominent locations in a manner approved by Engineer. Install one sign spaced approximately every 6 m on protection-zone fencing, but no fewer than four signs with each facing a different direction.

C. Maintain protection zones free of weeds and trash.

D. Maintain hydration of plants to assure plant survival.

E. Maintain protection-zone fencing and signage in good condition as acceptable to Engineer and remove when construction operations are complete and all tree/plantings threatening activities have ceased on site, including equipment removal.

1. Do not remove protection-zone fencing, even temporarily, to allow deliveries or equipment access through the protection zone.
2. Temporary access is permitted subject to preapproval in writing by arborist and Employer if a root buffer effective against soil compaction is constructed as directed by arborist. Maintain root buffer so long as access is permitted.

3.5 EXCAVATION

A. General: Excavate at edge of protection zones and for trenches indicated within protection zones in accordance with requirements in Division 31 Section 312000 "Earth Moving" unless otherwise indicated, and under the direction of project arborist.

1. Excavate only where absolute necessary.
2. Where possible, route utility trenches away from roots to avoid any damage.
3. Avoid excavation within the protection zone during hot, dry weather.

B. Trenching within Protection Zones: Where utility trenches are required within protection zones, excavate under or around tree roots by hand or with air spade, or tunnel under the roots by drilling, auger boring, or pipe jacking. Do not cut main lateral tree roots or taproots; cut only smaller roots that interfere with installation of utilities, with prior approval from certified arborist. Cut roots as

required for root pruning. If excavating by hand, use narrow-tine spading forks to comb soil and expose roots.

C. Do not allow exposed roots to dry out before placing permanent backfill. Provide temporary earth cover or pack with peat moss and wrap with untreated burlap. Water and maintain in a moist condition. Temporarily support and protect roots from damage until they are permanently relocated and covered with soil.

3.6 ROOT PRUNING

A. Prune tree roots that are affected by temporary and permanent construction. Prune roots as shown on Drawings, under direction of Arborist and Site Engineer.

1. Cut roots manually by digging a trench and cutting exposed roots with sharp pruning instruments; do not break, tear, chop, or slant the cuts. Do not use a backhoe or other equipment that rips, tears, or pulls roots.
2. Cut Ends: Do not paint cut root ends
3. Temporarily support and protect roots from damage until they are permanently covered with soil.
4. Cover exposed roots with untreated burlap and water regularly to prevent drying out and maintain in a wet condition as long as necessary for temporary protection.
5. Backfill as soon as possible in accordance with requirements in Division 31 Section 312000 "Earth Moving."

B. Root Pruning at Edge of Protection Zone: Prune tree roots 300 mm outside and 300 mm inside of the protection zone by cleanly cutting all roots to the depth of the required excavation.

C. Root Pruning within Protection Zone: Clear and excavate by hand or with air spade to the depth of the required excavation to minimize damage to tree root systems. If excavating by hand, use narrow-tine spading forks to comb soil to expose roots. Cleanly cut roots as close to excavation as possible.

3.7 CROWN PRUNING

A. Prune branches affected by temporary and permanent construction. Prune branches under the direction of Arborist and Site Engineer.

1. Ascertain limbs to be trimmed with arborist. Clearly mark them to designate the approved points of cutting
2. Prune to remove only injured, broken, dying, or dead branches unless otherwise indicated. Do not prune for shape unless otherwise indicated.
3. Remove or reduce living branches to compensate for extensive root loss caused by damaging or cutting root system if needed as per arborist direction.
4. Pruning Standards: Prune trees in accordance with ANSI A300 (Part 1) and as indicated on Drawings.

    a. Type of Pruning: Cleaning, raising, reducing, and thinning where indicated.
    b. Specialty Pruning: Structural, restoration, vista, espalier, pollarding, palm and utility where indicated.

B. Unless otherwise directed by arborist and acceptable to Engineer, do not cut tree leaders.

C. Cut branches with sharp pruning instruments; do not break or chop.

D. Do not paint or apply sealants to wounds.

es

E. Provide subsequent maintenance pruning during Contract period as recommended by arborist.

F. Chip removed branches and spread over areas identified by the Arborist and Site Engineer.

3.8 REGRADING

A. Lowering Grade: Where new finish grade is indicated below existing grade around trees, slope grade beyond the protection zone. Maintain existing grades within the protection zone.

B. Lowering Grade within Protection Zone: Where new finish grade is indicated below existing grade around trees, slope grade away from trees as recommended by arborist unless otherwise indicated.

1. Root Pruning: Prune tree roots exposed by lowering the grade. Do not cut main lateral roots or taproots; cut only smaller roots. Cut roots as required for root pruning.

C. Raising Grade: Where new finish grade is indicated above existing grade around trees, slope grade beyond the protection zone. Maintain existing grades within the protection zone.

D. Minor Fill within Protection Zone: Where existing grade is 50 mm or less below elevation of finish grade, fill with backfill soil. Place backfill soil in a single uncompacted layer and hand grade to required finish elevations.

3.9 FIELD QUALITY CONTROL

A. Inspections: Engage a qualified arborist to direct plant-protection measures in the vicinity of trees, shrubs, and other vegetation indicated to remain and to prepare inspection reports.

3.10 REPAIR AND REPLACEMENT

A. General: Repair or replace trees, shrubs, and other vegetation indicated to remain or to be relocated that are damaged by construction operations, in a manner approved by Engineer.

1. Monitor and assess trees/plantings in decline or that have died, based on original report and any incident report(s).
2. Submit details of proposed pruning and repairs.
3. Perform repairs of damaged trunks, branches, and roots within 24 hours in accordance with arborist's written instructions.
4. Replace trees and other plants that cannot be repaired and restored to full-growth status, as determined by Engineer.

B. Trees: Remove and replace trees indicated to remain that are more than 20 percent dead or in an unhealthy or hazardous condition before the end of the corrections period or are damaged during construction operations that Engineer determines are incapable of restoring to normal growth pattern.

1. Small Trees: Provide new nursery-grown trees of same size and species as those being replaced for each tree that measures 100 mm or smaller in caliper size.
2. Large Trees: Provide two new nursery grown tree(s) of 150mm caliper size for each tree being replaced that measures more than 150 mm in caliper size.

    a. Species: As selected by the Arborist and Site Engineer.

3. Plant and maintain new trees as specified in Division 32 Section 329300 "Plants."

es

3.11 DISPOSAL OF SURPLUS AND WASTE MATERIALS

A. Disposal: Remove excess excavated material, displaced trees, trash, and debris and legally dispose of them off Employer's property.

END OF SECTION 015639

SECTION 016000 - PRODUCT REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Particular Conditions and other Division 01 Specifications sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for selection of products for use in Project; product delivery, storage, and handling; manufacturers' standard warranties on products; special warranties; Quality assurance, comparable products and Product substitutions.

B. If the requirements in this Section contradict with requirements in other Sections, the more stringent requirements shall prevail.

C. Related Requirements:

1. Division 01 Section 011000 "Summary" for Contractor requirements related to Employer-furnished products.
2. Division 01 Section 012500 "Substitution Procedures" for requests for substitutions.
3. Division 01, Section 014200 "References" for applicable industry standards for products specified.
4. Division 01, Section 017700 "Closeout Procedures" for submitting warranties.
5. Division 01, Section 018113.14 - Sustainable Design Requirements
6. Divisions 02 through 41, Specification Sections for specific requirements for warranties on products and installations specified to be warranted.

1.3 DEFINITIONS

A. Products: Items obtained for incorporating into the Work, whether purchased for Project or taken from previously purchased stock. The term "product" includes the terms "material," "equipment," "system," and terms of similar intent.

1. New Products: Items that have not previously been incorporated into another project or facility. Salvaged items or items reused from other projects are not considered new products. Items that are manufactured or fabricated to include recycled content materials are considered new products, unless indicated otherwise.
2. Comparable Product: Product by named manufacturer that is demonstrated and approved through the comparable product submittal process described in Part 2, section 2.2 "Comparable Products", to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.
3. Local Products: Naturally occurring materials found in the country that satisfy the required standards, products manufactured in the country from naturally occurring materials found in the country countries that satisfy the required standards, or products manufactured in the country that satisfy the required standards.
4. Other Products: All other products required for the Works that satisfy the required standards and which are excluded from the category of "Local Products".

B. Basis-of-Design Product Specification: A specification in which a single manufacturer's product is named and accompanied by the words "basis-of-design product," including make or model number or other designation. to establish the significant qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics for purposes of evaluating comparable products of additional manufacturers named in the Specification, published attributes and characteristics of basis-of-design product establish salient characteristics of products.

1. Evaluation of Comparable Products: In addition to the basis-of-design product description, product attributes and characteristics may be listed to establish the significant qualities related to type, function, in-service performance and physical properties, weight, dimension, durability, visual characteristics, and other special features and requirements for purposes of evaluating comparable products of additional manufacturers named in the specification.

C. Subject to Compliance with Requirements: Where the phrase "Subject to compliance with requirements" introduces a product selection procedure in an individual Specification Section, provide products qualified under the specified product procedure. In the event that a named product or product by a named manufacturer does not meet the other requirements of the specifications, select another named product or product from another named manufacturer that does meet the requirements of the specifications; submit a comparable product request or substitution request, if applicable.

D. Comparable Product Request Submittal: An action submittal requesting consideration of a comparable product, including the following information:

1. Identification of basis-of-design product or fabrication or installation method to be replaced, including Specification Section number and title and Drawing numbers and titles.
2. Data indicating compliance with the requirements specified in Part 2 "Comparable Products" Article.

E. Basis-of-Design Product Specification Submittal: An action submittal complying with requirements in Section 013300 "Submittal Procedures".

F. Substitution: Refer to Section 012500 "Substitution Procedures" for definition and limitations on substitutions.

G. Manufacturer's Instructions and Manufacturer's Recommendations means latest published or printed version of 'manufacturer's written instructions' and 'manufacturer's written recommendations.

H. Manufacturer's Warranty: Preprinted written warranty published by individual manufacturer for a particular product and specifically endorsed by manufacturer to Employer.

I. Special Warranty: Written warranty required by or incorporated into the Contract Documents, whether to extend time limit provided by manufacturer's warranty, or to provide for joint and several liability, or to provide more rights for Employer.

1.4 ACTION SUBMITTALS

A. Product List: Prepare and submit a list, in tabular form, identifying specified products. Include generic names of products required.

1. Coordinate product list with Contractor's Construction Program, the Submittals Schedule, and the Subcontract List.
2. Form: Tabulate information for each product under the following column headings:

a. Specification Section number and title.
b. Generic name used in the Contract Documents.
c. Specified warranty requirements, if any.
d. Model number, and similar designations.

e. Manufacturer's name and address.
f. Supplier's name and address.
g. Installer's name and address.
h. Total quantity required for the Works.
i. Projected delivery date or, if multiple deliveries, first and last delivery dates.
j. Identification of items that require early submittal approval for scheduled delivery date.

3. Initial Submittal: Within 14 days after Commencement Date, submit an electronic PDF copy and three (3) copies of initial product list. Include a written explanation for omissions of data and for variations from Contract requirements.

   a. At Contractor's option, initial submittal may be limited to product selections and designations that must be established early in Contract period.

4. Completed List: Within twenty-eight (28) days after Commencement Date, submit an electronic PDF copy and three (3) copies of completed product list. Include a written explanation for omissions of data and for variations from Contract requirements.
5. Engineer's Action: The Engineer will respond in writing to Contractor within 14 days of receipt of completed product list. The Engineer's response will include a list of unacceptable product selections and a brief explanation of reasons for this action. The Engineer's response, or lack of response, does not constitute a waiver of requirement that products comply with the Contract Documents.

B. Product Data: Collect information into a single submittal for each element of construction and type of product or equipment.

1. If information must be specially prepared for submittal because standard printed data are not suitable for use, submit as Shop Drawings, not as Product Data.
2. Mark each copy of each submittal to show which products and options are applicable.
3. Include the following information, as applicable:

   a. Manufacturer's written recommendations.
   b. Manufacturer's product specifications.
   c. Manufacturer's installation instructions.
   d. Standard color charts.
   e. Manufacturer's catalog cuts.
   f. Wiring diagrams showing factory-installed wiring.
   g. Printed performance curves.
   h. Operational range diagrams.
   i. Mill reports.
   j. Standard product operation and maintenance manuals.
   k. Compliance with specified referenced standards.
   l. Testing by recognized testing agency.
   m. Application of testing agency labels and seals.
   n. Notation of coordination requirements.

4. Submit Product Data before or concurrent with Samples.

C. Compliance Statement: Submit a copy of project specifications identifying on each item whether or not the submission complies with that requirement.

D. Copy of Product Warranty.

E. The Engineer reserves the right to request further clarifications and particulars regarding any submission.

F. Substitution Requests: Refer to Section 012500 "Substitution Procedures".

G. Comparable Product Requests: Submit an Electronic copy and three (3) hard copies of each request for consideration of each comparable product. Identify product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.

1. Request Form: Use a form acceptable to the Engineer.
2. Documentation: Show compliance with requirements for approval of an unnamed product.
3. Engineer's Action: If necessary, the Engineer will request additional information or documentation for evaluation within one week of receipt of a request. The Engineer will notify the Contractor of acceptance or rejection of proposed comparable product within 28 days of receipt of request, or within 14 days of receipt of additional information or documentation, whichever is later.

    a. Form of Acceptance: Variation Order, without additional compensation.
    b. Use product specified if the Engineer cannot make a decision on use of a proposed comparable product within time allocated.

H. This specification is based on International **C**odes and standards. An accredited and approved laboratory / certification agency shall provide technical assessment regarding the suitability of products and tests made to other approved international standards to provide equal or better performance.

1. The technical assessment shall comprise a detailed technical comparison between the two standards.
2. The most stringent code shall prevail.
3. The Engineer, in all cases, has the right to evaluate such comparison and request from the contractor to abide by the specified standard.

I. Basis-of-Design Product Specification Submittal: Comply with requirements in Division 01 Section "Submittal Procedures." Show compliance with requirements.

J. Products Manufactured under license: Contractor submitting products in accordance with these specifications manufactured by a company other than the one specified and in another country shall submit also:

1. A letter from the original manufacturing company listed in the specifications certifying that the product submitted is manufactured under license and subject to quality control and supervision from the original manufacturing company.
2. Both the original manufacturing company and the subsidiary company shall have Quality Management System such as ISO 9001 and 9002.
3. The submitted product under license is equivalent to the original specified product in all respects.
4. The Engineer has the right to request further testing in an approved independent laboratory to demonstrate that the product manufactured under license is equivalent in all respects to the product manufactured by the original company.

K. LEED Submittals: Submit LEED requirements as stated in Division 01 and in other specification sections.

1.5 QUALITY ASSURANCE

A. Alternative Equivalent Standards: Product references to industry standards establish quantitative and qualitative attributes, characteristics and properties, required to be inherent in the specified product. Standard products not conforming to referenced standards, but otherwise exhibiting the same essential properties and conforming to another recognized equivalent industry standard may be used, subject to approval and compliance with other specified requirements.

1. Recognized standards are those which are listed in Division 01 Section "References".

2. Comply with provisions in "Comparable Products" Article to obtain approval for use of a product conforming with an alternative equivalent standard.

B. Compatibility of Options: If Contractor is given option of selecting between two or more products for use on Project, select product compatible with products previously selected, even if previously selected products were also options.

1. Resolution of Compatibility Disputes between Multiple Contractors:

a. Each Contractor is responsible for providing products and construction methods compatible with products and construction methods of other contractors.
b. If a dispute arises between the multiple contractors over concurrently selectable but incompatible products, the Engineer will determine which products shall be used.

C. Identification of Products: Except for required labels and operating data, do not attach or imprint manufacturer or product names or trademarks on exposed surfaces of products or equipment that will be exposed to view in occupied spaces or on the exterior.

1. Labels: Locate required product labels and stamps on a concealed surface, or, where required for observation following installation, on a visually accessible surface that is not conspicuous.
2. Equipment Nameplates: Provide a permanent nameplate on each item of service or power operated equipment. Locate on a visually accessible but inconspicuous surface. Include information essential for operation, including the following:

a. Name of product.
b. Model and serial number.
c. Capacity.
d. Speed.
e. Ratings.

3. See individual identification Sections in Divisions 21, 22, 23, and 26 for additional equipment identification requirements.

D. Source Limitations: To the fullest extent possible, provide products of the same type and kind from a single source.

1. If a specified product is available only from a source that cannot produce or supply sufficient quantities to execute and/or complete Project requirements in a timely manner, request the Engineer to determine the most essential qualities, attributes and characteristics required in the specified product, in order to select a comparable product possessing the same relevant, significant properties.
2. Comply with provisions in "Comparable Products" Article to obtain approval for use of an unnamed product.

E. Compliance with Contract Documents: Contractor shall fully and unconditionally comply with requirements set in the Contract Documents.

F. Manufacturers'/ Installers' Qualifications: submit manufacturer / supplier profile form.

1.6 COORDINATION

A. Modify or adjust affected work as necessary to integrate work of approved comparable products and approved substitutions.

1.7 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle products, using means and methods that will prevent damage, deterioration, and loss, including theft and vandalism. Comply with manufacturer's written instructions.

B. Delivery and Handling:

1. Schedule delivery to minimize long-term storage at Project site and to prevent overcrowding of construction spaces.
2. Coordinate delivery with installation time to ensure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other losses.
3. Deliver products to Project site in an undamaged condition in manufacturer's original sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting, and installing.
4. Inspect products on delivery to determine compliance with the Contract Documents and that products are undamaged and properly protected.

C. Storage:

1. Store products to allow for inspection and measurement of quantity or counting of units.
2. Store materials in a manner that will not endanger Project structure.
3. Store products that are subject to damage by the elements under cover in a weathertight enclosure above ground, with ventilation adequate to prevent condensation and with adequate protection from wind.
4. Protect foam plastic from exposure to sunlight, except to extent necessary for period of installation and concealment.
5. Comply with product manufacturer's written instructions for temperature, humidity, ventilation, and weather-protection requirements for storage.
6. Protect stored products from damage and liquids from freezing.
7. Provide a secure location and enclosure at Project site for storage of materials and equipment.
8. Utilize the secure location and enclosure at Project site for storage of materials and equipment provided by the Employer.

1.8 PRODUCT WARRANTIES

A. Warranties specified in other Sections and other Contract Documents shall be in addition to, and run concurrent with the below general warranty requirements. Manufacturer's disclaimers and limitations on product warranties do not relieve Contractor of obligations under requirements of the Contract Documents.

1. Manufacturer's Warranty: Written standard warranty form furnished by individual manufacturer for a particular product and issued in the name of the Employer and the Contractor or endorsed by manufacturer to Employer.
2. Special Warranty: Written warranty required by the Contract Documents to provide specific rights for Employer and issued in the name of the Employer and the Contractor or endorsed by manufacturer to Employer.
3. All costs of repairing any defects in the Works due to this defect shall be borne by the warrantors.
4. Refer to Divisions 02 through 41, Technical Specification Sections for specific content requirements and particular requirements for submitting special warranties.
5. Submit form of warranty for the Engineer’s approval.

B. Special Warranties: Prepare a written document that contains appropriate terms and identification, ready for execution.

1. Manufacturer's Standard Form: Modified to include Project-specific information and properly executed.

2. Specified Form: When specified forms are included in the Project Manual, prepare a written document, using indicated form properly executed.
3. See other Sections for specific content requirements and particular requirements for submitting special warranties.

C. Submittal Time: Comply with requirements in Section 017700 "Closeout Procedures."

D. Warranty Requirements:

1. Related Damages and Losses: When correcting failed or damaged warranted construction, remove and replace construction that has been damaged as a result of such failure or must be removed and replaced to provide access for correction of warranted construction.
2. Reinstatement of Warranty: When Work covered by a warranty has failed and been corrected by replacement or rebuilding, reinstate the warranty by written endorsement. The reinstated warranty shall be equal to the original warranty period with an equitable adjustment for depreciation.
3. Replacement Cost: Upon determination that Work covered by a warranty has failed, replace or rebuild the Work to an acceptable condition complying with requirements of the Contract Documents. The Contractor is responsible for the cost of replacing or rebuilding defective Work regardless of whether the Employer has benefited from use of the Work through a portion of its anticipated useful service life.
4. Employer's Recourse: Expressed warranties made to the Employer are in addition to implied warranties and shall not limit the duties, obligations, rights, and remedies otherwise available under the law. Expressed warranty periods shall not be interpreted as limitations on the time in which the Employer can enforce such other duties, obligations, rights, or remedies.

E. Rejection of Warranties: The Employer reserves the right to reject warranties and to limit selection to products with warranties not in conflict with requirements of the Contract Documents.

F. Where the Contract Documents require a special warranty, or similar commitment on the Work or part of the Work, the Employer reserves the right to refuse to accept the Work, until the Contractor presents evidence that entities required to countersign such commitments are willing to do so.

G. Manufacturer Warranties and Special Warranties: Prepare a written document, ready for execution, that contains appropriate terms and conditions, and identifies commencement date and warranty period, submit a draft and obtain the Engineer's written approval before final execution.

1. Manufacturer's Standard Form: Modified to include Project-specific requirements and information, and properly executed; or
2. Special Form: Individually prepared and specially drafted to include Project-specific requirements and information, and properly executed.
3. Refer to Divisions 2 through 41 Sections for specific content requirements and particular requirements for submitting special warranties.

H. Submittal of Warranties: Comply with requirements in Division 01 Section 017700 "Closeout Procedures."

PART 2 - PRODUCTS

2.1 PRODUCT SELECTION PROCEDURES

A. General Product Requirements: Locally manufactured or imported products, materials, and equipment shall satisfy the below requirements.

B. Local Regulations and Codes: Comply with applicable requirements of the local codes and regulations of authorities having jurisdiction.

1. Obtain necessary approvals from authorities having jurisdiction.
2. Verify applicable performances whenever relevant equivalent counterparts to applicable standards are substituted and submit a comprehensive comparative matrix of equivalency between specified standard and proposed counterpart for Engineer’s approval.

C. General Product Requirements: Provide products that comply with the Contract Documents, are undamaged and, unless otherwise indicated, are new at time of installation.

1. Provide products complete with accessories, trim, finish, fasteners, and other items needed for a complete installation and indicated use and effect.
2. Standard Products: If available, and unless custom products or nonstandard options are specified, provide standard products of types that have been produced and used successfully in similar situations on other projects.
3. Employer reserves the right to limit selection to products with warranties meeting requirements of the Contract Documents.
4. Where products are accompanied by the term "as selected," the Engineer will make selection.
5. Where products are accompanied by the term "match sample," sample to be matched is Engineer's.
6. Descriptive, performance, and reference standard requirements in the Specifications establish salient characteristics of products.
7. Or Approved Equal: For products specified by name and accompanied by the term "or equal," "or approved equal," or "or approved," comply with requirements in "Comparable Products" Article to obtain approval for use of an unnamed product.

    a. Submit additional documentation required by the Engineer through Construction Manager in order to establish equivalency of proposed products. Unless otherwise indicated, evaluation of "or equal" product status is by the Engineer, whose determination is final.
    b. The Engineer reserves the right to limit selection to named products specified.
    c. Unless otherwise agreed, contract unit rates and prices will be deemed to be based on the use of named products specified in the Contract Documents.

D. Product Selection Procedures:

1. Sole Product: Where Specifications name a single manufacturer and product, provide the named product that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered.

    a. Sole product may be indicated by the phrase "Subject to compliance with requirements, provide the following."

2. Sole Manufacturer / Source: Where Specifications name a single manufacturer or source, provide a product by the named manufacturer or source that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered.

    a. Sole manufacturer / source may be indicated by the phrase "Subject to compliance with requirements, provide products by the following."

3. Limited List of Products: Where Specifications include a list of products, the products should fully comply with requirements.

    a. Limited list of products may be indicated by the phrase "Subject to compliance with requirements, provide one of the following".

4. Non-Limited List of Products: Where Specifications include a list of products, the products should be fully complied with requirements. Comply with requirements in "Comparable Products" Article for consideration of an unnamed product.

a. Non-limited list of products is indicated by the phrase "Subject to compliance with requirements, available products that may be incorporated in the Work include, but are not limited to, the following."
b. Provision of an unnamed product is not considered a substitution, if the product complies with requirements.

5. Limited List of Manufacturers: Where Specifications include a list of manufacturers' names, provide a product by one of the manufacturers listed that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered unless otherwise indicated.

    a. Limited list of manufacturers is indicated by the phrase "Subject to compliance with requirements, provide products by one of the following".

6. Non-Limited List of Manufacturers: Where Specifications include a list of available manufacturers, provide a product by one of the manufacturers listed or a product by an unnamed manufacturer that complies with requirements.

    a. Non-limited list of manufacturers is indicated by the phrase "Subject to compliance with requirements, available manufacturers whose products may be incorporated in the Work include, but are not limited to, the following".

7. Available Products: Where Specification paragraphs or subparagraphs titled "Available Products", provide the products that complies with requirements. Comply with provisions in "Comparable Products" Article to obtain approval for use of an unnamed product.
8. Product Options: Where Specification paragraphs titled "Product Options" indicate that size, profiles, and dimensional requirements on Drawings are based on a specific product or system, provide either the specific product or system indicated or a comparable product or system by another manufacturer. Comply with provisions in "Comparable Products" Article to obtain approval for use of product.
9. Basis-of-Design Product: Where Specifications name a product, or refer to a product indicated on Drawings, provide the specified or indicated product or a comparable product by one of the other named manufacturers. Drawings and Specifications may additionally indicate sizes, profiles, dimensions, and other characteristics that are based on the product named. Comply with requirements in "Comparable Products" Article for consideration.

    a. For approval of products, comply with requirements in Section 012500 "Substitution Procedures" for substitutions for convenience.

E. Visual Matching Specification: Where Specifications require the phrase "match the Engineer's sample," provide a product that complies with requirements and matches the Engineer's sample. The Engineer's decision will be final on whether a proposed product match.

1. If no product available within specified category matches and complies with other specified requirements, comply with requirements in Section 012500 "Substitution Procedures" for proposal of product.

F. Visual Selection Specification: Where Specifications include the phrase "as selected by the Engineer from manufacturer's full range" or a similar phrase, select a product that complies with requirements. The Engineer will select color, gloss, pattern, density, or texture from manufacturer's product line that includes both standard and premium items.

a. Standard Range: Where Specifications include the phrase "standard range of colors, patterns, textures" or similar phrase, the Engineer will select color, pattern, density, or texture from manufacturer's product line that does not include premium items.
b. Full Range: Where Specifications include the phrase "full range of colors, patterns, textures" or similar phrase, the Engineer will select color, pattern, density, or texture from manufacturer's product line that includes both standard and premium items.

G. Sustainable Product Selection: Where Specifications require product to meet sustainable product characteristics, select products complying with indicated requirements. Comply with requirements in Division 01 “Sustainable Design Requirements –Specification Sections.

1. Select products for which sustainable design documentation submittals are available from manufacturer.

2.2 COMPARABLE PRODUCTS

A. Conditions for Consideration of Comparable Products: the Engineer will consider Contractor's request for comparable product when the following conditions are satisfied. If the following conditions are not satisfied, the Engineer may return requests without action, except to record noncompliance with the following requirements:

1. Evidence that proposed product does not require revisions to the Contract Documents, is consistent with the Contract Documents, will produce the indicated results, and is compatible with other portions of the Work.
2. Detailed comparison of significant qualities of proposed product with those of the named basis-of-design product. Significant product qualities include attributes, such as type, function, in-service performance and physical properties, weight, dimension, durability, visual characteristics, and other specific features and requirements.
3. Evidence that proposed product provides specified warranty.
4. List of similar installations for completed projects, with project names and addresses and names and addresses of the Engineers and Employers, if requested.
5. Samples, if requested.

B. Engineer's Action on Comparable Products Submittal: If necessary, the Engineer will request additional information or documentation for evaluation, as specified in Section 013300 "Submittal Procedures."

1. Form of Approval of Submittal: As specified in Section 013300 "Submittal Procedures."
2. Use product specified if the Engineer does not issue a decision on use of a comparable product request within time allocated.

C. Submittal Requirements, Two-Step Process: Approval by the Engineer of Contractor's request for use of comparable product is not intended to satisfy other submittal requirements. Comply with specified submittal requirements.

D. Submittal Requirements, Single-Step Process: When acceptable to Engineer, incorporate specified submittal requirements of individual Specification Section in combined submittal for comparable products. Approval by the Engineer of Contractor's request for use of comparable product and of individual submittal requirements will also satisfy other submittal requirements.

PART 3 - EXECUTION (Not Used)

END OF SECTION 016000

es

SECTION 017300 - EXECUTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Particular Conditions and other Division 01 Specifications sections, apply to this Section.

1.2 SUMMARY

A. Section includes general administrative and procedural requirements governing execution of the Work, including, but not limited to, the following:

1. Construction layout.
2. Field engineering and surveying.
3. Installation of the Work.
4. Cutting and patching.
5. Coordination of Employer's portion of the Work.
6. Progress cleaning.
7. Starting and adjusting.
8. Protection of installed construction.
9. Correction of the Work.

B. Related Requirements:

1. Division 01, Section 011000 "Summary" for coordination of Employer-performed work and limits on use of Project site.
2. Division 01 Section 013300 "Submittal Procedures" for submitting surveys.
3. Division 01, Section 017700 "Closeout Procedures" for submitting final property survey with Project Record Documents, recording of Employer-accepted deviations from indicated lines and levels, replacing defective work, and final cleaning.
4. Division 02, Section 024119 "Selective Demolition" for demolition and removal of selected portions of the building.
5. Division 07, Section 078413 "Penetration Firestopping" for patching penetrations in fire-rated construction.
6. Specification sections related to the functionality and efficiency of the executed systems.

1.3 DEFINITIONS

A. Cutting: Removal of in-place construction necessary to permit installation or performance of subsequent work.

B. Patching: Fitting and repair work required to restore construction to original conditions after installation of subsequent work.

1.4 PREINSTALLATION MEETINGS

A. Cutting and Patching Conference: Conduct conference at Project site.

1. Prior to submitting cutting and patching plan, review extent of cutting and patching anticipated and examine procedures for ensuring satisfactory result from cutting and patching

es

work. Inform Engineer of scheduled meeting. Require representatives of each entity directly concerned with cutting and patching to attend, including the following:

a. Contractor's superintendent.
b. Trade supervisor responsible for cutting operations.
c. Trade supervisor(s) responsible for patching of each type of substrate.
d. Mechanical, electrical, and utilities subcontractors' supervisors, to the extent each trade is affected by cutting and patching operations.

2. Review areas of potential interference and conflict. Coordinate procedures and resolve potential conflicts before proceeding.

B. Layout Conference: Conduct conference at Project site.

1. Prior to establishing layout of new perimeter and structural column grid(s), review building location requirements. Review benchmark, control point, and layout and dimension requirements. Inform Engineer of scheduled meeting. Require representatives of each entity directly concerned with Project layout to attend, including the following:

a. Contractor's superintendent.
b. Professional surveyor(s) responsible for performing Project surveying and layout.
c. Professional surveyor(s) responsible for performing site survey serving as basis for Project design.

2. Review meanings and intent of dimensions, notes, terms, graphic symbols, and other layout information indicated on the Drawings.
3. Review requirements for including layouts on Shop Drawings and other submittals.
4. Review areas of potential interference and conflict. Coordinate procedures and resolve potential conflicts before proceeding.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For land surveyor(s)

B. Certified Surveys: Submit two (2) copies signed by land surveyor(s)

C. Certificates: Submit certificate signed by land surveyor(s), certifying that location and elevation of improvements comply with requirements.

D. Cutting and Patching Plan: Submit plan describing procedures at least ten (10) days prior to the time cutting and patching will be performed. Include the following information:

1. Extent: Describe reason for and extent of each occurrence of cutting and patching.
2. Changes to In-Place Construction: Describe anticipated results. Include changes to structural elements and operating components as well as changes in building appearance and other significant visual elements.
3. Products: List products to be used for patching and firms or entities that will perform patching work.
4. Dates: Indicate when cutting and patching will be performed.
5. Utilities and Mechanical and Electrical Systems: List services and systems that cutting and patching procedures will disturb or affect. List services and systems that will be relocated and those that will be temporarily out of service. Indicate length of time permanent services and systems will be disrupted.

a. Include description of provisions for temporary services and systems during interruption of permanent services and systems.

E. Landfill Receipts: Submit copy of receipts issued by a landfill facility, licensed to accept hazardous materials, for hazardous waste disposal.

F. Method Statement: Submit method statement to be used for construction layout.

1.6 CLOSEOUT SUBMITTALS

A. Final Property Survey: Submit ten (10) copies showing the Work performed and record survey data.

1.7 QUALITY ASSURANCE

A. Land Surveyor Qualifications: A professional land surveyor who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing land-surveying services of the kind indicated.

B. Professional Engineer Qualifications: Refer to Section 014000 "Quality Requirements."

C. Cutting and Patching: Comply with requirements for and limitations on cutting and patching of construction elements.

1. Structural Elements: When cutting and patching structural elements, or when encountering the need for cutting and patching of elements whose structural function is not known, notify Engineer of locations and details of cutting and await directions from Engineer before proceeding. Shore, brace, and support structural elements during cutting and patching. Do not cut and patch structural elements in a manner that could change their load-carrying capacity or increase deflection.
2. Operational Elements: Do not cut and patch operating elements and related components in a manner that results in reducing their capacity to perform as intended or that results in increased maintenance or decreased operational life or safety.

3. Other Construction Elements: Do not cut and patch other construction elements or components in a manner that could change their load-carrying capacity, that results in reducing their capacity to perform as intended, or that results in increased maintenance or decreased operational life or safety.

4. Visual Elements: Do not cut and patch construction in a manner that results in visual evidence of cutting and patching. Do not cut and patch exposed construction in a manner that would, in Engineer's opinion, reduce the building's aesthetic qualities. Remove and replace construction that has been cut and patched in a visually unsatisfactory manner.

D. Manufacturer's Installation Instructions: Obtain and maintain on-site manufacturer's written recommendations and instructions for installation of specified products and equipment.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Comply with requirements specified in other Sections.

1. For projects requiring compliance with sustainable design and construction practices and procedures, use products for patching that comply with sustainable design requirements.

B. In-Place Materials: Use materials for patching identical to in-place materials. For exposed surfaces, use materials that visually match in-place adjacent surfaces to the fullest extent possible.

es

1. If identical materials are unavailable or cannot be used, use materials that, when installed, will provide a match acceptable to Engineer for the visual and functional performance of in-place materials. Use materials that are not considered hazardous.

C. Cleaning Agents: Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.

1. Use cleaning products that comply with Green Seal's GS-37, or if GS-37 is not applicable, use products that comply with the California Code of Regulations maximum allowable VOC levels.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Existing Conditions: The existence and location of underground and other utilities and construction indicated as existing are not guaranteed. Before beginning sitework, investigate and verify the existence and location of underground utilities, mechanical and electrical systems, and other construction affecting the Work.

1. Before construction, verify the location and invert elevation at points of connection of sanitary sewer, storm sewer, gas service piping, and water-service piping; underground electrical services; and other utilities.
2. Furnish location data for work related to Project that must be performed by public utilities serving Project site.
3. Furnish a BIM model ready for integration with Digital Twin Platform representation of existing condition utilizing Reality Capture technologies, processes and procedures. The BIM model to be verified by the Engineer.

B. Examination and Acceptance of Conditions: Before proceeding with each component of the Work, examine substrates, areas, and conditions, with Installer or Applicator present where indicated, for compliance with requirements for installation tolerances and other conditions affecting performance. Record observations.

1. Examine roughing-in for mechanical and electrical systems to verify actual locations of connections before equipment and fixture installation.
2. Examine walls, floors, and roofs for suitable conditions where products and systems are to be installed.
3. Verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.

C. Written Report: Where a written report listing conditions detrimental to performance of the Work is required by other Sections, include the following:

1. Description of the Work, including Specification Section number and paragraph, and Drawing sheet number and detail, where applicable.
2. List of detrimental conditions, including substrates.
3. List of unacceptable installation tolerances.
4. Recommended corrections.

D. Proceed with installation only after unsatisfactory conditions have been corrected. Proceeding with the Work indicates acceptance of surfaces and conditions.

es

3.2 PREPARATION

A. Existing Utility Information: Furnish information to Employer that is necessary to adjust, move, or relocate existing utility structures, utility poles, lines, services, or other utility appurtenances located in or affected by construction. Coordinate with authorities having jurisdiction.

B. Field Measurements: Take field measurements as required to fit the Work properly. Recheck measurements before installing each product. Where portions of the Work are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

C. Space Requirements: Verify space requirements and dimensions of items shown diagrammatically on Drawings.

D. Review of Contract Documents and Field Conditions: Immediately on discovery of the need for clarification of the Contract Documents, submit a request for information to Engineer in accordance with requirements in Section 013100 "Project Management and Coordination."

E. Existing Utility Interruptions: Do not interrupt utilities serving facilities occupied by the Employer or others unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated:

1. Notify the Engineer rand Employer not less than two days in advance of proposed utility interruptions.
2. Do not proceed with utility interruptions without the Engineer's written permission

3.3 SETTING OUT AND ACCURACY

A. Site Survey: Before commencing work on Site, the Contractor shall carry out a topographical survey of the Site, in conjunction with, or as instructed by, the Engineer's Representative, or of such parts of the Site as the Engineer's Representative may direct, to record the site limits, dimensions, ground levels, obstructions and other features and to establish base lines and points for future setting out and to record the basis for re-measurement of excavation and earthwork, where applicable.

The site survey shall be carried out utilizing Reality Capture technologies, processes and procedures, and be coordinated as a Scan–to–BIM model driven Site Survey.

B. Setting Out: Details of methods and equipment to be used in setting out the Works shall be submitted to the Engineer. The Contractor shall inform the Engineer when setting out is complete and, before commencing construction, shall provide point layout BIM model ready for integration with Digital Twin Platform and instruments and assistance for the Engineer to check the setting out if required by the Engineer.

C. Infrastructure and Utility Work: Setting out shall be as shown on the Drawings extracted from the point layout BIM model or as instructed by the Engineer. It shall be revised if, in the opinion of the Engineer, modification of grade and line is advisable.

D. Record Drawings: The Contractor shall record details of all grid lines, existing ground levels, setting-out stations, benchmarks and profiles, Site BIM Model and the extracted site setting-out drawing; retain on the Site throughout the duration of the Contract and hand to the Engineer's Representative on completion.

E. Dimensions and levels both on the Drawings extracted from the point layout BIM model and the Site, shall be checked, particularly the correlation between components and the work in place. Materials and components shall not be ordered or work carried out until any discrepancies have been resolved with the Engineer.

es

F. Tolerances: Infrastructure and utility work shall be within tolerances stated in the Specification or as instructed.

G. Non-Compliance: Work which fails to meet the specified levels of accuracy must not be rectified without approval. Submit proposals for such rectification or removal and replacement and meet all costs arising, including effects on other work.

3.4 CONSTRUCTION LAYOUT

A. Method Statement: Before verifying layout, information shown on Drawings, prepare a detailed method statement comprising a descriptive narrative and drawings, clearly describing and identifying means and methods to be used for construction layout including but not limited to:

1. Establishing benchmarks and control points to set lines and levels at each storey of construction and elsewhere as needed to locate each element of the Works.
2. Locating offsets for gridlines.
3. Locating and sizing penetrations in structures as needed to transfer lines and levels horizontally and vertically.

B. Verification: Before proceeding to lay out the Work, verify layout information shown on Drawings, in relation to the property survey and existing benchmarks and existing conditions. If discrepancies are discovered, notify Engineer and Construction Manager promptly.

C. Engage a land surveyor experienced in laying out the Work, using the following accepted surveying practices:

1. Establish benchmarks and control points to set lines and levels at each story of construction and elsewhere as needed to locate each element of Project.
2. Establish limits on use of Project site.
3. Establish dimensions within tolerances indicated. Do not scale Drawings to obtain required dimensions.
4. Inform installers of lines and levels to which they must comply.
5. Check the location, level and plumb, of every major element as the Work progresses.
6. Notify Engineer when deviations from required lines and levels exceed allowable tolerances.
7. Close site surveys with an error of closure equal to or less than the standard established by authorities having jurisdiction.

D. Site Improvements: Locate and lay out site improvements, including pavements, grading, fill and topsoil placement, utility slopes, and rim and invert elevations.

E. Building Lines and Levels: Locate and lay out control lines and levels for structures, building foundations, column grids, and floor levels, including those required for mechanical and electrical work. Transfer survey markings and elevations for use with control lines and levels. Level foundations and piers from two or more locations.

F. Record Log: Maintain a log of layout control work. Record deviations from required lines and levels. Include beginning and ending dates and times of surveys, weather conditions, name and duty of each survey party member, and types of instruments and tapes used. Make the log available for reference by Engineer.

1. Advise the Engineer when deviations, exceeding indicated or recognized tolerances, are detected.
2. Record deviations that are accepted and not corrected on Record (As-Built) Drawings.

es

G. Auxiliary Services: Cooperate with the Engineer and provide, when requested, auxiliary services to enable and assist the Engineer to check the Contractor's site survey, layout and control work, including means of access to Site, use of instruments and tapes, and supply of survey

3.5 FIELD ENGINEERING

A. Identification: Employer will identify existing benchmarks, control points, and property corners.

B. Reference Points: Locate existing permanent benchmarks, control points, and similar reference points before beginning the Work. Preserve and protect permanent benchmarks and control points during construction operations.

1. Do not change or relocate existing benchmarks or control points without prior written approval of Engineer. Report lost or destroyed permanent benchmarks or control points promptly. Report the need to relocate permanent benchmarks or control points to Engineer before proceeding.
2. Replace lost or destroyed permanent benchmarks and control points promptly. Base replacements on the original survey control points.

C. Benchmarks: Establish and maintain a minimum of two (2) permanent benchmarks on Project site, referenced to data established by survey control points. Comply with authorities having jurisdiction for type and size of benchmark.

1. Record benchmark locations, with horizontal and vertical data, on Project Record Documents.
2. Where the actual location or elevation of layout points cannot be marked, provide temporary reference points sufficient to locate the Work.
3. Remove temporary reference points when no longer needed. Restore marked construction to its original condition.

D. Certified Survey: On completion of foundation walls, major site improvements, and other work requiring field-engineering services, prepare a certified survey showing dimensions, locations, angles, and elevations of construction and sitework.

E. Final Property Survey: Engage a land surveyor(s) to prepare a final property survey showing significant features (real property) for Project. Include on the survey a certification, signed by land surveyor(s) that principal metes, bounds, lines, and levels of Project are accurately positioned as shown on the survey.

1. Show boundary lines, monuments, streets, site improvements and utilities, existing improvements and significant vegetation, adjoining properties, acreage, grade contours, and the distance and bearing from a site corner to a legal point.
2. Recording: At Substantial completion have the final property survey recorded by or with authorities having jurisdiction as the official "property survey."

3.6 INSTALLATION

A. Locate the Work and components of the Work accurately, in correct alignment and elevation, as indicated.

1. Make vertical work plumb and make horizontal work level.
2. Where space is limited, install components to maximize space available for maintenance and ease of removal for replacement.
3. Conceal pipes, ducts, and wiring in finished areas unless otherwise indicated.
4. Maintain minimum headroom clearance of 2440 mm in occupied spaces and 2300 mm in unoccupied spaces, unless otherwise indicated on Drawings.

es

B. Comply with manufacturer's written instructions and recommendations for installing products in applications indicated.

C. Install products at the time and under conditions that will ensure satisfactory results as judged by Engineer. Maintain conditions required for product performance until Substantial completion.

D. Conduct construction operations, so no part of the Work is subjected to damaging operations or loading in excess of that expected during normal conditions of occupancy of type expected for Project.

E. Sequence the Work and allow adequate clearances to accommodate movement of construction items on-site and placement in permanent locations.

F. Tools and Equipment: Select tools or equipment that minimize production of excessive noise levels.

G. Templates: Obtain and distribute to the parties involved templates for Work specified to be factory prepared and field installed. Check Shop Drawings of other portions of the Work to confirm that adequate provisions are made for locating and installing products to comply with indicated requirements.

H. Attachment: Provide blocking and attachment plates and anchors and fasteners of adequate size and number to securely anchor each component in place, accurately located and aligned with other portions of the Work. Where size and type of attachments are not indicated, verify size and type required for load conditions with manufacturer.

1. Mounting Heights: Where mounting heights are not indicated, mount components at heights directed by Engineer.
2. Allow for building movement, including thermal expansion and contraction.
3. Coordinate installation of anchorages. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

I. Joints: Make joints of uniform width. Where joint locations in exposed Work are not indicated, arrange joints for the best visual effect, as judged by Engineer. Fit exposed connections together to form hairline joints.

J. Hazardous Materials: Use products, cleaners, and installation materials that are not considered hazardous.

3.7 CUTTING AND PATCHING

A. General: Employ skilled workers to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time, and complete without delay.

1. Cut in-place construction to provide for installation of other components or performance of other construction, and subsequently patch as required to restore surfaces to their original condition.

B. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during installation or cutting and patching operations, by methods and with materials so as not to void existing warranties.

C. Temporary Support: Provide temporary support of Work to be cut.

es

D. Protection: Protect in-place construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of Project that might be exposed during cutting and patching operations.

E. Adjacent Occupied Areas: Where interference with use of adjoining areas or interruption of free passage to adjoining areas is unavoidable, coordinate cutting and patching in accordance with requirements in Section 011000 "Summary."

F. Existing Utility Services and Mechanical/Electrical Systems: Where existing services/systems are required to be removed, relocated, or abandoned, bypass such services/systems before cutting to prevent interruption to occupied areas.

G. Cutting: Cut in-place construction by sawing, drilling, breaking, chipping, grinding, and similar operations, including excavation, using methods least likely to damage elements retained or adjoining construction. If possible, review proposed procedures with original Installer; comply with original Installer's written recommendations.

1. In general, use hand or small power tools designed for sawing and grinding, not hammering and chopping. Cut holes and slots neatly to minimum size required, and with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use.
2. Finished Surfaces: Cut or drill from the exposed or finished side into concealed surfaces.
3. Concrete and Masonry: Cut using a cutting machine, such as an abrasive saw or a diamond-core drill.
4. Excavating and Backfilling: Comply with requirements in applicable Sections where required by cutting and patching operations.
5. Mechanical and Electrical Services: Cut off pipe or conduit in walls or partitions to be removed. Cap, valve, or plug and seal remaining portion of pipe or conduit to prevent entrance of moisture or other foreign matter after cutting.
6. Proceed with patching after construction operations requiring cutting are complete.

H. Patching: Patch construction by filling, repairing, refinishing, closing up, and similar operations following performance of other Work. Patch with durable seams that are as invisible as practicable, as judged by Engineer. Provide materials and comply with installation requirements specified in other Sections, where applicable.

1. Inspection: Where feasible, test and inspect patched areas after completion to demonstrate physical integrity of installation.
2. Exposed Finishes: Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that will eliminate evidence of patching and refinishing.

    a. Clean piping, conduit, and similar features before applying paint or other finishing materials.
    b. Restore damaged pipe covering to its original condition.

3. Floors and Walls: Where walls or partitions that are removed extend one finished area into another, patch and repair floor and wall surfaces in the new space. Provide an even surface of uniform finish, color, texture, and appearance. Remove in-place floor and wall coverings and replace with new materials, if necessary, to achieve uniform color and appearance.

    a. Where patching occurs in a painted surface, prepare substrate and apply primer and intermediate paint coats appropriate for substrate over the patch, and apply final paint coat over entire unbroken surface containing the patch, corner to corner of wall and edge to edge of ceiling. Provide additional coats until patch blends with adjacent surfaces.

4. Ceilings: Patch, repair, or rehang in-place ceilings as necessary to provide an even-plane surface of uniform appearance.

es

5. Exterior Building Enclosure: Patch components in a manner that restores enclosure to a weathertight condition and ensures thermal and moisture integrity of building enclosure.

I. Cleaning: Clean areas and spaces where cutting and patching are performed. Remove paint, mortar, oils, putty, and similar materials from adjacent finished surfaces.

3.8 COORDINATION OF EMPLOYER'S PORTION OF THE WORK

A. Site Access: Provide access to Project site for Employer's construction personnel and Employer's separate contractors.

1. Provide temporary facilities required for Employer-furnished, Contractor-installed and Employer-furnished, Employer-installed products.
2. Refer to Section 011000 "Summary" for other requirements for Employer-furnished, Contractor-installed and Employer-furnished, Employer-installed] products.

B. Coordination: Coordinate construction and operations of the Work with work performed by Employer's construction personnel and Employer's separate contractors.

1. Construction Schedule: Inform Employer of Contractor's preferred construction schedule for Employer's portion of the Work. Adjust construction schedule based on a mutually agreeable timetable. Notify Employer if changes to schedule are required due to differences in actual construction progress.
2. Preinstallation Conferences: Include Employer's construction personnel and Employer's separate contractors at preinstallation conferences covering portions of the Work that are to receive Employer's work. Attend preinstallation conferences conducted by Employer's construction personnel if portions of the Work depend on Employer's construction.

3.9 PROGRESS CLEANING

A. Clean Project site and work areas daily, including common areas. Enforce requirements strictly. Dispose of materials lawfully.

1. Comply with requirements in NFPA 241 for removal of combustible waste materials and debris.
2. Do not hold waste materials more than seven days during normal weather or three days if the temperature is expected to rise above 27 deg C.
3. Containerize hazardous and unsanitary waste materials separately from other waste. Mark containers appropriately and dispose of legally, according to regulations.

    a. Use containers intended for holding waste materials of type to be stored.

4. Coordinate progress cleaning for joint-use areas where Contractor and other contractors are working concurrently.

B. Site: Maintain Project site free of waste materials and debris.

C. Work Areas: Clean areas where Work is in progress to the level of cleanliness necessary for proper execution of the Work.

1. Remove liquid spills promptly.
2. Where dust would impair proper execution of the Work, broom-clean or vacuum the entire work area, as appropriate.

D. Installed Work: Keep installed work clean. Clean installed surfaces according to written instructions of manufacturer or fabricator of product installed, using only cleaning materials specifically

recommended. If specific cleaning materials are not recommended, use cleaning materials that are not hazardous to health or property and that will not damage exposed surfaces.

E. Concealed Spaces: Remove debris from concealed spaces before enclosing the space.

F. Exposed Surfaces: Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of Substantial completion.

G. Waste Disposal: Do not bury or burn waste materials on-site. Do not wash waste materials down sewers or into waterways. Comply with waste disposal requirements in Section 015000 "Temporary Facilities and Controls." And Section 017419 "Construction Waste Management and Disposal."

H. During handling and installation, clean and protect construction in progress and adjoining materials already in place. Apply protective covering where required to ensure protection from damage or deterioration at Substantial completion.

I. Clean and provide maintenance on completed construction as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.
Such exposures include, but are not limited to, the following:

1. Excessive static or dynamic loading.
2. Excessive internal or external pressures.
3. Excessively high or low temperatures.
4. Thermal shock.
5. Excessively high or low humidity.
6. Pollution and air contamination.
7. Water.
8. Chemicals and solvents.
9. Light.
10. Radiation.
11. Puncture.
12. Abrasion.
13. Heavy traffic.
14. Soiling, staining, and corrosion.
15. Bacteria.
16. Rodent and insect infestation.
17. Combustion.
18. Electrical current.
19. High-speed operation.
20. Improper lubrication.
21. Unusual wear or other misuse.
22. Contact between incompatible materials.
23. Destructive testing.
24. Misalignment.
25. Excessive weathering.
26. Unprotected storage.
27. Improper shipping or handling.
28. Theft or vandalism.

J. Limiting Exposures: Supervise construction operations to ensure that no part of the construction, completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period.

K. Cutting and Patching: Clean areas and spaces where cutting and patching are performed. Completely remove paint, mortar, oils, putty, and similar materials.

1. Thoroughly clean piping, conduit, and similar features before applying paint or other finishing materials. Restore damaged pipe covering to its original condition.

es

3.10 STARTING AND ADJUSTING

A. Coordinate startup and adjusting of equipment and operating components with requirements in Section 019113 "General Commissioning Requirements."

B. Start equipment and operating components to confirm proper operation. Remove malfunctioning units, replace with new units, and retest.

C. Adjust equipment for proper operation. Adjust operating components for proper operation without binding.

D. Test each piece of equipment to verify proper operation. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

E. Manufacturer's Field Service: Comply with qualification requirements in Section 014000 "Quality Requirements."

3.11 PROTECTION OF INSTALLED CONSTRUCTION

A. Provide final protection and maintain conditions that ensure installed Work is without damage or deterioration at time of Substantial completion.

B. Protection of Existing Items: Provide protection and ensure that existing items to remain undisturbed by construction are maintained in condition that existed at commencement of the Work.

C. Comply with manufacturer's written instructions for temperature and relative humidity.

3.12 CORRECTION OF THE WORK

A. Repair or remove and replace damaged, defective, or nonconforming Work. Restore damaged substrates and finishes.

1. Repairing includes replacing defective parts, refinishing damaged surfaces, touching up with matching materials, and properly adjusting operating equipment.

B. Repair Work previously completed and subsequently damaged during construction period. Repair to like-new condition.

C. Restore permanent facilities used during construction to their specified condition.

D. Remove and replace damaged surfaces that are exposed to view if surfaces cannot be repaired without visible evidence of repair.

E. Repair components that do not operate properly. Remove and replace operating components that cannot be repaired.

F. Remove and replace chipped, scratched, and broken glass or reflective surfaces.

END OF SECTION 017300

SECTION 017312 - CUTTING AND PATCHING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes procedural requirements for cutting and patching.

B. Related Sections include the following:

1. Section 016000 "Product Requirements" for requirements regarding submittals and substitutions of products.
2. Division 01 Section related to sustainability requirements, as applicable.
3. Division 01 Section "Selective Structure Demolition" for demolition of selected portions of the building.
4. Divisions 02 through 34 Sections for specific requirements and limitations applicable to cutting and patching individual parts of the Work.

1.3 DEFINITIONS

A. Cutting: Removal of in-place construction necessary to permit installation or performance of other Work.

B. Patching: Fitting and repair work required to restore surfaces to original conditions after installation of other Work.

1.4 SUBMITTALS

A. Cutting and Patching Proposal: Submit a proposal describing procedures at least 10 days before the time cutting and patching will be performed, requesting approval to proceed. Include the following information:

1. Extent: Describe cutting and patching, show how they will be performed, and indicate why they cannot be avoided.
2. Changes to In-Place Construction: Describe anticipated results. Include changes to structural elements and operating components as well as changes in building's appearance and other significant visual elements.
3. Survey of concerned areas, to Engineer's satisfaction:

    a. Survey report and drawings of existing conditions correlated with requirements indicated for cutting and patching.

4. Products: List products to be used and firms or entities that will perform the Work.
5. Dates: Indicate when cutting and patching will be performed.
6. Utility Services and Mechanical/Electrical Systems: List services/systems that cutting and patching procedures will disturb or affect. List services/systems that will be relocated and

those that will be temporarily out of service. Indicate how long services/systems will be disrupted.

7. Structural Elements: Where cutting and patching involve adding reinforcement to structural elements, submit details and engineering calculations showing integration of reinforcement with original structure.
8. Engineer's Approval: Obtain approval of cutting and patching proposal before cutting and patching. Approval does not waive right to later require removal and replacement of unsatisfactory work.

1.5 QUALITY ASSURANCE

A. Sustainability Requirements for Building Reuse:

1. All related Product Data as detailed in Division 01 Sections related to sustainability requirements, as applicable.

B. Structural Elements: Do not cut and patch structural elements in a manner that could change their load-carrying capacity or load-deflection ratio.

C. Operational Elements: Do not cut and patch operating elements and related components in a manner that results in reducing their capacity to perform as intended or that results in increased maintenance or decreased operational life or safety.

D. Miscellaneous Elements: Do not cut and patch miscellaneous elements or related components in a manner that could change their load-carrying capacity, that results in reducing their capacity to perform as intended, or that results in increased maintenance or decreased operational life or safety.

E. Visual Requirements: Do not cut and patch construction in a manner that results in visual evidence of cutting and patching. Do not cut and patch construction exposed on the exterior or in occupied spaces in a manner that would, in Engineer's opinion, reduce the building's aesthetic qualities. Remove and replace construction that has been cut and patched in a visually unsatisfactory manner.

F. Cutting and Patching Conference: Before proceeding, meet at Project site with parties involved in cutting and patching, including mechanical and electrical trades. Review areas of potential interference and conflict. Coordinate procedures and resolve potential conflicts before proceeding.

1.6 WARRANTY

A. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during cutting and patching operations, by methods and with materials so as not to void existing warranties.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General: Comply with requirements specified in other Sections.

B. In-Place Materials: Use materials identical to in-place materials. For exposed surfaces, use materials that visually match in-place adjacent surfaces to the fullest extent possible. If identical materials are unavailable or cannot be used, use materials that, when installed, will match the visual and functional performance of in-place materials.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine surfaces to be cut and patched and conditions under which cutting and patching are to be performed.

1. Compatibility: Before patching, verify compatibility with and suitability of substrates, including compatibility with in-place finishes or primers.
2. Proceed with installation only after unsafe or unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Temporary Support: Provide temporary support of Work to be cut.

B. Protection: Protect in-place construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of Project that might be exposed during cutting and patching operations.

C. Adjoining Areas: Avoid interference with use of adjoining areas or interruption of free passage to adjoining areas.

D. Existing Utility Services and Mechanical/Electrical Systems: Where existing services/systems are required to be removed, relocated, or abandoned, bypass such services/systems before cutting to prevent interruption to occupied areas.

3.3 PERFORMANCE

A. General: Employ skilled workers to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time, and complete without delay.

1. Cut in-place construction to provide for installation of other components or performance of other construction, and subsequently patch as required to restore surfaces to their original condition.

B. Cutting: Cut in-place construction by sawing, drilling, breaking, chipping, grinding, and similar operations, including excavation, using methods least likely to damage elements retained or adjoining construction. If possible, review proposed procedures with original Installer; comply with original Installer's written recommendations.

1. In general, use hand or small power tools designed for sawing and grinding, not hammering and chopping. Cut holes and slots as small as possible, neatly to size required, and with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use.
2. Finished Surfaces: Cut or drill from the exposed or finished side into concealed surfaces.
3. Concrete and Masonry: Cut using a cutting machine, such as an abrasive saw or a diamond-core drill.
4. Excavating and Backfilling: Comply with requirements in applicable Division 02 Sections where required by cutting and patching operations.
5. Mechanical and Electrical Services: Cut off pipe or conduit in walls or partitions to be removed. Cap, valve, or plug and seal remaining portion of pipe or conduit to prevent entrance of moisture or other foreign matter after cutting.
6. Proceed with patching after construction operations requiring cutting are complete.

C. Patching: Patch construction by filling, repairing, refinishing, closing up, and similar operations following performance of other Work. Patch with durable seams that are as invisible as possible. Provide materials and comply with installation requirements specified in other Sections.

1. Inspection: Where feasible, test and inspect patched areas after completion to demonstrate integrity of installation.
2. Exposed Finishes: Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that will eliminate evidence of patching and refinishing.

    a. Clean piping, conduit, and similar features before applying paint or other finishing materials.
    b. Restore damaged pipe covering to its original condition.

3. Floors and Walls: Where walls or partitions that are removed extend one finished area into another, patch and repair floor and wall surfaces in the new space. Provide an even surface of uniform finish, color, texture, and appearance. Remove in-place floor and wall coverings and replace with new materials, if necessary, to achieve uniform color and appearance.

    a. Where patching occurs in a painted surface, apply primer and intermediate paint coats over the patch and apply final paint coat over entire unbroken surface containing the patch. Provide additional coats until patch blends with adjacent surfaces.

4. Ceilings: Patch, repair, or rehang in-place ceilings as necessary to provide an even-plane surface of uniform appearance.
5. Exterior Building Enclosure: Patch components in a manner that restores enclosure to a weathertight condition.

D. Cleaning: Clean areas and spaces where cutting and patching are performed. Completely remove paint, mortar, oils, putty, and similar materials.

END OF SECTION 017312

es

SECTION 017419 - CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Particular Conditions and other Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for the following:

1. Salvaging nonhazardous demolition and construction waste.
2. Recycling nonhazardous demolition and construction waste.
3. Disposing of nonhazardous demolition and construction waste.

B. Related Requirements:

1. Division 01 Section 01200 "Multiple Contract Summary" for coordination of responsibilities for waste management.
2. Division 01 Section 018113.14 "Sustainable Design Requirements" for Sustainability requirements.
3. All relevant sections under Division 04 till Division 31.

1.3 DEFINITIONS

A. Construction Waste: Building, structure, and site improvement materials and other solid waste resulting from construction, remodeling, renovation, or repair operations. Construction waste includes packaging.

B. Demolition Waste: Building and site improvement materials resulting from demolition or selective demolition operations.

C. Disposal: Removal of demolition or construction waste and subsequent salvage, sale, recycling, or deposit in landfill, incinerator acceptable to authorities having jurisdiction, or designated spoil areas on Employer’s property.

D. Recycle: Recovery of demolition or construction waste for subsequent processing in preparation for reuse.

E. Salvage: Recovery of demolition or construction waste and subsequent sale or reuse in another facility.

F. Salvage and Reuse: Recovery of demolition or construction waste and subsequent incorporation into the Works.

G. Alternative Daily Cover (ADC): Material other than earthen material placed on the surface of the active face of a municipal solid waste landfill at the end of each operating day to control vectors, fires, odors, blowing litter and scavenging.

H. Commingled Waste: Building waste streams that are combined on the project site and hauled away for sorting into recyclable streams. Also known as single-stream recycling.

es

I. Environmental Consultant: Environmental Consultant appointed by the Employer for auditing and monitoring the Contractor's compliance with this Section of the Specification.

J. Land clearing debris: materials that are natural (e.g. rock, soil, stone, vegetation). Materials that are man-made (e.g., concrete, brick, cement, steel) are considered construction waste even if they were on site.

K. Waste Diversion: A management activity that disposes of waste through methods other than incineration or landfilling. Examples include reuse and recycling.

1.4 MATERIALS OWNERSHIP

A. Unless otherwise indicated, demolition and construction waste becomes the property of Contractor.

B. Historic items, relics, antiques, and similar objects including, but not limited to, cornerstones and their contents, commemorative plaques and tablets, and other items of interest or value to Employer that may be uncovered during demolition remain the property of Employer.

1. Carefully salvage in a manner to prevent damage and promptly return to Employer.

1.5 CONSTRUCTION AND DEMOLITION WASTE MANAGEMENT PLANNING

A. Develop and implement a construction and demolition waste management plan:

1. Establish waste diversion goals for the project by identifying at least five materials (both structural and nonstructural) targeted for diversion. Approximate a percentage of the overall project waste that these materials represent.
2. Specify that materials will be separated and describe the diversion strategies planned for the project. Describe where the material will be taken and how the recycling facility will process the material.

B. Provide a final report detailing all major waste streams generated, including disposal and diversion rates.

C. Alternative daily cover (ADC) does not qualify as material diverted from disposal. Land clearing debris is not considered construction, demolition, or renovation waste that can contribute to waste diversion.

1.6 CONSTRUCTION AND DEMOLITION WASTE MANAGEMENT

A. Recycle and/or salvage nonhazardous construction and demolition materials. Calculations shall be by weight.

B. Divert 75% and Four Material Streams. Divert at least 75% of the total construction and demolition material; diverted materials must include at least four material streams. Streams to be diverted shall be agreed with the Engineer. A material stream should constitute at least 5% by weight of total diverted materials. Exclude hazardous waste, land-clearing debris, soil, and landscaping materials from calculations

C. Reduction of Total Waste Material: Do not generate more than 2.5 pounds of construction waste per square foot (12.2 kilograms of waste per square meter) of the building's floor area. Exclude on-site reused materials. Materials reused on site are not considered waste for the purposes of calculating option D only.

es

D. Contractor shall choose one item only from C and D above; however, this shall be agreed with the Engineer before the start of the work.

E. Concrete waste if any must be diverted to Construction Waste Treatment Plant.

F. Other recyclable materials such as woods, plastics and metals can be re-used at site.

G. Excavated soil, land-clearing debris and hazardous waste must be diverted to places designated by the concerned department (these materials are exempt while calculating the percentages for recycling or reuse).

1.7 PERFORMANCE REQUIREMENTS

A. Contractor to achieve end-of-Project rates for salvage/recycling of 75 percent by weight of total non-hazardous solid waste generated by the works. Diverted materials must include at least four material streams, or do not generate more than 12.2 kilograms of waste per square meter of the building's floor area. Practice efficient waste management in the use of materials in the course of the Works. Use all reasonable means to divert construction and demolition waste from landfills and incinerators.

B. Contractor and his sub-contractors shall be audited and/or required to provide information at any time during the construction phase by the Engineer or by the Environmental Consultant.

C. Contractor and his sub-contractors shall provide Sustainability progress report at any time requested by the Engineer but not less than monthly to confirm compliance with Sustainability requirements.

D. Facilitate recycling and salvage of materials, including by no way of limitation the following:

1. Demolition Waste:

a. Asphaltic concrete paving.
b. Concrete.
c. Concrete reinforcing steel.
d. Brick.
e. Concrete masonry units.
f. Wood studs.
g. Wood joists.
h. Plywood and oriented strand board.
i. Wood paneling.
j. Wood trim.
k. Structural and miscellaneous steel.
l. Rough hardware.
m. Roofing.
n. Insulation.
o. Doors and frames.
p. Door hardware.
q. Windows.
r. Glazing.
s. Metal studs.
t. Gypsum board.
u. Acoustical tile and panels.
v. Carpet.
w. Carpet pad.
x. Demountable partitions.
y. Equipment.
z. Cabinets.
aa. Plumbing fixtures.
bb. Piping.

es

cc. Supports and hangers.
dd. Valves.
ee. Sprinklers.
ff. Mechanical equipment.
gg. Refrigerants.
hh. Electrical conduit.
ii. Copper wiring.
jj. Lighting fixtures.
kk. Lamps.
ll. Ballasts.
mm. Electrical devices.
nn. Switchgear and panelboards.
oo. Transformers.

2. Construction Waste:

a. Site-clearing waste.
b. Masonry and CMU.
c. Lumber.
d. Wood sheet materials.
e. Wood trim.
f. Metals.
g. Roofing.
h. Insulation.
i. Carpet and pad.
j. Gypsum board.
k. Piping.
l. Electrical conduit.
m. Packaging: Regardless of salvage/recycle goal indicated in paragraph above, salvage or recycle 100 percent of the following uncontaminated packaging materials:

1) Paper.
2) Cardboard.
3) Boxes.
4) Plastic sheet and film.
5) Polystyrene packaging.
6) Wood crates.
7) Plastic pails.

n. Construction Office Waste: Regardless of salvage/recycle goal indicated in "General" Paragraph above, salvage or recycle 100 percent of the following construction office waste materials:

1. Paper.
2. Aluminum cans.
3. Glass containers.

1.8 ACTION SUBMITTALS

A. Waste Management Plan: Submit plan within seven days of date established for commencement of the Works and prior to generation of any waste.

B. Waste management plan to be submitted for Engineer’s approval.

C. Contractor to submit the total estimated construction waste report before the procurement stage for Engineer’s approval.

es

D. Contractor to submit a proposal to reduce the construction waste during construction for Engineer's approval.

E. Final Waste Repot: Submit a final waste report for the project that includes the following information:

1. Total construction and demolition waste produced by the project.
2. Types of waste material and quantity of each material.
3. Total waste diverted and diversion rate (percentage).

1.9 INFORMATIONAL SUBMITTALS

A. Waste Reduction Progress Reports: Concurrent with each Application for Payment, submit report. For guidance use Form CWM-7 for construction waste and Form CWM-8 for demolition waste. Include the following information:

1. Material category.
2. Generation points of waste.
3. Total quantity of waste in tonnes.
4. Quantity of waste salvaged, both estimated and actual in tonnes.
5. Quantity of waste recycled, both estimated and actual in tonnes.
6. Total quantity of waste recovered (salvaged plus recycled) in tonnes.
7. Total quantity of waste recovered (salvaged plus recycled) as a percentage of total waste.

B. Waste Reduction Calculations: Before request for Taking Over, submit calculated end-of-Project rates for salvage, recycling, and disposal as a percentage of total waste generated by the works.

C. Records of Donations (As Applicable): Indicate receipt and acceptance of salvageable waste donated to individuals and organizations. Indicate whether organization is tax exempt.

D. Records of Sales (As Applicable): Indicate receipt and acceptance of salvageable waste sold to individuals and organizations. Indicate whether organization is tax exempt.

E. Recycling and Processing Facility Records: Indicate receipt and acceptance of recyclable waste by recycling and processing facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.

F. Landfill and Incinerator Disposal Records: Indicate receipt and acceptance of waste by landfills and incinerator facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.

G. Sustainability Submittal: Letter template for the Construction and Demolition Waste Management, signed by Contractor, tabulating total waste material, quantities diverted and means by which it is diverted, and statement that requirements have been met.

H. Qualification Data: For waste management coordinator

1.10 QUALITY ASSURANCE

A. Waste Management Coordinator Qualifications: Experienced firm, or individual employed and assigned by Contractor, with a record of successful waste management coordination of Projects with similar requirements. Waste management coordinator may also serve as Sustainability coordinator.

B. Regulatory Requirements: Comply with hauling and disposal regulations of authorities having jurisdiction.

es

C. Waste Management Conference(s): Conduct conference(s) at Project site to comply with requirements in Division 01 Section 013100 "Project Management and Coordination." Review methods and procedures related to waste management including, but not limited to, the following:

1. Review and discuss waste management plan including responsibilities of waste management coordinator.
2. Review requirements for documenting quantities of each type of waste and its disposition.
3. Review and finalize procedures for materials separation and verify availability of containers and bins needed to avoid delays.
4. Review procedures for periodic waste collection and transportation to recycling and disposal facilities.
5. Review waste management requirements for each trade.

1.11 WASTE MANAGEMENT PLAN

A. General: Develop a waste management plan according to ASTM E 1609 and requirements of this Section. Plan shall consist of waste identification, waste reduction work plan, and cost/revenue analysis. Distinguish between demolition and construction waste. Indicate quantities by weight.

B. Waste Identification: Indicate anticipated types and quantities of demolition site-clearing and construction waste generated by the Works. For guidance use Form CWM-1 for construction waste and Form CWM-2 for demolition waste. Include estimated quantities and assumptions for estimates.

C. Waste Reduction Work Plan: List each type of waste and whether it will be salvaged, recycled, or disposed of in landfill or incinerator. For guidance use Form CWM-3 for construction waste and Form CWM-4 for demolition waste Include points of waste generation, total quantity of each type of waste, quantity for each means of recovery, and handling and transportation procedures.

1. Salvaged Materials for Reuse: For materials that will be salvaged and reused in this Project, describe methods for preparing salvaged materials before incorporation into the Work in compliance with Technical Specifications Sections.
2. Salvaged Materials for Sale: For materials that will be sold to individuals and organizations, include list of their names, addresses, and telephone numbers.
3. Salvaged Materials for Donation: For materials that will be donated to individuals and organizations, include list of their names, addresses, and telephone numbers.
4. Recycled Materials: Include list of local receivers and processors and type of recycled materials each will accept. Include names, addresses, and telephone numbers.
5. Disposed Materials: Indicate how and where materials will be disposed of. Include name, address, and telephone number of each landfill and incinerator facility.
6. Handling and Transportation Procedures: Include method that will be used for separating recyclable waste including sizes of containers, container labeling, and designated location on Project site where materials separation will be located.

D. Cost/Revenue Analysis: Indicate total cost of waste disposal as if there was no waste management plan and net additional cost or net savings resulting from implementing waste management plan. Use Form CWM-5 for construction waste and Form CWM-6 for demolition waste. Include the following:

1. Total quantity of waste.
2. Estimated cost of disposal (cost per unit). Include hauling and tipping fees and cost of collection containers for each type of waste.
3. Total cost of disposal (with no waste management).
4. Revenue from salvaged materials.
5. Revenue from recycled materials.
6. Savings in hauling and tipping fees by donating materials.
7. Savings in hauling and tipping fees that are avoided.
8. Handling and transportation costs. Include cost of collection containers for each type of waste.

es

9. Net additional cost or net savings from waste management plan.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 PLAN IMPLEMENTATION

A. General: Implement approved waste management plan. Provide handling, containers, storage, signage, transportation, and other items as required to implement waste management plan during the entire duration of the Contract.

1. Comply with Division 01 Section 015000 "Temporary Facilities and Controls" for operation, termination, and removal requirements.

B. Waste Management Coordinator: Engage a waste management coordinator to be responsible for implementing, monitoring, and reporting status of waste management work plan. Coordinator shall be present at Project site full time for duration of Project.

C. Training: Train workers, subcontractors, and suppliers on proper waste management procedures, as appropriate for the works occurring at Project site.

1. Distribute waste management plan to everyone concerned within three days of submittal return.
2. Distribute waste management plan to entities when they first begin work on-site. Review plan procedures and locations established for salvage, recycling, and disposal.

D. Site Access and Temporary Controls: Conduct waste management operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.

1. Designate and label specific areas on Project site necessary for separating materials that are to be salvaged, recycled, reused, donated, and sold.
2. Comply with Division 01 Section 015000 "Temporary Facilities and Controls" for controlling dust and dirt, environmental protection, and noise control.

3.2 SALVAGING DEMOLITION WASTE

A. Comply with requirements in Technical Specifications Sections for salvaging demolition waste.

B. Salvaged Items for Reuse in the Works: Salvage items for reuse and handle as follows:

1. Clean salvaged items.
2. Pack or crate items after cleaning. Identify contents of containers.
3. Store items in a secure area until installation.
4. Protect items from damage during transport and storage.
5. Install salvaged items to comply with installation requirements for new materials and equipment. Provide connections, supports, and miscellaneous materials necessary to make items functional for use indicated.

C. Salvaged Items for Sale and Donation: Permitted on Project site.

D. Salvaged Items for Employer's Use: Salvage items for Employer's use and handle as follows:

es

1. Clean salvaged items.
2. Pack or crate items after cleaning. Identify contents of containers.
3. Store items in a secure area until delivery to Employer.
4. Transport items to Employer's storage area designated by Employer.
5. Protect items from damage during transport and storage.

E. Doors and Hardware: Brace open end of door frames. Except for removing door closers, leave door hardware attached to doors.

F. Equipment: Drain tanks, piping, and fixtures. Seal openings with caps or plugs. Protect equipment from exposure to weather.

G. Plumbing Fixtures: Separate by type and size.

H. Lighting Fixtures: Separate lamps by type and protect from breakage.

I. Electrical Devices: Separate switches, receptacles, switchgear, transformers, meters, panelboards, circuit breakers, and other devices by type.

3.3 RECYCLING DEMOLITION AND CONSTRUCTION WASTE, GENERAL

A. General: Recycle paper and beverage containers used by on-site workers.

B. Recycling Incentives: Revenues, savings, rebates, tax credits, and other incentives received for recycling waste materials shall be to the benefit of the Contractor.

C. Preparation of Waste: Prepare and maintain recyclable waste materials according to recycling or reuse facility requirements. Maintain materials free of dirt, adhesives, solvents, petroleum contamination, and other substances deleterious to the recycling process.

D. Procedures: Separate recyclable waste from other waste materials, trash, and debris. Separate recyclable waste by type at Project site to the maximum extent practical according to approved construction waste management plan.

1. Provide appropriately marked containers or bins for controlling recyclable waste until they are removed from Project site. Include list of acceptable and unacceptable materials at each container and bin.

    a. Inspect containers and bins for contamination and remove contaminated materials if found.

2. Stockpile processed materials on-site without intermixing with other materials. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.
3. Stockpile materials away from construction area. Do not store within drip line of remaining trees.
4. Store components off the ground and protect from the weather.
5. Remove recyclable waste off Employer's property and transport to recycling receiver or processor as often as required to prevent overfilling bins.

3.4 RECYCLING DEMOLITION WASTE

A. Asphalt Paving: Grind asphalt to maximum 38-mm size.

1. Crush asphaltic concrete paving and screen to comply with requirements in Section 312000 "Earth Moving" for use as general fill.

es

B. Asphalt Paving: Break up and transport paving to asphalt-recycling facility.

C. Concrete: Remove reinforcement and other metals from concrete and sort with other metals.

1. Pulverize concrete to maximum 38-mm size.
2. Crush concrete and screen to comply with requirements in Section 312000 "Earth Moving" for use as satisfactory soil for fill or subbase.

D. Masonry: Remove metal reinforcement, anchors, and ties from masonry and sort with other metals.

1. Pulverize masonry to maximum 38-mm size.

a. Crush masonry and screen to comply with requirements in Section 312000 "Earth Moving" for use as general fill or satisfactory soil for fill or subbase.
b. Crush masonry and screen to comply with requirements in Section 329300 "Plants" for use as mineral mulch.

2. Clean and stack undamaged, whole masonry units on wood pallets.

E. Wood Materials: Sort and stack members according to size, type, and length. Separate lumber, engineered wood products, panel products, and treated wood materials.

F. Metals: Separate metals by type.

1. Structural Steel: Stack members according to size, type of member, and length.
2. Remove and dispose of bolts, nuts, washers, and other rough hardware.

G. Asphalt Shingle Roofing: Separate organic and glass-fiber asphalt shingles and felts. Remove and dispose of nails, staples, and accessories.

H. Gypsum Board: Stack large clean pieces on wood pallets or in container and store in a dry location. Remove edge trim and sort with other metals. Remove and dispose of fasteners.

I. Acoustical Ceiling Panels and Tile: Stack large clean pieces on wood pallets and store in a dry location.

J. Metal Suspension System: Separate metal members, including trim and other metals from acoustical panels and tile, and sort with other metals.

K. Carpet and Pad: Roll large pieces tightly after removing debris, trash, adhesive, and tack strips.

1. Store clean, dry carpet and pad in a closed container or trailer provided by carpet reclamation agency or carpet recycler.

L. Carpet Tile: Remove debris, trash, and adhesive.

1. Stack tile on pallet and store clean, dry carpet in a closed container or trailer provided by carpet reclamation agency or carpet recycler.

M. Piping: Reduce piping to straight lengths and store by material and size. Separate supports, hangers, valves, sprinklers, and other components by material and size.

N. Conduit: Reduce conduit to straight lengths and store by material and size.

O. Lamps: Separate lamps by type and store according to requirements in 40 CFR 273.

es

3.5 RECYCLING CONSTRUCTION WASTE

A. Packaging:

1. Cardboard and Boxes: Break down packaging into flat sheets. Bundle and store in a dry location.
2. Polystyrene Packaging: Separate and bag materials.
3. Pallets: As much as possible, require deliveries using pallets to remove pallets from Project site. For pallets that remain on-site, break down pallets into component wood pieces and comply with requirements for recycling wood.
4. Crates: Break down crates into component wood pieces and comply with requirements for recycling wood.

B. Wood Materials:

1. Clean Cut-Offs of Lumber: Grind or chip into small pieces.
2. Clean Sawdust: Bag sawdust that does not contain painted or treated wood.

    a. Comply with requirements in Section 329300 "Plants" for use of clean sawdust as organic mulch.

C. Gypsum Board: Stack large clean pieces on wood pallets or in container and store in a dry location.

1. Clean Gypsum Board: Grind scraps of clean gypsum board using small mobile chipper or hammer mill. Screen out paper after grinding.

    a. Comply with requirements in Section 329300 "Plants" for use of clean ground gypsum board as inorganic soil amendment.

D. Paint: Seal containers and store by type.

E. Site-Clearing Wastes: Chip brush, branches, and trees at landfill facility.

1. Comply with requirements in Division 32 Section "Plants" for use of chipped organic waste as organic mulch.

3.6 DISPOSAL OF WASTE

A. General: Except for items or materials to be salvaged, recycled, or otherwise reused, remove waste materials from Project site and legally dispose of them in a landfill or incinerator acceptable to authorities having jurisdiction.

1. Except as otherwise specified, do not allow waste materials that are to be disposed of accumulate on-site.
2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.

B. General: Except for items or materials to be salvaged or recycled, remove waste materials and legally dispose of at designated spoil areas on Employer’s property.

C. Burning: Do not burn waste materials.

D. Disposal: Transport waste materials off the property and legally dispose of them.

es

3.7 Hazardous Waste

A. Wastes which are deemed to be hazardous to health and/or the environment in accordance with local and international legislation must be identified and managed in accordance with the compliance requirements. This includes providing adequate facilities for the temporary storage and collection, and ensuring treatment and disposal is undertaken as per compliance requirements.

B. Excavated soil, land-clearing debris and hazardous waste must be diverted to places designated by the concerned departments.

3.8 ATTACHMENTS

A. Form CWM-1 for construction waste identification.

B. Form CWM-2 for demolition waste identification.

C. Form CWM-3 for construction waste reduction work plan.

D. Form CWM-4 for demolition waste reduction work plan.

E. Form CWM-5 cost/revenue analysis of construction waste reduction work plan.

F. Form CWM-6 cost/revenue analysis of demolition waste reduction work plan.

G. Form CWM-7 for construction waste reduction progress report.

H. Form CWM-8 for demolition waste reduction progress report.

SECTION 017700 - CLOSEOUT PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Particular Conditions and other Division 01 Specifications sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for Contract Closeout, including, but not limited to, the following:

1. Substantial Completion procedures.

2. Final Completion procedures.

3. List of Incomplete Items (Punch list).

4. Submittal of Project Warranties.

5. Final cleaning.

B. Related Requirements:

1. Division 01 Section 013233 "Photographic Documentation" for submitting Final Completion construction photographic documentation.

2. Division 01 Section 017823 "Operation and Maintenance Data" for additional operation and maintenance manual requirements.

3. Division 01 Section 017839 "Project Record Documents" for submitting Record Drawings, Record Specifications, and Record Product Data.

4. Division 01 Section 017900 "Demonstration and Training" for requirements to train the Employer's maintenance personnel to adjust, operate, and maintain products, equipment, and systems.

1.3 DEFINITIONS

A. List of Incomplete Items (Punch list): Contractor-prepared list of items to be completed or corrected, prepared for the Engineer's use prior to Engineer's inspection, to determine if the Work is substantially complete.

B. (COBie): Construction-Operations Building Information Exchange.

C. Punch List: Snag List.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of cleaning agent.

B. Contractor's List of Incomplete Items: Initial submittal at Substantial Completion.

C. Certified List of Incomplete Items: Final submittal at Final Completion.

1.5 CLOSEOUT SUBMITTALS

A. Certificates of Release: From authorities having jurisdiction.

B. Certificate of Insurance: For continuing coverage.

C. Field Report: For pest-control inspection.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Schedule of Maintenance Material Items: For maintenance material submittal items required by other Sections.

1.7 SUBSTANTIAL COMPLETION PROCEDURES

A. Contractor's List of Incomplete Items: Prepare and submit a list of items to be completed and corrected (Contractor's "punch list"), indicating the value of each item on the list and reasons why the Work is incomplete.

B. Submittals Prior to Substantial Completion: Complete the following a minimum of **[ten (10)]** days prior to requesting inspection for determining date of Substantial Completion. List items below that are incomplete at time of request.

1. Certificates of Release: Obtain and submit releases from authorities having jurisdiction, permitting Employer unrestricted use of the Work and access to services and utilities. Include occupancy permits, operating certificates, and similar releases.

2. Submit Closeout submittals specified in other Division 01 Sections, including Project Record drawings and documents BIM deliverables, As-Built Models, operation and maintenance manuals, damage or settlement surveys, property surveys, HSSE File and similar final record information.

3. Submit Closeout submittals specified in individual Sections, including specific warranties, Construction bonds, maintenance service agreements, final certifications, and similar documents.

4. Submit maintenance material submittals specified in individual Sections, including tools, spare parts, extra materials, and similar items, and deliver to location designated by Engineer. Label with manufacturer's name and model number.

    a. Schedule of Maintenance Material Items: Prepare and submit schedule of maintenance material submittal items, including name and quantity of each item and name and number of related Specification Section. Obtain Engineer's signature for receipt of submittals.

5. Submit testing, adjusting, and balancing records.

6. Submit sustainable design submittals not previously submitted.

7. Submit changeover information related to Employer's occupancy, use, operation, and maintenance.

8. Submit a written undertaking in a form acceptable to the Engineer, to complete and / or correct all items contained in the punch list, to the satisfaction of the Engineer, within twenty eight (28) days from date of issue of the Substantial Completion Certificate.

9. Submit warranties, bonds, maintenance service agreements, final certifications, and similar documents.

C. Procedures Prior to Substantial Completion: Complete the following a minimum of ten (10) days prior to requesting inspection for determining date of Substantial Completion. List items below that are incomplete at time of request.

1. Advise Employer of pending insurance changeover requirements.

2. Make final changeover of permanent locks and deliver keys to Employer. Advise Employer's personnel of changeover in security provisions.

3. Complete startup and testing of systems and equipment.

4. Perform preventive maintenance on equipment used prior to Substantial Completion.

5. Instruct Employer's personnel in operation, adjustment, and maintenance of products, equipment, and systems. Submit demonstration and training video recordings specified in Section 017900 "Demonstration and Training."

6. Advise Employer of changeover in utility services.

7. Participate with Employer in conducting inspection and walkthrough with local emergency responders.

8. Terminate and remove temporary facilities from Project site, along with mockups, construction tools, and similar elements.

9. Complete final cleaning requirements.

10. Touch up paint and otherwise repair and restore marred exposed finishes to eliminate visual defects.

11. Prepare and submit Project Record Documents, operation and maintenance manuals, final complete construction photographic documentation, damage or settlement surveys, property surveys, and similar final record information.

12. Deliver tools, spare parts, extra materials, and similar items to location designated by Employer. Label with manufacturer's name and model number where applicable.

D. Inspection: Submit a written request for inspection to determine Substantial Completion a minimum of ten (10) days prior to date the Work will be completed and ready for final inspection and tests. On receipt of request, the Engineer will either proceed with inspection or notify Contractor of unfulfilled requirements. Engineer will prepare the Certificate of Substantial Completion after inspection or will notify Contractor of items, either on Contractor's list or additional items identified by Engineer, that must be completed or corrected before certificate will be issued.

1. Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.

2. Results of completed inspection will form the basis of requirements for Final Completion.

G. BIM Deliverables: During Construction stage, the Contractor shall develop the asset management strategy as defined during design stage and agreed with Employer global asset management strategy by delivering an Asset Information Model (AIM) in accordance of the following requirements:

1. BIM Models characteristics:

   a. BIM digital assets (3D families) with required level of geometry as per the DTRD guidelines matrix.

   b. Each asset digital family shall have the required asset information attributes including asset ID, COBie parameters, classification codes.

   c. Exported Model elements geometry should be simplified to relay needed information without causing performance issues.

   d. BIM models to be compatible with other third-party platforms as IFC ready.

   e. BIM models to be georeferenced to be compatible with AR/VR devices.

   f. Size of models should be optimized for mobile platforms.

2. BIM Models Content and Information requirements:

   a. Provide different virtual zoning entities and sub-entities (facilities, floors, zones, spaces…) These zoning entities will be modeled as 3D volumes and assigned specific ID's for mapping with the digital platform for enhanced visualizations.

   b. Modeling new elements/provisions for future Digital Twin applications in accordance with agreed use cases.

   c. Progressive update of BIM models and publishing in different digital twin friendly software formats.

   d. COBie schema production for flexibility of integration with different digital platforms. The COBie schema will also provide the asset grouping breakdown structure in a parent-child data link.

   e. Models should be verified against site conditions in terms of overall dimensions and geospatial location to meet LOD 500 requirements.

   f. Project model division and WBS to take into consideration potential Construction/Operation phases modeling requirements at IFC.

   g. Coordination of project to take into consideration sensors and other IOTs potential locations and maintenance requirements.

H. BIM Deliverables: During Construction stage and prior handing over, the Contractor shall develop the As-Built strategy as defined during tender stage and agreed with Employer and Engineer by delivering a Project Information Model (PIM) in accordance of the following requirements:

1. BIM Models characteristics:

   a. Models should be verified against site conditions in terms of overall dimensions and geospatial location to meet LOD 500 requirements.

   b. Each digital family shall have the required information attributes as specified in project BEP and project information requirements LOI 500.

c. BIM Model shall be updated as per actual site conditions, red markup drawings.

d. Non-editable Federated BIM model (NWD) shall be submitted showing laser scanned point cloud (where applicable and as per project requirements) vs as-built updated model.

1.8 FINAL COMPLETION PROCEDURES

A. Submittals Prior to Final Completion: Before requesting final inspection for determining Final Completion, complete the following:

1. Submit a final Application for Payment.

2. Certified List of Incomplete Items: Submit certified copy of Engineer's Substantial Completion inspection list of items to be completed or corrected (punch list), endorsed and dated by Engineer. Certified copy of the list shall state that each item has been completed or otherwise resolved for acceptance.

3. Certificate of Insurance: Submit evidence of final, continuing insurance coverage complying with insurance requirements.

4. Submit pest-control final inspection report.

5. Submit Final Completion photographic documentation.

B. Inspection: Submit a written request for final inspection to determine acceptance a minimum of 10 days prior to date the Work will be completed and ready for final inspection and tests. On receipt of request, Engineer will either proceed with inspection or notify Contractor of unfulfilled requirements. Engineer will prepare a final Certificate for Payment after inspection or will notify Contractor of construction that must be completed or corrected before certificate will be issued.

1. Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.

1.9 LIST OF INCOMPLETE ITEMS (PUNCH LIST)

A. Organization of List: Include name and identification of each space and area affected by construction operations for incomplete items and items needing correction including, if necessary, areas disturbed by Contractor that are outside the limits of construction.

1. Organize list of spaces in sequential order, listed by room or space number.

2. Organize items applying to each space by major element, including categories for ceilings, individual walls, floors, equipment, and building systems.

3. Include the following information at the top of each page:

a. Project name.

b. Date.

c. Name of Engineer [and Construction Manager].

d. Name of Contractor.

e. Page number.

4. Submit list of incomplete items in the following format:

    a. MS Excel Electronic File: The Engineer will return annotated file.

    b. PDF Electronic File: The Engineer will return annotated file.

    c. Web-Based Project Software Upload: Utilize software feature for creating and updating list of incomplete items (punch list).

    d. Three (3) Paper Copies: The Engineer will return one (1) copy.

1.10 SUBMITTAL OF PROJECT WARRANTIES

A. Time of Submittal: Submit written warranties on request of Engineer for designated portions of the Work where warranties are indicated to commence on dates other than date of Substantial Completion, or when delay in submittal of warranties might limit Employer's rights under warranty.

B. Partial Occupancy: Submit properly executed warranties within fifteen (15) days of completion of designated portions of the Work that are completed and occupied or used by Employer during construction period by separate agreement with Contractor.

C. Organize warranty documents into an orderly sequence based on the table of contents of Project Manual.

D. Warranty Electronic File: Provide warranties and bonds in PDF format. Assemble complete warranty and bond submittal package into a single electronic PDF file with bookmarks enabling navigation to each item. Provide bookmarked table of contents at beginning of document.

    1. Submit on digital media acceptable to Engineer by uploading to web-based project software site by email to Engineer.

E. Warranties in Paper Form:

    1. Bind warranties and bonds in heavy-duty, three-ring, vinyl-covered, loose-leaf binders, thickness as necessary to accommodate contents, and sized to receive 215-by-280-mm paper.

    2. Provide heavy paper dividers with plastic-covered tabs for each separate warranty. Mark tab to identify the product or installation. Provide a typed description of the product or installation, including the name of the product and the name, address, and telephone number of Installer.

    3. Identify each binder on the front and spine with the typed or printed title "WARRANTIES," Project name, and name of Contractor.

F. Provide additional copies of each warranty to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Cleaning Agents: Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.

1. Use cleaning products that comply with Green Seal's GS-37, or if GS-37 is not applicable, use products that comply with the California Code of Regulations maximum allowable VOC levels.

PART 3 - EXECUTION

3.1 FINAL CLEANING

A. General: Perform final cleaning. Conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal and local environmental and antipollution regulations.

B. Cleaning: Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit to condition expected in commercial building cleaning and maintenance program. Comply with manufacturer's written instructions.

1. Complete the following cleaning operations before requesting inspection for certification of Substantial Completion for entire Project or for a designated portion of Project:

a. Clean Project site of rubbish, waste material, litter, and other foreign substances.

b. Sweep paved areas broom clean. Remove petrochemical spills, stains, and other foreign deposits.

c. Rake grounds that are not planted, mulched, or paved to a smooth, even-textured surface.

d. Remove tools, construction equipment, machinery, and surplus material from Project site.

e. [Remove snow and ice to provide safe access to building.

f.]Clean exposed exterior and interior hard-surfaced finishes to a dirt-free condition, free of stains, films, and similar foreign substances. Avoid disturbing natural weathering of exterior surfaces. Restore reflective surfaces to their original condition.

g. Remove debris and surface dust from limited-access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics, and similar spaces.

h. Clean flooring, removing debris, dirt, and staining; clean in accordance with manufacturer's instructions.

i. Vacuum and mop concrete.

j. Vacuum carpet and similar soft surfaces, removing debris and excess nap; clean in accordance with manufacturer's instructions if visible soil or stains remain.

k. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compounds and other noticeable, vision-obscuring materials. Polish mirrors and glass, taking care not to scratch surfaces.

l. Remove labels that are not permanent.

m. Wipe surfaces of mechanical and electrical equipment and similar equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.

n. Clean plumbing fixtures to a sanitary condition, free of stains, including stains resulting from water exposure.

o. Replace disposable air filters and clean permanent air filters. Clean exposed surfaces of diffusers, registers, and grills.

p. Clean ducts, blowers, and coils if units were operated without filters during construction or that display contamination with particulate matter on inspection].

1) Clean HVAC system in compliance with NADCA ACR and all relevant HVAC outline specifications. Provide written report on completion of cleaning.

q. Clean luminaires, lamps, globes, and reflectors to function with full efficiency.

r. Clean strainers.

s. Leave Project clean and ready for occupancy.

C. Pest Control: Comply with pest control requirements in Section 015000 "Temporary Facilities and Controls." Prepare written report.

D. Construction Waste Disposal: Comply with waste-disposal requirements in Section 015000 "Temporary Facilities and Controls.", Section 017419 "Construction Waste Management and Disposal."

E. Comply with safety standards for cleaning. Do not burn waste materials. Do not bury debris or excess materials on the Employer's property. Do not discharge volatile, harmful, or dangerous materials into drainage systems. Remove waste materials from Site and dispose of lawfully.

3.2 CORRECTION OF THE WORK

A. Complete repair and restoration operations required by "Correction of the Work" Article in Section 017300 "Execution" before requesting inspection for determination of Substantial Completion.

END OF SECTION 017700

SECTION 017823 - OPERATION AND MAINTENANCE DATA

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Particular Conditions and other Division 01 Specifications sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for preparing operation and maintenance manuals, including the following:

1. Operation and maintenance documentation directory manuals.
2. Emergency manuals.
3. Systems and equipment operation manuals.
4. Systems and equipment maintenance manuals.
5. Product maintenance manuals.

B. Related Requirements:

1. Section 011200 "Multiple Contract Summary" for coordinating operation and maintenance manuals covering the Work of multiple contracts.
2. Section 013300 "Submittal Procedures" for submitting copies of submittals for operation and maintenance manuals.
3. Section 017700 "Closeout Procedures" for schedule for submitting operation and maintenance documentation.
4. Section 019113 "General Commissioning Requirements" for verification and compilation of data into operation and maintenance manuals.
5. Specification sections related to the functionality and efficiency of the executed systems.

1.3 DEFINITIONS

A. System: An organized collection of parts, equipment, or subsystems united by regular interaction.

B. Subsystem: A portion of a system with characteristics similar to a system.

1.4 QUALITY ASSURANCE

A. O&M Manual Preparation: In preparation of O&M Manuals, use personnel thoroughly trained and experienced in operation and maintenance of equipment or system involved.

1. Where O&M Manuals require written instructions, use personnel skilled in technical writing where necessary for communication of essential data.
2. Where O&M Manuals require drawings or diagrams, use CAD / BIM operators or drafters (as applicable) capable of preparing drawings or models clearly in a clear, understandable industry standard format.
3. Develop System-Level O&M Manuals for mechanical and electrical systems specifically for this Project. Compilation of equipment vendor catalogues and O&M Manuals is not acceptable.

B. Instructions for the Employer's Personnel: Use experienced instructors thoroughly trained and experienced in operation and maintenance of equipment or system involved to instruct the Employer's O&M personnel.

1.5 CLOSEOUT SUBMITTALS

A. Submit operation and maintenance manuals indicated. Provide content for each manual as specified in individual Specification Sections, and as reviewed and approved at the time of Section submittals. Submit reviewed manual content formatted and organized as required by this Section.

1. The Engineer and Commissioning Authority will comment on whether content of operation and maintenance submittals is acceptable.
2. Where applicable, clarify and update reviewed manual content to correspond to revisions and field conditions.

B. Format: Submit operation and maintenance manuals in the following format:

1. PDF digital copies. Enable reviewer comments on draft submittals.
2. One (1) original and three (3)paper copies.

C. Initial Manual Submittal: Submit draft copy of each manual at least thirty (30) days before commencing demonstration and training. The Engineer and Commissioning Authority will comment on whether general scope and content of manual are acceptable.

D. Final Manual Submittal: Submit each manual in final form prior to requesting inspection for Substantial Completion and at least fifteen (15) days before commencing demonstration and training. The Engineer and Commissioning Authority will return copy with comments.

1. Correct or revise each manual to comply with The Engineer’s and Commissioning Authority's comments. Submit copies of each corrected manual within [fifteen (15)] days of receipt of The Engineer’s and Commissioning Authority's comments and prior to commencing demonstration and training.

E. Comply with Section 017700 "Closeout Procedures" for schedule for submitting operation and maintenance documentation.

1.6 FORMAT OF OPERATION AND MAINTENANCE MANUALS

A. Manuals, Electronic Files: Submit manuals in the form of a multiple file composite electronic PDF file for each manual type required.

1. Electronic Files: Use electronic files prepared by manufacturer where available. Where scanning of paper documents is required, files shall be in a PDF format at a resolution of at least 300 DPI, optimized for readability.
2. File Names and Bookmarks: Bookmark individual documents based on file names. Name document files to correspond to system, subsystem, and equipment names used in manual directory and table of contents. Group documents for each system and subsystem into individual composite bookmarked files, then create composite manual, so that resulting bookmarks reflect the system, subsystem, and equipment names in a readily navigated file tree. Configure electronic manual to display bookmark panel on opening file.

B. Manuals, Paper Copy: Submit manuals in the form of hard copy, bound and labeled volumes.

1. Binders: Heavy-duty, three-ring, vinyl-covered, loose-leaf, post-type binders, in thickness necessary to accommodate contents, sized to hold 215-by-280 mm paper; with clear plastic

sleeve on spine to hold label describing contents and with pockets inside covers to hold folded oversize sheets.

a. If two or more binders are necessary to accommodate data of a system, organize data in each binder into groupings by subsystem and related components. Cross-reference other binders if necessary to provide essential information for proper operation or maintenance of equipment or system.
b. Identify each binder on front and spine, with printed title "OPERATION AND MAINTENANCE MANUAL," Project title or name, and subject matter of contents, and indicate Specification Section number on bottom of spine]. Indicate volume number for multiple-volume sets.

2. Dividers: Heavy-paper dividers with plastic-covered tabs for each section of the manual. Mark each tab to indicate contents. Include typed list of products and major components of equipment included in the section on each divider, cross-referenced to Specification Section number and title of Project Manual.
3. Protective Plastic Sleeves: Transparent plastic sleeves designed to enclose diagnostic software storage media for computerized electronic equipment. Enclose title pages and directories in clear plastic sleeves.
4. Supplementary Text: Prepared on 215 by 280-mm white bond paper.
5. Drawings: Attach reinforced, punched binder tabs on drawings and bind with text.

a. If oversize drawings are necessary, fold drawings to same size as text pages and use as foldouts.
b. If drawings are too large to be used as foldouts, fold and place drawings in labeled envelopes and bind envelopes in rear of manual. At appropriate locations in manual, insert typewritten pages indicating drawing titles, descriptions of contents, and drawing locations.

1.7 REQUIREMENTS FOR EMERGENCY, OPERATION, AND MAINTENANCE MANUALS

A. Organization of Manuals: Unless otherwise indicated, organize each manual into a separate section for each system and subsystem, and a separate section for each piece of equipment not part of a system. Each manual shall contain the following materials, in the order listed:

1. Title page.
2. Table of contents.
3. Manual contents.

B. Title Page: Include the following information:

1. Subject matter included in manual.
2. Name and address of Project.
3. Name and address of Employer.
4. Date of submittal.
5. Name and contact information for Contractor.
6. Name and contact information for Construction Manager.
7. Name and contact information for The Engineer.
8. Name and contact information for Commissioning Authority.
9. Names and contact information for major consultants to the Engineer that designed the systems contained in the manuals.
10. Cross-reference to related systems in other operation and maintenance manuals.

C. Table of Contents: List each product included in manual, identified by product name, indexed to the content of the volume, and cross-referenced to Specification Section number in Project Manual.

1. If operation or maintenance documentation requires more than one volume to accommodate data, include comprehensive table of contents for all volumes in each volume of the set.

D. Manual Contents: Organize into sets of manageable size. Arrange contents alphabetically by system, subsystem, and equipment. If possible, assemble instructions for subsystems, equipment, and components of one system into a single binder.

E. Identification: In the documentation directory and in each operation and maintenance manual, identify each system, subsystem, and piece of equipment with same designation used in the Contract Documents. If no designation exists, assign a designation according to ASHRAE Guideline 4-2019, "Preparation of Operating and Maintenance Documentation for Building Systems."

1.8 OPERATION AND MAINTENANCE DOCUMENTATION DIRECTORY MANUAL

A. Operation and Maintenance Documentation Directory: Prepare a separate manual that provides an organized reference to emergency, operation, and maintenance manuals. List items and their location to facilitate ready access to desired information. Include the following:

1. List of Systems and Subsystems: List systems alphabetically. Include references to operation and maintenance manuals that contain information about each system.
2. List of Equipment: List equipment for each system, organized alphabetically by system. For pieces of equipment not part of system, list alphabetically in separate list.
3. Tables of Contents: Include a table of contents for each emergency, operation, and maintenance manual.

1.9 EMERGENCY MANUALS

A. Emergency Manual: Assemble a complete set of emergency information indicating procedures for use by emergency personnel and by Employer's operating personnel for types of emergencies indicated.

B. Content: Organize manual into a separate section for each of the following:

1. Type of emergency.
2. Emergency instructions.
3. Emergency procedures.

C. Type of Emergency: Where applicable for each type of emergency indicated below, include instructions and procedures for each system, subsystem, piece of equipment, and component:

1. Fire.
2. Flood.
3. Gas leak.
4. Water leak.
5. Power failure.
6. Water outage.
7. System, subsystem, or equipment failure.
8. Chemical release or spill.

D. Emergency Instructions: Describe and explain warnings, trouble indications, error messages, and similar codes and signals. Include responsibilities of Employer's operating personnel for notification of Installer, supplier, and manufacturer to maintain warranties.

E. Emergency Procedures: Include the following, as applicable:

1. Instructions on stopping.
2. Shutdown instructions for each type of emergency.
3. Operating instructions for conditions outside normal operating limits.
4. Required sequences for electric or electronic systems.
5. Special operating instructions and procedures.

1.10 SYSTEMS AND EQUIPMENT OPERATION MANUALS

A. Systems and Equipment Operation Manual: Assemble a complete set of data indicating operation of each system, subsystem, and piece of equipment not part of a system. Include information required for daily operation and management, operating standards, and routine and special operating procedures.

1. Engage a factory-authorized service representative to assemble and prepare information for each system, subsystem, and piece of equipment not part of a system.
2. Prepare a separate manual for each system and subsystem, in the form of an instructional manual for use by Employer's operating personnel.

B. Content: In addition to requirements in this Section, include operation data required in individual Specification Sections and the following information:

1. System, subsystem, and equipment descriptions. Use designations for systems and equipment indicated on Contract Documents.
2. Performance and design criteria if Contractor has delegated design responsibility.
3. Operating standards.
4. Operating procedures.
5. Operating logs.
6. Wiring diagrams.
7. Control diagrams.
8. Piped system diagrams.
9. Precautions against improper use.
10. License requirements including inspection and renewal dates.

C. Descriptions: Include the following:

1. Product name and model number. Use designations for products indicated on Contract Documents.
2. Manufacturer's name.
3. Equipment identification with serial number of each component.
4. Equipment function.
5. Operating characteristics.
6. Limiting conditions.
7. Performance curves.
8. Engineering data and tests.
9. Complete nomenclature and number of replacement parts.

D. Operating Procedures: Include the following, as applicable:

1. Startup procedures.
2. Equipment or system break-in procedures.
3. Routine and normal operating instructions.
4. Regulation and control procedures.
5. Instructions on stopping.
6. Normal shutdown instructions.
7. Seasonal and weekend operating instructions.
8. Required sequences for electric or electronic systems.
9. Special operating instructions and procedures.

E. Systems and Equipment Controls: Describe the sequence of operation, and diagram controls as installed.

F. Piped Systems: Diagram piping as installed and identify color coding where required for identification.

1.11 SYSTEMS AND EQUIPMENT MAINTENANCE MANUALS

A. Systems and Equipment Maintenance Manuals: Assemble a complete set of data indicating maintenance of each system, subsystem, and piece of equipment not part of a system. Include manufacturers' maintenance documentation, preventive maintenance procedures and frequency, repair procedures, wiring and systems diagrams, lists of spare parts, and warranty information.

1. Engage a factory-authorized service representative to assemble and prepare information for each system, subsystem, and piece of equipment not part of a system.
2. Prepare a separate manual for each system and subsystem, in the form of an instructional manual for use by Employer's operating personnel.

B. Content: For each system, subsystem, and piece of equipment not part of a system, include source information, manufacturers' maintenance documentation, maintenance procedures, maintenance and service schedules, spare parts list and source information, maintenance service contracts, and warranties and bonds as described below.

C. Source Information: List each system, subsystem, and piece of equipment included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual and drawing or schedule designation or identifier where applicable.

D. Manufacturers' Maintenance Documentation: Include the following information for each component part or piece of equipment:

1. Standard maintenance instructions and bulletins; include only sheets pertinent to product or component installed. Mark each sheet to identify each product or component incorporated into the Work. If data include more than one item in a tabular format, identify each item using appropriate references from the Contract Documents. Identify data applicable to the Work and delete references to information not applicable.

    a. Prepare supplementary text if manufacturers' standard printed data are not available and where the information is necessary for proper operation and maintenance of equipment or systems.

2. Drawings, diagrams, and instructions required for maintenance, including disassembly and component removal, replacement, and assembly.
3. Identification and nomenclature of parts and components.
4. List of items recommended to be stocked as spare parts.

E. Maintenance Procedures: Include the following information and items that detail essential maintenance procedures:

1. Test and inspection instructions.
2. Troubleshooting guide.
3. Precautions against improper maintenance.
4. Disassembly; component removal, repair, and replacement; and reassembly instructions.
5. Aligning, adjusting, and checking instructions.
6. Demonstration and training video recording, if available.

F. Maintenance and Service Schedules: Include service and lubrication requirements, list of required lubricants for equipment, and separate schedules for preventive and routine maintenance and service with standard time allotment.

1. Scheduled Maintenance and Service: Tabulate actions for daily, weekly, monthly, quarterly, semiannual, and annual frequencies.
2. Maintenance and Service Record: Include manufacturers' forms for recording maintenance.

G. Spare Parts List and Source Information: Include lists of replacement and repair parts, with parts identified and cross-referenced to manufacturers' maintenance documentation and local sources of maintenance materials and related services.

H. Maintenance Service Contracts: Include copies of maintenance agreements with name and telephone number of service agent.

I. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.

1. Include procedures to follow and required notifications for warranty claims.

J. Drawings: Prepare drawings supplementing manufacturers' printed data to illustrate the relationship of component parts of equipment and systems and to illustrate control sequence and flow diagrams. Coordinate these drawings with information contained in record Drawings to ensure correct illustration of completed installation.

1. Do not use original project record documents as part of maintenance manuals.

1.12 PRODUCT MAINTENANCE MANUALS

A. Product Maintenance Manual: Assemble a complete set of maintenance data indicating care and maintenance of each product, material, and finish incorporated into the Work.

B. Content: Organize manual into a separate section for each product, material, and finish. Include source information, product information, maintenance procedures, repair materials and sources, and warranties and bonds, as described below.

C. Source Information: List each product included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual and drawing or schedule designation or identifier where applicable.

D. Product Information: Include the following, as applicable:

1. Product name and model number.
2. Manufacturer's name.
3. Color, pattern, and texture.
4. Material and chemical composition.
5. Reordering information for specially manufactured products.

E. Maintenance Procedures: Include manufacturer's written recommendations and the following:

1. Inspection procedures.
2. Types of cleaning agents to be used and methods of cleaning.
3. List of cleaning agents and methods of cleaning detrimental to product.
4. Schedule for routine cleaning and maintenance.
5. Repair instructions.

F. Repair Materials and Sources: Include lists of materials and local sources of materials and related services.

G. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.

1. Include procedures to follow and required notifications for warranty claims.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 017823

SECTION 017836 - WARRANTIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Particular Conditions and other Division 01 Specifications sections, apply to this Section.

1.2 SUMMARY

A. Section Includes: General requirements for written warranties, guaranties, and bonds required by the Contract Documents.

B. Referenced Documents and Sections:

1. Division 01 Section 016000 “Product Requirements”: Product Warranties.
2. Division 01 Section 017700 “Closeout Procedures”: Submittal of warranties, guaranties, and bonds as a condition of Substantial Completion
3. Division 01 Section 017823 “Operating and Maintenance Data: Incorporation of warranties, guaranties, and bonds into instruction manuals.
4. Specification sections for warranty clauses specified.

C. Approval of the warranties, guaranties, and bonds by the Employer is a prerequisite to final payment under the Contract.

1.3 GENERAL

A. Deliver warranties, guaranties, and bonds required by Contract Documents as stated in the General Conditions, with Employer named as beneficiary.

B. Complete System Warranty: Provide complete system warranty in which Manufacturer and Installer are jointly and severally liable and agree to repair or replace all defective components of the warranted system. The warranty shall include both materials and workmanship.

C. Additional / Extended Warranties for the HVAC and Electrical Equipment: Provide additional/extended warranties for all HVAC and electrical equipment put into early operation for the supply of Wild Air to cover the operation period of the equipment from the Wild Air On date to the Date of Substantial Completion of the Works. Manufacturers’ Warranty Certificates shall be submitted which specifically cover this period related to the provision of Wild Air. The provision of these additional/extended warranties is in addition to the warranties required for the stated period after the Date of Substantial Completion.

D. Warranty shall include:

1. Defective materials and installation.
2. Failure to comply with requirements stated in technical specifications.
3. Structural failures including, but not limited to, excessive deflection.
4. Faulty operation of movable parts such as hardware.
5. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use.
6. Delamination of exterior or interior facing materials.

7. Making goods and installation and finishing all items that are disturbed and that may be required due to repair or replacement of defective items. Coordinate with Employer, manufacturer, and installer of adjacent disturbed items to ensure that their warranty is not cancelled due to the repair work.

E. Limitations: state the limitations of the warranty as agreed with Engineer / Employer.

F. Warranty Period: Warranties shall come into force from the date of Substantial Completion. Refer to sections in each project specifications which include warranty clauses with warranty periods. Where the Project Specifications do not specify a warranty period, the warranty period shall be in accordance with the Manufacturer's standard warranty.

1.4 WARRANTY / GUARANTY FORM

A. Submit paper and PDF digital copies of warranties and guaranties, on the Contractor's, subcontractor's, material supplier's, or manufacturer's own letterhead, addressed to Employer.

B. Submit warranties and guaranties in duplicate, in the form indicated, signed by cognizant entities, including Contractor in every case, with modifications as approved by Employer to suit the conditions pertaining to the warranty or guaranty.

1.5 SUBMITTAL

A. Collect and assemble written warranties and guaranties as instructed in Division 01 Section 017700 "Closeout Procedures" and submit to Engineer for delivery to Employer for final review and approval.

1.6 TERMS

A. In addition to specific product requirements, Contractor agrees to repair or replace defective materials, workmanship, or failures in a timely, satisfactory manner at no cost to the Employer.

PART 2 - PRODUCTS (Not used)

PART 3 - EXECUTION (Not used)

END OF SECTION 017836

SECTION 017839 - PROJECT RECORD DOCUMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Particular Conditions, and other Division 01 Specifications sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for Project Record Documents, including the following:

1. Record Drawings.
2. Record Specifications.
3. Record Product Data.
4. Miscellaneous Record Submittals.

B. Related Requirements:

1. Division 01 Section 011200 "Multiple Contract Summary" for coordinating Project Record Documents covering the Work of multiple contracts.
2. Division 01 Section 013300 “Submittal Procedures” for use and submission of digital data files.
3. Division 01 Section 017300 "Execution" for final property survey.
4. Division 01 Section 017700 "Closeout Procedures" for general Closeout procedures.
5. Division 01 Section 017823 "Operation and Maintenance Data" for operation and maintenance manual requirements.
6. Specifications Sections for specific requirements for project Record (As-Built) Documents of the Work in those Sections.
7. Specification Sections for specific requirements for Miscellaneous Record keeping and submittal in those Sections.
8. Specification sections related to the functionality and efficiency of the executed systems.

1.3 CLOSEOUT SUBMITTALS

A. BIM File Incorporation: Develop and submit the Project Information Model (PIM) As-built Model(s) ready for integration with Digital Twin Platform, to the level specified in Section 013300 and annexes, and submit the extracted As-built Drawing files in the following order:

1. The Contractor shall submit the Federated BIM As-built Model(s) ready for integration with Digital Twin Platform to the Engineer to facilitate his coordination review of the as-built drawings.
2. The Contractor shall extract the As-Built drawings and details from the native file As-built Model(s) and submit them to the Engineer’s approval. The relevant Federated/Composite BIM Model (NWD) ready for integration with Digital Twin Platform is provided to the Engineer to facilitate his coordination review of the as-built drawings.
3. The Contractor shall use the updated BIM Model(s) to produce all as-built drawings and data and shall submit such drawings and data to the Engineer for approval as per the Specification requirements.
4. The Project As-built BIM Model: upon completion of the Project, the Contractor shall hand over to the Engineer.

5. The Project As-built BIM Model ready for integration with Digital Twin Platform developed as per Section 013300 and its Annexes and this Section, reflecting all As-Built conditions, items 1.3B, C, D and E and including all relevant handover documents (warranties, Operation and Maintenance (O&M) Manuals, commissioning reports, plans, product submittals, etc.).
6. The Project As-built BIM Model shall be submitted to the Engineer for review and verification on the overall quality and comprehensiveness of the Model in reflecting these requirements.

B. Record Drawings: Comply with the following:

1. Number of Copies: Submit two (2) set(s) of marked-up record prints.
2. Submit PDF electronic files of scanned record prints and one (1) set(s) of file prints.
3. Number of Copies: Submit copies of Record Drawings as follows:

    a. Initial Submittal:

        1) Submit one (1) paper-copy set(s) of marked-up record prints.
        2) Submit PDF electronic files of scanned record prints and one (1) set(s) of file prints.
        3) Submit Record Digital Data Files and one (1) set(s) of plots.
        4) The Engineer will initial and date one set of drawings and mark whether general scope of changes, additional information recorded, and quality of drafting are acceptable.

4. Final Submittal: After incorporating the Engineer's initial submittal review comments, submit:

    1) Submit two (2) paper-copy set(s) of marked-up record prints.
    2) Submit PDF electronic files of scanned Record Prints and one (1) set(s) of file prints.
    3) Print each drawing, whether or not changes and additional information were recorded.
    4) Comply with Part 1.4 of section 017823 “Operation & Maintenance Data” for number of sets required for the O&M Manual.

5. Final Submittal:

    a. Submit two (2) paper-copy set(s) of marked-up record prints.
    b. Submit Record Digital Data Files and one (1) set(s) of Record Digital Data File drawings.
    c. Plot each drawing file, whether or not changes and additional information were recorded.

C. Record Specifications: Submit annotated PDF electronic files and one (1) paper copies of Project's Specifications, including addenda and Contract modifications.

D. Record Product Data: Submit annotated PDF electronic files and directories and one (1) paper copies of each submittal.

1. Where record Product Data are required as part of operation and maintenance manuals, submit duplicate marked-up Product Data as a component of manual.

E. Miscellaneous Record Submittals: See to other Specification Sections for miscellaneous record-keeping requirements and submittals in connection with various construction activities. Submit annotated PDF electronic files and directories and one (1) paper copie(s) of each submittal.

F. Reports: Submit written weekly report indicating items incorporated into Project Record Documents concurrent with progress of the Work, including revisions, concealed conditions, field changes, product selections, and other notations incorporated.

1.4 RECORD DRAWINGS

A. Record Prints: Print and maintain one (1) set of marked-up paper copies of the Contract Drawings and Shop Drawings, incorporating new and revised drawings as modifications are issued.

1. Preparation: Mark record prints to show the actual installation, where installation varies from that shown originally. Require individual or entity who obtained record data, whether individual or entity is Installer, subcontractor, or similar entity, to provide information for preparation of corresponding marked-up record prints.

a. Give particular attention to information on concealed elements that would be difficult to identify or measure and record later.
b. Accurately record information in an acceptable drawing technique.
c. Record data as soon as possible after obtaining it.
d. Record and check the markup before enclosing concealed installations.
e. Cross-reference record prints to corresponding photographic documentation.

2. Content: Types of items requiring marking include, but are not limited to, the following:

a. Dimensional changes to Drawings.
b. Revisions to details shown on Drawings.
c. Depths of foundations.
d. Locations and depths of underground utilities.
e. Revisions to routing of piping and conduits.
f. Revisions to electrical circuitry.
g. Actual equipment locations.
h. Duct size and routing.
i. Locations of concealed internal utilities.
j. Changes made by Change Order or Construction Change Directive.
k. Changes made following the Engineer's written orders.
l. Details not on the original Contract Drawings.
m. Field records for variable and concealed conditions.
n. Record information on the Work that is shown only schematically.
o. All coordinates shown on the drawings shall be in accordance with the system agreed with the Engineer.

3. Mark the Contract Drawings and Shop Drawings completely and accurately. Use personnel proficient at recording graphic information in production of marked-up record prints.
4. Mark record prints with erasable, red-colored pencil. Use other colors to distinguish between changes for different categories of the Work at same location.
5. Mark important additional information that was either shown schematically or omitted from original Drawings.
6. Note Construction Change Directive numbers, alternate numbers, Change Order numbers, and similar identification, where applicable.

B. Newly Prepared Record Drawings: Prepare new Drawings where the Engineer determines that neither the original Contract Drawings nor Shop Drawings are suitable to show actual installation.

1. New Drawings may be required when a Variation is issued or as a result of the Engineer accepting an alternate, substitution, or other modification.
2. Consult with the Engineer for proper scale and scope of detailing and notations required to record the actual physical installation and its relation to other construction. Integrate newly prepared Record Drawings into Record Drawing sets; comply with procedures for formatting, organizing, copying, binding, and submitting.

3. Reflect the Newly Prepared Record Drawings information extracted from the BIM Model(s) on a continuous basis utilizing Reality capture.

C. Progress Review: Unless otherwise indicated or directed, submit a copy of marked-up Record Prints and newly prepared Record Drawings at monthly intervals, for progress review and acceptance by the Engineer.

1. Limit submittals to drawings marked-up, prepared or further amended since previous submittal. List drawings contained in each submittal on transmittal form.

D. Record CAD Drawings: Before requesting inspection for determining date of Substantial Completion, review marked-up final Record Prints with the Engineer. When authorized, prepare a full set of CAD Drawings of all Contract Drawings, Shop Drawings and newly prepared Drawings, whether changes or additional information are recorded:

1. Incorporate changes and additional information previously marked on Record Prints. Delete, redraw, and add details and notations where applicable.
2. Refer instances of uncertainty to the Engineer for resolution.
3. Identify and date each Record Drawing; include the designation "RECORD (AS-BUILT) DRAWING" in a prominent location.
4. Record CAD Drawing: Produce a full set of Record Drawings from completed Record CAD Drawing files.
5. Format:

    a. Paper Submittals: Organize record prints into manageable sets. Bind each set with durable paper cover sheets. Include identification on cover sheets.
    b. Annotated PDF electronic file with comment function enabled.
    c. As-Built BIM Models ready for integration with Digital Twin Platform in accordance with this section, section 013300 and Annexes.

6. Organize CAD information into separate electronic files that correspond to each sheet of the Record Prints. Produce "List of Drawings" sheet. Name each file with the sheet identification number. Include identification in each CAD file. All as follows:

    a. All As-Built drawings and GIS files to be submitted coordinate system as agreed with the Engineer.
    b. The master map unit for As-Built drawings and GIS files should be in meter (m) only.
    c. All As-Built CAD drawings and GIS files to be submitted in digital formats on CD's media.
    d. As-Built CAD and GIS formats are both required for any As-Built design / entity submission.
    e. All As-Built GIS maps to be submitted in standard shape files.
    f. All As-Built CAD drawings should be submitted in original AutoCAD format, (not converted), unless agreed otherwise with the Engineer.
    g. Pen width details for plotting should also be provided in each drawing. (Outside the drawing area).
    h. All reference files (if used) should be copied in a directory called 'reference'.
    i. If any of the files/drawings are using fonts other than the normal fonts provided by the software, then those fonts shall also be copied in a separate directory called 'fonts.
    j. Drawing should be neat and perfect. None of the items shall be outside the drawing sheet area.
    k. Drawings of different disciplines (i.e. Architectural, Structural, Electrical, Mechanical etc.) shall be kept in separate directories with suitable names.
    l. One file shall contain only one drawing.
    m. Drawing shall be drawn/organized in suitable/proper layers/levels. Same kind of items shall always be in the same layer/level.
    n. Drawing shall be copied into CD's in such a way that, when one drawing is opened from the CD, it must be complete and all reference files, fonts & libraries (if used) should attach automatically.
    o. The index of drawings shall also be provided in the original format of the drawing (DGN or DWG) and it must be kept in a directory called "general".
    p. Total number of As-Built drawings in the index and in the CD shall be the same.

q. Change notice drawings shall be submitted along with all other drawings of that project package in a new CD.
r. All the drawings must be numbered serially (sheet number), starting from 001 (drawing index as sheet no. 001) and must be listed in the drawing index. (Total number of drawings in one project (Package) should be same as the sheet number of the last drawing).
s. One (1) file shall contain only one drawing. (This point is also incorporated under item 2.1. F.2 above).
t. All the drawings, sketches or diagrams inside the O&M manuals shall also be stamped as As-Built and certified by the contractor and consultant.
u. All As-Built drawings and GIS files to be submitted in coordinate system to be agreed with the Engineer.
v. All As-Built CAD drawings and GIS files to be submitted in digital formats on CD's media.
w. As-Built CAD and GIS formats are both required for any As-Built design / entity submission.
x. All As-Built GIS maps to be submitted in standard shape files.

1.5 RECORD SPECIFICATIONS

A. Preparation: Mark Specifications to indicate the actual product installation, where installation varies from that indicated in Specifications, addenda, and Contract modifications.

1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.

2. Mark copy with the proprietary name and model number of products, materials, and equipment furnished, including substitutions and product options selected.
3. Record the name of manufacturer, supplier, Installer, and other information necessary to provide a record of selections made.

4. For each principal product, indicate whether Record Product Data has been submitted in operation and maintenance manuals instead of submitted as Record Product Data.
5. Note related Change Orders, Record Product Data, and Record Drawings where applicable.
6. Reflect the Specification information on the BIM Model(s) ready for integration with Digital Twin Platform on a continuous basis.

B. Format: Submit record specifications as annotated PDF electronic file.

1.6 RECORD PRODUCT DATA

A. Recording: Maintain one copy of each submittal during the construction period for Project Record Document purposes. Post changes and revisions to Project Record Documents as they occur; do not wait until the end of Project.

B. Preparation: Mark Product Data to indicate the actual product installation where installation varies substantially from that indicated in Product Data submittal.

1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
2. Include significant changes in the product delivered to Project site and changes in manufacturer's written instructions for installation.
3. Note related Change Orders, Record Specifications, and Record Drawings where applicable.

C. Format: Submit Record Product Data as annotated PDF electronic file.

1. Include Record Product Data directory organized by Specification Section number and title, electronically linked to each item of Record Product Data.

2. Reflect the Product Data on the BIM Model(s) ready for integration with Digital Twin Platform on a continuous basis.

1.7 MISCELLANEOUS RECORD SUBMITTALS

A. Assemble miscellaneous records required by other Specification Sections for miscellaneous record keeping and submittal in connection with actual performance of the Work. Bind or file miscellaneous records and identify each, ready for continued use and reference. Miscellaneous records include, but are not limited to, the following:

1. Field records on excavations and foundations.
2. Field records on underground construction and similar work.
3. Surveys showing locations and elevations of underground lines.
4. Invert elevations of drainage piping.
5. Surveys establishing building lines and levels.
6. Special and authorized measurements.
7. Certifications received in lieu of labels on bulk products.
8. Batch mixing and bulk delivery records.
9. Testing and qualification of tradesmen.
10. Documented qualification of installation firms.
11. Tests and inspections.
12. Inspections and certifications by governing authorities.
13. Final inspection and correction procedures.
14. Any other information / documents which are not included on As-Built Drawings and Operation and Maintenance Manuals.
15. Reflect the miscellaneous record submittals on the BIM Model(s) ready for integration with Digital Twin Platform on a continuous basis.

B. Format: Submit miscellaneous record submittals as PDF electronic file.

1. Include miscellaneous record submittals directory organized by Specification Section number and title, electronically linked to each item of miscellaneous record submittals.

1.8 MAINTENANCE OF RECORD DOCUMENTS

A. Maintenance of Record Documents: Store Record Documents in the field office apart from the Contract Documents used for construction. Do not use Project Record Documents for construction purposes. Maintain Record Documents in good order and in a clean, dry, legible condition, protected from deterioration and loss. Provide access to Project Record Documents for The Engineer's reference during normal working hours.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 017839

SECTION 017843 - TOOLS AND EXTRA STOCK MATERIAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Particular Conditions and other Division 01 Specifications sections, apply to this Section.

1.2 SUMMARY

A. This Section includes administrative and procedural requirements for extra materials, tools, and spare parts.

1.3 RELATED REQUIREMENTS

A. Technical specifications: specific quantities of extra material required by individual Specifications Sections.

1.4 PRODUCTS REQUIRED

A. Provide quantities of extra materials, tools, and spare parts specified in individual Specification Sections in a matrix table, or as recommended by manufacturer or, if not specified as required in addition to quantities required for completion of work.

B. Products to be identical to those installed in work. Include quantities in original purchase from supplier or manufacturer to avoid variations in manufacture.

C. Provide a complete outline list, including specification or drawing references, of tools to be provided under Contract Documents within 60 days of date of Commencement Date. Submit list to the Engineer in editable electronic form (in Microsoft Excel).

D. Provide within 60 days of date of Commencement Date a complete outline list, including specification or drawing references, of all recommended extra materials and spare parts that the end user may purchase directly. Submit list to the Engineer in editable electronic form (in Microsoft Excel).

E. Provide detailed itemized listings of extra materials, tools, and spare parts for approval concurrent with material submission for each section of work. Provide final approved listing to the Engineer in editable electronic form (in Microsoft Excel).

1.5 STORAGE AND MAINTENANCE

A. Temporarily store and protect tools with products to be installed in work, or in another location acceptable to Engineer.

B. When adequate, provide secure storage facilities available at site capable of maintaining conditions required for storage and not required for Contract work or construction material storage tool, may be stored in available space.

C. Maintain tools, in manufacturer's unopened original containers with labels intact and legible until delivery to Engineer.

1.6 DELIVERY

A. Coordinate final delivery of tools, with Engineer prior to Substantial Completion.

B. Deliver, unload, store, and account for specified quantities of tools in presence of Engineer.

C. Engineer will indicate final placement of tools.

D. Obtain written acceptance from Engineer of receipt of specified quantities of tools.

E. For portions of work accepted and occupied by Employer prior to Substantial Completion, deliver proportional quantity of tools, and maintenance materials if requested by Engineer. Record quantities delivered with Engineer.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 017843

SECTION 017900 - DEMONSTRATION AND TRAINING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Particular Conditions and other Division 01 Specifications sections, apply to this Section.

1.2 SUMMARY

A. This section covers the requirements for preparing, administering, and conducting a training program in English for the Employer and its nominated operator (as applicable), maintenance, supervisor, and instructor trainees in operation, maintenance, and computer software programming of the system. Training shall be of sufficient scope and depth to ensure that all operations, maintenance, and computer software trainees who complete the training program will be fully qualified, certified and capable of operating and / or maintaining the system / subsystems as installed under this Contract. The program shall provide the training, orientation, and familiarization necessary to ensure a smooth transition between system installation and operations activities.

B. This Section includes administrative and procedural requirements for instructing the Employer's personnel, including the following:

1. Instruction in operation and maintenance of systems, subsystems, and equipment.
2. Demonstration and training video recordings.
3. Demonstration of operation of systems, subsystems, and equipment.
4. Training in operation and maintenance of systems, subsystems, and equipment.

C. Related Sections:

1. Division 01 Section 013100 "Project Management and Coordination" for submitting coordination drawings and subcontract list and for requirements for web-based Project software.
2. Division 01 Section 014000 "Quality Requirements" for submitting test and inspection reports, and schedule of tests and inspections.
3. Division 01 Section 017823 "Operation and Maintenance Data" for submitting operation and maintenance manuals.
4. Divisions 02 through 34, Technical Specification Sections for specific requirements for demonstration and training for products in those Sections.

D. PDF digital copy and Two (2) copies of submittals required by this Part shall be supplied to the Engineer / the Employer Authorized Representative for review not later than ninety (90) days prior to scheduled start of each formal training course. Thirty (30) days shall be allowed for such review. Training shall be performed only in accordance with such reviewed and approved training program submittals. All training aids proposed for use in the program shall be available for inspection prior to commencement of training. Upon completion of the training program, the training aids, tools, test equipment, training manuals and other materials relating to the program shall be handed over to the Employer.

E. When short familiarization courses are offered to the Contractor by the equipment manufacturer / vendor as a common industry practice at no extra cost to the Contractor, then the Contractor shall decide for the Employer nominated staff to attend such courses at no additional cost to the Employer

1.3 INFORMATIONAL SUBMITTALS

A. Instruction Program: Submit for the Engineer's approval, outline of instructional program for demonstration and training, including a list of training modules and a schedule of proposed dates, times, length of instruction time, and instructors' names for each training module. Include learning objective and outline for each training module.

1. Indicate proposed training modules using manufacturer-produced demonstration and training video recordings for systems, equipment, and products in lieu of video recording of live instructional module.
2. Include for providing instruction at start of each season for equipment that requires seasonal operation and maintenance.

B. Qualification Data: For facilitator/instructor/videographer.

C. Attendance Record: For each training module, submit a list of participants and length of instruction time.

D. Evaluations: For each participant and for each training module, submit results and documentation of performance-based test.

E. A training program stating all program courses and activities, and their individual duration, sequence, and interrelationships.

F. A narrative description of each course, including its purpose, technical scope, and the number of hours from start of course to trainee certification.

G. Current résumés of training and technical personnel who will be assigned to the classroom and / or on-the-job (hands-on) phases of training. Résumés shall be identified by course.

H. The ratio of training and technical personnel to trainees for both classroom and on-the-job phases of each course.

I. A narrative (verbal) and graphic (pictorial) explanation of the system's operational scheme and features that will be covered in the operations-related courses.

J. A narrative (verbal) and graphic (pictorial) explanation of the system's operational and maintenance schemes that will be covered in the maintenance-related courses.

K. A comprehensive training manual for each course in the form and content that will be used in both classroom and on-the-job phases of training. In addition to other information, the manual shall contain an agenda, the hours devoted to each topic / subject, and the objectives for each lesson. Such manual shall be prepared in English.

L. A descriptive listing, by course, of all training aids to be used during both classroom and on-the-job phases of training.

M. A narrative description of the practices to be followed to measure, record, and report each trainee's progress and proficiency on completion of formal training. Also, a description of the method(s) to be used to certify trainees as being capable to operate and/or maintain the system/subsystem.

N. Samples of written examinations to be used for each course.

O. A narrative description of the methods proposed to provide make-up instruction for trainees who miss training sessions due to illness or approved absences.

P. A bibliography containing a listing of reference publications to be used in conjunction with classroom and on-the-job training.

1.4 EMPLOYER-NOMINATED STAFF

A. Employer will nominate staff to receive training. Such trainees may be expected to be familiar with the fundamental concepts of the operation and maintenance of similar systems and be basically qualified in both written and spoken English. Each trainee will be designated by the Employer in one of the three categories (trainee, supervisor-trainee, or instructor-trainee) for operations, maintenance, or computer software training.

1.5 ASSISTANCE TO KEY TECHNICAL PERSONNEL

A. All key technical personnel of the Contractor shall have a general responsibility to assist Employer-nominated trainees in conducting training for the operations and maintenance of the

system/subsystem and equipment. Such assistance shall be a part of their duties and shall be included in their job descriptions.

1.6 QUALIFICATIONS OF TRAINING PERSONNEL

A. Personnel designated to conduct training shall be fully qualified and shall have a minimum of three years' experience with the system/ subsystems as installed, or comparable successful experience as a trainer.

1.7 CLOSEOUT SUBMITTALS

A. Demonstration and Training Video Recordings: Submit two (2) copies within seven (7) days of end of each training module.

1. Identification: On each copy, provide an applied label with the following information:

    a. Name of Project.
    b. Name and address of videographer.
    c. Name of the Engineer.
    d. Name of Construction Manager.
    e. Name of Contractor.
    f. Date of video recording.

2. Transcript: Prepared and bound in format matching operation and maintenance manuals. Mark appropriate identification on front and spine of each binder. Include a cover sheet with same label information as the corresponding video recording. Include name of Project and date of video recording on each page.
3. Transcript: Prepared in PDF electronic format. Include a cover sheet with same label information as the corresponding video recording and a table of contents with links to corresponding training components. Include name of Project and date of video recording on each page.
4. At completion of training, submit complete training manual(s) for the Employer's use prepared in same paper and PDF file format required for operation and maintenance manuals specified in Section 017823 "Operation and Maintenance Data".

1.8 QUALITY ASSURANCE

A. Facilitator Qualifications: A firm or individual experienced in training or educating maintenance personnel in a training program similar in content and extent to that indicated for this Project, and whose work has resulted in training or education with a record of successful learning performance.
B. Instructor Qualifications: A factory-authorized service representative, complying with requirements in Section 014000 "Quality Requirements," experienced in operation and maintenance procedures and training.
C. Videographer Qualifications: A professional videographer who is experienced photographing demonstration and training events similar to those required.
D. Pre-instruction Conference: Conduct conference at Project site to comply with requirements in Section 013100 "Project Management and Coordination." Review methods and procedures related to demonstration and training including, but not limited to, the following:

1. Inspect and discuss locations and other facilities required for instruction.
2. Review and finalize instruction schedule and verify availability of educational materials, instructors' personnel, audiovisual equipment, and facilities needed to avoid delays.
3. Review required content of instruction.
4. For instruction that must occur outside, review weather and forecasted weather conditions and procedures to follow if conditions are unfavorable.

1.9 COORDINATION

A. Coordinate instruction schedule with the Employer's operations. Adjust schedule as required to minimize disrupting the Employer's operations and to ensure availability of the Employer's personnel.
B. Coordinate instructors, including providing notification of dates, times, length of instruction time, and course content.
C. Coordinate content of training modules with content of approved emergency, operation, and maintenance manuals. Do not submit instruction program until operation and maintenance data have been reviewed and approved by the Engineer.

1.10 INSTRUCTION PROGRAM

A. Scope: Training shall be in sufficient scope to ensure that all trainees who complete the program will be certified as capable to operate and / or maintain the equipment, systems, and facilities furnished and installed under this contract, and to ensure a smooth transition between construction and operation activities.
B. Language: Training shall be conducted in English.
C. Program Structure: Develop an instruction program that includes individual training modules for each system and for equipment not part of a system, as required by individual Specification Sections and include by no way of limitation for the following (where applicable):

1. Motorized doors, including overhead coiling doors, overhead coiling grilles and automatic entrance doors.
2. Equipment, including stage equipment, projection screens, loading dock equipment, waste compactors, food-service equipment, and fume hoods.
3. Fire-protection systems, including fire alarm, fire pumps and fire-extinguishing systems.
4. Intrusion detection systems.
5. Conveying systems, including elevators, lifts, escalators, chutes and cranes.
6. Airport networks, CUTE, baggage handling system, AODB, and FIDS.
7. Heat generation, including boilers, feedwater equipment, pumps, steam distribution piping and water distribution piping.
8. Refrigeration systems, including chillers, cooling towers, condensers, pumps and distribution piping.
9. HVAC systems, including fan coils, air-handling equipment, air distribution systems and terminal equipment and devices.
10. HVAC instrumentation and controls management and control system.
11. Electrical service and distribution, including transformers, switchboards, panelboards, uninterruptible power supplies and motor controls.
12. Packaged engine generators, including transfer switches.
13. Lighting equipment and controls.
14. Communication systems, including intercommunication equipment, surveillance, clocks and programming, voice and data and television equipment.

D. Training Modules: Develop a learning objective and teaching outline for each module. Include a description of specific skills and knowledge that participant is expected to master. For each module, include instruction for the following as applicable to the system, equipment, or component:

1. Basis of System Design, Operational Requirements, and Criteria: Include the following:

a. System, subsystem, and equipment descriptions.
b. Performance and design criteria if Contractor are delegated design responsibility.
c. Operating standards.
d. Regulatory requirements.
e. Equipment function.
f. Operating characteristics.
g. Limiting conditions.

h. Performance curves.

2. Documentation: Review the following items in detail:

   a. Emergency manuals.
   b. Systems and equipment operation manuals.
   c. Systems and equipment maintenance manuals.
   d. Product maintenance manuals.
   e. Project Record Documents.
   f. Identification systems.
   g. Warranties and bonds.
   h. Maintenance service agreements and similar continuing commitments.

3. Emergencies: Include the following, as applicable:

   a. Instructions on meaning of warnings, trouble indications, and error messages.
   b. Instructions on stopping.
   c. Shutdown instructions for each type of emergency.
   d. Operating instructions for conditions outside of normal operating limits.
   e. Sequences for electric or electronic systems.
   f. Special operating instructions and procedures.

4. Operations: Include the following, as applicable:

   a. Startup procedures.
   b. Equipment or system break-in procedures.
   c. Routine and normal operating instructions.
   d. Regulation and control procedures.
   e. Control sequences.
   f. Safety procedures.
   g. Instructions on stopping.
   h. Normal shutdown instructions.
   i. Operating procedures for emergencies.
   j. Operating procedures for system, subsystem, or equipment failure.
   k. Seasonal and weekend operating instructions.
   l. Required sequences for electric or electronic systems.
   m. Special operating instructions and procedures.

5. Adjustments: Include the following:

   a. Alignments.
   b. Checking adjustments.
   c. Noise and vibration adjustments.
   d. Economy and efficiency adjustments.

6. Troubleshooting: Include the following:

   a. Diagnostic instructions.
   b. Test and inspection procedures.

7. Maintenance: Include the following:

   a. Inspection procedures.
   b. Types of cleaning agents to be used and methods of cleaning.
   c. List of cleaning agents and methods of cleaning detrimental to product.
   d. Procedures for routine cleaning.
   e. Procedures for preventive maintenance.
   f. Procedures for routine maintenance.
   g. Instruction on use of special tools.

8. Repairs: Include the following:

    a. Diagnosis instructions.
    b. Repair instructions.
    c. Disassembly; component removal, repair, and replacement; and reassembly instructions.
    d. Instructions for identifying parts and components.
    e. Review of spare parts needed for operation and maintenance.

1.11 TRAINING AIDS

A. Training aids shall include approved operation and maintenance (O&M) manual(s) prepared by the Contractor as part of this Contract; training manuals, including course outline, basic text of instructions modules, and trainee workbook; films; slides; video tape(s); charts; models; hand-outs; catalogues; samples; and other visual and written aids to complement instruction. In addition, spare parts and other special hardware shall be provided to support "hands-on" familiarization with the equipment or systems.

1.12 TRAINING MANUALS

A. Training manuals in English shall be provided for each training course covering both the classroom and on-the-job phases. The organization of the manuals shall follow the same sequence as the course's scheduled presentation of material, providing such additional background and supplementary information as a trainee may need to understand the O&M manuals. The training manuals shall contain course agenda, schedule of hours devoted to each topic or subject, and objectives for each lesson.

1.13 DISPOSITION

A. Upon completion of the training program, all training aids, test equipment, and similar items provided by the Contractor for this training program shall become the property of the Employer.

1.14 PREPARATION

A. Assemble educational materials necessary for instruction, including documentation and training module. Assemble training modules into a training manual organized in coordination with requirements in Section 017823 "Operation and Maintenance Data."
B. Set up instructional equipment at instruction location.
C. Scheduling: Provide instruction at mutually agreed-on times. For equipment that requires seasonal operation, provide similar instruction at start of each season.

    a. Schedule training with the Employer, through the Engineer, with at least seven days' advance notice.

D. SCOPE:

    1. Training shall be performed in accordance with an approved training program. All training aids shall be available and approved prior to start of training.
    2. Each training course shall usually include classroom (theoretical) training and on-the-object (hands-on) training to provide practical experience. Where system/subsystem interfaces occur, such as with equipment or facilities furnished under other contracts, the Contractor shall cooperate with and assist the Employer / the Engineer in coordinating timing and scheduling of training so that trainees can be made familiar with the operation and maintenance of the system subsystem as a complete, in-place, operating unit.

3. Laboratory equipment, spare parts, and mock-up models may be used for theoretical orientation. However, practical "hands-on" familiarization shall be provided on equipment that is either installed and operable or ready to be installed and capable of being operated. System spares of special hardware items may be used to support "hands-on" familiarization as long as said spares are returned to inventory in satisfactory condition in accordance with approved procedures.

E. Proficiency: At designated intervals, each trainee's proficiency level shall be determined by written, oral, and practical performance tests.

F. Completion: Upon satisfactory completion of the training, it shall be certified, in writing, that each trainee, by name, is qualified to operate or maintain the system, supervise or instruct, as applicable.

G. Make-up Instruction: Make-up instruction shall be scheduled to accommodate shift work and authorized absences.

H. Training Categories: Training shall be provided using approved programs in the following categories:

1. Operations.
2. Maintenance.
3. Computer Software.
4. Operations – Supervisor.
5. Operations – Instructor.
6. Maintenance – Supervisor.
7. Maintenance – Instructor.
8. Other Categories as may be required by the Contractor's system design.

I. Operations Training: Operators shall be provided with a thorough training in all aspects of system/subsystem operation under both normal and abnormal conditions. This training shall include, but not be limited to:

1. Orientation to provide overview of system/subsystem purpose, configuration, and operations.
2. Terminology.
3. Operations theory and interface.
4. Equipment appearance, functions, concepts and operation.
5. Operating modes, practices, and procedures under normal and emergency conditions.
6. Safety precautions.
7. On-the-job operating experience covering all system/subsystem operating functions, activities, and tasks including those associated with degraded operating modes; failure recognition, and recovery processes.
8. Familiarity with the content and use of O&M manuals and related reference publications.

J. Maintenance Training: Maintenance training shall cover all on-site routine preventive, and remedial maintenance of the system/subsystem. This training shall include, but not be limited to:

1. Orientation to provide overview of system/subsystem purpose, configuration, and operations.
2. Terminology.
3. Operations theory and interfaces.
4. Equipment appearance, layout, functions, concepts and operations.
5. Operating modes, practices, and procedures under normal and emergency conditions.
6. Safety precautions.
7. Use of tools and test equipment.
8. Preventive maintenance.
9. Troubleshooting, diagnostic, and testing.
10. Assembly and disassembly.
11. Repair and parts replacement.
12. Parts ordering practices and storage.
13. Failure and recovery procedures.
14. System/subsystem cabling.

15. Familiarity with and use of O&M manuals and other reference materials.

K. Computer Software Training: Computer software training shall cover the use, management, development, and maintenance of system/subsystem software. This training shall include, but not be limited to:

1. Orientation to provide overview of system/subsystem concepts, configurations, and operation.
2. Basis programming and software architecture.
3. System executive and utility program.
4. Application program.
5. Modification of command lines codes.
6. Interrupt logic.
7. Intra-and inter system interfaces.
8. Processor system operating procedures.
9. Diagnostics.
10. Communications software.
11. File management.
12. Hands-on training.
13. Safety precautions.
14. Familiarization with and use of O&M manuals and other reference materials.

L. Operations-Supervisor Training: Supplemental and specialized training shall be provided for supervisor level trainees. This training shall impart the knowledge and skills necessary to schedule, supervise, and improve the proficiency of operating and computer software personnel.

M. Operations - Instructor Training: Supplemental and specialized training shall be provided to prepare graduate trainees or nominated instructors successfully to instruct future trainees in system/subsystem operations and computer software.

N. Maintenance - Supervisor Training: Supplemental and specialized training shall be provided for supervisory level trainees. This training shall impart the knowledge and skills necessary to schedule, supervise, and improve the proficiency of maintenance personnel.

O. Maintenance - Instructor Training: Supplemental and specialized training shall be provided to prepare graduate trainees or nominated instructors successfully to instruct future trainees in all phases of system/subsystem maintenance.

P. Cleanup: Collect used and leftover educational materials and remove from instruction location. Remove instructional equipment. Restore systems and equipment to condition existing before initial training use.

1.15 INSTRUCTION

A. Facilitator: Engage a qualified facilitator to prepare instruction program and training modules, to coordinate instructors, and to coordinate between Contractor and the Employer for number of participants, instruction times, and location.

B. Engage qualified instructors to instruct the Employer's personnel to adjust, operate, and maintain systems, subsystems, and equipment not part of a system.

1. The Engineer will furnish an instructor to describe basis of system design, operational requirements, criteria, and regulatory requirements.
2. The Employer will furnish an instructor to describe the Employer's operational philosophy.
3. The Employer will furnish Contractor with names and positions of participants.

C. Scheduling: Provide instruction at mutually agreed-on times. For equipment that requires seasonal operation, provide similar instruction at start of each season.

1. Schedule training with the Employer with at least seven (7) days' advance notice.

D. Training Location and Reference Material: Conduct training on-site in the completed and fully operational facility using the actual equipment in-place. Conduct training using final operation and maintenance data submittals.
E. Evaluation: At conclusion of each training module, assess and document each participant's mastery of module by use of a verbal and written performance-based test.
F. Cleanup: Collect used and leftover educational materials and remove from Project site. Remove instructional equipment. Restore systems and equipment to condition existing before initial training use.

1.16 DEMONSTRATION AND TRAINING VIDEO RECORDINGS

A. General: Engage a qualified commercial videographer to record demonstration and training video recordings. Record each training module separately. Include classroom instructions and demonstrations, board diagrams, and other visual aids, but not student practice.

1. At beginning of each training module, record each chart containing learning objective and lesson outline.

B. Digital Video Recordings: Provide high-resolution, digital video in MPEG format, produced by a digital camera with minimum sensor resolution of twelve (12) megapixels and capable of recording in full HD mode with vibration reduction technology.

1. Submit video recordings on CD-ROM or thumb drive by uploading to web-based Project software site.
2. File Hierarchy: Organize folder structure and file locations according to Project Manual table of contents. Provide complete screen-based menu.
3. File Names: Utilize file names based on name of equipment generally described in video segment, as identified in Project specifications.
4. Contractor and Installer Contact File: Using appropriate software, create a file for inclusion on the equipment demonstration and training recording that describes the following for each Contractor involved on the Project, arranged according to Project Manual table of contents:

    a. Name of Contractor / Installer.
    b. Business address.
    c. Business phone number.
    d. Point of contact.
    e. Email address.

C. Recording: Mount camera on tripod before starting recording, unless otherwise necessary to adequately cover area of demonstration and training. Display continuous running time.

1. Film training session(s) in segments not to exceed fifteen 15 minutes.

    a. Produce segments to present a single significant piece of equipment per segment.
    b. Organize segments with multiple pieces of equipment to follow order of Project Manual table of contents.
    c. Where a training session on a particular piece of equipment exceeds 15 minutes, stop filming and pause training session. Begin training session again upon commencement of new filming segment.

D. Light Levels: Verify light levels are adequate to properly light equipment. Verify equipment markings are clearly visible prior to recording.

1. Furnish additional portable lighting as required.

E. Narration: Describe scenes on video recording by audio narration by microphone while dubbing audio narration off-site after video recording is recorded. Include description of items being viewed.

F. Transcript: Provide a transcript of the narration. Display images and running time captured from videotape opposite the corresponding narration segment.
G. Preproduced Video Recordings: Provide video recordings used as a component of training modules in same format as recordings of live training.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)

END OF SECTION 017900

SECTION 017905 - CONSTRUCTION ENVIRONMENTAL MANAGEMENT GUIDELINES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Particular Conditions and other Division 01 Specifications sections, apply to this Section.

1.2 PURPOSE OF DOCUMENT

A. The following General Guidelines are prepared to assist the Contractor undertake their construction activities in a manner that will least damage the environment and cause least disruption to local communities.

B. These Guidelines represent good practice that may be followed by the Contractor. They are based on current construction practices but should not be seen as limiting to the Contractor.

C. This Section shall be read in conjunction with the general provisions of the Contract, including General and Particular Conditions, Construction Environmental Management Plan (CEMP), and applicable relevant accredited international standards and specifications latest version.

1.3 RESPONSIBILITIES

A. The Contractor shall be responsible for full compliance with these Guidelines.

B. The Contractor and his sub-contractors shall be audited and / or asked to provide information at any time during the construction phase by the Engineer or by the Environmental Consultant.

C. These Guidelines do not negate or contradict the responsibility of the Contractor to comply with the provisions of the Construction Environmental Management Plan (CEMP) if exist in full and any environmental protection measures of relevant accredited international standards and specifications latest version and local regulations.

D. There are several acts, statutes and regulations that govern aspects of likely Contractor activity and No Objection certification may be required from various agencies. Many of these agencies are mentioned in the Guidelines. However, the responsibility for obtaining all approvals rests with the Contractor.

E. In considering this, the Contractor must be aware, and confirm in writing, that he shall abide by the Guideline at his sole risk.

F. Electronic copy of documents containing approved plans or permits shall be stored on the specified the Employer Project web site and be available for reference at all times.

G. The Contractor shall maintain a register of all complaints and shall provide electronic copy of these records to the Employer in their monthly report.

H. The Contractor shall identify personnel responsible for implementation, monitoring and updating of any Management Plans required by these Guidelines.

1.4 GUIDANCE AND TRAINING OF PERSONNEL

A. The Contractor must ensure that all their workers and employees are adequately inducted and are well aware of the requirements of relevant accredited international standards and specifications latest version and local regulations and requirements Standards the Construction Environmental Management Guidelines (CEMG) if exists and other legal requirements. It will be the individual responsibility of each worker and employee to ensure their activities and actions do not cause pollution to either the terrestrial or aquatic environments.

B. The Contractor and his sub-contractors must also ensure their workers are made aware of any known or possible activities that could potentially be hazardous to the environment, and they are required to arrange adequate training and instruction for all site personnel in the procedures to be followed to avoid such hazards.

C. The Contractor and his sub-contractors are required to have in place a Health, Safety, Security, Environment, and Social Welfare Plan acceptable to the Employer.

D. Toolbox talks shall be done prior to the task being carried out so as to ensure each team member is fully aware of their responsibilities. Training topics that shall be addressed during toolbox talks include the emergency response procedures and use of spill prevention and clean-up kits, asbestos management, implementation of specific environmental safeguard measures and cultural change towards environment.

1.5 USE OF ENVIRONMENTALLY FRIENDLY AND SAFE MATERIALS

A. All materials used on the sites must be permitted for use and considered to be “environmentally friendly” and safe; for example, lead-free paints and asbestos-free materials are to be used instead of paints and materials that contain these toxic substances.

B. Contractor and his sub-contractors have a duty to proactively seek safer and more environmentally friendly alternatives for all materials currently being used.

1.6 CONSTRUCTION ACTIVITIES

A. The Contractor shall comply with relevant construction requirements and environmental legislation. It will be the responsibility of the Contractor to initiate procedures to prevent pollution, which could arise from Contractor operations and endeavor to reduce the impact upon the environment through continuous improvement in performance.

B. All construction works are to be carried out in such a way so as to minimize disturbance to the environment. In particular, construction work shall be carried out in such a manner that there is no damage to or interference with the following other than to the extent that is necessary for them to be removed or diverted to permit the execution of the Works within the defined operational perimeter:

1. Drainage systems.
2. Public utilities.
3. Structures, roads, or other property; and,
4. Public and private vehicular and pedestrian access.

C. Any facilities disturbed or damaged directly or indirectly due to construction operations shall be restored to their original condition. The Contractor shall discuss his restoration plans with the Employers concerned prior to the start of restoration work to obtain the agreement of the Employers concerned.

D. Appropriate measures shall be implemented during earthworks, stockpiling, concreting, bitumen application and other construction works to suppress dust, prevent toxic fumes and abate noise.

E. The Contractor shall maintain and clean all working areas and temporary buildings on a regular basis and shall at all times keep access to work sites free of all debris, waste and excavated material and other obstructions.

F. The Contractor shall post at least one sign no smaller than 2m2 in a prominent position at all active construction sites that give the name and telephone numbers or e-mail address of the appropriate representative of the Contractor the public may contact to complain about construction activities.

1.7 CONSTRUCTION EQUIPMENT

A. All equipment shall be well maintained, certified (where required) and in good working condition at all times to ensure safe operation with minimal emissions and operational noise. Emission and noise limitation devices installed by the manufacturer shall be maintained and serviced or replaced at intervals not greater than that recommended by the manufacturer.

B. Equipment should be operated only by trained and experienced operators, in an efficient manner, in accordance with the manufacturers' instructions. A register of all persons trained to operate the specialist equipment types similar to that shown in Annex 1 shall be maintained on site.

C. Carrying out repairs (whether minor or major) on alongside roads or on open ground is prohibited. Broken-down vehicles/equipment shall be moved to the workshop for repair or servicing.

D. Routine servicing such as on-the-job addition of oil, lubrication and refueling shall be done with utmost care at designated locations. Designated locations shall be prepared such that the potential adverse effects of accidental hydrocarbon spills are minimized.

E. Post operation cleaning of all machines and heavy equipment such as concrete mixers, truck washing, etc. shall be carried out within a specified washing area that is bunded and paved to prevent ground or aquatic pollution.

F. Portable devices for the measurement of noise and exhaust emissions will be provided by Contractor to the approval of the Engineer.

1.8 POLLUTION

A. Prevention of Water Pollution

1. Construction activities shall be performed by methods that will prevent the entrance or accidental spillage of solid matter, contaminants, debris, and other objectionable pollutants and wastes into the underground aquifer or surface water courses. Such pollutants and wastes include, but are not limited to refuse, cement, concrete, industrial wastes and aggregate tailings.
2. No domestic wastewater may be directly discharged onto or into the ground. The Contractor shall consult with the Employer and agree on the nature, nature and location of any temporary on-site cleansing facilities. Once this has been agreed the contractor shall submit provide a program for wastewater collection and disposal to the Employer for approval.
3. In approving these programmed, the Employer shall ensure that:

    a. The locations of facilities are such as to minimize the risk of direct discharge of wastewaters into shallow aquifers.
    b. Any equipment used for collection and disposal is 'fit-for-purpose'; and,
    c. Operators of such equipment are appropriately trained in its use and are suitably protected against public health and other risks.
    d. Any industrial wastewater generated on site shall be disposed of in accordance with the requirements of the Authorities.

B. Prevention of Soil Pollution

1. The Contractor is required to perform all construction activities by methods that will prevent contamination of the soil by accidental spillage of solid matter, contaminants, debris, and other objectionable pollutants.
2. Minor spills shall be cleaned up immediately in compliance with appropriate MSDS (Materials Storage Details Sheet) and recommended clean up procedures.

C. Remediation

1. If a significant spillage does occur the Contractor will remove all contaminated soil to a site specified by the Employer for disposal and where necessary appropriate replacement material shall be laid. Remediation costs will be borne by the Contractor.

1.9 SITE BOUNDARY

A. The Contractor shall confine activities to site boundaries agreed with the Employer. This applies to all activities including site offices, labor accommodation (where permitted), workshops, warehouses, equipment storage and operation, vehicle parking and associated Contractor's facilities, except and unless agreed with the Employer.

B. All site boundaries shall be clearly identified with the use of either temporary walls or other marking systems approved by the Engineer.

1.10 PUBLIC SERVICES AND UTILITIES

1. Prior to any excavation or performance of any other work directly or indirectly affecting any utility (underground, overhead or on the surface), written authorization shall be obtained from the utility Employer and provider. All works carried out shall conform to utility Employer's and providers' requirements.
2. After co-ordination with the utility agencies, field checks of utility data, including the obtaining of additional data as necessary, shall be undertaken, and before starting work Utilities Work Plans shall be prepared by the Contractor. These Plans will address:

    a. Utilities proposed for temporary support in-place and subsequent restoration.
    b. Temporary relocation with subsequent permanent restoration in-place with the removal or abandonment of the temporary facility.
    c. Permanent relocation with existing facility to be removed or abandoned in-place.
    d. Measures to ensure continuity of operation of the affected utilities in a safe manner.
    e. Procedures to maintain the affected utilities to ensure safety and unhindered function of each utility.
    f. Whether the work will be performed by the utility authority or the Contractor.
    g. Traffic diversion plans and schedules if the utilities to be diverted are within streets.

3. During construction works the utility authorities must be informed of:

    a. Damage to any utility.
    b. Leakage from any utility.
    c. Discovery of utilities not previously identified; and,
    d. Diversion, removal, repositioning, re-erection of utilities that may be required to enable work to proceed.

1.11 WATER SUPPLY AND USE

A. The Contractor shall prepare a Water Plan. This Plan shall contain at minimum:

1. Details of the water source and storage.

2. The method of abstraction.
3. The method of distribution.
4. The provision of access to abstraction points; and,
5. The quantity of permitted extraction, and where relevant, the timing of permitted extraction.

B. If the Contractor exceeds the estimated annual daily average water consumption contained in the Water Plan over any one calendar year, he shall be required to do at least one of the following:

1. Reduce water consumption.
2. Apply for an increase in water allocation; and/or,
3. Seek other sources of water.

1.12 PUBLIC HYGIENE AND SANITARY FACILITIES

A. The Contractor shall supply adequate sanitary facilities to all site(s) including restrooms, showers, water tanks, cold drinking water facilities and solid waste collection systems.

B. All proposed liquid sanitary facilities shall be in accordance with relevant accredited international standards and specifications latest version and local regulations and approved by the Engineer. If a separate system is required, it shall collect all wastewater generated and drain it to a centralized and containerized collection system (septic tanks or similar). Routine checks shall be made to ensure zero leakage from the system.

C. It is not permitted to channel wastewater through a drain to underground or open water bodies.

D. It is not permitted to use open ground for sanitary purposes, including bathing, defecation, urination, cooking, washing dishes or other items, laundry, or other activities that may pose a risk to human health and local ecosystems.

1.13 WASTE MANAGEMENT

A. The Contractor is required to develop a Waste Management Plan (WMP). This will apply to all sites and will be submitted to the Engineer for approval.

B. The Contractor shall at all times keep construction areas, repair shops, storage sites and other areas under his control free from the accumulation of waste material, construction debris and rubbish. Littering of any site in any form, volume or location is prohibited.

C. Suitable dedicated areas with easy access for vehicles shall be allocated for the storage of construction debris/solid waste material prior to disposal. Suitable skips/garbage bins shall be provided on site to enable proper collection.

D. It shall be the responsibility of the Contractor to arrange for the timely collection of sewage and solid waste from the site.

E. It is prohibited to dispose of waste at any site not defined in the approved WMP. Burning of any waste is strictly forbidden.

F. Works that involve onsite filling with material other than virgin excavated natural material require prior approval by the Engineer.

1.14 CONSTRUCTION TRAFFIC

A. The Contractor shall prepare an Access Management Plan (AMP) for approval by the Engineer.

1.15 NON-HAZARDOUS MATERIALS STORAGE

A. Wherever possible, the Contractor shall ensure that all Aggregate, Fill and Spoil Heaps shall be of a size and stability that will ensure the risk of mass movement in periods of rainfall is minimized. To this end the Contractor shall ensure that all such heaps are located at sites that:

1. Do not permit direct run off into water courses.
2. Are generally on flat land, slopes as per relevant international standards and specifications latest version and local regulations.

B. The on-site storage of excessive quantities of such materials should also be avoided.

C. Spill clean-up procedures must be clearly displayed in all material storage areas, with nominated, trained personnel responsible for equipment maintenance and use. All equipment necessary to enact defined clean up measures must be in place at each site, and regularly inspected and tested to ensure it remains operational.

1.16 HAZARDOUS MATERIALS STORAGE AND USE

A. Prior to the commencement of construction, the Contractor shall provide the Engineer with an Initial Materials Inventory (IMI) that will list ALL materials to be stored at each site. This will be accompanied by a Materials Storage Details Sheet

B. (MSDS) for each material, together with details of the proposed storage location and description of the storage facility for each material.

C. The Inventory must specify the purpose/intended use of all hazardous materials that may be stored on site and the quantities required.

D. All hazardous materials shall be used only for their intended and specified purpose and be safely used/installed in strict conformance with the manufacturer's instructions.

E. An up-to-date register of all potentially hazardous materials stored on site must be kept with the Contractor's Environmental Protection Officer. This must include material types, quantities, storage methods, locations and accompanying MSDSs.

F. Clean-up procedures and equipment must be clearly displayed in all hazardous materials storage areas, with nominated, trained personnel responsible for equipment maintenance and use.

G. If during the Contract, the Contractor wishes to store/use a hazardous material that was not listed on the IMI they must seek approval from Engineer prior to the procurement of the material. The request for approval should include the quantity of the material it is proposed to use, a MSDS, the proposed storage location and description of the storage facility.

H. Minor hydrocarbon spills shall be cleaned immediately using appropriate absorbent granules and powders. Flushing of the spill site shall not be permitted until such measures are taken and the majority of the spill is absorbed. Other spills of other substances will be cleaned up in a manner compatible with the MSDS.

I. In the event of a serious spill, and/or contamination, the Contractor shall notify the Engineer immediately and the relevant Emergency Response Plan (ERP) put into action. In this regard any remedial works required to be undertaken by the Contractor or any third party shall be undertaken at the Contractor’s cost. Failure to notify the Engineer of such incidents will be considered a breach of contract.

J. All hazardous waste containers to be labelled clearly with a waste hazard identification label.

K. Hazardous wastes shall be stored in impervious containers for transport by hazardous waste contractors to the appropriate landfill or hazardous waste facility.

1.17 NOISE CONTROL

A. Local Order places responsibility for adopting the 'best practical means of ensuring the emission of noise does not exceed a reasonable level' upon the Employers, occupiers, and supervisors of premises and the drivers of vehicles.

B. The level of noise the LO considers reasonable should be as per relevant accredited [international standards and specifications latest version] [local regulations].

C. Construction equipment will often exceed these levels. However, Contractor shall be expected to limit the nuisance that may be so caused by application the following general noise abatement measures.

1. The Contractor shall maximize the potential for noise attenuation with distance by the placement of noisy plant and machinery away from site boundaries.
2. Advance and regular notification of construction activity schedules shall be provided to potentially affected residents.
3. In the conduct of general construction activities and the operation of other equipment, the Contractor shall utilize all practical methods and devices as are reasonably available to control, prevent and otherwise minimize noise disturbance.
4. The Contractor shall ensure all equipment is properly maintained and shall conform to relevant accredited [international standards and specifications latest version] [local regulations] sound level emissions:
5. The Contractor shall be responsible for monitoring equipment noise levels.

D. Workmen and others present in the vicinity of noise generating sources or operations, particularly those working in trenches or other confined areas, shall be provided with protective devices such as earmuffs.

E. The Contractor shall maintain a telephone line to which members of the public may report noise complaints. The line shall be staffed during all work periods. If any noise level gives rise to public complaints, it shall be treated as a nuisance and the Contractor shall take immediate steps to mitigate the problem.

1.18 AIR QUALITY

A. The Contractor shall comply with relevant accredited international standards and specifications latest version and local regulations.

B. Dust Abatement

1. Throughout the performance of the works the Contractor shall furnish all necessary labor, equipment, materials and means required to carry out effective measures, wherever and as often as necessary, to prevent dust that has originated from his operations causing a nuisance or health hazard to persons.
2. Specific dust suppression measures, may include:
3. The provision of water troughs at site entry and exit points to prevent the carry over, beyond the construction site, of dust emissions.
4. Use of appropriate hoardings.
5. Establishment of speed restrictions for all vehicles operating within the construction site, and/or on access roads to the site.
6. Covering all vehicles transporting materials likely to give off excessive dust emissions.
7. Maintenance of construction site access roads in such a way as to minimize fugitive dust emissions. Water shall be lightly sprayed on exposed ground during dry and windy periods.

8. Adoption of methods of handling cement and pozzolanic that eliminate atmospheric discharges.
9. The Contractor will be held liable for any damages resulting from dust originating from his operations.

C. Other Atmospheric Pollution

1. In operating equipment, the Contractor shall utilize all practical methods and devices as are reasonably available to control, prevent and otherwise minimize atmospheric emissions or the discharge of air contaminants. Equipment and vehicles that show excessive emissions due to poor engine adjustment or other inefficient operating conditions shall be taken out of service and not be deployed again until corrective measures to the satisfaction of the Engineer have been taken.
2. The Contractor shall, where feasible, use clean fuel equipment and emissions control technology for diesel powered engines. Measures to reduce diesel emissions are considered feasible when they are capable of being used on equipment without interfering substantially with equipment performance.
3. Burning of materials resulting from the clearance of trees, bushes and other combustible materials shall not be permitted without the specific approval of the Engineer.

D. Implementing methods of reducing wind speed such as wind barriers in the form of a structure or vegetative barrier, around potentially dusty activities / areas and limiting activities during extremely windy conditions.

1.19 ECOSYSTEMS AND WILDLIFE

A. It shall be strictly forbidden to directly or indirectly cause harm to the fauna (birds, mammals, reptiles) inhabiting the site or their habitats. This does not apply to the removal of recognized pest species by qualified IPC professionals.

B. The Contractor shall impose a total ban on hunting, the capture of species and egg collecting, and on the destruction of habitats through any activity not defined in the contract.

C. All Contractor's staff are to be advised of the requirements above, and of the penalties for non-compliance that will be imposed by the Contractor. In all cases this shall comprise dismissal, and in the event that the actions are deemed to have contravened the relevant adopted accredited [international standards and specifications latest version] [local regulations], prosecution under the relevant law.

D. The penalties to be imposed on staff contravening the requirements of these guidelines shall apply equally to misdemeanors within and outside working hours.

E. The Contractor shall vigorously enforce these penalties.

1.20 TRANSPORT OF CONSTRUCTION WORKFORCE

A. The Contractor is required to ensure that any and all members of the construction workforce legitimately utilizing company vehicles is transported securely and safely.

B. The following provisions are made in this regard:

C. All vehicles used for the transport of staff must be expressly designed for the purpose of transporting people.

D. All drivers of vehicles used for the transport of people must hold a license that permits them to drive that category of vehicle.

E. Any vehicles over 3 years old and used for the transport of staff must be subject to an annual safety inspection.

F. No personal vehicles will be permitted on site without prior approval of the Contractor.

G. No personal vehicle may be used to transport the company workforce on company business.

H. No parking of personal or unauthorized vehicles will be permitted without prior approval of Contractor.

1.21 CULTURAL HERITAGE SITES

A. In undertaking the works the Contractor and his sub-contractors shall be aware, and make all his staff and workers, aware, of the presence of "Listed" archaeological sites within the Site, the location of which shall have been provided during the bidding process.

B. The Contractor shall make provision for the monitoring of ground-breaking activities greater than 40mm in depth at all listed sites and apply a "chance find" procedure at all other times.

C. In the event that previously unidentified cultural resources are discovered, the Contractor shall cease work in the immediate area and report the find to Employer and relevant authorities.

D. In the event that human skeletal remains are encountered, Contractor will be required to immediately notify relevant authority and no further works may continue until clearance to continue has been issued by the relevant authority.

1.22 HEALTH AND SAFETY

A. Identification and provision of appropriate personal protective equipment (PPE), on-going job specific occupational health and safety training and monitoring, as well as ongoing safety checks and safety audits will be conducted.

B. Provision of appropriate first aid and medical supplies and the location and route to the nearest hospitals will be identified and form part of the on-site workforce training.

1.23 POST-CONTRACT ACTIVITIES AND DEMOBILIZATION

A. Upon completion of all works contracts, all project sites shall be cleaned up; all construction debris, waste and surplus material and rubbish shall be removed and the site and other affected areas shall be fully restored.

B. Final approval and hand over of completed construction sites and Contractor demobilization shall be subject to certification of environmental compliance by the Employer. The approval certification shall be based on a field assessment carried out by the Engineer with the Contractor, and potentially other Authorities as required.

C. It may be necessary to carry out a series of remediation activities to mitigate adverse impacts before approval is granted.

1.24 ANNEX 1 REGISTER OF TRAINED OPERATORS

Operator Name	Equipment Authorised to Operate	Training and Operational History	Authorising Authority

END OF SECTION 017905

SECTION 018113.14 - SUSTAINABLE DESIGN REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings, Bill of Quantities and general provisions of the Contract, including General and Particular Conditions, schedules and other Specification Sections, apply to this Section.

B. Division 01 Section 015000 Temporary Facilities and Controls

C. Division 01 Section 017419 Construction Waste Management

D. Division 01 Section 019113 General Commissioning Requirements

1.2 SUMMARY

A. General considerations:

1. Specific requirements for sustainability are also included in other Sections and should be abided by.

2. Other sustainability requirements depend on product selections. Compliance with requirements needed may be used as one criterion to evaluate substitution requests and comparable product requests.

3. Sustainability criteria checklist:

a. Sustainability requirements needed depend on Engineer's design and other aspects of Project.

b. The Contractor should abide by the minimum Sustainability requirements.

c. The Contractor to abide by any new requirement dictated by the updated Sustainability strategy.

d. Sustainability requirements may be updated in future stages based on design developments or due to any other aspect of the Project.

e. Sustainability requirements must be achieved by the Contractor including the design and construction requirements. Contractor is to review the package received for Tender and acquire all documentations needed for early design from the original designer.

f. When several options are available to achieve the Sustainability requirements, the option to be followed shall be agreed with the Engineer before the start of the work.

4. The commissioning scope should cover all the requirements dictated by Section 019113 “General Commissioning Requirements”.

es

1.3 DEFINITIONS

A. Chain of Custody (CoC): a procedure that tracks a product from the point of harvest or extraction to its end use, including all successive stages of processing, transformation, manufacturing, and distribution.

B. Construction Activity Pollution Prevention: To reduce pollution from construction activities by controlling soil erosion, waterway sedimentation, and airborne dust.

C. Cradle-to-gate assessment: Analysis of product's partial life cycle, from resource extraction (cradle) to the factory gate (before it is transported for distribution and sale), it omits the use and the disposal phases of the product.

D. Environmental Product Declaration: A statement that the item meets the environmental requirements of ISO 1402-1999, ISO 14025-2006 and EN 15804 or ISO 21930-2007.

E. Extended Producer Responsibility: Measures undertaken by the maker of a product to accept its own and sometimes other manufacturers' products as postconsumer waste at the end of the products' useful life. Producers recover and recycle the materials for use in new products of the same type. To count toward credit compliance, a program must be widely available. For carpet, extended producer responsibility must be consistent with NSF/ANSI 140–2007. Also known as closed-loop program or product take-back.

F. Life-cycle assessment: An evaluation of the environmental effects of a product from cradle to grave, as defined by ISO14040-2006 and 14044-2006.

G. Raw Material: The basic substance from which products are made, such as concrete, glass, gypsum, masonry, metals, recycled materials (e.g., plastics and metals), oil (petroleum polylactic acid), stone, agrifiber, bamboo, and wood.

H. Recycled Content: The recycled content value of a material assembly shall be determined by weight. The recycled fraction of the assembly is then multiplied by the cost of assembly to determine the recycled content value.

1. Postconsumer recycled content: Waste generated by households or commercial, industrial and institutional facilities in their role as end users of a product that can no longer be used for its intended purpose.
2. Preconsumer recycled content: Matter diverted from the waste stream during the manufacturing process, determined as the percentage of material, by weight. Examples include planer shavings, sawdust, bagasse, walnut shells, culls, trimmed materials, over issue publications, and obsolete inventories. The designation excludes rework, regrind, or scrap materials capable of being reclaimed within the same process that generated them (ISO 14021).

I. Regional Materials: Materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site. If only a fraction of a product or material is extracted/harvested/recovered and manufactured locally, then only that percentage (by weight) shall contribute to the regional value.

J. Reuse: The reemployment of materials in the same or a related capacity as their original application, thus extending the lifetime of materials that would otherwise be discarded. Reuse includes the recovery and reemployment of materials recovered from existing building or construction sites. Also known as salvage.

K. Solar Reflectance Index (SRI): The measure of a constructed surface's ability to stay cool in the sun by reflecting solar radiation and emitting thermal radiation. SRI values range from zero (solid black surface) to 100 (solid white surface). SRI value of a material is calculated according to ASTM E1980 and based on the aged tested values of solar reflectance and thermal emittance.

es

L. Wood: Plant-based materials that are eligible for certification under the Forest Stewardship Council. Examples include bamboo and palm (monocots) as well as hardwoods (angiosperms) and softwoods (gymnosperms).

1.4 PREINSTALLATION CONFERENCE:

A. Contractor to conduct conference at site to review Sustainability requirements and action plans to meet the compliance and certification requirements and achieve all construction requirements and materials procurement requirements.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Respond to questions and requests from the Engineer regarding Sustainability requirements that are the responsibility of the Contractor, and which depend on product selection or product qualities, or which depend on Contractor's procedures.

B. Submit documentation to Engineer respond to questions and requests from the Engineer regarding Sustainability requirements that are the responsibility of the Contractor, that depend on product selections or product qualities, or that depend on the Contractor's procedures.

1. Document correspondence as informational submittals.

1.6 ACTION SUBMITTALS

A. General: Submit additional Sustainability submittals required in other Specification Sections.

B. Sustainable design submittals are in addition to other submittals.

1. If submitted item is identical to that submitted to comply with other requirements, include an additional electronic copy with other submittal as a record of compliance with indicated Sustainability requirements instead of separate sustainable design submittal. Mark additional copy "Sustainable design submittal."

C. Sustainable Design Documentation Submittals:

1. Documentation for luminaires indicating BUG ratings, lumens emitted, and vertical illuminance values.
2. Documentation for compliant paving materials indicating the SRI, SR, and permeability.
3. Documentation for compliant roofing materials indicating the SRI.
4. Product Data and certification for Water Sense-labeled water fixtures.
5. Product Data for plumbing fixtures indicating flush or flow rate.
6. Environmental Product Declarations (EPDs) complying with Sustainability requirements.
7. Documentation for products that have a compliant embodied carbon optimization report or action plan separate from the LCA or EPD.
8. Documentation for products that comply with Sustainability requirements for multi-attribute optimization.
    a. Include documentation for regional materials, indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material and costs of regional materials.
    b. Include documentation for any applicable third-party certifications.
9. Sustainability reports for products that comply with Sustainability requirements for raw material and source extraction reporting.

es

a. Extended producer responsibility. Products purchased from a manufacturer (producer) that participates in an extended producer responsibility program or is directly responsible for extended producer responsibility. Products meeting extended producer responsibility criteria are valued at 50% of their cost for the purposes of target achievement calculation.
b. Bio-based materials. Bio-based products and materials other than wood must be tested using ASTM Test Method D6866 or equivalent method ISO 16620-2 or be certified to the USDA BioPreferred Voluntary Labeling Initiative that includes verification via ASTM 6866 testing. Exclude hide products, such as leather and other animal skin materials.
    1) Bio-based products that meet the criteria above: value at 50% of cost multiplied by the biobased content of the product for the purposes of target achievement calculation.
c. Wood products. Wood products must be certified by the Forest Stewardship Council or USGBC-approved equivalent. Products meeting wood products criteria are valued at 100% of their cost for the purposes of target achievement calculation.
d. Materials reuse. Reuse includes salvaged, refurbished, or reused products. Products meeting materials reuse criteria are valued at 200% of their cost for the purposes of target achievement calculation.
e. Recycled content. Products meeting recycled content criteria are valued at 100% of their cost for the purposes of target achievement calculation.
    1) Recycled content is the sum of postconsumer recycled content plus one-half the preconsumer recycled content, based on weight.
    2) The recycled fraction of the assembly is then multiplied by the cost of assembly to determine the recycled content value.

10. Documentation for products that comply with Sustainability requirements for leadership extraction practices. Include the following:
    a. Product Data and certification letter from product manufacturers, indicating participation in an extended producer responsibility program and statement of costs.
    b. Product Data and certification for bio-based materials, indicating that they comply with requirements. Include statement of costs.
    c. Product Data and chain-of-custody certificates for products containing certified wood. Include invoices.
    d. Receipts for salvaged and refurbished materials used for Project, indicating sources and costs.
    e. Product Data and certification letter from product manufacturers, indicating percentages by weight of postconsumer and preconsumer recycled content for products having recycled content. Include statement of costs.
    f. Documentation for regional materials, indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material and costs of regional materials.
11. Material ingredient reports for products that comply with Sustainability requirements for material ingredient reporting.
    a. ANSI/BIFMA e3 Furniture Sustainability Standard The documentation from the assessor or scorecard from BIFMA must demonstrate the product earned at least 3 points under 7.5.1.3 Advanced Level in e3-2014 or 3 points under 7.4.1.3 Advanced Level in e3-2012.
    b. Cradle to Cradle. Product has Material Health Certificate or is Cradle to Cradle Certified™ under standard version 3 or later with a Material Health achievement level at the Bronze level or higher
    c. Declare. The Declare product label must meet the following requirements:
    d. Declare labels designated as Red List Free, LBC Red List Free, or Declared.
    e. Declare labels designated as LBC Red List Approved or LBC Compliant that demonstrate content inventory to 0.1% (1,000 ppm).
    f. Facts – NSF/ANSI 336: Sustainability Assessment for Commercial Furnishings Fabric at any certification level.
    g. Global Green TAG. Product Health Declaration (PHD) labels issued after January 1, 2020.

es

h. Health Product Declaration. The end use product has a published and complete Health Product Declaration with full disclosure of known hazards in compliance with the Health Product Declaration Open Standard.
i. Living Product Challenge. The included Declare product label must demonstrate content inventory to 0.1% (1,000 ppm).
j. Manufacturer Inventory. The manufacturer has published complete content inventory for the product following these guidelines:
k. A publicly available inventory of all ingredients identified by name and Chemical Abstract Service Registration Number (CASRN) and/or European Community Number (EC Number).
l. Materials defined as trade secret or intellectual property may withhold the name and/or CASRN/EC Number but must disclose ingredient/chemical role, amount and hazard score/class using either:
m. Greenscreen List Translator (LT) score and/or Full GreenScreen Benchmark (BM)
n. The Globally Harmonized System of Classification and Labeling of Chemicals rev.6 (2015) (GHS)
o. Product Lens Certification

12. Documentation for products that comply with Sustainability requirements for material ingredient optimization. (Reach Optimization, Declare, etc.)
13. Documentation for products that comply with Sustainability requirements for product manufacturer supply chain optimization.

    a. Include documentation for regional materials, indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material and costs of regional materials.

14. Documentation complying with Section 017419 "Construction Waste Management and Disposal."
15. Product Data for adhesives and sealants used inside weatherproofing system, indicating VOC content and laboratory test reports showing compliance with requirements for low-emitting materials.
16. Product Data for paints and coatings used inside weatherproofing system, indicating VOC content and laboratory test reports showing compliance with requirements for low-emitting materials.
17. Laboratory test reports for flooring, indicating compliance with requirements for low-emitting materials.
18. Laboratory test reports for products containing composite wood or Agri fiber products or wood glues, indicating compliance with requirements for low-emitting materials.
19. Laboratory certificates for compliant composite wood products.
20. Laboratory test reports for ceilings, walls, and thermal insulation, indicating compliance with requirements for low-emitting materials.
21. Construction Indoor-Air-Quality (IAQ) Management:

    a. Construction IAQ ESplan.
    b. Product data for temporary filtration media.
    c. Product data for filtration media used during occupancy.
    d. Construction Documentation: Six photographs at three different times during the construction period, along with a brief description of the SMACNA approach employed, documenting implementation of the IAQ management measures, such as protection of ducts and on-site stored or installed absorptive materials.

22. IAQ Assessment:

    a. Signed statement describing the building air flush-out procedures, including the dates when flush-out was begun and completed and statement that filtration media was replaced after flush-out.
    b. Product data for filtration media used during flush-out and occupancy.
    c. Report from testing and inspecting agency indicating results of IAQ testing and documentation showing compliance with IAQ testing procedures and requirements.

23. Construction Activity Pollution Prevention:

    a. Before construction begins, create and submit a construction activity pollution prevention plan that includes dust control plan and erosion and sedimentation control plan for all construction activities associated with the project. The erosion and sedimentation control plan must conform to the related regulations, local orders and their executive orders, technical guidelines, guides and construction safety codes and practices. The plan must describe measures implemented.

24. Laboratory test reports of products complying with heat island reduction requirement including, Solar Reflectance (SR) for Nonroof measures and Solar Reflectance Index (SRI) for Roof measures.
25. Submit all narratives, plans, as-built drawings, plans, elevations, calculators to confirm compliance, quality checked and reviewed to the Engineer.
26. Submit all drawings and calculations
27. Cooling Tower Water Use
    a. Project site's potable water analysis results and non-potable water (if applicable) analysis results. At a minimum, the analysis must measure the following concentration parameters (Ca (as $CaCO_3$), Total alkalinity, SiO_2, Cl^-, Conductivity)
    b. Potable and non-potable water analysis narrative.
    c. Cycle of concentrations calculations and narrative.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Sustainability coordinator.

B. Project Materials Cost Data: Provide statement indicating total cost for materials used for Project. Costs exclude labor, overhead, and profit. Include breakout of costs for the following categories of items:
   1. Furniture.
   2. Plumbing.
   3. Mechanical.
   4. Electrical.
   5. Specialty items, such as elevators and equipment.

C. Sustainable Design Action Plans: Provide preliminary submittals within 30 days of date established for Commencement of the Works, indicating how the following requirements will be met:

   1. List of proposed products with Environmental Product Declarations.
   2. List of proposed products complying with requirements for multi-attribute optimization.
   3. List of proposed products complying with requirements for raw material and source extraction reporting.
   4. List of proposed products complying with requirements for leadership extraction practices.
   5. List of proposed products complying with requirements for material ingredient reporting.
   6. List of proposed products complying with requirements for material ingredient optimization.
   7. List of proposed products complying with requirements for product manufacturer supply chain optimization.
   8. Waste management plan complying with Section 017419 "Construction Waste Management and Disposal."
   9. Construction IAQ management plan.
   10. List of proposed products complying with requirements for Heat Island Reduction.

D. Sustainable Design Progress Reports: Concurrent with each Application for Payment, submit reports comparing actual construction and purchasing activities with sustainable design action plans.

E. Sustainable Progress Reports (during Construction Stage) to be submitted for Engineer's review at least monthly (or as it will be advised by Engineer).

es

1.8 QUALITY ASSURANCE

A. Sustainability Coordinator: Engage an experienced Sustainability Coordinator to coordinate Sustainability requirements, Curriculum Vitae including qualifications and references to Sustainability projects undertaken to be submitted to the Engineer. Sustainability coordinator may also serve as waste management coordinator.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Provide products and procedures necessary to comply with Sustainability requirements required in this Section. Although other Sections may specify some requirements that contribute to the Sustainability Strategy, the Contractor shall provide additional materials and procedures necessary to comply with the Sustainability requirements.

B. Contractor to provide Environmental Declaration Reporting for different permanently installed products sourced from different manufacturers that meet one of the disclosure criteria below.
   1. Life-cycle assessment and environmental product declarations.
      a. Products with a publicly available, critically reviewed life-cycle assessment conforming to ISO 14044 that have at least a cradle to gate scope are valued as one whole product for the purposes of target achievement calculation.
      b. Product-specific Type III EPD -- Internally Reviewed. Products with an internally critically reviewed LCA in accordance with ISO 14071. Products with product specific internal EPDs which conform to ISO 14025, and EN 15804 or ISO 21930 and have at least a cradle to gate scope are valued as one whole product for the purposes of target achievement calculation.
      c. Industry-wide Type III EPD -- Products with third-party certification (Type III), including external verification, in which the manufacturer is explicitly recognized as a participant by the program operator. Products with industry wide EPDs, which conform to ISO 14025, and EN 15804 or ISO 21930 and have at least a cradle to gate scope are valued as one whole product for the purposes of target achievement calculation.
   2. Environmental Product Declarations which conform to ISO 14025 and EN 15804 or ISO 21930 and have at least a cradle to gate scope.
      a. Product-specific Type III EPD -- Products with third-party certification (Type III), including external verification and external critical review are valued as 1.5 products for the purposes of target achievement calculation.

C. The Contractor shall be required to provide any requested final documents, manufacturer's data, data or product sheets, plans, results, drawings, and / or reports to illustrate proof of implementation.

D. Use products that have a compliant embodied carbon optimization report or action plan separate from the LCA or EPD

E. Contractor to ensure the use of products sourced from different manufacturers that meet at least one of the responsible sourcing and extraction criteria, by cost, of the total value of permanently installed building products in the project.
   a. Extended producer responsibility. Products purchased from a manufacturer (producer) that participates in an extended producer responsibility program or is directly responsible for extended producer responsibility. Products meeting extended producer responsibility criteria are valued at 50% of their cost for the purposes of target achievement calculation.
   b. Bio-based materials. Bio-based products and materials other than wood must be tested using ASTM Test Method D6866 or equivalent method ISO 16620-2 or be certified to the USDA BioPreferred Voluntary Labeling Initiative that includes verification via

es

ASTM 6866 testing. Exclude hide products, such as leather and other animal skin materials.

1) Bio-based products that meet the criteria above: value at 50% of cost multiplied by the biobased content of the product for the purposes of target achievement calculation.

c. Wood products. Wood products must be certified by the Forest Stewardship Council or USGBC-approved equivalent. Products meeting wood products criteria are valued at 100% of their cost for the purposes of target achievement calculation.

d. Materials reuse. Reuse includes salvaged, refurbished, or reused products. Products meeting materials reuse criteria are valued at 200% of their cost for the purposes of target achievement calculation.

e. Recycled content. Products meeting recycled content criteria are valued at 100% of their cost for the purposes of target achievement calculation.

1) Recycled content is the sum of postconsumer recycled content plus one-half the preconsumer recycled content, based on weight.

2) The recycled fraction of the assembly is then multiplied by the cost of assembly to determine the recycled content value.

1. Cost of postconsumer recycled content plus one-half of preconsumer recycled content of an item shall be determined by dividing weight of postconsumer recycled content plus one-half of preconsumer recycled content in the item by total weight of the item and multiplying by cost of the item.
2. Do not include plumbing, mechanical and electrical components, and specialty items, such as elevators and equipment, in the calculation.

F. Concrete to be used with Fly ash or GGBS or GGBFS

G. Certified Wood: Not less than 50 percent, by cost, of wood-based materials shall be produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD- 01-001.

H. Contractor to ensure the use of different permanently installed products from different manufacturers that use any of the following programs to demonstrate the chemical inventory of the product to at least 0.1% (1,000 ppm).

1. ANSI/BIFMA e3 Furniture Sustainability Standard The documentation from the assessor or scorecard from BIFMA must demonstrate the product earned at least 3 points under 7.5.1.3 Advanced Level in e3-2014 or 3 points under 7.4.1.3 Advanced Level in e3-2012.
2. Cradle to Cradle. Product has Material Health Certificate or is Cradle to Cradle Certified™ under standard version 3 or later with a Material Health achievement level at the Bronze level or higher
3. Declare. The Declare product label must meet the following requirements:
4. Declare labels designated as Red List Free, LBC Red List Free, or Declared.
5. Declare labels designated as LBC Red List Approved or LBC Compliant that demonstrate content inventory to 0.1% (1,000 ppm).
6. Facts – NSF/ANSI 336: Sustainability Assessment for Commercial Furnishings Fabric at any certification level.
7. Global Green TAG. Product Health Declaration (PHD) labels issued after January 1, 2020.
8. Health Product Declaration. The end use product has a published and complete Health Product Declaration with full disclosure of known hazards in compliance with the Health Product Declaration Open Standard.
9. Living Product Challenge. The included Declare product label must demonstrate content inventory to 0.1% (1,000 ppm).
10. Manufacturer Inventory. The manufacturer has published complete content inventory for the product following these guidelines:
11. A publicly available inventory of all ingredients identified by name and Chemical Abstract Service Registration Number (CASRN) and/or European Community Number (EC Number).
12. Materials defined as trade secret or intellectual property may withhold the name and/or CASRN/EC Number but must disclose ingredient/chemical role, amount and hazard score/class using either:

es

13. Greenscreen List Translator (LT) score and/or Full GreenScreen Benchmark (BM)
14. The Globally Harmonized System of Classification and Labeling of Chemicals rev.6 (2015) (GHS)
15. Product Lens Certification

I. Contractor to ensure the use of products that have a compliant optimized material ingredient report or action plan. (Declare, REACH Optimization, etc.)

J. All refrigerants, fire suppression systems and maintenance gases installed and used within the project boundary should have an ODP of zero and a low GWP.

K. It is prohibited to use CFCs or halon-based materials through the project.

L. Insulation: All acoustic and thermal insulation must meet the following:
1. Manufactured without the use of chlorofluorocarbons (CFCs) or hydrochlorofluorocarbons (HCFC's). a) Ozone Depletion Potential (ODP) is zero and Global Warming Potential (GWP) is less than 5.
2. Compliance blowing agent used to manufacture the insulation product to spray it in place.
3. Formaldehyde to be max or less than 13.5 parts per billion (ppb).
4. Non-toxic and no release of toxic fumes during combustion.

M. Electrical Vehicle Supply Equipment (EVSE): EVSE shall comply with the following:
1. Provide a Level 2 charging capacity (208 – 240 volts) or greater.
2. Comply with the relevant regional or local standard for electrical connectors, such as:
   a. SAE Surface Vehicle Recommended Practice J1772
   b. SAE Electric Vehicle Conductive Charge Coupler.
   c. IEC 62196 of the International Electrotechnical Commission for projects outside the U.S.

N. At least 50 percent, by Area of the hardscape materials shall have a three-year aged solar reflectance (SR) value of at least 0.28. If three-year aged value information is not available, use materials with an initial SR of at least 0.33 at installation.

O. At least 75 percent, by area of the roofing materials shall have an SRI value equal or greater than the value in the table below. Meet the three-year aged SRI value. If three-year aged value information is not available, use materials that meet the initial SRI value.

Minimum solar reflectance index value, by roof slope			
	Slope	Initial SRI Value	3-year aged SRI Value
Low-sloped roof	≤2:12	82	64
Steep-Sloped roof	>2:12	39	32

P. The Contractor shall comply, abide by and achieve the following:

1. Construction Activity Pollution Prevention.

2. Volatile Organic Compounds (VOC) limits to follow the more stringent requirements between what is noted in the specifications and the local code and achieve the threshold level of compliance with emissions and content standards for the number of product categories already predefined in Sustainability requirements or by using Budget Calculation Method.

3. Construction Indoor Air Quality Management Plan:
   Develop and implement an Indoor Air Quality (IAQ) management plan for the construction and preoccupancy phases of the building. The plan must address all of the following:

es

During construction, meet or exceed all applicable recommended control measures of the Sheet Metal and Air Conditioning National Contractors Association (SMACNA) IAQ Guidelines for Occupied Buildings under Construction, 2nd edition, 2007, ANSI/SMACNA 008–2008, and Chapter 3.
Protect absorptive materials stored on-site and installed from moisture damage.
Do not operate permanently installed air-handling equipment during construction unless filtration media with a minimum efficiency reporting value (MERV) of 13, as determined by ASHRAE 52.2–2007, with errata (or equivalent filtration media class of F5 or higher, as defined by CEN Standard EN 779–2002, Particulate Air Filters for General Ventilation, Determination of the Filtration Performance), are installed at each return air grille and return or transfer duct inlet opening such that there is no bypass around the filtration media. Immediately before occupancy, replace all filtration media with the final design filtration media, installed in accordance with the manufacturer's recommendations.
Prohibit the use of tobacco products inside the building and within 25 feet (7.5 meters) of the building entrance during construction.

4. Indoor Air Quality Assessment:
   If occupancy is desired prior to flush-out, maintain an internal temperature of at least 60°F (15°C) and no higher than 80°F (27°C) and relative humidity no higher than 60%.

2.2 LOW-EMITTING MATERIALS

A. The values below are to be compared with the local code. The most stringent is to be adopted.

B. Paints and Coatings: For field applications that are inside the weatherproofing system, paints and coatings shall comply with VOC content limits of authorities having jurisdiction and the following VOC content limits:

1. Flat Paints and Coatings: 30 g/L.
2. Nonflat Paints and Coatings: 50 g/L.
3. Dry-Fog Coatings: 150 g/L.
4. Primers, Sealers, and Undercoaters: 30 g/L.
5. Rust-Preventive Coatings: 100 g/L.
6. Zinc-Rich Industrial Maintenance Primers (solvent based): 100 g/L.
7. Zinc-Rich Industrial Maintenance Primers (water based): 30 g/L
8. Pretreatment Wash Primers: 420 g/L.
9. Clear Wood Finishes, Varnishes (solvent based): 275 g/L.
10. Clear Wood Finishes, Varnishes (water based): 130 g/L.
11. Clear Wood Finishes, Lacquers: 275 g/L.
12. Floor Coatings: 50 g/L.
13. Shellacs, Clear (solvent based): 700 g/L.
14. Shellacs, Clear (water based): 130 g/L
15. Shellacs, Pigmented: 550 g/L.
16. Stains: 100 g/L.

C. Paints and Coatings: For field applications that are inside the weatherproofing system, 90 percent of paints and coatings by volume shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers" V1.1-2010, using the applicable exposure scenario. The manufacturer's or third-party certification must state the exposure scenario used to determine compliance. Manufacturers' claims of compliance must also state the range of total VOCs after 14 days (336 hours) measured as specified in the CDPH standard method v1.1.

For wet applied paints and coatings, in addition to meeting the general requirements for VOC emissions (above), 100 percent of on-site wet-applied paints and coatings must meet the applicable VOC limits of the California Air Resources Board (CARB) 2007, Suggested Control Measure (SCM) for architectural coatings, or the south coast air quality management district (SCAQMD) rule 1113. Claims of compliance for wet-applied products must state the amount applied in mass per surface area.

D. Adhesives and Sealants: For field applications that are inside the weatherproofing system, adhesives and sealants shall comply with VOC content limits of authorities having jurisdiction and the following VOC content limits:

1. Wood Glues: 30 g/L.
2. Metal-to-Metal Adhesives: 30 g/L.
3. Adhesives for Porous Materials (Except Wood): 50 g/L.
4. Subfloor Adhesives: 50 g/L.
5. Plastic Foam Adhesives: 50 g/L.
6. Carpet Adhesives: 50 g/L.
7. Carpet Pad Adhesives: 50 g/L.
8. VCT and Asphalt Tile Adhesives: 50 g/L.
9. Cove Base Adhesives: 50 g/L.
10. Gypsum Board and Panel Adhesives: 50 g/L.
11. Rubber Floor Adhesives: 60 g/L.
12. Ceramic Tile Adhesives: 65 g/L.
13. Multipurpose Construction Adhesives: 70 g/L.
14. Fiberglass Adhesives: 80 g/L.
15. Contact Adhesives: 80 g/L.
16. Structural Glazing Adhesives: 100 g/L.
17. Wood Flooring Adhesives: 100 g/L.
18. Structural Wood Member Adhesives: 140 g/L.
19. Single-Ply Roof Membrane Adhesives: 250 g/L.
20. Special-Purpose Contact Adhesives (That Are Used to Bond Melamine-Covered Board, Metal, Unsupported Vinyl, Rubber, or Wood Veneer 1/16 Inch or Less in Thickness to Any Surface): 250 g/L.
21. Top and Trim Adhesives: 250 g/L.
22. Plastic Cement Welding Compounds: 250 g/L.
23. ABS Welding Compounds: 325 g/L.
24. CPVC Welding Compounds: 490 g/L.
25. PVC Welding Compounds: 510 g/L.
26. Adhesive Primer for Plastic: 550 g/L.
27. Sheet-Applied Rubber Lining Adhesives: 850 g/L.
28. Aerosol Adhesive, General-Purpose Mist Spray: 65 percent by weight.
29. Aerosol Adhesive, General-Purpose Web Spray: 55 percent by weight.
30. Special-Purpose Aerosol Adhesives (All Types): 70 percent by weight.
31. Other Adhesives: 250 g/L.
32. Architectural Sealants: 250 g/L.
33. Nonmembrane Roof Sealants: 300 g/L.
34. Single-Ply Roof Membrane Sealants: 450 g/L.
35. Other Sealants: 420 g/L.
36. Sealant Primers for Nonporous Substrates: 250 g/L.
37. Sealant Primers for Porous Substrates: 775 g/L.
38. Modified Bituminous Sealant Primers: 500 g/L.
39. Other Sealant Primers: 750 g/L.

E. Adhesives and Sealants: For field applications that are inside the weatherproofing system, 90 percent of adhesives and sealants by volume shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers. V1.1-2010, using the applicable exposure scenario. The manufacturer’s or third-party certification must state the exposure

scenario used to determine compliance. Manufacturers' claims of compliance must also state the range of total VOCs after 14 days (336 hours) measured as specified in the CDPH standard method v1.1.

For wet applied adhesives and sealants, in addition to meeting the general requirements for VOC emissions (above), 100 percent of on-site wet-applied adhesives and sealants must meet the applicable chemical content requirements of SCAQMD Rule 1168. Claims of compliance for wet-applied products must state the amount applied in mass per surface area.

F. Flooring: Flooring shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers.

G. Composite Wood: Composite wood, agrifiber products, and adhesives shall be made using ultra-low-emitting formaldehyde resins as defined in the California Air Resources Board's "Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products" or shall be made with no added formaldehyde. Furthermore, Composite wood must be documented not to exceed a concentration limit of 0.05ppm of formaldehyde (0.06mg/m2-h when expressed as emission rate).

H. Ceilings, Walls, Thermal Insulation and Acoustic Insulation: Ceilings, walls, thermal insulation and acoustic insulation shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

I. Suspended Ceiling Systems: All internal suspended ceiling systems must have a maximum formaldehyde limit of 13.5 ppb (or 16.5 µg/m3)

PART 3 - EXECUTION

3.1 NONSMOKING

A. Smoking is not permitted within the building or within 7.5m of entrances, operable windows, or outdoor air intakes.

3.2 CONSTRUCTION WASTE MANAGEMENT

A. Comply with Section 017419 "Construction Waste Management and Disposal."

B. Ensure that at least 75% of construction and demolition waste is managed on site.

3.3 CONSTRUCTION INDOOR-AIR-QUALITY (IAQ) MANAGEMENT

A. Comply with SMACNA's "SMACNA IAQ Guideline for Occupied Buildings under Construction."

1. If Owner authorizes use of permanent heating, cooling, and ventilating systems during construction period as specified in Section 015000 "Temporary Facilities and Controls," install MERV 8 filter media at each return-air inlet for the air-handling system used during construction.
2. Replace air filters immediately prior to occupancy.

es

3. During construction, protect all absorptive materials stored on-site or installed from moisture damage as described in the Construction IAQ Management Plan (CIAQMP) defined above. Specifically, insulation and other absorbing materials.
4. Inspect absorptive materials stored onsite on a regular basis and record findings
5. Exercise special care at all times in the storage of materials to prevent exposure to moisture.
6. During construction and HVAC system installation, provide the Engineer with photographs of IAQ management measures (such as protection of ducts and on-site or installed absorptive materials), including photographs on different occasions depicting implemented SMACNA approaches.
7. Develop a moisture control plan as part of the CIAQMP detailing measures to prevent or remove materials with mold spores. Record observations and corrective action taken.
8. Noise & Vibration: Develop a plan based on British Standard BS5228 to reduce noise emissions & vibration during construction by specifying low emission design and Contractor to ensure construction workers wear hearing protection in areas of 85db or more. This is included as part of the CIAQMP.

3.4 IAQ ASSESSMENT

A. Flush-Out:

1. After construction ends, prior to occupancy and with all interior finishes installed, perform a building flush-out by installing new filtration media and supplying a total volume of 14,000 cu. ft. of outdoor air per sq. ft. of gross floor area while maintaining an internal temperature of at least 60°F (15° C) and no higher than 80 deg. F (27 deg. C) and a relative humidity no higher than 60 percent.

2. If occupancy is desired prior to flush-out completion, the space may be occupied following delivery of a minimum of 3500 cu. ft. of outdoor air per sq. ft. of gross floor area to the space while maintaining an internal temperature of at least 60 deg F (15 deg C) and no higher than 80 deg. F (27 deg. C) and relative humidity no higher than 60 percent. Once a space is occupied, it shall be ventilated at a minimum rate of 0.30 cfm per sq. ft. (1.52 L/s per sq. m) of outside air or the design minimum outside-air rate, whichever is greater. During each day of the flush-out period, ventilation shall begin a minimum of three hours prior to occupancy and continue during occupancy. These conditions shall be maintained until a total of 14,000 cu. ft./sq. ft. of outside air has been delivered to the space.

B. Air-Quality Testing: Engage testing agency to perform the following:
1. Conduct baseline IAQ testing, after construction ends and prior to occupancy, using testing protocols consistent with the EPA's "Compendium of Methods for the Determination of Air Pollutants in Indoor Air.
2. Demonstrate that the contaminant maximum concentrations listed below are not exceeded:
    a. Formaldehyde: 27 ppb.
    b. Particulates (PM10): 50 micrograms/cu. m.
    c. Particulates (PM2.5): 15 micrograms/cu. m.
    d. Ozone: 0.075 ppm, according to ASTM D 5149.
    e. Total Volatile Organic Compounds: 500 micrograms/cu. m.
    f. 4-Phenylcyclohexene (4-PH): 6.5 micrograms/cu. m.
    g. Carbon Monoxide: 9 ppm and no greater than 2 ppm above outdoor levels.
    h. Target Volatile Organic Compounds in California Department of Public Health "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers," Table 4-1 (except formaldehyde): Allowable concentrations in California Department of Public Health "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers," Table 4-1.
    i. The maximum allowed concentration limits for all the above mentioned target compounds shall be compared to the maximum allowable figures dictated by local codes. The more stringent requirements shall be applied.

es

3. For each sampling point where the maximum concentration limits are exceeded, take corrective action until requirements have been met.
4. Air-sample testing shall be conducted as follows:
    a. All measurements shall be conducted prior to occupancy but during normal occupied hours, and with building ventilation system starting at the normal daily start time and operated at the minimum outside-air flow rate for the occupied mode throughout the duration of the air testing.
    b. Building shall have all interior finishes installed, including, but not limited to, millwork, doors, paint, carpet, and acoustic tiles. Nonfixed furnishings, such as workstations and partitions, are encouraged, but not required, to be in place for the testing.
    c. Number of sampling locations varies depending on the size of building and number of ventilation systems. For each portion of building served by a separate ventilation system, the number of sampling points shall not be less than one per 5000 sq. ft. (465 sq. m). For large open spaces, one sampling point per 50,000 sq. ft. (4654 sq. m) may be used.
    d. Air samples shall be collected between 3 and 6 feet (900 and 1800 mm) from the floor to represent the breathing zone of occupants, and over a minimum four-hour period.

3.5 CONSTRUCTION ACTIVITY POLLUTION PREVENTION PLAN

A. Before construction begins, implement the approved Construction Activity Pollution Prevention plan for all construction activities associated with the project, establish control measures before construction begins and implement additional measures as needed based on site conditions and as construction progresses. The establishment and maintenance of ESC measures are the responsibility of Contractor.

B. Monitor control measures periodically through monthly site inspections and record maintenance activities taken during construction.

C. Inspections must be recorded regularly via date-stamped photographs, inspection reports, or other recording processes.

D. Any problems identified in site inspections should be resolved in a timely manner.

E. Generate and save documentation as the plan is implemented for eventual use in the certification submission.

F. Submit drawings depicting erosion and sedimentation control measures implemented.

G. Submit a description of how the project complies with the equivalent local standards and codes.

H. Notify the Engineer in case of any damage to the ESC measures.

I. Create and submit a narrative description of ESC plan implementation that includes the following:

1. Timing of the implementation of the plan.
2. Specific control measures applied on site.
3. Maintenance protocols used to ensure the proper function of control measures.

3.6 HEAT ISLAND REDUCTION

A. Submit as built nonroof and roof area calculations.

B. Submit site plan(s) with elements and measurements, including project boundary, building footprint, roof and hardscape area, and area of each roof and nonroof measure.

es

3.7 Cooling Tower Water Use

A. Conduct a one-time potable water analysis and another non-potable water (if applicable) analysis, measuring at least the five control parameters listed in the Table below.

TABLE 1. Maximum concentrations for parameters in condenser water

Parameter	Maximum level
Ca (as $CaCO_3$)	1000 ppm
Total alkalinity	1000 ppm
SiO_2	100 ppm
Cl^-	250 ppm
Conductivity	2000 μS/cm

ppm = parts per million

μS/cm = micro siemens per centimeter

B. Calculate the number of cooling tower cycles by dividing the maximum allowed concentration level of each parameter by the actual concentration level of each parameter found in the potable makeup water. Limit cooling tower cycles to avoid exceeding maximum values for any of these parameters.

C. Identify which concentration parameter has the fewest calculated cycles before it exceeds the maximum concentration. That parameter's number of cycles, the limiting factor, will determine the maximum number of cycles for the cooling tower.

3.8 COMMISSIONING REQUIREMENTS

The commissioning scope should cover all the Sustainability requirements. For more details, please refer to section 'SPC_01_SEC-019113_GENERAL COMMISSIONING REQUIREMENTS'.

A. Commissioning Team

1. Members Appointed by Contractor(s): Individuals, each having the authority to act on behalf of the entity he or she represents, explicitly organized to implement the commissioning process through coordinated action. The commissioning team shall consist of, but not be limited to, representatives of each Contractor, including Project superintendent and subcontractors, installers, suppliers, and specialists deemed appropriate by the CxA.

2. Members Appointed by Employer:
   - CxA: The designated person, company, or entity that plans, schedules, and coordinates the commissioning team to implement the commissioning process. Employer will engage the CxA under a separate contract. The CxA must have documented commissioning process experience on at least two building projects with a similar scope of work. The experience must extend from early design phase through at least 10 months of occupancy
   - Representatives of the facility user and operation and maintenance personnel.
   - Engineer and engineering design professionals.

3. Commissioning authority should have the following qualifications:
   - The CxA must have documented commissioning process experience on at least two building projects with a similar scope of work. The experience must extend from early design phase through at least 10 months of occupancy.
   - The CxA may be a qualified employee of the owner, an independent consultant or an employee of the design or construction firm who is not part of the project's

design or construction team, or a disinterested subcontractor of the design or construction team.
- The CxA may be a qualified employee of the owner, an independent consultant or a disinterested subcontractor of the design team.
- The CxA must report their findings directly to the owner.

B. Employer's Responsibilities
1. Provide the OPR documentation to the CxA and each Contractor for information and use.
2. Assign operation and maintenance personnel and schedule them to participate in commissioning team activities.
3. Provide the BoD documentation, prepared by Designer and approved by Employer, to the CxA and each Contractor for use in developing the commissioning plan, systems manual, and operation and maintenance training plan.

C. Contractors' Responsibilities

Each Contractor shall assign representatives with expertise and authority to act on its behalf and shall schedule them to participate in and perform commissioning process activities including, but not limited to, the following:
1. Evaluate performance deficiencies identified in test reports and, in collaboration with entity responsible for system and equipment installation, recommend corrective action.
2. Cooperate with the CxA for resolution of issues recorded in the Issues Log.
3. Attend commissioning team meetings held on a variable basis and as agreed with the Employer
4. Integrate and coordinate commissioning process activities with construction schedule.
5. Review and accept construction checklists provided by the CxA.
6. Complete paper and electronic construction checklists as Work is completed and provide to the Commissioning Authority on a weekly basis.
7. Review and accept commissioning process test procedures provided by the Commissioning Authority.
8. Complete commissioning process test procedures.

D. Commissioning Agent (CxA)'s Responsibilities
1. Organize and lead the commissioning team.
2. Review the OPR, BOD and project design.
3. Develop and implement a Commissioning plan.
4. Convene commissioning team meetings.
5. Confirm incorporation of Cx requirements into the construction documents.
6. Provide Project-specific construction checklists and commissioning process test procedures.
7. Develop a system test procedure.
8. Verify system test execution
9. Verify the execution of commissioning process activities using random sampling. The sampling rate may vary from 1 to 100 percent. Verification will include, but is not limited to, equipment submittals, construction checklists, training, operating and maintenance data, tests, and test reports to verify compliance with the OPR. When a random sample does not meet the requirement, the CxA will report the failure in the Issues Log.
10. Prepare and maintain the Issues and benefits Log throughout the Cx process.
11. Prepare a final Cx process report.
12. Document all findings and recommendations and report directly to the owner throughout the process.
13. Review the exterior enclosure design.
14. Prepare and maintain a current facilities requirements and operation and maintenance plan that contains the information necessary to operate the building efficiently. The plan must include the following:
    - A sequence of operations for the building.
    - The building occupancy schedule.
    - Equipment run-time schedule.
    - Setpoints for all HVAC equipment

es

- Set lighting levels throughout the building
- Minimum outside air requirements
- Any changes in schedule or setpoints for different seasons, days of the week and times of day
- A systems narrative describing the mechanical and electrical systems and equipment
- A preventive maintenance plan for building equipment described in the systems narrative

15. A commissioning program that includes periodic commissioning requirements, ongoing commissioning tasks, and continuous tasks for critical facilities. Prepare and maintain completed construction checklist log.
16. Witness systems, assemblies, equipment, and component startup.
17. Compile test data, inspection reports, and certificates; include them in the systems manual and commissioning process report.
18. Review Contractor submittals.
19. Verify inclusion of system manual requirements in construction documents.
20. Verify inclusion of operator and occupant training requirements in construction documents.
21. Verify systems manual updates and delivery.
22. Verify operator and occupant training delivery and effectiveness.
23. Verify seasonal testing.
24. Review building operations 10 months after substantial completion.
25. Develop an on-going commissioning plan.
26. Include all enhanced commissioning tasks in the OPR and BOD.
27. Develop monitoring-based procedures and identify points to be measured and evaluated to assess performance of energy and water consuming systems.
28. Include the procedures and measurement points in the commissioning plan. Address the following:
    a. Roles and responsibilities;
    b. Measurement requirements (meters, points, metering systems, data access);
    c. The points to be tracked, with frequency and duration for trend monitoring;
    d. The limits of acceptable values for tracked points and metered values (where appropriate, predictive algorithms may be used to compare ideal values with actual values);
    e. The elements used to evaluate performance, including conflict between systems, out of sequence operation of systems components, and energy and water usage profiles;
    f. An action plan for identifying and correcting operational errors and deficiencies;
    g. Training to prevent errors;
    h. Planning for repairs needed to maintain performance; and
    i. The frequency of analyses in the first year of occupancy (at least quarterly).
29. Update the systems manual with any modifications or new settings, and give the reason for any modifications from the original design.
30. Fulfill the Sustainability requirements of fundamental commissioning and verification as they apply to the building's thermal envelope in addition to mechanical and electrical systems and assemblies.
31. Complete the following commissioning process activities for the building's thermal envelope in accordance with ASHRAE guideline 0-2005 and the national institute of building science (NIBS) guideline 3-2012, exterior enclosure technical requirements for the commissioning process as they relate to energy, water, indoor environmental quality and durability, commissioning authority must complete the following:

    a. Review contractor submittals
    b. Verify inclusion of systems manual requirements in construction documents
    c. Verify inclusion of operator and occupant training requirements in construction documents
    d. Verify system manual updates and delivery
    e. Verify operator and occupant training delivery and effectiveness
    f. Verify seasonal testing
    g. Review building operations 10 months after substantial completion

es

32. Develop an ongoing commissioning plan.

END OF SECTION 018113.14

SECTION 019112 - SYSTEM STARTUP AND TESTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Particular Conditions and other Division 01 Specifications sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the startup and testing requirements for the equipment / systems supplied and / or installed. The Contractor shall be responsible for providing complete startup, testing, and operator training services to demonstrate operability of all electrical and mechanical equipment / systems supplied and any Employer-furnished components and materials provided.

B. In the absence of main permanent power availability from the Utility Provider or any other permanent source, the Contractor shall be responsible for providing the full power required, on temporary basis, using Contractor's supplied and operated back-up generators, for all systems startup, testing and commissioning activities. Such temporary power from back-up generators shall remain in operation until permanent power becomes available.

C. Related Requirements:
   1. Specification sections related to the functionality and efficiency of the executed systems.

1.3 DEFINITIONS

A. Wherever the Specifications of this Contract refer to 'copy or copies' in whatsoever form it means the 'copy or copies' read, reproduced, communicated and stored through the Project Website as defined in clause 1.9 of Section 013100.

PART 2 - PRODUCTS: (NOT USED)

PART 3 - EXECUTION

3.1 FIELD TESTS AND ADJUSTMENTS

A. Pre-Commissioning:

   1. All mechanical and electrical equipment including the interfaces with the building management system, control systems, communication systems, software and all alarm circuits and operating modes for each piece of equipment shall be tested by the Contractor and approved by the Engineer before any facility is put into operation. Tests shall be as specified herein and in the Specification Section applicable to and as specified for the various pieces of equipment. The testing and commissioning are to be done in the presence of the equipment manufacturer / supplier authorized representative. As a minimum, the startup tests shall be sufficiently detailed and comprehensive to demonstrate and verify that the equipment has been properly assembled, aligned, and connected and that the control and information circuitry and any associated controllers, panels, and software systems are fully operational

and functioning as designed. Any changes, adjustments, or replacements required to make the equipment operate as specified shall be performed as part of the Works.

2. At least sixty (60) days before the time allowed in the construction schedule for commencing testing and startup activities, submit to the Engineer electronic copy of the detailed procedures proposed, based on the manufacturer's recommendations and relevant Divisions Specifications, for testing and startup of all mechanical (including instrumentation and controls) and electrical equipment. Procedures shall be required for each major piece of equipment, each subsystem which can logically be treated as an integral group and division for purposes of testing and demonstrating system operability.
3. Testing and startup procedures shall include detailed descriptions of all pre-operational electrical, mechanical, communication and software and instrumentation testing work. Each control device, item of mechanical, electrical, and instrumentation equipment, software and all control circuits shall be considered in the testing procedures. The testing procedures shall be established / prepared in a stepwise, logical sequence to verify that all equipment has been properly serviced, aligned, connected, wired, calibrated, and adjusted prior to operation. Motors shall be tested in accordance with ANSI / IEEE Publication 112. Testing procedures shall be designed to duplicate as nearly as possible all conditions of operations and shall be carefully selected to ensure that the equipment is not damaged as a result of the testing program. All filters and filter elements shall be installed prior to beginning the tests. Construction or temporary filters shall be used during startup activities and shall be replaced with new unused ones before system handing over.
4. Once the testing procedures have been approved by the Engineer, provide checkout, alignment, adjustment, and calibration signoff forms for each item of equipment and system that will be used. The signoff forms shall be used at the Site jointly with Engineer, to demonstrate that each item of electrical, mechanical, and instrumentation equipment and system has been properly installed and tested. Cooperate with the contractors of other systems / facilities where startup and testing are to be conducted concurrently. Performance of any system shall be based on suitable ambient conditions with consideration to all diversity factors.
5. Any special testing equipment, loads or instrumentation required shall be provided to the Employer at the Contractor's cost during startup and pre-operational testing of systems and equipment.

B. Post Commissioning:

1. Before starting a system, perform all service on all equipment, which comprises the system and associated equipment that supports the system, which normally requires service in accordance with the Operation & Maintenance Manual instructions. Submit a detailed maintenance schedule and be responsible for lubrication and maintenance of equipment and filters throughout the entire equipment break-in period indicated by the manufacturer. Note that, when the manufacturer does not specify a break-in period, construction or temporary filters shall be installed and the new and clean filters shall be installed only after the system and equipment are thoroughly cleaned to the satisfaction of the Engineer.
2. Be responsible for the startup, adjustment, preliminary maintenance, and checkout of all equipment and instrumentation. All systems shall be carefully checked for conformance with the Contract Documents including Design Drawings, Specifications, and other Contract documents, which provide performance requirements (e.g., Design Criteria document(s) when provided by the Employer as part of the Contract Package).
3. If any equipment or system does not operate as specified in the Contract Documents, replace or repair components until they operate properly and meet the specified performance requirements.
4. When system startup and testing is complete, submit ("draft") test reports to the Engineer for review and acceptance within two (2) weeks of the completion of the tests and before the final test reports are issued (no later than one month from the final date of completion of the tests).

3.2 FINAL INSTRUCTIONS AND OPERATION TRAINING

A. After all testing is completed, demonstrate to the Employer the proper manner of operating the equipment, adjusting, responding to alarms and emergency signals, and maintaining the systems. Each system shall include a minimum of 8 hours of operator training. Note that major systems like HVAC System and other important systems shall be tested and a minimum of eight (8) hours of operator training provided for each major sub-system as defined in the other Divisions Specifications, or as agreed with the Engineer. Operator schools shall be conducted as applicable with duly qualified instructors. Work performed by the manufacturer's representative required for testing shall not be considered as operator training even if the operators are present and witnessing the adjustments. Equipment testing shall be completed and Operations and Maintenance Manuals submitted and approved before the required on-the-job operator training begins.

B. Prepare and furnish training materials for use in training Employer’s personnel. The training materials shall be submitted for the Engineer's review 3 weeks in advance of training and shall include detailed comprehensive written documents / procedures which clearly describe all startup, maintenance, troubleshooting, and service procedures for all equipment and systems, video clips, professionally produced and edited may be utilized as suitable media for at least a portion of the training program.

C. The Contractor shall carry out, to the satisfaction of the above Clauses to the Employer requirements, preventive and breakdown maintenance for the equipment and systems as per manufacturer’s recommendations.

3.3 SYSTEMS STARTUP (PERFORMANCE WARRANTY RUN)

A. Be responsible for a thirty (30) days period of completed systems operation, during which electrical and mechanical equipment, fixtures, and associated devices shall be energized and operated under local and automatic (remote) controls, in all intended design operating modes. Be present with system manufacturer’s / supplier’s representative(s) during the startup period with adequate labor and support personnel to perform needed adjustments and troubleshoot system failures and / or any performance deficiencies that might arise and to perform necessary corrective actions.

B. When mechanical, electronic / hardware / software or electrical equipment is found to be deficient compared with the specified performance criteria/requirements, adjustments shall be made by a qualified representative of the manufacturer.

C. If adjustments fail to correct the operation and performance of equipment, remove the equipment from the Site and replace it with new equipment that meets the specified requirements.

3.4 INTEGRATED STARTUP AND TESTING

A. The thirty (30) days startup (system warranty run) period shall commence at the time of completion. If during this period, the system fails to operate and perform in accordance with Contract Document requirements, the failure shall be corrected and the 30-day performance warranty run period shall begin again.

END OF SECTION 019112

es

SECTION 019113 - GENERAL COMMISSIONING REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Particular Conditions and other Specification Sections, apply to this Section.

B. Owner's (Employer's) Project Requirements and Basis-of-Design Document are included by reference for information only.

1.2 SUMMARY

A. This Section specifies the requirements and procedures for project systems commissioning activities. This work is to be done in conjunction with the commissioning and associated activities (i.e. testing, start up, training and other activities) specified in the various trade specifications and provides an organized format for the commissioning process.

B. Section includes:
1. General requirements that apply to implementation of commissioning without regard to specific systems, assemblies, or components.
2. General requirements for coordinating and scheduling commissioning activities.
3. Commissioning meetings.
4. Commissioning reports.
5. Use of commissioning process test equipment, instrumentation, and tools.
6. Construction checklists, including, but not limited to, installation checks, startup, performance tests, and performance test demonstration.
7. Commissioning tests and commissioning test demonstration.
8. Adjusting, verifying, and documenting identified systems and assemblies.

C. Related Requirements:
1. Section 013300 "Submittal Procedures" for submittal procedure requirements for commissioning process.
2. Section 017700 "Closeout Procedures" for Certificate of Construction-Phase Commissioning Process Completion submittal requirements.
3. Section 017823 "Operation and Maintenance Data" for preliminary operation and maintenance data submittal requirements.
4. Division 01 Section 019119.43 "Exterior Enclosure Commissioning" for technical commissioning requirements for exterior closure.
5. Section 018113.14 "Sustainable Design Requirements" for Sustainability requirements.
6. ASHRAE Guideline 0-2005 and ASHRAE Guideline 1.1-2007 for HVAC&R systems as they relate to energy, water, indoor environmental quality and durability.
7. NIBS Guideline 3-2012.
8. Division 14 for technical commissioning requirements for conveying systems.
9. Section 210800 "Commissioning of Fire Suppression" for technical commissioning requirements for fire suppression.
10. Section 220800 "Commissioning of Plumbing" for technical commissioning requirements for plumbing.
11. Section 230800 "Commissioning of HVAC" for technical commissioning requirements for HVAC.
12. Division 26 for technical commissioning requirements for electrical systems.
13. Division 27, for technical commissioning requirements for communications systems

es

14. Division 28, for technical commissioning requirements for electronic safety and security systems.
15. Specification sections related to the functionality and efficiency of the executed systems

1.3 DEFINITIONS

A. Acceptance Criteria: Threshold of acceptable work quality or performance specified for a commissioning activity, including, but not limited to, construction checklists, performance tests, performance test demonstrations, commissioning tests, and commissioning test demonstrations.

B. Basis-of-Design Document: A document prepared by Engineer that records concepts, calculations, decisions, and product selections used to comply with Employer's Project Requirements and to suit applicable regulatory requirements, standards, and guidelines.

C. Commissioning Authority: An entity to evaluate Commissioning-Process Work.

D. Commissioning Plan: A document, prepared by Commissioning Authority, that outlines the organization, schedule, allocation of resources, and documentation of commissioning requirements.

E. Commissioning: A quality-focused process for verifying and documenting that the facility and all of its systems and assemblies are planned, designed, installed, and tested to comply with Employer's Project Requirements. The requirements specified here are limited to the construction phase commissioning activities.

F. Construction-Phase Commissioning-Process Completion: The stage of completion and acceptance of commissioning process when resolution of deficient conditions and issues discovered during commissioning process and retesting until acceptable results are obtained has been accomplished.

1. Commissioning process is complete when the Work specified of this Section and related Sections has been completed and accepted, including, but not limited to, the following:

a. Completion of tests and acceptance of test results.
b. Resolution of issues, as verified by retests performed and documented with acceptance of retest results.
c. Comply with requirements in Section 017900 "Demonstration and Training."
d. Completion and acceptance of submittals and reports.

G. Owner's (Employer’s) Project Requirements: A document that details the functional requirements of a project and the expectations of how it will be used and operated, including Project goals, measurable performance criteria, cost considerations, benchmarks, success criteria, and supporting information. This document is prepared either by the Employer or for the Employer by the Engineer or Commissioning Authority.

H. Employer's Witness: Commissioning Authority, Employer's Project Manager, or Engineer-designated witness authorized to authenticate test demonstration data and to sign completed test data forms.

I. "Systems," "Assemblies," "Subsystems," "Equipment," and "Components": Where these terms are used together or separately, they shall mean "as-built" systems, assemblies, subsystems, equipment, and components.

J. Test: Performance tests, performance test demonstrations, commissioning tests, and commissioning test demonstrations.

es

1.4 DESCRIPTION

A. The purpose of the Commissioning process is to provide the Employer/Operator of the facilities with a higher level of assurance that the systems are carefully planned and coordinated and have been installed in the prescribed manner, and that will operate within the performance guidelines, and to ensure the proper integrated commissioning of its various systems.

B. To meet the above-mentioned task, the Contractor shall provide within his site organization the services of a qualified Commissioning Committee headed by a qualified Commissioning Manager from the outset of the Contract. The Commissioning Committee shall be a separate and dedicated team within the Contractor's site organization.

C. Throughout the course of the Contract, the Contractor shall supplement the services of the Commissioning Committee by the appointment of further qualified staff in order to create commissioning activities of the Contractor and his sub-contractors in such a way as to ensure the successful integrated commissioning of the installed systems within the timeframe of the Contract.

D. The Commissioning Committee shall be a separate and dedicated team within the Contractor's to Sub-contractors site organization, solely for the planning, organization, coordination, preparation, implementation and documentation of the Contractor and Sub-contractors commissioning obligations.

E. The Contractor shall indicate his intentions in relation to the staffing of the Commissioning Committee in an organization chart but shall undertake to ensure that all times adequate numbers of personnel, of adequate experience and training are available to fulfill the specified objectives.

F. Prior to making any appointment to meet the above obligations, the Contractor shall submit, for the Engineer's approval full resumes of the staff concerned. It will be an obligation upon the Contractor to ensure, before submittal, that the staff proposed has adequate experience to undertake the duties that they are being proposed for.

G. The Commissioning Committee shall be responsible for the planning, coordination, safety and execution of the Contractor's integrated commissioning of the installed systems of the works. It is, however, implicitly to be understood that actions of the Contractor and his Commissioning Committee shall not relieve the Contractor of his obligations to ensure that the Engineer is kept fully informed of all activities of the Commissioning Committee and is informed of all planning decisions, provided with all schedules, test schedules and test procedures, details of tests and of testing times and dates in adequate time and in adequate detail in order to ensure that the Engineer is able to approve where necessary, monitor, witness, and the like, the activities of the Commissioning Committee and the commissioning process.

H. No approval other than that of the Engineer shall be considered with respect to the commissioning process and the acceptance of equipment, systems and integrated systems.

I. The Contractor's attention is drawn to the obligations that he undertakes, under the provisions of this contract, in respect to training. Although not specifically mentioned herein, it is to be understood that as part of such training requirements, the Employer/Operator and/or their representatives or direct contractors nominated by the Employer to partake in such training upon his behalf, may at any time attend tests or commissioning activities as witnesses and/or as part of such training activities.

1.5 COMMISSIONING TEAM

A. Members appointed by Contractor: Individuals, each having the authority to act on behalf of the entity he or she represents, explicitly organized to implement the commissioning process through coordinated action. The commissioning team shall consist of, but not be limited to, representatives of Contractor, subcontractors, installers, suppliers, and specialists deemed appropriate.

es

1. Commissioning Coordinator: A person or entity employed by Contractor to manage, schedule, and coordinate commissioning process.
2. Project superintendent and other employees that Contractor may deem appropriate for a particular portion of the commissioning process.
3. Subcontractors, installers, suppliers, and specialists that Contractor may deem appropriate for a particular portion of the commissioning process.
4. Appointed team members shall have the authority to act on behalf of the entity they represent.

B. Members Appointed by Employer:
1. Facility operations and maintenance personnel, plus other employees, and separate contractors, that Employer may deem appropriate for a particular portion of the commissioning process.

C. Commissioning Authority should have the following qualifications:
1. The Commissioning Authority must have documented commissioning process experience on at least two building projects with a similar scope of work. The experience must extend from early design phase through at least 10 months of occupancy.
2. Commissioning Authority must report their findings directly to the Employer.

1.6 SCOPE OF WORK AND RESPONSIBILITY OF COMMISSIONING COMMITTEE (TEAM)

A. As part of its responsibilities, the Commissioning Committee shall:

1. Inform the Engineer on the integration and performance of systems within the facility.
2. Disseminate information and assist the design and construction teams of the Contractor to complete the certification process. This will include system completeness, performance and adequacy to meet the intended performance standards of each system.
3. Create a commissioning plan, which will describe in detail all commissioning functions, actions, tests, documentation and schedule.
4. Verify and document the following field tests and observations:

a. Field Installation Verification (FIV). Verification of all installed systems for compliance to plans and specification.
b. Operation Performance Tests (OPT). Operational tests which verify proper start-up of all equipment and systems. These tests are to be described in detail in the commissioning plan.
c. Functional Performance Tests (FPT). Functional system tests that verify all systems are functioning and interacting with other systems correctly. These tests are to be described in detail in the commissioning plan.

B. The primary role of the Contractor's Commissioning Committee (team) is to identify the commissioning scope, and plan, develop, prepare for and co-ordinate the execution of an integrated overall start-up commissioning plan, for the Contractor and his Sub-contractors, for the Contract.

C. The Contractor and his Commissioning Committee shall perform the coordination with other contractors responsible for executing works for the Employer under other contracts referred to in the specification and make sure that all the interfaces between the different contracts are taken into consideration and are implemented and detailed in the integrated overall start-up commissioning plan.

D. An integral part of such duties will be to observe and document the performance of systems and the inter-relationships of the systems to ensure that they are functioning in accordance with the documented project intent and in accordance with the Contract Documents.

E. An essential element of the fulfillment of such aims and obligations will be the Commissioning Committee's involvement in the contract submittal process and the identification, at the submittal/approval stage, of the related commissioning requirements and the commencement of the commissioning process.

es

F. The Contractor will provide all tools, or the use of tools; to start, checkout and functionally test equipment and systems, including the specified testing with portable data loggers.

G. All equipment and systems that are installed shall be individually and integrally commissioned as an obligation by the Contractor and his Commissioning Committee (team).

H. The following provides a non-limitative list as applicable:

1. Fuel Hydrants system.
2. Aircraft Stand Equipment "ASE" (Visual Docking Guidance System "VDGS", Pre-conditioned Air System "PCA", Aircraft Passenger Loading Bridges "PLBs", & 400 Hz Ground Power System).
3. Conveying systems (Elevators, escalators, and moving walks).
4. Baggage handling systems and subsystems, including all control systems.
5. Fire Protection System.
6. Plumbing Work.
7. HVAC System and subsystems, including all control systems and software.
8. Airfield Lighting/equipment System.
9. Lighting System.
10. UPS System.
11. MV & LV Power Supply System.
12. Lightning Protection System.
13. ATCT Equipment/systems.
14. Information Communication Technologies "ICT" systems.
15. All any other equipment and system and subsystems forming part of the contract and is not addressed above.

I. During construction, the following activities shall represent, without limitation as to overall scope, the typical scope of work for the Contractor's Commissioning Committee (team).

1. Coordinate and direct the commissioning activities with the Contractor organization in a logical, sequential and efficient manner using consistent protocols and forms, centralized documentation, clear and regular communications and consultations with all necessary parties, frequently updated timelines and schedules and all necessary technical expertise.
2. Coordinate the commissioning work and ensure that commissioning activities are scheduled in the construction programme and the commissioning plan to be submitted for the approval of the Engineer.
3. Plan and call for a commissioning scoping meeting and other commissioning meetings.
4. Plan and implement all safety requirements and precautions.
5. Request and review additional information required to perform commissioning tasks, including O&M materials, start-up and checkout procedures.
6. Before start-up, gather and review the current control sequences and interlocks and work with Contractor and Contractor's design engineers and with other contracts under execution by others, until sufficient clarity has been obtained, in writing, to be able to write detailed testing procedures which shall be subject to the Engineer's approval.
7. Review all normal submittals, applicable to equipment and systems requiring commissioning, for compliance with commissioning needs.
8. Prepare and distribute pre-functional tests and checklists.
9. Develop an enhance start-up and initial system checkout plan with all Contractor's Sub-contractors/suppliers /vendors.
10. Observe component and system installations. Attend selected planning and job-site meetings to obtain information on construction progress. Review construction meeting minutes for revisions/substitutions relating to the commissioning process. Assist in resolving any discrepancies.
11. With the assistance and review from installing sub-contractors, Commissioning Committee shall prepare, for approval by the Engineer, the functional performance test procedure for equipments and systems.

12. Submit for the Engineer's approval pre-functional tests and checklist completion after reviewing and checking pre-functional checklist reports submitted by Sub-contractors and by site observation and spot checking.
13. Submit for the Engineer's approval systems startup after reviewing and checking start-up reports and by site observation.
14. Analyze and functional performance trend logs and monitoring date to verify performance.
15. Coordinate and witness with the Engineer manual functional performance tests performed by the Contractor or his installing Sub-contractors. Submit the results from the said tests for approval. Coordinate and retesting that proves necessary until satisfactory performance is achieved.
16. Maintain in the Engineer's offices, or at a place otherwise agreed, a master deficiency and resolution log and a separate testing record. Submit to the Engineer written progress reports and all original test results records along with recommended actions necessary.
17. Prior to submittal review equipment warranties to ensure that the Employer's rights are clearly define. Submit all such warranties to the Engineer for approval.
18. Plan, programme, compile and maintain in the Engineer's offices or in another place to be agreed, a commissioning record and systems book (s).
19. Prior to submittal for approval review and amend as necessary the preparation of the O&M manuals.
20. Prepare and provide the Contractor final commissioning report.

1.7 COORDINATION

A. The Commissioning Committee (team) will report on a regular basis to the Engineer and will comply with any instructions issued by the Engineer in respect to any commissioning activity or actions of the committee.

Likewise, the commissioning team will work closely with the design teams assigned by the Contractor to perform design.

It is an obligation upon the Contractor to ensure that all his installing sub-contractors or supplier of equipment are aware from the outset that they will be required to report to and cooperate fully with Contractor's Commissioning Committee in order to ensure the successful completion of the integrated commissioning.

1.8 INFORMATIONAL SUBMITTALS

A. Comply with requirements in Section 013300 "Submittal Procedures" for submittal procedure general requirements for commissioning process.

B. Commissioning Plan Information:

1. List of Contractor-appointed commissioning team members to include specific personnel and subcontractors performing the various commissioning requirements.
2. Schedule of commissioning activities, integrated with the Construction Schedule. Comply with requirements in Section 013200 "Construction Progress Documentation" for the Construction Schedule general requirements for commissioning process.
3. Contractor personnel and subcontractors participating in each test.
4. List of instrumentation required for each test to include identification of parties that will provide instrumentation for each test.

C. Commissioning schedule.

D. Two-week look-ahead schedules.

E. Commissioning Coordinator Letter of Authority:

es

1. Within 10 days after approval of Commissioning Coordinator qualifications, submit a letter of authority for Commissioning Coordinator, signed by a principal of Contractor's firm. Letter shall authorize Commissioning Coordinator to do the following:

    a. Make inspections required for commissioning process.
    b. Coordinate, schedule, and manage commissioning process of Contractor, subcontractors, and suppliers.
    c. Obtain documentation required for commissioning process from Contractor, subcontractors, and suppliers.
    d. Report issues, delayed resolution of issues, schedule conflicts, and lack of cooperation or expertise on the part of members of the commissioning team.

F. Commissioning Coordinator Qualification Data: For entity coordinating Contractor's commissioning activities to demonstrate their capabilities and experience.

1. Experienced: When used with an entity or individual, "experienced" means having successfully completed a minimum of five previous projects similar in nature, size, and extent to this Project; being familiar with special requirements indicated; and having complied with requirements of authorities having jurisdiction.

G. List test instrumentation, equipment, and monitoring devices. Include the following information:

1. Make, model, serial number, and application for each instrument, equipment, and monitoring device.
2. Brief description of intended use.
3. Calibration record showing the following:

    a. Calibration agency, including name and contact information.
    b. Last date of calibration.
    c. Range of values for which calibration is valid.
    d. Certification of accuracy.
    e. Certification for calibration equipment traceable to NIST.
    f. Due date of the next calibration.

H. Test Reports:

1. Pre-Startup Report: Prior to startup of equipment or a system, submit signed, completed construction checklists.
2. Test Data Reports: At the end of each day in which tests are conducted, submit test data for tests performed.
3. Commissioning Issue Reports: Daily, at the end of each day in which tests are conducted, submit commissioning issue reports for tests for which acceptable results were not achieved.
4. Weekly Progress Report: Weekly, at the end of each week in which tests are conducted, submit a progress report.
5. Data Trend Logs: Submit data trend logs at the end of the trend log period.
6. System Alarm Logs: Daily, at the start of days following a day in which tests were performed, submit printout of log of alarms that occurred since the last log was printed.

I. Construction Checklists:

1. Material checks.
2. Installation checks.
3. Startup procedures, where required.

1.9 ACTION SUBMITTALS

A. The Contractor’s Commissioning Manager will provide appropriate Sub-contractors, Suppliers, Vendors, Installers with a specific request for the type of submittal documentation the Contractor’s

Commissioning Manager requires to facilitate the commissioning work; forms related to (Commissioning Request for Information) will be prepared by the Commissioning Committee and agreed upon with the Engineer. These requests will be integrated into the normal submittal process and protocol of the Contractor's construction team. At minimum, the request will include the manufacturer and model number, the manufacturer's printed installation and detailed start-up procedures, full sequences of operation, O&M data, performance data, any performance test procedures, control drawings and details of Employer contracted tests. All documentation requested by the Commissioning Committee will be included by the Contractor and his Sub-contractors in their O&M manual contributions.

B. The Commissioning Committee and involved parties will review submittals related to the commissioned equipment for conformance to the Contract Documents as it relates to the commissioning process, to the functional performance of the equipments and adequacy for developing test procedures. This review is intended primarily to aid in the development of functional testing procedures and only secondarily to verify compliance with equipment specification. The Engineer shall be notified by the Commissioning Committee, of items missing or areas that are not in conformance with Contract Documents and which require resubmission.

C. The O&M manuals submittals and compliance with the requirements remain the responsibility of the Contractor.

D. No approval other than that of the Engineer shall be considered with request to the commissioning process submittals related acceptance of equipment, systems and integrated systems and reports tests and manuals submittals.

1.10 CLOSEOUT SUBMITTALS

A. Commissioning Report:

1. At Construction-Phase Commissioning Completion, include the following:

   a. Pre-startup reports.
   b. Approved test procedures.
   c. Test data forms, completed and signed.
   d. Progress reports.
   e. Commissioning issue report log.
   f. Commissioning issue reports showing resolution of issues.
   g. Correspondence or other documents related to resolution of issues.
   h. Other reports required by commissioning process.
   i. List unresolved issues and reasons they remain unresolved and should be exempted from the requirements for Construction-Phase Commissioning Completion.
   j. Report shall include commissioning work of Contractor.

B. Request for Certificate of Construction-Phase Commissioning Process Completion.

C. Operation and Maintenance Data: For proprietary test equipment, instrumentation, and tools to include in operation and maintenance manuals.

1.11 QUALITY ASSURANCE

A. Commissioning Coordinator Qualifications:

1. Documented experience commissioning systems of similar complexity to those contained in these documents on at least three projects of similar scope and complexity.
2. Certification of commissioning-process expertise. The following certifications are acceptable. The Employer reserves the right to accept or reject certifications as evidence of qualification.

es

a. Certified Commissioning Authority, by AABC Commissioning Group (ACG).
b. Commissioning-Process Management Professional, by American Society of Heating, Refrigerating and Air-Conditioning Engineers.
c. Certified Commissioning Professional, by Building Commissioning Association.
d. Accredited Commissioning-Process Authority Professional, by University of Wisconsin.
e. Accredited Commissioning-Process Manager, by University of Wisconsin.
f. Accredited Green Commissioning-Process Provider, by University of Wisconsin.

B. Calibration Agency Qualifications:

1. Documented experience commissioning systems of similar complexity to those contained in these documents on at least three projects of similar scope and complexity.
2. Certification that the calibration agency complies with the minimum requirements of ISO/IEC 17025.

C. Commissioning results must be recorded and available for inspection.

1. A systems manual, documenting the information required to allow future operations staff to understand and optimally operate the commissioned services, must be developed and provided to the building operator, upon completion of commissioning works.

1.12 EMPLOYER'S RESPONSIBILITIES

A. Provide the OPR documentation to Commissioning Authority and Contractor for information and use.

B. Assign operation and maintenance personnel and schedule them to participate in commissioning team activities.

C. Provide the BoD documentation, prepared by Designer and approved by Employer, to Commissioning Authority and Contractor for use in developing the commissioning plan, systems manual, and operation and maintenance training plan.

1.13 CONTRACTOR'S RESPONSIBILITIES

A. Contractor shall assign representatives with expertise and authority to act on its behalf and shall schedule them to participate in and perform commissioning process activities including, but not limited to, the following:

1. Evaluate performance deficiencies identified in test reports and, in collaboration with entity responsible for system and equipment installation, recommend corrective action.
2. Cooperate with the Commissioning Authority for resolution of issues recorded in the Issues Log.
3. Attend commissioning team meetings held on a variable basis and as agreed with the Employer
4. Integrate and coordinate commissioning process activities with construction schedule.
5. Review and accept construction checklists provided by the Commissioning Authority.
6. Complete electronic construction checklists as Work is completed and provide to the Commissioning Authority on a weekly basis.
7. Review and accept commissioning process test procedures provided by the Commissioning Authority.
8. Complete commissioning process test procedures.

es

1.14 COMMISSIONING AUTHORITY'S RESPONSIBILITIES

A. Organize and lead the commissioning team.

B. Review the OPR, BOD and project design.

C. Develop and implement a Commissioning plan.

D. Convene commissioning team meetings.

E. Confirm incorporation of Commissioning requirements into the construction documents.

F. Provide Project-specific construction checklists and commissioning process test procedures.

G. Develop a system test procedure.

H. Verify system test execution.

I. Verify the execution of commissioning process activities using random sampling. The sampling rate may vary from 1 to 100 percent. Verification will include, but is not limited to, equipment submittals, construction checklists, training, operating and maintenance data, tests, and test reports to verify compliance with the OPR. When a random sample does not meet the requirement, the Commissioning Authority will report the failure in the Issues Log.

J. Prepare and maintain the Issues and benefits Log throughout the Cx process.

K. Prepare a final Cx process report.

L. Document all findings and recommendations and report directly to the Employer throughout the process.

M. Review the exterior enclosure design.

N. Prepare and maintain completed construction checklist log.

O. Witness systems, assemblies, equipment, and component startup.

P. Compile test data, inspection reports, and certificates; include them in the systems manual and commissioning process report.

Q. Prepare and maintain a current facilities requirements and operation and maintenance plan that contains the information necessary to operate the building efficiently. The plan must include the following:
   - A sequence of operations for the building.
   - The building occupancy schedule.
   - Equipment run-time schedule.
   - Setpoints for all HVAC equipment
   - Set lighting levels throughout the building
   - Minimum outside air requirements
   - Any changes in schedule or setpoints for different seasons, days of the week and times of day
   - A systems narrative describing the mechanical and electrical systems and equipment
   - A preventive maintenance plan for building equipment described in the systems narrative
   - A commissioning program that includes periodic commissioning requirements, ongoing commissioning tasks, and continuous tasks for critical facilities.

Enhanced Commissioning requirements:

- Path 1 : Enhanced Commissioning

Complete the following commissioning process (CxP) activities for mechanical, electrical, plumbing, and renewable energy systems and assemblies in accordance with ASHRAE Guideline 0–2005 and ASHRAE Guideline 1.1–2007 for HVAC&R systems, as they relate to energy, water, indoor environmental quality, and durability.
The Commissioning Authority must do the following:

A. Review Contractor submittals.

B. Verify inclusion of system manual requirements in construction documents.

C. Verify inclusion of operator and occupant training requirements in construction documents.

D. Verify systems manual updates and delivery.

E. Verify operator and occupant training delivery and effectiveness.

F. Verify seasonal testing.

G. Review building operations 10 months after Taking Over.

H. Develop an on-going commissioning plan.

I. Include all enhanced commissioning tasks in the OPR and BOD.

J. Option 1 Path 2: Enhanced and Monitoring-Based Commissioning: Develop monitoring-based procedures and identify points to be measured and evaluated to assess performance of energy and water consuming systems.

And

Develop monitoring-based procedures and identify points to be measured and evaluated to assess performance of energy- and water-consuming systems.

Include the procedures and measurement points in the commissioning plan. Address the following:

1. roles and responsibilities;
2. measurement requirements (meters, points, metering systems, data access);
3. the points to be tracked, with frequency and duration for trend monitoring;
4. the limits of acceptable values for tracked points and metered values (where appropriate, predictive algorithms may be used to compare ideal values with actual values);
5. the elements used to evaluate performance, including conflict between systems, out of sequence operation of systems components, and energy and water usage profiles;
6. an action plan for identifying and correcting operational errors and deficiencies;
7. training to prevent errors;
8. planning for repairs needed to maintain performance; and
9. the frequency of analyses in the first year of occupancy(at least quarterly).

K. Update the systems manual with any modifications or new settings, and give the reason for any modifications from the original design.

L. And Option 2. Envelope Commissioning

1. Fulfill the requirements of fundamental commissioning and verification as they apply to the building’s thermal envelope in addition to mechanical and electrical systems and assemblies.

es

2. Complete the following commissioning process activities for the building's thermal envelope in accordance with ASHRAE guideline 0-2005 and the national institute of building science (NIBS) guideline 3-2012, exterior enclosure technical requirements for the commissioning process as they relate to energy, water, indoor environmental quality and durability, Commissioning Authority must complete the following:
   a. Review Contractor submittals.
   b. Verify inclusion of systems manual requirements in construction documents.
   c. Verify inclusion of operator and occupant training requirements in construction documents.
   d. Verify system manual updates and delivery.
   e. Verify operator and occupant training delivery and effectiveness.
   f. Verify seasonal testing.
   g. Review building operations 10 months after Taking Over.
   h. Develop an ongoing commissioning plan.

es

PART 2 - PRODUCTS

2.1 GENERAL

A. Commissioning of air distribution systems, water distribution systems, lighting, central control and building management systems, refrigeration systems and boilers must be carried out.

1. Commissioning must be carried out in accordance with the CIBSE Codes listed below or other commissioning standard or code.

1.1. 'The Chartered Institution of Building Services Engineers (CIBSE) Commissioning Code, Air Distribution Systems, Code A-2006'

1.2. 'CIBSE Commissioning Code, Water Distribution Systems, Code W-2010'

1.3. 'CIBSE Commissioning Code, Lighting, Code L-2018'

1.4. 'CIBSE Commissioning Code, Automatic Controls, Code C-2001' for central control and Building Management System (BMS);

1.5. 'CIBSE Commissioning Code R: 2002 Refrigeration Systems; and

1.6. 'CIBSE Commissioning Code B: 2002 Boilers'.

2. Commissioning results must be recorded.

3. A systems manual, documenting the information required to allow future operations staff to understand and optimally operate the commissioned services, must be developed and provided to the building operator, upon completion of commissioning works.

2.2 TEST EQUIPMENT, INSTRUMENTATION, AND TOOLS

A. All industry standard test equipment required for performing the tests specified herein shall be provided by the Contractor. If any special data logging equipment is required, for any FPT, the equipment shall be provided by the Contractor, the Contractor may arrange with his sub-contractors/suppliers/vendors for the provision of any special data logging equipment required.

B. All instrumentation shall meet the following standards:

1. Be of sufficient quality and accuracy to test and/or measure system performance within the tolerances required to determine adequate performance.
2. Be calibrated on the manufacturer's recommended intervals with calibration tags permanently affixed to the instrument being used.
3. Be maintained in good repair and operating condition throughout the duration of use on this project.
4. Be recalibrated/repaired if dropped and/or damaged in any way during use on this project.

es

C. Test equipment and instrumentation required to perform the commissioning process shall remain the property of Contractor unless otherwise indicated.

D. Test equipment and instrumentation required to perform commissioning process shall comply with the following criteria:

1. Be manufactured for the purpose of testing and measuring tests for which they are being used and have an accuracy to test and measure system performance within the tolerances required to determine acceptable performance.
2. Calibrated and certified.

    a. Calibration performed and documented by a qualified calibration agency according to national standards applicable to the tools and instrumentation being calibrated. Calibration shall be current according to national standards or within test equipment and instrumentation manufacturer's recommended intervals, whichever is more frequent, but not less than within six months of initial use on Project. Calibration tags shall be permanently affixed.
    b. Repair and recalibrate test equipment and instrumentation if dismantled, dropped, or damaged since last calibrated.

3. Maintain test equipment and instrumentation.
4. Use test equipment and instrumentation only for testing or monitoring Work for which they are designed.

2.3 PROPRIETARY TEST EQUIPMENT, INSTRUMENTATION, AND TOOLS

A. Proprietary test equipment, instrumentation, and tools are those manufactured or prescribed by tested equipment manufacturer and required for work on its equipment as a condition of equipment warranty, or as otherwise required to service, repair, adjust, calibrate, or perform work on its equipment.

1. Identify proprietary test equipment, instrumentation, and tools required in the test equipment identification list submittal.
2. Proprietary test equipment, instrumentation, and tools shall become the property of Employer at Taking Over.

2.4 REPORT FORMAT AND ORGANIZATION

A. General Format and Organization:

1. Bind report in three-ring binders.
2. Label the front cover and spine of each binder with the report title, volume number, project name, Contractor's name, and date of report.
3. Record report on compact disk.
4. Electronic Data: Portable document format (PDF); a single file with outline-organized bookmarks for major and minor tabs and tab contents itemized for specific reports.

B. Commissioning Report:

1. Include a table of contents and an index to each test.
2. Include major tabs for each Specification Section.
3. Include minor tabs for each test.
4. Within each minor tab, include the following:

    a. Test specification.
    b. Pre-startup reports.
    c. Approved test procedures.

es

d. Test data forms, completed and signed.
e. Commissioning issue reports, showing resolution of issues, and documentation related to resolution of issues pertaining to a single test. Group data forms, commissioning issue reports showing resolution of issues, and documentation related to resolution of issues for each test repetition together within the minor tab, in reverse chronological order (most recent on top).

PART 3 - EXECUTION

3.1 PREPARATION

A. Review preliminary construction checklists and preliminary test procedures and data forms.

3.2 BASIS OF DESIGN DOCUMENTATION

A. Provide documentation of each system design criteria. Include a narrative for each system with its design criteria and design intent.

3.3 DESIGN DOCUMENT REVIEW

A. Provide a complete review of all design documents for commissioning requirements. Provide a sheet by sheet narrative indicating any areas that may prevent a complete and successful commissioning project. Areas of review are:

1. Equipment access and maintainability.
2. Installation clearances and available space.
3. Any specific layout or design problem that will prevent its being commissioned.

3.4 COMMISSIONING PLAN

A. The commissioning plan for this project shall detail the implementation of the commissioning process. The Commissioning Committee will formulate the commissioning plan for the project based on the plans and specifications. This plan will include the following:

1. The initial design intent.
2. A listing of observations and inspections to be made during construction.
3. A listing of the equipment and systems that will be functionally tested.
4. A description of the commissioning documentation.
5. A schedule and sequence to provide documentation.
6. Acceptance procedures.
7. Training requirements.

3.5 CONSTRUCTION CHECKLISTS

A. Construction checklists cannot modify or conflict with the Contract Documents.

B. Create construction checklists based on actual systems and equipment to be included in Project.

C. Material Checks: Compare specified characteristics and approved submittals with materials as received. Include factory tests and other evaluations, adjustments, and tests performed prior to shipment if applicable.

es

1. Service connection requirements, including configuration, size, location, and other pertinent characteristics.
2. Included optional features.
3. Delivery Receipt Check: Inspect and record physical condition of materials and equipment on delivery to Project site, including agreement with approved submittals, cleanliness, and lack of damage.
4. Installation Checks:

    a. Location according to Drawings and approved Shop Drawings.
    b. Configuration.
    c. Compliance with manufacturers' written installation instructions.
    d. Attachment to structure.
    e. Access clearance to allow for maintenance, service, repair, removal, and replacement without the need to disassemble or remove other equipment or building elements. Access coordinated with other building elements and equipment, including, but not limited to, ceiling and wall access panels, in a manner consistent with OSHA fall-protection regulations and safe work practices.
    f. Utility connections are of the correct characteristics, as applicable.
    g. Correct labeling and identification.
    h. Startup Checks: Verify readiness of equipment to be energized. Include manufacturer's standard startup procedures and forms.

D. Startup: Perform and document initial operation of equipment to prove that it is installed properly and operates as intended according to manufacturer's standard startup procedures, at minimum.

E. Performance Tests:
1. Static Tests: As specified elsewhere, including, but not limited to, duct and pipe leakage tests, insulation-resistance tests, and water-penetration tests.
2. Ductwork leakage testing must be carried out by a company that is specialized in commissioning of buildings.
3. Component Performance Tests: Tests evaluate the performance of an input or output of components under a full range of operating conditions.
4. Equipment and Assembly Performance Tests: Test and evaluate performance of equipment and assemblies under a full range of operating conditions and loads.
5. System Performance Tests: Test and evaluate performance of systems under a full range of operating conditions and loads.
6. Intersystem Performance Tests: Test and evaluate the interface of different systems under a full range of operating conditions and loads.

F. Deferred Construction Checklists: Obtain Employer’s approval of proposed deferral of construction checklists, including proposed schedule of completion of each deferred construction checklist, before submitting request for Certificate of Construction-Phase Commissioning Process Completion. When approved, deferred construction checklists may be completed after date of Construction-Phase Commissioning Completion. Include the following in a request for Certificate of Construction-Phase Commissioning Process Completion:

1. Identify deferred construction checklists by number and title.
2. Provide a target schedule for completion of deferred construction checklists.
3. Written approval of proposed deferred construction checklists, including approved schedule of completion of each deferred construction checklist.

G. Delayed Construction Checklists: Obtain Employer’s approval of proposed delayed construction checklists, including proposed schedule of completion of each delayed construction checklist, before submitting request for Certificate of Construction-Phase Commissioning Process Completion. When approved, delayed construction checklists may be completed after date of Construction-Phase Commissioning Completion. Include the following in a request for Certificate of Construction-Phase Commissioning Process Completion:

1. Identify delayed construction checklist by construction checklist number and title.

es

2. Provide a target schedule for completion of delayed construction checklists.
3. Written approval of proposed delayed construction checklists, including approved schedule of completion of each delayed construction checklist.

3.6 GENERAL EXECUTION REQUIREMENTS

A. Schedule and coordinate commissioning process with the Construction Schedule.

B. Perform activities identified in construction checklists, including tests, and document results of actions as construction proceeds.

C. Perform test demonstrations for Employer's witness. Unless otherwise indicated, demonstrate tests for 100 percent of work to which the test applies. In some instances, demonstration of a random sample of other than 100 percent of the results of a test is specified.
1. On determination of the sample size, the samples shall be selected randomly by Employer's witness at the time of the test demonstration.
2. Include in the Commissioning Plan a detailed list of the test demonstrations with lot and sample quantities for each test.

D. Report test data and commissioning issue resolutions.

E. Schedule personnel to participate in and perform Commissioning-Process Work.

F. Installing Contractors' commissioning responsibilities include, but are not limited to, the following:

1. Operating the equipment and systems they install during tests.
2. In addition, installing contractors may be required to assist in tests of equipment and systems with which their work interfaces.

3.7 COMMISSIONING COORDINATOR RESPONSIBILITIES

A. Management and Coordination: Manage, schedule, and coordinate commissioning process, including, but not limited to, the following:

1. Coordinate with subcontractors on their commissioning responsibilities and activities.
2. Obtain, assemble, and submit commissioning documentation.
3. Conduct periodic on-site commissioning meetings. Comply with requirements in Section 013100 "Project Management and Coordination."
4. Develop and maintain the commissioning schedule. Integrate commissioning schedule into the Construction Schedule. Update Construction Schedule at specified intervals.
5. Review and comment on preliminary test procedures and data forms.
6. Report inconsistencies and issues in system operations.
7. Verify that tests have been completed and results comply with acceptance criteria, and that equipment and systems are ready before scheduling test demonstrations.
8. Direct and coordinate test demonstrations.
9. Coordinate witnessing of test demonstrations by Employer's witness.
10. Coordinate and manage training. Be present during training sessions to direct video recording, present training, and direct the training presentations of others. Comply with requirements in Section 017900 "Demonstration and Training."
11. Prepare and submit specified commissioning reports.
12. Track commissioning issues until resolution and retesting is successfully completed.
13. Retain original records of Commissioning-Process Work, organized as required for the commissioning report. Provide Employer's representative access to these records on request.
14. Assemble and submit commissioning report.

es

3.8 COMMISSIONING TESTING

A. Quality Control: Construction checklists, including tests, are quality-control tools designed to improve the functional quality of Project. Test demonstrations evaluate the effectiveness of Contractor's quality-control process.

B. Employer’s witness will be present to witness commissioning work requiring the signature of an Employer's witness, including, but not limited to, test demonstrations. Employer's project manager will coordinate attendance by Employer's witness with Contractor's published Commissioning Schedule. Employer's witness will provide no labor or materials in the commissioning work. The only function of Employer's witness will be to observe and comment on the progress and results of commissioning process.

C. Construction Checklists:

1. Complete construction checklists as Work is completed.
2. Distribute construction checklists to installing contractors before they start work.
3. Installers:

    a. Verify installation using approved construction checklists as Work proceeds.
    b. Complete and sign construction checklists daily for work performed during the preceding day.

4. Provide Commissioning Authority access to construction checklists.

D. Installation Compliance Issues: Record as an installation compliance issue Work found to be incomplete, inaccessible, at variance with the Contract Documents, nonfunctional, or that does not comply with construction checklists. Record installation compliance issues on the construction checklist at the time they are identified. Record corrective action and how future Work should be modified before signing off the construction checklist.

E. Pre-Startup Audit: Prior to executing startup procedures, review completed installation checks to determine readiness for startup and operation. Report conditions, which, if left uncorrected, adversely impact the ability of systems or equipment to operate satisfactorily or to comply with acceptance criteria. Prepare pre-startup report for each system.

F. Test Procedures and Test Data Forms:

1. Test procedures shall define the step-by-step procedures to be used to execute tests and test demonstrations.
2. Test procedures shall be specific to the make, model, and application of the equipment and systems being tested.
3. Completed test data forms are the official records of the test results.
4. Commissioning Authority will provide to Contractor preliminary test procedures and test data forms for performance tests and commissioning tests after approval of Product Data, Shop Drawings, and preliminary operation and maintenance manual.
5. Review preliminary test procedures and test data forms, and provide comments within 14 days of receipt from Commissioning Authority. Review shall address the following:

    a. Equipment protection and warranty issues, including, but not limited to, manufacturers' installation and startup recommendations, and operation and maintenance instructions.
    b. Applicability of the procedure to the specific software, equipment, and systems approved for installation.

6. After Contractor has reviewed and commented on the preliminary test procedures and test data forms, Commissioning Authority will revise and reissue the approved revised test procedures and test data forms marked "Approved for Testing."

es

7. Use only approved test procedures and test data forms marked "Approved for Testing" to perform and document tests and test demonstrations.

G. Performance of Tests:

1. The sampling rate for tests is 100 percent. The sampling rate for test demonstrations is 100 percent unless otherwise indicated.
2. Perform and complete each step of the approved test procedures in the order listed.
3. Record data observed during performance of tests on approved data forms at the time of test performance and when the results are observed.
4. Record test results that are not within the range of acceptable results on commissioning issue report forms in addition to recording the results on approved test procedures and data forms according to the "Commissioning Compliance Issues" Paragraph in this Article.
5. On completion of a test, sign the completed test procedure and data form. Tests for which test procedures and data forms are incomplete, not signed, or which indicate performance that does not comply with acceptance criteria will be rejected. Tests for which test procedures and data forms are rejected shall be repeated and results resubmitted.

H. Performance of Test Demonstration:

1. Perform test demonstrations on a sample of tests after test data submittals are approved. The sampling rate for test demonstrations shall be 100 percent unless otherwise indicated in the individual test specification.
2. Notify Employer's witness at least three days in advance of each test demonstration.
3. Perform and complete each step of the approved test procedures in the order listed.
4. Record data observed during performance of test demonstrations on approved data forms at the time of demonstration and when the results are observed.
5. Provide full access to Employer's witness to directly observe the performance of all aspects of system response during the test demonstration. On completion of a test demonstration, sign the completed data form and obtain signature of Employer's witness at the time of the test to authenticate the reported results.
6. Test demonstration data forms not signed by Contractor and Employer's witness at the time of the completion of the procedure will be rejected. Test demonstrations for which data forms are rejected shall be repeated and results shall be resubmitted.

    a. Exception for Failure of Employer's Witness to Attend: Failure of Employer's witness to be present for agreed-on schedule of test demonstration shall not delay Contractor. If Employer's witness fails to attend a scheduled test, Contractor shall proceed with the scheduled test. On completion, Contractor shall sign the data form for Contractor and for Employer's witness, and shall note the absence of Employer's witness at the scheduled time and place.

7. False load test requirements are specified in related Sections.

    a. Where false load testing is specified, provide temporary equipment, power, controls, wiring, piping, valves, and other necessary equipment and connections required to apply the specified load to the system. False load system shall be capable of steady-state operation and modulation at the level of load specified. Equipment and systems permanently installed in this work shall not be used to create the false load without Engineer's written approval.

I. Deferred Tests:

1. Deferred Test List: Identify, in the request for Certificate of Construction-Phase Commissioning Process Completion, proposed deferred tests or other tests approved for deferral until specified seasonal or other conditions are available. When approved, deferred tests may be completed after the date of Construction-Phase Commissioning Completion. Identify proposed deferred tests in the request for Certificate of Construction-Phase Commissioning Process Completion as follows:

es

a. Identify deferred tests by number and title.
b. Provide a target schedule for completion of deferred tests.

2. Schedule and coordinate deferred tests. Schedule deferred tests when specified conditions are available. Notify Engineer and Commissioning Authority at least three working days (minimum) in advance of tests.
3. Where deferred tests are specified, coordinate participation of necessary personnel and of Engineer, Commissioning Authority, and Employer's witness. Schedule deferred tests to minimize occupant and facility impact. Obtain Engineer's approval of the proposed schedule.

J. Delayed Tests:

1. Delayed Test List: Identify, in the request for Certificate of Construction-Phase Commissioning Process Completion, proposed delayed tests. Obtain Employer approval of proposed delayed tests, including proposed schedule of completion of each delayed test, before submitting request for Certificate of Construction-Phase Commissioning Process Completion. Include the following in the request for Certificate of Construction-Phase Commissioning Process Completion:

a. Identify delayed tests by test number and title.
b. Written approval of proposed delayed tests, including approved schedule of completion of delayed tests.

2. Schedule and coordinate delayed tests. Schedule delayed tests when conditions that caused the delay have been rectified. Notify Engineer and Commissioning Authority at least three working days (minimum) in advance of tests.
3. Where delayed tests are approved, coordinate participation of necessary personnel and of Engineer, Commissioning Authority, and Employer's witness. Schedule delayed tests to minimize occupant and facility impact. Obtain Engineer's approval of the proposed schedule.

K. Commissioning Compliance Issues:

1. Test results that are not within the range of acceptable results are commissioning compliance issues.
2. Track and report commissioning compliance issues until resolution and retesting are successfully completed.
3. If a test demonstration fails, determine the cause of failure. Direct timely resolution of issue and then repeat the demonstration. If a test demonstration must be repeated due to failure caused by Contractor work or materials, reimburse Employer for billed costs for the participation in the repeated demonstration.
4. Test Results: If a test demonstration fails to meet the acceptance criteria, perform the following:

a. Complete a commissioning compliance issue report form promptly on discovery of test results that do not comply with acceptance criteria.
b. Submit commissioning compliance issue report form within 24 hours of the test.
c. Determine the cause of the failure.
d. Establish responsibility for corrective action if the failure is due to conditions found to be Contractor's responsibility.

5. Commissioning Compliance Issue Report: Provide a commissioning compliance issue report for each issue. Do not report multiple issues on the same commissioning compliance issue report.

a. Exception: If an entire class of devices is determined to exhibit the identical issue, they may be reported on a single commissioning compliance issue report. (For example, if all return-air damper actuators that are specified to fail to the open position are found to fail to the closed position, they may be reported on a single commissioning issue report. If a single commissioning issue report is used for

es

multiple commissioning compliance issues, each device shall be identified in the report, and the total number of devices at issue shall be identified.

b. Complete and submit Part 1 of the commissioning compliance issue report immediately when the condition is observed.
c. Record the commissioning compliance issue report number and describe the deficient condition on the data form.
d. Resolve commissioning compliance issues promptly. Complete and submit Part 2 of the commissioning compliance issue report when issues are resolved.

6. Diagnose and correct failed test demonstrations as follows:

a. Perform diagnostic tests and activities required to determine the fundamental cause of issues observed.
b. Record each step of the diagnostic procedure prior to performing the procedure. Update written procedure as changes become necessary.
c. Record the results of each step of the diagnostic procedure.
d. Record the conclusion of the diagnostic procedure on the fundamental cause of the issue.
e. Determine and record corrective measures.
f. Include diagnosis of fundamental cause of issues in commissioning compliance issue report.

7. Retest:

a. Schedule and repeat the complete test procedure for each test demonstration for which acceptable results are not achieved. Obtain signature of Employer's witness on retest data forms. Repeat test demonstration until acceptable results are achieved. Except for issues that are determined to result from design errors or omissions, or other conditions beyond Contractor's responsibility, compensate Employer for direct costs incurred as the result of repeated test demonstrations to achieve acceptable results.
b. For each repeated test demonstration, submit a new test data form, marked "Retest."

8. Do not correct commissioning compliance issues during test demonstrations.

a. Exceptions will be allowed if the cause of the issue is obvious and resolution can be completed in less than five minutes. If corrections are made under this exception, note the deficient conditions on the test data form and issue a commissioning compliance issue report. A new test data form, marked "Retest," shall be initiated after the resolution has been completed.

3.9 COMMISSIONING MEETINGS

A. Schedule and conduct commissioning meetings. Comply with requirements in Section 013100 "Project Management and Coordination."

B. The commissioning scoping meeting is planned and called for by the Contractor’s Commissioning Manager of the Commissioning Committee within 90 days of the beginning of construction. It is obligatory that the Engineer and the designer’s, sub-contractors/suppliers assigned by the Contractor be invited. During the meeting, parties; including but not limited to the Employer, Engineer, Contractor and his Sub-contractors and suppliers, involved in the commissioning shall be introduced and the commissioning process shall be reviewed, while management and reporting lines shall be determined. The flow of documents, how much submittal data the Commissioning Committee (Team) will receive, etc. shall also be discussed.

C. The outline of the commissioning plan shall be prepared by the Contractor’s Commissioning Committee and shall be reviewed by the Engineer. The commissioning plan shall address process questions. Lines of reporting and communications shall be determined and the work products list shall be discussed. Also, to be covered is the general list of each party’s responsibilities; who is

responsible to develop the startup plan for each piece of equipment, assembly and system; and the proposed commissioning schedule.

D. The outcome of the meeting should result in an increased understanding by all parties of the commissioning process and their respective responsibilities. The meeting provides the Commissioning Committee additional information needed to finalize the Commissioning Plan, including the commissioning schedule.

E. Prior to this meeting the attendees shall receive from the Contractor, all drawings, specifications and the construction schedule. The Commissioning Committee shall keep notes of the meeting and shall distribute them to the attendees.

F. Other meetings will be planned and called for by the Contractor's Commissioning Manager as construction progresses. Those meetings will cover coordination, deficiency resolution and planning issues with particular Sub-contractors. The Commissioning Committee will plan those meetings and will minimize unnecessary time being spent by Sub-contractors and suppliers. Those meetings will be held every two weeks, until the final 6 months of construction when they will be held as frequently as one per week or more.

G. Minutes of such meetings shall be submitted to the Engineer for information.

H. The Engineer shall be free to call meetings upon the above subject as and when he considers such meetings are required. The Contractor's Commissioning Committee and any other representatives of the Contractor or the sub-contractors and suppliers invited shall attend as summoned.

3.10 SEQUENCING

A. Sequencing of Commissioning Verification Activities: For a particular material, item of equipment, assembly, or system, perform the following in the order listed unless otherwise indicated:

1. Construction Checklists:

    a. Material checks.
    b. Installation checks.
    c. Startup, as appropriate. Some startup may depend on component performance. Such startup may follow component performance tests on which the startup depends.
    d. Performance Tests:

        1) Static tests, as appropriate.
        2) Component performance tests. Some component performance tests may depend on completion of startup. Such component performance tests may follow startup.
        3) Equipment and assembly performance tests.
        4) System performance tests.
        5) Intersystem performance tests.

2. Commissioning tests.

B. Before performing commissioning tests, verify that materials, equipment, assemblies, and systems are delivered, installed, started, and adjusted to perform according to construction checklists.

C. Verify readiness of materials, equipment, assemblies, and systems by performing tests prior to performing test demonstrations. Notify Engineer if acceptable results cannot be achieved due to conditions beyond Contractor's control or responsibility.

D. Commence tests as soon as installation checks for materials, equipment, assemblies, or systems are satisfactorily completed. Tests of a particular system may proceed prior to completion of other systems, provided the incomplete work does not interfere with successful execution of test.

es

3.11 SCHEDULING

A. Commissioning of systems will proceed per the commissioning schedule and as outlined in the commissioning plan, The Contractor's Commissioning Committee (Team) will work and schedule the commissioning activities which shall be subject to the approval of the Engineer. Commissioning schedule shall be arranged in a form to be agreed upon with the Engineer Commissioning schedule shall include by no way of limitation the following details:

1. Scoping meeting and final plan
2. Commissioning submittals
3. Construction site visits and meetings
4. Pre-functional checklists/tests (Write & distribute)
5. Startup and initial checkout plan
6. Startup and initial checkout (pre-functional)
7. Functional performance tests
8. Manual Tests Execution
9. Documentation Verification
10. Final Commissioning Report
11. Seasonal testing

The above-mentioned activities are only for guidance. Details of actions under each task and duration is to be indicated with duration.

B. The Contractor shall coordinate with his Commissioning Committee (team) and integrate all commissioning activities within his design and construction programme of the Contract.

C. The Contractor's Commissioning Committee shall address scheduling problems and make necessary notifications, updating, revisions, in a timely manner in order to expedite the commissioning process.

D. The Commissioning Committee (team) shall provide the initial schedule of primary commissioning events with the estimated start and end date for each event at the commissioning scoping meeting, which shall be held at the start of the work to coordinate the different commissioning activities. Commissioning events with the estimated start and end date for each event shall be arranged in a form to be agreed upon with Engineer, Initial Commissioning Schedule Summary shall include by no way of limitation the following events/activities:

1. Task/Activity
2. Initial scooping meeting and final plan
3. Submittals obtained and reviewed
4. Begin construction site visits/inspections
5. Pre-functional forms developed and distributed
6. Start-up and initial checkout plans
7. Start-up and initial checkout executed
8. Functional performance tests
9. O&M documentation review and verification
10. Final commissioning report
11. Seasonal testing

E. As construction progresses more detailed schedules are to be developed by the Commissioning Committee (team).

F. Commence commissioning process as early in the construction period as possible.

G. Commissioning Schedule: Integrate commissioning activities into Construction Schedule. See Section 013200 "Construction Progress Documentation."

1. Include detailed commissioning activities in monthly updated Construction Schedule and short-interval schedule submittals.
2. Schedule the start date and duration for the following commissioning activities:

    a. Submittals.
    b. Preliminary operation and maintenance manual submittals.
    c. Installation checks.
    d. Startup, where required.
    e. Performance tests.
    f. Performance test demonstrations.
    g. Commissioning tests.
    h. Commissioning test demonstrations.

3. Schedule shall include a line item for each installation check, startup, and test activity specific to the equipment or systems involved.
4. Determine milestones and prerequisites for commissioning process. Show commissioning milestones, prerequisites, and dependencies in monthly updated critical-path-method construction schedule and short-interval schedule submittals.

H. Two-Week Look-Ahead Commissioning Schedule:

1. Two weeks prior to the beginning of tests, submit a detailed two-week look-ahead schedule. Thereafter, submit updated two-week look-ahead schedules weekly for the duration of commissioning process.
2. Two-week look-ahead schedules shall identify the date, time, beginning location, Contractor personnel required, and anticipated duration for each startup or test activity.
3. Use two-week look-ahead schedules to notify and coordinate participation of Employer’s witnesses.

I. Employer’s Witness Coordination:

1. Coordinate Employer's witness participation via Engineer.
2. Notify Engineer of commissioning schedule changes at least two work days in advance for activities requiring the participation of Employer's witness.

3.12 COMMISSIONING PROCESS

A. The following narrative provides a brief overview of the typical commissioning tasks of the project and the general order in which they occur.

1. Commissioning begins with the scoping meeting called by the Contractor’s Commissioning Committee manager and/or the Engineer, where the commissioning process is reviewed with the commissioning parties.
2. The Commissioning Committee finalizes the commissioning plan using the information gathered from the scoping meeting. The initial commissioning schedule is also developed, along with detailed time line using *Detailed Commissioning Schedule,* the form of which shall be agreed upon with Engineer.
3. Additional meetings will be required throughout construction, scheduled by the Commissioning Committee and/or the Engineer, with necessary parties attending, to plan, scope, coordinate, schedule future activities and resolve problems.
4. Equipment documentation is to be copied by the Contractor to his Commissioning Committee during normal submittals, including detailed start-up procedure.

5. The Commissioning Committee shall work together with the Sub-contractors/suppliers/vendors to develop start-up plans and start-up documentation formats, including providing the Sub-contractors with pre-functional checklists to be completed, during the start-up process.
6. In general, checkout and performance verification proceeds from simple to complex, from component level to equipment to systems and intersystem integration levels. Pre-functional checklists shall be completed before functional testing.
7. The Sub-contractors, under their own direction shall execute and document the pre-functional checklists and perform start-up and initial checkout. The Commissioning Committee shall review and document that the checklists and start-up were completed according to the approved plans. This will include the Commissioning Committee, Employer and Engineer witnessing start-up of selected equipment.
8. The Commissioning Committee develops specific equipment and system integration functional performance test procedures. All documents shall be submitted for approval to the Engineer prior to any actions having been taken.
9. The procedures are executed by the Contractor/Sub-contractors, under the direction of, and documented by the Commissioning Committee. All shall be subject approval of the Engineer
10. Items of non-compliance in material, installation or setup shall be corrected at the Contractor's expense prior to retesting of the system concerned.
11. The Commissioning Committee reviews the O&M documentation for completeness.
12. Deferred testing is conducted, as specified or required.

3.13 START-UP CHECKLIST AND INITIAL CHECKOUT

The following procedures shall apply to all equipment and systems to be commissioned.

A. General: Pre-functional checklists are important to ensure that the equipment and systems are hooked up and operational. It ensures that functional performance testing (in-depth system checkout) may proceed without unnecessary delays. Each piece of equipment receives full pre-functional checkout. No sampling strategies are used. The pre-functional testing for a given system must be successfully completed prior to formal functional performance testing of equipment or subsystems of the given system.

B. Start-up and Initial Checkout Plan: The Commissioning Committee shall assist the commissioning parties responsible for startup of any equipment in developing detailed start-up plans for all equipment. The primary role of the Commissioning Committee in this process is to ensure that there is written documentation that each of the manufacturer-recommended procedures have been completed and that such documentation has been submitted and approved by the Engineer prior to being needed on site.

1. The Commissioning Committee shall prepare pre-functional checklists and procedures that include safety requirements using Form to be agreed upon with the Engineer and involved parties such form is related to Plan *and Documentation Requirements for Startup and Initial Checkout*. Those checklists indicate and define the required procedures to be executed as part of startup and initial checkout of the systems. They also define the party responsible for the execution of startup/initial checkout.

2. The Contractor or his sub-contractor/supplier/vendor responsible for the purchase and installation of the equipment shall develops the full start-up plan by combining (or adding to) the Commissioning Committee's checklists with the manufacturer's detailed start-up and checkout procedures from the O&M manual and the normally used field checkout sheets. The plan will include checklists and procedures with specific boxes or lines for recording and documenting the execution of checking and inspection and a summary statement with a signature block at the end of the plan. The Commissioning Committee shall ensure that all such checkout sheets are submitted for approval by the Engineer well in advance of the time that they will be need on site.

3. The full start-up plan shall mainly consist of:

es

a. The Commissioning Committee's pre-functional checklists.
b. The manufacturer's standard written start-up procedures copies from the installation manuals with check boxes by each procedure and signature block added by hand at the end.
c. The manufacturer's normally used field checkout sheets.
d. The Contractor/sub-contractor submit the full startup plan to the Commissioning Committee for review updating and comments ready for submission for approval.
e. The Commissioning Committee reviews the procedures and format for documenting them, noting any procedures that need to be added and then submits for Construction Manger approval.

C. Execution of Pre-functional Checklists and Startup:

1. Four weeks prior to startup, Contractor shall schedule, in coordination with the Sub-contractors and vendors, startup and checkout with the Engineer, Employer, Contractor's design team and Commissioning Committee. The performance of the pre-functional checklists, startup and checkout will be directed and executed by the Contractor/Sub-contractors or vendor.

   When checking off pre-functional checklists, signatures may be required of other Sub-contractors or vendors/suppliers/installers for verification of completion of their work.

   All original records produced by the said procedures will be organized and submitted to the Engineer for the records of the project. The Commissioning Committee shall on behalf of the Contractor maintain organized and full electronic copies of all such documents.

2. The Commissioning Committee shall observe, the procedures for each piece of primary equipment, unless there are multiple units, (in which case a sampling strategy may be used as approved by the Engineer).

   In no case will the number of units witnessed be less than four on any one system, nor less than 20% of the total number of identical or very similar units.

3. The Contractor's Sub-contractors and vendors shall execute startup and provide the Contractor's Commissioning Committee with a signed and dated electronic copy of the completed start-up and pre-functional tests and checklists. The Commissioning Committee shall do likewise with the Engineer.

D. Deficiencies, Non-Conformance and Approval in Checklists and Startup:

1. The Contractor with his Sub-contractors shall clearly list any outstanding items of the initial start-up and pre-functional procedures that were not completed successfully, at the bottom of the procedures form or on an attached sheet. The procedures form and any outstanding deficiencies shall be provided to the Contractor's Commissioning Committee within one working day of test completion with a copy to the Engineer for information.

2. The Commissioning Committee shall review and submit on behalf of the Contractor, with any comments that the Commissioning Committee may have, the procedures form and any outstanding deficiencies, to the Engineer. The Engineer shall issue a non-compliance report or an approval form to the Contractor.

3. The Commissioning Committee shall work with the Sub-contractors and vendors to correct and retest deficiencies or uncompleted items. In this respect the Commissioning Committee will report to the Engineer and others as necessary. The Contractor/Installing Sub-contractors or vendors shall correct all areas that are deficient or incomplete in the checklists and tests in a timely manner, and shall notify the Commissioning Committee as soon as outstanding items have been corrected and resubmit an updated start-up report and a Statement of Correction on the original non-compliance report. When satisfactory completed, the Commissioning

Committee recommends approval of the execution of the checklists and startup of each system to the Engineer using Form agreed upon related Commissioning Test or Document Approval.

4. Items left incomplete, which later cause deficiencies or delays during functional testing, may result in back-charges to the responsible party.

3.14 FUNCTIONAL PERFORMANCE TESTING

A. General: The objective of functional performance testing is to demonstrate that each system is operating according to the documented design intent and Contract Documents. Functional testing facilitates bringing the systems from a state of substantial completion to full dynamic operation. Additionally, during the testing process, areas of deficient performance are identified and corrected, improving the operation and functioning of the systems. In general, each system should be operated through all modes of operation. Inter-system integration performance shall further be tested and checked.

B. Development of Test Procedure: Before test procedures are written, the Commissioning Committee shall obtain all requested documentation and a current list of change orders affecting equipment or systems from the Contractor, such as an updated points list, program code, control sequences and parameters. The Commissioning Committee shall develop specific test procedures and forms to verify and document proper operation of each piece of equipment and system. Each Sub-contractor or vendor responsible to execute a test shall provide all assistance to the Commissioning Committee in developing the procedures review (answering questions about equipment, operation, sequences, etc.)

Prior to execution, the Commissioning Committee shall provide a copy of the test procedures to the Sub-contractors who shall review the tests for feasibility, safety, equipment and warranty protection. The Commissioning Committee shall submit the test procedure to the Engineer for review and approval.

The purpose of any given specific test is to verify document compliance with the stated criteria of acceptance given in the test form.

The test procedure electronic forms developed by the Commissioning Committee shall include (but not limited to) the following information:

1. System, equipment or component name(s).
2. Equipment location and ID number.
3. Unique test ID number and reference to unique pre-functional checklist and start-up documentation ID numbers for the piece of equipment.
4. Date.
5. Project name.
6. Participating parties.
7. A copy of the relevant specification describing the test requirements.
8. A copy of the specific sequence of operations or other specified parameters being verified.
9. Formulas used in any calculations.
10. Required pre-test field measurements.
11. Instructions for setting up the test.
12. Special cautions, alarm limits, etc.
13. Specific step-by-step procedures to execute the test, in a clear, sequential and repeatable format.
14. Acceptance criteria of proper performance with a Yes/No check box to allow for clearly making whether or not proper performance of each part of the test was achieved.

es

15. A section for comments.
16. Signatures and date block for the Engineer.

C. Coordination and Scheduling: The Sub-contractors provide sufficient notice to the Commissioning Committee regarding their completion schedule for the pre-functional checklists and startup of all equipment and systems. The Commissioning Committee will schedule functional tests through the Engineer and the affected Sub-contractors. The Commissioning Committee shall direct, witness, along with the Engineer, and document the functional testing of all equipment and systems. The Sub-contractors shall execute the tests. The Commissioning Committee shall on behalf of the Contractor submit all test records to the Engineer for approval.

In general, functional testing is conducted after pre-functional and startup has been satisfactorily completed.

Testing shall proceed from components to assemblies to subsystems to systems. When the proper performance of all interacting individual systems has been achieved, the interface or coordinated response between systems is checked.

3.15 DOCUMENTATION, NON-CONFORMANCE AND TEST APPROVAL

A. Documentation: The Commissioning Committee shall witness, along with the Engineer, and document the results of all functional performance tests using the specific procedural forms developed for that purpose. Prior to testing, the forms are provided to the Engineer for review and approval and to the Contractor/Sub-contractors for review. The Commissioning Committee will include he filled out and approved forms in the O&M manuals.

B. Non-Conformance:

1. The Commissioning Committee will record the results of the functional test on the procedure or test form. All deficiencies or non-conformance issues shall be noted and reported to the Engineer on a standard non-compliance form.
2. Corrections of minor deficiencies identified may be made during the tests at the discretion of the Engineer. In such cases the deficiency and resolution will be documented on the procedure form.
3. The Commissioning Committee records the results of the test on the procedure or test form. Deficiencies or non-conformance issue are noted to the Engineer on Form (Commissioning Corrective Action Report). Contractor/Sub-contractors correct deficiencies, notify the Commissioning Committee and return Form certifying corrections. The Commissioning Committee shall schedule retesting through the Engineer.
4. Every effort shall be made to expedite the testing process and minimize unnecessary delays, while not compromising the integrity of the procedures. However, the Engineer will not overlook deficient work or relax acceptance criteria to satisfy scheduling or cost issues.
5. As tests progress and a deficiency are identified, the Commissioning Committee discusses the issue with the executing sub-contractor, and advises the Engineer of the conclusions reached.
6. When there is no dispute on the deficiency and the Contractor/Sub-contractor accepts responsibility to correct it:

    a. The Commissioning Committee documents the deficiency and the Contractor's /Sub-contractor response and intention and they go on to another test or sequence. After the day's work, the Commissioning Committee submits the non-compliance reports to the Engineer. An electronic copy is provided to the Sub-contractor. The Sub-contractor shall correct the deficiency, signs the statement of correction at the bottom of the non-compliance form certifying that the equipment is ready to be retested and send it back to the Commissioning Committee who will copy to the Engineer.

    b. The Commissioning Committee shall accordingly reschedule the test in conjunction with the Engineer and the test shall be repeated.

es

7. If there is a dispute about a deficiency, regarding whether it is a deficiency or who is responsible:

    a. The deficiency shall be documented on the non-compliance form with the Sub-contractor response and an electronic copy given to the Engineer and to the Sub-contractors representative assumed to be responsible.
    b. Resolutions shall be normally made at the lowest management level possible. Other parties are brought into the discussions as needed. Final interpretive authority is with the Engineer. Final acceptance authority is likewise the Engineer.
    c. The Commissioning Committee shall document the resolution process and shall copy all such documentation to the Engineer.
    d. Once the interpretation and resolution have been decided, the appropriate party shall correct the deficiency, sign the statement of correction on the non-compliance form and provide it to the Commissioning Committee. The Commissioning Committee will reschedule the test and the test shall be repeated in the presence of the Engineer until satisfactory performance is achieved.

8. The Contractor/Commissioning Committee shall report to the Engineer in writing, at least as often as commissioning meetings are being scheduled, concerning the status of each apparent outstanding discrepancy identified during commissioning. Discussion shall cover explanations of any disagreements and proposals for their resolution.
9. The Commissioning Committee retains electronic copies and updated records of all non-conformance forms till the end of the contract.
10. Any required retesting, by any of Contractor's Sub-contractor, shall not be justification for a claim of delay or for a time extension by the Contractor (Sub-contractor or Contractor).

C. Approval of Tests: The Commissioning Committee shall note each satisfactorily function on the test form. Formal approval of the test shall be made later after review by the Engineer. While the Commissioning Committee may recommend acceptance of each test to the Engineer, using standard forms, the final decision as to acceptance rests with the Engineer. The Engineer shall give final approval on each test using the same form, providing a signed electronic copy to the Commissioning Committee and Contract.

3.16 COMMISSIONING REPORTS

A. The Contractor's Commissioning Manager will provide regular reports to the Engineer, with copies to the relevant involved sub-contractors and suppliers, with increasing frequency as construction progresses.

    1. The Contractor's Commissioning Manager will regularly communicate with all commissioning parties, keeping them updated of commissioning progress and scheduling changes through memos, progress reports. Commissioning Committee will keep a log of all commissioning related issue that require current or future attention using forms related to Commissioning Issue Log, Commissioning Progress Record, provides a form from tracking the status of documentation and testing for each piece of equipment and system. All related forms will be agreed upon with Engineer.

B. Test Reports:

    1. Pre-startup reports include observations of the conditions of installation, organized into the following Sections:

        a. Equipment Model Verification: Compare contract requirements, approved submittals, and provided equipment. Note inconsistencies.
        b. Preinstallation Physical Condition Checks: Observe physical condition of equipment prior to installation. Note conditions including, but not limited to, physical damage, corrosion, water damage, or other contamination or dirt.

es

c. Preinstallation Component Verification Checks: Verify components supplied with the equipment, preinstalled or field installed, are correctly installed and functional. Verify external components required for proper operation of equipment correctly installed and functional. Note missing, improperly configured, improperly installed, or nonfunctional components.
d. Summary of Installation Compliance Issues and Corrective Actions: Identify installation compliance issues and the corrective actions for each. Verify that issues noted have been corrected.
e. Evaluation of System Readiness for Startup: For each item of equipment for each system for which startup is anticipated, document in summary form acceptable to Employer completion of equipment model verification, preinstallation physical condition checks, preinstallation component verification checks, and completion of corrective actions for installation compliance issues.

2. Test data reports include the following:

a. "As-tested" system configuration. Complete record of conditions under which the test was performed, including, but not limited to, the status of equipment, systems, and assemblies; temporary adjustments and settings; and ambient conditions.
b. Data and observations, including, but not limited to, data trend logs, recorded during the tests.
c. Signatures of individuals performing and witnessing tests.
d. Data trend logs accumulated overnight from the previous day of testing.

3. Commissioning Compliance Issue Reports: Report as commissioning compliance issues results of tests and test demonstrations that do not comply with acceptance criteria. Report only one issue per commissioning compliance issue report. Use sequentially numbered facsimiles of commissioning compliance issue report form included in this Section, or other form approved by Employer. Distribute commissioning compliance issue reports to parties responsible for taking corrective action. Identify the following:

a. Commissioning compliance issue report number. Assign unique, sequential numbers to individual commissioning compliance issue reports when they are created, to be used for tracking.
b. Action distribution list.
c. Report date.
d. Test number and description.
e. Equipment identification and location.
f. Briefly describe observations about the performance associated with failure to achieve acceptable results. Identify the cause of failure if apparent.
g. Diagnostic procedure or plan to determine the cause (include in initial submittal)
h. Diagnosis of fundamental cause of issues as specified below (include in resubmittal).
i. Fundamental cause of unacceptable performance as determined by diagnostic tests and activities.
j. When issues have been resolved, update and resubmit the commissioning issue report forms by completing Part 2. Identify resolution taken and the dates and initials of the persons making the entries.
k. Schedule for retesting.

4. Weekly progress reports include information for tests conducted since the preceding report and the following:

a. Completed data forms.
b. Equipment or system tested, including test number, system or equipment tag number and location, and notation about the apparent acceptability of results.
c. Activities scheduled but not conducted per schedule.
d. Commissioning compliance issue report log.
e. Schedule changes for remaining Commissioning-Process Work, if any.

es

5. Data trend logs shall be initiated and running prior to the time scheduled for the test demonstration.

    a. Trend log data format shall be multiple data series graphs. Where multiple data series are trend logged concurrently, present the data on a common horizontal time axis. Individual data series may be presented on a segmented vertical axis to avoid interference of one data series with another, and to accommodate different axis scale values. Graphs shall be sufficiently clear to interpret data within the accuracy required by the acceptance criteria.
    b. Attach to the data form printed trend log data collected during the test or test demonstration.
    c. Record, print out, and attach to the data form operator activity during the time the trend log is running. During the time the trend log is running, operator intervention not directed by the test procedure invalidates the test results.

6. System Alarm Logs: Record and print out a log of alarms that occurred since the last log was printed. Evaluate alarms to determine if the previous day's work resulted in any conditions that are not considered "normal operation."

    a. Conditions that are not considered "normal operation" shall be reported on a commissioning issue report attached to the alarm log. Resolve as necessary. The intent of this requirement is to discover control system points or sequences left in manual or disabled conditions, equipment left disconnected, set points left with abnormal values, or similar conditions that may have resulted from failure to fully restore systems to normal, automatic control after test completion.

C. FINAL COMMISSIONING REPORT

1. A final commissioning report by the Commissioning Committee will be provided to the Engineer for his approval. The report shall include an executive summary, list of participants and roles, brief systems description, overview of commissioning and testing scope and a general description of testing and verification methods. For each piece of commissioned equipment or system, the report should contain the disposition of the commissioning team regarding the adequacy of the equipment and documentation according to contract documents in the following areas:

    a. Equipment/System meeting its specifications.

    b. Equipment/System installation.

    c. Functional performance and efficiency.

    d. Equipment/System documentation and design intent.

2. Each non-compliance issue shall be referenced to the specific functional test, inspection, trend log, etc. where the deficiency is documented. The functional performance and efficiency section for each piece of equipment shall include a brief description of the verification method and include observations and conclusions from the testing.

3. Appendices shall contain acquired sequence documentation, logs, meeting minutes, progress reports, deficiency lists, site visit reports, findings, unresolved issues, communications, etc. Pre-functional checklists and functional tests and monitoring data and analysis will be provided in a separate labeled binder.

4. For each group of integrated systems, a final similar report shall be also provided by the Commissioning Committee. The report of each group shall mainly include:

5. System Integration documentation/design intent.

es

6. Functional integration performance of all systems.

D. WRITTEN WORK PRODUCT

1. The commissioning process generates a number of written work products.

In summary the written products are:

Product	Developed By	Approved By
- Final commissioning plan	Commissioning Committee	Engineer
- Meeting minutes	Commissioning Committee	Engineer
- Commissioning schedules	Contractor/Commissioning Committee and Engineer	Engineer
- Equipment submittals	Sub-contractors/Contractor /Commissioning Committee	Engineer
- Sequence clarifications	Sub-contractors and Engineer as needed	Engineer
- Pre-functional checklists	Commissioning Committee	Engineer
- Startup & initial checkout plan	Sub-contractors/Contractor /Commissioning Committee	Engineer
- Startup & initial checkout forms filled out	Sub-contractors/Contractor	Engineer
- Issues log (deficiencies)	Commissioning Committee	Engineer
- Commissioning Progress Record	Commissioning Committee	Engineer
- Deficiency reports	Commissioning Committee	Engineer
- Functional test forms	Commissioning Committee	Engineer
- Filled out functional tests	Commissioning Committee	Engineer
- O&M manuals	Sub-contractors/Contractor /Commissioning Committee	Engineer
- Commissioning record book	Commissioning Committee	Engineer
- Final commissioning report	Commissioning Committee	Engineer
- Misc. approvals	Commissioning Committee	Engineer

3.17 CERTIFICATE OF CONSTRUCTION-PHASE COMMISSIONING PROCESS COMPLETION

A. When Contractor considers that construction-phase commissioning process, or a portion thereof which Employer agrees to accept separately, is complete, Contractor shall prepare and submit to Employer and Commissioning Authority through Engineer a comprehensive list of items to be completed or corrected. Failure to include an item on such list does not alter Contractor's responsibility to compete commissioning process.

B. On receipt of Contractor's list, Commissioning Authority will make an inspection to determine whether the construction-phase commissioning process or designated portion thereof is complete. If

es

Commissioning Authority's inspection discloses items, whether included on Contractor's list, which is not sufficiently complete as defined in "Construction-Phase Commissioning Process Completion" Paragraph in the "Definitions" Article, Contractor shall, before issuance of the Certificate of Construction-Phase Commissioning Process Completion, complete or correct such items on notification by Commissioning Authority. In such case, Contractor shall then submit a request for another inspection by Commissioning Authority to determine construction-phase commissioning process completion.

C. Contractor shall promptly correct deficient conditions and issues discovered during commissioning process. Costs of correcting such deficient conditions and issues, including additional testing and inspections, the cost of uncovering and replacement, and compensation for Engineer's and Commissioning Authority's services and expenses made necessary thereby, shall be at Contractor's expense.

D. When construction-phase commissioning process or designated portion is complete, Commissioning Authority will prepare a Certificate of Construction-Phase Commissioning Process Completion that shall establish the date of completion of construction-phase commissioning process. Certificate of Construction-Phase Commissioning Process Completion shall be submitted prior to requesting inspection for determining date of Taking Over.

END OF SECTION 019113

B01 - MECHANICAL SERVICES PROJECT PARTICULAR

PART 3 PROJECT PARTICULAR SPECIFICATION

300.000 GENERAL

300.030 COMPLIANCES:

- Comply, with applicable clauses relating to; workmanship, installation, work on site, fixing, access, marking, identification, labelling, accessories, testing and inspection, commissioning, operation and maintenance, training, system demonstration, notifications, spare parts and tools, quality control, safety, delivery, storage, protection, certification, programming, documentation, submittals, installation records, surveys, guarantee and warranty etc. as detailed in this specification.
- Comply with the requirements of the infrastructure. The contractor shall ensure that all mechanical building services interfaces and tie in with the site infrastructure utilities is thoroughly coordinated in all aspects including setting out plans, coordinates, levels, type and finish of valve chambers, meter box, hand hole, etc.

300.035 ACCURACY OF DATA AND CONTRACT DRAWINGS:

- The design drawings are diagrammatic and they do not show all physical arrangements, offsets, bends, or elbows which may be required for installation of various materials, equipment, piping, and ductwork systems in allotted spaces. The Contractor shall examine these and other available drawings to determine space limitations and interferences. The Contractor shall be responsible for developing the design to reach detailed design level including making any changes in location of equipment, pipe and ductwork from that shown on drawings and for all physical details required for installation. Cost for adapting Contractor's work to job site conditions shall not be considered as basis of an extra cost to contract. The Contractor shall get submit the design for Client approval before proceed in shop drawings, material procurement or any other construction activities.
- Information pertaining to new and existing conditions that are described in the specifications or appear on drawings are based on available records. While such data has been collected with reasonable care, there is no expressed or implied guarantee that conditions so indicated are entirely representative of those actually existing or that unlooked for developments may not occur. Such information is merely provided to assist the Contractor in his investigation of conditions.
- The Contractor must carefully examine the drawings, specifications and project site, and verify all measurements, distances, levels, materials, equipment, etc. before starting work.
- Drawings shall not be scaled for determining exact dimensions or location of equipment.
- All works not shown on drawings in complete detail shall be installed in conformance with accepted standard practice and manufacturer’s recommendations.
- All items shall be installed in a manner and in locations avoiding all obstructions, preserving headroom and keeping openings and passageways clear. Changes shall be made to the location of equipment and materials as may be necessary in order to meet this requirement.
- Work indicated on drawings, but not mentioned in Specifications, or vice versa, shall be performed as if specifically mentioned or indicated by both

300.036 SUBMITTALS:

- Detailed Design.

- Detailed Design drawings shall be prepared by the Contractor and submitted for Client Approval.
- Detailed Design drawings shall include the following:
  - 1/100 scale floor plans.
  - 1/50 scale enlarged mechanical rooms.
  - 1/25 scale Composite Sections in corridors and mechanical rooms.
  - Miscellaneous Details on appropriate Scale
  - Riser Diagrams.
  - Schedule of equipment
  - Control Drawings.
- Contractor shall include relevant design calculations with each submission

- Shop drawings:
  - Shop drawings shall be produced as required in the contract documents in addition to the following points
  - Shop drawings shall be new drawings prepared by the Contractor and shall not be reproductions or tracings of the contract drawings
  - Drawings shall be overlaid with shop drawings of other trades and checked for conflicts.
  - Shop drawings shall identify the related contract drawing number or related reference drawing.
  - Shop drawings shall be fully dimensioned, including both plan and elevation dimensions from building reference points.
  - Shop drawings shall show schedules and description of equipment, valves, piping and fittings.
  - Shop drawings shall show complete system layout of equipment, components, plumbing fixtures, piping, indicating service clearances, and pipe sizes, fitting types and sizes and hanger support locations.
  - Planned piping layout, including valve and specialty locations and valve-stem movement.
  - Clearances for installing and maintaining insulation.
  - Clearances for servicing and maintaining equipment, accessories, and specialties, including space for disassembly required for periodic maintenance.
  - Equipment and accessory service connections and support details.
  - Exterior wall and foundation penetrations.
  - Fire-rated wall and floor penetrations.
  - Sizes and location of required concrete pads and bases.
  - Scheduling, sequencing, movement, and positioning of large equipment into building during construction.
  - Floor plans, elevations, and details to indicate penetrations in floors, walls, and ceilings and their relationship to other penetrations and installations.
  - Reflected ceiling plans to coordinate and integrate installation of air outlets and inlets, light fixtures, communication system components, sprinklers, ceiling access panels and other ceiling-mounted items.
  - Mechanical equipment rooms.
  - Interstitial space.
  - Hangers, inserts, supports, and bracing.
  - Pipe sleeves.
  - Shop drawings shall include but not be limited:
  - Complete HVAC floor plans with a minimum of 1/50 scale.
  - HVAC mechanical rooms to a minimum of 1/25 scale.

- Sections of congested areas to a minimum of 1/25 scale.
- Fabricated equipment to a minimum of 1/25 scale.

- Submit shop drawings for review as required by the contract documents. Additional shop drawings may be requested when it appears that coordination issues are not clearly resolved, when there is a question as to whether contract documents are being complied with or the design intent is not being met.

300.040 STANDARDS AND REGULATIONS:

- Contractor to execute Mechanical Works in compliance with Engineering Design Works as shown in drawings, schedules, specifications etc., according to codes mentioned in basis of design report
- Ensure all equipment and systems are designed and installed in accordance with the relevant standards and that operational compatibility exists between the systems and any other system installed in the same location.
- Provide products in accordance with the Construction Products Regulations (CPR). Products covered by harmonised European product standards (hENs) must have a Declaration of Performance (DoP) certificate for the product and be CE marked. Manufacturers of products not fully covered by a hEN or which do not fall within the scope of a hEN shall provide Declaration of Performance documentation in accordance with one of the methods in the CPR.
- All product and materials shall have European product conformity certification or product approval.
- All products shall comply with relevant European standards.
- All fire suppression systems shall comply with NFPA standards.
- All products must have the recognised 'CE Mark' attached.

    - CE Mark (European Conformity) defined as the official certification mark within the European Economic Area that indicates manufacturers' conformity with European Commission directives for health, safety and environmental protection.

- Comply with the requirements of the Local Authority Having Jurisdiction (AHJ).
- Comply with Health Safety Standards of Local Authority Having Jurisdiction (AHJ) and British and European Standards, for products and systems.
- Contractor shall use the latest versions of relevant codes and standards along with the latest amendments where applicable.

    - Where specified standard is withdrawn before date of the project's contract, Contractor shall use the latest standard replacement.
    - All EN standards published only by CEN national members, are considered equivalent and acceptable.

- Should an instance occur in this Specification or on the Drawings in which material or construction methods called for is less than minimum requirement of the reference standards, immediately inform the Engineer in writing, and supply the materials and perform the work as though called for to minimum code standards.

300.050 WARRANTIES:

- All Mechanical works and systems shall have a warranty of at least 2 year or as per the requirements of the local Authority Having Jurisdiction. From the date of completion of the project,

- The following mechanical products shall be provided with warranties from the manufacturer as per the appropriate British Standard (BS), requirements of the local Authority Having Jurisdiction, or a warranty period of at least 2 year; unless shown otherwise below:
    - Boilers
    - Warranty Period: 10 years.
    - Warranty Period: 5 years for Electric Boilers.
    - Chillers
    - Warranty Period: 5 years.
    - Pumps
    - Air Handling Units
    - Recovery Air Handling Units
    - Warranty Period: 5 years.
    - Fans
    - VRV units
    - Warranty Period: 5 years.
    - Split DX Units
    - Warranty Period: 5 years.
    - Warranty Period: 10 years for Heat Exchangers in packaged plants.
    - Warranty Period: 5 years for self-contained air conditioning units.
    - Fan Coil Units
    - Heat Exchangers
    - LPG systems
    - Natural gas systems
    - Fuel systems
    - Life Safety Equipment and Systems
    - Warranty Period: 5 years

300.055 SPARE PARTS

- Provide spare parts for mechanical equipment and systems as specified in individual mechanical specification sections.
- Provide spare parts for all Life Safety systems as per the relevant NFPA standards and the requirements of the Local Authorities Having Jurisdiction.

300.060 MANUFACTURERS

- For manufacturers: Refer to manufacturer list as applicable.
- Material and equipment shall be the standard products of a manufacturer regularly engaged in the manufacture, supply and servicing of the specified products for at least 5 years. The standard products shall have been in satisfactory commercial or industrial use for 5 years prior to bid opening. The 5 year experience shall be satisfactorily completed by a product that has been sold or is offered for sale on the commercial market through advertisements, manufacturer's catalogs, or brochures However, digital electronics devices, software and systems such as

controls, instruments, computer work station, shall be the current generation of technology and basic design that has a proven satisfactory service record of at least 5 years.

- Material and equipment shall be supported by a service organization that maintains a complete inventory of repair parts and is reasonably located within the project reach.

300.070 QUALITY ASSURANCE

- Electrical Characteristics for HVAC Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.
- Installer shall be qualified with at least 5 years of successful installation experience on projects incorporating HVAC systems and equipment similar to that required for the project.
- Asbestos products or equipment or materials containing asbestos shall not be used.
- Equipment and materials to be installed outdoors shall be of the type that is designed, manufactured and listed or approved for outdoor installation by being resistant to the adverse effects of weather prevailing at the project location. The additional protective measures against outdoor weather required by the manufacturers' installation instructions and prevalent practice shall be provided.
- Where two or more equipment or components are of the same class, the same manufacturer shall be used for selecting the equipment; component parts of the entire system need not be products of the same manufacturer.
- Equipment shall be provided with suitable lifting attachments to enable equipment to be lifted in its normal position. Lifting attachments shall withstand any handling conditions that might be encountered, without bending or distortion of shape, such as rapid lowering and braking of load.
- Nameplate bearing manufacturer's name or identifiable trademark shall be securely affixed in a conspicuous place on equipment, or name or trademark cast integrally with equipment, stamped or otherwise permanently marked on each item of equipment.
- Supply mechanical equipment complete with electrical motors.
- All equipment with moving parts shall be protected against personal injury.

300.075 TESTING AND COMMISSIONING

- Comply with requirements of section "Z251 TESTING AND COMMISSIONING OF MECHANICAL SERVICES".

- TEST CERTIFICATES:
    - Where testing specific to the project is required, ensure test certificates include
    - Project title.
    - Details and date of test.
    - Instruments used, serial numbers, calibration dates.
    - Signature of those witnessing test.
    - Contractor's name.
    - Specific location of the item in the Works.

- INSPECTION AND TESTS - ON OR OFF-SITE:
    - Submit schedules showing those parts of the Works for which inspections and tests are required in the specifications, to substantiate conformity with the Specification and for which records are required to be maintained.

- Should any alternative item be proposed which does not carry appropriate certification, ensure independent testing is carried out at no expense to the Employer to confirm compliance.
- Where required, provide formal method statements supported by risk assessments detailing the procedures for carrying-out on-site tests. Agree in advance with all parties procedures for inspections and tests including periods of notice.
- Where a test indicates non-compliance with the Specification submit immediately details of the non-compliance and proposals for corrective action.
- Arrange access for personnel who require to be in attendance, to manufacturer's or other off site premises when any inspections and tests carried out.
- Attendance or otherwise of the supervisory personnel during specified inspections or tests will not reduce the obligations or restrictions of the Contract.
- Carry out all tests required by legislation under the direction of a competent person.

- INSPECTIONS AND TEST RECORDS:
  - Prepare a set of drawings and/or report sheets to record accurately the test and inspection information including the following:
  - Plant identification, section and installation under test.
  - Manufacturer's reference number.
  - Date, time, duration of test, weather conditions.
  - Test results with itemised readings including records of all other checks and tests.
  - Maintain records of all specified inspections and tests performed including third party and works test certificates.
  - Include in records, as appropriate, details of the element, item, batch or lot, the nature, number and date of the inspections and tests, the number and type of deficiencies found, any corrective action taken and other relevant particulars.
  - Maintain all records on-site for inspection. On completion of the Works, include copies in the operating and maintenance manuals.
  - Submit copies of records within one week of request.

- TESTING AND COMMISSIONING OF SERVICES:
  - The contractor is to adhere to a programme for pre-commissioning checks, setting to work, commissioning and performance testing, as set out in the specifactions documents, and allow for all costs incurred.
  - Where required, provide formal method statements supported by risk assessments detailing all commissioning procedures.
  - Provide all necessary facilities to enable tests to be witnessed and inspections carried out either on-site or at manufacturer's works.
  - The CA will only witness test proceedings, confirm recorded results and determine if the specified requirements have been satisfied.
  - If following test or inspection, any plant or part thereof is shown to be defective or not conforming to the specification, the CA will reject such defective parts by written notice, within reasonable time, indicating area of dispute.
  - Appoint an "approved engineer" to supervise the whole of the testing, commissioning, performance testing and instruction of client's staff.
  - Provide all specialised personnel (including manufacturer's representatives) and co-ordinate their activities.

- Test all equipment, material and systems as detailed in sections. If an inspection or test fails, repeat the procedure, until satisfactory results are obtained.
- Complete all tests before any paint, cladding or similar materials are applied or before services are concealed.
- Ensure all requirements such as cleanliness, protection from harmful external and internal elements etc. are provided prior to commencement of commissioning.
- Following satisfactory completion of testing and when the installations are in a safe and satisfactory condition, set to work, regulate and adjust, as necessary, to meet the specified design requirements.
- Provide all necessary instruments and recorders to monitor systems during commissioning and performance testing.
- Provide test equipment subject to a quality assurance procedure complying with BS EN ISO 10012.
- Do not start performance testing, including system demonstration, system proving or environmental and capacity testing, until commissioning of the system is completed to the satisfaction of the CA.
- Maintain on-site full records of all commissioning and performance testing, cross referenced to system components and on completion of the Works include a copy in each Operating and Maintenance Manual.
- Provide all certification documents for approval by the CA before any system is offered for final acceptance.

- Commissioning of building services as required by ADL2 (Section 5.16 - 5.28).
- Commissioning of building services as required by Section 6 of Scottish Technical Handbook, Section 6.7.

- Gas, fuel oil, and water for testing and commissioning will be provided by the contractor.

- COMMISSIONING PROCEDURES:

  - Observe the following requirements when commissioning the Engineering Services.
  - Progressive static testing will be witnessed by the CA when work is presented for testing. This will include:

  - Insulation resistance tests.
  - Earth fault loop impedance tests.
  - Earth continuity tests.
  - Pipeline pressure tests.
  - Air Ductline Pressure Tests.

  - Finalise commissioning, taking into account site progress and availability of related services, with CA and Contractor, and agree access required for controls, etc.
  - Completion for operational purposes implies the bulk of snagging has been offered to the CA and that remedial work has been completed. All fans, pumps etc. tested for operation, polarity, phase sequence and impedance etc.
  - Pre-commissioning examination and testing to ensure that each system or item of equipment is complete, in a safe condition and all notices are displayed.

- OPERATIONAL DEMONSTRATION:

- Provide a written statement to the CA confirming that each installation has been correctly tested and commissioned and that the performance requirements can be achieved.
- Demonstrate to the CA that all system components are operating correctly, and the completely integrated installation will function in accordance with the specified performance requirements.
- Run each plant for
- Provide a log book and record all hours run.
- Carry out performance testing in both summer and winter conditions.
- Provide equipment to simulate loads to allow for the full testing of the air conditioning system(s) for the following areas:

- OPERATING AND MAINTENANCE INSTRUCTIONS:
  - The Contractor shall provide operating and maintenance instruction manuals covering each and every item of equipment and devices furnished or erected by the Contractor prior to "Substantial Completion".
  - Each separate manual shall consist of the following:
  - Neatly typewritten table of contents including contractor's name, address and telephone number; list of each product referenced in manual; and name, address and telephone number of installing contractor and maintenance contractor for each product.
  - Tabbed sections of catalog data and literature for each product including model number, description and component parts; operating procedures; maintenance procedures; servicing and lubrication schedules; description of sequence of operations; parts lists; illustrations, assembly drawings and diagrams required for maintenance; any additional drawings, diagrams, charts or written text which may be required to supplement product data for particular installation; certified test and balance report; list of control point labels, and wiring diagrams.
  - Copy of warranty, bond and/or service contract issued for each product including an information sheet for operations personnel with proper procedures in event of a product failure and instances which might affect validity of warranties or bonds.
  - Full size sheets, if required, shall be folded into special holding pockets. Faxed, handwritten, or illegible materials are not acceptable.
  - Prior to final inspection or acceptance, fully instruct designated facility operating and maintenance personnel on operation, adjustment and maintenance of products, equipment and systems. Review contents of operating and maintenance manual with personnel in full detail to explain all aspects of operations and maintenance.

- SYSTEMS USED BEFORE PRACTICAL COMPLETION:
  - Systems may not, without the prior written approval of the CA be used before Practical Completion. Systems to be used before practical completion for the benefit of the Contractor and/or Subcontractor must have all defective consumable elements (including lamps and tubes) replaced by new not more than seven days prior to Practical Completion.
  - No system shall be put into use prior to handover to the employer, except for testing and commissioning, unless in accordance with the following procedure:
  - Following the receipt of written instructions, the Subcontractor shall operate designated parts of the Subcontract Works, provided that such operation is practicable

and does not prejudice the Subcontractor's responsibilities and obligations under the Subcontract.

- Additionally and with adjustment to the Subcontract sum, the Subcontractor, shall if instructed, provide:
- Comprehensive insurance including indirect loss for any plant being operated
- Maintenance of the installation
- Re-instatement of the installation to as new condition prior to handover to the Employer
- Allow the defects liability period to commence on handover.

300.080 TRAINING OF PERSONNEL

- Training of Owner's personnel shall include:
    - on-site overview of the overall HVAC System.
    - Refer to relevant U and Z sections for specific training on each of the components of the HVAC System.

300.090 DELIVERY STORAGE AND HANDLING

- DELIVERY:
    - Provide an adequate and safe protection for all materials and products during transport to site.
    - Deliver all tubes, conduit, trunking and associated equipment with open ends effectively plugged, capped or sealed.
    - Deliver all ductwork, tubes, conduit, trunking and associated equipment with open ends effectively plugged, capped or sealed.

- HANDLING:
    - Offload and transport about the Works all materials and products as recommended by manufacturers.

- STORAGE:
    - Store all materials and products as recommended by manufacturers.
    - Provide sufficient, safe and secure storage for all materials and products.
    - Provide racks to prevent distortion for storage of conduits, pipes and similar materials.
    - Store all fittings, accessories and sundry items in clean bins or bagged and stowed in racks and maintained under suitable weatherproof cover.

300.100 IDENTIFICATION:

- Where appropriate, ensure that materials, plant and equipment bear the brand name, serial/batch number and any other data required to identify their nature in relation to the Works.
- Comply with requirements of section "Z254 IDENTIFICATION – MECHANICAL".

310.000 DESCRIPTION OF THE WORKS - GENERAL

310.010 GENERAL:

- Liaise with the Statutory Authorities and provide any test notices required to ensure final connections are made in accordance with the requirements of the testing and commissioning programme
- Provide all formalities in connection with Test Notices, Agreement and Application for Supply Forms etc. Ensure all documents requiring the Employer's signature are forwarded to the CA in time to meet the building programme in order for the necessary test and supply arrangements to be made. No additional payments will be made for expenses incurred due to reconnections, re-visits etc., by Supply Authorities or any other officials.
- Contractor to ensure all mechanical equipment are accessible for maintenance, providing raised walk walkways and platforms where necessary.
- Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction, to allow for HVAC installations.
- For large equipment make provisions for the necessary openings in the building to allow for admittance of all equipment before closing in.
- Contractor to ensure all mechanical services crossing fire rate walls and slabs to be provided with appropriate fire stopping material as per manufacturer guidelines, BS codes and standards, Local Authorities regulations.

    - For Fire-Resistance-Rated Penetrations, Horizontal Assembly Penetrations, and Smoke Barrier Penetrations: Comply with requirements to fire-stopping and fill materials specified in Penetration Fire-stopping section in Division P Section.

- Contractor to ensure no chilled water pipes penetrate water vapor seals.
- All systems related to Life Safety shall require the approval of the Local Authorities Having Jurisdiction (AHJ).
- Contractor shall provide access panels in false ceiling under all FCUs, valves, dampers, etc. in coordination with ID consultant.
- Work Coordination:

    - Contractor shall coordinate with ID consultant or Engineer locations of thermostats, ceiling fixtures and access panels such as, but not limited to: air outlets, lighting, signage, etc., and shall provide a coordinated Reflected Ceiling Plan for the ID consultant’s or Engineer’s approval.
    - All Trades shall work in cooperation with each other, and fit their work into the structure as job conditions may demand. In general, priority shall be arranged as follows: (in order of preference)

    - Recessed lighting fixtures
    - Piping which must be drainable
    - Sheet metal ductwork
    - Lighting fixtures
    - Plumbing waste lines, downspouts, vents and sprinkler piping
    - Gravity water lines
    - Heating hot and chilled water lines
    - Refrigerant lines
    - Plumbing water and gas and air lines
    - Electrical conduit
    - Control wiring conduit

- Contractor shall ensure Noise Levels are respected in different areas as detailed in this specification, providing sound attenuation where necessary, irrespective of whether they are shown on drawings or not.

- Protection of roof:
    - The contractor are cautioned that they must exercise extreme care in any activity involving contact with any installed roof membrane.
    - Construct protective plywood (3/4 in. thick) runways across the roof for moving, setting, and installing equipment and piping systems. No activity on the roof will be permitted without this protection. Start runways at the point of origin of any equipment placed on roof and terminate at the point of installation on curb or base. Any and all repairs necessary to bring the roofing system to its original condition shall be made by an approved Roofing Contractor and paid for by the Contractor responsible for the damage.
- Continuity of existing services:
    - Do not interrupt or change existing services without prior written approval. When interruption is required, coordinate length of service time with employer to minimize disruption of occupant activities. Depending on the length of the service time temporary equipment or pipe installation or relocation might be required and shall be provided to maintain continuity of operation of existing facilities.

- Demolition works:
    - Disconnect, demolish, and remove HVAC systems, equipment, and components indicated to be removed.
        - Piping to be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
        - Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material.
        - Ducts to Be Removed: Remove portion of ducts indicated to be removed and plug remaining ducts with same or compatible ductwork material.
        - Ducts to Be Abandoned in Place: Cap or plug ducts with same or compatible ductwork material.
        - Equipment to Be Removed: Disconnect and cap services and remove equipment.
        - Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
        - Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to Government.
    - If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.
    - Where existing kitchen extract systems require inspection and cleaning prior to modification, employ a specialist to undertake the following works approved in accordance with Loss Prevention Standard LPS 2084:
        - Inspect and clean ductwork that may be contaminated with combustible deposits.
        - Make recommendations for access improvements to any areas where there is currently limited access making cleaning / maintenance impractical.
        - [.....]
    - Removed materials must not be reused unless otherwise specified or directed to be so.
    - Arrange and pay for disconnecting, removing and capping utility services within areas of demolition. Place markers to indicate location of disconnected services. Identify service lines and capping locations on Project Record Documents.

- Refrigerant shall be recovered from any refrigeration unit that will be removed or salvaged. Recovered refrigerants must be bottled in pressure containers suitable for shipping per DOT requirement and remain property of the Government. Salvage or disposal by Contractor is not permitted.

- Cutting and Patching:
  - Additional openings required in building construction shall be made by drilling or cutting.
  - Fill holes which are cut oversize so that a tight fit is obtained around the objects passing through.
  - Do not pierce beams or columns without written permission from the structural engineer and then only as directed.

310.015 PIPING SYSTEMS – COMMON REQUIREMENTS:

- Install piping according to the following requirements and Sections Z210a,b and c specifying piping systems.
- Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- Firefighting: Comply with BS requirements for installation of fire protection piping materials.
- Firefighting: Install drain piping at low points of piping systems.
- Firefighting: Install pressure gages at top of each standpipe.
- .
- Firefighting: Provide dedicated supports for the firefighting piping. Common supports with other building services shall not be utilized.
- Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.
- Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- Install piping to permit valve servicing.
- Install piping free of sags and bends.
- Install fittings for changes in direction and branch connections.
- Install piping to allow application of insulation.
- Select system components with pressure rating equal to or greater than system operating pressure.
- Size reduction shall be made using reducing fittings; bushings are not acceptable.
- Independently support piping so that its weight shall not be supported by the equipment to which it is connected.
- Mitered ells, notched tees, and orange peel reducers are not acceptable. On threaded piping, bushings are not acceptable.
- "Weldolets" and "Threadolets" may be used for branch takeoffs up to one-half (1/2) the diameter of the main.
- Cover ends of piping during installation to keep inside of piping clean.
- Piping shall not be routed through electrical rooms or transformer vaults, or above transformers, panelboards, or switchboards, including the required service space for this equipment, unless the piping is serving this equipment.
- Use only wrenches having square flat jaws, or non-metallic strap wrenches on brass specialties; wrench marks not permitted.
- Select system components with pressure rating equal to or greater than system operating pressure.

- Install escutcheons for penetrations of walls, ceilings, and floors in finished spaces.
- Sleeves are not required for core-drilled holes.
- Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, and concrete floor and roof slabs.
- Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Refer to section Z210a,b and c for materials.
- Aboveground, Exterior-Wall Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
    - Install steel pipe for sleeves smaller than 6 inches in diameter.
    - Install cast-iron "wall pipes" for sleeves 6 inches and larger in diameter.
    - Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
- Underground, Exterior-Wall Pipe Penetrations: Install cast-iron "wall pipes" for sleeves. Seal pipe penetrations using mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
    - Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
- Verify final equipment locations for roughing-in.
- Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.
- Conveniently locate control panels, hardware and devices, valves, gauges, cleanout fittings, and other equipment or specialties requiring frequent reading, adjustments, inspection, repairs, or removal and replacement.
- Install thermometers and gauges to be easily read from floors, platforms, and walkways.
- Install piping at the required slope indicated in the specification and/or drawings
- Install piping to allow application of insulation plus 25 mm clearance around insulation.
- Locate groups of pipes parallel to each other, spaced to permit valve servicing.

310.030 EQUIPMENT INSTALLATION – COMMON REQUIREMENTS:

- Install equipment to allow maximum possible headroom unless specific mounting heights are not indicated.
- Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.
- Install HVAC equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.
- Install equipment to allow right of way for piping installed at required slope.
- Install flexible connectors on equipment side of shutoff valves, horizontally and parallel to equipment shafts

310.040 CONCRETE BASES:

- Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.
    - Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit.
    - Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
    - Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
    - Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
    - Install anchor bolts to elevations required for proper attachment to supported equipment.
    - Install anchor bolts according to anchor-bolt manufacturer's written instructions.
    - Use 3000-psi, 28-day compressive-strength concrete and reinforcement as specified for cast-in-place concrete in relevant E sections.

310.050 GROUTING:

- Mix and install grout for HVAC equipment base bearing surfaces, pump and other equipment base plates, and anchors.
- Clean surfaces that will come into contact with grout.
- Provide forms as required for placement of grout.
- Avoid air entrapment during placement of grout.
- Place grout, completely filling equipment bases.
- Place grout on concrete bases and provide smooth bearing surface for equipment.
- Place grout around anchors.
- Cure placed grout according to manufacturer’s written instructions.

310.060 WELDING:

- The below compliments specifications on welding in subsequent sections.
- The Contractor is entirely responsible for the quality of the welding and shall:
    - Conduct tests of the welding procedures used by his organization, determine the suitability of the procedures used, determine that the welds made will meet the required tests, and also determine that the welding operators have the ability to make sound welds under standard conditions.
    - Comply with the set standards in the specification.
    - Perform all welding operations required for construction and installation of the piping and systems.
- Examine each welder at job site, in the presence of the Engineer, to determine the ability of the welder to meet the qualifications required. Test welders for piping for all positions, including welds with the axis horizontal (not rolled) and with the axis vertical. Each welder shall be allowed to weld only in the position in which he has qualified and shall be required to identify his welds with his specific code marking signifying his name and number as signed.

- Provide the Engineer with a list of names and corresponding code markings. Retest welders who fail to meet the prescribed welding qualifications. Disqualify welders, who fail the second test, for work on the project.
- Field bevels and shop bevels shall be done by mechanical means or by flame cutting. Where beveling is done by flame cutting, surfaces shall be thoroughly cleaned of scale and oxidation just prior to welding. Conform to specified standards.
- Utilize split welding rings or approved alternate method for joints on all pipes above 50 mm to assure proper alignment, complete weld penetration, and prevention of weld spatter reaching the interior of the pipe.
- Piping shall not be split, bent, flattened, or otherwise damaged either before, during or after installation.
- Replace and re-inspect defective welds. Repairing defective welds by adding weld material over the defect or by peening will not be permitted. Welders responsible for defective welds must be re-qualified.
- Electrodes shall be stored in a dry heated area, and be kept free of moisture and dampness during the fabrication operations. Discard electrodes that have lost part of their coating.

310.080 DESIGN CRITERIA:

- EXTERNAL NOISE CRITERIA:
    - Building services plant noise level to comply with local planning / environmental authority requirements and statutory noise nuisance legislation.

310.090 PERFORMANCE REQUIREMENTS:

- Contractor to execute all mechanical works ensuring efficiency and safety of installation and operation of systems, coordinating between all mechanical and other services.

310.100 CONTROL REQUIREMENTS:

- Refer to BMS and Control Sections W60

320.000 DESCRIPTION OF FIREFIGHTING WORKS

320.010 FIREFIGHTING GENERAL:

- Refer to drawings

320.020 DESIGN PARAMETERS:

- Refer to drawings

330.000 DESCRIPTION OF PLUMBING WORKS

330.010 PLUMBING GENERAL:

- Refer to drawings

330.020 DESIGN PARAMETERS:

- SANITARY APPLIANCES

- Comply with BS EN 806-2, BS EN 806-3 and complementary guidance in BS 8558, CIBSE Guide G: Public Health & Plumbing Engineering, CIBSE TM13: Minimizing the Risk of Legionnaires' Disease, HSE Approved Code of Practice & Guidance L8 (The Control of Legionella Bacteria in Water Systems),
- The requirements of local codes and regulations, and the requirements of EN standards.
- Comply with appropriate WRAS guidance.
- On healthcare projects comply with the requirements of HTM 04-01.

- RAINWATER PIPEWORK / GUTTERS
    - Relevant parts of BS EN 12056
    - BS 8490 for siphonic roof drainage systems.
    - Current Building Regulations Technical Guidance Documents and requirements of the Local Authority, local codes, local regulations, and the requirements of EN standards.
    - Design rainfall intensity 240mm / Hr
    -

- FOUL DRAINAGE ABOVE GROUND
    - Relevant parts of BS EN 12056
    - Current Building Regulations Technical Guidance Documents and requirements of the Local Authority, local codes, local regulations, and the requirements of EN standards.

- DRAINAGE BELOW GROUND
    - Relevant parts of BS EN 12056 for gravity drainage systems in the building.
    - BS EN 752 for drain systems outside the building.
    - Current Building Regulations Technical Guidance Documents and requirements of the Local Authority, local codes, local regulations, and the requirements of EN standards.

- COLD WATER
    - BS EN 806-2, BS EN 806-3 and supplementary guidance in BS 8558, CIBSE Guide G: Public Health & Plumbing Engineering, CIBSE TM13: Minimizing the Risk of Legionnaires' Disease, HSE Approved Code of Practice L8 and associated guidance HSG274 Part 2 (The control of legionella bacteria in hot and cold water systems).
    - For water supply systems outside buildings comply with the requirements of BS EN 805.
    - The requirements of local codes and regulations, and the requirements of EN standards.
    - Comply with appropriate WRAS guidance.
    - On healthcare projects comply with the requirements of HTM 04-01.

- HOT WATER:
    - BS EN 806-2, BS EN 806-3 and complementary guidance in BS 8558, CIBSE Guide G: Public Health & Plumbing Engineering, CIBSE TM13: Minimizing the Risk of Legionnaires' Disease, HSE Approved Code of Practice L8 and associated guidance HSG274 Part 2: The control of legionella bacteria in hot and cold water systems.
    - The requirements of local codes and regulations, and the requirements of EN standards.
    - Comply with appropriate WRAS guidance.
    - On healthcare projects comply with the requirements of HTM 04-01 and associated supplements.

- Unvented hot water storage systems to be complete with "unvented kits" and pressure regulating valve to comply with the Building Regulations safety requirements. Indirectly heated storage water heaters to comply with BS EN 12897.

340.000 DESCRIPTION OF HEATING VENTILATION AND AIR CONDITIONING WORKS

340.010 HVAC GENERAL:

- Refer to drawings

340.020 DESIGN PARAMETERS:

- CENTRAL REFRIGERATION PLANT
  - The requirements of local codes and regulations, and the requirements of EN standards.
  - Ambient temperatures
  - Worse condition between applicable European standard, and Local Authorities code
  - Supply air cooled chiller capable of providing rated output at an ambient dry bulb temperature as mentioned in basis of design report

- EXTERNAL ENVIRONMENTAL DESIGN CONDITIONS:
- As mentioned in basis of design report

- INTERNAL ENVIRONMENTAL DESIGN/COMFORT CONDITIONS:
  - operative temperature and humidity levels for all room types/areas shall be as per basis of design report

- INTERNAL NOISE CRITERIA:
  - Limiting noise levels for all types of areas shall be as per basis of design report

- EQUIPMENT SOUND POWER LEVEL
  - Ensure noise precations are in accordance witht the European Council and Parliament Directive 2003/10/EC.
  - Air handling units maximum outlet/discharge sound power levels (dB re 10^{-12} W):
  - 63 Hz (94 dB)
  - 125 Hz (90 dB)
  - 250 Hz (89 dB)
  - 500 Hz (89 dB)
  - 1 kHz (89 dB)
  - 2 kHz (84 dB)
  - 4 kHz (82 dB)
  - 8 kHz (79 dB)
  - Fans maximum power levels (dB re 10^{-12} W) at design air flow
  - 63 Hz (55 dB)
  - 125 Hz (50 dB)
  - 250 Hz (48 dB)
  - 500 Hz (47 dB)
  - 1 kHz (48 dB)

- 2 kHz (46 dB)
- 4 kHz (42 dB)
- 8 kHz (37 dB)

- Fan coil units limiting sound power levels of at design cooling output, dB re 10^{-12} Pa at frequency (Hz) below:

- 63 Hz: 70 dB
- 125 Hz: 65 dB
- 250 Hz: 60 dB
- 500 Hz: 55 dB
- 1 kHz: 53 dB
- 2 kHz: 50 dB
- 4 kHz: 48 dB
- 8 kHz: 45 dB
- Sound power level measurements

- Determine the sound power levels of fan coil units in accordance with:

    - BS EN 16583

        - Acoustic test facilities / measurement in accordance with BS EN ISO 3741 or BS EN ISO 3744 or BS EN ISO 3745 or relevant parts of BS EN ISO 3743, or relevant parts of BS EN ISO 9614.

- The below condensing units sound power levels will vary based on their capacities and efficiencies, as such their noise impact shall be checked & verified per- project basis to meet the target levels in line with applicable code requirements for internal and environmental noise criteria:

- Roof mounted air conditioning unit

- Chiller sound power level

- 125 Hz: 98 dB
- 250 Hz: 96 dB
- 500 Hz: 95 dB
- 1 kHz: 93 dB
- 2 kHz: 94 dB
- 4 kHz: 88 dB
- 8 kHz: 81 dB
- Limiting overall chiller sound pressure level in free field conditions (dBA) 67 at distance from machine (m) 10

- Note: the above sound power levels of each equipment shall be verified and checked versus proposed equipment selection at each frequency level. In case the sound power levels greatly differ from the above then the selection shall be verified by an acoustic study to ensure it has low noise impact on outdoor environment, building façade and internal occupied spaces and that the target noise levels achieved due to equipment sound are within allowable code requirements for internal and environmental noise criteria, as applicable.

340.030 PERFORMANCE OBJECTIVES:

- CENTRAL REFRIGERATION PLANT

    - Coordination for Chiller, Fluid Coolers

- Coordinate size and location of concrete bases with actual equipment provided. Cast anchor-bolt inserts into base.
- Coordinate sizes, locations and anchoring attachments of structure steel support structures.
- Coordinate sizes and location of roof curbs, equipment supports and roof penetrations with actual equipment provide

	Rain Water	Z210B	-	-	Z210A

D GROUNDWORK

D20 EXCAVATING AND FILLING

To be read with Preliminaries/General conditions

The outlined specifications provided herein are indicative and for guidance purposes only. The Contractor shall develop his own Technical Specifications upon Contract Award based on design requirements and geotechnical conditions at the project site.

GENERALLY/THE SITE

111 SITE FEATURES

- Before starting work ascertain and verify with the Engineer which existing fences, gates, walls, roads, paved areas and other site features if any are to be retained and protected. Materials arising from demolition and clearance of site features are to be removed from Site.

120 TREES AND SITE VEGETATION

- Before starting work ascertain and verify with the Engineer which trees, shrubs and areas of turf and site vegetation if any are to be retained and protected.

CLEARANCE/EXCAVATING

140 REMOVAL OF TREES

- Cut down trees and tree stumps, grub up main roots, fill in voids with approved material and dispose of all wood.
- Protected area: Do not cut roots within precautionary protection area.
- Excavation in protected area:
  - Backfill as soon as possible or temporarily line with polyethylene sheet to reduce evaporation.
- Outside protected area: Give notice of roots exceeding 25 mm and do not cut without approval.
- Cutting:
  - Make clean smooth cuts with no ragged edges.
  - Pare cut surfaces smooth with a sharp knife.

141 REMOVAL OF SITE VEGETATION

- Clear Site of hedges, bushes, scrub and undergrowth, grub up and dispose of large roots. Do not use herbicide without prior approval.

151 PROTECTION OF FEATURES AND VEGETATION

- Site features, trees, shrubs and areas of site vegetation indicated or directed to be retained are to be protected from damage, preserved and maintained by the Contractor in a manner approved by the Engineer.

168 SITE CLEARANCE

- Timing: Before topsoil stripping, if any.
- General: Clear Site of general debris and rubbish. Dispose of by removing from Site as directed. Do not compact topsoil.

169 TURF

- Not required to be retained and protected may, at the Contractor's discretion, cost and/or profit be:
  - lifted, removed and sold, or
  - left to be incorporated with existing topsoil.

220 STRIPPING TOPSOIL

- General: Before beginning general excavation or filling, strip topsoil from areas where there will be regrading, buildings, pavings/ roads and other areas shown on drawings.
- Depth:
  - Remove to an average depth of: as **directed by the Engineer**.
  - Give notice where the depth of topsoil is difficult to determine.
- Handling: Handle topsoil for reuse or sale in accordance with Clause 182.
- Around trees: Do not remove topsoil from below the spread of trees to be retained.

221 TREATING TOPSOIL

- Treatment: Apply a suitable translocated non-residual and approved herbicide.
- Timing: Not less than two weeks before excavating topsoil.

225 HANDLING TOPSOIL

- Standard: To BS 3882.
- Aggressive weeds:
  - Species: Included in the Weeds Act, section 2 or the appropriate Wildlife and Countryside Act for the relevant jurisdiction.
  - Give notice: Obtain instructions before moving topsoil.
- Contamination: Do not mix topsoil with:
  - Subsoil, stone, hardcore, rubbish or material from demolition work.
  - Other soil or material containing aggressive weeds, sharps, plastics and non-soil forming materials and notifiable animal or plant diseases.
  - Oil, fuel, cement or other substances harmful to plant growth.
  - Other classifications of topsoil.
- Multiple handling: Keep to a minimum. Use topsoil immediately after stripping.

226 WATERWAYS

- Temporarily divert as necessary ditches, field drains and other waterways encountered during excavations and reinstate on completion. If reinstatement is not possible obtain instructions.

227 EXISTING WATERCOURSES

- Which have been diverted and are to be filled must be cleared of all vegetable growth and soft deposits before filling.

228 EXISTING PUBLIC UTILITIES

- Ascertain and verify the positions and routes of existing underground public utilities, if any, on or adjacent to the Site. Mark, protect, maintain, temporarily or permanently re-route; seal, abandon or remove to the approval of and in cooperation with relevant utilities authorities.

229 EXCAVATIONS FOR STRUCTURES GENERALLY

- Materials and conditions:
  - If obtained, the Employer shall have made available to the Contractor, such data on hydrological and sub-surface conditions as may have been obtained by or on behalf of the Employer from investigations undertaken relevant to the Works, but the Employer takes no responsibility as to the correctness, accuracy or validity of any such data. The Contractor shall be responsible for his own assessment and interpretation thereof and shall in any event be deemed to have carried out his own investigation, inspection and examination of the Site and its surroundings and to have satisfied himself before submitting his Tender, as to:

    the form and nature thereof, including the sub-surface and hydrological conditions,

    means of access, the extent and nature of work and the material and conditions likely to be encountered, including the occurrence of rock or unstable ground and,

    In general, to have obtained all necessary information in connection therewith and made due allowance in his Tender as to risks, contingencies and all other circumstances which may influence or affect the undertaking of excavation and earthwork.

- Methods:
  - Submit details of proposed methods of working which may cause nuisance, damage or danger to people and/or property.
  - Submit details of expansive chemicals used for breaking rock.
  - Submit detailed narrative describing means, methods and techniques to be implemented in excavation works.

- Material arising from excavations:
  - The excavated material should be the property of the Contractor to transport and dispose properly, unless otherwise indicated on drawings or specified. Subject to approval of the Engineer, if found suitable, it can be used as selected fill and backfill on site.

- Approved fill and backfill material:
  - Approved fill and backfill material arising from excavations is to be carefully handled and stockpiled in a manner that will exclude foreign or undesirable material. Stockpiles are to be neatly and compactly constructed in an approved manner adjacent to excavations or elsewhere on Site as directed.

- Topsoil for preservation:

- Before beginning general excavation or filling, excavate topsoil from required areas and keep separate from excavated subsoil.

- Benching:
  - Surfaces of ground with a gradient greater than 1 in 5 which are to receive fill, are to have horizontal benches cut to match the depths of compacted layers of filling.

- Adjacent excavations:
  - Where an excavation encroaches below a line drawn at an angle from the horizontal of 45 degrees for dry stable soil or 30 degrees for wet clays or soils below water table from the nearest formation level of another higher excavation then all work within the lower excavation and backfilling thereto must be completed before the higher excavation is made, unless detailed support structure proposals have been submitted and approved by the Engineer.

- Excavated formations generally:
  - Obtain instructions if:

    Natural bearing formation of undisturbed subsoil is not obtained at depth shown on the Drawings.

    Formation contains soft or hard spots or highly variable material.

- Excavated formations in made up ground:
  - Excavate down to a natural bearing formation of undisturbed subsoil unless otherwise instructed. Obtain instructions if this is obtained at a lesser depth than shown on the Drawings or is not obtained at the depth shown on the Drawings.

- Excavated formations:
  - Excavated formations are to be inspected and approved by the Engineer before new work is laid on them. Give 24 hours written notice of when excavations will be ready for inspection. If, after inspection, surfaces become unsuitable due to water, frost or other causes excavate further and backfill with approved material. Proceed with subsequent operations and overlay formations as soon as possible after approval.

- Preparation:
  - Remove carefully by hand if instructed, the bottom 200 mm depth of trench and pit excavations immediately prior to laying concrete, bedding material, pipework and the like.
  - Trim bottoms of excavations to required profiles, levels and grades and remove all loose material.
  - Compact bottoms of excavations to approval.

- Anti-termite treatment:
  - Destroy ant-nests and vermin encountered during excavations. Apply to surfaces of structural excavations, an approved proprietary and EPA certified pesticide solution of "Dieldrin" or "Aldrin" in clean water, with a spray maintaining a pressure of 150 psi, at the rate recommended by the manufacturer and approved by the Engineer.

- Sides of excavations:
  - Responsibility and risk for upholding sides of excavations and protecting them against erosion rests solely with the Contractor.

- Earthwork support:

- Use as necessary to support sides of excavations and remove on completion unless otherwise instructed. In the event of any collapse occurring while excavations are open bear the cost of and re-excavate and reinstate such excavations and other work affected, to approval.

- Steel sheet piling:
  - Use as necessary to support sides of excavations and remove on completion unless otherwise instructed.

- Special support:
  - The standards listed below, or equivalent International standards, shall apply the excavation of special geotechnical works:

    BS EN 1537 Execution of special geotechnical work - Ground anchors,
    BS EN 14199 Execution of special geotechnical work - Micropiles,
    BS EN 14490 Execution of special geotechnical work - Soil nailing.

  - Use as necessary to uphold excavations against sides of adjoining buildings, public footpaths, roads and the like and remove on completion unless otherwise instructed. Contractor is responsible for preventing any damage to, and protecting: buildings, utilities and structures to remain on site or adjacent to site.

  - Design by a qualified professional Engineer with minimum 10 years' experience in the management, design, installation and monitroing of support systems of equal complexity. Construct special support system to uphold and support sides of excavation to protect adjacent structures roads and the like comprising all or part of the following works, installation and testing of micropiles, bracing, anchors, shotcrete, nails top-down concrete wall and dewatering.

  - Submit shop drawings showing layout, number, length and location of anchors, bracing, micropiles, calculations showing the adequacy and stability of the proposed system.

  - Excavation support and protection system design and calculations shall be acceptable to authorities having jurisdiction, and should include:

Calculations for excavation support and protection, including but not limited to the following:

Soil parameters used and their substantiation.

Codes, standards and methods followed.

Principle underlying selection of system.

- Provide a detailed narrative describing means, methods and techniques to be implemented for construction of excavation support and protection systems. The Method Statement shall include, but not limited to, the following:

  Details of equipment and monitoring instrumentation, quality control, testing and reporting procedures, work program, and any other information required by the Engineer.

  Contingency plan outlining procedures to be adopted in the event that problems arise during construction work.

- Monitor vibrations during installation and monitor support deformations of sides of excavations until permanent construction is able to withstand lateral soil and hydrostatic pressure.

- Submit photographs or video files prior to commencement of the works, showing the existing condition of adjacent structures and adjoining site works that may be construed as damage caused by excavation and earthwork operations.

- Micropiles:

  - Install micropiles before starting excavation. Extend micropiles below excavation grade level to depths adequate to prevent lateral movement. Accurately align micropiles to vary not more than 20 mm from a horizontal line and not more than 1:120 out of vertical alignment.

- Anchors and nails:

  - Prior to drilling, investigate to ensure that installation of anchors will not interfere with or cause damage to underground utilities or structures adjacent to the site. Submit design, calculations, detailed narrative of construction methodology, shop drawings, layout, number, length and dimensions of anchors.

  - Drill to required length for each anchor or nail. Maintain accurate work records and produce a log for each drill hole in a form acceptable to the Engineer, including the following data:

    Project name and number,
    Location and identity of drill hole,
    Diameter of drill hole,
    Date and time of starting and completing drilling,
    Overall length of drill hole,
    Description of soil materials recovered,
    Description and location of obstructions encountered,
    Ground-water conditions,
    Remarks, including conditions encountered.

- Drill, install, grout, and tension anchors. Test load-carrying capacity of each anchor and replace and retest deficient tiebacks at no extra cost.

  Test loading shall be observed by a qualified professional engineer responsible for design of excavation support and protection system.

  Maintain anchors and nails in place until permanent construction is able to withstand lateral soil and hydrostatic pressures.

- Bracing:

  - Submit design, calculations, detailed narrative of construction methodology, shop drawings showing layout, number, length and dimensions of struts.

  - Install internal bracing, to withstand lateral earth and hydrostatic pressures during excavation work, including any surcharges.

  - Locate bracing to maximize clear space and allow other permanent work. If necessary to move brace, install new bracing before removing original brace.

  - Maintain bracing until structural elements are supported by other bracing or until permanent construction is able to withstand lateral earth and hydrostatic pressures.

    Remove excavation support and protection systems when construction has progressed sufficiently to support excavation and bear soil and hydrostatic pressures. Remove in stages to avoid disturbing underlying soils or damaging structures, pavements, facilities, and utilities.

    Coordinate the removal of bracing with the Contractor of the other package executing the basement permanent construction.

- Unstable ground:

  - Inform the Engineer without delay if any newly excavated face will not remain unsupported sufficiently long to allow necessary earthwork support to be inserted. If instability is likely to affect adjacent structures or roadways take appropriate emergency action. Responsibility for preventing instability rests solely with the Contractor.

  - Carry out geological mapping of rock joints exposed by excavation works, define unstable wedges, and provide stabilization measures with design calculations.

- Obstructions:

  - Where old foundations, beds, drains and similar obstructions are encountered obtain instructions before proceeding. Break out and remove obstructions and seal off drain ends. Remove contaminated earth and disinfect soil surfaces as instructed.

- Excessive Excavation:

  - Bear the cost of and unless otherwise instructed backfill and compact to approval any excavations taken:

    wider than required, with selected fill material;

    deeper than required, with “Blinding” concrete, unless otherwise instructed.

- Unauthorised excavations:

  - Bear the cost of and backfill and compact as instructed to approval.

230 PROBE DRILLING

- Generally: Carry out probe drilling in order to determine the presence or otherwise of cavities below excavated formations under foundations and/or footings, as directed by the Engineer. The number and location of the drill holes shall be as shown on Drawings or otherwise as instructed and approved by the Engineer. At least one drill hole shall be drilled below each footing. The depth of drill holes shall be at least double the longest plan dimension of the respective footing, and deeper if so directed by the Engineer.

- Method of drilling: The minimum drill-hole diameter shall be 76 mm. Circulation may be either water or air. Percussion drilling will be allowed provided that the rate of penetration at a fixed number of RPM and the thrust on the drill bit is recorded continuously throughout the drill hole. Should any variation in the RPM or thrust be necessary, such variation shall be recorded.

- Drilling records: The Contractor shall maintain and produce a record of each drill hole, which shall indicate the depths, if any, at which tool drops, loss of circulation and changes in the rate of penetration occurred and/or changes in the nature of the rock. A copy of each drilling record shall be submitted immediately after completion of each respective drill hole. Following completion of all drill holes, the Contractor shall submit a bound report which shall include all original drilling records together with a site plan identifying and locating all drill holes.

- Grout filling to cavities and fissures: Based upon the drilling results, the Engineer shall instruct the Contractor as to whether or not grouting at a location is required. The level at which the grouting shall take place will usually be foundation level, or as given by the Engineer. The Contractor shall undertake pressure grouting of cavities and fissures in accordance with the Engineer's instructions. The pressures to be used shall be sufficient to ensure that the cavities are filled. Grouting shall continue until grout appears in other drill hole(s), or until the Engineer decides that sufficient grout take has been achieved. The grout mix shall be proportioned as 1 part cement to 3 parts sand, with a water content adequate to give a workable mix. The proportions may be changed to suit the actual conditions with the agreement of the Engineer.

- Concrete filling to cavities and fissures: If cavities and fissures are accessible from the excavated level, the filling shall be carried out either by pouring and compacting cyclopean concrete or by pouring lean concrete, as directed by the Engineer, until the void(s) is completely filled. Allowance should be made for shrinkage as necessary.

- Backfilling of drillholes and site clearance:

  - Unless otherwise directed by the Engineer, drill holes that are not grouted shall be backfilled with grout in accordance with the Engineer's instructions. All mud and debris shall be removed from the foundation area, and the site left clean.

300 EXCAVATION FOR PIPE TRENCHES

- Commencement:
  - Do not begin excavation for any section of work until a full supply of pipes and fittings required for that section is available on Site.

- Adjacent excavations:
  - Underground pipelines must be set out so that their excavations do not encroach below a line drawn at an angle from the horizontal from the nearest lower edge of any adjacent building foundations. The angle is to be 45 degrees for dry stable soil or 30 degrees for wet clays or soils below water table. If this condition cannot be met obtain instructions before proceeding.

- Headings:
  - Drive accurately to required line and gradient and provide adequate support. Construct in approved lengths to size required to contain permanent work. Obtain approval before commencement of pipe laying or other work.

- Trench width:
  - For pipes smaller or equal to 500mm, OD +500
  - For pipes between 600 and 900 mm, OD+1000
  - For pipes larger or equal to 1000 mm, OD+1200

- Excessive trench width:
  - Bear the cost of increased pipe strength or additional pipe protection where required by the Engineer due to excavations being taken wider than specified.
  - Bear the cost of and unless otherwise instructed backfill to approval any excavations taken deeper than required, with Blinding concrete.

- Excessive trench depth:
  - Bear the cost of and unless otherwise instructed backfill to approval any excavations taken deeper than required, with Blinding concrete.

- Battered sides:
  - Excavation with battered sides will not be permitted in public highways, private gardens or within 30 m of any building or other structure.

- Excavation in fill:
  - Embankments and other areas of fill are to be filled and compacted as specified to a height of at least 600 mm above top of pipe before trench is excavated.

- Excavation in existing pavements:
  - Is to be executed carefully and to minimum widths. Use methods which will give trenches a straight and vertical face and maintain pavement at original level.

- Combined trenches:
  - Where one pipe is at a lower level than an adjacent pipe in a common trench:
    a sub-trench is permissible provided soil of step is stable.
    if a sub-trench is not permissible, the whole trench is to have a depth related to the lower pipe, with increased thickness of bedding to upper pipe as necessary.
    lower pipe is to be backfilled with thoroughly compacted approved granular material up to a level not less than half-way up the higher pipe.

- Formation for pipe beds generally:
  - Remove carefully by hand, the bottom 200 mm depth of trenches immediately prior to laying bedding material or pipes
  - Remove unstable material, rock projections, boulders and hard spots and replace with approved filling material, well consolidated
  - Harden local soft spots by tamping in bedding material.

- Formation in rock:
  - Excavate to 150 mm below bed level and replace with approved granular material or blinding concrete, as directed.

- Subsoil for backfilling:
  - Carefully handle and stockpile approved excavated subsoil material required for backfilling, in temporary spoil heaps adjacent to excavations or elsewhere on Site as directed.

DISPOSAL OF MATERIALS

410 EXCAVATED TOPSOIL STORAGE

- Stockpile excavated topsoil required to carry out subsequent topsoiling operations in temporary spoil heaps on Site as instructed.

415 EXCAVATED TOPSOIL REMOVAL

- General: Remove surplus topsoil from Site.

420 TOPSOIL STORAGE HEAPS

- Standard: To BS 3882.
- Protection:
  - Do not place any other material on top of storage heaps.
  - Do not allow construction plant to pass over storage heaps.
  - Prevent compaction and contamination.

441 SURPLUS SUBSOIL

- Excavated material: Remove from Site excavated materials which are surplus to requirements or deemed by the Engineer as unsuitable for filling, backfilling, spreading and levelling or stockpiling.
- Retained material: Spread and level surplus subsoil on site.
  - Protected areas: Do not raise soil level within root spread of trees that are to be retained.
- Remaining material: Remove from site.

442 TIPS

- Use only authorised tips for disposal of all materials removed from Site. Pay all tipping fees and charges arising in connection therewith.

443 PERMISSIBLE DEVIATIONS FROM FORMATION LEVELS

- Beneath mass concrete foundations: ±25 mm.
- Beneath ground bearing slabs and R.C. foundations: ±15 mm.
- Embankments and cuttings: ±50 mm.

- Ground abutting external walls: ±50 mm, but such as to ensure that finished level is not less than 150 mm below DPC.

450 WATER

- Generally: Keep all excavations free from water until:
  - Formations are covered.
  - Below ground constructions are completed.
  - Basement structures and retaining walls are able to resist leakage, water pressure and flotation.
- Drainage: Form surfaces of excavations and fill to provide adequate falls.
- Removal of water: Keep surface excavations well drained. Provide temporary drains, sumps and pumping as necessary. Do not pollute watercourses with silt laden water.
- Keep excavations free from water and keep water from excavations clear of other work.

454 GROUND WATER LEVEL, SPRING OR RUNNING WATER

- Give notice: If it is considered that the excavations are below the water table.
- Springs/ Running water: Give notice immediately if encountered.

456 DRAINAGE DITCHES AND SUMPS

- Obtain approval for location of any drainage ditches and sumps; backfill and compact to approval when no longer required.

457 PUMPING AND DEWATERING

- General: Do not disturb excavated faces or stability of adjacent ground or structures adjacent to or around excavations by pumping and dewatering operations.
- Pumped water: Discharge without flooding the site or adjoining property.
- Drainage ditches and sumps: Construct clear of excavations. Backfill and compact to approval when no longer required.
  - Locations: Obtain approval for location of any drainage ditches and sumps;
- Unless otherwise instructed, maintain and continue pumping and dewatering operations until such time that the dead-weight of permanent works is at least 1.1 times the up lift applied from any ground water encountered in excavations, including expected fluctuations in water table level during the construction period.
- Do not stop dewatering before informing the Engineer and obtaining his approval.

460 PERMANENT DRAINAGE SYSTEM

- Permanent drainage system is not to be used for disposal of water from excavations without approval.

FILLING

470 EARTH FILLING GENERALLY

- To be approved material arising from excavations or approved imported filling material, free from clay, debris, harmful matter, organic materials and other materials liable to decompose or chemically react, and capable of being compacted as specified.

471 SATISFACTORY SOILS

- Soil Classification **[Groups GW, GP, GM, SW, SP, and SM according to BS 5930] [Groups A-1, A-2-4, A-2-5, and A-3 according to AASHTO M 145]**, or a combination of these groups; free of rock or gravel larger than [(75 mm)] in any dimension, debris, waste, vegetation, and other deleterious matter.
  - Liquid Limit: 35% Maximum
  - Plasticity Index: 12 Maximum.

472 UNSATISFACTORY SOILS

- Soil Classification **[Groups GC, SC, CL, ML, OL, CH, MH, OH, and PT according to BS5930] [Groups A-2-6, A-2-7, A-4, A-5, A-6, and A-7 according to AASHTO M 145]**, or a combination of these groups.

- Unsatisfactory soils also include satisfactory soils not maintained within 2 percent of optimum moisture content at time of compaction.

- Unsatisfactory Soils for Airfield and Roadway Construction: AASHTO M145 soil classification groups A-6, and A-7, or a combination of these group symbols; and any other material not complying with specified requirements for Satisfactory Roadway/Airfield Soils.

473 EARTH FILLING UNDER BUILDING SLABS AND GENERAL FILL/BACKFILL

- Satisfactory soil. To pass a 75 mm ASTM standard sieve and material passing 5mm BS standard sieve is to have a maximum plasticity index of 12% and a maximum liquid limit of 25%.. No piece is to have its largest dimension greater than one third the thickness of a compacted layer. Gradation of material is to be approved by the Engineer.
- The material shall be non-aggressive with water soluble Chlorides less than 0.05% and water soluble Sulphates (SO3) content less than 0.1% and pH between 6.5 and 8 when tested according to BS EN 1744-1 or BS 1377-3 standard.

474 EARTH FILLING AND EMBANKMENTS

- Under roads and paved areas: Satisfactory soil. Natural material is to conform to the general requirements of **[BS EN 13242] or [AASHTO M 145 soil classification groups A-1, A-2-4, A-2-5, and A-3 when confined, or a combination of these group symbols]**; material shall be free of debris, waste, vegetation, and other deleterious matter, and conforming with the below requirements.
  - Maximum Size: 75mm Max. and not more than third of placement layer thickness.
  - Organic Matter: Not more than 5 percent; BS 1377-3.
  - Maximum Dry Density: Not less than 1.7; BS 1377-4.
  - 4-day soaked CBR: Not less than 8 percent; BS 1377-4 when compacted at 95% max. dry density in accordance with BS 1377.
  - Plasticity Index PI < 20%.

475 IMPROVED SUBGRADE LAYER (IF REQUIRED)

- Subgrade layer: Satisfactory roadway/embankment soil materials, but conforming to the following additional requirements:
  - Size: 100 percent passing a 75 mm sieve and not more than 18 percent passing a 0.075 mm sieve.
  - 4-day soaked CBR: Not less than 15 percent; BS 1377-1 when compacted at 100% BS 1377.
  - Maximum Plasticity Index: 12 percent.
  - The top 150 mm subgrade material should not contain more than 0.1% water soluble Sulphate (SO_3) content and 0.05% total water soluble Chloride content and pH between 6.5 and 8, when tested according to BS EN 1744-1 or BS 1377-3 standards.
  - **[Subgrade material should respect filter criteria specified under Clause 445 below, when the subgrade layer is laid directly underneath and/or above the drainage blanket]**.

476 PERMEABLE DRAINAGE LAYER

- To abutment and retaining walls is to consist of clean no fines material having a maximum size of 20 mm and minimum size of 2 mm, unless otherwise approved by the Engineer, the gradation should be such that D60/D10 is less than 3. Minimum thickness of the drainage layer shall be 300 mm. Filter criteria shall be satisfied at the interface of the drainage layer and the backfill, alternatively a geotextile fabric may be placed as a separator.

477 BEDDING COURSE

- Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; BS EN 13285; except with 100 percent passing a (25-mm) sieve and not more than 8 percent passing a No. 200 (0.075-mm) sieve.

478 FILTER MATERIAL FOR SUBSURFACE DRAINAGE

- Graded mixture of natural or crushed gravel stone with 100% passing a 25mm sieve and 0 to 5% passing a No.4 (4.75mm) sieve.

479 DRAINAGE BLANKET MATERIAL

- Course of washed granular material placed to cut off upward capillary flow of pore water under paved areas.
- Filter material for subsurface drainage: graded mixture of natural or crushed gravel stone with 100% passing a 25 mm sieve and 0 to 5% passing a No.4 (4.75mm) sieve.
- Drainage Blanket Material: Aggregate Material for use in drainage blanket shall be Rapid Draining crushed stone, or crushed or uncrushed gravel conforming to the following properties:

PROPERTY	**RANGE**
Permeability in m/day	300 - 1500

Effective Porosity	0.25
% Fractured Faces (COE Method)	Min. 75%
Cv (D60/D10)	> 3.5
L.A. Abrasion	< 40
California Bearing Ratio (CBR)	> 30%

- The gradation of the Rapid Draining Material for use in Drainage Blanket shall be as follows:

Sieve Designation (mm)	**Percent Passing**
53.0	100
37.5	74 – 100
26.5	55 - 98
13.2	40 - 67
4.75	24 - 36
2.00	15 - 20
0.425	4 - 9
0.075	0 - 4

- The Subgrade layer directly underneath the drainage blanket and the one directly above it shall satisfy the following filter criteria:
  - The 15 % size of Filter (D15 Filter) should not be greater than 4 times the 85 % size of the surrounding material (D85 Surrounding material):
  - D15 Filter < 4 D85 Surrounding material.
  - The 15 % size of Filter (D15 Filter) should not be less than 4 times the 15 % size of the surrounding material (D15 Surrounding material):
  - D15 Filter > 4 D15 Surrounding material.
  - The 50 % size of Filter (D50 Filter) should not exceed 25 times the 50 % size of the surrounding material (D50 Surrounding material):
  - D50 Filter < 25 D50 Surrounding material.
  - The plasticity index of the portion of all filter materials passing sieve # 40 (0.425mm sieve) should not exceed 6%.
  - The filter materials should not contain more than 5% material passing through sieve # 200 (0.075mm sieve).

- Wherever and as shown on the drawings, place drainage blanket under the raft as follows:
  - Compact drainage blanket to required cross sections and thickness to not less than 95 percent of maximum dry density according to BS1377.
  - Place Drainage Blanket in layers, 150mm each.
    When compacted thickness of drainage blanket exceeds 300 mm, place materials in equal layers, with no layer more than 150 mm thick or less than 75 mm thick when compacted.

480 SELECTED FILL

- Selected fill: approved material arising from excavations or approved imported filling material conforming to Clause 473 or 474 hereof as applicable.

481 BACKFILL

- Backfill: Approved material arising from excavations conforming to Clause 473 hereof.

482 PIPE BEDDING MATERIAL AND BACKFILLING FOR PIPE TRENCHES

- Granular Bedding and Backfill materials: Granular bedding shall be composed of natural gravel, crushed gravel or crushed rock, free from dirt, clay, roots, organics and other deleterious materials. Granular bedding according to pipe type, shall conform to the following:

Standard Sieve size (mm)	% By Weight Passing for DI/steel pipes	Standard Sieve size (mm)	% By Weight Passing for UPVC / PE pipes
19.0 (3/4 in)	70-100	4.76 (No. 4)	100
12.7 (1/2 in)	30-75	1.16 (No. 16)	25-75
8.0 (5/16 in)	8-40	0.300 (No. 50)	10-30
4.76 (No.4)	0-10	0.177 (No. 80)	0-10

- For GRP pipes bedding shall be of graded crushed stone 2.83-8.0 mm or as recommended by Manufacturer and approved by the Engineer.

- Sand bedding and initial backfill up to 300 mm minimum above crown of the pipe shall be non-plastic, natural well graded sand having hard, strong, durable angular particles. It shall be clean and free from extraneous materials, clay balls, organic matter or other detrimental material. The amount of fines passing sieve No. 200 shall not exceed 15%.

- Backfill over a pipe shall consist of two different materials: Initial or selected backfill and main backfill. Initial backfill or backfill in contact with the pipes and up to 300 mm minimum above crown of the pipe shall be selected material. Selected fill material shall be similar in composition and gradation to the granular pipe bedding as defined above or the sand bedding described above. The main backfill (for the remainder of the trench) shall be done with suitable material either from material removed in the course of excavating the trench, or imported from approved borrow pit. In either case the backfill material shall conform to backfill described in this section above and will be selected to avoid large stones greater than 76mm.

483 TOPSOIL

- To BS 3882, medium texture, neutral to slightly alkaline reaction, free of stones, pests, weed seeds, roofs, sticks, subsoil and foreign matter.

484 DRAINAGE STONE

- water-borne or crushed, hard durable stone, washed free of loam, sand, clay and other foreign substances and evenly graded from 20 mm minimum to 50 mm maximum size.

485 STONE MULCH

- Water-borne, hard durable gravel, washed free of loam, sand, clay and other foreign substances and evenly graded from 5 mm minimum to 25 mm maximum size and of approved natural colour.

486 CYCLOPEAN CONCRETE

- Cyclopean concrete consists of mass concrete in which large stones larger than 150 mm are deposited as the concrete is placed.

- Concrete for use as backfilling for structural excavation shall be cyclopean concrete. Plums used in cyclopean concrete shall consist of non-reactive broken stone spalls or boulders ranging in size from 200mm to 300mm. They shall be free from sharp or angular edges and shall not form more than 30% of the total volume of concrete. They shall be evenly graded and shall be soaked in water prior to incorporation in the mix. Plums shall be evenly distributed in the concrete mix with a minimum cover of 100mm.

487 ENGINEERED FILL FOR EARTH FILLING UNDER BUILDING SLABS AND FOUNDATIONS

- Engineered fill shall be uniformly graded granular material, capable of being compacted to the specified compaction level, and having adequate permeability to permit free drainage through it. Backfill material shall also conform to the following:
  - Minimum D10 value: 1 mm
  - Maximum Plasticity Index: 10 per cent

- Engineered fill shall satisfy the chemical properties of general fill/backfill material.

488 IMPERVIOUS BACKFILL MATERIALS

- Impervious Backfill materials for structures: Selected cohesive material with 15% to 100% of soil passing a No. 200 (0.075 mm) sieve and 100% passing a 37.5 mm sieve. The cohesive material shall have a maximum Liquid Limit of 35% and a maximum Plasticity Index of 20%.

- The impervious backfill material shall satisfy the chemical properties of general fill/backfill material.

- Place impervious backfill around buildings above structural foundations that are beyond the slab on grade limits.

500 PROPOSED FILL MATERIALS

- Details: Submit full details of proposed fill materials to demonstrate compliance with specification, including:
  - Type and source of imported fill.
  - Proposals for processing and reuse of material excavated on site.
  - Test reports by an approved independent testing agency as required elsewhere.

510 HAZARDOUS, AGGRESSIVE OR UNSTABLE MATERIALS

- General: Do not use fill materials which would, either in themselves or in combination with other materials or ground water, give rise to a health hazard, damage to building structures or instability in the filling, including material that is:
  - Organic.
  - Contaminated or noxious.
  - Susceptible to spontaneous combustion.
  - Likely to erode or decay and cause voids.
  - With excessive moisture content, slurry, mud or from marshes or bogs.
  - Clay of liquid limit exceeding 80 and/or plasticity index exceeding 55.
  - Classified as Unsatisfactory soil.

511 SAMPLES AND TESTS

- Submit 50 kg representative samples of filling materials to an approved laboratory for tests as follows and submit results for approval:
  - For soils with less than 50% fines: sieve analysis and compaction and chemical composition (% sulphates, % chlorides and pH).
  - For soils with more than 50% fines: sieve analysis, Atterberg Limits, Compaction and California Bearing Ratio (CBR) and chemical composition (% sulphates, % chlorides and pH).
  -
  - For all soils: test in accordance with BS 1377-4 to determine the optimum amount of water to be used with fill material to obtain maximum dry density. Test procedure is to be selected on the basis of the gradation of the material.
- Samples and tests are to be conducted for every source of filling material and for each type of filling material encountered.

512 APPROVAL

- Sources and types of filling materials and moisture contents at which they may be placed and compacted are to be those approved after receipt of laboratory test results.

530 PLACING FILL

- Surfaces of excavations and areas to be filled: Free from loose soil, topsoil, organic material, rubbish and standing water.
- Uniformly using approved methods to required dimensions, levels, lines and profiles and to permit water to drain freely.

- Against columns, foundation walls, abutments, culverts and the like only with approval and after concrete and any masonry have been in place for at least 21 days.
- Adjacent structures, membranes and buried services:
  - Do not overload, destabilise or damage.
  - Submit proposals for temporary support necessary to ensure stability during filling.
  - Allow 14 days (minimum) before backfilling against in situ concrete structures.
- Layers: Place so that only one type of material occurs in each layer.
- Earthmoving equipment: Vary route to avoid rutting.

535 COMPACTION GENERALLY

- General: Compact fill not specified to be left loose as soon as possible after placing.
- After compaction: Surface of each layer must be well closed, showing no movement under compaction plant, and without cracks, holes, ridges, loose material and the like.
- Defective areas: Remove and recompact to full thickness of layer using new material.

536 FIELD DENSITY TESTS

- Minimum field density required on compacted earth layers when tested in accordance with BS 1377-9, unless otherwise specified on drawings, is to be:
  - For top 30 cm subgrade layer under slabs within buildings areas
    Or under road, parking and paved area 100% of maximum dry density
  - for ground surfaces prepared to receive fill: 95% of maximum dry density
  - for top 600mm depth of filling under slabs within building areas: 100% of maximum dry density
  - for top 600mm depth of filling under roads, parking and paved areas: 98% of maximum dry density
  - for filling in excess of top 600 mm under same areas last described: 95% of maximum dry density
  - for filling elsewhere, such as landscaped areas: 90% of maximum dry density

- DRAINAGE BLANKET: Wherever and as shown on the drawings, place drainage blanket under the aggregate Base Course, as follows:
  - Compact drainage blanket to required cross sections and thickness to not less than 100 percent of maximum dry density according to ASTM D 1557.
  - Place Drainage Blanket in layers, 150mm compacted thickness each.
  - When compacted thickness of drainage blanket exceeds 300 mm, place materials in equal layers, with no layer more than 150 mm thick or less than 75 mm thick when compacted.

537 PERMEABLE MEMBRANE FOR PLANTERS

- Non-woven, 70% polypropylene, 0.3 mm thick, weighing 70 g/m^2, with permeability to water of 80 l/sec/m^2 at 100 mm head of water.
- Membrane is to be resistant to all naturally occurring soil acidities and to tearing and stress and is to remain unaffected by direct sunlight for up to one month.

540 BENCHING IN FILL

- Adjacent areas: If, during filling the difference in level between adjacent areas of filling exceeds 600 mm, cut into edge of higher filling to form benches 600 mm minimum width and height equivalent to depth of a layer of compacted filling.
- New filling: Spread and compact to ensure maximum continuity with previous filling.
- Surfaces of ground with a gradient greater than 1 in 5 which are to receive fill, are to have horizontal benches cut to match the depths of compacted layers of filling.

550 GEOTEXTILE SHEET

- Subsurface Drainage Geotextile: Nonwoven needle-punched geotextile, manufactured for subsurface drainage applications, made from polyolefins or polyesters; with elongation greater than 50 percent; complying with BS EN 13252 and the following, measured per test methods referenced:
  - Survivability: **[Insert Limit].**
  - Grab Tensile Strength: **[Insert Limit].**
  - Sewn Seam Strength: **[Insert Limit].**
  - Tear Strength: **[Insert Limit].**
  - Puncture Strength: **[Insert Limit].**
  - Apparent Opening Size**[Insert Limit].**
  - Permittivity: **[Insert Limit].**
  - UV Stability: **[Insert Limit].**

- Separation Geotextile: Woven geotextile fabric, manufactured for separation applications, made from polyolefins or polyesters; with elongation less than 50 percent; complying with BS EN 13251 and the following, measured per test methods referenced:
  - Survivability: **[Insert Limit].**
  - Grab Tensile Strength: **[Insert Limit].**
  - Sewn Seam Strength**: [Insert Limit].**
  - Tear Strength: **[Insert Limit].**
  - Puncture Strength: **[Insert Limit].**
  - Apparent Opening Size: **[Insert Limit]**.
  - Permittivity: **[Insert Limit].**
  - UV Stability: **[Insert Limit].**

- Geotextile: Place and install in accordance with manufacturer's written instructions and as follows, to the approval of the Engineer.
  - Overlaps shall not, in any case, be less than 25 mm.
  - Place bedding layer as soon as possible after placement of the geotextile, in accordance with approved methods, to thickness shown on Drawings.
  - Remove and replace any geotextile damaged or punctured either before, during or after laying.

553 GROUND SURFACES TO RECEIVE FILLING

- Ground surfaces to receive filling are to be cleared and all vegetation and topsoil removed before filling is placed. Surfaces of ground are to be scarified, pulverised, watered and recompacted to at least 90% of maximum dry density as determined by BS 1377. Compaction is to be to a depth of at least 200 mm

below ground surface. Hard or smooth surfaces are to be roughened before filling is placed. Existing road surfaces and the like are to be broken up and removed or used as part of fill.

554 PLACE FILLING

- Surfaces of excavations and areas to be filled: Free from loose soil, topsoil, organic material, rubbish and standing water.
- Uniformly using approved methods to required dimensions, levels, lines and profiles and to permit water to drain freely.
- Against columns, foundation walls, abutments, culverts and the like only with approval and after concrete and any masonry have been in place for at least 21 days.
- Adjacent structures, membranes and buried services:
  - Do not overload, destabilise or damage.
  - Submit proposals for temporary support necessary to ensure stability during filling.
  - Allow 14 days (minimum) before backfilling against in situ concrete structures.
- Layers: Place so that only one type of material occurs in each layer.
- Earthmoving equipment: Vary route to avoid rutting.

556 DEPOSIT FILLING

- In a manner not to endanger wholly or partly finished structures or sub-structures either by direct pressure or indirectly by overloading banks contiguous to the operation or in any other manner.

557 MOISTURE CONTENT

- Uniformly moisten or aerate subgrade and each subsequent fill or backfill soil layer before compaction to within 2 percent of optimum moisture content.

  - Do not place backfill or fill soil material on surfaces that are muddy or contain excess water.
  - Remove and replace, or scarify and air dry, otherwise satisfactory soil material that exceeds optimum moisture content by 2 percent and is too wet to compact to specified dry unit weight.
  - Jetting or fills or other hydraulic methods involving or likely to involve liquid or semi-liquid pressure will not be permitted.

558 EARTH FILLING UNDER BUILDING SLABS

- Earth filling outside the limits of the slab on grade is to be spread and compacted in layers not exceeding 150 mm compacted thickness, to the limits specified in Clause 536.

559 EARTH FILLING UNDER ROADS AND PAVED AREAS

- The top 600 mm depth of fill is to be compacted to at least 95% of maximum dry density all as determined by BS 1377.
- The top 200 mm subgrade layer is to be compacted to 100% of maximum dry density all as determined by BS 1377.

561 EARTH EMBANKMENTS

- Unless otherwise specified or determined and approved by the Engineer from trial tests in the field, embankments are to formed in horizontal layers not exceeding 200 mm compacted thickness.
- The top 600 mm depth of fill is to be compacted to at least 95% of maximum dry density all as determined by BS 1377.
- Where landscaping, planting, seeding or turfing are required or where instructed the embankment is to be stopped below indicated levels and prepared to receive topsoil, specified elsewhere.

562 MINOR UPFILLING

- Minor Upfilling and local adjustment of levels is to be selected fill spread and levelled in layers not exceeding 150 mm compacted thickness well consolidated and compacted to approval by suitable mechanical means.

563 SUBGRADE LAYER FOR AIRFIELD AND ROADWAY CONSTRUCTION

- Subgrade in Cut:
  - Where the subgrade is located in rock, the subgrade, unless shown otherwise on the Drawings, shall be undercut to a depth of 300 mm by drilling or as directed. No rock shall project more than 50 mm above the undercut surface elevation. The 300 mm thick subgrade layer shall then be constructed in 2 lifts having 150 mm compacted thickness each and using approved subgrade material.
  - Where the subgrade is on in-situ soil which is of a quality and CBR value at least equal to those specified for subgrade, the 300 mm depth of such material immediately below top of subgrade shall be scarified and all roots, sod, vegetable and other undesirable matter and stones larger than 75 mm in any dimension shall be removed. The material shall then be brought to uniform moisture content within the specified range and compacted to 100% AASHTO T180 (Method D) maximum density. The compaction shall be done in 2 lifts having 150 mm compacted thickness each.
  - Where the subgrade (under the shoulders, roadways and vehicular pavements) is on in-situ soil which is unsatisfactory and unsuitable for retention as the subgrade layer, such material immediately below the top of subgrade layer shall be sub-excavated to a depth of 300 mm, hauled away and disposed of unless approved for use for other applications. The subgrade layer shall then be constructed in 2 lifts having 150 mm compacted thickness each, and using approved subgrade material, brought to uniform moisture content within the specified range and compacted to 100% AASHTO T180 (Method D) maximum density. If the material below subgrade does not satisfy the requirement of top 600 mm embankment, it shall be excavated for further 300 mm and replaced by suitable material to satisfy the requirements of subgrade.
  - The underlying natural material shall be scarified, leveled and rolled. The surface of the natural soil shall be approved by the Engineer before placement of suitable material.

- Subgrade in Embankment: The 300 mm minimum depth of embankment immediately below top of subgrade shall consist of selected, approved subgrade material. The material shall be spread in two layers (150 mm thick each) over the full width of the top of embankment, brought to a uniform moisture content within the specified range and compacted to 100% AASHTO T180 (Method D) maximum density.

- Surface Tolerances:
  - All finished elevations, lines and grades shall be in accordance with the details shown on the Drawings. Each cross section shall be checked at maximum intervals of 25m, at each change in cross slope and elsewhere as directed.

– The tolerances on elevations of finished subgrade, top of embankment under the subgrade layer and subexcavated (undercut) surface shall be as follows:

1.

Surface	Tolerances
Finished Subgrade:	
Soil	+10 or -15 mm
Top of Embankment or Sub-excavated Surface:	
Soil	+10 or -15 mm

– When the finished subgrade surface is tested with a 3.7m long straightedge placed parallel to, or at right angles to the centerline, the maximum depression of the surface from the testing by straight edge shall be 12 mm.

- Maintenance of Finished Subgrade: The finished and approved subgrade shall be continuously maintained in a smooth, well compacted and properly drained condition until the sub-base (or base) course is constructed. Reapproval of the subgrade will be required if the overlying course is not constructed within 14 days of subgrade completion or if the subgrade layer is damaged by traffic or any other causes prior to the placement of the sub-base layer.

564 FREQUENCY OF TESTING FOR EMBANKMENT AND SUBGRADE LAYER FOR AIRFIELD AND ROADWAY CONSTRUCTION

- Minimum soil tests required during the construction of subgrade and/or embankment are:

  – One sample for CBR, and laboratory (Moisture - density) or relative density compaction from each source prior to use. Each sample shall represent not more than 5,000 m3.

  – One sample for classification (AASHTO M145) representing not more than 3,000 m3 of the material in use.

  – For every completed layer/lift, one field density shall be determined every 500 m2. Testing shall be in accordance with ASTM D1556 (Sand Cone Method) or ASTM D2167 (Rubber Balloon Method) or ASTM D6938 (Nuclear Method)

610 COMPACTED FILLING FOR LANDSCAPE AREAS

- Fill: Material capable of compaction by light earthmoving plant.
- Filling: Layers not more than 200 mm thick. Lightly compact each layer to produce a stable soil structure.

615 LOOSE TIP FILLING FOR LANDSCAPE AREAS

- Filling: Do not firm, consolidate or compact when laying. Tip and grade to approximate levels in one operation with minimum of trafficking by plant.

616 PROTECTION OF FORMATION

- Do not allow construction traffic on completed filling until the level has been raised not less than 150 mm above formation level by properly compacted temporary protective filling.
- Lift and remove temporary protective filling from Site before beginning permanent construction
- Do not stockpile materials on newly filled areas without permission.

619 BACKFILLING

- Place and compact backfill in excavations promptly, but not before completing the following:
  - All permanent construction below finish grade, including where applicable, basement slabs, damproofing, waterproofing and perimeter insulation and protection
  - Inspecting and testing
  - surveying and measuring for record documents
  - removal of concrete formwork
  - removal of trash and debris
  - removal of temporary shoring, bracing and sheeting.

620 SAND CEMENT MIX

- place sand cement mix in layers of 250mm thickness, each layer well compacted with suitable equipment to 95% of maximum dry density, all as determined by BS 1377-Part 4. The minimum percentage of cement shall be equal to 5%.

621 FILLING TO PLANTING BOXES

- Place not less than 100 mm of drainage stone in bottom of planting box, install permeable membrane fabric and fill with topsoil in lightly compacted layers to a level 100 mm below top of planting box allowing for natural settlement. Place stone mulch to a level 40 mm below top of planting box.

622 BACKFILLING TO PIPE TRENCHES

- Compaction equipment: compact backfilling using approved compaction equipment suited to the particular application and location. Do not use heavy steel or pneumatic rollers for compacting backfill to pipe trenches.
- Initial backfill: where pipe surround does not extend up to a level 300 mm above top of pipe, backfill to that level with initial backfill laid and hand compacted in 150 mm layers.
- Main backfill: unless otherwise specified is to be approved material arising from trench excavations, laid and well compacted in layers not exceeding 200 mm thick. Do not use heavy compactors until there is a minimum of 600 mm cover over pipes.
- Concrete: when backfilling to pipes with concrete beds and surrounds:
  - Do not start backfilling within 24 hours of placing concrete.
  - Do not use heavy compactors.
  - Prevent traffic loads within 72 hours of placing concrete.
- Temporary Bridges are to be provided over trenches to prevent construction traffic damaging pipes after backfilling.

623 RESTORATION OF SURFACES

- Generally: Restoration of asphalt, concrete and gravel pavements and the like is to be with materials and to thicknesses to match the existing pavement. Materials and workmanship are to be in accordance with local authority requirements and as directed by and to the approval of the Engineer.
- Restoration of pavement: Make good to existing and ensure new pavement is to same level and profile as existing to provide a uniform surface.
- Restoration of grassed areas: after backfilling, spread approved topsoil over affected area and seed, fertilize and water until grass is restored to its former condition.
- Restoration of unsurfaced areas:
  - After backfilling, grade surface and any adjoining areas disturbed to provide a level, smooth surface.
  - Proceed with restoration of surfaces as soon as practicable after completion of backfilling operations and in sections if necessary. In every case commence restoration no later than 10 days after backfilling and ensure completion of the restoration within 20 days thereafter.

624 HARDCORE FILLING

- Fill: Granular material, free from excessive dust, well graded, all pieces less than 75 mm in any direction.
  - Test requirements:
    Minimum 10% fines value tested in a soaked condition to BS 812-111.
    Impact value SZ tested to BS EN 1097-2.

- Material:
  - In any one layer only one of the following:
    - Crushed rock (good quality and hard rock other than argillaceous rock) with not more binding material than is required to help hold the stone together.
    - Gravel with not more clay content than is required to bind the material together, and with no large lumps of clay.
    - Natural gravel.
- Filling: Spread and level in 150 mm maximum layers. Thoroughly compact each layer.
- Water Soluble Sulphate (SO_3) content of materials for filling under concrete slabs or adjacent to substructures must not exceed 0.1% by dry weight of material and water soluble chloride content not exceeding 0.05% by dry weight of material and pH between 6.5 and 8, when tested according to EN 1744-1 or BS 1377-3 standards. Test in an approved laboratory and submit results for approval.

625 HARDCORE

- Granular material, free from harmful matter, well graded, passing a 150 mm diameter ring in every direction and in any one layer only one of the following:
  - broken hard stone
  - broken concrete free steel reinforcement and old plaster
  - gravel

627 VENTING HARDCORE LAYER

- Fill: Clean granular material, well graded, passing a 75 mm BS sieve but retained on a 20 mm BS sieve. In each layer only one of the following:
  - Crushed hard rock.
  - Gravel.

- Filling: Spread and level in 150 mm maximum layers. Thoroughly compact each layer whilst maintaining enough voids to allow efficient venting.

730 BLINDING

- Surfaces to receive sheet overlays or concrete:
  Blind with:
  - Concrete where shown on drawings; or
  - Sand, fine gravel, or other approved fine material applied to fill interstices. Moisten as necessary before final rolling to provide a flat, closed, smooth surface.
- Sand for blinding: To BS EN 12620, grade 0/4 or 0/2 (MP).
- Permissible deviations on surface level: +0 -25 mm.

740 ROCK FILL

- Sound, dense, hard and durable rock free from weathering, cracks, seams or other visual defects; rock laterite; broken stone, brick or concrete; or other comparable inert material capable of being placed and compacted as specified.
- Individual pieces are to be clean, angular and neither elongated nor flat, the longest dimension not exceeding twice the shortest dimension.
- No piece is to have its largest dimension greater than one third the thickness of a compacted layer.
- Submit representative samples stating source of supply and obtain approval before delivery to the Site.
- Samples shall be tested by an approved independent testing agency and results shall be submitted for Engineer's approval.

745 ROCK RIPRAP PROTECTION

- Sound, dense, hard and durable rock free from weathering, cracks, seams or other visual defects. Individual rock pieces are to be clean, angular, broad and flat and in accordance with the following size and gradation requirements:
  - no individual piece is to weigh less than 20 kg or more than 70 kg
  - at least 60% of pieces are to weigh not less than 45 kg.

- Submit representative samples stating source of supply and obtain approval before delivery to the Site.
- Samples shall be tested by an approved independent testing agency and results shall be submitted for Engineer's approval.

746 STONE FOR PITCHING TO WATERCOURSES

- Durable, angular, field or quarry stones of approved quality, sound, dense, hard, free from cracks, seams and other structural defects and having a specific gravity not less than 2.4. Individual stone pieces are to be not less than 150 mm thick in any direction and in accordance with the following size and gradation requirements
  - no individual piece is to weigh less than 2.5 kg or more than 25 kg
  - at least 60% of pieces are to weigh not less 15 kg.

- Submit representative samples stating source of supply and obtain approval before delivery to the Site.
- Samples shall be tested by an approved independent testing agency and results shall be submitted for Engineer's approval.

747 WORKMANSHIP

- Stability: Before laying hardcore take necessary precautions to ensure stability of adjacent structures.
- Filling: Ensure excavations and areas to be filled are kept free from soil and rubbish. Spread and level hardcore in 300 mm maximum layers each well consolidated with a suitable mechanical rammer.
- Beds: Spread and level in 150 mm maximum layers. Thoroughly consolidate each layer with vibratory roller, vibrating plate compactor, vibro tamper or other suitable means.
- Blinding: Surface of hardcore to receive sheet overlays or concrete is to have sufficient blinding material applied to fill surface interstices to provide a close smooth surface.
- Tolerance: On surface level of blinded hardcore is to be +0 mm and -25 mm.

748 PLACING ROCK FILLING

- Rock filling: Is to be formed in horizontal layers not exceeding in thickness the approximate average size of the rocks within the layer, except that no layer shall exceed 600 mm, each layer is to be compacted and approved before the next is laid.
- Placing rock: Place rock in each layer so that all large stones are well distributed and the voids completely filled with smaller stones, earth, sand or gravel to form a solid and homogenous layer.
- Compaction: Unless otherwise specified or determined and approved by the Engineer from trial compaction tests in the field, compact each layer of rock filling by at least twelve passes of:
  - towed vibratory roller with static load of at least 50 kg per 25 mm width of roller
  - grid roller with load of at least 225 kg per 25 mm width of roller
  - other approved plant.

749 PLACING ROCK RIPRAP

- Rock riprap protection:
  - Place and lay rocks to provide minimum number of voids, using approved methods suited to the particular application, location and sizes of rock material.
  - Place larger rocks in footing trenches and on surfaces of slopes.

- Loose riprap:
  - Lay rocks with flat face uppermost, parallel to intended finished surface and roughly arranged in close contact.
  - Fill voids between rocks with rock chips of largest possible size.

- Grouted riprap:
  - Lay rocks with flat face uppermost, parallel to intended finished surface and roughly arranged in close contact.
  - Fill voids between rocks with cement-sand mortar 1:3 to full depth of the rock.
  - Remove excess mortar by brushing.
  - Keep finished work moist for three days after grouting.

751 STONE PITCHING TO WATERCOURSES

- Trimming: Trim sides and bed of watercourse to required profile.

- Place pitching by hand and bed firmly on 75 mm gravel or other approved material to the depth shown on the Drawings. Pitching is to be roughly square on all faces and the upper (water) face roughly dressed. Courses are to be laid to break joint.

D30 PILING

To be read with Preliminaries/General conditions

GENERAL

1.1 Scope

Provide all labor, materials, plant, and supervision for:

- Installation of piles (bored, CFA, driven, or precast as applicable)
- Temporary works (casings, drilling fluids, support systems)
- Reinforcement, concreting, and finishing
- Testing, monitoring, and quality control

1.2 Contractor's Responsibilities

Contractor shall:

- Review and interpret ground investigation data
- Carry out additional investigations if required
- Submit detailed **pile installation plan** for approval
- Be fully responsible for construction method and performance

1.3 Submittals

- Method statement including:
    - Piling method and equipment
    - Sequence of works
    - Quality control procedures
- Daily piling programme submission
- Test reports and as-built records

1.4 Site Conditions

- Contractor shall:
    - Assume full responsibility for interpretation of subsurface conditions
    - Report unexpected ground conditions immediately
    - Verify presence of contaminated materials if encountered

© Copyright protected

1.5 Protection of Adjacent Structures

- No damage to structures or services permitted
- Monitor movements with approved instrumentation
- Stop works and implement mitigation if movement occurs

2. SYSTEM PERFORMANCE

2.1 Piling Method

- Submit details of:
  - Pile type
  - Installation method
  - Equipment
  - Any alternative method requires approval

2.2 Performance Requirements

- Contractor shall demonstrate:
  - Load capacity
  - Settlement performance
  - Construction control measures

2.3 Working Loads

- Pile loads and group configuration:
  - As indicated on drawings

2.4 Pile Length and Penetration

- Pile toe level and penetration:
  - As per drawings
- Minimum penetration into bearing strata required

© Copyright protected

3. MATERIALS

3.1 Concrete

- Concrete shall comply with:
  - BS EN 206
  - BS EN 1992-1-1
- Requirements:
  - Continuous, monolithic placement
  - High workability for tremie placement
  - No contamination or segregation

3.2 Concrete Production and Testing

- Trial mixes required prior to construction
- Sampling and testing:
  - Regular compliance testing during works
- Reject non-compliant materials

3.3 Reinforcement

- Reinforcement shall:
  - Be clean and free from corrosion
  - Be stored properly and protected
  - Be fixed as per drawings
- Splicing:
  - Mechanical couplers for tension piles
- No tack welding permitted

3.4 Drilling Fluids and Casings

- Temporary casing:
  - Required to maintain bore stability
- Bentonite slurry:
  - To approved standards and properties

4. EXECUTION

4.1 Site Preparation

- Remove unsuitable surface materials prior to piling
- Prepare working platform to required level

© Copyright protected

4.2 Bored Piles

- Boreholes shall be:
    - Stable throughout excavation
    - Free from collapse or contamination
- Use casing or drilling fluid where required

4.3 Concreting

General

- Continuous concreting without interruption
- Prevent contamination by soil or water

Tremie Concreting

- Required for underwater concreting
- Maintain:
    - Minimum embedment of tremie in concrete (≥ 2 m)
    - Continuous flow to avoid segregation

4.4 Casing Extraction

- Extract casing while concrete remains workable
- Maintain sufficient concrete head to prevent:
    - Necking
    - Contamination

4.5 Reinforcement Installation

- Install centrally with proper cover
- Ensure stability during concreting

4.6 Temporary Works

- Provide temporary support where required
- Prevent pile damage during construction

5. TOLERANCES

- Position tolerance:
    - As specified in drawings

© Copyright protected

- Verticality:
    - Within allowable deviation
- Raking piles:
    - Maintain specified inclination
- No forcible correction of concrete piles allowed

6. QUALITY CONTROL

6.1 General

- Implement full QA/QC procedures
- Maintain records of:
    - Bore logs
    - Concrete volumes
    - Reinforcement details

6.2 Concrete Testing

- Sampling frequency:
    - Initial and ongoing testing during works

6.3 Monitoring

- Monitor:
    - Adjacent structures
    - Ground movement
- Use independent monitoring system

7. TESTING

7.1 Load Testing

- Static load testing:
    - Compression / tension / lateral
- Reaction system:
    - Adequate and stable
- Load measurement:
    - Calibrated equipment required

7.2 Acceptance Criteria

- Based on:

© Copyright protected

    - Load test results
    - Settlement limits
    - Structural integrity

8. HEALTH, SAFETY AND ENVIRONMENT

- Minimize:
    - Noise and vibration
    - Disturbance to surroundings
- Protect:
    - Adjacent structures
    - Utilities
- Prevent environmental contamination

© Copyright protected

E05 - IN SITU CONCRETE CONSTRUCTION GENERALLY

To be read with Preliminaries/General Requirements.

215 CONTRACTOR'S STRUCTURAL DETAILING OF REINFORCEMENT

- Responsibility: Prepare reinforcement drawings and schedules for all structural members.
- Requirement: Complete the detailing/ scheduling of reinforcement in accordance with the designated code of practice.
- Design information:
  - Designed reinforcement: As per design drawings.
  - Additional reinforcement: Provide and adjust spacing of reinforcement as required by designated code of practice for the control of cracking.
- Reinforcement:
  - Order of priority when clashes occur: Continuity of column steel followed by primary beam steel, followed by secondary beam steel.
  - Other detailing requirements: Use 150 mm high kickers in columns and walls.

220 STRUCTURAL DESIGN PROVIDED

- Description: as per Preliminaries and General Requirements.
- Requirements:
  - Generally: As section B50.
  - Additional requirements: None.
- Production/ execution records: In accordance with the designated code of practice.

223 STRUCTURAL DRAWINGS AND SCHEDULES

- Standards:
  - Drawings: To BS EN ISO 3766 and 'Standard method of detailing structural concrete' published by the Institution of Structural Engineers.
  - Reinforcement schedules: To BS 8666.

225 TEMPERATURE RECORDS

- Requirement: Throughout period of concrete construction record:
  - Daily: Maximum and minimum atmospheric shade temperature, temperature at intervals of four hours (maximum).
  - Under adverse temperature conditions: Temperature at commencement and end of placing.
- Equipment: Submit proposals.
  - Location: In the shade, close to the structure.

235 OPENINGS, INSERTS AND FIXINGS

- Requirement: Collate all information.
- Submit: Details where openings, inserts and fixings can only be accommodated by adjustments to reinforcement.
- Locate reinforcement: To ensure specified minimum cover at openings and inserts and to be clear of fixing positions.

250 STRUCTURAL TESTING

- Requirement:
  - For finished existing structures: the tests include:1-Load testing;2-Core testing according to BS EN 12504-1; 3-Ultrasonic pulse velocity testing according to BS EN 12504-4; 4-Gamma ray testing; 5-Rebound hammer testing according to BS EN 12504-2, and as per section E10.

  - For in situ early strength testing of concrete, the tests should be fully complied with BS EN 12504-3 and section E10.
- Method/ standard: Submit proposals.
  - Timing: For preliminary laboratory tests, period before commencing construction of structural element. For in situ testing and laboratory compliance testing describe maturity of concrete at time of testing.
- Report: as per preliminaries.
  - Submission: Within five working days of testing.

290 ACCURACY OF CONSTRUCTION
- Setting out: To BS 5964-1.
- Geometrical tolerances: To BS EN 13670, Tolerance Class 1.
  - Conflicts: Notwithstanding tolerances specified elsewhere, do not exceed requirements for compliance with the designated code of practice.
  - Substitution of alternative requirements: None.

300 LEVELS OF STRUCTURAL CONCRETE FLOORS
- Tolerances (maximum):
  - Level of floor: As Preliminaries and general requirements
  - Steps in floor level: Not applicable.

310 SURFACE REGULARITY OF CONCRETE FLOORS TO BS EN 13670, BS EN 13892-3, BS EN 13318 - GENERAL
- Standard: To BS EN 13670, BS EN 13892-3, BS EN 13318, and as per section E20.
- Measurement: From underside of a 2 m straightedge (between points of contact) placed anywhere on surface and using a slip gauge.

410 IN SITU CONCRETE CONSTRUCTION - SUPERVISION/ CHECKING
- Standard: To BS EN 13670, Execution Class 1.

420 LIQUID RETAINING AND CONTAINMENT CONCRETE CONSTRUCTION
- Description: trenches and the like.
- Form of construction: To BS EN 1992-3, Tightness Class 2.

430 SURFACE CRACKING OF CONCRETE VISIBLE ON FACADE, LIQUID RETAINING OR CONTAINMENT CONCRETE CONSTRUCTION WATERTIGHT CONCRETE CONSTRUCTION
- Method of measurement**:** graduated magnifying devices**.**
- Maximum crack width: 0.3 mm**.**
- Action: Should cracks occur that are wider than the maximum crack width:
  - Survey: Frequency and extent of such cracks and investigate cause.
  - Report: Findings together with recommendations for rectification.
  - Final action: Submit proposal for Engineer’s approval.

E10 - MIXING/CASTING/CURING IN SITU CONCRETE

To be read with Preliminaries/General Requirements.

CONCRETE

101 SPECIFICATION

- Concrete generally: To BS EN 206/BS 8500-2, BS EN 1992-1-1.
- Exchange of information: Provide concrete producer with information required by BS 8500-1, clauses 4 and 5, and BS EN 206.

149 PRESCRIBED CONCRETE FOR REINFORCED CONCRETE ELEMENTS to BS 8500:

- Compressive strength class (cylinder/ cube minimum): C40/50
- Fibres: Not required**.**
- Coarse Aggregates: Crushed and well graded, non-reactive, coarse aggregate material to BS EN 12620 and meeting the requirements of clause 310.
  - Size (maximum): 20 mm**.**
  - Coarse recycled aggregates: Not permitted.
- Fine Aggregates: natural sand material alone or combined natural sand with washed crushed sand, to BS EN 12620 and meeting the requirements of clause 310
- Special requirements for cementitious combinations: to EN 197-1 Type CEM I 42.5N or Type CEM II/A-L 42.5N, as specified under Clause 313**.**
- Special requirements for cement/ combinations: Silica fume (5% to 10% of cementitious weight) to EN 13263-1, Fly ash (25% to 35% of cementitious weight) or GGBS (36% to 65% of cementitious weight) may need to be added to the substructure concrete mixes to achieve the specified permeability test requirements, if required and as directed and approved by the Engineer.
- Consistence class: S4.
- Chloride class: CL 0.15.
- Admixtures: To EN 934-2 Plasticising / water reducing, Retarding, Super plasticising, and Water resisting to be added as per manufacturer recommendations, as directed and approved by the Engineer and based on satisfactory trial mixes.
- Design chemical/chloride class: XC2-XC4/DC-1. to be further validated based on site specific investigation.
- Additional mix requirements:
  - Minimum Cementitious Content: 400**.**
  - Maximum Water to Cementitious Ratio (W/C): 0.4**.**
  - Permeability level: Low Permeability**.**
  - Air Content: 2% maximum

150 PRESCRIBED CONCRETE FOR REINFORCED CONCRETE ELEMENTS to BS 8500:

- Compressive strength class (cylinder/ cube minimum): C30/37
- Fibres: Not required**.**
- Coarse Aggregates: Crushed and well graded, non-reactive, coarse aggregate material to BS EN 12620 and meeting the requirements of clause 310.
  - Size (maximum): 20 mm**.**
  - Coarse recycled aggregates: Not permitted.
- Fine Aggregates: natural sand material alone or combined natural sand with washed crushed sand, to BS EN 12620 and meeting the requirements of clause 310
- Special requirements for cementitious combinations: to EN 197-1 Type CEM I 42.5N or Type CEM II/A-L 42.5N, as specified under Clause 313**.**

- Special requirements for cement/ combinations: Silica fume (5% to 10% of cementitious weight) to EN 13263-1, Fly ash (25% to 35% of cementitious weight) or GGBS (36% to 65% of cementitious weight) may need to be added to the substructure concrete mixes to achieve the specified permeability test requirements, if required and as directed and approved by the Engineer.
- Consistence class: S4.
- Chloride class: CL 0.15.
- Admixtures: To EN 934-2 Plasticising / water reducing, Retarding, Super plasticising, and Water resisting to be added as per manufacturer recommendations, as directed and approved by the Engineer and based on satisfactory trial mixes.
- Design chemical/chloride class: XC2-XC4/DC-1. to be further validated based on site specific investigation.
- Additional mix requirements:
  - Minimum Cementitious Content: 360**.**
  - Maximum Water to Cementitious Ratio (W/C): 0.4**.**
  - Permeability level: Low Permeability**.**
  - Air Content: 2% maximum

151 PRESCRIBED CONCRETE FOR PLAIN CONCRETE (BLINDING) to BS 8500

- Compressive strength class (cylinder/ cube minimum): C15/20
- Aggregates:
  - Size (maximum): 25 mm**.**
  - Coarse recycled aggregates: Not permitted**.**
  - Coarse Aggregates: Crushed and well graded, non-reactive, coarse aggregate material to BS EN 12620, meeting the requirements of clause 310**.**
  - Fine Aggregates: natural sand material alone or combined natural sand with washed crushed sand, to BS EN 12620 and meeting the requirements of clause 310.
- Special requirements for cement/ combinations: to EN 197-1 Type CEM I 42.5N or Type CEM II/A-L 42.5N.
- Consistence class: S3.
- Chloride class: Normal.
- Admixtures: EN 934-2.
- Additional mix requirements:
  - Minimum Cementitious Content : 280 kg/m3**.**
  - Maximum Water to Cementitious Ratio (W/C): 0.55.
  - Air content: 2% maximum

195 CYCLOPEAN CONCRETE

- Definition: Concrete used as backfilling for structural excavation shall be cyclopean concrete.
- Compressive strength: similar to the Blinding Concrete.
- Minimum Cementitious Content: similar to the Blinding Concrete.
- Maximum Water/Cementitious ratio: similar to the Blinding Concrete.
- Cement/Cementitious combination: similar to the Blinding Concrete.
- Constituents: Plums used in cyclopean concrete shall consist of non-reactive broken stone spalls or boulders ranging in size from 200mm to 300mm. They shall be free from sharp or angular edges and shall not form more than 30% of the total volume of concrete. They shall be evenly graded and shall be soaked in water prior to incorporation in the mix. Plums shall be evenly distributed in the concrete mix and with minimum cover of 70 mm.

MATERIALS, BATCHING AND MIXING

215 READY-MIXED CONCRETE

- Ready mixed concrete: concrete mixed outside the site and transported to it is to be batched and mixed in accordance with the requirements of BS 8500-1, BS 8500-2, and BS EN 206.
- Production plant: A firm experienced in manufacturing ready-mixed concrete products currently certified and accredited to BS EN ISO/IEC 17065 or equivalent international standard for production facilities and equipment, and product conformity certification of ready-mixed concrete.
- Source of ready-mixed concrete: Obtain from one qualified source/batching plant, approved by the Engineer.
- Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, each aggregate from one source, and each admixture from the same manufacturer.
- Delivery time limitations:
  - When air temperature is between 30 deg. C and 32 deg. C, delivery time from the time water is added to the mix until it is placed in its final position in the form shall not exceed 60 minutes.
  - When air temperature is above 32 deg. C, delivery time shall not exceed 45 minutes.
- Before discharging concrete at the point of delivery, provide the Engineer with a delivery ticket for each batch of concrete containing the following information as minimum:
  - Name or number of off-site concrete depot.
  - Serial number for ticket.
  - Date.
  - Time of dispatch.
  - Truck number.
  - Name of supplier.
  - Grade or mix description of concrete.
  - Type of cement.
  - Cement content.
  - Water/cement ratio.
  - Nominal maximum size of aggregate.
  - Source of aggregate, maximum size, weight of fine and coarse aggregate.
  - Type or name of admixture, if included.
  - Quantity of concrete in cubic meters.
  - Amount of concrete in cubic meter.

216 TESTING AGENCY QUALIFICATIONS

- An independent testing agency, acceptable to Engineer, ISO certified and qualified according to international standards to conduct the testing indicated.
- Personnel conducting field tests shall be qualified as international Concrete Field Testing Technician, according to an approved certification program.
- Personnel performing laboratory tests shall be an internationally certified Concrete Strength Testing Technician and Concrete Laboratory Testing Technician.
- Testing Agency laboratory supervisor shall be an internationally certified Concrete Laboratory Testing Technician.

218 SITE MIXED CONCRETE

- Design concrete mixes to the requirements of EN 206, and BS 8500-1 and BS 8500-2.
- Evidence of suitability: for each mix submit in writing details of:
  - proposed quantities of each ingredient per cubic metre of compacted concrete
  - Evidence to show that proposed constituent materials and method of manufacture will produce concrete of required quality.

- Trial mixes are to be prepared for testing and approval by the independent testing agency, one month prior to commencing concreting.
- Approval: do not use mixes before submitted information and evidence has been approved. Such approval will not prejudice the requirement that mixes are to comply with the Specification.
- Make adjustments to percentage of fine aggregate to allow for:
  - Fineness zone of material
  - Workability requirements
  - Bulking of damp sand if measuring by volume.
- Enrichment of mix: subject to approval the aggregate/cement ratio may be reduced by up to 10% for first layer of concrete in walls. Do not alter water/cement ratio.
- Control of colour: obtain approval before altering proportions or grading of concrete exposed in finished work.
- Admixtures: Approved admixtures shall be used strictly in accordance with the manufacturer's instructions.
- Retarding water reducing admixtures may be used in large volumes of concrete subject to approval and are to be used when instructed by the Engineer.
- Water reducing admixtures (Plasticizer): to be used in the production of all reinforced concrete, as approved by the Engineer, unless otherwise specified.
- In case of concrete contains silica fume with a density between 400-720 kg/cu. m, the mixing time shall be 50 percent greater than the requirement for concrete without silica fume.
- Whenever mixing is to be suspended for half an hour or longer, the drum of the mixer shall be thoroughly washed out with clean water. Provide a competent operator who shall be in continuous control of the mixer. No retempering of concrete, which has partially hardened, by the addition of cement, aggregate, or water shall be allowed.
- Provide batch ticket for each batch discharged and used in the Work, indicating Project identification name and number, date, mix type, mix time, quantity, and amount of water introduced.

225 CHANGES TO SPECIFICATION

- Changes to specification of fresh concrete (outside concrete producer's responsibility): Prohibited.
- Do not add water or admixture to concrete during delivery, at Project site, or during placement.

230 INTERRUPTION OF SUPPLY DURING CONCRETING

- Elements without joints: Where elements are detailed to be cast in a single pour without joints, make prior arrangements for a back-up supply of concrete.
- Elsewhere:
  - Preparation: Manage pour to have a full face, and have materials available to form an emergency construction joint while concrete can still be worked.
  - Before pour is completed: Submit location and details of joint, make proposals for joint preparation.

310 AGGREGATES

- Normal-Weight Aggregates: Aggregates shall be from approved sources and shall conform to the requirements of BS EN 12620, from the same source for entire project, uniformly graded.
  - Coarse Aggregate: Coarse aggregate size shall be as specified, and those retained on a 5mm sieve and shall consist of crushed or uncrushed gravel or crushed stone and shall be selected, re-crushed, finish screened and washed with water meeting the requirements of Paragraph 311 as necessary, to comply with the following:

Frequency of Tests	Test Description	Standard	Limit
1 per 30-days	Los Angeles Abrasion Loss	BS EN 1097-2	30% maximum
1 per 30-days	Micro-Deval Coefficient, M_{DE}	BS EN 1097-1	20% maximum
1 per 30-days	Impact Value	BS EN 1097-2	22% maximum
1 per day	Fines Content	BS EN 933-1	1.0% maximum
1 per 7 days	Water Absorption	BS EN 1097-6	2.0% maximum
1 per 3 days	Chlorides as Cl	BS EN 1744-1	0.03% maximum*
1 per 3 days	Sulphates as SO3	BS EN 1744-1	0.3% maximum*
1 per 30 days	Magnesium Sulphate Soundness Loss (5 cycles)	BS EN 1367-2	10.0% maximum
1 per 7 days	Flakiness Index	BS EN 933-3	25% maximum
1 per 7 days	Elongation Index	BS 812	25% maximum
1 per 7 days	Shape Index	BS EN 933-4	25% maximum
1 per source	Reactive Silica	BS 812-123	Non-reactive as per BS EN 12620 and BS 8500
1 per 7 days	Specific gravity		Minimum 2.6
1 per each batch	Moisture Content		
1 in 7 days	Shell Content	BS EN 933-7	5% maximum
1 in 3 days	Sieve analysis	BS EN 933-1	Clause 4.3 of BS EN 12620
1 in 30 days	Drying Shrinkage	BS EN 12620 cl. 5.7 BS EN 1367-4	0.05% maximum

* The limits specified in Paragraph 420 for the total salt content of the concrete shall not be exceeded.

– Fine Aggregate: Fine aggregate, those passing a 5mm sieve, shall consist of natural sand with rounded or surrounded particles alone or in combination with crushed gravel, crushed stone and shall be washed as necessary to comply with the following:

Frequency of Tests	Test Description	Standard	Limit
1 per 7 days	Organic Matter/Humus Content	BS EN 1744-1	Lighter than standard colour
1 per day	Fines Content	BS EN 933-1	maximum 3% for natural sand and 5% for crushed sand with no plastic fines
1 per 7 days	Water Absorption	BS EN 1097-6	2.0% maximum
1 per 3 days	Chlorides as Cl	BS EN 1744-1	0.06% maximum*
1 per 3 days	Sulphates as SO_3	BS EN 1744-1	0.30% maximum*
1 per 30 days	Magnesium Sulphate Soundness Loss (5 cycles)	BS EN 1367-2	10.0% maximum
1 per 7 days	Methylene Blue	BS EN 933-9	1.0 (g/kg) maximum
1 per day	Sand equivalent	BS EN 933-8	75% minimum
1 per 7 days	Shell content	BS EN 933-7	5% maximum
1 per source	Reactive Silica	BS 812-123	Non-Reactive as per BS EN 12620 and BS 8500
1 in 3 days	Sieve analysis	BS EN 933-1	Clause 4.3 of BS EN 12620 standard
1 per 30 days	Drying Shrinkage	EN 12620 cl. 5.7 EN 1367-4	0.05% maximum

* The limits specified in Paragraph 420 for the total salt content of the concrete shall not be exceeded.

- Certification: Obtain from each proposed source of supply Test Certification to confirm that the aggregates comply with the above requirements. The following information shall be provided:
  - Quarry location.
  - Aggregate type.
  - Petrographic analysis report.
  - Grading curve.
  - Shape and surface texture.
  - Flakiness index.
  - 10 percent fines value.
  - Impact test.
  - Shell content.
  - Chloride and sulphate content.
  - Relative density.
  - Water absorption value and moisture content.
  - Silt, clay, and dust content.
  - Results of reactive silica tests.
  - Organic impurities (fine aggregate only).
  - Sand equivalent.
- Testing:
  - When a source of supply for each aggregate type had been established, samples of materials delivered to Project site shall be taken for testing in accordance with BS 812 or BS EN standard test methods as follows:

- Tests for clay, silt and dust, and sieve analysis shall be carried out for every 20 tons of fine aggregate and every 40 tons of coarse aggregate.
- Chemical analyses shall be carried out on every 100 tons of aggregate.

- The Engineer shall have the right to call for additional samples at any time for testing of aggregates delivered to the Project site or of aggregates at the source of supply in order to confirm that the aggregates meet the above requirements.
- Transportation: During transportation to the Project site, all aggregates shall be protected from wind-borne contaminants. If these contaminants are present at time of delivery to the Project site, then the aggregates shall be washed with water meeting the requirement of Paragraph 311. Transport vehicles shall be cleaned of possible contamination due to previous use.
- Storage: Aggregates shall be stored (under shade) on hard concrete floors or other approved materials having sufficient slope to ensure adequate drainage of aggregate before being used for concrete and each size and type shall be stored in separate heaps without intermixing. Storage shall prevent contamination of the aggregates by foreign material including wind-blown dust. Fine and coarse aggregates shall be separated by permanent substantial partitions. Methods of storing, shading and cooling aggregates shall be approved by the Engineer.
- Lightweight aggregates:
  - Standard: BS EN 13055-1.
  - Nominal Size: 10mm.

311 WATER

- Water used for mixing concrete, ice production, washing and cooling aggregates, and curing concrete shall be potable water complying with BS EN 1008, free from impurities, oil, acid, salts, alkali, organic matter, and other potentially deleterious substances. The chloride content shall not exceed 500 ppm.
  - Once a source of satisfactory supply has been established, further tests shall be made daily with a portable electrical conductivity probe calibrated against the satisfactory supply. If the conductivity exceeds that of the satisfactory supply, then further chemical tests shall be performed.
  - The limits specified in Paragraph 420 for the total salt content of the concrete shall not be exceeded.
- Non-potable water may be used when potable water is not available provided the impurities do not exceed the values given below:
  - Chloride as (Cl-): 500 ppm to ASTM D512.
  - Sulphates as SO4: 1000ppm to ASTM D516.
  - Alkalis as (Na2O + 0.658 K2O): 600ppm to ASTM C1602/C1602M.
  - Total solids: 50000ppm to ASTM C1602/C1602M.

313 CEMENT

- Cements: obtain from approved sources. Delivery of cement is to be in sealed and branded containers in batches not exceeding 100 tonnes or in purpose made bulk delivery vehicles.
- Portland cement: to EN 197-1 type CEM I 42.5N or Type CEM II/A-L 42.5N, to be used in superstructure concrete.
- Portland cement: to EN 197-1 type CEM I 42.5N or Type CEM II/A-L 42.5N, with C3A content ranging from 5% to 8%, to be used in substructure concrete.
- The heat of hydration of cement to be used in massive concrete structures shall not exceed 260kg/kj at 7-days when tested according to EN 196 standard.
- Sulphate resisting Portland cement: to EN 197-1Type CEM I 42.5N/SR5, shall be used for all sewage concrete elements. As an alternative cement Type CEM I 42.5N or Type CEM II/A-L 42.5N in combination with fly ash or GGBS can be used in the concrete mixes.
- High Alumina Cement: do not use.

- Cementitious additives: cementitious additives such as Silica fume (SF) to EN 13263-1, fly ash to EN 450-1 or GGBS to EN 15167-1, may be necessary to be added to the concrete mixes individually or in combination, to meet the specified strength, permeability and heat of hydration requirements and provide dense concrete with "Low" permeability level.
- Cementitious Materials: Limit percentage, by weight, of cementitious materials other than Portland cement in concrete as follows:
    1. Fly Ash : 35% maximum
    2. GGBS 65% maximum.
    3. Silica Fume 10% maximum.

315 AGGREGATES FOR EXPOSED VISUAL CONCRETE

- Limitations on contaminants: Free from absorbent particles which may cause 'pop outs', and other particles such as coal and iron sulphide or the like which may be unsightly or cause unacceptable staining**.**
- Colour: Consistent, colour variation to be between 3 to 5%.
- Supply: From a single source and maintained throughout the contract.
- Samples: Submit on request.

325 MATERIALS FOR EXPOSED VISUAL CONCRETE

- Alterations to sources, types and proportions: Submit proposals to Engineer's approval.

415 ADMIXTURES

- Admixtures: Use admixtures according to the manufacturer's written instructions and Engineer's approval.
- Use water-reducing admixture or high-range water-reducing admixture (superplasticizer) to EN 934-2 in concrete, as required, for placement and workability.
- Use water-reducing and retarding admixture to EN 935 when required by high temperatures, low humidity, or other adverse placement conditions.
- Use water-reducing admixture to BS EN 934-2, in pumped concrete, concrete for heavy-use industrial slabs and parking structure slabs, concrete required to be watertight, and concrete with a water-cementitious materials ratio below 0.50.
- Use Third generation admixture, PolyCarboxylate Ether to BS EN 934-2, if silica fume is used in the concrete or if self-consolidated concrete is required.
- Calcium chloride and admixtures containing calcium chloride: Do not use.

420 TOTAL SALT CONTENT:

- Chlorides: The water soluble chloride content of the concrete from all sources, expressed as chloride ion, shall not exceed 0.15 percent by weight of dry cement, inclusive of cementitious additives, when tested in accordance with BS 1881-124.
- Sulphates: The total sulphate content of the concrete from all sources, expressed as SO3, when tested in accordance with BS 1881-124 and BS EN 1744-1, shall not exceed 3 percent by weight of dry cement, inclusive of cementitious additives.

430 PIGMENTS FOR COLOURED CONCRETE

- Standard: To BS EN 12878.
    - Synthetic mineral-oxide pigments or coloured water-reducing admixtures; colour stable, free of carbon black, non-fading and resistant to lime and other alkalis.
    - Colour: Refer to AR drawings for colour specification.

490 PROPERTIES OF FRESH CONCRETE

- Adjustments to suit construction process**:** Maintain conformity to the specification.
- The fresh properties of concrete shall be determined during the trial mix design stage and for the cast concrete. The following minimum testing on fresh concrete shall be conducted:
    - Slump/Slump retention: to BS EN 12350-2

- Density: BS EN 12350-6
- Air content: BS EN 12350-7
- Degree of Compactability: to BS EN 12350-4
- Concrete Mixing Temperature

491 PATCHING MORTAR

- Mix dry-pack, consisting of one part Portland cement to two and one half parts fine aggregates passing a 1.2mm sieve, using only enough water for handling and placing.

495 MISCELLANEOUS CONCRETE ITEMS

- Filling in: Fill in holes and openings left in concrete structures, unless otherwise indicated, after work of other trades is in place. Mix, place, and cure concrete, as specified, to blend with in-place construction. Provide other miscellaneous concrete filling indicated or required to complete work.
- Curbs: Provide monolithic finish to interior curbs by stripping forms while concrete is still green and by steel-trowelling surfaces to a hard, dense finish with corners, intersections, and terminations slightly rounded.
- Equipment bases and foundations:
  - Coordinate sizes and locations of concrete bases with actual equipment provided.
  - Construct concrete bases as shown on drawings; and extend base not less than 150mm in each direction beyond the maximum dimensions of supported equipment unless otherwise indicated or unless required for seismic anchor support.
  - Minimum compressive strength: same strength as the main structural elements.
  - Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 450mm centres around the full perimeter of concrete base.
  - For supported equipment, install epoxy coated anchor bolts that extend through concrete base, and anchor into structural concrete substrate.
  - Prior to pouring concrete, place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  - Cast anchor bolt insert into bases. Install anchor bolts to elevations required for proper attachments to supported equipment.
- Steel pan stairs: Provide concrete fill for steel pan stair treads, landings, and associated items. Cast-in inserts and accessories as shown on Drawings. Screed, tamp, and trowel finish concrete surfaces.

PROJECT TESTING/ CERTIFICATION

505 PROJECT TESTING OF CONCRETE - GENERAL

- Testing: To BS EN 206 and BS 8500
  - Nonconformity: Obtain instructions immediately.
- Recording: Maintain complete correlated records including:
  - Concrete designation.
  - Sampling, site tests, and identification numbers of specimens tested in the laboratory.
  - Location of the parts of the structure represented by each sample.
  - Location in the structure of the batch from which each sample is taken.

507 INITIAL PROJECT TESTING OF CONCRETE

- Trial mixes are to be prepared for testing and approval one month prior to commencing concreting.
- The Engineer will review the Contractor's trial - mixes and break the test cylinders or test cubes at seven (7) and twenty-eight (28) days. The Engineer will then determine which of the trial-mixes shall be used. If none of the trial-mixes for a class of concrete meets the specifications, the Engineer will direct the Contractor to prepare additional trial-mixes. No class of concrete shall be prepared or placed until its job-mix proportions have been approved by the Engineer.

- The approval of the job-mix proportions by the Engineer, or his assistance to the Contractor in establishing those proportions, in no way relieves the Contractor of the responsibility of producing concrete which meets the requirements specified in these specifications.
- Absorption and permeability testing: shall be carried out on substructure concrete samples at the trial mix design stage.
- Tests: Refer to section 508.

508 REGULAR PROJECT TESTING OF CONCRETE

- Generally: sampling, testing and assessment of compliance are to be as specified in compliance with BS EN 206 and BS EN 12390 unless otherwise specified or approved.
- Compliance testing: testing and checking are to be in the presence of or as agreed with the Engineer. Submit results to the Engineer within 2 working days of completion of each test.
- Testing authority: testing shall be carried out by an independent testing agency, approved by the Engineer.
- Atmospheric thermometer: provide maximum and minimum thermometer in approved position on the site for measuring atmospheric shade temperature.
- Soil thermometer: provide soil thermometer for measuring concrete and ground temperatures.
- Test apparatus: keep in good repair until concrete work is completed.
- Samples: to ensure adequate quality control of mixes on the site take samples of each mix of concrete from every mixing point in accordance with the recommendations and the requirements of EN 12350-1, EN 12504, EN 12390.
- Sampling rate: take samples for compliance testing of compressive strength for each mix as follows:
  Initially 4 random samples during each of the first 10 days of using mix
  Thereafter not less than one sample during each day of using mix.
  Unless otherwise approved each sample is to represent a volume of not more than 20 m3. Higher rates of sampling and testing may be instructed at: start of work to establish level of quality, during periods of production when quality may be in doubt or during the pouring of column, cantilever and other critical elements. Subject to approval sampling rates may be reduced when high and consistent quality has been established.
- Water/cement ratio: where works slump testing is specified for assessing compliance with specified free-water/cement ratio, submit results of preliminary tests to establish relationship between the two properties and obtain approval.
- Slump tests: carry out in accordance with EN 12350-2 at required times and when test cylinders/cubes are prepared.
- Compressive strength testing: a minimum of six test cylinders or test cubes if approved are to be made for each sample. Test three at 7 days and three or more at 28 days. The strength at 28 days must not be less than the compressive strength specified for the relevant class of concrete.
- Records: indicate on works test records parts of structure represented by samples tested. Keep records on the site.
- Failure of concrete mix: if concrete mix fails to achieve specified criteria or to pass specified tests arrange for design of mixes to be adjusted and tests repeated until mixes are accepted by the Engineer.
- Failure of concrete work: if workmanship and finished work are not in accordance with specified requirements then the Engineer may require testing of drilled cores and/or loading tests to be carried out on any part of the structure after completion. The Contractor is to arrange for an approved independent testing authority to carry out such required tests. The costs of all such tests and testing shall be borne by the Contractor.
- Procedure for drilling and testing cores is to comply with EN 12504-1. Evaluation of adequacy of concrete in area represented by core tests is to comply with EN 13791.
- Static load tests are to be carried out and evaluated in accordance with the requirements of EN 12390-3, as requested by the Engineer.

- Tests for consistence class of self-compacting concrete: Viscosity class by v-funnel test to BS EN 12350-9.
- Consistence testing period: 4 h.
- Other requirements: Cubes for early age strength testing to be stored under same conditions as concrete in members.

509 ABSORPTION TEST

- The absorption of the hardened concrete from the trial mixes for structural grades shall be tested as a measure of the concrete's ability to resist the ingress of aggressive salts. No absorption tests shall be required for blinding or mudmat concrete. Absorption tests shall be in accordance with modified BS 1881: Part 122 and tested at 28-days.
  - The mean of the corrected absorption figure for each concrete grade shall be calculated and the absorption of the concrete mixes shall be acceptable if the mean absorption is less than 2.0 percent, at 30 minutes for "Low" permeability level.

510 DEPTH OF PENETRATION PERMEABILITY TESTS

- Carry out to BS EN 12390-8 as a measure of water permeability on concrete samples before the mix design or manufacturing method are approved.
- The tests shall be carried out in accordance with EN 12390-8 at age 28 days and the maximum value of penetration shall not exceed 15 mm for "Low" permeability level.

511 RAPID CHLORIDIE ION PENETRATION TEST

- The chloride permeability of the concrete shall be determined using cores taken from the concrete trial samples, in accordance with ASTM C1202 "Electrical Indication of Concrete's Ability to Resist Chloride Ion Penetration" or AASHTO T277 and the limit of 2000 Coulombs shall not be exceeded at 28-days for "Low" permeability level concrete.

512 EVALUATION OF CONCRETE PERMEMABILITY TEST

- The concrete will be deemed to comply with the permeability requirements of this specification if minimum of two test results comply with the limits indicated in sub clauses 509, 510, and 511. If the concrete trial samples failed to meet the above requirements, then the concrete mix represented by such sample shall be deemed not to comply with the permeability requirements and new and adjusted concrete trials shall be carried out by the Contractor, as directed by the Engineer.

513 TEST MIXES FOR BLINDING OR MUDMAT CONCRETE

- Concrete for blinding or mudmat shall be a designed mix with the specified design strength. The trial mix proportions shall be left to the discretion of the Contractor. Once they have been chosen, three separate test mixes shall be made with those proportions and three 150mm test cylinders or cubes shall be made from each mix for testing at 28 days. The trial mix proportions and water/cement ratio shall be approved if the average cylinder strength of the nine cylinders is not less than 20N/sq.m (25 N/sq.m for cube samples).
- No production test shall be made for this grade of concrete but the Engineer will monitor the mix proportions and water/cement ratio.

520 TESTING LABORATORY

- Laboratory: Accredited by UKAS, ISO or other international equivalent and approved by the Engineer.
  - Name and accreditation reference number: Submit well in advance of making trial mixes or concrete for use in the works.

530 TESTS RESULTS

- Submission of reports: Within one day of completion of each test.
  - Number of copies: Three**.**

- Reports on site: A complete set, available for inspection.
- Reports shall include the following as applicable to each test and inspection:
  - Date, time, location, and volume of pour.
  - Ambient temperature and humidity.
  - Concrete temperature (at time of placement).
  - Cement type and manufacture.
  - Concrete type and class.
  - Aggregate type and source.
  - Admixture details.
  - Water/cement ratio.
  - Identification of test cylinder/cube.
  - Name of concrete testing service.
  - Date and time of sampling.
  - Method of compaction.
  - Date of testing and results of test.
  - Age of sample in days, weight in grams, density in kg/cu. m.
  - Crushing load in newton and crushing strength in N/sq. mm.
  - Signatures of person preparing cylinder/cube and of person crushing cylinder/cube.
  - Results of compressive strength.
  - Compressive breaking strength, and type of break for both 7- and 28-days tests.

550 BROKEN CUBES FROM FAILED STRENGTH TESTS

- Nonconformity: Keep separately the pieces of each cube which fail to meet the conformity requirements for individual results.
- Period for keeping cubes: Obtain instructions.

PLACING/ COMPACTING/ CURING AND PROTECTING

610 CONSTRUCTION/ SEQUENCE/ TIMING REQUIREMENTS

- As Specified in Preliminaries and General Requirements.

620 TEMPERATURE OF CONCRETE

- Application: Concrete slabs with a thickness exceeding 1500mm**.**
- Objective: Limit maximum temperature of concrete to minimize cracking during placing, compaction and curing. Take account of:
  - High temperatures and steep temperature gradients: Prevent build-up during first 24 hours after casting. Prevent coincidence of maximum heat gain from cement hydration with high air temperature and/ or solar gain.
  - Rapid changes in temperature: Prevent during the first seven days after casting**.**
- Concrete temperature shall be measured 50 mm below the surface prior to and at the point of placement and recorded on the pour card for each pour. There shall be one test hourly when air temperature is 4 deg.C and below and when air temperature is 27 deg.C and above, and one test for each set of compressive-strength specimens. Concreting shall stop if the temperature of the concrete does not meet the requirements of below paragraphs.
- Cold-Weather Placement:
  - Protect concrete work from physical damage or reduced strength that could be caused by low temperatures.
- Hot-Weather Placement: as follows:
  - Maintain concrete temperature below 32 deg. C at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.

- Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.
- No concreting operation shall be carried out at ambient temperature of 40 deg. C or more.
- Cover reinforcing steel with water-soaked burlap if it becomes too hot, so that steel temperature will not exceed the ambient air temperature immediately before embedding in concrete.
- Fog spray forms, reinforcing steel, and subgrade just before placing concrete. Keep subgrade moisture uniform without puddles or dry areas.
- Use water-reducing retarding admixture when required by high temperatures, low humidity, or other adverse placing conditions, as acceptable to the Engineer.
- Shade mixing plant and trucks, aggregates, water tank, and cement silo.
- Paint white the mixing plant, trucks, water tank, and cement silo.
- Insulate the water tank and supply piping.
- Provide necessary shades over and around the concrete being poured to prevent sun rays from coming into direct contact with the surface of the concrete and the formwork for a period of about 7 days (minimum from the time of pouring concrete).
- Concrete placing shall be completed as quickly as possible to reduce transit time.
- Curing of exported concrete shall be immediately carried out.

- Proposals for meeting objective: Submit method statements for engineer's approval.
- For curing measures, refer to articles 810, 811, 815, 817, 818, and 820

630 PREMATURE WATER LOSS

- Requirement: Prevent water loss from concrete laid on absorbent substrates.
  - Underlay:
    Polyethylene sheet: 250 micrometres thick.
    Building paper: To BS 1521, grade B1F
  - Installation: [lap edges 150 mm].

640 CONSTRUCTION JOINTS

- Location of joints:
  - joints in water resistant construction to be as per drawings, Pours to be continuous between movement joints.
- Submit proposals for Engineer's approval when not shown on drawings.
- Preparation of joint surfaces: As section E40. Remove surface laitance and expose aggregate by lightly brushing and spraying. Joint surface to be clean and damp immediately before placing fresh concrete.

645 SPACING OF CONSTRUCTION JOINTS

- Distance between joints (maximum): 30 m .
- Area of pour (maximum): minimize number of joints.

648 ADVERSE TEMPERATURE CONDITIONS

- Requirement: Submit method statement for protecting concrete when predicted ambient temperatures indicate risk of concrete freezing or overheating.

650 SURFACES TO RECEIVE CONCRETE

- Cleanliness of surfaces immediately before placing concrete: Clean with no debris, tying wire clippings, fastenings or free water.

660 INSPECTION OF SURFACES

- Notice: Give notice to allow inspections of reinforcement and surfaces before each pour of concrete.
  - Period of notice: Obtain instructions.

- Timing of inspections: First inspection when reinforcement fixing is close to completion, second inspection when reinforcement and formwork are ready for concreting.

670 TRANSPORTING

- General: Avoid contamination, segregation, loss of ingredients, excessive evaporation and loss of workability. Protect from heavy rain.
- Entrained air: Anticipate effects of transport and placing methods in order to achieve specified air content.
- Transport and deliver concrete in compliance with BS EN 206 standard.
- Additional requirements: Concrete, after being discharged from the mixer, shall be transported as rapidly as possible to its final position by agitator trucks, which shall prevent adulteration, segregation, loss of workability or contamination of the ingredients. The containers that convey the concrete shall be kept clean and free from hardened or partially hardened concrete.

680 PLACING

- Records: Maintain for time, date and location of all pours.
- Timing: Place as soon as practicable after mixing and while sufficiently plastic for full compaction.
- Temperature limitations for concrete: [32°C (maximum)] and [4.4°C (minimum)], unless otherwise specified.
- Continuity of pours: Place in final position in one continuous operation up to construction joints. Avoid formation of cold joints.
- Discharging concrete: Prevent uneven dispersal, segregation or loss of ingredients or any adverse effect on the formwork or formed finishes.
- Thickness of layers: To suit methods of compaction and achieve efficient amalgamation during compaction.
- Poker vibrators: Do not use to make concrete flow horizontally into position, except where necessary to achieve full compaction under void formers and cast-in accessories and at vertical joints.
- When the continuous placement of concrete in any structural member is interrupted or delayed, for any reason, for a period long enough for the previously partially placed concrete to take its initial set, the Engineer shall declare such a joint a cold joint.
  - In case of cold joint, immediately remove the previously partially placed concrete from the forms. No extra payment will be made for the initial placement or the removal of concrete which is wasted because of a cold joint. The Engineer may suspend all or any part of the subsequent concrete work until he deems the Contractor has corrected the cause for the cold joint occurrence.
  - The Engineer may, with due consideration to the location of the cold joint and/or the importance of the member, allow the Contractor to retain the partially placed concrete and complete the concreting by a subsequent pour, which for permission, the Engineer shall instruct the Contractor to carry out at his own expense some or all of the following measures before completing the pour:
    - Surface laitance shall be removed from the surface of the partially placed concrete by wire brushing or light tooling or by sand blasting as directed by the Engineer without damage to reinforcement and formwork.
    - Shear keys shall be cut in the partially placed concrete. The shape, size and orientation of the shear keys shall be as directed by the Engineer. The reinforcement and formwork shall not be damaged.
    - The cleaned surface of the partially placed concrete shall be coated with an approved bonding agent before placing the subsequent pour.
    - Additives to facilitate bonding shall be added to the concrete used for the subsequent pour.

- Dowel bars of a type and length to be approved by the Engineer shall be installed in the partially placed concrete using non-shrink cement grout or resin grout as directed by the Engineer. The size and spacing of the dowel bars shall be approved by the Engineer. Their installation shall not damage the reinforcement or formwork.
- The partially placed concrete and the subsequent concrete shall be stressed by prestressing bars of a size and type approved by the Engineer to achieve a level of compressive stress at the interface approved by the Engineer. The method of installing the prestressing bars and type of anchors used shall be approved by the Engineer. Unless otherwise agreed by the Engineer, the drill hole shall be grouted with a cement grout containing expanding additive to the manufacturer's recommendations.

682 EMBEDDED ITEMS

- Place and secure anchorage devices and other embedded items required for adjoining work that is attached to or supported by cast-in-place concrete. Use Setting Drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  - Install anchor bolts, accurately located, to elevations required.
  - Install reglets to receive top edge of foundation sheet waterproofing and to receive through-wall flashings in outer face of concrete frame at exterior walls, where flashing is shown at lintels, shelf angles, and other conditions.
  - Install dovetail anchor slots in concrete structures as indicated.

685 CONCRETE DEPOSITING IN WATER

- Concrete shall not be deposited in water.

690 COMPACTING

- General**:** Fully compact concrete to full depth to remove entrapped air. Continue until air bubbles cease to appear on the top surface.
  - Areas for particular attention: Around reinforcement, under void formers, cast-in accessories, into corners of formwork and at joints.
- Consecutive batches of concrete: Amalgamate without damaging adjacent partly hardened concrete.
- Methods of compaction: To suit consistence class and use of concrete.

700 LIGHTWEIGHT AGGREGATE CONCRETE

- Placing and compacting: Prevent flotation of coarse aggregate and formation of excessive blowholes.

720 VIBRATORS

- General: Maintain sufficient numbers and types of vibrator to suit pouring rate, consistency and location of concrete.
- Internal vibration shall be executed in all sections which are sufficiently large to permit the insertion and manipulation of immersion vibrators, previously approved by the Engineer.
- External form vibrators shall be used for external vibration when it is impossible to use internal vibrators, for example in heavily reinforced thin walls, pipes or other precast, small cross-section element, etc. Obtain approval for use.
- Mixed vibration shall be used in the construction of reinforced or prestressed concrete beams. External wall vibrators shall also be used. These shall be mounted on the outside of the formwork after this has been suitably reinforced with ribs of U-bars. The mounting places of the wall vibrators shall be welded to these reinforcements. They must be symmetrically positioned on each side of the beam and produce a rotary movement within the concrete during vibration from the bottom towards the top and from the part placed first towards the part placed last. The network of reinforcing bars and tensioning cables should not move as a result of the vibration. To prevent this from happening, either special ties passing through the formwork walls, or spacers shall be used. It is better, if these last are made of concrete and are of a size and shape that will ensure that the reinforcing and tensioning cables do not move.

- Poker vibrators types and sizes, if needed to be used, shall suit the pour size, density of reinforcement and member dimensions. Poker vibrators shall be inserted into the concrete vertically at regular intervals which shall be no greater than 0.5m, keeping them clear of formwork and concrete previously cast. They shall be inserted quickly and withdrawn slowly. The withdrawal rate shall be not more than 75mm/sec. A cycle of insertion and withdrawal shall be between 10 and 30 seconds.

730 PLASTIC SETTLEMENT

- Settlement cracking: Inspect fresh concrete closely and continuously wherever cracking is likely to occur, including the top of deep sections and at significant changes in the depth of concrete sections.
  - Timing: During the first few hours after placing and while concrete is still capable of being fluidized by the vibrator.
- Removal of cracks: Re-vibrate concrete.

810 CURING GENERALLY

- Requirement: Keep surface layers of concrete moist throughout curing period, including perimeters and abutments, by either restricting evaporation or continuously wetting surfaces of concrete.
  - Surfaces covered by formwork: Retain formwork in position and, where necessary to satisfy curing period, cover surfaces immediately after striking.
  - Top surfaces: Cover immediately after placing and compacting. If covering is removed for finishing operations, replace it immediately afterwards.
- Surface temperature: Maintain above 5°C throughout the specified curing period or four days, whichever is longer.
- Records: Maintain details of location and timing of casting of individual batches, removal of formwork and removal of coverings. Keep records on site, available for inspection.

811 COVERINGS FOR CURING

- Sheet coverings: Suitable impervious material.
- Curing compounds: Selection criteria:
  - Curing efficiency: Not less than 75%.
  - Colouring: [none.
  - Application to concrete exposed in the finished work: Readily removable without disfiguring the surface.
  - Application to concrete to receive bonded construction/ finish: No impediment to subsequent bonding.
- Interim covering to top surfaces of concrete: Until surfaces are in a suitable state to receive coverings in direct contact, cover with impervious sheeting held clear of the surface and sealed against draughts at perimeters and junctions.

812 PREVENTING EARLY AGE THERMAL CRACKING

- Deep lifts or large volume pours: Submit proposals for curing to prevent early age thermal cracking, taking account of:
  - After the concrete has been placed, its peak temperature in any part of the structure shall not be permitted to rise above 70deg C.
  - After the concrete has been placed, the maximum temperature difference between a point at the centre of a concrete section and the adjacent surface shall not be greater than 19 deg. C.
  - Employ effective means such as insulation, selection of appropriate pour cycle times, or heating/cooling as necessary, to ensure that at any time within 21 days after the concrete has been placed, the temperature differential between any point in the freshly placed concrete of any structural element at a distance of 600mm from a construction joint and the corresponding point 600mm from the construction joint in the adjacent previously placed structural element, shall not exceed 19 deg. C.

  - Coefficient of thermal expansion of the concrete
  - Strain capacity of the concrete mix (aggregate dependent).
- Mock-up trial sample for evaluating the variation in concrete temperature:
  - Two mock-up samples of minimum dimensions (to be specified by Engineer depending on dimensions of actual concrete structure) shall be prepared for each trial mix for the purpose of measuring the temperature variation inside the concrete by thermocouples to ensure the above limits are met.
  - Sample preparation, test procedure, and results shall be as approved by the Engineer.

815 ADDITIONAL CURING REQUIREMENT - WATER CURING

- Water to be complying with paragraph 311.
- Commencement of water curing: As soon as practicable after placing and compacting concrete.
  - Surfaces covered by formwork: Expose to water curing as soon as practicable.
  - Top surfaces: Cover immediately with impermeable sheeting to prevent evaporation before commencement of water curing.
- Water curing: Wet surfaces continuously throughout curing period.
  Methods: Mist spray**.**

817 CURING CLASS

- Standard: To BS EN 13670 Curing class 1

818 CURING PERIODS GENERALLY

- Minimum periods: to BS EN 13670, Annex F.8.5 when not otherwise indicated, but not less than seven days.

820 CURING PERIODS

- General: Curing periods are in days (minimum of seven days).
  - Definition of (t): The average surface temperature of concrete in degrees Celsius during the curing period.
- Curing periods for concrete made using CEM1 strength class 42.5 or 52.5, or SRPC class 42.5:
  - Drying winds or dry, sunny weather (relative humidity < 50%): 140 days/ (t+10).
  - Intermediate conditions (relative humidity between 50 and 80%): 100 days/ (t+10).
  - Damp weather, protected from sun and wind (relative humidity > 80%): 100 days/ (t+10).
- Curing periods for concrete made using cements listed in BS8500-1, Table A.6 except for those listed above and for super sulphated cement:
  - Drying winds or dry, sunny weather (relative humidity < 50%): 180 days/ (t+10).
  - Intermediate conditions (relative humidity between 50 and 80%): 140 days/ (t+10).
  - Damp weather, protected from sun and wind (relative humidity > 80%): 100 days/ (t+10).
- Curing periods: For concretes using admixtures or other types of cements/ combinations: Submit proposals.
- Other requirements: Increase curing period by any time during which surface temperature of concrete is less than 5°C.

840 PROTECTION

- Prevent damage to concrete, including:
  - Surfaces generally: From rain, indentation and other physical damage.
  - Surfaces to exposed visual concrete: From dirt, staining, rust marks and other disfiguration.
  - Immature concrete: From thermal shock, physical shock, overloading, movement and vibration.
- Members exposed to strong winds shall be provided with windbreakers. The windbreakers shall, if directed by the Engineer, be kept moist by regular spraying.

E12 - TENSIONED REINFORCEMENT FOR PRESTRESSED CONCRETE

To be read with Preliminaries/General Requirements

MATERIALS AND PRODUCTS

110 PRESTRESSING COMPONENTS

- Prestressing tendons: to BS 5896, as shown on the Drawings.
- Prestressing system: to be as shown on the Drawings. Submit, for approval, full details of proposed prestressing system and names of suppliers of basic materials and components. No system is to be used in the work until approved by the Engineer.
- Anchorages: to be cast type, to BS EN 13391 or other approved standard.

115 GROUT

- Grout for ducts: unless otherwise directed or agreed as a result of grouting trials, is to consist of ordinary Portland cement to BS EN 197-1 and water, in accordance with BS ISO 14824-1.
- Water/cement ratio is to be as low as possible consistent with necessary workability and not higher than 0.45, and not subject to bleeding in excess of 2% after 3 hours or 4% maximum.
- When measured at 18 deg. C in a covered glass cylinder approximately 100 mm diameter with a height of grout approximately 100 mm, water is to be re- absorbed after 24 hours.

WORKMANSHIP

210 GENERALLY

- Prestressing operations: are to be carried out only under the direction of an experienced and competent supervisor and all personnel operating the stressing equipment are to be properly trained in its use.
- Special precautions: against accident are to be taken when working with or near tendons which have been tensioned or are being tensioned.
- Prestressing components generally are to be clean and free from loose rust and mill scale at time of fixing in position and subsequent concreting. Slight rusting of steel is acceptable, but surface is not to be pitted. Components are to be stored in clean, dry conditions.
- Prestressing tendons:
  - All wires or strands stressed at the same time are to be taken from the same parcel; each cable is to be tagged with its number and coil numbers of steel used
  - Do not weld tendons within the length to be tensioned and, unless other methods of cutting are approved by the Engineer, only saw or crop tendons using abrasive disc cutter
  - Build tendons into the work strictly in accordance with requirements for system being employed
  - Tendons are not to be kinked or twisted; individual wires or strands are to be readily identifiable at each end of member; no strand which has become unravelled is to be used in the work.
- Anchorages:
  - Position and maintain anchor cones, blocks and plates during concreting so that centre line of duct passes axially through anchorage assembly
  - Bearing surfaces of anchorages are to be clean prior to concreting and tensioning
  - If proprietary forms of anchorage are used, anchoring procedure is to be strictly in accordance with manufacturer's instructions
  - Allowance for draw-in of tendon during anchoring is to be in accordance with the Engineer's instructions; actual slip occurring is to be recorded for each anchorage.
- Equipment generally: jacks used for prestressing are to be type suitable for system being employed. Check accuracy of load metering equipment to the satisfaction of the Engineer at the start of work each day it is used and whenever equipment is moved to a different location.

- Jacks: provide documentary evidence confirming that all jacks have been fully overhauled and checked by an agent approved by the manufacturer of the equipment. Provide test certificate for each jack indicating that it has been tested and calibrated by the manufacturer or by an approved testing laboratory, up to a load equal to full capacity of jack, within a period of 2 years prior to commencement of prestressing.
- Measuring devises: gauges, load cells, dynamometers and other devices used for measuring stressing force are to have accuracy within +/-1.5%. Pressure gauges are to have capacity and calibrated cell such that working pressure required to stress tendons to full load is indicated within central half of gauge range. Dials are to be read in kilograms or tonnes.
- Calibration of gauges: pressure gauges are to be constructed so that they may be calibrated either directly by an approved testing laboratory or by compressing with a meter gauge which has itself been calibrated by an approved testing laboratory. Provide, for each gauge, a calibration certificate issued by an approved testing laboratory.
- Re-calibration of pressure gauges is to be carried out before use and at intervals of 14 days thereafter. The Engineer may order re-calibration of any pressure gauge at any time should he have reason to suspect damage to or faulty operation of gauge.
- Checking of equipment: check accuracy of all prestressing and load measuring equipment whenever required by the Engineer. Provide facilities suitable, in the opinion of the Engineer, for all checking and calibration of any jacking system comprising jacks and associated load devices, pressure gauges and dynamometers.

220 TESTING OF MATERIALS

- Generally: carry out tests in the presence of the Engineer or his appointed representative.
- Prestressing tendons: initially test for chemical composition, mechanical strength, relaxation and physical characteristics, as per the requirements of BS 5896. Subsequently similarly test samples selected at random by the Engineer from each coil supplied.
- Compression grips, when used, are to be tested to failure using strands to be used in the work. Not less than six compression grips selected at random are to be tested.
- Anchorages: test in accordance with BS EN 13391 and as often as considered necessary by the Engineer.
- Grout mix: test each design mix and each batch mix for longitudinal dimensional change in accordance with BS ISO 14824-3:
- Concrete: prepare test cylinders, cure in similar conditions to the concrete to which they relate and test all as described in section E10, to ascertain when required strength of concrete at transfer has been reached.

230 FIXING CABLE SHEATHS

- Location: tolerance in the location of sheaths is to be +/-3 mm. Maintain sheaths in their correct positions during placing of concrete.
- Joints in sheaths: keep to a minimum and seal each joint against ingress of materials. Stagger joints in adjacent sheaths by at least 300 mm.
- Protection: keep sheaths free of material detrimental to bond between sheath and grout and, except for material sealing a sheath joint, between sheath and concrete. Seal and protect ends of sheaths and ducts until tendon is threaded through and stressing operations are commenced. Where tendons in sheaths or sheaths alone are left exposed to the atmosphere, use rust inhibitors, in accordance with manufacturer's instructions, to prevent rusting and corrosion of inside of sheaths.
- Duct joints between members comprising precast units stressed together are to be in perfect alignment and joined securely to allow unimpeded cable threading and pulling and to prevent ingress of epoxy mortar used for gluing units together before stressing. Submit details of such joints for approval prior to incorporation in the work.

240 POST-TENSIONING PROCEDURES

- Immediately before tensioning, ensure that all tendons are free to move between jacking points and that members are free to accommodate horizontal and vertical movements due to application of prestress.
- Transfer strength of concrete: unless otherwise specified, do not stress concrete until it has reached the age when two test cylinders taken from it have attained specified transfer strength. Where members consist of jointed elements, the strength at transfer of the jointing material is to be at least equivalent to specified transfer strength of the member.
- Datum point for measuring extension and jack pressure is to be established to the satisfaction of the Engineer.
- Forces and extensions: make allowance to the specified forces where necessary for anchorage friction, wedge pull- in, jack losses and friction due to duct alignment and curvature.
- Stresses in tendons immediately after anchoring are not to exceed 75% of their ultimate tensile strength. During stressing the value is not to exceed 80%.
- Stress tendons at a gradual and steady rate until they attain force and extension specified. Stressing is to be either from one end or both ends as shown on the Drawings.
- Force in tendons is to be obtained from reading on load cell or pressure gauge and extension of tendons is to be measured. Due allowance is to be made for taking up slack in tendons.
- Extension of tendons: if measured extension differs by more than 5% from estimated extension, take corrective action as directed by the Engineer.
- Stressing from one end only: accurately measure pull-in at end remote from jack and make appropriate allowance in measured extension at jacking end.
- Anchoring: when specified force, including any overload of short duration, has been applied to the satisfaction of the Engineer, the tendons are to be anchored. Release jack pressure in a manner to avoid shock to anchorage of tendons.
- At completion of anchoring, if pull-in of tendons is greater than that stipulated by the Engineer, tensioning is to be repeated.
- Cutting tendons: if it is necessary to cut tendons to enable ducts to be grouted, this is to be delayed for as long as possible up to the time of grouting. In all other cases, unless agreed otherwise by the Engineer, do not crop tendons less than 3 days after grouting.
- Records: keep full and detailed records of all tensioning operations including measured extensions, pressure gauge or load cell readings and amount of pull-in at each anchorage. Supply copies of records to the Engineer within 24 hours of each tensioning operation.

242 PRESTRESSING EXECUTION – PRETENSIONING PROCEDURES

- In pretensioned members where tendons are specified as de-bonded from the concrete, they shall be covered with sleeves of PVC or other material approved by the Engineer. The ends of the sleeves shall be taped to the tendon to prevent the ingress of grout.
- Unless otherwise agreed by the Engineer, tendons shall be stressed in accordance with the requirements of this Specifications.
- Members shall be free to accommodate the horizontal and vertical movements due to the application of prestress.
- When the concrete has attained the specified strength, the load shall be transferred gradually without severance of the tendons. The tendons shall then be trimmed back flush to the face of the concrete and specified protection applied to their ends.
- All members shall be indelibly marked to show the specified member mark, the production line on which they were manufactured, the date on which the concrete was cast, the load applied and, if they are of symmetrical section, the face which will be uppermost when the member is in its correct position in the Work. The markings shall be so located that they are not exposed to view when the member is in its permanent position.

250 MIXING AND PLACING GROUT

- Mix grout for a minimum of 2 minutes and until a uniform and colloidal consistency is obtained. Pumpability of grout may be determined to the Engineer's approval in which case efflux time of grout sample immediately after mixing is not to be less than 11 seconds.
- Admixtures containing chlorides or nitrates are not to be used in the grout. Other admixtures may be used with approval of the Engineer and are to be used strictly in accordance with manufacturer's instructions.
- Grout injector is to operate continuously with a sensibly constant pressure up to 0.7 N/mm2 and is to include a system for circulating or agitating the grout while grouting is not in progress. Pump baffles are to be fitted with sieve strainer of 1 mm nominal aperture size to BS ISO 3310-1 and BS ISO 3310-2. Equipment is to be capable of maintaining pressure on completely grouted ducts and is to be fitted with nozzle which can be locked off without loss of pressure in duct.
- Pressure gauges are to be calibrated before first use in the work and thereafter as required by the Engineer.
- Cleaning of equipment, by thoroughly washing with clean water, is to be carried out at least once every 3 hours during grouting operations and at the end of use each day.
- Grouting trials are to be carried out when required by the Engineer.
- Anchorages are to be sealed before grouting.
- Temperatures: do not grout ducts when air temperature in the shade is lower than 3 deg. C. Grout is not to be above 32 deg. C during mixing or pumping and, if necessary, mixing water is to be cooled.
- Cleaning of ducts: clean all ducts thoroughly by compressed air. Fill ducts formed without sheathing with water at least 1 hour before grouting. Do not fill sheathed ducts with water unless required by the Engineer. Blow out water filling to ducts using compressed air.
- Grouting: carry out as soon as practicable after tendons have been stressed and the Engineer's permission to start has been obtained. Completely fill ducts with grout injected in one continuous operation. Allow grout to flow from vents until consistency is equivalent to that being injected. Seal vents consecutively in direction of flow and seal injection tube under pressure until grout has set.
- Protection: protect filled ducts, to the satisfaction of the Engineer, to ensure that they are not subjected to shock or vibration for 1 day and that temperature of grout does not fall below 3 deg. C for 3 days after injection.
- Making good: 2 days after grouting, inspect the level of grout in the injection and vent tubes and make good if necessary.
- Records: keep full and detailed records of grouting including date each duct was grouted, proportion of grout and admixtures used, pressure, details of any interruptions and topping up required. Supply copies of records to the Engineer within 3 days of grouting.
- Testing of ducts: when required by the Engineer, provide facilities and attendance for radiographic testing of ducts.

E20 - FORMWORK FOR IN SITU CONCRETE

To be read with Preliminaries/ General Requirements.

GENERALLY/ PREPARATION

110 LOADINGS

- Requirement: Design and construct formwork to withstand the worst combination of the following:
  - Total weight of formwork, reinforcement and concrete.
  - Construction loads including dynamic effects of placing, compacting and construction traffic.
  - Wind, snow loads, and all possible static and dynamic loads.

111 GENERAL REQUIREMENTS

- Submit to the Engineer full design calculations, detailed drawings, material specification and test certificates for approval.
- Formwork design shall be in accordance with BS 5975 "Code of practice for temporary works procedures and the permissible stress design of falsework".
- Notwithstanding any approval of falsework design by the Engineer, the Contractor will not be relieved of his responsibility for the adequacy and correctness of the design, manufacture and assembly of the falsework.

120 FORMWORK DETAILS

- Provide the following: Formwork shop-drawings including Construction joints - positions and types, Layout of panel joints where exposed to view, Layout of form tie holes where exposed to vie, means of sealing panel joints, form tie holes and at construction joints, Surface of forms, form liners and other means of obtaining required finish.

132 PROPPING

- General: Prevent deflection and damage to the structure. Carry down props to bearings strong enough to provide adequate support throughout concreting operations.
- Method statement: Submit proposals for prop bearings and sequence of propping/ re-propping and back propping.
  - Timing of submission: To be agreed between the permanent works designer and the temporary works coordinator.

141 FORMWORK MATERIALS

- Wood: All timber shall be of sound wood, in good condition and free from defects that might impair its strength. The minimum timber grade, determined in accordance with BS 4978 shall be C16 (SC3).
- Plywood: When plastic coated plywood is used, the Phenol resin on melamine shall be not less than 20% of the total coating weight.
- Steel: Except as otherwise specified or shown on the Drawings, the grades and qualities shall conform to the following applicable standards of ASTM:
  - Structural carbon steel shall conform to ASTM A36/A36M.
  - Structural steel for welding shall conform to ASTM A36/A36M.
  - High-strength low-alloy structural steel shall conform to ASTM A588/A588M.
- Other materials: Other materials, with the approval of the Engineer, may be used for falsework. These include, but not limited to, fibre-glass reinforced plastic, polystyrene, polyethylene, PVC, rubber, concrete, brick etc.

145 PERMANENT FORMWORK

- Location and materials: Submit proposals.

- Standard: Design profiled steel shuttering as permanent formwork in accordance with BS EN 1993-1-3.

170 WORK BELOW GROUND

- Casting vertical faces against faces of excavation: Obtain Consent
- Requirements:Increase width of section to give nominal cover to reinforcement of 75 mm;
  - Prevent contamination of concrete by loose soil;
  - Progressively withdraw face supports as concrete is placed against soil face;
- Submit proposals for maintaining stability of excavated faces and preventing contamination of concrete by loose soil.

190 SUBSTRUCTURE FORMWORK

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.

200 PROPRIETARY UNDERSLAB INSULATION

- Manufacturer: Submit proposals.
  - Product reference: Agrément certified products are available for use underground bearing slabs.
- Recycled content: Submit proposals.
- Thickness:
  - Under slab: 100 mm.
  - To edge of slab: 25 mm.

CONSTRUCTION

310 ACCURACY

- General requirement for formwork: Accurately and robustly constructed to produce finished concrete in the required positions and to the required dimensions.
- Formed surfaces: Free from twist and bow (other than any required cambers).
- Intersections, lines and angles: Square, plumb and true.

311 SHORING AND RESHORING

- General: Comply with applicable Eurocodes, BS 5975, BS EN 12812, and BS EN 12813 for design, installation, and removal of shoring and reshoring.
- Requirements:
  - In multi-storey construction, extend shoring or reshoring over a sufficient number of stories to distribute loads in such a manner that no floor or member will be excessively loaded or will induce tensile stress in concrete members without sufficient steel reinforcement.
  - Plan sequence of removal of shores and reshore to avoid damage to concrete. Locate and provide adequate reshoring to support construction without excessive stress or deflection.

315 SUBSTRUCTURE FORMWORK AND UNDERSLAB INSULATION

- Cutting: Neat and accurate to edges, and around penetrations and down-stands.
- Laying: Tightly butted and fully supported on firm, even substrate.
- Vertical faces: Stiffen as necessary to act as shutter.
- Formwork/ insulation surfaces: Protect from indentation by spacers and other items.
- Joints in formwork/ insulation and with edge structure and penetrations: Seal to prevent penetration of concrete.
- Concrete placement: Restrain formwork/ insulation against movement.

320 JOINTS IN FORMS

- Requirements including joints in form linings and between forms and completed work:

- Prevent loss of grout, using seals where necessary.
- Prevent formation of steps. Secure formwork tight against adjacent concrete.

330 INSERTS, HOLES AND CHASES

- Positions and details:
  - Dimensioned on drawings provided on behalf of the Employer: Do not change without consent.
  - Dimensioned or from other sources: Submit proposals.
- Positioning relative to reinforcement: Give notice of any conflicts well in advance of placing concrete.
- Method of forming: Fix inserts or box out as required. Do not cut hardened concrete without approval.

340 KICKERS

- Method statement: Submit proposals including means of achieving quality of concrete consistent with that specified for the column or wall.
  - Kicker height: As drawing.

350 FORM TIES

- Metal associated with form ties/ devices: Prohibited within cover to reinforcement.
- Compatible with reinforcement metal.

351 PROHIBITION OF FORM TIES

- Do not use ties in the following work: In water resistant concrete construction where form ties can be a source of leakage, and where there are strong objections to the appearance of form tie holes in the finished work.

360 PROPRIETARY FORM TIES FOR WATER RESISTANT CONCRETE

- Tie manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Sealing mortar manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Making good of holes: Fully fill.

361 FORM TIES FOR WATER RESISTANT CONCRETE

- General: Maintain water resistance of construction.
- Tie type and sealing system: Submit proposals.

380 VOID FORMERS

- Manufacturer: Submit proposals.
  - Product reference: expanded plastics (usually polystyrene).

470 RELEASE AGENTS

- Use: All formwork except when fresh concrete relies upon bond to the shutter for its support, ex. for concrete sprayed onto a vertical back shutter and for pavement formwork.
- General: Achieve a clean release of forms without disfiguring the concrete surface.
- Product types: Compatible with formwork materials, specified formed finishes and subsequent applied finishes. Use the same product throughout the entire area of any one finish.
- Protection: Prevent contact with reinforcement, hardened concrete, other materials not part of the form face, and permanent forms.

480 SURFACE RETARDERS

- Use: Obtain approval.
- Reinforcement: Prevent contact with retarder.

481 ACCESSORIES

- Types:
  - Chamfer strips: Wood, metal, PVC, or rubber strips, 20 by 20mm, unless otherwise indicated.
  - Rustication strips: Wood, metal, PVC, or rubber strips, kerfed for ease of form removal.

STRIKING

510 STRIKING FORMWORK

- Timing: Prevent any disturbance, damage or overloading of the permanent structure.

521 MINIMUM PERIOD FOR RETAINING FORMWORK/ TEMPORARY SUPPORTS IN POSITION

- Assumptions: Imposed load will not exceed 10 KN/m² until concrete reaches full strength.
  - Before removing formwork: Submit proposals if assumptions will not be realised.
- Method to be used in assessing early age strength of concrete:
  - Submit proposal;
  - Temperature matched curing (TMC) of cube samples to BS 1881-130 or the different parts of BS EN 12350
  - To BS EN 13670, Annex F.

FORMED FINISHES

600 SAMPLES OF FINISHES AVAILABLE FOR INSPECTION

- Quality of finish: Special finish E20/630.
- Location: as agreed or shown on drawings.
- Variations: None.

605 CONTROL SAMPLES (PART OF THE FINISHED WORK)

- Quality of finish: Special finish E20/630.
- Location: Obtain instructions.
- Area (minimum): 10 m².
- Features to be included: Horizontal and vertical construction joints , horizontal and vertical panel joints, arises, chamfers and margins tie bolts or other fixing devices, pattern of tie holes and filling. Use of the proposed release agent, striking of formwork after an agreed curing period.
- Viewing distance (maximum): 2 m.
- Approval of appearance: Obtain before proceeding with remainder of the work.

610 BASIC FINISH

- Location: refer to drawing.
- Finish: Faces fully compacted and cover to reinforcement provided.

613 ORDINARY FINISH

- Location: Refer to drawing**.**
- Finish: Faces fully compacted. Formed surfaces free from major blemishes and honeycombing. Steps at joints to be less than 5 mm.

615 FINISH TO RECEIVE ASPHALT TANKING OR CHRYSTALLINE/EPOXY COATING

- Finish: Even and suitable to receive waterproofing, and as per manufacturer requirements.
- Permissible deviation of surfaces:
  - Sudden irregularities (maximum): 3 mm
  - Gradual irregularities (maximum): 3 mm, when measured from underside of a 1 m straightedge, placed anywhere on surface.
- Surface blemishes:

  - Permitted: Blowholes less than 10 mm in diameter.
  - Not permitted: Voids, honeycombing, segregation and other large defects.
- Projecting fins: Remove.
- Formwork tie holes: Filled with mortar.

620 PLAIN FINISH

- Location: refer to drawing.
- Finish: Even and dense. Arrange formwork panels in a regular pattern as a feature of the surface.
- Permissible deviation of surfaces:
  - Sudden irregularities (maximum): 3 mm.
  - Gradual irregularities (maximum): 3 mm, when measured from the underside of a 1 m straightedge, placed anywhere on surface.
- Variations in colour:
  - Permitted: Those caused by impermeable formwork linings.
  - Not permitted: Those caused by contamination or grout leakage.
- Surface blemishes:
  - Permitted: Blowholes less than 10 mm in diameter and at an agreed frequency.
  - Not permitted: Voids, honeycombing, segregation and other large defects.
- Formwork tie holes: In a regular pattern and filled with matching mortar.

630 SPECIAL FINISH

- Location: refer to drawings.
- Finish: Smooth and even. Formwork panels as large as practicable. Arrange in a regular pattern as a feature of the surface.
  - Special requirements: None.
- Permissible deviation of surfaces:
  - Sudden irregularities (maximum): 3 mm.
  - Gradual irregularities (maximum): 3 mm, when measured from the underside of a 1 m straightedge, placed anywhere on surface.
- Variations in colour:
  - Permitted: Those caused by impermeable formwork linings.
  - Not permitted: Those caused by contamination, grout leakage and replacement of formwork panels.
- Cover spacers: Submit proposals.
- Surface blemishes:
  - Permitted: Blowholes less than 5 mm in diameter and at an agreed frequency.
  - Not permitted: Voids, honeycombing, segregation and other defects.
- Formwork tie holes: In a regular pattern and filled with matching mortar.

640 ROUGH BOARD FINISH

- Forms or form linings: Rough textured softwood boards with smooth planned joint faces.
  - Width of boards: 100 mm.
  - Moisture content at time of casting: 18-25 %.
- Arrangement of boards: Vary textures to give uniform overall effect.
  - Orientation of boards: Horizontal, Vertical, as shown on drawings.
  - End joints: Not permitted.
  - Nail heads: Flush with surface.
- Surface blemishes: Penetration of grout between boards not permitted. Wet pre-assembled forms with clean water before erecting and keep damp until concrete is placed.
- Formwork tie holes: In a regular pattern and filled with matching mortar.

650 RIBBED FINISH

- Forms or form linings: Splayed timber battens secured to plywood backing.
  - Finished size of battens: 40 mm x 30 mm.
  - Centres of battens: 50 mm.
  - Fixing to plywood backing: Adhesive and screws.
  - Finish: Smooth with clean, sharp arises at junctions with backing. Prevent penetration of grout behind battens.
- Cover spacers: Submit proposals.
- Surface blemishes:
  - Permitted: Blowholes less than 5 mm in diameter and at an agreed frequency.
  - Not permitted: Voids, honeycombing, segregation and other defects.
- Formwork tie holes: In a regular pattern and filled with matching mortar.

660 PROPRIETARY FORM LINING FINISH

- Form linings:
  - Manufacturer: submit proposal.
    Product reference: moulded expanded polystyrene, flexible urethanes, plasticized PVC, synthetic or natural rubber, pressed steel sheet, papier Marché.
- Installation of linings: Securely to support formwork and jointed neatly.

All types of spacer will to some extent be visible on the concrete face. Spacers with flat contact faces will be clearly visible and will be unsightly. The problem may be reduced by using Spacers with recessed contact faces, Plastic wheel spacers with nibs, provided that the colour is similar to that of the concrete, or Spacers made with the same materials and mix proportions as the bulk of the concrete

- Cover spacers: Submit proposal.
- Surface blemishes:
  - Permitted: Blowholes less than 5 mm in diameter and at an agreed frequency.
  - Not permitted: Voids, honeycombing, segregation and other defects.
  - Formwork tie holes: In a regular pattern and filled with matching mortar.

665 CONTROLLED PERMEABILITY FORM LINING FINISH

- Form linings:
  - Manufacturer: Submit proposals.
    Product reference: CIRIA report C511, section 6.
- Installation of linings: As part of a controlled permeability formwork (CPF) system. Prevent any restrictions to drainage of water.
- Cover spacers: Submit proposals.
- Surface blemishes:
  - Permitted: Blowholes less than 5 mm in diameter and at an agreed frequency.
  - Not permitted: Voids, honeycombing, segregation and other defects.
- Formwork tie holes: Regular pattern and filled with matching mortar.

700 FINISH FOR ABRASIVE BLASTING

- Finish: Even with accurate, true and even joints.
- Permissible deviation of surfaces:
  - Gradual irregularities when measured from the underside of a 1 m straightedge, placed anywhere on surface (maximum): 3 mm.
- Cover spacers: Submit proposal.
- Surface blemishes:
  - Permitted: Blowholes less than 10 mm in diameter and at an agreed frequency.
  - Not permitted: Voids, honeycombing, segregation and other large defects.
- Formwork tie holes: In a regular pattern and filled with matching mortar.

710 FINISH FOR TOOLING

- Finish: Even with accurate, true and even joints.
- Permissible deviation of surfaces:
  - Gradual irregularities when measured from the underside of a 1 m straightedge, placed anywhere on surface (maximum): 5 mm.
- Cover spacers: Submit proposal.
- Surface blemishes:
  - Permitted: Blowholes less than 10 mm in diameter and at an agreed frequency.
  - Not permitted: Voids, honeycombing, segregation and other large defects.
- Formwork tie holes: In a regular pattern and filled with matching mortar.

750 ARRISES, MARGINS AND JUNCTIONS

- Requirements:
  - As shown on drawings.

760 REPAIRING FORMED SURFACES

- General: Surface defects include colour and texture irregularities, cracks, spalls, air bubbles, honeycombs, rock pockets, fins or other projections on the surface, stains and other discolorations that cannot be removed by cleaning.
  - Repair and patch defective areas when approved by Engineer.
  - Remove and replace concrete that cannot be repaired and patched to Engineer's approval.
  - Any remedial treatment to surfaces shall be agreed with the Engineer following inspection, immediately after removing the formwork, and shall be carried out without delay. Any concrete surface which has been treated before being inspected by the Engineer, shall be liable to rejection.
- In case of noncompliance:
  - Concrete not meeting the specified requirements shall be removed and rebuilt without delay unless the Engineer approves that a repair may be satisfactorily effected. This agreement shall not preclude the subsequent rejection of the repaired Work by the Engineer.
  - All repairs shall be performed by qualified technicians/personnel to guarantee the required Work.
  - Any repair method submitted for approval shall produce a result that is impermeable as the original concrete.
  - Subsequent tests on the repaired concrete shall be carried out at the discretion of the Engineer in order to establish the quality of the repair, particularly at the joint between the original and repaired concrete.

E30 - REINFORCEMENT FOR IN SITU CONCRETE

To be read with Preliminaries/ General Requirements.

REINFORCEMENT

110 QUALITY ASSURANCE OF REINFORCEMENT

- Standards:
  - Reinforcement: To BS 4449, BS 4482, BS 4483, BS 6744 or BS EN 10080.
  - Cutting and bending: To BS 8666, BS EN 1992-1-1, and BS EN ISO 3766.
- Source of reinforcement: Companies holding valid certificates of approval for product conformity issued by the UK Certification Authority for Reinforcing Steels (CARES) or international equivalent certification.

150 RIBBED BAR REINFORCEMENT

- Standard: To BS 4449 or BS EN 10080.
  - Strength grade: B500B.

155 HIGH TENSILE STEEL WIRE AND STRAND FOR THE PRESTRESSING OF CONCRETE

- Standard: to BS EN ISO 16120-4. BS EN 10020, Non-alloy steel wire rod for conversion to wire – Part 1: General requirements.
- Steel wire: Steel wire shall comply with BS 5896.
- Pre-tensioning strand: BS 5896, low relaxation strand.
- Post-tensioning strand: BS 5896, Grade 270, uncoated, 7-wire, low relaxation strand.
- Post-tensioning bars: BS 5896, uncoated high-strength steel bar.
- Anchorages: to be cast type, to BS EN 13391 or other approved standard.

160 GALVANIZED STEEL REINFORCEMENT

- Galvanizing: To BS EN ISO 1461 after cutting but before bending.

210 STANDARD FABRIC REINFORCEMENT

- Standard: To BS 4483 and BS 8666.
- Strength grade: B500B.

211 WELDED FABRIC REINFORCEMENT

- Standard: To BS 4482 and BS 8666.
- Strength grade: B500B.260 PROPRIETARY MECHANICAL COUPLERS
- Locations: As shown on Drawings
- Strength: Capable to resist the tensile strength of the connected bars.
- Manufacturer: Submit proposals.
  - Product reference: CARES or international equivalent certification.

266 REINFORCEMENT ACCESSORIES

- Joint dowel bar: plain dowel bar with lubrication or debonding compound as per clause E40/437 on one half of dowel length to prevent concrete bonding to one side of joint. Cut bars true to length with end square and free of burs.
- Bar supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire fabric in place. Manufacture bar supports from plastic, precast concrete or fiber reinforced concrete of greater compressive strength than concrete.

WORKMANSHIP

310 CUTTING AND BENDING REINFORCEMENT

- General: To schedules and to BS 8666, BS EN 10080, BS EN ISO 3766.
- Bending on site, including minor adjustments: Obtain instructions
- Continuity reinforcement: As shown on drawing.

320 PROTECTION OF REINFORCEMENT

- Prevent Dropping from height, mechanical damage and shock loading.
- Cleanliness of reinforcement at time of pouring concrete: Free from corrosive pitting, loose mill scale, loose rust and contaminants which may adversely affect the reinforcement, concrete, or bond between the two.

410 LAPS OR SPLICES

- For Details not shown on drawings: Obtain instructions
- For tension piles, staggered mechanical couplers distant of at least 800mm should be used to splice reinforcement**.**

427 LAPS IN FABRIC REINFORCEMENT

- Terms: As defined in BCA publication 97.321.
- Lap type:
  - Long edge of fabric: Butt end bars in adjacent fabric sheets and provide loose bars of the same diameter and type as the fabric bars, tied to and with a full lap with the bars in each sheet.
  - Short edge of fabric: Butt end bars in adjacent fabric sheets and provide loose bars of the same diameter and type as the fabric bars, tied to and with a full lap with the bars in each sheet.
- Other requirements: Stagger end laps and Stagger laps in fabric to each face and locate laps away from cut joints in ground slabs.

430 WELDING REINFORCEMENT

- Standard: BS EN 10080, BS EN ISO 17660-1 & 2.
- Joint type/ dimensions: Submit proposals.
  - Location: Submit proposals, showing joints in principal tension reinforcement staggered.
- Site welding: Not permitted.

451 FIXING REINFORCEMENT

- Standard: To BS 7973-1 and -2.
- Installation: In addition to any spacers and chairs shown on drawings or schedules, provide adequate support, tie securely and maintain the specified cover.
- Tying:
  - Wire type: 16 gauge black annealed. Use stainless steel wire for stainless steel reinforcement.
  - Ends of tying wire: Prevent intrusion into the concrete cover. Remove loose ends.
- Compatibility of metals: Prevent contact between ordinary carbon steel and stainless or galvanized reinforcement.
- Electrical continuity: All steel reinforcement bars should ensure the electrical continuity of the steel reinforcement bars with an overall resistance not exceeding 0.2 Ohm.

454 FIXING REINFORCEMENT FOR SPRAYING CONCRETE

- First reinforcement layer: Install prior to concreting, with chairs or other means of support fixed ready for installation of subsequent reinforcement layer.
- Subsequent reinforcement layer: Fabricate as a mat prior to concreting. Install when first reinforcement layer is fully encapsulated in concrete.

470 TOLERANCES ON COVER

- Tolerance (maximum): 5 mm.
- Checking specified cover dimensions: Before concreting check that cover dimensions will be achieved.

480 NOMINAL COVER TO REINFORCEMENT

- Nominal cover: refer to general notes drawings.

510 RUST STAINING

- Prevent Staining of surfaces of concrete which will be exposed to view in the finished work.

520 COVER METER SURVEY

- Purpose of survey: To check positions of reinforcement and that the specified cover has been achieved.
- Type of cover meter: A magnetic induction digital display type selected to suit arrangement and type of reinforcement.
  - Use: In accordance with recommendations of BS 1881-204 and manufacturer as appropriate to yield accurate results.
  - Surveyor: Experienced with cover meter surveys.
  - Calibration: At the outset and thereafter regularly at 45 minute (maximum) intervals.
- Locations for checking: at doubted locations, and as required by the Engineer. Include columns, beams, cantilevers, slab soffits and all faces exposed to the weather in the finished structure.
- Timing: As soon as practicable after casting.
  - Notification: Give adequate notice.
- Results: Submit. Notify immediately where specified cover has not been achieved.

521 COVER METER FOR USE BY OTHERS

- Type of cover meter: Provide a magnetic induction digital display type selected to suit arrangement and type of reinforcement.
- Availability: Calibrate and maintain ready for use by others as instructed.
  - Periods/ time**:** Within 24 hours of striking formwork.

E40 - DESIGNED JOINTS IN IN SITU CONCRETE

To be read with Preliminaries/General Requirements.

120 CONSTRUCTION/ MOVEMENT JOINTS GENERALLY

- Accuracy: Position and form joints accurately, straight, well-aligned and truly vertical or horizontal or parallel with setting out lines of the building.
- Modifications to joint design or location: Submit proposals.
- Placing concrete to form movement joints:
  - Maintain effectiveness of joints. Prevent concrete entering joints or penetrating or impregnating compressible joint fillers.
  - Do not place concrete simultaneously on both sides of movement joints.

132 ADDITIONAL REQUIREMENTS FOR CONSTRUCTION JOINTS

- Limitations: Permitted subject to restrictions in section E10 and engineer's approval.

210 FORMED JOINTS

- Forms/ stop ends generally: Rigid and grout-tight.
- Forms/ stop ends for projecting continuity reinforcement: To accommodate bars or fabric without temporary bending or displacement.

211 FORMED JOINTS IN CONCRETE WEARING SURFACES

- Temporary forms: Square edged with a steel top surface.
- Placing concrete: Compact thoroughly at edges to give level, closely abutted joints with no lipping.

220 PRECAST CONCRETE PERMANENT SIDE FORMS

- Manufacturer: submit proposal.
  - Product reference: Submit proposal
- Depth: depending on the depth of precast element.
- Installation: To accurate line and level with concrete thoroughly compacted at edges and with no lipping.

225 PREFABRICATED STEEL PERMANENT JOINT FORMERS

- Manufacturer: Submit proposals.
  - Product reference: Submit proposal Depth: depending on the depth of precast element.
- Installation: To accurate line and level with concrete thoroughly compacted at edges and with no lipping.

230 PREPARATION OF CONSTRUCTION JOINTS

- Roughening of joint surfaces:
  - Brushing and spraying: Remove surface laitance and expose aggregate finish while concrete is still green.
  - Other methods: Submit proposals.
- Condition of joint surfaces immediately before placing fresh concrete: Clean and damp.

260 SAWN CRACK INDUCING GROOVES

- Groove dimensions:
  - Depth**:** As shown on drawings
  - Width: As narrow as practicable.
- Sawing: Sufficiently early to prevent random cracking within 24 hours of casting slab and to produce strong, well defined arrises.

- Groove filling: Sealant or Sheet joint filler and sealant, noting that filling should be left as late in the construction process as possible.

310 FLEXIBLE WATERSTOPS

- Manufacturer: Submit proposals.
  - Product reference: Self-sealing hydrophilic rubber-based water-stops. Sandwiched centrally in the joint, they swell on contact with penetrating water to form a tight compression seal.
  - Injection hose systems: A perforated PVC hose is encased in polyurethane foam into which a polyurethane-based resin is injected after most of the drying shrinkage has taken place in the concrete.
- Junctions and angles: Use factory formed junction pieces.
- Placing concrete: Fully compact concrete around water-stops with no voids or porous areas.

320 HYDROPHILIC WATERSTOPS

- Manufacturer: Submit proposals.
  - Product reference: Submit Proposal
- Location: Fixed to first cast concrete surface 80 mm (minimum) clear from face of structure.
- Method of fixing: Bonded using an adhesive approved by water-stop manufacturer or Nailed.
- Condition of concrete surface at time of fixing: Clean and free from ponded or running water.
- Protection: Prevent wetting of exposed sections of water-stop.

410 CARBON STEEL TIE BARS

- Standard: To BS 4449.
  - Product form: Ribbed.
  - Strength grade: B500B.
- Cleanliness: Free from corrosive pitting, loose mill scale, loose rust and contaminants which may adversely affect the tie bars, reinforcement, concrete, or bond between the two.
- Position: Centred on joint.
- Other requirements: None.

415 STAINLESS STEEL TIE BARS

- Standard: To BS 6744.
  - Product form: Ribbed.
  - Designation: 1.4162.
  - Strength grade: 500.
- Cleanliness: Free from contaminants which may adversely affect the tie bars, concrete, or bond between the two.
- Position: Centred on joint.

420 FABRIC TIE STRIPS

- Standard: To BS 4483.
- Cleanliness: Free from corrosive pitting, loose mill scale, loose rust and contaminants which may adversely affect the fabric, concrete, or bond between the two.
- Position: Width of the mesh strip centred on the joint.

435 STAINLESS STEEL DOWEL BARS

- Standard: To BS 6744.
  - Designation: 1.4362.
  - Product form: Plain.
  - Strength grade: 200.
  - Properties: Perfectly straight, with sawn (not sheared) ends.

- De-bonding: Achieve effective de-bonding of each bar
  - Material: Suitable proprietary de-bonding compound or Flexible polymeric coating as Highways Agency 'Specification for Highway Works' clause 1011(7)
  - Extent: Half-length of bar.
- Position: At right angles to and centred on joint.
- Other requirements: Fit de-bonded ends of bars in expansion joints with an approved type of cap incorporating not less than 30 mm of compressible material.

437 DEBONDING COMPOUND

- Manufacturer: submit proposal.
  - Product reference: The compound should be a Flexible polymeric coating as Highways Agency 'Specification for Highway Works'.

440 LOAD TRANSFER SYSTEMS

- Manufacturer: Submit proposals
  - Product reference: for proprietary load transfer systems other than reinforcement or dowel bars

510 SHEET MEMBRANE FOR SLIDING JOINTS

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Fixing: Bond to first cast concrete surface, or otherwise hold in position during concreting.

520 SHEET JOINT FILLER FOR EXPANSION JOINTS, FOR ISOLATION JOINTS

- General: The joint filler material should be robust and resilient. It should be capable of accommodating anticipated movements without unacceptable deformation, and minimizing the transfer of loads across joints when required. The joint filler material should also be compatible with any joint sealant with which it will come into contact.
- Manufacturer: Submit proposals.
  - Product reference: The exposed edges of joint fillers are normally protected by sealants.
- Joints finished with sealant: Leave sufficient space for sealant by using temporary formers.

521 BONDING AGENT

- Standard: ASTM C1059/C1059M, Type II, non-redispersible, acrylic emulsion or styrene butadiene.
- For bonding hardened or freshly mixed concrete to hardened concrete.

545 COMPRESSIBLE SEALING STRIP SYSTEM FOR SAWN JOINTS IN FLOOR SLABS, FOR EXPANSION JOINTS

- Manufacturer: Submit proposals.
  - Product reference: matching with joint filler and having a fire resistance similar to substrate element.
  - Colour: not applicable.

590 INSPECTION OF TIED AND PARTIALLY TIED JOINTS

- Purpose: To determine whether shrinkage is concentrated at occasional joints
- Timing: At intervals from one month after casting of slab for duration of works.
- Joints that have opened significantly more than the average: Submit proposals for grouting.

E41 - WORKED FINISHES TO IN SITU CONCRETE

To be read with the structural drawings and structural basis of design report.

140 SAMPLES AVAILABLE FOR INSPECTION

- Type: Tooled finish as clause 430.

145 CONTROL SAMPLES

- Sample areas that are part of finished work: To be agreed.
- Location: To be agreed.
- Approval of appearance: Obtain before proceeding with remainder of the work.

150 FINISHING

- Timing: Carry out at optimum times in relation to setting and hardening of concrete.
- Prohibited treatments to concrete surfaces:
  - Wetting to assist surface working.
  - Sprinkling cement.

210 TAMPED FINISH

- Surface on completion: Even array of parallel ribs**.**

220 SCORED FINISH

- Surface on completion: Roughened, regular pattern.
  - Scoring tool: Metal comb.

230 BRUSHED FINISH

- Surface on completion: Light even texture.

240 WOOD FLOATED FINISH

- Surface on completion: Slightly coarse, even texture with no ridges or steps.

310 SMOOTH FLOATED FINISH

- Surface on completion: Even with no ridges or steps.

320 TROWELLED FINISH

- Surface on completion: Uniform, smooth but not polished, free from trowel marks and blemishes and suitable to receive specified flooring material.

330 TROWELLED FINISH FOR WEARING SURFACES

- Surface on completion: Uniform and smooth, free from trowel marks and blemishes.

335 DRY SHAKE TROWELLED FINISH FOR WEARING SURFACES

- Dry shake manufacturer: submit proposal.
  - Product reference: submit proposal.
  - Mix: Manufacturer's standard.
  - Application: Sprinkle evenly at appropriate stages during floating and before trowelling.
    Application rate: as per approved manufacturer.
- Curing agent/ Sealer: Manufacturer as dry shake apply immediately after completion of trowelling.
- Protection: Prevent marking of adjacent surfaces.
- Surface on completion: Uniform and smooth, free from trowel marks and blemishes.

340 DEWATERED TROWELLED FINISH FOR WEARING SURFACES

- Dewatering:

  - Timing: Immediately after compacting concrete.
  - Removing water: Use vacuum process.
- Surface on completion: Uniform and smooth, free from trowel marks and blemishes.

410 POWER GROUND FINISH FOR WEARING SURFACES

- Grinding: Remove 1-2 mm from surface.
  - Timing: When concrete is sufficiently hard for fine aggregate surface particles not to be dislodged.
- Cleaning: Remove dust and wash down.
- Surface on completion: Even glass-paper texture, free from blemishes and trowel marks.

510 SURFACE HARDENER

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Condition of substrate prior to application: Cured, clean and free from surface contaminants.
- Application: Evenly to dry surfaces. After absorption, wash surface immediately with clean water.
  - Additional applications: As manufacturer's recommendations.
- Solutions and wash water: Do not discharge to drains. Store and dispose of safely.

520 SURFACE SEALER

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals. Check suitability with sealer manufacturers.
- Substrate:
  - Moisture content: As recommended by sealer manufacturer. Test relative humidity to BS 8203, Annex A where required to verify suitability.
  - Condition prior to application: Cured, clean and free from contaminants.
- Primer: Primer as recommended by Manufacturer.
- Application: Evenly to dry surfaces to form an effective seal but without a glossy finish.

530 SLIP RESISTANCE TESTING OF WEARING SURFACES

- Test: To BS 7976-2 using a Transport Research Laboratory (TRL) Pendulum.
  - Timing: Give adequate notice.
  - Test results: Submit, inclusive of slip resistance values (pendulum test value [PTV]), in the wet and dry states.

E42 - ACCESSORIES CAST INTO IN SITU CONCRETE

To be read with the structural drawings and structural basis of design report.

GENERAL

110 ACCESSORIES SPECIFIED ELSEWHERE

- Item/ location: as shown on drawings.

PRODUCTS

310 HOLDING DOWN SYSTEMS

- Bolts: see drawing.
  - Material: Carbon steel.
  - Standard: To BS 7419
  - Type: see drawing.
  - Property class to [BS EN ISO 898-1]: 4.6.
  - Thread diameter: see drawing.
  - Coating: galvanized.
- Nuts:
  - Standard: To BS EN ISO 4032.
  - Material: Carbon steel.
  - Class: To suit NSSS CE Marking version, clause 2.4.5 and Table 2.6.
  - Coating: galvanized
- Washers:
  - Standard: To BS EN ISO 7091.
  - Material: see drawing.
  - Class: To suit NSSS CE Marking version, clause 2.4.5 and Table 2.6.
  - Coating: galvanized.
- Bolt box: None, hole formed around bolt using polystyrene former.
- Anchorage: see drawing.
- Other requirements: see drawing.

320 CAST-IN SOCKETS see drawing

- Material: Stainless steel].
  - Coating or treatment: galvanized.
- Manufacturer: Submit proposals.
  - Product reference: see drawing.
- Cleanliness: Plug inside as necessary to prevent ingress of grout during concreting.
- Safe working load (minimum): see drawing.
- Temporary fixings to shutter/ temporary supports: Bolts through shutter.

330 ANCHOR BOLTS

- Material: galvanized steel (internal), Stainless steel (external).
  - Designation: see drawing.
  - Coating or treatment: galvanized.
- Manufacturer: submit proposals.
  - Product reference: submit proposals.

335 SHEAR LOAD CONNECTORS

- Material: as shown on drawings.

  - Designation: as shown on drawings.
- Manufacturer: Submit proposals.
  - Product reference: submit proposal.
- Anchors: Welded to back of section.
  - Type/ centres: submit proposals.
- Temporary fixings to shutter/ temporary supports: stainless steel nails.

340 CHANNELS AND SLOTS

- Material: galvanized steel (internal), Stainless steel (external).
  - Designation: see drawing.
  - Coating or treatment: galvanized.
- Manufacturer: Submit proposals.
  - Product reference: submit proposals.
- Anchors: Welded to back of section.
  - Type/ centres: submit proposals.
- Temporary fixings to shutter/ temporary supports: galvanized carbon steel nails or staplesor Stainless-steel nails or staples.
- Bolts/ ties: see drawing.
- Other requirements: see drawing.

345 ANCHOR PLATES/ COLUMN SHOES

- Location: see drawing.
- Material: galvanized steel or Stainless steel
  - Designation: see drawing.
- Manufacturer: Submit proposals.
  - Product reference: submit proposals.
- Anchors: Welded to face in contact with concrete.
  - Type/ centres: see drawing.
- Temporary fixings to shutter: galvanized carbon steel nails or staples or Stainless steel nails or staples or Self drilling and tapping screws through shutter into plate or Set screws through shutter into tapped holes in plate].

350 PROPRIETARY CORNER GUARDS

- Location: to exposed corners of columns.
- Material: galvanized steel or Stainless steel
  - Coating or treatment: Galvanized.
- Manufacturer: Submit proposals.
  - Product reference: submit proposals.
- Anchors: Welded to face in contact with concrete.
  - Type/ centres: submit proposals.
- Temporary fixings to shutter: galvanized carbon steel nails or staples or Stainless-steel nails or staples or Self drilling and tapping screws through shutter into guard or Set screws through shutter into tapped holes in each leg of guard.

360 CORNER GUARDS

- Location: to exposed corners of columns.
- Material: galvanized steel or Stainless steel.
  - Designation: see drawing.
  - Coating or treatment: Galvanized.
- Section: Cold formed angle.

  - Size: see drawing.
- Anchors: Welded to face in contact with concrete.
  - Type/ centres: see drawing.
- Temporary fixings to shutter: galvanized carbon steel nails or Stainless steel staples or Self drilling and tapping screws through shutter into guard or Set screws through shutter into tapped holes in each leg of guard.

370 FABRICATED EDGE STRIPS AND FRAMES

- Use: for chequer plate duct covers and for open grid flooring.
- Material: Carbon Steel or Stainless Steel as for chequer plate.
  - Designation: see drawing.
  - Coating or treatment: galvanized.
- Section: see drawing.
- Anchors: Welded to face in contact with concrete.
  - Type/ centres: see drawing.
- Temporary fixings to shutter/ temporary support: galvanized carbon steel nails or Stainless steel nails or Self drilling and tapping screws through shutter or temporary support into frame or Set screws through shutter or temporary support into tapped holes in frame.

380 DUCTS through slabs, through trench fill foundations

- Material Concrete to BS EN 1916.
- Shape: see drawing.
  - Size: see drawing.
- Location: submit location for approval.
- Other requirements: Ducts to be set perpendicularly to face of concrete unless otherwise indicated.

390 GALVANIZED COATINGS

- Standard: to BS 7371-6 and BS EN ISO 1461.
  - Galvanizing: Applied and passivated by component manufacturer. Threaded items tapped after galvanizing.

395 SHERARDIZED COATINGS ON METAL FASTENERS

- Standard: To BS 7371-8.

EXECUTION

610 HOLLOW ACCESSORIES

- Filling/ sealing: Temporally fill or seal accessory to prevent ingress of grout during concreting. Leave filling/ seals in position until accessory is used.

620 TEMPORARY SUPPORTS

- Location: Provide to hold accessories for casting into un-shuttered surface of concrete, set at a level that will not adversely affect finish of concrete surface remote from accessory.
- Position: Hold securely to prevent lateral movement or rotation of accessory during concreting.

630 PROTECTIVE COATINGS

- Inspect: Immediately prior to casting concrete.
- Damage to coatings:
  - Minor: Submit proposals for coating repair**.**
  - Significant: Replace accessory.

640 INSTALLATION

- Cleanliness: At time of casting, surfaces in contact with concrete to be free from contaminants which may adversely affect accessory, reinforcement, concrete, or bond between accessory and concrete
- Position: Hold accessory firmly in position, preventing displacement during concreting.
- Other requirements: see drawing, check with engineer on site.

E60 PRECAST/ COMPOSITE CONCRETE FLOORS/ ROOF DECKS

To be read with Preliminaries/ General Requirements.

PROPRIETARY FLOORS/ ROOF DECKS

100 GENERALLY

- Contractor is to submit the following:
  - Design Mixes: For each concrete mixture. Include compressive strength and, if required, water-absorption tests.
  - Shop Drawings: Detail fabrication and installation of precast structural concrete units. Indicate member locations, plans, elevations, dimensions, shapes, cross sections, openings, and types of reinforcement, including special reinforcement.
    - Include member locations, plans, elevations, dimensions, shapes and sections, openings, support conditions, and types of reinforcement, including special reinforcement.
    - Detail fabrication and installation of precast structural concrete units, including connections at member ends and to adjoining construction.
    - Indicate joints, reveals, drips, chamfers, and extent and location of each surface finish.
    - Indicate separate face and backup mixture locations and thicknesses.
    - Indicate type, size, and length of welded connections by BS EN ISO 2553 standard symbols.
    - Detail loose and cast-in hardware, lifting and erection inserts, connections, and joints.
    - Indicate locations, tolerances, and details of anchorage devices to be embedded in or attached to structure or other construction.
    - Indicate and locate openings larger than 250 mm. Where additional structural support is required, include header design.
    - Indicate location of each precast structural concrete unit by same identification mark placed on panel.
    - Indicate relationship of precast structural concrete units to adjacent materials.
    - Indicate locations, dimensions, and details of thin-brick units, including corner units and special shapes, and joint treatment.
    - Indicate locations, dimensions, and details of stone facings, anchors, and joint widths.
    - Indicate estimated camber for precast floor slabs with concrete toppings.
    - Indicate shim sizes and grouting sequence.
    - If design modifications are proposed to meet performance requirements and field conditions, submit design calculations and Shop Drawings. Do not adversely affect the appearance, durability, or strength of units when modifying details or materials and maintain the general design concept.
  - Delegated-design submittals: For precast structural concrete indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified Engineer responsible for their preparation.
    - Show precast structural concrete unit types, connections, types of reinforcement, including special reinforcement, and concrete cover on reinforcement. Indicate location, type, magnitude, and direction of loads imposed on the building structural frame from precast structural concrete.
  - Sample of bearing pads.

140 PRECAST FLOOR PLATE FOR COMPOSITE FLOOR (Hollow Core Slab).

- Manufacturer: Submit proposals.
  - Product reference: As per drawings.

- Finish:
  - Top surface: Rough to improve bonding with concrete topping.
- In situ continuity reinforcement: As per drawings.

GENERAL/ PERFORMANCE

240 DETAILING OF PROPRIETARY SYSTEM
- Installation details: Submit location and assembly drawings showing every aspect of the construction, incorporated components and features, trimming for voids, holes for services, and related work by others.
  - Purpose: To allow checking of compatibility with surrounding structure and coordination of services.
- Method statement and risk assessment for installation: Submit.
- Programme: Submit well in advance of construction.

250 CONTRACTOR'S STRUCTURAL DESIGN
- Design: Complete in accordance with the designated code of practice to satisfy specified performance criteria.
  - Composite construction: As per drawings providing partial continuity to control cracking and, where required, diaphragm and tie action.
  - Fully precast construction: As per drawings providing diaphragm and tie action where required.

INSTALLATION

320 CONCRETE INFILL
- Designated concrete: To BS 8500-2.
  - Designation: As per drawings.
  - Aggregate size (maximum): 10 mm generally but 6 mm in shear keys between precast units.
- Preparation: Thoroughly clean and wet surfaces of precast units.
- Placing: Avoid segregation and compact thoroughly to eliminate voids.
  - Extent: Fill troughs and other holes.
  - Finish: Flush with top of precast units.
- Protection: Prevent movement of units until concrete has gained sufficient strength.

325 GROUTING
- Preparation: Thoroughly clean and wet surfaces.
- Fill all joints and surface irregularities.

330 EXPANDED POLYSTYRENE VOID FORMERS
- Expanded polystyrene: To BS EN 13163.
- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Compressive strength (minimum): As per drawings.
- Size: As per drawings.

345 IN SITU CONCRETE TOPPING TO HOLLOW CORE SLABS.
- Concrete: As section E10.
  - Thickness (minimum): 75mm.
- Formwork: As section E20.
- Reinforcement: As section E30.
  - Cover: As per drawings

- Construction/ Movement joints: As section E40.
- Finish: Trowelled as per section E41.
  - Surface regularity: As section E05, suitable for specified floor finish.

350 LEVELS OF STRUCTURAL CONCRETE FLOORS

- Tolerances: See Preliminaries and General Requirements.

F10 BRICK/ BLOCK WALLING

To be read with Preliminaries/ General Conditions.

TYPES OF WALLING

355A CONCRETE COMMON BLOCKWORK IN PARTITIONS AND WHERE INDICATED

- Blocks: To BS EN 771-3.
  - Manufacturer: To be approved.
    Product reference: to be approved.
  - Configuration: Group 2- Greater than 25% and less than or equal to 60% formed vertical voids.
  - Compressive strength- Net area individual unit Compressive Strength: minimum 10 MPa for non- load bearing walls.
  - Net area individual unit Compressive Strength: minimum 15 MPa for load bearing walls.
  - Net area individual unit compressive strength: minimum 7 MPa for non-load bearing interior partitions.
  - Freeze/ Thaw resistance: Not to be left exposed.
  - Thermal properties: U-value for external wall complete assembly with insulation not more than 0.4 w/m2. k.
  - Recycled content: 0% (minimum) to BS EN ISO 14021.
  - Work sizes (length x width x height): as indicated on drawings and as approved by Engineer.
    Tolerance category: D1.
  - Special shapes: As shown on drawings.
  - For load bearing CMU walls: normal weight, with oven dry concrete density not less than of 2000 kg/cu.m.
  - For non-load bearing CMU walls: medium weight, with oven dry concrete density not less than of 1850 kg/cu.m.
  - Reaction to Fire: Class A1.

- Typical fire-rating based on equivalent thickness method for concrete masonry units including cement plaster facings on both sides with thickness not less than 15mm for each facing:
  - 100mm solid: 2hrs.
  - 100mm hollow with fill percentage not less than of 55%: 1 Hr.
  - 150mm solid: 4 Hrs.
  - 150mm hollow with fill percentage not less than 53%: 2 Hrs.
  - 200mm solid: 4 Hrs.
  - 200mm hollow with fill percentage not less than 45%: 2.25 Hrs.

- Mortar: As section Z21.
  - Standard: To BS EN 998-2.
  - Mix: 1:3 masonry cement: sand.
  - Additional requirements: Bond strength: not less than 14 N/mm².
- Bond: Half lap stretcher.

TESTING

410 COMPRESSIVE STRENGTH OF MORTAR FOR EACH WALLING TYPE

- Testing authority: An approved laboratory.
- Test method: To BS EN 1015-11.
- Preliminary tests procedure: As follows:
  - Specimens:

© Copyright protected

Number of specimens: 6.
Type : 40 x 40 x 160 mm prism.
Preparation: At least six weeks before walling commences.

- Specimen testing: Half of specimens at 7 days. Remainder at 28 days.
  Retarded mixes: Extend curing periods to include retardation period.
- Response to result: If mean compressive strength at 28 days is not within the range given below repeat tests with more suitable sand or next higher mortar class.

- Site tests procedure: As follows.
  - Number of specimens: Six per 150m² of walling or per storey whichever the more frequent.
  - Specimen types: As preliminary test but prepared during construction.
  - Specimen testing: Half of specimens at 7 days. Remainder at 28 days.
    Retarded mixes: Extend curing periods to include retardation period.
- Required test mean compressive strength at 28 days (N/mm²): To be within the following range:
  - Walling type: Concrete Blockwork.
    Preliminary tests minimum (N/mm²): 14.0.
    Preliminary tests maximum (N/mm²): No Value.
    Site tests minimum (N/mm²): 14.0.
    Site tests maximum (N/mm²): No Value.
- Results: Submit.

415 FRESH MORTAR CEMENT CONTENT

- Test method: BREMORTEST in accordance with Building Research Establishment Information Paper 8/89.
- Test specimens: Test mortar for the following wall types: F10/ 355A and all other types of walling specified in this section and applicable to project.
- Results: Submit.

WORKMANSHIP GENERALLY

440B CONDITIONING OF CONCRETE BLOCKS

- Avoidance of suction in concrete blocks: Do not wet.
  - Use of water retaining mortar admixture: Submit details.

460 MORTAR GROUPS

- Mix proportions: For a specified group select a mix design from the following:
  - Group 1:
    1: 0–0.25: 3 (Portland cement: lime: sand with or without air entraining additive).
    1: 3 (Portland cement: sand and air entraining additive).
    Typical Use for Structural / high load-bearing masonry.
  - Group 2:
    1: 0.5: 4–5 (Portland cement: lime: sand with or without air entraining additive).
    1: 3–4 (Portland cement: sand and air entraining additive.)
    Typical Use for External walls, moderate exposure.
  - Group 3:
    1: 1: 5–6 (Portland cement: lime: sand with or without air entraining additive).
    1: 3.5–4 (masonry cement: sand containing Portland cement and lime in approximate ratio 1: 1, and an air entraining additive).
    General masonry (most blockwork, partitions)
  - Group 4:
    1: 2: 8–9 (Portland cement: lime: sand with or without air entraining additive).

© Copyright protected

1: 4.5 (masonry cement: sand containing Portland cement and lime in approximate ratio 1: 1, and an air entraining additive).
Typical Use for Internal, non-loadbearing, sheltered.

- Materials:
  - Cement: BS EN 197-1, CEM I or CEM II
  - Masonry cement: BS EN 413-1
  - Sand: BS EN 13139, washed natural or crushed, graded for joint thickness.
  - Water: Potable, per BS EN 1008
- Batching: Mix proportions by volume.
- Mortar type: Continuous throughout any one type of masonry work.
- Additives: Optional air-entraining admixture per manufacturer, if required for frost resistance.

500A LAYING GENERALLY

- Mortar joints: Fill vertical joints. Lay solid and cellular blocks on a full bed.
- Bond where not specified: Half lap stretcher.
- Vertical joints in concrete block facework: Even widths. Plumb at every fifth cross joint.

520A ACCURACY

- Courses: Level and true to line.
- Faces, angles and features: Plumb.
- Permissible deviations:
  - Position in plan of any point in relation to the specified building reference line and/ or point at the same level ± 10 mm.
  - Straightness in any 5 m length ± 5 mm.
  - Verticality up to 3 m height ± 10 mm.
  - Verticality up to 7 m height ± 14 mm.
  - Overall thickness of walls ± 10 mm.
  - Level of bed joints up to 5 m (block masonry) ± 13 mm.

545 LEVELLING OF SEPARATE LEAVES

- Locations for equal levelling of cavity wall leaves: As follows:
  - Every course containing vertical twist type ties or other rigid ties.
  - Every third tie course for double triangle/ butterfly ties.
  - Courses in which lintels are to be bedded.

595 LINTELS

- Bearing: Ensure full length masonry units occur immediately under lintel ends.

635 JOINTING

- Profile: Consistent in appearance.

645 ACCESSIBLE JOINTS NOT EXPOSED TO VIEW

- Jointing: Struck flush as work proceeds.

665 POINTING TO ALL WALLING, WHERE INDICATED ON DRAWINGS

- Joint preparation: Remove debris. Dampen surface.
- Mortar: As section Z21.
  - Standard: To BS EN 998-2.

© Copyright protected

  - Mix: 1:3 masonry cement: sand 6 N/mm² (mortar class 6).
  - Additional requirements: Bond strength: 10 N/mm².
- Profile: Bucket handle.

671 FIRE STOPPING

- Avoidance of fire and smoke penetration: Fit tightly between cavity barriers and masonry. Leave no gaps.

690A ADVERSE WEATHER

- Air temperature requirements: Do not lay blocks:
  - In cement gauged mortars when at or below 3°C and falling or unless it is at least 1°C and rising.
  - In hydraulic lime: sand mortars when at or below 5°C and falling or below 3°C and rising.
  - In thin joint mortar glue when outside the limits set by the mortar manufacturer.
- Temperature of walling during curing: Above freezing until hardened.
- Newly erected walling: Protect at all times from:
  - Rain.
  - Drying out too rapidly in hot conditions and in drying winds.

730 CONCRETE BLOCK SAMPLES

- General: Before placing orders with suppliers submit for approval of appearance labelled samples of the following: Blocks as in clause F10/355.
- Selection of samples: Representative of the range in variation of appearance.

740A FINISHED MASONRY WORK REFERENCE PANELS

- General: Before proceeding to construct the following walling types, construct panels as specified. Give notice when panels are dry.
- Selection of masonry units: Randomly to BS EN 771-3.
- Panel types:
  - Walling type: All.
    Location: as directed by Engineer and as indicated on drawings.
    Size: As directed by Engineer and as indicated on drawings.
    Other requirements: None.
- For landscaped boundary walls, add grooves, plaster and paint finish as indicated on landscape drawings.

745 MASONRY SAMPLE PANELS

- Sampling frequency: A panel for each type and delivery of masonry unit.
- Selection of masonry units: Randomly to BS EN 771-3.
- Panel types: As clause 740.

760 APPEARANCE

- Block selection: Do not use units with damaged faces or arrises.
- Cut masonry units: Where cut faces or edges are exposed cut with table masonry saw.
- Quality control: Lay masonry units to match relevant reference panels.
  - Setting out: To produce satisfactory junctions and joints with built-in elements and components.
  - Coursing: Evenly spaced using gauge rods.
- Lifts: Complete in one operation.
- Methods of protecting facework: Submit proposals.

© Copyright protected

780 GROUND LEVEL

- Commencement of facework: Not less than 150 mm below finished level of adjoining ground or external works level.

800 TOOTHED BOND

- New and existing facework in same plane: Bond together at every course to achieve continuity.

830 CLEANLINESS

- Facework: Keep clean.
- Mortar on facework: Allow to dry before removing with stiff bristled brush.
- Removal of marks and stains: Rubbing not permitted.

© Copyright protected

F30 ACCESSORIES/ SUNDRY ITEMS FOR BRICK/ BLOCK/ STONE WALLING

To be read with Preliminaries/ General Conditions.

CAVITIES

110 CONCRETE FILL TO BASE OF CAVITY

- Concrete generally: To BS EN 206 and BS 8500-2.
- Concrete type: Designated GEN1.
  - Workability: High.
- Extent: Maintain 75 mm between top of fill and external ground level and a minimum of 225 mm between top of fill and ground level DPC.
- Placement: Compact to eliminate voids.

120 CLEANLINESS

- Cavity base and faces, ties, insulation and exposed DPCS: Free from mortar and debris.

130 PERPEND JOINT WEEP HOLES

- Form: Open perpend joint.
- Locations: Through outer leaf immediately above base of cavity, at cavity trays, stepped DPCS and external openings. 75 mm above top of cavity fill at base of cavity.
- Provision: At not greater than 1000 mm centres and not less than two over each opening.

131 BED JOINT WEEP HOLES

- Form: Open 10 mm diameter hole.
- Locations: Through outer leaf immediately above base of cavity at cavity trays, stepped DPCS and external openings. 75 mm above top of cavity fill at base of cavity.
- Provision: At not greater than 1000 mm centres and not less than two over each opening.

132 PERPEND JOINT PLASTICS WEEP HOLES

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Locations: Through outer leaf immediately above base of cavity, at cavity trays, stepped DPCS and external openings. 75 mm above top of cavity fill at base of cavity.
- Provision: At not greater than 1000 mm centres and not less than two over each opening.

150A FULL FILL CAVITY INSULATION

- Insulation: Fire retardant Extruded polystyrene (XPS) boards to BS EN 13164.
- Type: Suitable for full-fill cavity applications.
- Density / Compressive Strength: Minimum CS (10)300 (≥ 300 kPa).
- Face/Barrier: Unfaced, unless otherwise indicated on drawings.
- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Recycled content: Contractor's choice.
- Face size (nominal length x width): To suit wall tie spacing.
- Thickness (nominal): As required to achieve the design U-value.
- Thermal conductivity: not greater than 0.029 W/ (m.K).

REINFORCING/ FIXING ACCESSORIES

214 CAVITY WALL TIES FOR ALL CAVITY WALLS, WHERE INDICATED

- Standard: To BS EN 845-1.

© Copyright protected

  - Type: 1 (Masonry heavy duty).
- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Material/ finish: Austenitic stainless steel - material/ coating reference 1.
- Sizes: 250 mm, unless otherwise advised by Engineer to accommodate different cavity wall thicknesses.
- End types: Symmetrical butterfly loop or deformed plate or triangle unless otherwise indicated on drawings.
- Design embedment length (minimum): 50 mm.
- Movement: Nontolerant.
- Additional requirements: None.

225 FIXING TIES IN MASONRY CAVITY WALLS

- Embedment in mortar beds (minimum): 50 mm.
- Placement: Sloping slightly downwards towards outer leaf, without bending. Drip centred in the cavity and pointing downwards.
- Spacing: Staggered in alternate courses.
  - Horizontal centres: 900 mm.
  - Vertical centres: 400 mm.
- Additional ties: Provide within 225 mm of reveals of unbonded openings and at the vertical reveals of unsupported masonry.
  - Spacing: In every course.

228 FIXING TIES IN MASONRY CAVITY WALLS WITH FULL FILL CAVITY INSULATION

- Embedment in mortar beds (minimum): 50 mm.
- Placement: Sloping slightly downwards towards outer leaf, without bending. Drip centred in the cavity and pointing downwards.
- Spacing: Staggered in alternate courses.
  - Horizontal centres: 900 mm.
  - Vertical centres: 400 mm.
- Provision of additional ties:

    One row to support lowest row of insulation batts.
    Within 225 mm of reveals of unbonded openings and at the vertical reveals of unsupported masonry.
  - Spacing: In every course.

241 WALL STARTERS/ CONNECTORS

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Material/ finish: Austenitic stainless steel 316 for external applications, and galvanized steel for internal applications.
- Sizes: to suit wall thicknesses.

242 SURFACE MOUNTED CHANNELS/ SLOTS

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Material: Austenitic stainless steel.
- Type: Attached lug.
- Profile: Rectangular.
- Size (width x depth): as indicated.
- Length: 100 mm.

© Copyright protected

- Fixing: Manufacturer's standard.

245 CHANNEL/ SLOT TIES as determined by Engineer

- Standard: To BS EN 845-1.
- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Material/ finish: Austenitic stainless steel - material/ coating reference 1.
- Sizes: as indicated.
- Channel/ slot fixing: Embedded.
- End types: Asymmetrical dovetail slot end with twisted plate surface end.
- Design embedment length (minimum): 50 mm.
- Additional requirements: None.

270 MESHWORK JOINT REINFORCEMENT GENERALLY

- Standard: To BS EN 845-3.
- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Type: Welded wire ladder type.
- Material: Austenitic stainless steel - material/ coating reference R1 to BS EN 845-3 for exterior applications and Zinc coated steel wire - material/ coating reference R13 to BS EN 845-3 for interior locations.
- Width: Approximately 40-50 mm less in width than wall or leaf.
- Placement: Lay on an even bed of mortar in a continuous strip with full laps at angles. Keep back 20 mm from face of external work, 12 mm back from face of internal work and finish joint to normal thickness.
  - Lap length (minimum): 225 mm.

281 LATERAL RESTRAINT PROPRIETARY SLIP TIES FOR MOVEMENT JOINTS GENERALLY

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals, subject to Engineer's approval.
- Material/ finish: Austenitic stainless steel - material/ coating reference 1.
- Fixing centres: Alternate courses.

282 GENERAL PURPOSE SLIP TIES FOR MOVEMENT JOINTS GENERALLY

- Standard: To BS EN 845-1.
- Manufacturer: Submit proposals.
  - Product reference: Submit proposals, subject to Engineer's approval.
- Material/ finish: Austenitic stainless steel - material/ coating reference 1.
- Sizes: as determined and recommended by manufacturer for the area of intended application.
- Shear load capacity: as recommended by Manufacturer.
- End types: Asymmetrical deformed plate and flat plate with slip case.
- Design embedment length (minimum): 50 mm.
- Additional requirements: None.
- Fixing centres: Alternate courses.

291 SPECIAL FIXINGS GENERALLY

- Type: Submit proposals.
- Material/ Finish: To PD 6697, clause 5.3.2.
- Performance: Of type, size, strength and number necessary to resist loads likely to occur during the life of the building and prevent lateral displacement or pulling apart of construction.

© Copyright protected

- Placement: Fill pockets with bedding mortar finished flush where exposed to view.

FLEXIBLE DAMP PROOF COURSES/ CAVITY TRAYS

310 DAMP PROOF COURSE - BITUMEN BASED

- Standard: To BS 6398.
  - Class: B.
- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.

INSTALLATION OF DPCS/ CAVITY TRAYS

415 HORIZONTAL DPCS

- Placement: In continuous lengths on full even bed of fresh mortar, with 100 mm laps at joints and full laps at angles.
- Width: At least full width of leaf unless otherwise specified. Edges of dpc not covered with mortar or projecting into cavity.
- Overlying construction: Immediately cover with full even bed of mortar to receive next masonry course.
- Overall finished joint thickness: As close to normal as practicable.

425 GROUND LEVEL DPCS

- Joint with damp proof membrane: Continuous and effectively sealed.

435 STEPPED DPCS IN EXTERNAL WALLS

- External walls on sloping ground: Install DPCS not less than 150 mm above adjoining finished ground level.

445 SILL DPCS

- Form and placement: In one piece and turned up at back when sill is in contact with inner leaf.

455 COPING/ CAPPING DPCS

- Placement: Bed in one operation to ensure maximum bond between masonry units, mortar and DPC.
- DPCS crossing cavity: Provide rigid support to prevent sagging.

465 SEALING DPCS PARAPET WALLS

- Overlaps and junctions: Seal with Cold applied roofing felt adhesive.

560 VERTICAL DPCS GENERALLY

- Form: In one piece wherever possible.
  - Joints: Upper part overlapping lower not less than 100 mm.

570 JAMB DPCS AT OPENINGS

- Joint with cavity tray/ lintel at head: Full underlap.
- Joint with sill/ horizontal DPC at base: Full overlap.
- Projection into cavity: Not less than 25 mm.
- Relationship with frame: In full contact.

JOINTS

610 MOVEMENT JOINTS WITH SEALANT GENERALLY

- Joint preparation and sealant application: As section Z22.
- Filler: fire treated Closed cell polyethylene foam.

© Copyright protected

  - Thickness: To match design width of joint.
  - Manufacturer: Submit proposals.
    Product reference: Submit proposals.
  - Placement: Build in as work proceeds with no projections into cavities and to correct depth to receive sealant system.
- Sealant:
  - Designation: ISO 11600-F-20LM.
  - Manufacturer: Submit proposals.
    Product reference: Submit proposals.
  - Colour: To match adjoining masonry.

615 MOVEMENT JOINTS WITHOUT SEALANT GENERALLY

- Filler: Fire treated Closed cell polyethylene foam.
  - Thickness: To match design width of joint.
  - Manufacturer: Submit proposals.
    Product reference: Submit proposals.
  - Placement: Build in as work proceeds filling the joint but without projecting into cavities.

616 FIRE RESISTANT MOVEMENT JOINTS WITHOUT SEALANT GENERALLY

- Fire resistant filler:
  - Thickness: to match design width of joint.
  - Fire resistance period: as indicated in Fire report.
  - Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
  - Placement: Compress and insert into place in open joint.
  - Adhesives and accessories: Types recommended by filler manufacturer.

630 UNEXPOSED CONTRACTION JOINTS

- Formation: Close butt as work proceeds.

650 POINTING IN FLASHINGS

- Joint preparation: Free of debris and lightly wetted.
- Pointing mortar: As for adjacent walling.
- Placement: Fill joint and finish flush.

670 TOPS OF NONLOADBEARING WALLS

- Restraints: to BS EN 845-1.
  - Fixing: Secure to soffit.
- Joint filler: fire treated closed cell polyurethane foam, where indicated on drawings.
  - Placement: Full, no gaps.

PROPRIETARY SILLS/ LINTELS/ COPINGS/ DRESSINGS

720 SILLS

- Standard: To BS 5642-1.
- Material: Precast concrete.
- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Dimensions: As shown on drawings allowable tolerance length - 6 mm, height and all other dimensions: +-3 mm.
- Finish: Smooth.

© Copyright protected

- Mortar for bedding/ jointing: Cement gauged as section Z21.
  - Standard: To BS EN 998-2.
  - Mix: 1:3 masonry cement: sand (mortar class 6).
  - Additional requirements: None.
- Joints: Flush.
- Bedding one-piece sills: Leave bed joints open except under end bearings and masonry mullions. On completion, point to match adjacent work.

735 PRECAST CONCRETE LINTELS

- Standard: To BS EN 845-2.
- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Types: as indicated on drawings.
- Sizes: as indicated on drawings
- Additional requirements: as indicated on drawings.
- Placement: Bed on mortar used for adjacent work.
  - Bearing length (minimum): 100 mm unless otherwise indicated on drawings.

760 COPING UNITS

- Standard: To BS 5642-2.
- Material: Natural stone, or precast concrete or metal as indicated on drawings.
- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Dimensions: As shown on drawings.
- Finish: To match sample submitted to Engineer's approval.
- Mortar for bedding/ jointing: Cement gauged as section Z21.
  - Standard: To BS EN 998-2.
  - Mix: 1:3 masonry cement: sand (mortar class 6).
  - Additional requirements:
    Material density (Mean value to BS EN 1936:2006): 2550 kg/m³.
    Durability freeze-thaw (Mean values to EN 12371:2010): 8.5 MPa.
    Flexural strength (Mean value to BS EN 12372:2006): 8.5 MPa.
    Reaction to fire: Class A1.
    Open porosity: 7.5%.
    Water absorption (Mean value to BS EN 13755:2008): 2%.
- Resistance to fixing: (Mean value to BS EN 13364:2002): 2600 N.
- Joints: Full and finished flush.
- Placement: Lay on a full bed of mortar to line and level.

MISCELLANEOUS ITEMS

840 OPENINGS FOR FRAMES

- Formation: Use accurate, rigid templates to required size.

850 WALL PLATES

- Placement: On full bed of mortar to correct horizontal level.

© Copyright protected

G10 - STRUCTURAL STEEL FRAMING

- To be read with Preliminaries/ General Requirements.

GENERAL

20 RELATED DOCUMENTS

- This section includes:
  - Structural Steel.
  - Shrinkage-resistant grout.
  - Architectural exposed structural steel.
  - Shear stud connectors.
- To be read with Drawings, Specifications, Bill of Quantities, and general provisions of the Contract, including General and Particular Conditions.
- To be read with:
  - Division “A” for “Quality Requirements” for independent testing agency procedures and administrative requirements.
  - Division “E” for “cast-in-place concrete on steel decking”.
  - Division “G” for “Metal Profiled Sheet Decking”.
  - Division “M” for “Painting and Fireproofing on Steel”.
  - Division “Q” for “Grating”.

30 INFORMATIONAL SUBMITTALS

- General: Submit each item in this section according to the Conditions of the Contract and Division A Specification Sections.
- Qualification data: Submit qualification data for firms and persons specified in the "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of engineers and employers, and other information specified. For each project, submit photographs showing details of installed AESS.
- Fabricator: Submit the name of the proposed fabricator with reference to works of a similar nature carried out by him on other projects, with relevant dates. Engage a firm experienced in fabricating structural steel similar to that indicated for this project and with a record of successful in-service performance, as well as sufficient production capacity of fabricate structural steel without delaying the works.
- Erector: Submit the name of the proposed erector with reference to works of a similar nature carried out by him on other projects, with relevant dates. Engage an experienced Installer who has completed structural steel works similar in material, design and extent to that indicated for this Project and with a record of successful in-service performance.
- Qualified engineer qualifications: A qualified Engineer who is legally authorized to practice in jurisdiction where Project is located and who is experienced in providing Engineering services of the kind indicated. Engineering services are defined as those performed for projects with structural steel framing that are similar to that indicated for this Project in material, design and extent.
- Quality control: Submit a method statement of the system of quality control to be used in fabrication and erection including proposed welding procedure complying with BS EN1011.

An approved quality control Engineer is to be assigned for the complete duration of the works to ensure proper performance.

- Surveys of existing conditions: Submit for information certified copies of each survey conducted by an approved engineer, showing elevations and locations of base plates and anchor bolts to receive structural steel, and final elevations and locations for major members. Indicate discrepancies between actual installation and contract documents.
- Quality system: Comply with ISO 9001/9002 Quality System as a minimum. Incorporate all the standard procedures supplied by the Engineer and the Employer.
- Product data: Submit producer's or manufacturer's specifications and installation instructions. Include mill test reports in accordance with EN standard relevant to each product, laboratory test reports and other data to show compliance with specifications (including specified standards) for the following products, but not limited to:
  - Structural steel (each type), including certified copies of mill reports covering chemical and physical properties.
  - Bolts, nuts, and washers, including mechanical properties and chemical analysis.
  - Tension-control, high strength bolt-nut-washer assemblies.
  - Direct-tension indicators.
  - Shear stud connectors.
  - Welding electrodes.
  - Anchor bolts.
  - Threaded rods.
  - Forged-steel hardware.
  - Shrinkage-resistant grout.
  - Bearing pads and stainless-steel plates.
  - Slide bearings.
  - Prefabricated building columns.
  - Shop primer.
  - Galvanized-steel primer and repair paint.
  - Etching cleaner.
- Welding certificates.
- Test reports: Submit copies of reports of tests conducted on shop and field bolted and welded connections. Include data on type(s) of tests conducted and test results. State compliance or non-compliance with specifications.
- Fabricator and erector: Submit the name of the proposed fabricator and erector with reference of works of a similar nature carried out by the company on other projects, with relevant dates.
- Surveys of existing conditions: Submit for information certified copies of each survey conducted by an approved engineer, showing elevations and locations of base plates and anchor bolts to receive structural steel, and final elevations and locations for major members. Indicate discrepancies between actual installation and contract documents.
- Method statement: Submit for approval, Quality Control method statement in accordance with quality assurance procedures, and Erection method statement. No fabrication works are to commence before approval of test reports and submittals.
- Source quality-control reports.
- Field quality-control reports.

40 DEFINITIONS

- Reference standards: Follow the latest edition in case any standard in this specification is superseded by newest version.
- Structural steel: Elements of structural-steel frame indicated on Drawings and as described in BS EN 1993-1-1, BS EN 1090-1 and -2.
- AESS: Architecturally exposed structural steel. Category as defined in the Architectural drawings and specifications in the Contract Documents.

50 PERFORMANCE REQUIREMENTS

- Engineering responsibility: Engage a fabricator who utilizes a qualified engineer to prepare calculations, shop drawings, and other structural data for structural steel members and connections. The fabricator shall be specialized, registered, and licensed for building structural steelwork according to the local building and construction Authority. The name of the structural steel fabricator and the location of the fabrication shall be submitted to the Engineer.
- Calculations: Submit clear, self-explanatory, easy to follow, and well documented calculation notes supporting each of the task along with softcopy of computer models conducted for the analysis/design. The contractor has to be ready to submit softcopy of the used programs with licensed copy and supporting manuals. Contractor has to be ready to validate any software, spreadsheets or homemade tools used in the analysis/design against the codes, and standards indicated in this Section, once requested by the Engineer.

60 ACTION SUBMITTALS

- General: Submit each item in this Article according to the Conditions of the Contract and Division “A” Specification Sections.
- Design calculations: For the extent of structural steel items shown on the project drawings, the contractor is to submit design criteria, reference codes and loads used, fully detailed computer analysis and design including input data file, analysis model, end restraints and the associated output diagrams of all straining actions, stresses and code checking in addition to design calculations for bolted and welded connections.
- Product data: As detailed in clause “Information Submittals” For each type of product indicated.
- Shop drawings: As detailed in clause “Drawings and Calculations Prepared by Contractor”.
- Welding procedure specifications (WPSs) and procedure qualification records (PQRs): Provide according to BS EN ISO 15607 to BS EN ISO 15613 - AWS D1.1/D1.1M, "Structural Welding Code - Steel", for each welded joint whether prequalified or qualified by testing, including the following:
  - Power source (constant current or constant voltage).
  - Electrode manufacturer and trade name, for demand critical welds

GENERAL REQUIREMENTS/ INFORMATION

111 CONTRACTOR'S DESIGN OF MEMBERS AND JOINTS OF STEEL STRUCTUTRES

- Design concept: In accordance to designated standards and criteria in the specifications, report, and drawings issued in the concept design stage.
- Design responsibility: Design and detail all steel members and joints to suit the conceptual layout detailed in the contract drawings.

- Other responsibilities: Contractor’s design of concrete encasement as per section E05.

- Structural requirements:
  - Design: Complete in accordance with the designated code of practice to satisfy specified performance criteria.
  - Connections: Design and detail joints to designated code of practiceAll moment connections are fully restrained (Rigid connections) as per BS EN 1993-1-8.
  - Fixings to foundations and walls: Design and detail fixings to concrete to designated code of practice.
  - Loads: The loads that shall be taken in the design are as follows:
    a. Basis of structural design: BS EN 1990: Basis of structural design.
    b. Dead Loads (D): Self weight of all components.
    c. Imposed actions are according to Eurocode 1, BS EN 1991-1-1: actions on structures - part 1-1: general actions — densities, Self-weight, imposed loads for buildings.
    d. Wind Loads (W): Wind loads according to Eurocode 1, BS EN 1991-1-4: actions on Structures - part 1-4: general actions - wind actions, considering the following: the fundamental basic wind velocity (as per project location) for 10 Min. Mean wind velocity with an annual risk of being exceeded of 0.02.
    e. Seismic Loads (E): Seismic loads according to Eurocode 8, BS EN 1998-1: design of structures for earthquake resistance, Part 1: general rules, seismic actions and rules for buildings. Ground acceleration and seismic parameters (as per project location).
    f. Temperature Variation (T): -/+ degrees C (as per project location).
    g. The design load combinations are as per BS EN 1990: Basis of Structural Design.
  - Additional requirements: Respect the architectural design intent and choose details consistent with the architectural wall sections, elevations, and image. Submit preliminary dimensions and configuration of the connections for the approval of the Engineer before starting the structural design of connections. The Engineer reserves the right to modify/confirm the shape of the connections to respect the architectural intent.
- Design and production information: Engage a fabricator who utilizes a qualified engineer to prepare calculations, shop drawings, and other structural data for structural steel members and connections. As Preliminaries section A31 and clause 120.

115 DESIGN CONSTRAINTS - GENERAL

- Members forming bracing systems or girders of lattice construction: Unless detailed or instructed otherwise, position so that their lines of action intersect at a point.
- Bolts:
  - Diameter (minimum): as per approved connection design**.**
  - Number per connection (minimum): as per approved connection design, with minimum of two bolts.
  - Other requirements: Choose bolt dimensions to ensure that threads do not occur in shear plane of joint. Choose suitable bolt length to ensure receiving the required washer and nuts with full tightening in threads.

- Punching of bolt holes: Permitted except when detailed otherwise. Enlarge holes with heat is not permitted.
- Welds: Full profile, fillet welds, minimum 6 mm or 0.7 smaller thickness of connected plates, whichever is smaller.
- Other constraints: Pre-set anchors shall not be replaced by post-anchors; Welded splice of any member to be full-penetration weld.
- Architecturally exposed structural steel: Engage a firm experienced in fabricating and erecting structural steel similar to that indicated for this Project. Provide qualification data for firms and persons assigned to execution of architecturally exposed structural steel elements and details, compliance with AISC. Refer to Architectural section related to Architecturally Exposed Structural Framing. Prepare mockups at least four weeks prior to fabrication to demonstrate aesthetical effects as well as qualities of materials and execution. Build mockups to comply with the following requirements, using materials indicated for the final unit of Work:
  - Locate mockups on-site or in the fabricator's shop as directed by the Engineer. Mockups shall be full-size pieces unless the Engineer approves smaller models.
  - Notify the Engineer one week in advance of the dates and times when mockups will be available for review.
  - Obtain Engineer's approval of mockups before starting fabrication of final units.
  - Demonstrate the proposed range of aesthetic effects regarding each element listed under the fabrication heading below.
  - Mockup will have finished surface including surface preparation and paint system.
- Products and equipment: shall demonstrate compliance with sustainability targets and requirements.

116 DESIGN CONSTRAINTS - STEELWORK TO BE GALVANIZED

- Steel grades: Do not use steel downgraded from a higher specification.
- Detail design: Avoid details that will increase the risk of initiating liquid metal assisted cracking (LMAC).
- Particular restrictions: Avoid asymmetrical sections; Avoid redundant members in latticed construction; Balance primary welds on either side of section access; Restrict changes in material thickness ratio, thick to thin, to less than 2.5:1; Round corners of rectangular web openings; Use bolted cleat connections; Use fillet welds for attachment of brackets; Use full end plates and stiffeners.
- Other requirements: Drill holes for bolts; Grind exposed cut edges and notches; Seal vent and drainage holes in hollow sections using non-ferrous plugs.

124 DRAWINGS AND CALCULATIONS PREPARED BY CONTRACTOR

- Information required: As project schedule.
- Requirements: Before preparing detailed fabrication drawings, submit General arrangement drawings: Submit before preparing calculations. Clearly identify:
  - Individual steel members.
  - Conflicts with other work.
  - Proposed changes to contract drawings.
  - Preliminary submittal showing proposed conceptual typical connection details with the design methodology, sample calculations, etc.

  - Detailed comprehensive design submittals of all connections substantiated with structural calculations performed using approved speciality software (IdeaStatica, Ram, Limcon, etc.). Design submittals shall include soft/native copy of the design connection runs and shall be signed and sealed by the qualified Engineer responsible for their preparation.
- Member and joint calculations: Submit for approval before preparing fabrication drawings.
- Structural-steel connections: Submit and comply with design loads, include structural analysis data signed and sealed by the qualified Engineer responsible for their preparation.
- Methods of erection and calculations of erection stability and stresses: Submit for all stages of constructions including methods of bracing and temporary guys.
- Shop drawings: Signed and sealed submission by a qualified Engineer responsible for their preparation. Show fabrication of structural-steel components include:
  - Details of cuts, connections, splices, camber, holes, and other pertinent data.
  - Embedment drawings.
  - Welds by standards symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain.
  - Type, size, and length of bolts, distinguishing between shop and filed bolts. Pre-tensioned and slip-critical high-strength bolted connections.
  - Setting drawings, templates, and directions for installation of anchor bolts and other anchorage to be installed as works of other sections.
  - Members and connections of the seismic-load resisting system. Locations and dimensions of protected zones. Demand critical welds.
  - Identify methods of bracing and temporary guys.
  - Identify members not to be shop primed.
  - Include detailing fabrication of architecturally exposed structural steel AESS.
  - Setting drawings, templates, and directions for installation of anchor bolts and other anchorage to be installed as works of other Sections.
  - For structural-steel connections, include structural analysis data signed and sealed by the qualified engineer responsible for their preparation.
- As-built drawings: At project close-out, submit record "As-Built" drawings of completed works products, in accordance with requirements of specifications.
- Shop and erection drawings: Shall be substantiated with calculation notes including soft copies of any connection design model or spreadsheets. Any In-house design spreadsheets shall be validated with sample hand calculations.

125 SPECIFICATION STANDARD

- Standard: Comply with latest edition of National Structural Steelwork Specification (NSSS CE Marking version).
  - Additional requirements: Substitution of reference standards and other requirements from BS EN 1090-2 (for the execution of steel structures in compliance with Eurocode 3) when these differ from those given in the NSSS CE Marking version (see general guidance 5.1), Requirement to comply with a BS EN 1090-2 execution class, e.g. EXC2, in addition to the NSSS CE Marking version, Requirements for members supporting dynamic or vibrating loads or subject to fatigue, Submission of completion certificate.

  - Document availability: For the duration of the work, at fabrication shop and on site.
- References to engineer in NSSS CE marking version: For the purpose of this contract, interpret such references as being to the person named in section A10 as Consulting Structural Engineer, the person named in section A10 as administering the contract on behalf of the Employer.
  - Exceptions: Functions indicated in Design stage 1 and 2 checklists as being delegated to the Engineer appointed by the Contractor, Functions indicated in Design stage 1 and 2 checklists as being reserved for the Employer's Consulting Structural Engineer.
- Products: Follow the latest edition in case any standard in this specification is superseded by newest version.
  - BS 3692:2014 "ISO metric precision hexagon bolts, screws and nuts. Specification."
  - BS EN ISO 5817:2014 "Welding. Fusion-welded joints in steel, nickel, titanium, and their alloys (beam welding excluded). Quality levels for imperfections."
  - BS 7668:2016 "Weldable structural steels. Hot finished structural hollow sections in weather resistant steels. Specification."
  - BS EN ISO 9445 (all parts) "Continuously cold-rolled stainless steel. Tolerances on dimensions and form."
  - BS EN 10027-1:2016 "Designation systems for steels. Steel names."
  - BS EN 10029:2010 "Hot-rolled steel plates 3 mm thick or above. Tolerances on dimensions and shape."
  - BS EN 10034:1993 "Structural steel I and H sections. Tolerances on shape and dimensions."
  - BS EN 10048:1997 "Hot rolled narrow steel strip. Tolerances on dimensions and shape."
  - BS EN 10051:2010 "continuously hot-rolled strip and plate/sheet cut from wide strip of non-alloy and alloy steels. Tolerances on dimensions and shape."
  - BS EN 10055:1996 "Hot rolled steel equal flange tees with radiused root and toes. Dimensions and tolerances on shape and dimensions."
  - BS EN 10056-1:2017 "Structural steel equal and unequal leg angles. Dimensions."
  - BS EN 10056-2:1993 "Structural steel equal and unequal leg angles. Tolerances on shape and dimensions."
  - BS EN 10095:1999 "Heat resisting steels and nickel alloys."
  - BS EN 10163 (all parts) "Delivery requirements for surface condition of hot-rolled steel plates, wide flats and sections."
  - BS EN 10164:2018 – Steel products with improved deformation properties perpendicular to the surface of the product. Technical delivery conditions."
  - BS EN ISO 10684:2004 "Fasteners. Hot dip galvanized coatings."
  - BS EN ISO 14341:2020 "Welding consumables. Wire electrodes and weld deposits for gas shielded metal arc welding of non-alloy and fine grain steels. Classification."
  - BS EN ISO 16810:2014 "Non-destructive testing. Ultrasonic testing. General principles.
  - BS EN ISO 17659:2004 "Welding. Multilingual terms for welded joints with illustrations."
  - SCI/NSSS – National Structural Steelwork Specification for Building Construction – CE Marking Version; 2020 (7th Edition)."

- Design codes: Comply with applicable provisions of the following specifications and documents. Follow the latest edition in case any standard in this specification is superseded by newest version.
  - BS EN 1990:2005 “Eurocode. Basis of structural design.”
  - BS EN 1991-1 (all parts) “Eurocode 1. Actions on structures. General actions.”
  - BS EN 1993-1-1:2014 “Eurocode 3. Design of steel structures. General rules and rules for buildings.”
  - BS EN 1993-1-3:2006 “Eurocode 3. Design of steel structures. General rules. Supplementary rules for cold-formed members and sheeting.”
  - BS EN 1993-1-8:2005 “Eurocode 3. Design of steel structures. Design of joints.”
  - BS EN 1994-1-1:2004 “Eurocode 4. Design of composite steel and concrete structures. General rules and rules for buildings.”
  - BS EN 1998-1:2004 “Eurocode 8. Design of structures for earthquake resistance. General rules, seismic actions and rules for buildings.”

PRODUCTS

130 GENERAL STEEL SECTIONS AND PLATES

- Standard: To BS EN 10025-1 to 6.
  - Grade: S355JR, or approved equal, typically used unless noted otherwise; S275JR, or approved equal, used only when specified; S235JR, or approved equal, used only when specified.
  - Options: for galvanized steel to BS EN 10025.
- Source: Obtain steel from a source accredited to a national or internationally accepted quality standard.
- Other requirements: Steel to be galvanized to have a carbon equivalent value not exceeding 0.44.

135 HOLLOW STEEL SECTIONS

- Standard: To BS EN 10210-1 for hot finished sections, BS EN 10219-1 for cold formed welded sections.
- Grade: 355JR, or approved equal, typically used unless noted otherwise; S275JR, or approved equal, used only when specified; S235JR, or approved equal, used only when specified.
  - Options: For galvanized steel to BS EN 10210.
- Source: Obtain steel from a source accredited to a national or internationally accepted quality standard.
- Other requirements: Steel to be galvanized to have a carbon equivalent value not exceeding 0.44.

140 WELDS

- Welding materials: Conform to BS EN 1011-1 and -2 and relevant EN standards for consumables - AWS Code and AWS Filler Metal Specifications. Select materials which are suitable for use with types of steel to be joined. Unless otherwise indicated, connections are designed for:
  - Metal-Arc Welding Electrodes: to E42 (Table 1A) per BS EN ISO 2560, BS EN ISO 14171, BS EN ISO 26304, equivalent to E70XX series of the Specification for Mild

Steel Covered Arc-Welding Electrodes, AWS A5.1, or the Specification for Low-Alloy Steel Covered Arc-Welding Electrodes, AWS A5.5.

- Bare Electrodes and Granular Flux used in the submerged-arc process are to conform to BS EN ISO 14171, BS EN ISO 14174, BS EN ISO 26304, equivalent to F7 X-EXXX AWS flux classifications of the Specification for Base Mild Steel Electrodes and Fluxes for Submerged Arc Welding, AWS A5.17, or A5.23 or the of AISC "Specification for the Design, Fabrication and Erection of Structural Steel for Buildings".

141 SHEAR CONNECTORS

- Connector type: Headed stud shear connectors (SD).
- Standard: Headed-stud type, cold finished carbon steel, to BS EN 13918, BS EN 1994-1-1, and BC1, with a minimum yield stress of 345 N/mm2, nominal tensile strength of 450 N/mm2, and minimum elongation of 14%, both in cold drawn condition, when tested in accordance with the relevant European standard or equivalent AWS, and applied in accordance with Recommended Practices for Stud Welding
  - Size/ spacing: as shown on drawings.
- Source: Obtain material from a source accredited to a national or internationally accepted quality standard.
- Welding method: Shot fired pins, Drawn arc stud welding, 6 mm fillet welds.
- Procedure trials: Required.
- Other requirements:
  - Do not arc weld studs through more than one layer of decking.
  - Check the thickness of flanges and webs for the minimum requirements before welding.
  - Check the length for the minimum requirements to exceed the depth of deck corrugation.
  - Prepare steel surfaces as recommended by manufacturer of shear connectors. Shop weld shear connectors, spaced as shown, to beams and girders in composite construction. Use automatic end welding of headed-stud shear connectors according to BS EN 13918, BS EN 1994-1-1, AWS D1.1/D1.1M and manufacturer's printed instructions.

170 COLD-FORMED GALVANIZED STEEL PURLINS/ SIDE RAILS

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Material: Galvanized steel sheet to BS EN 10346.
  - Thickness: As per the approved calculations provided by supplier. This to be submitted for engineer’s review and approval.
  - Designation: As per the approved calculations provided by supplier. This to be submitted for engineer’s review and approval. Minimum S350GD+Z.
  - Any missing members shall be designed by the contractors/manufacturer.

171 OTHER SECTIONS

- Stainless steel plates for Teflon bearings: to conform to BS EN 10088-2 with a minimum 0.2% proof strength of 345 MPa or equivalent.
- Polytetrafluoroethylene: Polytetrafluoroethylene (PTFE) sheets are to conform to EN relevant standards – ASTM D 4894 and 4895.
- Seam stitching:

  - Fixings/ centres: 4.8 mm diameter self-drilling screws at 800 mm centres, installed from underside of sheet**.**
  - Coating applied by manufacturer: Sherardized or galvanized**.**
- Steel castings: EN relevant standards - ASTM A216/A216M, Grade WCB, with supplementary requirement S11.
- High strength steel castings: Conform to EN relevant standards - ASTM A148/A148M grade 795-655.
- Steel forgings: EN relevant standards - ASTM A668/A668M
- Clevises and turnbuckles: EN relevant standards made from cold-finished carbon steel bars - to ASTM A108, Grade 1035.
- Eye bolts and nuts: EN relevant standards made from cold-finished carbon steel bars - to ASTM A108, Grade 1030.
- Sleeve nuts: EN relevant standards made from cold-finished carbon steel bars - to ASTM A108, Grade 1018.

176 PROFILED SHEET FOR SHUTTERING/ COMPOSITE FLOOR SLABS

- Refer to section G30 related to METAL PROFILED SHEET DECKING.

FABRICATION

180 NOTIFICATIONS OF COMMENCEMENT

- Notice: Obtain permission of the Engineer before starting fabrication Give notice before fabrication is due to start.
  - Period of notice (minimum): [Five working days].
- General for fabrication:
  - Camber structural steel members where indicated.
  - Fabricate for delivery a sequence that will expedite erection and minimize field handling of structural steel.
  - Complete structural steel assemblies, including welding of units, before starting shop-priming operations.
  - Comply with fabrication tolerance limits as per standards.
  - Holes: Cut, drill, or punch standard bolt holes perpendicular to metal surface. Do not flame-cut holes or enlarge holes by burning. Drill holes in bearing plates. Provide holes required for securing other works to structural steel framing and for passage of other works through steel framing members, as shown on Shop Drawings.
  - Bolt field connections, except where welded connections or other connections are indicated. Do not distort or enlarge holes when using drifts. Do not use drifts of large diameter than holes. Report any misalignment of holes. Reaming of holes will not be allowed except for minor connections, and subject to written approval from the Engineer.

185 SEQUENCES

Unless noted otherwise and approved:

- Submit source quality-control reports.
- Obtain permission of the Engineer before starting fabrication.
- Fabricate for delivery a sequence that will expedite erection and minimize handling of structural steel.

- Where finishing is required, complete assembly, including welding of units, before starting of finishing operations. Provide finish surfaces of members exposed in final structure free of markings, burrs, and other defects.
- Comply with fabrication tolerance limits of standards.
- Mark and match-mark materials for field assembly.
- Accurately mill ends of columns and other members transmitting loads in bearing.

190 MARKING

- Identifying and recording materials and components: Submit details of proposed methods.
- Location of marks:
  - Generally: Visible for checking after erection.
  - Weathering steel: On surfaces not exposed to open view in the completed work.
- Steel to be blast cleaned, pickled, and metal sprayed or galvanized: Marked so that subsequent treatment cannot obliterate the marking.

195 HARD STAMPING

- Usage: Not permitted except as indicated on drawings.

200 FAYING SURFACES FOR PRELOADED JOINTS

- Location: Surfaces which are to receive special treatment to be identified.
- Steel 25 mm thick or over: Check faying surfaces for deformities that may reduce slip factor to below design limit.
  - Remedial measures: Submit proposals
- Preparation/ treatment: [As required for friction surface class category specified in approved design to BS EN 1993-1-8].

205 EXPOSED STEEL

- For fabrication of works which will be exposed to view, use only materials which are smooth and free of surface blemishes including pitting, rust and scale seam marks, roller marks, rolled trade names and roughness. Remove such blemishes by grinding, or by welding and grinding, prior to cleaning, treating and application of surface finishes.
- For the entire project: Use new steel, well and cleanly rolled to the dimensions, sections and weights specified, sound and free from cracks, surface flaws, laminations, and other defects, finished in a workmanlike manner. Supply certified materials that comply with the specifications and documents listed in this specification. Supply to the Engineer a summary list of the rolling mills and manufacturers from which it is proposed to obtain the steel sections, plates, forgings, and fixings.

210 END CONNECTIONS

- Angle cleats: Project 10 mm beyond ends of simply supported members.
- Finishing: Accurately mill ends of columns and other members transmitting loads in bearing.

215 HOLLOW SECTIONS

- Insides of sections: Debris and moisture removed before sealing ends and openings.
- Holes: Sealed to prevent access of moisture.
  - Method of sealing: Welding cap plate with thickness as shown on drawing.

217 CAMBERS

- Camber structural steel where indicated and comply with tolerance limits as per standards.
- Fabricate beams with rolling camber up.

218 SHOP CONNECTIONS

- Weld shop connections.

219 HOLES FOR BOLTS

- Cut, drill, or punch standard bolt holes perpendicular to metal surface.
- Do not flame-cut holes or enlarge holes by burning.
- Drill holes in bearing plates.
- Perform pre-installation verification as indicated in EN standards - RCSC prior to installation.
- Provide holes required for securing other works to structural steel framing and for passage of other works through steel framing members, as shown on shop drawings.
- Do not distort or enlarge holes when using drifts.
- Do not use drifts of large diameter than holes.
- Report any misalignment of holes.
- Reaming of holes will not be allowed except for minor connections, and subject to written approval from the Engineer.
- Bolted Connections: Bolted connections will be tested and inspected according to EN standards - AISC specifications and RCSC's "Specification for High-Strength Bolts". For pretension and slip critical joints, follow inspection as mentioned in EN standards - RCSC using Direct-Tension Indicator Pretensioning method.
  - Direct-tension indicator gaps will be verified to comply with BS EN 14399, BS EN ISO 898, ASTM F959/F959M, Table 2, F2437/F2437M.

220 ACCESS/ VENTILATION HOLES IN BASE PLATES

- Base plates larger than 1 m², or the smaller width larger than 600 mm Make 25 mm diameter holes as necessary for pressure grouting, escape of entrapped air or direct compaction of filling/ bedding material after erection of columns.

225 STEELWORKS TO BE GALVANIZED

- Standards: Apply zinc coating by the hot-dip process to structural steel according to BS EN ISO 14713, and ASTM A123 for American Standards.
- Cutting, drilling and shop welding: Complete before galvanizing.
- Vent and drain holes: Provide as necessary.
  - Locations: Submit proposals.
  - Sealing: Required, submit proposals

235 SHOP INSPECTION

- Give notice: Before fabricating.
  - Period of notice (minimum): [Three working days].

240 TRIAL SHOP ASSEMBLY

- Check fit, profile and camber before making connections in lattice girders and trusses which are assembled before delivery to site.
- Make trial assemblies of parts of structure.

- Component: Fabricate and assemble structural steel in shop to greatest extent possible.
- Give notice: Before commencing trial assembly.
  - Period of notice (minimum): [Three working days].

WELDING

250 WELDING PROCEDURES

- Quality management systems: To BS EN ISO 3834-3.
- Welding Procedure Specifications (WPSs) and Procedure Qualification Records (PQRs): Provide for each welded joint whether prequalified or qualified by testing, including power source (constant current or constant voltage), and electrode manufacturer and trade name, for demand critical welds.Certification of welders: [the steelwork contractor's system for the management of welding shall meet the standard quality requirements described in BS EN ISO 3834-3].
  - Third party certification: To BS EN ISO 9606-1.
  - Verification of welding procedures: Submit for Engineer's review and approval.
  - Welding procedure qualification records: To BS EN ISO 15614-1.
  - Provide evidence of welder's competence to undertake specified works. Welders must have been tested to the Standard Code using thickest plate specified and/or, material with highest carbon content, electrodes of appropriate class, welding positions which will be used in the works. Test Welder's competence to undertake special welding procedures when instructed.
- Special welding procedures:
  - Location: To be given where special welding procedures are needed. See BS EN ISO 15609-1.
  - Requirement: Submit procedure.

255 SITE WELDING

- Usage: unless otherwise indicated on the Drawings site welding will only be permitted for minor connections subject to written approval by the Engineer.
- Working conditions: Suitable and safe. Do not weld when surfaces are wet or when ambient temperature is below 0°C.

260 BUTT WELDS

- Use run on and run off plates to ensure full throat thickness at ends of butt welds.
- Material for plates is to be identical to material being welded.
- Prepare plates in same manner as parts being joined.
- Size of run on and run off plates to be 75 mm x 75 mm.
- After completion of welding remove plates and grind surfaces of joined parts where plates are attached to make smooth.
- Retain and identify plates for inspection when requested.

270 ADDITIONAL WELDS

- Welds (including tack welds) not indicated on drawings: Not permitted without approval.

BOLT ASSEMBLIES

302 NON-PRELOADED BOLT ASSEMBLIES

- To be used where specified only under the engineer approval.
- Designation: Countersunk bolts to BS 4933, grade 4.6. Countersunk bolts to BS 4933, grade 8.8. Cup bolts to BS 4933, grade 4.6. Cup bolts to BS 4933, grade 8.8. Hexagon head bolts to BS EN ISO 4014, grade A. Hexagon head bolts to BS EN ISO 4014, grade B. Hexagon head bolts to BS EN ISO 4016, grade C. Hexagon head screws to BS EN ISO 4017, grade A. Hexagon head screws to BS EN ISO 4017, grade B. Hexagon head screws to BS EN ISO 4018, grade C.
  - Threading: Part length for fitted bolts, otherwise full length. Part length for bolts to column splice plates, otherwise full length to suit design criteria
- Nuts and washers: To suit grade of bolt, as NSSS CE Marking version, clause 2.4.3.
- Coating applied by manufacturer: [Galvanized], [Sherardized] [Zinc plated].
- Other requirements: Provide additional washers under the nut as necessary]; [Bolts to beams supporting plant loads to be provided with lock nuts; Threaded length of fit bolts to BS EN 1993-1-8, clause 3.6.1.]; [For sections less than 4 mm thick, provide washers under both head and nut.

303 PRELOADED BOLT ASSEMBLIES

- Designation:
  - BS EN 14399-3, property class 8.8, system HR. BS EN 14399-3, property class 10.9, system HR. BS EN 14399-4, property class 10.9, system HV. BS EN 14399-7, property class 8.8/8, system HR with countersunk head. BS EN 14399-7, property class 10.9/10, system HR with countersunk head. Hexagon fit bolt assemblies to BS EN 14399-8, property class 10.9/10, system HVP. Hexagon head bolt assemblies to BS EN 14399-10, property class 10.9/10, system HRC. Cup head bolt assemblies to BS EN 14399-10, property class 10.9/10D, system HRC. Fit bolts to BS EN 14399-7, property class 10.9, system HV with direct tension indicators to BS EN 14399-9.
- Nuts and washers: To suit grade of bolt, as NSSS CE Marking version, clause 2.4.4.
- Coating applied by manufacturer: galvanized or Sherardized.

304 PROPRIETARY BOLT ASSEMBLIES

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.

305 PROPRIETARY ANCHORS TO CONCRETE, [TO 14 N DENSE CONCRETE BLOCKS, TO EXISTING STONE MASONRY

- Manufacturer: Submit Proposal.
  - Product reference: Submit proposals.
- Anchor type: Bonded anchor; Thick-walled sleeve expansion anchor. Bonded internally threaded sleeve with bolt. Intended bolt. Rebar bolt. Rag bolt.
- Material: Carbon steel; stainless steel.

310 ANCHORAGES TO CONCRETE

- Design standard: As the designated code of practice.
- Anchor type: Pre-set anchors or Bonded anchor as indicated on the drawings.

- Material: EN ISO 898-1 Grade 8.8, or EN ISO 898-1 Grade 10.9.
  - Coating applied by manufacturer: Galvanized.
- Concrete:
  - Grade: refer to section E10.
  - Condition: cracked.
- Characteristic resistances of single anchor remote from edge of concrete (minimum):
  - Tension: As shown on drawing or as per approved calculations.
  - Shear: As shown on drawing or as per approved calculations.
- Fixing in concrete: As per drawings: Pre-set anchors installed within customized templates, prior to casting of concrete or Bonded into predrilled hole using chemical bonding agent.

325 DIRECT TENSION INDICATORS

- To be used for all pretensioned bolted assemblies
- Standard: To BS EN ISO 898-1, BS EN 14399-9.
- Grade: Appropriate for grade of bolt and nut assembly.
- Finish: Plain (as processed).
- Ancillary components: Washers to BS EN 14399-9.
- Post installation and inspection treatment: Where no further protective coating is specified, apply a butyl rubber sealing compound to seal measuring gap around indicators.

335 SPRING WASHERS

- Standard: To BS 4464.

370 GALVANIZED COATING TO BOLT ASSEMBLIES

- Standard: To BS 7371-6.
- Galvanizing: Applied by fastener manufacturer. Passivated and lubricated if no additional coatings are specified. Nuts tapped after galvanizing.
- Use/location: All shop and site connections in shop painted steelwork.

375 SHERARDIZED COATING TO BOLT ASSEMBLIES

- Standard: To BS 7371-8.
  - Class: 30
- Sherardizing: Applied by fastener manufacturer and passivated.
- Post treatment: Sealed - inorganic or organic sealant. Lubricant: Commonly, molybdenum disulphide. Reduces torque required to turn nuts, making them easier to put on Zinc Phosphated (passivated).
- Use/location: All shop and site connections in shop painted steelwork.

380 ZINC PLATED FINISH TO BOLT ASSEMBLIES

- Standard: To BS EN ISO 4042.
  - Designation: as shown on drawing. A7L.
- Zinc plating: Applied by fastener manufacturer. Clear passivated if no additional coatings are specified. Nuts tapped after plating.
- Use/ location: All shop and site connections in shop painted steelwork.

390 SEALED HOLLOW SECTIONS

- Holes: Sealed to prevent access of moisture.

- Method of sealing: [Submit proposals].

ERECTION

405 OUTLINE METHOD OF ERECTION

- Outline method statement of erection is to be submitted for approval.
- Set structural steel accurately in locations and to elevations indicated and according to NSSS CE marking version, BS EN 1090-1 and -2, ANSI/AISC. Consider the followings:
  - Ensure that the capacity of plant and equipment used for erection are suitable and are in first class working order.
  - Obtain permission before starting erection of steelwork. Do not use welding equipment on site without approval.
  - Align and adjust various members that form part of complete frame or structure before permanently fastening.
  - Before assembly, clean bearing surfaces and other surfaces that will be in permanent contact with members.
  - Clean concrete- and masonry-bearing surfaces of bond reducing materials and roughen surfaces prior to setting columns base plates. Clean bottom surface of plates.
  - Verify elevations of concrete- and masonry-bearing surfaces and location of anchor rods, bearing plates, and other embedment for compliance with requirements.
  - Notify the Engineer when space beneath any column base is less than 10 mm or more than 50 mm.
  - In the presence of shear key pocket, pre-set anchors to be out of pocket fully embedded in concrete to avoid bending during erection.
  - Perform necessary adjustments to compensate for discrepancies in elevations and alignment. Proceed with installation only after unsatisfactory conditions have been corrected.
  - Weld plate washers to top of base plates. Not to be welded if shear key is used.
  - Snug-tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but. if protruding, cut off flush with edge of plate before packing with grout.
  - Promptly pack grout solidly between bearing surfaces and plates so no void remains. Neatly finish exposed surfaces, protect grout and allow to cure. Comply with manufacturer's written installation instructions for shrinkage-resistance grout.
  - Level and plumb individual members of structure.
  - Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding tolerances in specifications for mill material.
  - Comply with Specifications for bearings, adequacy of temporary connections, alignment, and removal of paint on surfaces adjacent to field welds.
  - Make allowance for difference between temperature at time of erection and mean temperature when structure is complete and in service.
  - Splice members only where indicated.
  - Do not use thermal cutting unless approved by the Engineer. Finish thermally cut sections within smoothness limits.
  - Do not enlarge unfair holes in members by burning or using drift pins. Ream holes that must be enlarged to admit bolts.

- For shear connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to standards BS EN 13918, BS EN 1994-1-1, AWS D1.1/D1.1M and manufacturer's written instructions.
- For slotted holes: Ensure bolts are in center of holes after erection of structure and ensure that washers of anchors are not welded to base plate.
- Treat sliding surfaces of proprietary joints in accordance with manufacturer's recommendations before connecting.
- Ensure bolts are in center of slotted holes after erection of structure.
- Use double nuts (finger tight nut to allow movement plus lock nut) for bolts in slotted holes with non-friction type connection.
- For architecturally exposed structural steel: Remove erection bolt on welded, and fill holes with plug welds, and grind smooth at exposed surfaces. Remove backing bars or runoff tabs, back gouge, and grind steel smooth.

- Verify that weld sizes, fabrication sequence, and equipment used for architecturally exposed structural steel will limit distortions to allowable tolerances. Prevent surface bleeding of back-side welding on exposed steel surfaces. Grind smooth exposed fillet welds 13 mm and larger, and flush butt welds. Dress exposed welds.

406 FIELD CONNECTIONS

- Bolt filed connections, except for welded connections or other connections are indicated.
- Perform pre-installation verification for bolted field connections prior to installation.
- High-Strength Bolts: Install high-strength bolts according to Standards for type of bolt and type of joint specified. For pretension and slip critical joints, follow installation and inspection as mentioned in standards using Direct-Tension Indicator Pretensioning method.

410 PRE-ERECTION CHECKS

- Scope: At least 7 days before proposed erection start date, check the following:
  - Foundations and other structures to which steelwork will be attached: Accuracy of setting out.
  - Holding down bolts: Position, protruding length, slackness and condition.
- Inaccuracies and defects: Report without delay.
- Permission to commence erection: Obtain.

415 DELIVERY, STORAGE, HANDLING AND SEQUENCING

- Deliver structural steel to Project site in such quantities and at such times to ensure continuity of installation.
- Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, platforms, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.
- Store fasteners in a protected place in sealed containers with manufacturer's labels intact. Fasteners may be repackaged provided independent testing and inspecting agency observes repackaging and seals containers. Clean and relubricate bolts and nuts that become dry or rusty before use. Comply with manufacturer's written recommendations for cleaning and lubricating fasteners and for retesting fasteners after lubrication.

- Manufactured items are to be delivered in original packages, containers, …etc bearing name of manufacturer and brand. Each piece of material is to bear the official grade and trade mark of the association under whose rules it is graded, or is to be accompanied by a certificate of inspection issued by that association.
- Protect steel works by approved adequate measures from constructional hazards during and after erection.
- Deliver anchor bolts and anchorage devices which are to be embedded in cast-in-place concrete or masonry, in ample time to not to delay works.
- Supply and coordinate installation of anchorage items to be embedded in or attached to other construction without delaying the works. Provide setting diagrams, templates, instructions, and directions as required, for installation.

420 SETTING OUT

- Permissible deviations: In addition to the requirements of the NSSS CE Marking version, add permissible deviations for different types of dimension and locations, as necessary.
- Supply and Coordinate installation of anchorage items to be embedded in or attached to other construction without delaying the works. Provide setting diagrams, templates, instructions, and directions, as required, for installation.

425 MODIFICATIONS

- Steelwork: Do not modify without approval.
- Temporary fabrication/ erection attachments: May remain when they will not interfere with subsequent work, and will be completely hidden by finishes; otherwise, remove.

432 TEMPORARY SUPPORT

- Permanent bracing system:
  - Vertical: as detailed on drawings.
  - Horizontal: as detailed on drawing.
- Temporary bracing/ restraints: Provide as necessary until permanent bracing system is complete and sufficiently mature to carry loads and all connections have been made to the permanent system. Do not remove temporary shoring supporting composite deck construction (propped type) until cast-in-place concrete has attained its design compressive strength.
- Elements to be supported: as detailed on drawing.
- Bracing/ Restraints: Provide as necessary until permanent connection can be made to floor structure, and as detailed on drawing.
- Forces and moments in temporary supports: As per contractor's method statement of erection and supporting calculations.

440 COLUMN BASES

- Levels: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates. Clean bottom surface of plates; Adjust using steel shims or folding wedges no larger than necessary.
- Location of shims/ wedges: Position symmetrically around perimeter of base plate. Do not use a single central pack.
- Give notice: If space beneath any column base is outside specified limits for bedding thickness.

- Accuracy of erection: Verify, with steel Erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedment for compliance with requirements. Check, and correct errors before filling and bedding beneath bases and carrying out other adjacent work. Weld plate washers to top of base plate. Snug-tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
- Proceed with installation only after unsatisfactory conditions have been corrected.

441 GROUT FILLING/ BEDDING OF COLUMN BASES

- Bedding thickness range: 25–40 mm unless noted otherwise on drawings.Bolt pockets: Completely filled with neat cement slurry. ; Check pre-set anchors to be out of pocket, embedded in concrete during erection.
- Promptly pack grout solidly between bearing surfaces and plates so no voids remain. Neatly finish exposed surfaces, protect grout and allow to cure. Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.Spaces beneath base plates:
  - NON-SHRINK RHEOPLASTIC EXPANSIVE CEMENT GROUT: free flowing, non-shrink, non-ferrous rheoplastic, oil resistant and water resistant; complying with CE-CRD-C621 and having minimum compressive strength of 60 MPa; or equal.
- Additives: Not required.

443 PROPRIETARY FILLING/ BEDDING OF COLUMN BASES

- Bedding thickness range: 25-40mm.
- Preparation: Concrete surfaces scarified to provide a good mechanical key.
- Bolt pockets and spaces beneath base plates: Completely filled with approved grout filling.

445 MOVEMENT JOINTS

- Joint type: as shown on drawings. Bolts in shear in slotted holes, laminated neoprene bearing. Sliding bearing surfaces coated with molybdenum disulphide grease. Sliding bearing with a polished, austentic stainless steel upper surface sliding on a PTFE layer. Solid rubber bearing, submit proposal for approval.
  - Requirements: Shouldered bolts fitted with washer, spring washer, nut and lock nut]. [Anchor bolts in slotted holes as per drawings, and fitted with spring washers and self-locking nuts, cadmium plated to BS EN 2133].
- Appearance and fit: Bolts centred in slotted holes unless otherwise indicated. Joints free to move.

447 BONDED ANCHORS

- Holes: Clean and free from dust at time of installing anchor.
- Permeable sleeves: Use in conditions where otherwise the loss of bonding agent would be unacceptably high.
- Other requirements: refer to drawings.

TESTING

460 QUALITY CONTROL

- Arrange the tests in the following section for
  - Fabrication phases at shop.

  - Erection phases at site.
- Provide testing agency with access to places where structural steel works is being fabricated or produced or erected so required inspection and testing can be accomplished.

465 TESTING

- Testing: Arrange tests for each type of product indicated. Prepare test pieces as necessary.
- Product data: As detailed in clause “Information Submittals” For each type of product indicated.
- Test: Testing agency will:
  - Inspect and approve the received raw material and material delivered to site.
  - Conduct and interpret tests and state in each report whether test specimens comply with or deviate from requirements.
  - Review and approve steel fit up and dimension check report.
  - Inspect and approve the completed fabricated material prior to dispatch to site.
  - Review and approve steel alignment and survey reports.
  - Inspect and test all bolted and welded connections.
  - Inspect and approve the composite deck construction.
  - Inspect and approve surface rectification and application of any coating system including painting or fireproofing system.
  - Certify welders and conduct inspections and tests as required, Record types and locations of defects found in works, Record works required and performed to correct deficiencies.
  - Carry out ultrasonic testing for lamination. The appropriate through thickness tension properties (Z-Quality) material is to be utilized to diminish possibility of lamellar tearing and cracks.
  - Inspect and approved welded shear connector.
  - Test Non-shrink grout.
- Testing authority: Accredited laboratory or an approved laboratory.
  - The fabricator could be the testing authority if the necessary facilities, equipment and qualified personnel are available.
  - Or Testing authority: Contractor will engage at his own expenses a qualified independent testing and inspecting agency approved by owner’s designated representative for construction to perform shop and field inspections and tests and to prepare test reports for owner’s representative review and approval.
- Frequency/ Number: Where the extent of a test cannot be expressed as a frequency, a number, or provisional number can be inserted. Examples are as follows:
  - Visual inspection of all welds.
  - Non-destructive tests on 10% of fillet and partial penetration weld length of each joint as a first round, depending on its results the Engineer might instruct the Contractor to extend the testing process and/or to replace welder at no extra cost.
  - Non-destructive tests on 100% of the lengths of all complete joint penetration (full penetration) weld.
  - Non-destructive tests on 100% of site welds; Depending on its results, the Engineer might instruct the Contractor to replace welder at no extra cost. Non-destructive tests of complete joint penetration (full penetration butt weld) welds to be done on 100% of the welded lengths.

  - Lamination test on all head plates for moment connections with 15 mm thick and above.
  - Lamination test on plates with 25 mm thick and above, and plates subjected to through thickness tensile stresses.
  - Prepare 50 mm cubes of the non-shrink grout and test for compressive strength, a total of six test specimens shall be prepared, three of which will be tested.
- Level of acceptability: to be agreed; as per Specifications.
  - Contractor to correct deficiencies in or remove and replace structural steel that inspections and test reports indicate do not comply with specified requirements.
  - Additional testing, at Contractor's expense, will be performed to determine compliance of corrected works with specified requirements.
  - Testing agency may inspect structural steel at plant before shipment, however, Engineer reserves right, at any time before final acceptance, to reject material not complying with specified requirements.
  - Cracks or zones of incomplete fusion or penetration of welds are not acceptable.
- Other requirements:
  - Selection of tested samples to be approved by the Engineer.
  - Fillet weld to be tested in accordance to Liquid Penetrate Inspection, or Magnetic Particle Inspection performed on root pass and on finished weld of fillet welds at random;
  - Partial and Full Penetration Welds to be tested in accordance to Radiographic Inspection, or Ultrasonic Inspection;
  - Visual test on welded shear connectors, and bend test to be performed when visual inspections reveal either less than a 360-degree flash or welding repairs to any shear connector.
  - Tests to be conducted on additional shear connectors when weld fracture occurs on shear connector already tested.
  - In addition to visual inspection, test and inspect field-welded shear connectors for stud welding and as follows: Perform bend tests if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to any shear connector. Conduct tests on additional shear connectors if weld fracture occurs on shear connectors already tested.
  - Plates and rolled members subject to tension vertical to the rolling direction as well as the requirement for welding of thick plates will require appropriate through thickness tension properties (“ttt”/“z-quality”) as per BS EN 1993-1-10 and BS EN 10164. Contractor is responsible, in accordance to his fabrication process, procedure and plates thickness, if Z quality plates are required in any other details to reduce the possibility of lamellar tearing occurrence.
- Test and examination results: Submit <five> copies immediately they are available; State compliance or non-compliance with specifications.

466 TESTS REFERENCE

- Visual Inspection to BS EN ISO 17637.
- Liquid Penetration Inspection to BS EN ISO 3452, and ASTM E165/E165M for American Standards.
- Magnetic Particle Inspection to BS EN ISO 17638, BS EN ISO 9934, and ASTM E709/E709M for American Standards.

- Radiographic Inspection to BS EN ISO 17636-1 and -2, BS EN ISO 5579, ASTM E94/E94M, minimum quality level "2-2T" for American Standards.
- Ultrasonic Inspection to BS EN ISO 17640, BS EN ISO 23279, BS EN ISO 11666, and ASTM E164/E164M for American Standards.
- Lamination inspection to in accordance with BS EN 10160, BS ISO 17577, ASTM E164, and ASTM A435/A435M for American Standards.
- Test methods for hot dip galvanized coatings to BS EN ISO 1461.
- Shear connector Inspection according to requirements in BS EN ISO 14555, BS EN ISO 13918, BS EN 1994-1-1, abd AWS D1.1/D1.1M for American Standards.
- Non-shrinkage grout to ASTM C109, or approved equal in EN Standards.

467 EXCEPTIONS TO NSSS CE MARKING VERSION REQUIREMENTS FOR WELD TESTING

- Weld location: as per drawings and approved calculations.
  - Requirements: Final acceptance of welds to BS EN 1090-2, Section 12.4.

470 SITE TESTING OF ANCHORS TO MASONRY

- Standard: To BS 5080.
- Preliminary tests: 5 No. tests for tensile loading to failure in locations that will be hidden in completed structure.
- Proof tests: Test 10% of working fixings to 1.5 times the working load
- Test results: Report failures and seek instructions.

COATING

700 PROTECTIVE COATINGS / PROTECTIVE COATING SYSTEMS / PREPARATION FOR PAINTING

- Refer to Architectural sections related to High performance coatings, Applied Fire Protection for requirements of cementitious fireproofing on steel, and Intumescent Fire Protection for requirements of intumescent fireproofing on steel. Painting and fire proofing shall be read from Section M22 for SPRAYED MONOLITHIC COATINGS, Section M60 for PAINTING AND CLEAR FINISHING, and Section M61 for Intumescent coatings for fire protection of steelwork

710 SURFACES NOT TO BE COATED

- Location: [as shown on drawing].

730 PREPARATIONS FOR SITE WELDING OF SHOP PAINTED STEELWORK

- Method:
  - Mask weld areas immediately after blast cleaning and before coating steelwork. If paint system comprises more than one coat, step each coat 30 mm back from edge of preceding coat and away from masked areas. Remove masking immediately before welding.
  - Prepare and paint steelwork including weld areas. Grind off to bare steel around each weld area immediately before welding.

735 TREATMENT OF SITE WELDED JOINTS IN PAINTED STEELWORK

- Preparation: After welding, and without delay, remove scale and weld spatter from weld areas. Remove traces of rust. Wash with clean water and allow to dry. Prime without delay.
- Protective/ Decorative coatings: Apply to weld areas to match surrounding painted areas.

736 TREATMENT OF SITE WELDED JOINTS IN GALVANIZED STEELWORK

- Preparation: After welding, and without delay, remove scale and weld spatter from weld areas. Remove traces of rust. Wash with clean water and allow to dry.
- Coating: Reinstate using one of the methods given in BS EN ISO 1461, clause 6.3.

740 BOLTED JOINTS (OTHER THAN PRELOADED JOINTS)

- Steelwork to be shop painted: Apply full shop specification to joint faces.
- Steelwork to be erected with mill finish then site painted: Before erection, prepare and prime joint faces and allow to dry.
- Bolted joints in externally exposed steelwork:
- Immediately before assembling, apply a further coat of primer and bring surfaces together while still wet.
- After assembling and before applying site coatings, seal crevices to bolts and joint perimeters with a compatible sealant.

745 FAYING SURFACES OF PRELOADED JOINTS

- Protection: Immediately after blast cleaning and before coating surrounding areas, mask faying surfaces to protect from contamination and deterioration.
- Paint systems comprising more than one coat: Step each coat 30 mm back from edge of preceding coat and away from masked areas.
- Removal of protection: Immediately before bolting, remove masking. Check faying surfaces are free from adhesive. Clean with solvent if necessary.

750 PRELOADED JOINTS IN SHOP PAINTED STEELWORK

- Post assembly treatment of bolts and surrounding areas: After final tightening of bolts and inspection of joints:
- Thoroughly degrease and clean uncoated areas including bolts.
- Prime without delay.
- Apply full shop coating specification.
- Direct tension indicators: Seal measuring gap to prevent ingress of moisture.

H41 GLASS FIBRE REINFORCED PLASTICS CLADDING/ FEATURES

To be read with Preliminaries/ General Conditions.

130 GRP PURPOSE MADE FEATURES GRP ladders

- Primary support structure: Concrete blockwork, as section F10 or as indicated on drawings.
- GRP components:
  - Manufacturer: Submit proposals to Engineer's approval.
  - Construction: Submit proposals to Engineer's approval.
  - Finish: Gloss.
  - Colour: to BS 4800.
  - Fire rating:
    Spread of flame (component external face): Index (1) not more than 20 (National class).
    Spread of flame (component internal face): As external face.
- Fixings and fasteners: Submit proposals to Engineer's approval.
- Joints: submit proposals to Engineer's approval.
- Accessories/ Other requirements:
  - Manufactured to BS EN ISO14122-3: 2001 and BS5395-1
  - The completed handrail installation shall meet the following load requirements with a minimum factor of safety of 2.0:
  - Concentrated Load: 891 N applied in any direction at the top rail.
  - Uniform Load: 730.5 N/m of the top rail in any direction.
- Loads are assumed not to act concurrently.

130A LADDER SYSTEM GRP LADDER WHERE INDICATED ON DRAWINGS

- Method of provision: Fabricated off site and assembled on site.
- Dimensions: As indicated on drawings.
- Basic component material: Isophthalic Polyester.
- Rungs: Solid bar 20mm dia.
- Stiles: pultruded glass reinforced polyester.
- Landings/ platforms: Not required.
- Hoops: Not required.
- Assembly connectors: Stainless steel bolt assemblies and Full welds, unless otherwise indicated on drawings.
- Fixing to superstructure: Stainless steel bolts and Expanding bolts as indicated on drawings.
- Accessories: Brackets for fall arrest system, as section N25 unless indicated otherwise on drawings.
- Phenolic (to BS 476, Part 7): Class 0.

DESIGN/ PERFORMANCE REQUIREMENTS

205A CONTRACTOR'S DESIGN OF GRP LADDERS

- Design responsibility: Determine sizes and thickness of units and type size, number and spacing of fixings.
- Structural and fire requirements:
  - Generally: As per structural specifications.
  - Modifications: None.
  - Design: Complete the design in accordance with the designated code of practice to satisfy specified performance criteria.
- Functional requirements: As specified in this section.

© Copyright protected

- Additional requirements: None.
- Design and production information: As Preliminaries.
- Timing of submissions: As Preliminaries.

260 FIRE RATING CERTIFICATION

- Verification: Before commencing full manufacture, submit evidence based on laboratory testing.
- Testing authority: Civil defense authorities and authorities having jurisdiction.

270 COLOUR FASTNESS/ APPEARANCE OF GRP

- Colour fastness of pigments: Not less than standard 6 when measured to BS 1006:B01C:LFS6.
  - Evidence of compliance: Submit.

275 COLOUR FASTNESS/ APPEARANCE SAMPLES

- Weathered samples: If available, submit naturally weathered samples, otherwise submit artificially weathered samples.
- Naturally weathered samples:
  - Pigments and resins: As proposed GRP.
  - Age: Not less than two years.
  - Action: Submit with new unweathered control samples.
- Artificially weathered samples:
  - Pigments, resins and gel coat: As proposed GRP.
  - Test method: Accelerated weatherometer subjecting samples to moisture and ultraviolet light.
  - Duration: Not less than 1500 hours.
  - Action: Submit with new unweathered control samples.

320 DESIGN SAMPLES

- GRP samples: Before general manufacture obtain approval of appearance of fully tested compliant design samples of: Each component type as indicated on drawings.
  - Extent: Showing proposed colour, texture and incorporating a completed section of a joint.
  - Action: Obtain approval of appearance before proceeding. Retain as production control sample.

330 MOCK-UP

- Element: At an agreed stage during detailed design construct a mock-up of: all types as directed by Engineer.
- Function: To refine design details.
- Inspection: Obtain approval of appearance before proceeding. Retain mock-up in undisturbed condition until completion of GRP installation.

MANUFACTURE

410 QUALITY OF WORK

- Manufacture: Compliant with design and performance requirements.
  - Materials: Appropriate and compatible.
  - Workmanship: Appropriate and in accordance with manufacturers' recommendations.
- Resins: Used as supplied and not adulterated.
- Fillers and admixtures: Submit proposals.
- Standard of finish: Appropriate to end use and position in building.
  - Prohibited blemishes: Including, but not limited to, wrinkling, spotting, striations, fibre patterning, fish eyes, blisters, crazing, cracking, dry patches and uneven or inconsistent colour.

© Copyright protected

440 MANUFACTURING ACCURACY

- Finished dimensions of completed units when erected:
  - Ambient temperature: Measurements taken at 16-18°C.
  - Maximum permissible deviations:

Overall dimension involved (m)	Up to 2	2-3	3-4.5	4.5-6
Width and height:	+0 -2 mm	+0 -3 mm	+0 -5 mm	+0 -6 mm
Straightness of edges: deviation from intended line, any variation to be evenly distributed with no sudden bends or irregularities.	3 mm	4 mm	5 mm	6 mm
Squareness: taking the longer of 2 sides at any corner as a base line, the deviation of shorter side from perpendicular; dimension involved is the shorter side.	3 mm	4 mm	5 mm	6 mm
Twist: deviation of any corner from the plane containing the other 3 corners; dimension involved is the shorter side.	3 mm	5 mm	7 mm	8 mm

Flatness - deviation under a 1 m straight edge placed anywhere on a flat panel surface: 3 mm

470 BONDING OF CONSTITUENTS

- Resin layers: Good overall bond between gel coats and layers of laminate.
- Additional components: Core materials, ties, ribs, fixings and accessories fully bonded to GRP skins over full contact surface area.

480 FIXINGS AND FASTENERS

- Loadbearing fixing type: Submit proposals to Engineer's approval.
  - Material: Austenitic stainless steel grade 1,4401 (316).
- Restraint fixing type: Submit proposals to Engineer's approval.
  - Material: Austenitic stainless steel grade 1,4401 (316).
- Extent of adjustment: To accommodate support structure/ cladding fabrication/ installation tolerances and thermal movement of GRP.
- Method of fixing to primary support structure: Submit proposals to Engineer's approval.
  - Avoidance of bimetallic corrosion: Select appropriate materials for fixings/ fasteners/ spacers/ washers.

© Copyright protected

490 SEALING OF UNITS

- Flow coat: Apply to all surfaces of finished units which are not gel coated.
- Cut edges and holes: Seal to avoid penetration of moisture into glass fibres.

500 CURING

- Initial curing period at 20°C: 24 hours.
- Oven curing regime: As product data sheet.
- Distortion during curing: Prevent.

505 METAL POWDER FINISH

- Polishing: Remove an even film of resin to ensure natural patination of the whole exposed surface.

510 HARDNESS TESTING

- Standard: To BS EN 59.
- Timing: After curing.
- Extent: One test for each 1 m² of external surface area, not less than 2 tests per unit. The number of measurements shall be such that the average result has a standard deviation of +4%.
- Barcol hardness at ambient temperature: Not less than 30.

530 WEIGHT TESTING

- First unit of each type and size:
  - Compliance: In accordance with design and specification.
  - Weight: Record.
- Subsequent units:
  - Acceptable weight: Unmodified subsequent units to be within 10% of weight of first unit.

560 ADDITIONAL UNITS FOR DESTRUCTIVE TESTING

- Unit type: Component to Engineer's approval.
  - Additional quantity: as selected by Engineer.
- Testing: Permit random selection of units.

570 PRODUCTION RECORDS

- Recorded information:
  - Unique identification number.
  - Full details of composition.
  - Date of each stage of manufacture.
  - Dates and results of tests, checks and inspections.
  - Dimensions related to specified levels of accuracy.
  - Specific location in the finished work.
  - Other pertinent data, e.g. if the unit is a production control unit.
- Availability of records: For inspection on request.

580 RETENTION OF MOULDS AFTER PRODUCTION

- Purpose: Retain moulds and store in a reusable condition to allow manufacturing to recommence if required.
- Retention period: Until completion.

INSTALLATION

605 PREPARATION

- Prefabrication: Complete products and attach fixings in workshop wherever possible.
- Identification: Mark or tag products. Do not mark surfaces visible in the complete installation.

© Copyright protected

- Electrolytic corrosion: Isolate dissimilar metals.

635 ACCURACY OF ERECTION OF GRP COMPONENTS

- Joint widths: Within joint lengths, including in-line continuations across transverse joints, as follows:
  - Tolerance: Greatest width not to exceed least width by more than 20%.
  - Variations: Evenly distribute, with no sudden changes.
- Offset in elevation: Between component edges across transverse joints not to exceed 10% width of joint.
- Offset in plan or section: Between flat faces of adjacent units across joints not to exceed 10% width of joint.
- Sealant joints width limitations: To recommendations of sealant manufacturer.
- Finished work: True to line and plane with satisfactory fit at junctions.

640 FINAL FIXING

- Torque figures: Tighten threaded fastenings to figures recommended by manufacturer. Do not overtighten restraint fixings intended to permit lateral movement.

645 METALWORK

- Material standards and fabrication: As section Z11.

650 SEALANT JOINTING SYSTEM

- Sealant: Silicone.
  - Class to BS EN ISO 11600: F-20LM.
  - Colour: To be agreed.
  - Other requirements: To be agreed.
- Joint back up/ filler: Closed cell plastics foam (minimum 25% compression in joint).
- Primer: As recommended by sealant manufacturer.
- Application: As section Z22.

680 CLEANING DOWN

- General: Return to site at completion or when instructed and thoroughly clean down the entire area of the GRP work. Cleaning agents for the purpose must be approved by the GRP manufacturer.

© Copyright protected

J10 CEMENTITIOUS MORTAR TANKING/ DAMP PROOFING

To be read with Preliminaries/ General Conditions.

TYPES OF TANKING/ DAMP PROOFING

111 POLYMER MODIFIED CEMENTITIOUS WATERPROOFING TO WET AREAS UNDER TILES WATERPROOFING AND WHERE INDICATED

- Substrate: Concrete.
- Manufacturer: Submit proposals.
  - Product reference: Agreement certified system and Submit proposals.
- Coats (excluding dubbing out):
  - Number (excluding keying mixes): Two and as coating manufacturer's recommendations.
  - Thickness: 2 mm and as coating manufacturer's recommendations.
- Finish: as shown on drawings and as waterproof coating manufacturer's recommendations.
- Other requirements: Movement joints.
- Features:
  - Positive-Negative Side, Polymer-Modified Cement microfiber reinforced class A4 crack bridging Waterproofing coating for concrete substrates performance in accordance with BS EN 14891.
  - Product shall be classified CMO2P based on BS EN 14891 and shall meet EN 1504-2 requirements.
  - Manufacturer's proprietary blend of dry cementitious and other ingredients for mixing with polymer admixture to produce a waterproof coating that is suitable for vertical and horizontal applications below or above grade, is breathable, resists positive-side hydrostatic pressure, and has properties complying with or exceeding the criteria specified below.
- Technical Characteristics:
  - Impermeability to water under pressure (150 Kpa for 7days): To EN 14891-A.7: no penetration.
  - Crack bridging ability at 23 degrees Celsius: To EN 14891-A.8.2 not less than 2.5 mm.
  - Crack bridging ability at -5 degrees Celsius: To EN 14891-A.8.3 not less than 0.75 mm.
  - Initial adhesion strength (MPa): To EN 14891-A.6.2 not less than 1.
  - Tensile adhesion strength after water contact (MPa): To EN 14891-A.6.3, not less than 0.6.
  - Tensile adhesion strength after heat aging (MPa): To EN 14891-A.6.5, not less than 1.2.
  - Tensile adhesion strength after freeze-thaw cycle (MPa): To EN 14891-A.6.6, not less than 0.65
  - Tensile adhesion strength after immersion in basic water (MPa): To EN 14891-A.6.9, not less than 0.65.
  - Tensile adhesion strength after immersion in chlorinated water (MPa): to EN 14891-A6.8, not less than 0.65.
  - Product shall be tested and certified for suitability in potable water applications where applicable, including use in potable water storage tanks, in accordance with NSF/ANSI 61, BS 6920, or applicable equivalent standard.
  - For applications in cold climate areas where temperatures may reach less than -5 degrees Celsius, product crack bridging ability shall be tested according to EN 14891-A.8.3 at -20 degrees Celsius with minimum result of 0.75 mm.
  - Color: As approved by Engineer.

© Copyright protected

- Warranty:
  - Special Warranty: Written warranty, signed by the Applicator and countersigned by the Contractor agreeing to repair or replace waterproofing that does not comply with requirements or that fails to perform as required, and to maintain watertight conditions within specified warranty period. Warranty includes responsibility for removing and replacing other work that conceals modified cement waterproofing. During warranty period, repairs and replacements required because of unusual weather phenomena and other events beyond the Contractor's or the Applicator's control shall be completed by the Contractor or the Applicator and paid for by the Employer at prevailing rates.
  - Warranty Period: 10 years from date of Substantial Completion.

MATERIALS AND MAKING OF MORTAR

330 MOVEMENT JOINT SYSTEM

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
  - Application: As section Z22.

340 SEALANTS AROUND SERVICE PENETRATIONS, ALONG WALL-TO-FLOOR ABUTMENTS AND WHERE INDICATED ON DRAWINGS

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Colour: To match surface finish and as selected by Engineer.
  - Application: As section Z22.

PREPARING SUBSTRATES

410 SUITABILITY OF SUBSTRATES

- Preparation generally: To tanking mortar/ admixture manufacturer’s recommendations.
- Stability and soundness: Free from movement, and loose or weak areas that will cause failure of tanking.
- Key: To achieve firm adhesion of tanking.
- Contamination: Free from previous coatings and contaminants including dirt, dust, efflorescence, mould, oil, paint and plaster.
- Cracks, porous patches and other defective areas subject to water pressure and liable to admit water: Control and seal using waterproof mortar recommended by the tanking mortar manufacturer.
- Holes/ Recesses for fixings (where permitted): Prepared to receive fasteners.
- Openings and chases: Prepared, including sleeves for pipe penetrations and chases to receive waterproofing compounds/ sealants.

420 PREPARATION OF MORTAR JOINTS AND CAVITIES

- Mortar joints: Rake out to a depth of 12 mm (minimum).
  - Debris: Remove and flush out with water.
  - Fill: Repoint with waterproof mortar to the tanking mortar manufacturer's recommendations.
- Blow holes, cavities, cracks, etc: Remove loose material and fill flush using waterproof mortar recommended by the tanking mortar manufacturer.

430 TANKING INTEGRITY

- Penetrations for fixings, services, etc: Permitted for bolt fixings using coating manufacturer's recommended methods.

© Copyright protected

EXECUTION

510 APPLICATION GENERALLY

- Application methods and coating sequence: As recommended by the tanking mortar/ admixture manufacturer to achieve a water-resistant structure.

520 JOINTS/ JUNCTIONS AND PENETRATIONS

- Abutments, joints and active cracks: Sealed and watertight.
  - Movement joints: Centred over joints in substrate and extended through waterproof coating and finishes.
  - Daywork joints in successive coatings: Staggered and lapped.
  - Angled joints: Not permitted.
- Penetrations: Watertight.

530 APPEARANCE OF TANKING

- Render/ Screed coatings: Even and consistent. Free from rippling, hollows, ridges, cracks and crazing.
  - Accuracy: A true plane, to correct line and level. Walls and reveals plumb and square with neat arises
- Thin slurry coatings: Consistent and free from hollows, cracks and crazing. Suitable to receive specified finish.

540 FLATNESS/ SURFACE REGULARITY OF TANKING SCREEDS

- Measurement method: From the underside of a 3 m straightedge (between points of contact) placed anywhere on surface and using a slip gauge to BS 8204-1 or -2 (or equivalent).
- Deviation of surface: Sudden irregularities not permitted.
  - Maximum permissible deviation: 1 mm under 1 m straightedge.

550 CURING AND DRYING

- General: Prevent premature setting, uneven drying and cracking of each coat.
- Curing coatings: Prevent evaporation from surface.
  - Curing period (minimum): As the cementitious waterproof coating manufacturer's recommendations.

560 PROTECTION

- Mechanical damage: Prevent impact and abrasion.
- Application of protective coatings/ linings: After completion of curing.

© Copyright protected

J30A - LIQUID APPLIED TANKING/ DAMP PROOFING

To be read with the structural drawings and structural basis of design report.

TYPES OF TANKING/ DAMP PROOFING

100 WARRANTY

- Manufacturer's Warranty: Provide written Warranty, signed by Damp proofing Manufacturer and Installer, and countersigned by Contractor, agreeing to replace damp proofing material that does not comply with requirements during specified Warranty period. Warranty includes responsibility for removing and replacing construction and other Works that conceal damp proofing. Warranty period shall be for 10 years.

110 COLD APPLIED TANKING TO SURFACES IN CONTACT WITH SOIL

- Substrate: In situ concrete structural elements in contact with soil other than basement walls.
- Primer: as per approved system recommendations.
- Coating: Bituminous.
  - Manufacturer: Submit proposals.
    Product reference: for tanking to prevent infiltration of subsurface water under pressure.
  - Application: as per approved system.; Two coats; first coat 0.75 kg/m², second coat 1 kg/m²; Floors; first coat 1.0 L/m², second coat 0.75 L/m².
- Reinforcement: As per coating manufacturer's recommendations.

120 COLD APPLIED TANKING TO INTERNAL SURFACES OF WATER RETAINING STRUCTURES.

- Substrate: reinforced concrete surfaces.
- Primer: as per approved system recommendations.
- Coating: Crystalline coating
  - Manufacturer: Submit proposals.
    Product reference: surface-applied material that causes capillary waterproofing system to protect concrete in-depth. Pre-packaged white - Colored proprietary blend of Portland cement, specially treated sand, and active chemicals that, when mixed with water and applied, penetrates into concrete and reacts chemically with the products of cement hydration in the presence of water to develop crystalline growth within substrate capillaries to produce an impervious, dense, waterproof substrate.
  - Application: as per approved system.
- Reinforcement: As per coating manufacturer's recommendations
- Accessories materials:
  - Patching compound: Ready mixed cementitious waterproofing and repair mortar for filling and patching tie holes, honeycombs, reveals, and other imperfections.
    Compressive strength: minimum 30MPa at 28 days when tested according to BS 6319-2.
    Flexural strength: Minimum 5MPa at 28 days when tested according to BS 6319-3.
    Shrinkage: Minus 0.01 percent at 28 days and plus 0.07 percent at 90 days when tested according to ASTM C596.
  - Plugging compound: Cementitious, ready mixed, efflorescence-free, surface waterproofing compound with hydrophobic properties that requires only the addition of water, and is resistant to water and moisture but is vapor permeable for all standard applications (vertical, overhead and horizontal surfaces not exposed to vehicular traffic); with properties meeting or exceeding the following criteria:
    Permeability: less than 5mm according to DIN 1048-5.

Compressive strength: Minimum 30MPa at 28days when tested according to BS 6319-2.
Flexural strength: Minimum 5MPa at 28days when tested according to BS 6319-3.
Bond strength: 2MPa at 14days when tested according to BS EN 12504-3.

- Mixes: Add pre-packaged dry ingredients to water according to Manufacturer's written instructions. Mix together with mechanical mixer or by hand to required consistency.

EXECUTION

205 SUITABILITY OF SUBSTRATE

- Substrates generally:
  - Smooth, even textured, clean, dry and frost free.
  - Within tolerances for level and surface regularity.
  - Vertical and horizontal surfaces: Correctly prepared and free from irregularities.
- Examine Substrates, areas, and conditions with Applicator present, for compliance with requirements for surface smoothness and other conditions affecting performance of Works.
- Curing period for concrete substrates (minimum): 7 days.
- Moisture content and stability of substrate: Must not impair integrity of finished tanking/ damp proofing**.**
- Preliminary work: Complete including**:**
  - Chases.
  - External angles.
  - Formation of upstands and kerbs.
  - Movement joints.
  - Penetrations/ Outlets.
- Proceed with application only after substrate construction and penetrating Works have been completed and unsatisfactory conditions have been corrected.

206 ADHESION TESTING

- Tensile bond strength: Test in accordance with BS EN ISO 4624**.**
- Test results: Submit.

207 PRIMERS

- Application: Uniform, continuous coverage.

210 COATING APPLICATION

- Adjacent surfaces exposed to view in finished work: Protect**.**
- Coatings:
  - Apply in dry atmospheric conditions when substrate is dry. Refer to approved coating requirements.
  - Uniform, continuous coverage. Do not allow to pool in hollows.
  - Firmly adhered to substrate and free from imperfections.
  - Prevent damage to finished coatings.
- Where damp proofing footings and foundation walls, apply from finished grade line to top of footing. Extend over top of footing and down a minimum of 150mm over outside face of footing.
  - Extend onto blinding beds, intersecting walls and footings, but do not extend onto surfaces exposed to view when Project is completed, unless otherwise indicated.
  - Install flashings and corner protection stripping at internal and external corners, changes in plane, construction joints, and cracks.

- Where damp proofing exterior face of inner wythe of exterior masonry cavity walls, lap damp proofing at least 6mm onto flashing, masonry reinforcement, veneer ties, and other items that penetrate inner wythe.

  - Extend damp proofing over outer face of structural members and concrete slabs that interrupt inner wythe.
  - Lap damp proofing at least 6mm onto shelf angles supporting veneer.
- Where damp proofing interior face of above grade, exterior concrete and masonry single wythe masonry walls, continue damp proofing through intersecting walls by keeping vertical mortar joints at intersection temporarily open or by damp proofing wall before constructing intersecting walls.
- Penetrations: impervious.
- Final covering: Apply as soon as possible after coating has hardened.

220 COLD APPLIED COATINGS – RUBBERIZED BITUMEN EMULSION; EMULSIFIED ASPHALT DAMP PROOFING

- Thinning: Not permitted unless recommended by manufacturer.
- Successive coats:
  - Allow to dry before applying next.
  - Apply at right angles to previous.

221 COLD APPLIED COATINGS – CRYSTALLINE WATERPROOFING

- Preparation and application:
  - Comply with Manufacturer's written instructions.
  - Protect other Works from dripping or splatter from crystalline waterproofing during application. Provide temporary enclosure to confine operation, to prevent polluting the air, and to ensure adequate ambient temperatures and ventilation conditions for application.
  - Do not allow waterproofing, patching, and plugging materials to enter reveals or annular spaces intended for resilient sealants or gaskets, such as joint spaces between pipes and pipe sleeves.
  - Stop active water leaks with plugging and patching compounds according to waterproofing Manufacturer's written instructions.
  - Repair damaged or unsatisfactory substrate with patching compound.
  - Saturate surface with water for several hours and maintain damp condition until applying water proofing. Remove standing water.
  - Apply waterproofing to surfaces, and extend waterproofing onto adjacent surfaces as follows:
    - Onto columns integral with treated walls.
    - Onto interior non-treated walls intersecting exterior treated walls, for a distance of 600mm for cast-in-place concrete.
    - Onto exterior walls and onto both exterior and interior columns, for a height of 300mm, where floors, but not walls, are treated.
    - Onto every substrate in areas indicated for treatment, including pipe trenches, pipe chases, pits, sumps and similar offsets and features.
- Curing: cure waterproofing immediately after coat has set, as recommended by Manufacturer.

230 BITUMINOUS COATINGS

- Air and surface temperatures (minimum): 5°C.
- Weather conditions: Do not apply if there is a risk of rain during application and drying unless effective temporary cover is provided over working area.
  - Unavoidable wetting of construction or coatings: Minimize and make good damage.

235 MODIFIED COATINGS

- Air and surface temperatures: Do not apply if below minimum recommended by coating manufacturer.

- Curing: Keep dry until fully cured.

COMPLETION

310 INSPECTION
- Interim and final inspections: Submit reports.

320 ELECTRONIC INTEGRITY TEST
- Testing authority: The coating contractor.
- Timing of test: Prior to placement of protection boards and backfilling.
- Condition of coating prior to testing:
  - Complete to a stage where integrity can be tested.
  - Surface: Clean.
- Test results and waterproof integrity certificate: Submit on completion of testing.

330 PROTECTION OF EXTERNAL COATINGS
- Coated surface: Clean and free from contaminants.
- Board manufacturer: Submit proposals.
  - Product reference: submit proposals.
  - Thickness: as per approved manufacturer's requirement.
- Placement: as per approved board protection requirement.
  - Edges: as per approved system requirements.
  - Perimeter treatment: as per board protection requirements..
- Contact with coating: Secure and continuous**.**

340 BACKFILLING TO EXTERNAL COATINGS
- Timing: Carry out as soon as possible after tanking and protection are complete.

J30 B LIQUID APPLIED TANKING/ DAMP PROOFING

To be read with Preliminaries/General Conditions.

TYPES OF TANKING/ DAMP PROOFING

130A COLD FLUID APPLIED WATERPROOFING WHERE INDICATED

- Substrate: smooth in situ concrete slab unless otherwise indicated on drawings.
- Primer: As coating manufacturer's recommendations.
- Coating: a single part, rapid curing, modified polyurethane waterproofing membrane that can be applied directly to concrete surfaces.
  - Manufacturer: Contractor's choice.
    Product reference: Contractor's choice.
  - Application: As coating manufacturer's recommendations.
  - Components: urethane primer to cementitious and porous surfaces. Coverage per coat: 8 sq.m/litre. Topcoat: cold applied UV resistant polyurethane coating.
  - Protection Mat: nonwoven geotextile, polypropylene fabric; water permeable and resistant to UV degradation; type and weight as recommended by roofing system manufacturers for application but not less than 200 g/m2 mass per unit area, and minimum static puncture resistance of 2 Kn.
    Blinding: As coating manufacturer's recommendations.

- Minimum physical and performance requirements as determined by laboratory testing:

  - Solid Content by volume: Not less than 80 percent when tested to ASTM D2697.
  - Tensile strength: Not less than 2 MPa when tested to ASTM D412.
  - Elongation: Not less than 500 percent when tested to ASTM D2370.
  - Water Vapor Permeance: Maximum 0.1 perm (5.7 ng/Pa x s x sq. M), when tested to ASTM E96/E96M.
  - Hardness, type OO to ASTM D2240: Not less than 85.
  - Low Temperature Crack Bridging: Pass result when tested to ASTM C1305.
  - Adhesion in peel: Not less than 2 MPa when tested to ASTM D4541.
  - Extensibility after heat aging: Should pass and show no observable cracking after minimum 6.4 mm extensibility when tested to ASTM C1522.
  - UV resistant for exposed applications: Pass result for 2000 hrs.
  - Root penetration: Resistant when tested to CEN/TS 14416 where applicable and required by Engineer.
  - Product shall be tested and certified for suitability in potable water applications where applicable and required by Engineer, including use in potable water storage tanks, in accordance with NSF/ANSI 61, BS 6920, or applicable equivalent standard.

- Compatibility: Provide waterproofing system materials suitable for the location and intended application, that are compatible with one another and with adjacent materials under conditions of service and application required, as demonstrated by waterproofing manufacturer based on testing and field experience.

130D EPOXY WATERPROOFING

- Substrate: smooth in situ concrete slab unless otherwise indicated on drawings.
- Primer: As coating manufacturer's recommendations.

© Copyright protected

- Epoxy waterproofing, two components, non-toxic, solvent free epoxy resin based, flexible protective coating which provides a waterproof and chemical resistant surface for concrete and metal substrates, applied to concrete or metal potable water tanks and where indicated by Engineer:

  - Adhesion to concrete: Not less than 1.5 MPa when tested to ASTM C4541.
  - Water penetration under pressure: Impermeable at 5 bars pressure when tested to DIN 1048-5 or equivalent applicable standard.
  - Product shall be tested and certified for suitability in potable water applications where applicable and required by Engineer, including use in potable water storage tanks, in accordance with NSF/ANSI 61, BS 6920, or applicable equivalent standard.
  - Protection Mat: nonwoven geotextile, polypropylene fabric; water permeable and resistant to UV degradation; type and weight as recommended by roofing system manufacturers for application but not less than 200 g/m2 mass per unit area, and minimum static puncture resistance of 2 Kn.
  - Blinding: As coating manufacturer's recommendations.

130E WARRANTY

- Full System Warranty: Provide full system warranty in which Manufacturer and Installer will repair without limitations, all or any part of the liquid waterproofing system which fails or becomes defective in materials or workmanship within specified warranty period.

  - Warranty includes removing and reinstalling protection board, drainage panels, insulation, pedestals, and pedestal-mounted pavers on plaza decks, due to failure. Failure includes, but not limited to water penetration, deterioration in membranes and coatings; other than due to normal aging and weathering; and any defects in insulation, protection board, drainage panels, pedestals, and pedestal-mounted pavers on plaza decks, coverings and other components of the work.
  - Warranty pavers do not dish or warp and do not crack, split, or disintegrate in freeze-thaw conditions.
  - Warranty Period: Ten (10) years from date of Substantial Completion.

EXECUTION

205 SUITABILITY OF SUBSTRATE

- Substrates generally:
  - Smooth, even textured, clean, dry and frost free.
  - Within tolerances for level and surface regularity.
  - Vertical and horizontal surfaces: Correctly prepared and free from irregularities.
- Curing period for concrete substrates (minimum): 7 days.
- Moisture content and stability of substrate: Must not impair integrity of finished tanking/ damp proofing.
- Preliminary work: Complete including:
  - Chases.
  - External angles.
  - Formation of upstands and kerbs.
  - Movement joints.
  - Penetrations/ Outlets.

206 ADHESION TESTING

- Tensile bond strength: Test in accordance with BS EN ISO 4624.
- Test results: Submit.

© Copyright protected

207 PRIMERS

- Application: Uniform, continuous coverage.

210 COATING APPLICATION

- Adjacent surfaces exposed to view in finished work: Protect.
- Coatings:
  - Apply in dry atmospheric conditions when primer is dry.
  - Uniform, continuous coverage. Do not allow to pool in hollows.
  - Firmly adhered to substrate and free from imperfections.
  - Prevent damage to finished coatings.
- Penetrations: Impervious.
- Final covering: Apply as soon as possible after coating has hardened.

220 COLD APPLIED COATINGS

- Thinning: Not permitted unless recommended by manufacturer.
- Successive coats:
  - Allow to dry before applying next.
  - Apply at right angles to previous.

235 MODIFIED COATINGS

- Air and surface temperatures: Do not apply if below minimum recommended by coating manufacturer.
- Curing: Keep dry until fully cured.

240 REINFORCEMENT

- Laying: Laid into second coat with third coating applied locally over fabric.
- Edge overlap (minimum): 75 mm
- Finish: Smooth and free from imperfections.

260 JUNCTIONS WITH DPCS

- DPCS: Clean, all edges fully exposed.
- Application: Fully coat DPC and overlap adjacent surfaces by (minimum) 75 mm.

270 BLINDING

- Coatings: Blind whilst tacky.
- Surplus material: Remove when coatings are completely dry.

COMPLETION

310 INSPECTION

- Interim and final inspections: Submit reports.

320 ELECTRONIC INTEGRITY TEST

- Testing authority: approved laboratory.
- Timing of test: Give notice.
- Condition of coating prior to testing:
  Complete to a stage where integrity can be tested.
  Surface: Clean.
- Test results and waterproof integrity certificate: Submit on completion of testing.

© Copyright protected

J40 - FLEXIBLE SHEET WATERPROOFING/ DAMP PROOFING

To be read with Preliminaries/ General Requirements.

100 WARRANTY

- Manufacturer's Warranty: Provide written Warranty, signed by waterproofing Manufacturer and Installer, and countersigned by Contractor, agreeing to replace waterproofing material that does not comply with requirements or that does not remain watertight during specified Warranty period. Warranty includes responsibility for removing and replacing construction and other Works that conceal waterproofing sheet. Warranty period shall be for 10 years.
- Installer special Warranty: Written waterproofing Installer's Warranty, signed by Installer, covering Works of this Section, for Warranty period of two years from taking over.
- Special Warranty: Submit a written Warranty signed and guaranteed jointly and severally by the Main Contractor, the Waterproofing Manufacturer and the Prefabricator/Applicator/Installer agreeing to repair or replace waterproofing that does not meet requirements or that does not remain watertight during the specified Warranty period. Warranty includes responsibility for construction remedial measures and for other works that conceal defective sheet waterproofing, and repair corresponding damages. Warranty does not include failure of waterproofing due to failure of substrate prepared and treated in accordance with requirements or formation of new joints and cracks in substrate exceeding 2.0mm in width. Warranty does not include mechanical damages to membrane created by other than Contractor, or his Sub-contractor after handing over of Project.

115 CONCRETE BLINDING TO HARDCORE BEDS

- Concrete: plain concrete as per section E10.
  - Thickness: see drawing.
- Finish on completion: Smooth.

TYPES OF TANKING/ DAMP PROOFING

297B WATERPROOFING/ DAMP PROOFING MEMBRANE

- Substrate: **[Concrete].**
- Manufacturer: Submit proposals.
  - Product reference: Self-Adhesive High Density Polyethylene Sheet, cold applied, flexible, preformed waterproofing membrane combining a special high performance cross laminated, high density multi-layer polyethylene film with a self-adhesive rubber/bitumen compound, BBA certified, Agrément certified**.**
- Number of layers: One**.**
  - Thickness/ Gauge: 1.5 mm**.**
- Bonding: Full adhesive bond**.**
- Joints:
  - Surfaces to be joined: Clean and dry beyond full width of joint**.**
  - Laps (minimum): as per approved membrane requirements**.**
  - Sealing: Fully adhere**.**
- Accessories: as per approved membrane requirements**.**

WORKMANSHIP

310 WORKMANSHIP GENERALLY

- Condition of substrate:
  - Clean and even textured, free from voids and sharp protrusions.
  - Moisture content: Compatible with damp proofing/ tanking.

- Air and surface temperature: Do not apply sheets if below is minimum recommended by membrane manufacturer.
- Condition of membrane at completion:
  - Neat, smooth and fully supported, dressed well into abutments and around intrusions.
  - Completely impervious and continuous.
  - Undamaged. Prevent puncturing during following work.
- Permanent overlying construction: Cover membrane as soon as possible.

320 INSPECTION
- Give notice: Before covering any part of membrane with overlying construction.

335 PRIMERS
- Manufacturer: Submit proposals.
  - Product reference: where required for waterproofing/ damp proofing system.
- Coverage per coat (minimum): as per approved system requirement.
- Curing: Allow to dry thoroughly before covering.

345 COLD APPLIED BONDING COMPOUNDS
- Type and application: As recommended for the purpose by the membrane manufacturer.

350 ANGLES IN BONDED DAMP PROOFING/ TANKING
- Preformed rot proof fillet to internal angles:
  - Size (minimum): 50 x 50 mm, splay faced.
  - Bedding: Bitumen mastic or bonding compound.
- Reinforcing strip to all angles:
  - Material: As damp proofing tanking.
  - Width (minimum): 300 mm.
  - Timing: Apply before main sheeting.
- Dressing of main sheeting onto adjacent surfaces (minimum): 100 mm.

360 JUNCTIONS WITH PROJECTING DPCS/ CAVITY TRAYS
- Adjoining surfaces: Clean and dry.
- Damp proof coatings/ Cavity trays: Lap and fully bond/ seal with sheeting.
  - Laps (minimum): As recommended for the purpose by the approved membrane manufacturer
  - Bonding/ Sealing: As recommended by the approved membrane manufacturer.

365 JUNCTIONS WITH FLUSH DPCS/ CAVITY TRAYS
- Adjoining surfaces: Clean and dry.
- Damp proof coatings / Cavity trays:
  - Expose edge where concealed.
  - Lap and fully bond/ seal sheeting to wall.
  - Dressing of sheeting beyond damp-proof coating/ cavity tray (minimum): 50 mm.
  - Bonding/ Sealing: As recommended by the approved membrane manufacturer.

370 PREFORMED COLLARS FOR PIPES, DUCTS, CABLES, ETC**.**
- Manufacturer: Submit proposals.
  - Product reference: where required.
- Sealing: As recommended by the approved membrane manufacturer.
- Completed junctions: Impervious.

380 PROTECTION BOARDS FOR DAMP PROOFING/ TANKING
- Manufacturer: Submit proposals.

  - Product reference: as required above.
- Thickness: As recommended by the approved membrane manufacturer and the protection board manufacturer.
- Application: Membrane surface clean and free from contaminants.
  - Bonding: As recommended by the approved membrane and protection board manufacturers.
  - Board joints: As recommended by the approved membrane and protection board manufacturers.
  - Board contact with membrane: Secure and continuous.
- Backfilling: Carry out when testing, tanking, loading and protection are complete.

J42 SINGLE LAYER POLYMERIC SHEET ROOF COVERINGS

To be read with Preliminaries/ General Conditions.

TYPES OF ROOF COVERING

120 INVERTED ROOF COVERING GENERALLY

- Substrate: Cement: sand screed.
  - Preparation: Cement: sand screed as section M10, laid to falls.
- Roof covering system: Manufacturer's recommended system complying with indicative drawings.
  - Protection layer (loose laid): Polyester fleece where indicated for roof garden system.
  - Waterproof membrane: fully adhered Ethylene propylene diene monomer (EPDM).
    Width: manufacturer's standard width as indicated on drawings.
    Thickness: 1.52 mm where indicated on drawings. Minimum thickness of 2.3 mm to be utilized for roof garden inverted system and where indicated on drawings.
    Colour: Black, unless othewise indicated.
  - Separating layer (loose laid): Nonwoven geotextile, polypropylene fabric; not less than 200g/m2 mass per unit area, and minimum static puncture resistance of 2Kn.
  - Insulation: Extruded polystyrene boards thickness to achieve the required thermal U value.
- Surface protection: Precast concrete paving slabs or crushed stone where indicated on drawings.
- Accessories: Determined by contractor to complete the system in accordance with manufacturer's recommendations and drawing details.

PERFORMANCE

202 CONTRACTOR'S DESIGN OF ROOF COVERINGS

- Design responsibility: Determine sizes, spacings and locations of fixings to suit the layout and details shown on drawing and submitted to Engineer's approval.
- Structural and fire requirements:
  - Generally: As section B50.
  - Modifications: None.
  - Design: Complete the design in accordance with the designated code of practice to satisfy specified performance criteria.
- Functional requirements:
  - Performance: As specified in this section.
- Additional requirements: None.
- Design and production information: As Preliminaries.
- Timing of submissions: As Preliminaries.

210A ROOF PERFORMANCE

- Roof covering: Secure, free draining and weathertight.
- Roof Assembly Overall Heat Transfer coefficient (U-value): roof assembly shall be not more than 0.25 W/m2. K, unless otherwise indicated
- Warranty: Provide complete system warranty in which Manufacturer and Installer are jointly and severally responsible and agree to repair or replace without limitations, all or any part of the membrane waterproofing system which fails or becomes defective in materials or workmanship within specified warranty period. Failure includes but is not limited to water penetration, deterioration in membranes; other than due to normal ageing and weathering; and any defects in adhesion, sealants, flashings, fixings, coverings and other components of the work.
  Warranty includes roofing membrane, base flashings, roofing membrane accessories, roof insulation, fasteners, drainage boards, roof pavers, and other components of membrane roofing system.

© Copyright protected

Warranty Period: 20 years from date of Substantial Completion.

225 AVOIDANCE OF INTERSTITIAL CONDENSATION: WARM AND INVERTED ROOFS

- Interstitial condensation within roof construction: Determine risk as recommended in BS 5250 and BS EN ISO 13788.
- Vapour control layer: If necessary, provide a suitable membrane so that damage and nuisance from interstitial condensation do not occur.

230 INSULATION

- Requirement: Determine type and thickness of insulation and integral or separate overlay to satisfy the following criteria:
  - Thermal transmittance of the roof (maximum): as calculated to suit mechanical requirements as indicated in general notes but not more than 0.228 W/(m2·K) for total built up system.
  - Compressive strength of insulation (minimum) at 10% compression: 350 kPa.
  - Finished surface: Suitably even, stable and robust to receive roof covering.
  - Insulation compliance: To a relevant European Standard, or Agreement certified.

PRODUCTS

325 ADHESIVE for bonding membranes at seams and only for point bonding membrane to substrate considering that membrane should be loosely laid

- Type: As membrane manufacturer's/ supplier's recommendations for conditions and surface.
- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.

340 PREFORMED SLEEVES

- Type: non-vulcanized rubber sleeves and accessories as recommended by manufacturer.
- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Colour: Black.
- Size: As drawing.

355 MECHANICAL FASTENERS, WASHERS, PRESSURE PLATES, ETC

- Type: Point fastener.
  - Material: As membrane manufacturer's/ supplier's recommendations.
- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.

375 MINOR MOVEMENT JOINTS IN SUBSTRATES

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Size: As drawings.
- Insert colour: Grey.

380 PROTECTION LAYER, WHERE INDICATED

- Type: Nonwoven geotextile, polypropylene fabric membrane as membrane manufacturer's/ supplier's recommendations.
- Manufacturer: Submit proposals to Engineer's approval.
  Product reference: Submit proposals to Engineer's approval.
- Grade: 200 g/m².

© Copyright protected

383 SEPARATING LAYER

- Type: Nonwoven geotextile, polypropylene fabric membrane as membrane manufacturer's/ supplier's recommendations .
- Manufacturer: Submit proposals to Engineer's approval.
  Product reference: Submit proposals to Engineer's approval.
- Grade: 200 g/m².

395 VAPOUR CONTROL LAYER

- Type: Two-layer, fire-retardant polyethylene laminate reinforced with cord grid, as recommended by membrane manufacturer/supplier .
- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Thickness: 1200 gauge.
- Vapour resistance: 1300 MN s/g.
- Reaction to fire: Minimum Euro class B-s1, d0 to BS EN 13501-1

400A WATERPROOF MEMBRANE

- Type: Ethylene propylene diene monomer (EPDM).
- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Width: manufacturer's standard.
- Thickness: Minimum 1.52 mm.
- Colour: black, unless othewise indicated.
- Guarantee: 25 years.
- EPDM MEMBRANE SHALL HAVE:
  - High tensile strength and elongation at break.
  - 100% ozone and UV – radiation resistance.
  - Permanent elasticity.
  - Resistant to chemicals.
  - Resistant to root penetration (FLL approved in accordance with DIN 4102 T7).
  - Self-extinguishing (NEN 6383).
  - Excellent temperature stability from -40 to + 120ºC.

- Typical Properties and Characteristics
  - Essential Characteristics Performance Test Standard
  - Visible Defects Pass EN 1850-2
  - Width -0,5 % to +1 % of target. Test Standard EN 1848-2
  - Straightness -50 mm to +50 mm. Test Standard EN 1848-2
  - Flatness = 10 mm. Test Standard EN 1848-2
  - Effective Thickness -5 % to +10 % of target. Test Standard EN 1849-2
  - External Fire Performance BROOF (t1) and BROOF (t4). Test Standard ENV 1187
  - Reaction to Fire E. Test Standard EN 13501-1
  - Tensile Strength = 8 N/mm². Test Standard EN 12311-2
  - Elongation = 350 %. Test Standard EN 12311-2
  - Tear Resistance = 25 N. Test Standard EN 12310-2
  - Dimensional Stability = 0,5 %. Test Standard EN 1107-2?0
  - UV Exposure Pass. Test Standard EN 1297
  - Resistance to Ozone Pass. Test Standard EN 1844
  - Tensile Strength @ break (MPa): No Aging – (L, T) = 8,0. Test Standard ISO R 527 parts 1 & 3

© Copyright protected

- Oxidation – 90 days @ 85°C = 25%. Test Standard PR EN 14575
- Weathering – 3000 hours UV = 25%. Test Standard EN 12224
- Static Puncture (KN) = 0,5. Test Standard EN ISO 12236
- Water Permeability (m^3/m^2)/d 0. Test Standard PR EN 14150
- Durability - Environmental Stress Cracking (hours): = 200. Test Standard ASTM D 5397-99 Appendix

440A INVERTED ROOF INSULATION

- Type: Fire retardant Extruded polystyrene board, suitable for load-bearing and inverted roof applications.
- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Standard: To BS EN 13164.
  - Reaction to fire: Euro class E, flame retardant boards.
  - Thermal conductivity (minimum): 0.030 W/mK.
  - Thickness: As drawing.
  - Compressive strength (minimum): 350 kPa.
  - Other characteristics: Density: 40 kg/cu.m.
- Edges: Rebated.
- Integral topping: Not required.
- Recycled content: Contractor's Choice.

460 STONE BALLAST

- Type: Washed, round aggregate.
- Supplier: Submit proposals to Engineer's approval.
- Size: Size 2, ranging in size from 38 to 63 mm .
- Colour: white.

465 PRECAST CONCRETE PAVING SLABS

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Standard: To BS EN 1339, hydraulically pressed.
  - Size: 500 x 500 x 50 mm unless otherwise indicated.
  - Water absorption: Manufacturer's standard but not more than 5%.
  - Resistance to freeze thaw: Manufacturer's standard.
  - Breaking load (minimum): 5.6 KN to BS EN 1339.
  - Colour: Natural, unless otherwise indicated.
  - Finish: Pimple surface unless otherwise indicated.
  - Other BS EN 1339 characteristics: None.
- Recycled content: Contractor's choice.

EXECUTION GENERALLY

510 ADVERSE WEATHER

- General: Do not lay membrane at temperatures below 5°C or in wet or damp conditions unless effective temporary cover is provided over working area.
- Unfinished areas of roof: Keep dry and protect edges of laid membrane from wind action.

520 INCOMPLETE WORK

- End of working day: Provide temporary seal to prevent water infiltration.
- On resumption of work: Cut away tail of membrane from completed area and remove from roof.

© Copyright protected

530 APPLYING PRIMERS

- Coverage per coat (minimum): 0.2 L/m².
- Surface coverage: Even and full.
- Coats: Fully bonded. Allow volatiles to dry off thoroughly between coats.

550 CONTROL SAMPLES

- Type of covering: as indicated.
- Sample area (minimum): as determined by Engineer.
  - Location: as determined by Engineer.
  - Features: Movement joints, upstands and as determined by Engineer.
- Approval of appearance: Obtain before proceeding with remaining work.

610 SUITABILITY OF SUBSTRATES

- Surfaces to be covered: Secure, clean, dry, smooth, free from frost, contaminants, voids and protrusions.
- Preliminary work: Complete, including
  - Grading to correct falls.
  - Formation of upstands, kerbs, box gutters, sumps, grooves, chases and expansion joints.
  - Fixing of battens, fillets and anchoring plugs/ strips.
- Moisture content and stability of substrate: Must not impair integrity of roof.

WATERPROOF MEMBRANES/ ACCESSORIES

710A MECHANICAL FIXING OF WATERPROOF MEMBRANE (MEMBRANES ARE LOSELY LAID UNLESS MECHANICAL FIXING IS REQUIRED FOR POINT SUPPORT)

- Setting out: Perpendicular to the deck direction.
- Laying: Loose, do not wrinkle or stretch.
- Installing fasteners:
  - Use manufacturer's/ supplier's recommended methods and equipment.
  - Insertion: Correct and consistent.
- Washers/ Pressure plates/ Bars:
  - Distance from fixed edge (minimum): 10 mm.
  - Fixing: Flush with membrane.
- Sheet overlaps: Extend beyond washers/ pressure plates by minimum 50 mm.
- Surface condition at completion: Fully sealed, smooth, weatherproof and free draining.

740 ADHESIVE JOINTING OF WATERPROOF MEMBRANE

- Side and end joints:
  - Laps (minimum): 150 mm.
  - Preparation: Prime, clean and dry surfaces beyond full width of joint and lap.
  - Sealing: Apply continuous even coverage of adhesive to both surfaces. Mate and roll together. Do not wrinkle or stretch membrane.
- Seam sealant: Not required.
- Condition at completion: Fully sealed, smooth, weatherproof and free draining.

760 PERIMETERS OF MEMBRANE AND FLASHING

- General: Secure membrane at roof edge conditions, changes of plane, curb flashings, upstands to roof lights, etc. with mechanical fasteners.
- Perimeter metal flashing: minimum 1.5-mm- thick predrilled stainless steel or aluminium sheets; with stainless steel 316 fasteners.

© Copyright protected

775 PERIMETER DETAILS FOR ELASTOMERIC MEMBRANES

- Upstands, edge trims, drips, kerbs, etc: Preformed from waterproof membrane material.
- Reinforcing strip: Lay at edge of horizontal roof plane.
  - Securing: Mechanically fasten.
- Roof membrane: Dress over perimeter profiles.
  - Sealing: Bond to substrate and to secured perimeter reinforcing strip.

785 ROOF PENETRATIONS THROUGH ELASTOMERIC MEMBRANES

- Roof membrane: Cut around penetrations.
- Flanged sleeve:
  - Type: Preformed flanged sleeve.
  - Installation: Dress over and around penetration.
  - Seating: Flush to roof membrane.
  - Roof membrane overlap to flange (minimum): 75 mm beyond fasteners.
  - Sealing: Adhesive.

SURFACING

810 LAYING INVERTED ROOF INSULATION

- Condition of substrate: Clean.
- Setting out: Loose lay with staggered joints.
  - Cutting: Minimize.
  - Small cut pieces: Avoid at perimeters and penetrations.
  - Joints: Butt together.
- Projections, upstands, rainwater outlets, etc: Cut insulation cleanly and fit closely around.
- Completion:
  - Insulation boards to be in good condition, well-fitting and stable.
  - Cover to prevent wind uplift and flotation as soon as practicable.

820 LAYING STONE BALLAST

- Condition of substrate: Clean.
- Gravel guards: Fit to outlets.
- Previously laid materials: Protect whilst laying ballast.
- Laying: Spread evenly. Do not pile to excessive heights.
  - Depth (minimum): 100 mm unless otherwise indicated on drawings.

840 LAYING PRECAST CONCRETE PAVING SLABS

- Condition of substrate: Clean.
- Setting out: Minimize cutting.
- Joints: Open.
  - Width: 7 mm open joints unless indicated otherwise.
  - Perimeter/ Upstand margins: indicated width, stone ballast filled.
- Completion: Slabs must be level and stable.

COMPLETION

910 INSPECTION

- Interim and final roof inspections: Submit reports.

930 FLOOD TEST OF ROOF

- Condition of roof prior to testing:

© Copyright protected

  - Waterproof membrane complete to a stage where integrity can be tested.
- Outlets: Externally cover and seal. Protect against damage from water pressure using temporary kerbs. Do not use plugs to seal outlets.
- Flood levels: Submit proposals. In no case higher than kerbs.
- Flood duration: Three days.
- Inspection: Regular, to detect leaks.
- Completion of test: Slowly drain roof. Do not overload or flood outlets.
- Test results and warranty: Submit on completion of testing.

940 COMPLETION

- Roof areas: Clean.
  - Outlets: Clear.
- Work necessary to provide a weathertight finish: Complete.
- Storage of materials on finished surface: Not permitted.
- Completed membrane: Do not damage. Protect from traffic and adjacent or high-level working.

© Copyright protected

K10 GYPSUM BOARD DRY LININGS/ PARTITIONS/ CEILINGS

To be read with Preliminaries/ General Conditions.

TYPES OF DRY LINING

115 METAL STUD PARTITION SYSTEM generally

- Partition type: Double row studs or single row studs or staggered studs or shaft wall, as indicated on drawings.
- Partition height: as indicated.
- Head condition: as indicated.
  - Deflection allowance: 15 mm maximum.
- Structural performance:
  - Strength grade to BS 5234-2: Heavy.
    Additional tests: Crowd pressure (Annex G).
  - Air pressure and deflection: Air pressure (maximum) 200 N/m² and deflection (maximum) height ÷ 240 mm.
  - Other requirements: where indicated, Allow for weight of ceramic tiles, as section M40.
- Fire performance:
  - Reaction to fire: To BS EN 13501-1, class B-s3, d2 or better.
  - Fire resistance of complete partition assembly: To BS EN 13501-2. EI 60 or 90 or 120 as indicated on fire report.
- Airborne sound insulation
  - Laboratory measurement of complete partition assembly:
  - Weighted sound reduction index Rw (minimum) to BS EN ISO 717-1: Not less than the Rw in dB as indicated in the Acoustics Report.
- Metal framing: Type recommended by board manufacturer to complete the partition assembly and achieve specified performance.
- Insulation: Mineral wool to BS EN 13162; density not less than 60 kg/m³.
  - Recycled content: Contractor's choice.
  - Thickness: 100 mm unless otherwise indicated on drawings and in acoustics report.
- Resilient layer: not required.
- Linings: as indicated on drawings.
- Finishing: Seamless jointing.
  - Primer/ Sealer: As recommended by board manufacturer for vapour control and subject to Engineer's approval in compliance with the finish manuals.
  - Accessories: Rigid beads/ stops as recommended by board manufacturer and subject to Engineer's approval.
- Other requirements: Fire stopping around services as section P12.

145 WALL LINING SYSTEM (METAL STUDS) generally

- Cavity between wall and studs: as indicated on drawings.
- Wall lining height: as indicated on drawings.
  - Intermediate bracing: as recommended by manufacturer.
- Head condition: Concrete slab unless otherwise indicated on drawings.
  - Deflection allowance: Up to ± 15 mm maximum.
- Structural performance:
  - Strength grade to BS 5234-2: heavy.
    Additional tests: Crowd pressure (Annex G).

© Copyright protected

  - Air pressure and deflection: Air pressure (maximum) 200 N/m² and deflection (maximum) height ÷240.
  - Other requirements: where indicated, Allow for weight of ceramic tiles, as section M40.
- Fire performance:
  - Reaction to fire: To BS EN 13501-1, class B-s3, d2 or better.
- Fire resistance of complete wall lining assembly: To BS EN 13501-2. EI 60 or 90 or 120 as indicated on drawings and in the fire report.
- Thermal resistance (R) of complete wall lining assembly (excluding surface resistances): Not less than 2.8 m²K/W.
- Metal framing: Type recommended by board manufacturer to complete the partition system and achieve specified performance.
- Insulation: Mineral wool to BS EN 13162; density not less than 80 kg/m³.
  - Recycled content: Contractor's choice.
  - Thickness: as indicated on drawings.
- Moisture vapour resistance (minimum): 150 MNs/g.
- Resilient layer: not required.
- Linings: as indicated on drawings.
- Access units: as indicated on drawings.
- Finishing: Seamless jointing.
  - Primer/ Sealer: As recommended by board manufacturer for vapour control and subject to Engineer's approval in compliance with the finish manuals.
  - Accessories: Rigid beads/ stops as recommended by board manufacturer and subject to Engineer's approval.
- Other requirements: Fire stopping around services as section P12.

165 WALL LINING SYSTEM (METAL FRAMING) generally

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Wall: Concrete blockwork.
- Cavity between wall and back of lining: as indicated.
  - Framing centres: 600 mm unless otherwise recommended by Manufacturer.
  - Bracket centres (maximum): 600 mm.
- Insulation: Mineral wool to BS EN 13162; density not less than 80 kg/m³.
  - Recycled content: Contractor's choice.
  - Thickness: as indicated.
- Resilient layer: not required.
- Linings: as indicated on drawings.
- Access units: as indicated on drawings.
- Finishing: Seamless jointing.
  - Primer/ Sealer: As recommended by board manufacturer for vapour control and subject to Engineer's approval in compliance with the finish manuals.
  - Accessories: Metal beads/ stops recommended by board manufacturer.
- Other requirements: Fire stopping around services as section P12.

175 WALL LINING SYSTEM (METAL FURRINGS) generally

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Wall: Concrete blockwork.
- Furring centres: 400 mm unless otherwise recommended by manufacturer.
- Resilient layer: not required.

© Copyright protected

- Linings: as indicated on drawings, of type and thickness as recommended by manufacturer to meet performance requirements.
- Finishing: Seamless jointing.
  - Primer/ Sealer: As recommended by board manufacturer for vapour control and subject to Engineer's approval in compliance with the finish manuals.
  - Accessories: Metal beads/ stops recommended by board manufacturer.
- Other requirements: Fire stopping around services as section P12.

215 SUSPENDED CEILING SYSTEM generally

- Standard: To BS EN 13964.
- Evidence of compliance: All ceilings' kits to be CE marked. Submit Declaration of Performance (DoP).
- Lining board: as indicated on drawings and as recommended by manufacturer to comply with performance requirements.
  - Finishing: Seamless jointing.
    Primer/ Sealer: Type recommended by lining board manufacturer for vapour control and as indicated in the finish manuals to the Engineer's approval.
  - Accessories: Metal beads/ stops recommended by lining board manufacturer.
- Suspension system: As recommended by lining manufacturer to complete the ceiling system and achieve specified performance.
  - Grid type: double with primary channels unless otherwise indicated on drawings and recommended by manufacturer to comply with performance requirements, including structural, acoustical and fire requirements.
  - Hangers: Type recommended by board manufacturer.
    Length: as indicated.
  - Top fixing: To suit structural soffit of concrete beams and blocks unless otherwise indicated.
- Insulation: Mineral wool to BS EN 13162; density (minimum) 80 kg/m³.
  - Recycled content: Contractor's choice.
  - Thickness: as indicated on drawings to meet acoustic and performance requirements.
- Access units: Required, as indicated on drawings and as per manufacturer's recommendations.
- Integrated services fittings: provide cut-outs and trims as required for the installation of building services accessories.
- Other requirements: Fire stopping around service penetrations as section P12.
- System performance:
  - Standard: To BS EN 13964.
  - Structural: The ceiling system must safely support all anticipated loads including services fittings.
    Uniformly distributed load (maximum): 0.6 kN/m².
    Additional loads/ pressures: fire detection, firefighting, air conditioning, Luminaires and other building services accessories as drawings and schedules.
    Deflection of grid between points of support (maximum): 0.0025 x span.
  - Fire performance:
    Reaction to fire: To BS EN 13501-1, class B-s3, d2 or better.
  - Fire resistance: To BS EN 13501-2. REI 30 or 90 or 120 as indicated on drawings and in the fire report.
  - Airborne sound insulation (complete floor and ceiling assembly):
    Weighted sound reduction index, Rw (minimum), to BS EN ISO 717-1: as indicated in the acoustics report.

© Copyright protected

Other requirements: Weighted standardized level difference, DnT,W (minimum) to BS EN ISO 717-1 when combined with partition to be in compliance with the acoustics report.

- Electrical continuity and earth bonding: Not required.
- Other BS EN 13964 characteristics: None.

255 ENCASEMENT SYSTEM (METAL FRAMING) generally

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals to the Engineer's selection.
- Structural members: as indicated on drawings.
  - Extent of protection: Columns: Four sides, beams: three sides.
- Fire performance:
  - Protection to structural steel: To BS EN 13501-2. REI 90 or 120 where indicated on drawings and in fire report.
- Framing system: Sizes and spacing of framing and fixings as recommended by the board manufacturer.
- Linings: as recommended by manufacturer to comply with performance requirements.
- Finishing: Seamless jointing.
  - Primer/ Sealer: Type recommended by lining board manufacturer for vapour control and as indicated in the finish manuals to the Engineer's approval.
  - Accessories: Metal beads/ stops recommended by board manufacturer.
- Other requirements: Plan dimensions of casings to be the same for all columns, unless otherwise indicated.

GENERAL/ PREPARATION

305 COMPLIANCES WITH PERFORMANCE REQUIREMENTS

- Testing/ Assessment: Submit UKAS accredited laboratory reports for the following: Fire resistance: Partitions (including deflection heads and door sets) and suspended ceilings (including access units).
- Materials, components and details: As used in testing/ assessment reports. If discrepancies arise, give notice.

325 PREPARATION OF MASONRY TO RECEIVE WALL LININGS

- General: Suitable to receive lining system. Redundant fixtures and services removed. Cutting, chasing and making good completed.
- Holes, gaps, service penetrations, perimeter junctions and around openings: Seal.
- Adhesive fixings: Prepare substrate to achieve effective bonding.
  - Contaminants: Remove loose material, dirt, grease, oil, paper, etc.
  - Absorption: Control by dampening, priming or applying bonding agents as necessary.

335 ADDITIONAL SUPPORTS

- Framing: Accurately position and securely fix to give full support to:
  - Partition heads running parallel with but offset from main structural supports.
  - Fixtures, fittings and service outlets. Mark framing positions clearly and accurately on linings.
  - Board edges and lining perimeters, as recommended by board manufacturer to suit type and performance of lining.

375 NEW WET LAID BASES

- DPCS: Install under full width of partitions/ freestanding wall linings.
  - Material: Bituminous sheet or plastics.

© Copyright protected

395 CONTROL SAMPLES

- General: Complete areas of finished work and obtain approval of appearance before proceeding.
- Type of dry lining: for ceiling and partition types as directed by Engineer.
  - Location/ Size: as directed by Engineer.

COMPONENTS

400 GYPSUM BOARDS GENERALLY

- Standard:
  - Gypsum plasterboard to BS EN 520.
  - Gypsum fibre board to BS EN 15283-2.
  - Evidence of compliance: All sheets to be CE marked. Submit Declaration of Performance (DoP).

401 GYPSUM PLASTERBOARD

- Type: To BS EN 520, type A.
- Dimensions: As indicated in finish manuals.
- Thickness: Not less than 12.7mm.
- Core density (minimum): 650 kg/m³.
- Reaction to fire: Class A2-s1, d0.
- Water vapour resistance factor: Dry - 10 μ to BS EN 12524.
- Thermal conductivity: 0.25 W/(m·K) to BS EN 12524.
- Other BS EN 520 characteristics: None.
- Recycled content: Contractor's choice.
- Exposed surface and edge profiles: Suitable to receive specified finish.

403 GYPSUM PLASTERBOARD (MOISTURE RESISTANT)

- Type: To BS EN 520, type H3.
- Core: Moisture resistant.
  - Density (minimum): 710 kg/m³.
- Dimensions: As indicated in finish manuals.
- Thickness: Not less than 12.7mm.
- Paper facings: Moisture resistant.
- Reaction to fire: Class A2-s1, d0.
- Water vapour resistance factor: Dry - 10 μ.
- Thermal conductivity: 0.25 W/(m·K).
- Other BS EN 520 characteristics: None.
- Recycled content: Contractor's choice.
- Exposed surface and edge profiles: Suitable to receive specified finish.

403 ACOUSTICAL GYPSUM BOARD CEILING

- Type: Acoustical seamless gypsum board ceiling suspended system.
- Standard: To BS EN 520.
- Core: Aerated gypsum core, minimum 12.5 mm thickness.
- Edges: Tapered edges.
- Board weight (12.5 mm): 7.8 kg/m².
- Finish: Seamless surface finished with paint, as indicated in finish manuals.
- Colour: As indicated in finish manuals.
- Fire performance: Class 1.
- Reaction to fire: Minimum A2-s1, d0.

© Copyright protected

- Thermal conductivity: 0.25 W/(m·K).
- Water vapour resistance factor: Dry – 10 μ.
- Recycled content: Contractor's choice.
- Installation: Suspended ceiling system, joints finished flush to achieve seamless effect.
- Exposed surface and edge profiles: Suitable to receive specified paint finish.

404 GYPSUM PLASTERBOARD (IMPROVED FIRE PROTECTION)

- Type: To BS EN 520, type F.
- Dimensions: As indicated in finish manuals.
- Thickness: As required to achieve the fire performance indicated in FLS report, but not less than 12.7mm.
- Core: Including fibres and/ or other additives for improved cohesion.
  - Density (minimum): 800 kg/m³.
- Reaction to fire: Class A2-s1, d0.
- Water vapour resistance factor: Dry - 10 μ.
- Thermal conductivity: 0.25 W/(m·K).
- Other BS EN 520 characteristics: None.
- Recycled content: Contractor's choice.
- Exposed surface and edge profiles: Suitable to receive specified finish.

406 GYPSUM PLASTERBOARD (IMPROVED FIRE PROTECTION AND MOISTURE RESISTANT)

- Type: To BS EN 520, type H1 and F.
- Dimensions: As indicated in finish manuals.
- Thickness: As required to achieve the fire performance indicated in FLS report, but not less than 12.7mm.
- Core: Moisture resistant and including fibres and/ or other additives for improved cohesion.
  - Density (minimum): 800 kg/m³.
- Paper facings: Moisture resistant.
- Reaction to fire: Class A2-s1, d0.
- Water vapour resistance factor: Dry - 10 μ.
- Thermal conductivity: 0.25 W/(m·K).
- Other BS EN 520 characteristics: None.
- Recycled content: Contractor's choice.
- Exposed surface and edge profiles: Suitable to receive specified finish.

409 GYPSUM PLASTERBOARD (IMPROVED SOUND INSULATION)

- Type: To BS EN 520, type D.
- Dimensions: As indicated in finish manuals.
- Thickness: As required to achieve the sound insulation performance indicated in acoustic report, but not less than 12.7mm.
- Core density (minimum): 820 kg/m³.
- Reaction to fire: Class A2-s1, d0.
- Water vapour resistance factor: Dry - 10 μ.
- Thermal conductivity: 0.25 W/(m·K).
- Other BS EN 520 characteristics: None.
- Recycled content: Contractor's choice.
- Exposed surface and edge profiles: Suitable to receive specified finish.

© Copyright protected

425 ACOUSTICAL CEMENT BOARD

- Type: To BS EN 12467, Category A, Class 2 or better, reinforced fibre-cement board with integrated or applied acoustical properties.
- Thickness: As required to achieve the sound insulation performance indicated in acoustic report, but not less than 12.7mm.
- Acoustic performance: As indicated in acoustic report and tested to BS EN ISO 354.
- Reaction to fire: Class A2-s1, d0 to BS EN 13501-1.
- Moisture resistance: Category A (suitable for external exposure) to BS EN 12467.
- Durability: Freeze-thaw, soak-dry, and heat-rain resistant per BS EN 12467.
- Other BS EN characteristics: None.
- Recycled content: Contractor's choice.

430 ACCESS PANELS

Generally:

- Type: 60 minutes fire protection to BS 476-22.
  - Sizes: as indicated.
- Frame: Bead for taping and jointing.
- Panel: Metal with powder coated factory finish.
- Lock: Tamper proof and operated by castellated key.

432 METAL STUDS

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.

INSTALLATION

435 DRY LININGS GENERALLY

- General: Use fixing, jointing, sealing and finishing materials, components and installation methods recommended by board manufacturer.
- Cutting gypsum boards: Neatly and accurately without damaging core or tearing paper facing.
  - Cut edges: Minimize and position at internal angles wherever possible. Mask with bound edges of adjacent boards at external corners.
- Fixings boards: Securely and firmly to suitably prepared and accurately levelled backgrounds.
- Finishing: Neatly to give flush, smooth, flat surfaces free from bowing and abrupt changes of level.

445 CEILINGS

- Sequence: Fix boards to ceilings before installing dry lined walls and partitions.
- Orientation of boards: Fix with bound edges at right angles to supports and with ends staggered in adjacent rows.
- Two-layer boarding: Stagger joints between layers.

455 METAL FRAMING FOR PARTITIONS/ WALL LININGS

- Setting out: Accurately aligned and plumb.
  - Frame/ Stud positions: Equal centres to suit specified linings, maintaining sequence across openings.
  - Additional studs: To support vertical edges of boards.
- Fixing centres at perimeters (maximum): 600 mm.
- Openings: Form accurately.
  - Door sets: Use sleeved or boxed metal studs and/ or suitable timber framing to achieve strength grade requirements for framing assembly and adequately support weight of door.

© Copyright protected

- Services penetrations: Allow for associated fire stopping.

465 STAGGERED STUD PARTITIONS

- Horizontal frame members (noggins, bearers, etc.) and boards: Fix between alternate studs and not touching adjacent offset studs.

475 METAL FURRINGS FOR WALL LININGS

- Setting out: Accurately aligned and plumb.
  - Vertical furring positions: Equal vertical centres to suit specified linings, maintaining sequence across openings. Position adjacent to angles and openings.
  - Additional vertical furring: To support vertical edges of boards and at junctions with partitions.
  - Horizontal furring positions: To provide continuous support to edges of boards.
- Adhesive bedding to furring:
  - Dabs: Length 200 mm (minimum). Located at ends of furring's and thereafter at 450 mm (maximum) centres.
  - Junctions with partitions: Continuous bed with no gaps across cavity.

485 SUSPENDED CEILING GRIDS

- Setting out: Accurately aligned and level.
  - Grid members and hangers: Centres to suit specified linings and imposed loads.
  - Additional grid members: Provide bracing and stiffening at upstands, partition heads, access hatches, etc.
- Fixing: Securely at perimeters, grid joints, top and bottom hanger fixings.

505 INSTALLING MINERAL WOOL INSULATION

- Fitting insulation: Closely butted joints and no gaps. Use fasteners to prevent slumping or displacement.
- Services:
  - Electrical cables overlaid by insulation: Sized accordingly.
  - Ceilings: Cut insulation around electrical fittings, etc.

510 SEALING GAPS AND AIR PATHS

- Location of sealant: To perimeter abutments and around openings.
  - Pressurized shafts and ducts: At board-to-board and board-to-metal frame junctions.
- Application: To clean, dry and dust free surfaces as a continuous bead with no gaps.
  - Gaps greater than 6 mm between floor and underside of gypsum board: After sealing, fill with jointing compound.

530 CAVITY FIRE BARRIERS WITHIN PARTITIONS/ WALL LININGS

- Metal framed systems:
  - Material: Plasterboard of thickness and type as indicated on drawings and in compliance with performance requirements, with fire report and with acoustic report.
  - Installation: Form accurately and fix securely with no gaps to provide a complete barrier to smoke and flame.
- Adhesive fixed wall lining systems:
  - Material: Adhesive compound.
  - Installation: Form in a continuous line with no gaps to provide a complete barrier to smoke and flame.

545 CAVITY FIRE BARRIERS WITHIN SUSPENDED CEILINGS

- Type: As recommended by board manufacturer to meet specified performance.

© Copyright protected

- Fire resistance: To BS 476-20, 60/60 minutes (Integrity/ Insulation), unless otherwise indicated in the fire report.
- Ceiling void subdivision: Fix barriers as indicated on drawings and in compliance with fire report.
- Fixing at perimeters and joints: Secure, stable and continuous with no gaps, to provide a complete barrier to smoke and flame.
- Service penetrations: Cut and pack to maintain barrier integrity. Sleeve flexible materials. Adequately support services passing through barrier.
- Ceiling systems for fire protection: Do not impair fire resisting performance of ceiling system.

555 FIRE STOPPING AT PERIMETERS OF DRY LINING SYSTEMS

- Material: Tightly packed mineral wool or intumescent mastic/ sealant.
- Application: To perimeter abutments to provide a complete barrier to smoke and flame.

560 JOINTS BETWEEN BOARDS

- Tapered edged gypsum boards:
  - Bound edges: Lightly butted.
  - Cut/ unbound edges: 3 mm gap.
- Square edged plasterboards: 3 mm gap.
- Square edged gypsum fibre boards: 5 mm gap.

565 VERTICAL JOINTS

- Joints: Centre on studs.
  - Partitions: Stagger joints on opposite sides of studs.
  - Two-layer boarding: Stagger joints between layers.

570 HORIZONTAL JOINTS

- Surfaces exposed to view: Horizontal joints not permitted. Seek instructions where height of partition/ lining exceeds maximum available length of board.
- Two-layer boarding: Stagger joints between layers by at least 600 mm.
- Edges of boards: Support using additional framing.
  - Two-layer boarding: Support edges of outer layer.

575 PLANK PLASTERBOARD

- First layer in two-layer boarding: Square edged with long edges at right angles to studs.

580 INSULATION BACKED PLASTERBOARD

- General: Do not damage or cut away insulation to accommodate services.
- Installation at corners: Carefully cut back insulation or plasterboard as appropriate along edges of boards to give a continuous plasterboard face, with no gaps in insulation.

590 FIXING GYPSUM BOARD TO METAL FRAMING/ FURRINGS

- Partitions/ Wall linings: Fix securely and firmly at the following centres (maximum):
  - Single layer boarding: To all framing at 300 mm centres. Reduce to 200 mm centres at external angles.
  - Multi-layer boarding: Face layer at 300 mm centres, and previous layers around perimeters at 300 mm centres.
- Ceilings: 230 mm. Reduce to 150 mm at board ends and at lining perimeters.
- Position of screws from edges of boards (minimum): 10 mm.
  - Screw heads: Set in a depression. Do not break paper or gypsum core.

© Copyright protected

592 FIXING INSULATION BACKED PLASTERBOARD TO METAL FURRINGS

- Fixing to furring's: In addition to screw fixings apply continuous beads of adhesive sealant to furring's.

595 DEFLECTION HEADS

- Fixing boards: Do not fix to head channels.

FINISHING

650 LEVEL OF DRY LINING ACROSS JOINTS

- Sudden irregularities: Not permitted.
- Joint deviations: Measure from faces of adjacent boards using methods and straightedges (450 mm long with feet/ pads) to BS 8212, clause 3.3.5.
  - Tapered edge joints:
    Permissible deviation (maximum) across joints when measured with feet resting on boards: 3 mm.
  - External angles:
    Permissible deviation (maximum) for both faces: 4 mm.
  - Internal angles:
    Permissible deviation (maximum) for both faces: 5 mm.

670 SEAMLESS JOINTING TO GYPSUM BOARDS

- Cut edges of boards: Lightly sand to remove paper burrs.
- Filling and taping: Fill joints, gaps and internal angles with jointing compound and cover with continuous lengths of paper tape, fully bedded.
- Protection of edges/ corners: Reinforce external angles, stop ends, etc. with specified edge/ angle bead.
- Finishing: Apply jointing compound. Feather out each application beyond previous application to give a flush, smooth, seamless surface.
- Nail/ screw depressions: Fill with jointing compound to give a flush surface.
- Minor imperfections: Remove by light sanding.

680A SKIM COAT PLASTER FINISH

- Plaster type as recommended by board manufacturer, where required only.
  - Thickness: 2-3 mm, unless otherwise recommended by manufacturer.
- Joints: Fill and tape except where coincident with metal beads.
- Finish: Tight, Matt, smooth surface with no hollows, abrupt changes of level or trowel marks.

692 RIGID BEADS/STOPS

- Internal: To BS EN 13658-1.
- External: To BS EN 13658-2.

695 INSTALLING BEADS/ STOPS

- Cutting: Neatly using mitres at return angles.
- Fixing: Securely using longest possible lengths, plumb, square and true to line and level, ensuring full contact of wings with substrate.
- Finishing: After joint compounds/ plasters have been applied, remove surplus material while still wet from surfaces of beads exposed to view.

© Copyright protected

K11 RIGID SHEET FLOORING/ SHEATHING/ DECKING/ SARKING/ LININGS/ CASINGS

To be read with Preliminaries/ General Conditions.

TYPES OF FLOORING/ SHEATHING/ DECKING/ SARKING/ LINING/ CASINGS

110 WOOD-BASED SHEETS GENERALLY

- Standard: To BS EN 13986.
  - Evidence of compliance: All sheets to be CE marked. Submit Declaration of Performance (DoP).

275A ACOUSTIC UNDERLAY WHERE INDICATED

- Substrate: concrete slab.
- System manufacturer: submit proposals to Engineer's approval.
  - Product reference: submit proposals to Engineer's approval.
- Acoustic Underlay
  - Provide heavy-duty acoustic underlayer for screed, toping, floor finishes and where otherwise indicated for occupied areas; made of recycled rubber or other approved-type manufacturer's proprietary material; complete with manufacturer’s standard perimeter wall strip, bond coat, and hi-tack adhesive tape; system-designed to meet or exceed the required impact sound pressure level reduction on slab structures, where indicated or required in the Project.
  - Thickness: 19mm, unless otherwise indicated to meet requirements in Acoustic Report.
  - Load Bearing Capacity: Not less than 3,000 kg/sq. m.
  - Impact sound reduction to comply with values indicated in the Acoustic Report.
  - An impact sound insulation performance of Lnw 38 or better for all normal occupied areas is required.
  - An impact sound insulation performance of Lnw 32 or better for all VIP occupied areas is required.
  - The floor of the rooms above occupied areas should achieve an Rw 70 and an Lnw 28 minimum, and should be floating floor
  - Water Vapour Transmission Rate for underlay (ASTM D 1653 or equivalent European counterpart):.40 g/sqm/24 hrs.
  - Bond Coat: Provide as follows:

    For Dry Areas: High-tack, semi-pressure sensitive, acrylic-based adhesive; one-part; specifically formulated for acoustic underlayer bonding in dry area substrates.

    For Wet Areas: Elastomeric, moisture-cured polyurethane adhesive; one-part; solvent-free.

415 PLYWOOD WALL SHEATHING

- Substrate: galvanized steel studs on concrete walls.
  - Additional supports: as recommended by manufacturer.
- Sheathing: Plywood manufactured to the relevant standards and quality control procedures specified in BS EN 636, and so marked.
  - Type: fire retardant hardwood plywood.
  - Grade: fire retardant.
  - Nominal thickness/ number of plies: 19 mm.
  - Other requirements: plywood to receive two coats of fire-retardant coating as recommended by manufacturer.
- Setting out: Long edges vertical and centred on supports.

© Copyright protected

- Expansion gap between adjacent boards (unless otherwise recommended by manufacturer): 2-3 mm.

- Fixing to supports:
  - Fasteners: 60 x 3.35 mm galvanized annular ringed shank nails.
  - Fixing centres (maximum):
    Around board edges: 150 mm.
    Along intermediate supports: 300 mm.
  - Fixing distance from edges (minimum): 25 mm from bottom edge of board and 10 mm from other edges.

815 PLYWOOD GENERALLY

- Substrate: as indicated.
  - Additional supports: as recommended by manufacturer.
- Plywood: Manufactured to an approved national standard.
  - Manufacturer/ Supplier: Submit proposals.
    Product reference: Submit proposals.
  - Face veneer species: Contractor's choice; biological durability appropriate for plywood subject to the risk of attack outlined in BS EN 335, use class 3.
  - Face grain direction: perpendicular to long edges of boards.
  - Bonding quality to BS EN 314-2: Class 1.
  - Appearance class to BS EN 635: Class E.
  - Finish: Sanded.
  - Thickness: 19 mm nominal.
  - Edges: Square.
  - Treatment: Fire retardant impregnation.
  - Other requirements: none.
- Setting out: Long edges running across supports.
  - Gap between adjacent boards: none.
- Fixing to supports:
  - Fasteners: 50 mm x 8 gauge wood screws into pilot holes.
  - Fixing centres (maximum):
    Around board edges: 150 mm.
    Along intermediate supports: 300 mm.
  - Fixing distance from edges (minimum): 10 mm.
- Joint treatment: Bonded with PVA adhesive to BS EN 204, class D3.
- Accessories: none.

875 MEDIUM DENSITY FIBREBOARD GENERALLY, WHERE INDICATED

- Substrate: as indicated.
  - Additional supports: as indicated.
- Medium density fibreboard: To BS EN 622-5, Type MDF.HLS.
  - Manufacturer/ Supplier: Submit proposals.
    Product reference: Submit proposals.
  - Formaldehyde class to BS EN 622-1: Class E1.
  - Fire rating: Class 1 surface spread of flame to BS 476-7.
  - Thickness: 18 mm.
  - Edges: Square.
  - Recycled content: Contractor's choice.
  - Other requirements: none.
- Setting out: Long edges running across supports.

© Copyright protected

  - Gap between adjacent boards: as indicated.
- Fixing to supports:
  - Fixing centres (maximum):
    Around board edges: 100 mm.
    Along intermediate supports: 150 mm.
  - Fixing distance from edges (minimum): 12 mm.
- Joint treatment: Bonded with PVA adhesive to BS EN 204, class D3.
- Accessories: none.

880 WOOD STRIP CLADDING

- Type: Solid wood strip wall/ceiling cladding.
  - Grade: Premium.
  - Manufacturer / Reference: Submit proposals to Engineer's approval.
  - Dimensions: As indicated in finish manuals and drawings.
  - Pattern: As indicated in finish manuals and drawings.
  - Finish: As indicated in finish manuals and drawings.
  - Moisture Content: Maximum 8–10%.
  - Edges / Joining: As indicated and approved shop drawings.
  - Width of strips: As indicated; uniform and consistent.
  - Grain / Colour matching: Selected and installed to achieve uniform appearance.
- Substructure / Fixing:
  - Timber or metal support framework as per manufacturer's recommendations.
  - Provide concealed fixing system unless otherwise specified.
- Fire performance: Comply with BS EN 13501-1, minimum Class B-s1,d0 or as required by project.
- Installation:
  - Install in accordance with manufacturer's instructions.
  - Allow for expansion gaps and movement.

880A SOLID METAL CLADDING

- Type: Solid metal sheet cladding system for walls.
  - Material: Metal panels, as indicated.
  - Grade: Suitable for architectural cladding applications.
  - Manufacturer / Reference: Submit proposals for Engineer's approval.
  - Panel size: As indicated in drawings and finishes manual.
  - Thickness: As indicated in drawings and finishes manual.
  - Finish: As indicated in drawings and finishes manual.
  - Colour: As indicated in drawings and finishes manual.
  - Fabrication: Factory-formed panels with folded edges and stiffeners for rigidity, as required.
- Substructure / Support system: Metal support framework as indicated.
- Fixing: Concealed fixing system, in accordance with manufacturer's recommendations.
- Installation: Install plumb, level, and true to line in accordance with manufacturer's instructions.

880B PERFORATED METAL CLADDING

- Type: Perforated metal sheet cladding system for walls.
  - Material: Metal panels, as indicated.
  - Pattern: As selected by engineer full range from manufacturer.
  - Grade: Suitable for architectural cladding applications.
  - Manufacturer / Reference: Submit proposals for Engineer's approval.
  - Panel size: As indicated in drawings and finishes manual.
  - Thickness: As indicated in drawings and finishes manual.
  - Finish: As indicated in drawings and finishes manual.
  - Colour: As indicated in drawings and finishes manual.

© Copyright protected

  - Fabrication: Factory-formed panels with folded edges and stiffeners for rigidity, as required.
- Substructure / Support system: Metal support framework as indicated.
- Fixing: Concealed fixing system, in accordance with manufacturer's recommendations.
- Installation: Install plumb, level, and true to line in accordance with manufacturer's instructions.

880C STAINLESS STEEL SKIRTING

- Type: Stainless steel skirting.
  - Material: Stainless steel, as indicated.
  - Grade: Suitable for architectural cladding applications.
  - Manufacturer / Reference: Submit proposals for Engineer's approval.
  - Height: 200 mm, unless otherwise indicated.
  - Thickness: 2mm, unless otherwise indicated.
  - Finish: Brushed finish, unless otherwise indicated.
  - Edges / Profile**:** Straight, true, with smooth finished edges.
  - Fabrication: Factory-formed panels with folded edges and stiffeners for rigidity, as required.
- Fixing: Concealed fixing system, in accordance with manufacturer's recommendations.
- Installation: Install plumb, level, and true to line in accordance with manufacturer's instructions.

WORKMANSHIP

910 INSTALLATION GENERALLY

- Timing: Building to be weathertight before fixing boards internally.
- Moisture content of timber supports (maximum): 18%.
- Joints between boards: Accurately aligned, of constant width and parallel to perimeter edges.
- Methods of fixing, and fasteners: As section Z20 where not specified otherwise.

930 ADDITIONAL SUPPORTS

- Additional studs, noggings/ dwangs (Scot) and battens:
  - Provision: In accordance with board manufacturer's recommendations and as follows:
    Tongue and groove jointed rigid board areas: To all unsupported perimeter edges.
    Butt jointed rigid board areas: To all unsupported edges.
  - Size: Not less than 50 mm wide and of adequate thickness.
  - Quality of timber: As for adjacent timber supports.
  - Treatment (where required): As for adjacent timber supports.

940 BOARD MOISTURE CONTENT AND CONDITIONING

- Moisture content of boards at time of fixing: Appropriate to end use.
- Conditioning regime: Submit proposals.

950 MOISTURE CONTENT TESTING

- Test regime and equipment: Submit proposals.
- Test results: Submit record of tests and results.

960 FIXING GENERALLY

- Boards/ sheets: Fixed securely to each support without distortion and true to line and level.
- Fasteners: Evenly spaced in straight lines and, unless otherwise recommended by board manufacturer, in pairs across joints.
  - Distance from edge of board/ sheet: Sufficient to prevent damage.
- Surplus adhesive: Removed as the work proceeds.

975 METAL WALL FRAMING

- Setting out: Framing accurately aligned, vertical and securely fixed to surrounding structure at maximum 600 mm centres. All board edges supported.

© Copyright protected

976 MINERAL WOOL INSULATION TO METAL FRAMING

- Installation: Neat and secure with close butted joints and no gaps. Where insulation is not self-supporting, fixed at head of frame using clips or other suitable proprietary fixings.

© Copyright protected

K30 PANEL PARTITIONS

To be read with Preliminaries/ General Conditions.

TYPES OF PARTITION

110A RELOCATABLE PARTITION SYSTEM FIT OUT

- Partition type: Fully glazed.
- Strength grade to BS 5234-2: Heavy (HD).
- Additional tests: Partition stiffness and Resistance to crowd pressure.
- Fire resistance of complete system:
  - Standard: To BS 476-22.
  - Rating: where fire rated partitions are required, rating to be 60 minutes integrity and 60 minutes insulation unless otherwise indicated in the fire and life safety report.
- Reaction to fire rating (for rateable components):
- Class A2 to BS EN 13501-1.
- Sound insulation (minimum):
  - Standard: BS EN ISO 140-4.
  - Rating: not less than 45 dB (Rw) (100-3150 Hz) to glazed panels, unless otherwise indicated on drawings and in acoustic report.
- Accessible design: In accordance with BS 8300.
- Partition height: As indicated on drawing.
- Partition abutments:
  - Head: Concrete slab along with back-to-back angles with silicone seal.
    Deflection allowance: Up to +/- 15 mm.
  - Floor: Concrete slab.
  - Wall/ Vertical structure: Concrete columns/ blockwork.
- Framing/ Perimeters/ Trims: Aluminium, powder coated, colour BS 4800.
- Glazed panels: Full height glazed.
  - Glass types: Acoustic-laminated clear, Class 1B1 to BS EN 12600 safety. Glass to achieve a minimum of -40 dB (Rw) to BS EN ISO 10140-2 and ISO 717-1.
  - Manifestation: Not required.
  - Blinds: where indicated to be Venetian with perforated blades - control integrated within frame, colour: Silver.
- Door sets: Supplied by system manufacturer.
  - Door frames: Aluminium, powder coated, colour to BS 4800.
  - Doors: single glazed leaf on offset pivots/hinges and as schedule.
  - Seals:
  - Acoustic.
  - Combined intumescent and smoke; and
- Intumescent.
  - Threshold: none.
  - Ironmongery: As section P21 and complying with door schedule.
  - Other features: ironmongery to be stainless steel 316.
- Accessories: none.
- Other requirements: none.

© Copyright protected

GENERALLY

310 COMPLIANCE WITH PERFORMANCE REQUIREMENTS

- UKAS accredited laboratory test/ assessment reports: Submit for the following:
  - Fire resistance including deflection heads, door sets and over panels;
  - Sound insulation; and
- Structural performance.
- Materials, components and details: In accordance with test/ assessment reports. Give notice if discrepancies arise.

315 ACOUSTIC FIELD TESTS

- Standard: To BS EN ISO 140-4.
- Requirements: 42 dB.

320 SAMPLES

- Representative samples: Before placing orders, submit the following: as indicated.
- Delivered materials/ products: To match samples.

330 CONTROL SAMPLES

- General: Complete areas of finished work and obtain approval of appearance before proceeding.
- Partition types: as indicated.
  - Location/ Size: as indicated.

340 ENVIRONMENTAL CONDITIONS

- General: Before, during and after installation, maintain temperature and humidity levels similar to those that will prevail after building is occupied.

375 NEW WET LAID BASES

- DPCS: Install under full width of partitions.
  - Material: Bituminous sheet or plastics.

380 COORDINATION WITH OTHERS

- Fire/ Sound barriers within floor and ceiling voids: Align accurately with partitions.
- Service runs and outlets: Check designated routes. Do not obstruct outlets and access panels.

INSTALLATION

410 WORKMANSHIPS GENERALLY

- Setting out: Plumb, true to line and level, and free from bowing, undulations and other planar distortions.
- Joints: Align accurately with no lipping.
- Stability: Fix securely, with additional supports where necessary at perimeters.
- Moisture and thermal movement of framing/ panels: Make adequate allowance.

425 INSTALLING RELOCATABLE PARTITIONS

- Site dimensions: Check before installation. Give notice of discrepancies.
- Perimeter abutments: Accommodate deviations whilst maintaining partition system performance. Form make up/ closer pieces accurately around projections and features.
- Customization: Do not cut or otherwise alter framing/ panels on site, except where shown on drawings.
- Intermediate joints in exposed frame members and trims: Keep to a minimum.
- Electrical continuity and earth bonding: To BS 7671 (The IEE Wiring Regulations).

© Copyright protected

470 PERIMETER SEALS

- Sealant material: A type recommended by partition/ panel manufacturer.
- Application: Continuously, to clean, dry, dust-free surfaces, leaving no gaps. In accordance with the sealant manufacturer's instructions.

475 FIRE STOPPING

- General: Seal gaps at junctions of partitions with perimeter abutments, cavity barriers, service penetrations etc, to prevent penetration of smoke and flame.
- Materials: Non-combustible or intumescent.

480 GLAZING FOR RELOCATABLE PARTITIONS

- Glass standards: To BS 952 and relevant parts of:
  - BS EN 12150 for thermally toughened glass.
  - BS EN ISO 12543 for laminated glass.
- Insulated glass unit standard: To relevant parts of BS EN 1279.
- Pane size: Within ±2 mm of nominal size.
- Pane condition: Clean and free from obvious scratches, bubbles, rippling, dimples and other defects.
- Glazing standard: To relevant parts of BS 6262.
- Preglazed panes: To be capable of being reglazed in situ.

490 IRONMONGERY FOR RELOCATABLE PARTITIONS

- Frames and doors: Prepare accurately to accept ironmongery and associated fixings.
- Ironmongery installation: Accurate and without damage to components or surrounding surfaces.
  - Fasteners: Supplied by partition/ ironmongery manufacturer. Finish to match component.
- Completion: Check, adjust and lubricate as necessary for correct operation.

495 POST INSTALLATION REQUIREMENTS FOR RELOCATABLE PARTITIONS

- General: Inspect and adjust for correct fit and operation.
- Documentation: Submit for each partition type, including:
  - Partition type and construction.
  - Manufacturer's identity.
  - Sound and fire rating.
  - Surface finishes and Light Reflectance Values (as manufactured).
  - Requirements for fixtures and fittings.
  - Test data and fire certificates.
  - Special requirements.
  - Dismantling and reassembly procedures.
  - Maintenance: Replacement of panels, access to services, cleaning, etc.
- Spares: Provide and hand over to the Employer, as follows: as indicated.

© Copyright protected

K32 PANEL CUBICLES/ DUCT AND WALL LININGS/ SCREENS

To be read with Preliminaries/ General Conditions.

120 PANEL CUBICLES GENERALLY

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: to Engineer's approval.
- Panels:
  - Height (overall): 2100 mm unless otherwise indicated.
  - Floor clearance: 100 mm, unless otherwise indicated .
  - Core material: Honeycomb core with phenolic compact laminate facings.
    Thickness: As indicated finish manuals, but not less than 25mm.
  - Facings: Manufacturer's standard as indicated in the finish manual.
    Colour/ Pattern/ Species: As finish Manual.
  - Edge treatment: Manufacturer's standard.
  - Wall support: stainless steel 1.4401 grade 316 Brackets.
- Pilasters:
  - Core material: Honeycomb core with phenolic compact laminate facings.
    Thickness: As indicated finish manuals, but not less than 25mm.
  - Facings: Manufacturer's standard as indicated in the finish manual.
    Colour/ Pattern/ Species: as finish manual.
  - Edge treatment: Manufacturer's standard.
- Doors:
  - Height: 2100 mm unless otherwise indicated.
  - Core material: Honeycomb core with phenolic compact laminate facings.
    Thickness: As indicated finish manuals, but not less than 25mm.
  - Facings: Manufacturer's standard as indicated in the finish manual.
    Colour/ Pattern/ Species: as finish manual.
  - Edge treatment: Manufacturer's standard.
  - Ironmongery: Manufacturer's standard.
    Material: Stainless steel door hardware grade 316.
    Hinges: Self-closing type.
    Lock: With occupancy indicator and emergency access.
    Colour: as selected by Engineer from Manufacturer's standard range.
- Fittings:
  - Headrails: Invisible overhead aluminium frame, unless otherwise indicated on drawings.
- Pedestals/ Shoes: Floor mounted anodized aluminium adjustable foot pedestals.
- Accessories: None.
- Other requirements:
  - Interlocking doors and fascia to provide flush sightline-free appearance.

130 PRIVACY SCREENS BETWEEN URINALS

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Frame/ Supports:
  - Type: wall mounted as indicated on drawings.
  - Material: Manufacturer's standard.
  - Finish: Manufacturer's standard.
- Panels:
  - Height (overall): Manufacturer's standard.

© Copyright protected

- Floor clearance: Manufacturer's standard.
- Core material: High pressure laminate (HPL) bonded to high-density resin impregnated particleboard substrate.
  Thickness: 25mm, unless othewise indicated.
- Facings: Manufacturer's standard.
  Colour/ Pattern/ Species: as selected by Engineer from Manufacturer's standard range.
- Edge treatment: Manufacturer's standard.
- Wall support: stainless steel 1.4401 grade 316 Brackets.

- Accessories: none.
- Other requirements: None.

210 SAMPLES

- General: Before placing orders submit representative samples of the following: Panel and door material and colours.
- Delivered materials/ products: To match samples.

220 CONTROL SAMPLES

- General: Complete samples as part of finished work and obtain approval of appearance before proceeding.
- Types: All items specified in this section and applicable to project.
  - Locations: as agreed with Engineer.

250 INSTALLATIONS

- Programming: Do not install cubicles wall panels before building is weathertight, wet trades have finished their work, wall and floor finishes are complete, and the building is well dried out.
- Accuracy: Set out to ensure frames and/ or panels and doors are plumb, level and accurately aligned.
- Modifications: Do not cut, plane or sand prefinished components except where shown on drawings.
- Fixing: Secure components using methods and fasteners recommended by the cubicle/ panel manufacturer. Prevent pulling away, bowing or other distortions to frames, panels and doors.
- Moisture and thermal movement: Make adequate allowance for future movement.

© Copyright protected

K40 DEMOUNTABLE SUSPENDED CEILINGS

To be read with Preliminaries/General Conditions.

TYPES OF CEILING SYSTEM

105 SUSPENDED CEILING SYSTEM GENERALLY

- Standard: To BS EN 13964.
- Evidence of compliance: All ceilings kits to be CE marked. Submit Declaration of Performance (DoP).
- Ceiling:
  - Type: Unit/ modular, as indicated in the finish's manual.
  - Module: 600 x 600 mm, unless otherwise indicated on drawings and in finishes manual.
  - Soffit height above finished floor level: as indicated on drawings.
- Grid:
  - Form: Non-interlocking.
  - Exposure: Exposed or semi-concealed, as indicated in the finish's manual and on drawings.
- Access: Access panels as indicated on drawings.
- Suspension system: Required to meet also seismic loads determined by Engineer.
- Perimeter trim: Required.
- Accessories: Air plenum barriers where fire rated plenum barriers are required and indicated in the fire and life safety report.
- Integrated services fittings: Hangers and housings for linear luminaires.
- Other requirements: Install primary grid using manufacturer's recommended system.

115A UNIT/ MODULAR SUSPENDED CEILING SYSTEM WITH FIBREGLASS ACOUSTIC TILES

- Standard: To BS EN 13964.
- Evidence of compliance: All ceilings kits to be CE marked. Submit Declaration of Performance (DoP).
- Ceiling system manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Ceiling:
  - Infill units: lay-in acoustic tiles.
  - Material: High-density glass wool / fiberglass core with factory-applied decorative facing.
  - Ceiling module: 600 x 600 mm, unless otherwise indicated on drawings and in manual.
  - Thickness: As selected by engineer from full range manufacturers, but not less than 25mm.
  - Color/Finish: As selected by engineer from full range manufacturers.
  - Light reflectance (LR): As indicated in finish manual.
  - Sound absorption (NRC): As indicated in acoustical report.
  - Fire performance: Class A to BS EN 13501-1.
  - Humidity resistance: Suitable for up to 95–100% RH without sagging.
  - Soffit height above finished floor level: as indicated.
- Grid:
  - Form: Interlocking exposed tee grid system, unless otherwise indicated on drawings.
  - Exposure: Exposed.
- Access: Infill units fully demountable.
- Suspension system: As clause 250.
- Perimeter trim: As clause 260.
- Accessories: Air plenum barriers as clause 290.

© Copyright protected

- Integrated services fittings: as clause 395.
- Other requirements: Insulation as clause 285 and cavity barrier as clause 287.

115B UNIT/ MODULAR SUSPENDED CEILING SYSTEM WITH ACOUSTIC MINERAL FIBRE TILES

- Standard: To BS EN 13964.
- Evidence of compliance: All ceilings' kits to be CE marked. Submit Declaration of Performance (DoP).
- Ceiling system manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Ceiling:
  - Infill units: lay-in acoustic tiles.
  - Ceiling module: 600 x 600 mm, unless otherwise indicated on drawings and in manual.
  - Thickness: As selected by engineer from full range manufacturers, but not less than 25mm.
  - Color/Finish: As selected by engineer from full range manufacturers.
  - Light reflectance (LR): As indicated in finish manual.
  - Sound absorption (NRC): As indicated in acoustical report.
  - Soffit height above finished floor level: as indicated.
- Grid:
  - Form: Interlocking exposed tee grid system unless otherwise indicated on drawings.
  - Exposure: Exposed, unless otherwise indicated on drawings and in manual.
- Access: Infill units fully demountable.
- Suspension system: As clause 250.
- Perimeter trim: As clause 260.
- Accessories: Air plenum barriers as clause 290.
- Integrated services fittings: as clause 395.
- Other requirements: Insulation as clause 285.
- Relative Humidity: maximum 95%.
- Sound attenuation: 36 dB, unless otherwise indicated on drawings and in manual.
- Fire performance: Euro class A2-s1,d0.
- Where indicated for clean rooms, provide units that comply with clean room classification ISO-Class4, in accordance to ISO 14644-1.
- Warranty: not less than15 years from date of taking over.

115 C UNIT/ MODULAR SUSPENDED CEILING SYSTEM WITH MICRO-PERFORATED ALUMINUM PAN CEILING

- Standard: To BS EN 13964.
- Ceiling tiles:
  - Material: Powder-coated aluminium, clip-in system.
  - Perforation: Micro-perforated, hole diameter 1.5 mm.
  - Open area: 22%.
  - Border: 20 mm unperforated edge.
  - Edge detail: 4 mm bevelled edges.
  - Infill: Fiberglass backing for enhanced acoustic performance.
  - Colour/ Finish: As indicated on drawings and finishes manual.
- Acoustical performance: NRC as indicated in Acoustic Report and Drawings.
- Humidity resistance: Suitable for environments up to 95% RH.
- Fire performance: Euro class A2-s1, d0.
- Tile dimensions: 600 x 600 mm, unless otherwise indicated.
- Suspension system: Concealed clip-in system, as recommended by manufacturer.

© Copyright protected

- Access: Fully demountable tiles.
- Grid/ framing: Compatible with concealed clip-in suspension system.
- Perimeter trim: As clause 260.
- Accessories: Air plenum barriers (clause 290), integrated service fittings (clause 395).
- Other requirements: Insulation as clause 285.
- Cleanroom performance (where indicated): Provide units compliant with ISO 14644-1, ISO-Class 4.
- Warranty: Not less than 15 years from date of Taking Over.

115 D UNIT/ MODULAR SUSPENDED CEILING SYSTEM WITH PERFORATED STEELTILES

- Standard: To BS EN 13964.
- Ceiling tiles:
  - Material: painted Steel sheet.
  - Steel sheet thickness: minimum 0.5 mm
  - Perforation: as indicated on drawings.
  - Open area: 22%.
  - Border: 20 mm unperforated edge.
  - Infill: Fiberglass backing for enhanced acoustic performance, unless otherwise indicated.
  - Colour and Finish: Light grey, 20 percent Matt, unless otherwise indicated on drawings and finishes manual.
- Acoustical performance: NRC as indicated in Acoustic Report and Drawings
- Humidity resistance: Suitable for environments up to 95% RH.
- Fire performance: Euro class A2-s1, d0.
- Tile dimensions: 600 x 600 mm, unless otherwise indicated.
- Suspension system: Concealed Lay-in system.
- Access: Fully demountable tiles.
- Grid/ framing: Compatible with concealed clip-in suspension system.
- Perimeter trim: As clause 260.
- Accessories: Air plenum barriers (clause 290), integrated service fittings (clause 395).
- Other requirements: Insulation as clause 285.
- Cleanroom performance (where indicated): Provide units compliant with ISO 14644-1, ISO-Class 4.
- Warranty: Not less than 15 years from date of Taking Over.

115 F WOOD-VENEER, LINEAR ACOUSTICAL BAFFLE CEILING

- Linear Baffle ceiling: Manufacturer's standard linear panels fabricated from planks consisting of wood veneer adhered to backs and exposed surfaces with medium density fibreboard composite-wood cores. Planks run parallel to panel length.
- Surface-Burning Characteristics: Provide products with the following characteristics when tested in accordance with BS EN 13501-1, class B-s2, d0
  - Baffle size: as indicated on drawings.
  - Thickness: As indicated.
  - Color: walnut, unless otherwise indicated
  - Veneer Face Grade: Manufacturer's standard Insert requirements.
  - Veneer Species: As indicated in the manual.
  - Veneer Cut: Manufacturer's standard.
  - Nominal Plank Width: As indicated in Interior finish materials manual.
  - Plank Depth: As indicated in Interior finish materials manual.
  - Plank Length: As indicated in Interior finish materials manual.
  - Plank Edges: As indicated in Interior finish materials manual.

© Copyright protected

- Panel Attachment: Provide manufacturer's standard attachment hooks or clips for attaching panels to grid suspension system, spaced to support ceiling loads and in accordance with manufacturer's written installation instruction.
- Veneer Adhesive: Manufacturer's standard that complies with "Performance Requirements" Article.
- Plank Finish: Tinted finish in color selected by Engineer from manufacturer's standard.
- Backing Board Gloss and Color: Flat black, unless otherwise indicated.

115 G WOOD-VENEER, ACOUSTICAL PANEL CEILING

- Acoustical wood Ceiling Panels: Manufacturer's standard linear panels fabricated from planks consisting of wood veneer adhered to backs and exposed surfaces with medium density fibreboard composite-wood cores. Planks run parallel to panel length.
- Surface-Burning Characteristics: Provide products with the following characteristics when tested in accordance with BS EN 13501-1, class B-s2, d0
  - Veneer Face Grade: Manufacturer's standard Insert requirements.
  - Veneer Species: As indicated in the manual.
  - Veneer Cut: Manufacturer's standard.
  - Nominal Plank Width: As indicated in the manual.
  - Plank Depth: As indicated in the manual.
  - Plank Length: As indicated in the manual.
  - Plank Edges: As indicated in the manual.
  - Backing Boards: Manufacturer's standard.
  - Panel Module: As indicated in the manual.
  - Panel Attachment: Provide manufacturer's standard attachment hooks or clips for attaching panels to grid suspension system, spaced to support ceiling loads and in accordance with manufacturer's written installation instruction.
  - Veneer Adhesive: Manufacturer's standard that complies with "Performance Requirements" Article.
  - Plank Finish: Tinted finish in color selected by Engineer from manufacturer's standard.

115 H LINEAR-CEILING-PANEL ACCESSORIES

- Linear-Ceiling-Panel Accessories: Linear-ceiling-panel manufacturer's accessories required to provide a complete installation of ceiling in accordance with manufacturer's written installation instructions.
  - Safety Cables: 610 mm.
  - Panel Splice Plates: Manufacturer's standard.
  - Acoustic Infill Panels: Manufacturer's standard to provide NRC rating indicated, with flame-spread index of 25 or less and smoke-developed index of 450 or less as determined by testing in accordance with ASTM E84.
  - NRC: NRC as indicated in Acoustic Report and Drawings.
  - Acoustic Felt: Manufacturer's standard, factory applied, black, backer with flame-spread index of 25 or less and smoke-developed index of 450 or less as determined by testing in accordance with ASTM E84.
  - Veneer Edge Banding: Manufacturer's standard matching planks for treating cut edges; with pressure-sensitive adhesive backing.
  - Trim: As indicated on the Drawings; with trim connectors recommended in writing by ceiling and suspension-system manufacturers.
  - Material: As indicated in the manual.

© Copyright protected

135 BOARD SUSPENDED CEILING SYSTEM WHERE INDICATED

- Standard: To BS EN 13964.
- Evidence of compliance: All ceilings kits to be CE marked. Submit Declaration of Performance (DoP).
- Ceiling system manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Ceiling:
  - Boards: As clause 270.
  - Soffit height above finished floor level: as indicated.
- Grid:
  - Form: Non-interlocking.
  - Exposure: Concealed.
- Suspension system:
  - Grid centres: as indicated.
  - Hanger centres: manufacturer's recommendations.
- Access: Access panels indicated on drawing.
- Perimeter trim: Not required.
- Accessories: None.
- Integrated services fittings: None.
- Other requirements: insulation as clause 285.

GENERAL/ PERFORMANCE

205 COMPLIANCE WITH PERFORMANCE REQUIREMENTS

- Testing/ assessment: Submit UKAS accredited laboratory reports for the following: Fire performance.
- Materials, components and details: Use those used in the test and identified in the assessment reports. If discrepancies arise, give notice.

210 ENVIRONMENT

- Environmental classification to BS EN 13964: Class A.
- Release of Formaldehyde to BS EN 13964: Class E1.
- Susceptibility to growth of harmful micro-organisms to BS EN 13964: Level A.

220 STRUCTURAL PERFORMANCE GENERALLY

- Loads: The ceiling system must safely support all anticipated loads, including services fittings:
  - Class: 1.
  - Additional loads/ pressures to be sustained by ceiling system: Lighting, fire detection, firefighting, air conditioning and other building services accessories as indicated on drawings.
    Ceiling system subject to wind pressure: No.
- Deflection (maximum) between points of support:
  - Span under 1200 mm: Span/400.
  - Span 1200-1800 mm: Span/500.
  - Span over 1800 mm: Span/600.
- Test standard: To BS EN 13964.

225 FIRE PERFORMANCE as per fire and life safety drawings and report

- Completed ceiling system: Intended for fire protection.
- Reaction to fire ratings:
  - Ceiling soffit surfaces: To BS EN 13501-1, Euro class A2-s1, d0. Where indicated on drawings and fire report to be classified as Class B.

© Copyright protected

  - Ceiling void surfaces: To BS EN 13501-1, Euro class A2-s1, d0. Where indicated on drawings and fire report to be classified as Class B.
- Fire resistance:
  - Overall fire resistance: To BS EN 13501-2, REI 60, unless otherwise indicated on drawings and in fire report.
  - Ceiling resistance: To 13501-2, EI 30, unless otherwise indicated on drawings and in fire report.
  - Other protection: None.
- Test reports or assessments: Include details of performance related to the particular elements of construction.
  - Ceilings with integrated luminaires: Test/ assess with luminaires in place.

230 ACOUSTIC PERFORMANCE AS INDICATED IN THE ACOUSTICS REPORT

- Sound absorption to BS EN ISO 11654: Class A.
- Sound attenuation: Dnf, w (minimum) to BS EN ISO 717-1: as indicated in the acoustics report and on drawings for each area.
- Other acoustic requirements: Weighted standardised level difference, DnT,w (minimum) to BS EN ISO 717-1: as determined in the acoustics report.

COMPONENTS

240 SAMPLES

- General: Submit representative samples of the following: All components for all ceiling systems specified in this section and applicable to the project.

245 STANDARDS

- Steel panels: To BS EN 10346.
- Aluminium sheet, strip and plate: To BS EN 485-1 and -2.
- Aluminium bars, tubes and sections: To relevant parts of BS EN 515, BS EN 573, BS EN 755 and BS EN 12020.

250 SUSPENSION SYSTEM GENERALLY

- Manufacturer: Submit proposals.
  - Product reference: To Engineer's selection.
- Extent of system: Include all hangers, fixings, main runners, cross members, primary channels, perimeter trims, splines, noggings, clips, bracing, bridging, etc. necessary to complete the ceiling system and achieve specified performance.
- Top fixings: wire hanger anchor bolts.
- Hangers: M6 galvanized threaded rods.
- Grid type: special extruded aluminium sections as indicated in the FF&E manual and on drawings.
  - Finish: powder coating, min. 60 microns.
  - Colour: as indicated in the FF&E manual.

260 PERIMETER TRIMS GENERALLY

- Type: 32 x 19 mm steel angle trim, colour and finish to match exposed grid.
- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Fixings:
  - Fasteners: BZP raised head screws.
  - Fixing centres (maximum): 450 mm.

© Copyright protected

265 INFILL UNITS WHERE INDICATED

- Type: Fine fissured mineral fibre tiles with rebated edge profile.
- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
  - Form: Pressed units.
  - Sizes: as indicated.
  - Finish: for metal panels insert: Powder coating to Z31 to all surfaces of panel, 60 micrometres minimum film thickness.
  - Colour: to BS 4800.
- Recycled content: Not applicable.

270 BOARDS WHERE INDICATED

- Type: fibre reinforced board, sound absorbent or moisture resistant where indicated.
- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Recycled content: Not applicable.
- Thickness: 12 mm, unless otherwise indicated on drawings and in manual, and as per manufacturer's recommendations to meet performance requirements.
- Sizes: manufacturer's standard size, subject to Engineer's approval.
- Edge profile: Bevelled.
- Fillets/ cover strips: 9 mm thick across full width of channel and 6 x 75 mm behind joints at right angles to channels.
- Finish: Seamless finishing to fibre reinforced gypsum boards.
- Colour: as indicated.
- Other requirements: Predrilled holes for fixings.

280 ACCESS UNITS WHERE INDICATED

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Size: as indicated.
- Frame type: Plaster.
- Fire performance: As suspended ceiling.
- Lock type : 3-point espagnolette bolt.
- Operation: Concealed steel hinges, downward opening.
- Finish: Antibacterial coating.
- Colour: as indicated.

285 INSULATION GENERALLY

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Purpose: Acoustic insulation and fire protection.
  - Performance: 43 dB sound reduction unless otherwise indicated on drawings and in acoustic report.
- Type: Mineral wool pads.
- Recycled content: Contractor's choice.
- Thickness: as indicated on drawings.
- Density: not less than 80 kg/m³.
- Facings/ Wrappings: Aluminium foil to back (facing void) and edges, white glass fibre tissue to front.

© Copyright protected

287 CAVITY BARRIERS

- Standard: To BS EN 13501-2.
- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Fire resistance: To BS EN 13501-2, EI 30.
- Type/ Material: Wire reinforced mineral wool.
- Thickness: 100 mm unless otherwise indicated.
- Density: 80 kg/m³.
- Facings/ Wrappings: Aluminium foil to back (facing void) and edges, white glass fibre tissue to front.

290 AIR PLENUM BARRIERS generally

- Material: Rigid or semirigid nonporous sheets with smooth non-dusting surfaces.
- Fire spread rating: Not less than ceiling materials exposed within the ceiling void.

EXECUTION

302 CONTROL SAMPLES

- General: Complete areas as part of the finished work in the following locations: As agreed with the Engineer.
- Approval: Obtain before completing areas of similar work.

305 SETTING OUT

- General: Completed ceiling should present, over the whole of its surface exposed to the room below, a continuous and even surface, jointed (where applicable) at regular intervals.
- Infill and access units, integrated services: Fitted correctly and aligned.
- Edge/ perimeter infill units' size (minimum): Half standard width or length.
- Corner infill units' size (minimum): Half standard width and length.
- Grid: Position to suit infill unit sizes. Allow for permitted deviations from nominal sizes of infill unit.
- Infill joints and exposed suspension members: Straight, aligned and parallel to walls, unless specified otherwise.
- Suitability of construction: Give notice where building elements and features to which the ceiling systems relate are not square, straight or level.

310 BRACING

- General: Secure, with additional bracing and stiffening to give a stable ceiling system resistant to design loads and pressures.

315 PROTECTION

- Loading: Do not apply loads for which the suspension system is not designed.
- Ceiling materials: When necessary, remove and replace correctly using special tools and clean gloves, etc. as appropriate.

320 TOP FIXING

- Building structure: Verify suitability.
- Structural soffit: Existing concrete slab.
  - Suitability to receive specified fixings: Evaluate and confirm.
- Fixing generally: In accordance with BS EN 13964.
- Fixing to:
  - Concrete: Drill and insert suitable expanding anchors.
  - Aerated concrete: Fix through from the top of concrete units and provide a system of primary support channels.

© Copyright protected

- Structural steel: Drill or use suitable proprietary clips/ adaptors.
- Metal roof decking: Fix to sides of liner tray corrugations.
- Timber: Fix to side of joists at least 50 mm from bottom edge. If ceiling system is intended for fire protection, fix into top third of joists.
- Hollow structural members: Submit fixing proposals.

325 INSTALLING HANGERS

- Wire hangers: Straighten and tension before use.
- Installation: Install vertical or near vertical, without bends or kinks. Do not allow hangers to press against fittings, services, or insulation covering ducts/ pipes.
- Obstructions: Where obstructions prevent vertical installation, either brace diagonal hangers against lateral movement, or hang ceiling system on an appropriate rigid sub-grid bridging across obstructions and supported to prevent lateral movement.
- Extra hangers: Provide as necessary to carry additional loads.
- Fixing:
  - Wire hangers: Tie securely at top with tight bends to loops to prevent vertical movement.
  - Angle/ strap hangers: Do not use rivets for top fixing.
- Spacings: As indicated in the relevant clauses and on drawings.

335 INSTALLING PERIMETER TRIMS

- Jointing: Neat and accurate, without lipping or twisting.
  - External and internal corners: Mitre joints generally. Overlap joints at internal corners are not acceptable.
  - Intermediate butt joints: Minimize. Use longest available lengths of trim. Align adjacent lengths.
- Fixing: Fix firmly to perimeter wall, edge battens or other building structure.
  - Fasteners: As recommended by the ceiling manufacturer subject to the Engineer's approval.
  - Fixing centres: 450 mm.

340 EXPOSED GRIDS

- Grid fixings: As recommended by the ceiling manufacturer subject to the Engineer's approval.
- Main runners: Install level. Do not kink or bend hangers.
  - Spliced joints: Stagger.
  - Wire hangers passing through main runners: Use sharp bends and tightly wrapped loops.
  - Angle/ strap hangers: Do not use rivets for bottom fixing.
  - Angular displacement of long axis of one runner in relation to next runner in line with it: Not visually apparent.
- Cross members supported by main runners or other cross members: Install perpendicular to intersecting runners.
- Cross tees: Flat and coplanar with flanges of main runners after panel insertion.
  - Cross tees over 600 mm long, cut and resting on perimeter trim: Provide an additional hanger.
- Holding down clips: Locate to manufacturer's recommendations.
  - Fire protecting/ resisting ceiling systems: Use clip type featured in the fire test/ assessment.

345 CONCEALED GRIDS

- Grid fixings: As recommended by the ceiling manufacturer subject to the Engineer's approval.
- Primary support channels: Install level. Do not kink or bend hangers.
  - Wire hangers wrapped around primary channels: Twice wrapped. Loops tightly formed.
  - Angle/ Strap hangers: Do not use rivets for bottom fixing.
- Splines: Locate between infill units to assist levelling of adjacent units and to resist air movement at joints.

© Copyright protected

- Spring-tee grids: Do not omit primary channel.

355 INSTALLING INFILL UNITS

- General:
  - Perimeter infill units: Trimmed, as necessary, to fully fill space between last grid member and perimeter trim. Prevent subsequent movement.
  - Deeply textured infill units: Minimize variations in apparent texture and colour. In particular, avoid patchiness.
- Concealed grids: Install infill units uniformly, straight and aligned. Avoid dimension creep.
  - Infill units around recessed luminaires and similar openings: Prevent movement and displacement.

365 INSTALLING METAL INFILL UNITS

- Sound absorbing pads: Fit to prevent upward air movement through infill units. Cut or fold pads in cut perimeter infill units to full unit size. Reseal cut pads.
- Perimeter infill units: Firmly wedge cut units into perimeter trim, or clip down.

375 BOARD CEILING SYSTEMS

- Cut boards: Neat and accurate.
- Fixing to grid:
  - Board edges: Fully support. Screw to grid members. Set heads of screws below surface of boards and fill flush with surface.
  - Boards applied in two or more layers: Stagger joints.
- Movement joints: Provide as appropriate for the area of ceiling system and/ or to coincide with movement joints in surrounding structure.

385 UPSTANDS AND BULKHEADS

- Vertical ceiling systems: Support and brace to provide alignment and stability.
- High upstands: Provide support at base of upstand.

390 OPENINGS IN CEILING MATERIALS

- General: Neat and accurate. To suit sizes and edge details of fittings. Do not distort ceiling system.

395 INTEGRATED SERVICES

- General: Position services accurately, support adequately. Align and level in relation to the ceiling and suspension system. Do not diminish performance of ceiling system.
- Small fittings: Support with rigid backing boards or other suitable means. Do not damage or distort the ceiling.
  - Surface spread of flame rating of additional supporting material: Not less than ceiling material.
- Services outlets:
  - Supported by ceiling system: Provide additional hangers.
  - Independently supported: Provide flanges to support ceiling system.

401 CEILING-MOUNTED LUMINAIRES

- Support: independent.
  - Independently supported luminaires: Suspension adjusted to line and level of ceiling.
  - Ceiling supported luminaires: Modifications and/ or extra support required: no.
- Surface mounted luminaires: Units installed so that in event of a fire the designed grid expansion provision is not affected.
- Modular fluorescent recessed luminaires: Compatible with ceiling module. Extension boxes must not foul ceiling system.

© Copyright protected

- Recessed rows of luminaires: Provide flanges for support of grid and infill units, unless mounted above grid flanges. Retain in position with lateral restraint.
- Fire protecting/ resisting ceiling systems: Luminaires must not diminish protection integrity of ceiling system.
- Access: Provide access for maintenance of luminaires.

406 TRUNKING

- Recessed trunking: Provide flanges for support of grid and infill units, unless mounted above grid flanges. Retain in position with lateral restraint.

411 MECHANICAL SERVICES

- Fan coil units:
  - Inlet/ Outlet grilles: Trim ceiling grid and infill units to suit.
  - Space beneath: Sufficient for ceiling system components.
  - Suspension and connections: Permit accurate setting out and levelling of fan coil units.
- Air grilles and diffusers:
  - Setting out: Accurate and level.
  - Linear air diffusers: Retain in place with lateral restraint. Provide flanges for support of grid and infill units.
  - Grille/ Diffuser ceiling joints: Provide smudge rings and edge seals.
- Smoke detectors and PA speakers:
  - Ceiling infill units: Scribe and trim to suit.
  - Independent suspension: Required.
  - Flexible connections: Required.
- Sprinkler heads: Carefully set out and level.

415 INSTALLING INSULATION

- Fitting: Fit accurately and firmly with butted joints and no gaps.
- Insulation within individual infill units: Fit closely. Secure to prevent displacement when infill units are installed or subsequently lifted.
  - Dustproof sleeving: Reseal, if cut.
- Width: Lay insulation in the widest practical widths to suit grid member spacings.
- Services: Do not cover electrical cables that have not been sized accordingly. Cut insulation carefully around electrical fittings, etc. Do not lay insulation over luminaires.
- Sloping and vertical areas of ceiling system: Fasten insulation, to prevent displacement.

421 CEILING SYSTEMS INTENDED FOR FIRE PROTECTION

- Junctions of ceiling systems with perimeter abutments and service penetrations: Seal gaps with tightly packed mineral wool or intumescent sealant to prevent penetration of smoke and flame.
- Ceiling system/ wall junctions: Maintain protective value of ceiling system.
  - Fixings and grounds: Non-combustible.
  - Metal trim: Provide for thermal expansion.
- Access and access panels: Maintain continuity of fire protection.

425 INSTALLING CAVITY FIRE BARRIERS

- Maximum ceiling void dimension in any direction: As indicated on drawings.
- Fixing: As recommended by the ceiling manufacturer subject to the Engineer's approval.
  - General: Fix barriers securely to channels or angles at abutments to building structure.
  - At perimeters and joints: Provide permanent stability and continuity with no gaps to form a complete barrier to smoke and flame.
- Joints: Form to preserve integrity in fire.

© Copyright protected

- Service penetrations: Cut barriers neatly to accommodate services. Fit fire resistant sleeves around flexible materials. Fill gaps around services to fire barrier manufacturer's recommendations to maintain barrier integrity. Adequately support services passing through the barrier.
- Ceiling systems intended for fire protection: Do not impair fire resisting performance of ceiling system.
- Ceiling systems not intended for fire protection: Do not mechanically interlink barriers with ceiling system.

431 INSTALLING SOUND BARRIERS

- Material: Wire reinforced mineral wool mat with aluminium foil facing, or equivalent.
- Setting out: Align accurately with partition heads.
- Fixing: Fix tightly at perimeters and joints using methods recommended by barrier manufacturer, including steel support sections as appropriate. Completed installation to be stable, secure and continuous, with no gaps.
- Gaps at junctions with partition heads, ceiling system, structural soffit, walls, ducts, pipes, etc: Seal with mineral wool or suitable sealant.

435 INSTALLING AIR PLENUM BARRIERS

- Fixing: Fix tightly at perimeters and joints using methods recommended by the barrier manufacturer to ensure permanent stability.
- Edges and joints: Seal effectively to prevent air leakage.

500 ELECTRICAL CONTINUITY AND EARTH BONDING

- Inclusion in finished work: Not required.

COMPLETION

505 TOOLS

- Access tools: At Completion, supply one set of the following: All tools required to provide access to the ceiling void as well as, all tools required to dismantle or re-assemble the ceiling system should maintenance works be required in the future.

520 USER INSTRUCTIONS

- Contents: Include the following:
  - Correct methods for removing and replacing infill units and other components.
  - Cleaning methods and materials.
  - Recommendations for redecoration.
  - Ceiling systems intended for fire protection: Limitations placed on subsequent alterations and maintenance procedures, to ensure that their fire performance is not impaired.
  - Maximum number, position and value of point loads that can be applied to ceiling system after installation.

530 SPARES

- General: At Completion supply the following: 25 tiles for each ceiling system unless otherwise indicated by Engineer.

© Copyright protected

K41 RAISED ACCESS FLOORS

To be read with Preliminaries/ General Conditions.

TYPES OF RAISED ACCESS FLOOR

120 RAISED ACCESS FLOOR generally

- Standard: To BS EN 12825.
- Subfloor: New screed on concrete slab.
  - Preparation: Apply dustproofing sealer.
- Floor panels: As clause 315.
  - Accessibility: Full.
- Pedestal fixing: Mechanical.
- Structural performance:
  - Static loading requirements:
    Structural load class: Class 5 unless otherwise indicated.
    Deflection class: Class A.
    Safety factor: 2.0.
  - Dynamic loading requirements:
    Absorption of hard body impacts testing: Required.
    Absorption of soft body impacts testing: Required.
    Rolling load testing: To check suitability for Castor wheels.
    - System shall be suitable for heavy-duty rolling loads including server racks and equipment.
- Fire performance: As clause 234.
- Installed mass of system (maximum): Not restricted.
- Height:
  - Finished raised access floor height above subfloor: Determined by floor void height.
  - Floor void height: Determined by finished floor height.
- Acoustic insulation: as clause 239.
- Thermal conductivity (maximum): Not applicable.
- Floor void air leakage: Limited as clause 249.
- Floor covering: Adhered static dissipative vinyl tiles as indicated in manual.
- Refer section M50.
  - Peel resistance of covering: Not required.
- Accessories: Provide all accessories required to install the system complete.

GENERAL/ PERFORMANCE

210 GENERAL PERFORMANCE

- Structural requirement: Generally, as section B50.
  - Additional requirements: None.

219 INSTALLATION

- Completed installation: Clean and stable. Free from bounce and vibration. No lipping between floor panels.

234 FIRE PERFORMANCE

- Reaction to fire: To BS 476-7, class 1.
- Resistance to fire: To BS 476-20 and -21, 30 minutes loadbearing capacity and integrity.

© Copyright protected

239 SOUND TRANSMISSION

- Laboratory system test: In accordance with BS EN ISO10848-2.
  - Airborne sound insulation: as indicated in the acoustic report.
  - Impact sound insulation: as indicated in the acoustic report.
  - Test report: Submit.

COMPONENTS

310 SAMPLES

- General: Submit representative samples of the following: Floor panels, pedestals, pads, stringers and all accessories.
  - Purpose: Engineer's Approval.

315A FLOOR PANELS GENERALLY

- Panel size: 600 x 600 mm nominal.
  - Dimensional deviations: To BS EN 12825, Class 1.
- Life expectancy, excluding coverings (minimum): 25 years.
- Casing material: Steel.
  - Casing finish: Galvanized.
  - Casing thickness: As required to meet Class 5 performance.
  - All components shall be free from electro-zinc plating to prevent zinc whisker formation.
- Core material: Cementitious filled steel core material.
- Where indicated on drawings, use Perforated panels top surface with slots of number, spacing, and size standard with manufacturer to produce a nominal open area of 25 percent.
- Perimeter edging material: Steel.
- Weight of removable panels: 20 kg maximum without floor covering.
- Floor panel fixing: gravity -held in under structure for fast removal and replacement and if required, blots.
- Floor panel location method: Positive.
- Labelling:
  - Nonstandard panels: Identify for relocation purposes.
  - Service identification labels: Provide self-adhesive labels to identify under-floor services and their direction. Fix to the visible surface of the floor panel, and under carpet finish if any.

320 PEDESTALS GENERALLY

- Material: Mild steel with galvanized base plates.
- Life expectancy (minimum): 50 years.
- Adjustability: Adjustable.
  - Limits on adjustability: Submit proposals to Engineer's approval.
  - Locking: Required.
- Additional pedestals: Where required.
- Provide seismic-resistant pedestals where required to resist lateral loads and vibrations.

322 PEDESTAL ADHESIVE

- Adhesive: Compatible with subfloor surface finish.

325 STRINGERS GENERALLY

- Type: Submit proposals.
- Material: galvanized steel.
- Life expectancy (minimum): 50 years.
- Removable stringers: Bolted.

© Copyright protected

331 INTEGRAL FLOOR PANEL COVERINGS GENERALLY

- Type: Static dissipative or conductive vinyl tiles to BS EN 649.
- Peel resistance (minimum) to BS EN 12825: 0.8 N/mm.
- Floor panel covering edges: Protect.

340 CAVITY BARRIERS

- Type: Mineral wool slabs.
- Performance:
  - General: Permanently stable, continuous, and an effective barrier to smoke and flame.
  - Fire resistance: To BS 476-20 and -22, 30 minutes integrity and insulation.
- Spacing: Maximum dimension in any direction: 10 m.
- Fixing: Fix securely so that their performance is unlikely to be affected by:
  - Movement of the building due to subsidence, shrinkage or temperature change.
  - Failure of their fixings in a fire.
  - Failure in a fire of any abutting material or construction.
  - Collapse in a fire of any services penetrating them.
- Floor panels above cavity barriers: To be firmly secured.
- Gaps between cavity barriers and other elements: Seal with mineral wool or other suitable material.
- Notification: Give notice when cavity barriers have been installed.

390 SUNDRY ACCESSORIES GENERALLY

- Component: Expansion joints and perimeter skirting.
  - Manufacturer: Submit proposals.
    Product reference: Submit proposals.

INSTALLATION

410 CONTROL SAMPLES

- General: Complete areas of finished work in the following locations: 1.5m2 including all accessories where agreed with the Engineer.

421 PREPARATIONS

- Areas where flooring is to be installed: Clean before installation and keep clean during installation.
- Setting out of flooring: Indelibly mark pedestal positions before installing services.
- Fixtures: Before installing floor, complete fixtures that floor panels are to be cut around, or that are to be bridged by floor supports.
- Bridging structures - supplementary supports: Where required, all in accordance with the manufacturer's details.

425 ENVIRONMENTAL CONDITIONS

- General: Dry, well ventilated, not subject to rapid variations or extremes of temperature or humidity.
- RH of air (maximum): 75%.
- Subfloors:
  - Moisture content: Test to BS 8201 using an accurately calibrated hygrometer.
  - RH (maximum): 75%.
  - Temperature (minimum): 5°C.

431 DUSTPROOFING

- Preparation: Surfaces to be sealed must be clean, dry and free from dust, grease and other contaminants.
- Extent of sealing: Concrete and masonry surfaces within raised access floor void.

© Copyright protected

- Sealer: Recommended by raised access floor manufacturer. Compatible with materials used to pack and/ or fix pedestals.
  - Colour: Tinted; different tint for each coat.
  - First coat: Apply before pedestals are erected.
  - Second coat: Apply after completion of services and other associated work.

435 CUT FLOOR PANELS

- Size (minimum): Half standard width x half standard length.
- Edges:
  - Burrs and rough edges: Make smooth.
  - Sealing: Seal exposed cut edges of floor panels that have moisture sensitive or combustible cores.

    Sealer: Self-adhesive aluminium foil tape rated class 0 as defined in Building Regulations.

441 RAISED ACCESS FLOOR LEVELS

- Permissible deviations in level:
  - Over set length: ±1.5 mm over 3m.
  - Overall: ±6 mm.

445 PERIMETERS

- Expansion gaps:
  - Size: 10 mm.
  - Location: At abutments.
- Expansion gap filling:
  - Filler type: Resilient closed cell.
  - Filling: Before fixing skirtings and cover strips.

455 LEVEL CHANGES

- Performance:
  - Ramps and steps: Comparable with performance of associated raised access floor.
  - Balustrades: Structural and safety requirements in accordance with BS 6180.

460 UNDER-FLOOR PLENUM AIR BARRIERS

- Material: Rigid or semirigid nonporous sheets with smooth non-dusting surfaces.
- Performance: Permanently stable, continuous and airtight.
- Fixing: Fix securely to subfloor, at joints and as necessary.
- Edges and joints: Seal.

470 INTEGRAL FINISHES ELECTRICAL RESISTANCE TESTING

- Location: Test complete raised access floor.
- Extent of testing: Test complete raised access floor.
- Testing agent: Qualified electrician.

COMPLETION

510 TOOLS

- Floor panel lifting devices: At completion, supply one set of suitable devices for each type of raised access floor finish installed. Train designated personnel in their use.
- Pedestal locking: At completion, supply one set of tools for releasing pedestal locking.

© Copyright protected

515 USER INSTRUCTIONS

- User manual contents: Include the following:
  - Correct method for lifting and replacing floor panels and stringers.
  - Limitations on sequence, number and positions of floor panels and stringers that can be removed safely at one time.
  - Permissible loading, with guidance on use of spreader plates when shifting heavy equipment and subsequent maintenance.
  - Methods for installing cabling and ducts to prevent damage to supporting structure.
  - Methods for cleaning floor panels and integral finishes.
  - Method for replacing integral floor panel coverings.
  - Method for adjusting and locking pedestals.
  - Recommended maintenance methods and frequency.
    Minimum maintenance-free life of raised access floor system.
    Minimum maintenance-free life of replaceable parts where this differs from that of the whole system.
    Minimum period during which replaceable components will be available.
  - Installation instructions, including COSHH Assessment.

520 SPARES

- General: At completion, supply the following: s determined by Engineer.

525 CLEANING

- Subfloors: At completion, thoroughly clean accessible areas of subfloors and leave free of dust and debris.
- Raised access floor: Before delivery of items carried by floor, clean thoroughly.

© Copyright protected

L10 WINDOWS/ ROOFLIGHTS/ SCREENS/ LOUVRES

To be read with Preliminaries/ General Conditions.

GENERAL

110 EVIDENCE OF PERFORMANCE

- Certification: Provide independently certified evidence that all incorporated components comply with specified performance requirements.

120 SITE DIMENSIONS

- Procedure: Before starting work on designated items take site dimensions, record on shop drawings and use to ensure accurate fabrication.
- Designated items: all items specified hereafter.

140 CONTROL SAMPLES

- Procedure:
  - Finalise component details.
  - Fabricate one of each of the following designated items as part of the quantity required for the project.
  - Obtain approval of appearance and quality before proceeding with manufacturer of the remaining quantity.
- Designated items: all items specified hereafter.

150 DAYLIGHT PERFORMANCE

- Daylight calculations: In accordance with BS 8206-2 and CIBSE 'Lighting guide LG10'.
- BREEAM requirements:
  - Submit: Design plans for each floor in the building with each room/ area labelled for use.
  - Calculations showing: Minimum point daylight factor expressed as a percentage for each room/ area.

PRODUCTS

335A ALUMINIUM WINDOWS

- Standard: To BS 4873.
- Exposure category to BS 6375-1/ Design wind load: 2000 Pa.
- Design wind pressure: Calculate in accordance with: BS EN 1991-1-4 and National Annex.
- Finish as delivered: super durable Polyester powder coating to BS 6496, Qualicoat Class 2, and AAMA 2604.
- Thermal performance (U-value maximum): 1.9 W/m²K for total assembly, considering as well that all frames shall be provided with thermal breaks.
- Glazing details: as section L40.
  - Beading: as indicated on drawings.
- Ironmongery/ Accessories: as indicated on drawings, and as specified in section P21.
- Fixing: Screwed to masonry reveal as clause 782.

650 METAL LOUVRES

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Material: Aluminium 2 mm thick blades.
  - Finish as delivered: super durable Powder coated, Qualicoat Class 2 or AAMA2604.

© Copyright protected

- Fire resistance rating: Not applicable.
- Number of louvre banks: One unless otherwise indicated on drawings and depending on weather resistance required.
- Louvre blade pitch and angle: Pitch: 100 mm, unless otherwise recommended by manufacturer.
- Blanking panels: Not required.
- Accessories/ Other requirements:
  Removable section for plant access where indicated on drawings
  Stainless steel bird mesh, unless otherwise indicated on drawings to be aluminium.
  Provide shop drawings for Engineer's approval prior to fabrication
  Provide sealant as section Z22 and as indicated on drawings to seal all gaps in jamb, head and sill
- Louvers to be Class A for excellent rain defence, where indicated on drawings.
- Fixing: as clause 782.

650B SAND TRAP METAL LOUVRES (IF INDICATED ON DRAWINGS)

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Description: Vertical channel louvre blades provide enhanced trapping of small airborne particles, particularly relevant where problems such as windborne sand are expected.
- Louvre blades mounted vertically directly into surrounding box frames to produce an overlapping baffle configuration.
- Collected debris ejected via horizontal Sill slot.
- Material: Aluminium, 2 mm thick blades.
  - Finish as delivered: super durable Powder coated, Qualicoat Class 2 or AAMA2604.
- Fire resistance rating: Not applicable.
- Number of louvre banks: One unless otherwise indicated on drawings and depending on weather resistance required.
- Louvre blade pitch and angle: Pitch: 100 mm, unless otherwise recommended by manufacturer.
- Blanking panels: Not required.
- Accessories/ Other requirements:
  Stainless steel bird mesh
  Provide shop drawings for Engineer's approval prior to fabrication
- Provide sealant as section Z22 and as indicated on drawings to seal all gaps in jamb, head and sill.
- Fixing: as clause 782.
- Sand efficiency removal: not less than 85% when measured during testing as described in ASHRAE standard 52-76 test method or equivalent as submitted to Engineer's approval.

EXECUTION

710 PROTECTION OF COMPONENTS

- General: Do not deliver to site components that cannot be installed immediately or placed in clean, dry floored and covered storage.
- Stored components: Stack vertical or near vertical on level bearers, separated with spacers to prevent damage by and to projecting ironmongery, beads, etc.

740 CORROSION PROTECTION

- Surfaces to be protected: Aluminium alloys in direct contact with:
  - Iron and steel unless galvanized.
  - Concrete, mortar or plasters, especially when embedded.
- Lead and stainless steel in heavily polluted atmospheres.
- Protective coating: Two coats of bitumen solution to BS 6949 or an approved mastic impregnated tape.

© Copyright protected

- Timing of application: Before fixing components.

750 BUILDING IN

- General: Not permitted unless indicated on drawings.
  - Brace and protect components to prevent distortion and damage during construction of adjacent structure.

765 WINDOW INSTALLATION GENERALLY

- Installation: Into prepared openings.
- Gap between frame edge and surrounding construction:
  - Minimum: 3 mm.
  - Maximum: 10 mm.
- Distortion: Install windows without twist or diagonal racking.

766A LOCATION OF OPENABLE WINDOWS, IF REQUIRED AND INDICATED, IN NATURALLY VENTILATED BUILDINGS

- Location: Over 10 m from sources of external pollution.

770 DAMP PROOF COURSES IN PREPARED OPENINGS

- Location: Ensure correct positioning in relation to window frames. Do not displace during fixing operations.

782 FIXING OF ALUMINIUM FRAMES

- Standard: As section Z20.
- Fasteners: 10 mm phosphor bronze expanding bolts unless otherwise indicated on drawings and as recommended by Manufacturer to Engineer's approval.
  - Spacing: When not predrilled or specified otherwise, position fasteners not more than 250 mm from ends of each jamb, adjacent to each hanging point of opening lights, and at maximum 600 mm centres.

790 FIRE RESISTING FRAMES

- Gap between back of frame and reveal: Completely fill with intumescent mastic or tape and tightly packed mineral wool.

810 SEALANT JOINTS

- Sealant:
  - Manufacturer: Submit proposals to Engineer's approval.
    Product reference: Submit proposals to Engineer's approval.
  - Colour: to Engineer's selection from manufacturer's standard range.
  - Application: As section Z22 to prepared joints. Finish triangular fillets to a flat or slightly convex profile.

820 IRONMONGERIES

- Fixing: In accordance with any third-party certification conditions applicable. Assemble and fix carefully and accurately using fasteners with matching finish supplied by ironmongery manufacturer. Do not damage ironmongery and adjacent surfaces.
- Checking/ Adjusting/ Lubricating: Carry out at Completion and ensure correct functioning.

© Copyright protected

L20 DOORS/ SHUTTERS/ HATCHES

To be read with Preliminaries/ General Conditions.

GENERAL

110 EVIDENCE OF PERFORMANCE

- Certification: Provide independently certified evidence that all incorporated components comply with specified performance requirements.

112 TIMBER PROCUREMENT

- Timber (including timber for wood-based products): Obtained from well-managed forests and/ or plantations in accordance with:
  - The laws governing forest management in the producer country or countries.
  - International agreements such as the Convention on International Trade in Endangered Species of wild fauna and flora (CITES).
- Documentation: Provide either:
  - Documentary evidence (which has been or can be independently verified) regarding the provenance of all timber supplied.
  - Evidence that suppliers have adopted and are implementing a formal environmental purchasing policy for timber and wood-based products.
- Certification scheme:
  - Forest Stewardship Council (FSA).
  - Programme for the Endorsement of Forest Certification (PEFC); or
- Sustainable Forestry Initiative (SFI), with Chain of Custody or submit proposals for Engineer's approval.
  - Other evidence: None.

115 FIRE RESISTING DOORS/ DOOR ASSEMBLIES/ DOORSETS

- Door products: As defined in BS EN 12519.
- Evidence of fire performance: Provide certified evidence, in the form of a product conformity certificate, directly relevant fire test report or engineering assessment, that each door/ door assembly/ door set supplied will comply with the specified requirements for fire or smoke resistance if tested to BS 476-22, BS EN 1634-1 or BS EN 1634-3. Such certification must cover door and frame materials, glass and glazing materials and their installation, essential and ancillary ironmongery, hinges and seals.
- Components, assemblies or sets will be marked to the relevant product standard and/ or third-party certification rating.

120 NON-FIRE RESISTING DOORS/ DOOR ASSEMBLIES/ DOORSETS

- Provide certified evidence, in the form of a product conformity certificate or engineering assessment, that each door/ door set/ assembly supplied will comply with the specified requirements to BS EN 14351-1. Such certification must cover door and frame materials, glass and glazing materials and their installation, essential and ancillary ironmongery, hinges and seals.
- Components and assemblies will be marked to the relevant product standard and/ or third-party certification rating.

150 SITE DIMENSIONS

- Procedure: Before starting work on designated items take site dimensions, record on shop drawings and use to ensure accurate fabrication.
- Designated items: all items specified hereafter.

© Copyright protected

170 CONTROL SAMPLES

- Procedure:
  - Finalize component details.
  - Fabricate one of each of the following designated items as part of the quantity required for the project.
  - Obtain approval of appearance and quality before proceeding with manufacture of the remaining quantity.
- Designated items: all items specified hereafter.

PRODUCTS

230 WOOD FLUSH DOORS FD30S FIRE RESISTING AND SMOKE CONTROL SINGLE AND DOUBLE LEAF DOORS, WHERE INDICATED ON DRAWINGS

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Facings: hardwood veneer, as indicated in door schedule and drawings, and in compliance with manufacturer's recommendations to meet fire rating required.
- Lipping's: manufacturer's recommended concealed lipping's to long edges to meet fire rating required.
- Preservative treatment: Not required, unless otherwise recommended by manufacturer.
- Finish as delivered: Full factory finish.
- Glazing/ Infill details: where indicated, Clear fire-resisting glazing.
  - Manifestation: As indicated on drawings.
  - Beading: Not required, unless otherwise recommended by Manufacturer.
- Thermal performance (U-value maximum): Manufacturer's standard.
- Other requirements: None.

230A WOOD FLUSH DOORS NON-FIRE RESISTING SINGLE AND DOUBLE LEAF DOORS WHERE INDICATED ON DRAWINGS

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Facings: HPL high pressure laminate.
- Lipping's: manufacturer's recommended lipping's.
- Preservative treatment: Not required.
- Finish as delivered: Full factory finish.
- Glazing/ Infill details: Not applicable.
  - Manifestation: Not required.
  - Beading: Not required, unless otherwise recommended by Manufacturer.
- Thermal performance (U-value maximum): As required to achieve the thermal performance and as indicated in sustainability report.
- Other requirements: None.

270 WOOD DOORS FD30S FIRE RESISTING AND SMOKE CONTROL WHERE INDICATED ON DRAWINGS AND DOOR SCHEDULE

- Materials: Generally, to BS EN 942.
  - Species: Hardwood as table NA2.
  - Appearance class: J20.
- Panels: 6 mm birch faced plywood; Bonding quality to BS EN 314-2: Class 3 unless otherwise recommended by manufacturer to meet fire rating indicated.
- Assembly:
  - Adhesive: PVAC to BS EN 204, Class D4, unless otherwise recommended by manufacturer.

© Copyright protected

  - Joinery workmanship: As section Z10.
  - Accuracy: To BS 4787-1.
- Preservative treatment: Organic solvent as section Z12 and WPA Commodity Specification C5; Desired service life: 30 years.
- Moisture content on delivery: 12-16%.
- Finish as delivered: Full paint system, as section M60.
- Glazing/ Infill details: where indicated, to be Clear fire-resisting glazing.
  - Manifestation: As indicated on drawings.
  - Beading: Not required, unless otherwise recommended by Manufacturer.
- Thermal performance (U-value maximum): As required to achieve the thermal performance and as indicated in sustainability report.
- Other requirements: None.

280A DOORS STEEL

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Finish as delivered: Polyester powder coated to BS 6496, colour to be submitted to Engineer's approval.
- Finish system for Exterior steel doors: zinc rich epoxy anti corrosive metal primer and mid coats, factory applied. Solvent based -component aliphatic polyurethane finish coat. Number of coats and Dry film thickness to be in accordance with ISO 12944 and as recommended by manufacturer for category C5 for exterior and C4 for interior. Warranty to first maintenance: not less than 15 years.
- Glazing/ Infill details: Not applicable.
  - Manifestation: Not applicable.
  - Beading: Not required, unless otherwise recommended by Manufacturer.
- Ironmongery: As ironmongery schedule and as specified in section P21.
- Thermal performance (U-value maximum): Manufacturer's standard and comply with sustainability report.
- Other requirements: None.

280B DOORS STEEL AND FIRE RESISTING AND SMOKE CONTROL WITH RESPECT TO RATING INDICATED

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Finish as delivered: unless otherwise indicated, to be Polyester powder coated to BS 6496, colour to be submitted to Engineer's approval.
- Finish system for Exterior steel doors: zinc rich epoxy anti corrosive metal primer and mid coats, factory applied. Solvent based 2-component aliphatic polyurethane finish coat. Number of coats and Dry film thickness to be in accordance with ISO 12944 and as recommended by manufacturer for category C3. Warranty to first maintenance: not less than 15 years.
- Glazing/ Infill details: where indicated on drawings, Clear fire-resisting glazing.
  - Manifestation: As indicated on drawings.
  - Beading: Not required, unless otherwise recommended by Manufacturer.
- Ironmongery: As ironmongery schedule and as specified in section P21.
- Thermal performance (U-value maximum): Manufacturer's standard.
- Other requirements: None.

280C LOUVRED DOORS ALUMINIUM UNLESS OTHERWISE INDICATED TO BE STEEL

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.

© Copyright protected

- Finish as delivered: Polyester powder coated to BS 6496, colour to be submitted to Engineer's approval.
- Glazing/ Infill details: Not applicable.
  - Manifestation: As indicated on drawings.
  - Beading: Not required.
- Door Material: Unless otherwise indicated to be steel with powder coating, door to be of extruded aluminium profiles fabricated to form entire door assembly.
- Louvre material: 1.6 mm thick extruded aluminium with blade pitch angle at 45 degrees.
- Finish as delivered: factory applied super durable polyester powder coating to qualicot Class 2, unless otherwise indicated on drawings. Colour to be to Engineer's selection from manufacturer's full RAL colour range.
- Ironmongery: As ironmongery schedule and as specified in section P21.
- Thermal performance (U-value maximum): Manufacturer's standard.
- Other requirements: Provide insect screens on the inner face of the louvred panels. Provide sealant as section Z22 to seal all gaps in jamb, head and sill.

310 WOOD DOOR FRAMES FD30S FIRE RESISTING AND SMOKE CONTROL WHERE INDICATED IN SCHEDULE AND ON DRAWINGS

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Species: Hardwood unless otherwise recommended by manufacturer to meet fire rating indicated.
- Preservative treatment: Not required unless otherwise recommended by manufacturer.
- Finish as delivered: Full factory finish.
- Perimeter seals: Fire and smoke seal as recommended by manufacturer.
- Thermal performance: Manufacturer's standard.
- Fixing: as recommended by manufacturer to meet fire rating indicated.

330 WOOD DOOR FRAMES AND ARCHITRAVES

- Materials: Generally, to BS EN 942.
  - Species: Hardwood as table NA2.
  - Appearance class: J20.
- Assembly:
  - Adhesive: PVAC to BS EN 204, Class D4.
  - Joinery workmanship: As section Z10.
- Preservative treatment: Organic solvent as section Z12 and WPA Commodity Specification C5; Desired service life: 30 years.
- Moisture content on delivery: 12-16%.
- Finish as delivered: Full paint system, as section M60.
- Perimeter seals: Acoustic seal.
- Thermal performance (U-value maximum): manufacturer's standard and comply with sustainability report.
- Fixing: as recommended by manufacturer.

370A DOOR FRAMES STEEL and FIRE RESISTING AND SMOKE CONTROL

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Perimeter seals: Fire and smoke seal, and acoustic seal as indicated on drawings and in schedule.
- Finish as delivered for Interior door frames: Polyester powder coated.

© Copyright protected

- Finish system for Exterior steel doors: zinc rich epoxy anti corrosive metal primer and mid coats, factory applied. Solvent based 2-component aliphatic polyurethane finish coat. Number of coats and Dry film thickness to be in accordance with ISO 12944 and as recommended by manufacturer.
- Thermal performance (U-value maximum): Manufacturer's standard.
- Fixing: as recommended by manufacturer.

410 WOOD DOORSETS DOUBLE AND SINGLE FIRE RESISTING AND SMOKE CONTROL AND 40DB SOUND INSULATING, UNLESS OTHERWISE INDICATED IN ACOUSTICS REPORT AND IN FIRE AND LIFE SAFETY REPORT

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Door leaf:
  - Facings: hardwood veneer unless recommended otherwise by Manufacturer.
  - Lipping's: manufacturer's recommended lipping's to long edges and where indicated.
  - Finish as delivered: Full factory finish.
- Frame and architraves:
  - Wood species: as indicated on drawings and in schedule.
  - Finish as delivered: Full factory finish.
- Preservative treatment: Not required unless otherwise recommended by manufacturer.
- Glazing/ Infill details: where indicated.
  - Manifestation: As drawing.
  - Beading: Not required.
- Ironmongery: As ironmongery schedule.
- Perimeter seals: Acoustic seal and fire and smoke seal.
- Thermal performance (U-value maximum): Manufacturer's standard and comply with sustainability report.
- Other requirements: None.
- Fixing: as recommended by manufacturer.

430 WOOD DOORSETS DOUBLE and SINGLE FIRE RESISTING AND SMOKE CONTROL AND 40DB SOUND INSULATING, AS INDICATED IN THE FIRE AND LIFE SAFETY REPORT AND ACOUSTICS REPORT

- Materials: Generally, to BS EN 942.
- Door leaf:
  - Core: Manufacturer's choice to meet fire rating and acoustic requirements.
  - Facings: hardwood veneer following manufacturer's recommendations.
  - Lipping's: manufacturer's choice to meet fire rating and acoustic requirement, along with door's integrity and insulation.
  - Finish as delivered: Full paint system, as section M60.
- Frame and architraves:
  - Wood species: as indicated on drawings and in schedule.
  - Appearance class to BS EN 942: J20.
  - Finish as delivered: Full paint system, as section M60.
- Preservative treatment: Organic solvent as section Z12 and WPA Commodity Specification C5; Desired service life: 30 years.
- Glazing/ Infill details: as indicated on drawings.
  - Manifestation: As drawing.
  - Beading: as recommended by manufacturer.
- Moisture content on delivery: 12-16%.
- Ironmongery: As ironmongery schedule.

© Copyright protected

- Perimeter seals: Fire and smoke seal as recommended by manufacturer.
- Thermal performance (U-value maximum): Manufacturer's standard and comply with sustainability report .
- Fixing: as recommended by manufacturer.

480A DOORSETS - STEEL; - DOUBLE FIRE RESISTING AND SMOKE CONTROL; AND - 40DB SOUND INSULATING AS INDICATED IN ACOUSTICS REPORT AND AS PER FIRE RATING INDICATED

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Door leaf: powder coated galvanized steel.
  - Finish as delivered: Polyester powder coated for internal steel doors.
  - Finish system for Exterior steel doors: zinc rich epoxy anti corrosive metal primer and mid coats, factory applied. Solvent based 2-component aliphatic polyurethane finish coat. Number of coats and Dry film thickness to be in accordance with ISO 12944 and as recommended by manufacturer.
- Frame and architraves: galvanized steel.
  - Finish as delivered: Polyester powder coated. Where indicated for exterior applications, steel doors to receive polyurethane coating system in compliance with ISO 12944-5, C3. Warranty to first maintenance: not less than 15 years.
- Glazing/ Infill details: Clear fire-resisting glazing where indicated on drawings.
  - Manifestation: As drawing.
  - Beading: Not required.
- Ironmongery: As ironmongery schedule.
- Perimeter seals: Acoustic seal and fire and smoke seal.
- Thermal performance (U-value maximum): Manufacturer's standard and comply with sustainability report.
- Other requirements: None.
- Fixing: as recommended by manufacturer.

495A AUTOMATIC SLIDING DOORS

- Size: as indicated on drawings.
- Arrangement: Opening both sides.
- Profile:
  - Type: Lightweight profile.
- Colour/ Finish: super durable polyester powder coating.
- Glazing: insulating laminated safety glazing, in accordance with section L40.
- Drive unit:
  - Type: to sustain door leaf weight (maximum): 1 x 450 kg, 2 x 300 kg.
  - Sensors:
    Activation: Active infrared and Radar.
    Safety facility: Combined detector and alarm.
- Accessories:
  - Electromechanical lock (bistable lock) with feedback.
  - Emergency 'OFF' switch flush mounted.
  - Monitored battery module; and
- User interface with six operating modes and fault display.

520A SLIDING DOORS GENERALLY

- Manufacturer: Contractor's choice.

© Copyright protected

  - Product reference: Submit proposals.
- General: All sections to be extruded from aluminium alloy specification 6060/6063 T6 complying with BS EN 755-9:2001. Aluminium profiles to be manufactured to BS EN 1509001/9002.
- The fabricated product to conform with BS 4873.
- The glass/framing sections to withstand the design wind loading calculated in accordance with BS 63099 pt2: 1995.
- System: Thermally broken outer frame sections mounted on a formed 4mm thick aluminium cill with welded stopped ends. Thermally broken glazing sections bonded to structurally calculated insulating glass units.
- Standard glazing details: Hermetically sealed double-glazed units to BS6262, BS EN 12600, BS5713 with black spacer bars and a P.I.B primary seal and silicone backing seal 32/34mm thick with a 16mm Air filled cavity.
- Glass Incorporating: An outer pane of 10, 12 or 15mm toughened float glass and an inner pane of 6 or 8mm toughened soft coat low-E glass.
- Glass to be toughened to BS EN 12150.
- Ironmongery and fittings: 75mm stainless steel rollers with needle bearings mounted in an enclosed carrier case. 300mm long stainless steel ‘D’ handles on purpose made steel brackets.
- Fully rust proofed deadlock operated by Euro cylinder.
- Arrangement: Paired leaf bottom rolling.
- Ironmongery and fittings: 75mm stainless steel rollers with needle bearings mounted in an enclosed carrier case. 300mm long stainless steel ‘D’ handles on purpose made steel brackets.
- Operation: Manual.
- Other requirements: None.

610 ROLLER SHUTTERS/ CURTAINS ALUMINIUM

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
    Performance: Doors to comply with BS EN 12604 (mechanical aspects) and BS EN 12453 (requirements for safety in use of power operated doors) with third party certification by recognised testing authority. Wind pressure to BS EN 12424: Doors to achieve a minimum wind class of Class 3.
- Arrangement: Vertical roller shutter.
- Shutter/ curtain material: Aluminium.
  - Finish as delivered: anodized unless super durable powder coating is indicated.
- Frame/ Guides: 2 mm thick galvanized steel side guides, complete with articulated wind lock and integral brush seal.
  - Finish as delivered: powder coating.
- Operation: Electrical, with key switch or constant pressure button control, as indicated.
- Ironmongery: electrical lock; pull handle as specified in section P21.
- Other requirements: Battery back-up unit with emergency hand chain.

610C ROLLER SHUTTERS/ CURTAINS FIRE RATED

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
    Performance: Doors to comply with BS EN 12604 (mechanical aspects) and BS EN 12453 (requirements for safety in use of power operated doors) with third party certification by recognized testing authority.
  - Fire resistance: 120 minutes unless otherwise indicated in fire and life safety report and drawings.
  - Surface spread of flame: as indicated in fire and life safety report and drawings.

© Copyright protected

and

- Wind resistance: to resist wind load calculated.
- Wind pressure to BS EN 12424:
  - Doors to achieve a minimum wind class of Class 3.
- Fire performance to DIN 4102:
  - Door section element materials are to meet Class B2.
- Arrangement: Vertical roller shutter.
- Shutter/ curtain material: interlocking slats cold rolled from structural-quality, cold-rolled steel sheets galvanised to BS EN ISO 1461 and BS EN 10143.
  - Finish as delivered: powder coating.
- Frame/ Guides: Galvanized steel side guides, complete with signal coloured plastic protection strips and integral brush seal, fixed with galvanized steel anchor brackets. Galvanized steel height-adjustable brackets with mounting plate.
  - Finish as delivered: powder coating.
- Operation: Electrical, controlled release activated by fire alarm link via audio visual warning unit (FDI). Shutters to receive actuating fusible links that close at temperature measured in degrees as provided by manufacturer and in compliance with fire and life safety report
- Ironmongery: electrical lock; pull handle as specified in section P21.
- Other requirements: Battery back-up unit and emergency hand chain.

630 HATCHES GENERALLY

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Performance: Acoustic control: to meet acoustic ratings indicated in the acoustic report, and Fire resistance: as indicated in the fire and life safety report and on drawings.
- Operation: manual.
- Other requirements: recessed surface to accept tiles or other finishes as indicated on drawings.

630A WATER TANK ACCESS PANEL GENERALLY

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Performance: Air Infiltration: less than 0.01 cfm/sq. foot. Water Penetration: no leakage at 15.05 psf.
- Fabricate access panel units of sizes, type and shape shown on drawings.
- Steel angles and T sections supporting the covers and covers constructed from Stainless steel grade 1.4401 class A4 with polished finish.
- to Comply to BS 4211.
- Fasteners are to be nonmagnetic stainless steel as recommended by manufacturer.
- Equip units with complete ironmongery and hardware sets.
- Operation: manual.
- Other requirements: recessed surface to accept tiles or other finishes, as indicated on drawings.

630B METAL ACCESS PANEL TO WALLS AND CEILINGS GENERALLY

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- 1.2 mm stainless steel frame and 1.2 mm stainless steel door tray class A2, unless otherwise indicated on drawings.
- 1.5 mm galvanized steel frame and door tray as indicated on drawings for fire rated wall panels, to receive zinc rich epoxy primer, mid coat and polyurethane topcoat.
- Type: Hinged – fire resisting.
- Joist opening size: as indicated on drawings.

© Copyright protected

- Performance:
  - Fire resistance: fire tested up to 2 hours, unless otherwise indicated in fire report and in accord with adjacent fire rated walls, to BS EN 1634-1 or to BS 476-22.
  - Thermal Insulation: Mineral wool insulation
  - Air Infiltration: Airtight to Part L. BS EN 12207: 2000 & BS EN 1026
- Rw32dB acoustic performance, unless otherwise indicated and required in the acoustic report. To BS EN ISO 140-3, BS 2750: Part 3.
- Operation: manual.
- Lock type: security lock: operated by a castellated key.
- Other requirements: recessed surface to accept tiles or other finishes as indicated on drawings.
- Frame type: beaded frame: for installation into unfinished walls or ceilings. Taped and jointed or plaster skimmed over to give a frameless finish.

630C INSULATED ACCESS HATCHES GENERALLY

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Aluminium thermally broken access hatch to permit easy movement of maintenance personnel, tools and equipment.
- Material: 2.3 mm aluminium.
- Insulation: 75 mm polyisocyanurate to cover and curb.
- Lift Mechanism: Maintenance free compression springs located within inner and outer tube.
- Performance: Wind resistance/ air tightness: shall withstand 1.9-kPa external and 0.95-kPa internal loads.
- Operation: manual.
- Other requirements: recessed surface to accept tiles or other finishes as indicated on drawings.

630E ACCESS HATCHES GENERALLY

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Galvanized steel watertight access hatch to permit easy movement of maintenance personnel, tools and equipment.
- Material: 8 mm hot dip galvanized steel sheet coated with zinc rich epoxy primer, epoxy mid coat and polyurethane topcoat as recommended by manufacturer. Use 3 mm thick galvanized steel sheet for door lids for access hatches with no loads acting on them.
- Lift Mechanism: Maintenance free hydraulic pistons with hold open arm in open position. Spring-assisted and counterbalanced rise up doors are recommended for custom sizes.
- Performance: Wind resistance/ air tightness: shall withstand 1.9-kPa external and 0.95-kPa internal loads.
- Operation: manual.
- Other requirements: recessed surface to accept paving tiles or other finishes as indicated on drawings.
- Insulation where indicated for access hatch door lids, to be mineral wool insulation

EXECUTION

710 PROTECTIONS OF COMPONENTS

- General: Do not deliver to site components that cannot be installed immediately or placed in clean, dry, floored and covered storage.
- Stored components: Stacked on level bearers, separated with spacers to prevent damage by and to projecting ironmongery, beads, etc.

© Copyright protected

730 PRIMING/ SEALING

- Wood surfaces inaccessible after installation: Primed or sealed as specified before fixing components.

740 CORROSION PROTECTION

- Surfaces to be protected:
  - Timber treated with copper, zinc or mercury-based preservatives.
  - Oak, sweet chestnut, Douglas fir and western red cedar, unless well-seasoned.
  - Iron and steel unless galvanized.
  - Concrete, mortar, plasters or soil, especially when embedded.
  - Paints containing copper or mercury-based fungicides, graphite or Lead.
- Lead and stainless steel in heavily polluted atmospheres.
- Protective coating: Two coats of bitumen solution to BS 6949 or an approved mastic impregnated tape.
  - Timing of application: Before fixing components.

750 FIXING DOORSETS

- Timing: After associated rooms have been made weathertight and the work of wet trades is finished and dried out.

760 BUILDING IN

- General: Not permitted unless indicated on drawings.

770 DAMP PROOF COURSES ASSOCIATED WITH BUILT IN WOOD FRAMES

- Method of fixing: To backs of frames using galvanized clout nails.

780 DAMP PROOF COURSES IN PREPARED OPENINGS

- Location: Correctly positioned in relation to door frames. Do not displace during fixing operations.

790 FIXING OF WOOD FRAMES

- Spacing of fixings (frames not predrilled): Maximum 150 mm from ends of each jamb and at 600 mm maximum centres.

800 FIXING OF LOOSE THRESHOLDS

- Spacing of fixings: Maximum 150 mm from each end and at 600 mm maximum centres.

809 FIRE RESISTING/ SMOKE CONTROL DOORS/ DOORSETS/ ROLLER SHUTTERS/ CURTAINS

- Installation: By a firm currently registered under a third-party accredited fire door installer scheme in accordance with instructions supplied with the product conformity certificate, test report or engineering assessment.

810 FIRE RESISTING/ SMOKE CONTROL DOORS/ DOORSETS/ ROLLER SHUTTERS/ CURTAINS

- Gaps between frames and supporting construction: Filled as necessary in accordance with requirements for certification and/ or door/ door set manufacturer's instructions.

820 SEALANT JOINTS

- Sealant:
  - Manufacturer: Submit proposals to Engineer's approval.
    Product reference: Submit proposals to Engineer's approval.
  - Colour: as selected by Engineer from manufacturer's standard range.
  - Application: As section Z22 to prepared joints. Triangular fillets finished to a flat or slightly convex profile.

© Copyright protected

830 FIXING IRONMONGERIES GENERALLY

- Fasteners: Supplied by ironmongery manufacturer.
  - Finish/ Corrosion resistance: To match ironmongery.
- Holes for components: No larger than required for satisfactory fit/ operation.
- Adjacent surfaces: Undamaged.
- Moving parts: Adjusted, lubricated and functioning correctly at completion.

840 FIXING IRONMONGERIES TO FIRE RESISTING DOOR ASSEMBLIES

- General: All items fixed in accordance with door leaf manufacturer's recommendations ensuring that integrity of the assembly, as established by testing, is not compromised.
- Holes for through fixings and components: Accurately cut.
  - Clearances: Not more than 8 mm unless protected by intumescent paste or similar.
  - Lock/ Latch cases for fire doors requiring > 60 minutes integrity performance: Coated with intumescent paint or paste before installation.

850 LOCATIONS OF HINGES

- Primary hinges: Where not specified otherwise, positioned with centre lines 250 mm from top and bottom of door leaf.
- Third hinge: Where specified, positioned on centre line of door leaf.
- Hinges for fire resisting doors: Positioned in accordance with door leaf manufacturer's recommendations.

860 INSTALLATION OF EMERGENCY EXIT DEVICES

- Standard: Unless specified otherwise, install panic bolts/ latches in accordance with BS EN 1125.

© Copyright protected

L30 STAIRS/ LADDERS/ WALKWAYS/ HANDRAILS/ BALUSTRADES

To be read with Preliminaries/ General Conditions.

PRELIMINARY INFORMATION/ REQUIREMENTS

105 CONTRACTOR'S DESIGN GENERALLY

- Design responsibility: Determine section sizes and strengths and type, sizes and numbers of fixings.
- Structural and fire requirements:
  - Generally: As section B50.
  - Modifications: None.
  - Design: Complete the design in accordance with the designated code of practice to satisfy specified performance criteria.
- Functional requirements:
  - BS 4211 for ladders.
  - BS 4592 for industrial type flooring and stair treads.
  - BS 6180 for barriers.
  - BS 9999 for fire safety and management.
  - External walkways to BS 8300.
  - Requirements for fire safety and management to BS 9999.
  - Stairs to BS 5395-2.
- Straight stairs and winders to BS 5395-1.
- Additional requirements: None.
- Design and production information: As Preliminaries.
- Timing of submissions: As Preliminaries.

109 STRUCTURAL DESIGN PROVIDED

- Description: As Preliminaries.
- Requirements:
  - Generally: As section B50.
  - Additional requirements: None.

130 SITE DIMENSIONS

- Procedure: Before starting work on designated items take site dimensions, record on shop drawings and use to ensure accurate fabrication.
  - Designated items: all items specified hereafter.

COMPONENTS

410 STEEL LADDERS GENERALLY

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: to Engineer's approval.
- Standard: To BS 4211.
- Safety hoops: required on all fixed ladders rising 2.2 m or more above ground level or a lower platform unless otherwise indicated on drawings.
- Platforms: as indicated on drawings.
- Finish as delivered: Galvanized to BS EN ISO 1461.
- Other requirements:
  - Applied slip resistant nosing's with visual contrast.
  - Applied slip resistant treatment to rungs; and
  - Joints welded and ground smooth

© Copyright protected

- Submit shop drawings and structural calculations to Engineer's approval prior to fabrication.
- Fixing: Bolted to concrete floor edges unless otherwise indicated on drawings.

460B WALKWAYS WHERE INDICATED ON DRAWINGS

- Component material, grade and finish as delivered:
  - Flooring: Proprietary aluminium walkway system to BS EN 516, with slip-resistant surface suitable for wet conditions.
  - Guarding: Aluminium guarding system where required.
  - Edge protection: Minimum 100 mm to BS 8300.
  - Handrails: Aluminium handrails where required.
  - Lower handrail: Not required unless indicated on drawings.
- Workmanship: To section Z11.
  - Execution: Install in accordance with manufacturer's instructions and approved drawings.
  - Fixing: Secure, stable, and true to line and level.
  - Protection: Ensure waterproofing integrity of roof is not impaired.
- Other requirements:
  - Joints and connections mechanically fixed, secure, and free of sharp edges.
  - Installation not to impair roof waterproofing or drainage.
  - Provide manufacturer's warranty minimum 10 years.

550A PURPOSE MADE BALUSTRADES GLASS SUPPORTED BALUSTRADES

- Component material, grade and finish as delivered:
  - Guarding: Minimum 25.52 mm thick clear laminated fully tempered glass (12 + 1.52 PVB + 12) to section L40.
- Lamination: Minimum 1.52 mm thick PVB interlayer.
  - Handrails: Stainless steel 1.4401 A4- satin polished or no handrail, unless otherwise indicated on drawings.
    Lower handrail: Not required.
- Workmanship:
  - Joinery: Not applicable.
  - Metalwork: To section Z11.
- Other requirements: None.
- Fixing: to be determined by Contractor as indicated on drawings and to Engineer's approval.
  - Centres: as indicated on drawings.

560 PROPRIETARY BALUSTRADES STAINLESS STEEL BALUSTRADES WHERE INDICATED ON DRAWINGS

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Component material and finish as delivered:
  - Guarding: Stainless steel 1.4401 - satin polished, unless otherwise indicated on drawings and in manual.
  - Handrails: Stainless steel 1.4401- satin polished unless otherwise indicated on drawings.
    Lower handrail: Not required.
- Other requirements: bolt assemblies to be stainless steel as indicated on drawings
- Submit shop drawings to Engineer's approval.
- Fixing: stainless steel expansion bolts as indicated on drawings.
  - Centres: as indicated on drawings.

© Copyright protected

570 PURPOSE MADE HANDRAILS STAINLESS STEEL GRADE A4/1.4401

- Component material, grade and finish as delivered:
  - Handrails: Stainless steel - satin polished grade A4, unless otherwise indicated on drawings.
    Lower handrail: Not required.
  - Brackets: Stainless steel - satin polished unless otherwise indicated on drawings and in manual.
- Workmanship:
  - Joinery: Not applicable.
  - Metalwork: To section Z11.
- Other requirements: Submit shop drawings to Engineer's approval.
- Fixing: stainless steel expansion bolts. Submit shop drawings to Engineer's approval.
  - Centres: as indicated on drawings.

580 PROPRIETARY HANDRAILS GALVANIZED STEEL HANDRAILS

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Component material and finish as delivered:
  - Handrails: Low carbon steel - galvanized. Minimum mass Z 275.
    Lower handrail: only where indicated on drawings.
  - Brackets: Stainless steel.
- Other requirements: Submit shop drawings to Engineer's approval.
- Fixing: Anchor fixed to concrete unless otherwise indicated on drawings. Submit shop drawings to Engineer's approval.
  - Centres: as indicated on drawings.

590 APPLIED STAIR NOSINGS WHERE INDICATED ON DRAWINGS

- Standard: In accordance with BS 8300.
- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Material: cast iron nonslip nosing anchored to concrete step as indicated on drawings.
- Size – outer dimensions (rise x going): As indicated on drawings.
  - Profile: radiused edge nosing unless otherwise indicated on drawings.
  - Slip resistance value – water wet (minimum): Rz of 30 μm to BS 1134.
- Colour:
  - Channel/ Frame: epoxy coated cast metal.
  - Inserts: LRV to BS 8493 contrast of 30 (minimum) with tread/ riser.
- Accessories: Edge sealant as manufacturer's recommendations.

592 TRIMS/ EDGINGS TO STAIRS WHERE INDICATED ON DRAWINGS

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Material: Mill finish aluminium.
  - Slip resistance value – water wet (minimum): Rz of 30 μm to BS 1134.
- Size – outer dimensions: As shown on drawings.
  - Profile: Square unless otherwise indicated on drawings.
- Colour:
  - Channel/ Frame: Mill finish.
  - Inserts: LRV to BS 8493 contrast of 30 (minimum) with tread/riser.
- Accessories: Edge sealant as manufacturer's recommendations.
- Other requirements: None.

© Copyright protected

INSTALLATION

620 PRIMING/SEALING/PAINTING

- Surfaces inaccessible after assembly/installation: Before fixing components, apply full protective/decorative treatment/coating system.

630 CORROSION PROTECTION OF DISSIMILAR MATERIALS

- Components/ substrates/ fasteners of dissimilar materials: Isolate using washers/ sleeves or other suitable means to separate materials to avoid corrosion and/ or staining.

640 INSTALLATION GENERALLY

- Fasteners and methods of fixing: To section Z20.
- Structural members: Do not modify, cut, notch or make holes in structural members, except as indicated on drawings.
- Temporary support: Do not use stairs, walkways or balustrades as temporary support or strutting for other work.
- Applied finishes: Substrates to be even, dry, sound and free from contaminants. Make good substrate surfaces and prepare/ prime as finish manufacturer's recommendation before application.

670 INSTALLATION OF TREAD INSERTS/ NOSINGS

- Treads: Fully cured, sound and level.
- Fixing:
  - Location/ position: as indicated on drawings and in accordance with BS 8300.
  - Fixings: Stainless steel screws unless otherwise indicated on drawings.
    Centres: As manufacturer's recommendations.

COMPLETION

910 INSPECTION

- Timing: Two weeks prior to date when Contractor expects work to be practically complete and as coordinated with Engineer.
- Period of notice (minimum): 5 working days as coordinated with Engineer.

915 SLIP RESISTANCE TESTING

- Surfaces to be tested: all surfaces specified ditto.
  - Surface condition: Dry and wet.
- Timing: As agreed with Engineer.
- Period of notice (minimum): 5 working days unless otherwise determined by Engineer.
- Test standard: To BS 1134.
  - Testing authority: An approved laboratory.
  - Witnessing/ Certification: Arrange for tests to be witnessed/ certified by: Engineer.
  - Report: Submit.
    Format: As required under BS 1134.

920 DOCUMENTATION

- Contents:
  - Copies of structural design calculations/ test reports.
  - General product information.
  - Installation information.
  - Inspection and maintenance reports.
- Number of copies: as determined by Engineer.
- Submission: as determined by Engineer.

© Copyright protected

L35 FIXED UTILITARIAN ACCESS SYSTEMS

To be read with Preliminaries/ General Conditions.

GENERAL

130 LADDER SYSTEM GALVANIZED STEEL LADDER WITH SAFETY CAGE, UNLESS OTHERWISE INDICATED ON DRAWINGS

- Method of provision: Fabricated off site and assembled on site.
- Dimensions: As indicated on drawings.
- Basic component material: Galvanized carbon steel.
- Rungs: Hollow tube unless otherwise indicated on drawings.
- Stiles: Rectangular hollow section unless otherwise indicated on drawings.
- Landings/ platforms: Not required.
- Hoops: Not required.
- Assembly connectors: Stainless steel bolt assemblies and Full welds, unless otherwise indicated on drawings.
- Fixing to superstructure: Stainless steel bolts and Expanding bolts as indicated on drawings.
- Accessories: Brackets for fall arrest system, as section N25 unless indicated otherwise on drawings.

130A ROOF ACCESS GALVANIZED STEEL LADDERS

- Space siderails: As indicated on drawing.
- Siderails: Continuous, 10-by-65-mm steel flat bars, with eased edges.
- Rungs: 19-mm diameter, steel bars.
- Fit rungs in centreline of siderails; plug-weld and grind smooth on outer rail faces.
- Provide nonslip surfaces on top of each rung, either by coating rung with aluminium-oxide granules set in epoxy-resin adhesive or by using a type of manufactured rung filled with aluminium-oxide grout.
- Nonslip Surfaces for Steel Ladders: Provide nonslip surfaces on top of each rung by coating with abrasive material metallically bonded to rung.
- Source Limitations: Obtain nonslip surfaces from single source from single manufacturer.
- Provide platforms as indicated fabricated from welded or pressure-locked steel bar grating, supported by steel angles. Limit openings in gratings to no more than 12 mm in least dimension.
- Support each ladder at top and bottom and not more than 1500 mm o.c. with welded or bolted steel brackets.
- Hot dip Galvanize ladders, including brackets.
- Coated with Polyurethane coating.
- Fixing to superstructure: Stainless steel bolts and Expanding bolts as indicated on drawings.
- Accessories: Brackets for fall arrest system, as section N25 unless indicated otherwise on drawings.

170 GUARDING SYSTEM TO LADDERS, STAIR AND WHERE INDICATED ON DRAWINGS

- Method of provision: Fabricated off site and assembled on site.
- Dimensions: As indicated on drawings.
- Basic component material: Galvanized carbon steel.
- Standards: Tubes.
- Handrails: Tubes.
- Knee rails: Tubes.
- Infill panels: Not required.
- Assembly connectors: Stainless steel bolts and screws, unless otherwise indicated on drawings.
- Fixing to parent structure: Stainless steel bolts unless otherwise indicated on drawings.
- Accessories: Brackets for fall restraint system unless otherwise not required as per drawings.

© Copyright protected

SYSTEM PERFORMANCE

212 CONTRACTOR'S DESIGN FOR ITEMS SPECIFIED DITTO

.

- Design responsibility: Determine section sizes and strengths and type, sizes and numbers of fixings.
- Structural requirements: Contractor to submit shop drawings including structural calculations for Engineer's approval.
  - Generally: As section B50.
    Modifications: Requirements for load testing to BS 5395-2.
  - Design: Complete in accordance with the designated code of practice to satisfy specified performance criteria.
- Functional requirements: Ladders: To BS 4211.
- Additional requirements: None.
- Design and production information: As Preliminaries.
- Timing of submissions: as determined by Engineer.
- Proposals: Submit drawings, technical information, calculations and manufacturers' literature.

214 **COMPLETION** OF DESIGN FOR ITEMS SPECIFIED DITTO

- Requirement: Complete the detailed design to satisfy specified performance criteria and coordinate with the detailed design of related and adjacent work.
  - Standards:
  - BS 8300.
  - Ladders: To BS 4211.
- Requirements for fire safety and management: To BS 9999.
- Structural requirements: Submit shop drawings and structural calculations for Engineer's approval.
  - Generally: As section B50.
    Modifications: Requirements for load testing to BS 5395-2.
  - Design: Complete in accordance with the designated code of practice to satisfy specified performance criteria.
- Additional requirements: None.
- Design and production information: As Preliminaries.
- Timing of submissions: as determined by Engineer.

PRODUCTS

330 LADDERS

- Standard: In accordance with BS 5395-3.
- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.

370 GUARDINGS

- Standard: To BS EN 516.
- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.

420 CARBON STEEL COMPONENTS

- Material: To BS EN 10025-1 and -2 or BS EN 10210-1 as appropriate.
  - Grade: S275JR.
  - Options: 2 and 5.
- Solid floor and tread plates: To BS 4592-5.
  - Thickness: 6 mm unless otherwise indicated on drawings.

© Copyright protected

- Expanded metal grating panels: To BS 4592-2.
- Open bar gratings: To BS 4592-1.
  - Depth: 30 mm unless otherwise indicated on drawings.
- Finish: Hot dip galvanized.
  - Colour: Self finished.
- Fixings: As section Z20.

490 ANCHORS

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Material and finish: Stainless steel sleeves and bolts.
- Size: As indicated on drawings.

FABRICATION

510 FABRICATION GENERALLY

- Shop drawings: Submit.

EXECUTION

620 EXECUTION GENERALLY

- Structural members: Do not subject to nonbenign loading. Do not modify, cut, notch or make unspecified holes.
- Frameworks: Assemble and brace, including temporary members required for installation.
  - Temporary support: Do not use access systems as temporary support or strutting for other work.
- External durability of fastenings: Corrosion resistant material or with a corrosion resistant finish.
- Bolted joints:
  - Contact between dissimilar metals: Avoid.
  - Bolts and washers: Select types, sizes and quantities of fasteners or packings and spacings to retain supported components without distortion or loss of support.
- Welded joints:
  - Standards:

    Aluminium alloys: TIG or MIG welding to BS EN 1011-4.
    Carbon steel: Metal arc welding to BS EN 1011-1 and -2.
    Stainless steel: TIG welding to BS EN 1011-3.
  - Surfaces to be jointed: Clean.
  - Tack welds: Use only for temporary attachment.
  - Traces of flux residue, slag and weld spatter: Remove.
  - Surface of welds: Grind smooth.
  - Joints: Fully bonded with no holes of cracks.
- Finished components:
  - Free: From distortion, cracks, burrs and sharp arises.
  - Corner junctions of identical sections: Mitre.
  - Handrails: Smooth and continuous, with no sharp edges.

660 ANCHORING

- Fixing positions: Coordinate location of holding down bolts and wall fixings with services fixing positions.
- Edge distance and spacing (minimum): Submit proposals to Engineer's approval.

© Copyright protected

COMPLETION

910 CLEANING

- General: Clean surfaces and wipe down finishes.

920 INSPECTION

- Notice for inspection (minimum): 5 days as determined by Engineer.

930 DOCUMENTATION

- Operation and maintenance instructions: Submit.
- Record drawings: Submit.

© Copyright protected

L40 GENERAL GLAZING

To be read with Preliminaries/ General Conditions.

GENERAL REQUIREMENTS

111 PREGLAZING

- Preglazing of components: Permitted.
- Prevention of displacement: Submit details of precautions to be taken to protect glazing and compound/ seals during delivery and installation.
- Defective/ displaced glazing/ compound/ seals: Reglaze components in situ.

140 MATERIAL SAMPLES

- Representative samples of designated materials: Submit before cutting panes.
  - Sample size (minimum): 600 x 300 mm unless otherwise directed by Engineer.
  - Designated materials: glass panes as directed by Engineer.

150 WORKMANSHIP AND POSITIONING GENERALLY

- Glazing generally: In accordance with BS 6262 series.
- Integrity: Glazing must be wind and watertight under all conditions with full allowance made for deflections and other movements.
- Dimensional tolerances: Panes/ sheets to be within ± 2 mm of specified dimensions.
- Materials:
  - Compatibility: Glass/ plastics, surround materials, sealers, primers and paints/ clear finishes to be used together to be compatible. Avoid contact between glazing panes/ units and alkaline materials such as cement and lime.
  - Protection: Keep materials dry until fixed. Protect insulating glass units and plastics glazing sheets from the sun and other heat sources.

151 PREPARATION

- Surrounds, rebates, grooves and beads: Cleaned and prepared by others.

152 PREPARATION

- Surrounds, rebates, grooves and beads: Clean and prepare before installing glazing; ensure compliance with any certified installation requirements.

155 GLASS GENERALLY

- Standards: To BS 952 and relevant parts of:
  - BS EN 572 for basic soda lime silicate glass.
  - BS EN 1096 for coated glass.
  - BS EN 1748-1 for borosilicate glass.
  - BS EN 1748-2 for ceramic glass.
  - BS EN 1863 for heat strengthened soda lime silicate glass.
  - BS EN 12150 for thermally toughened soda lime silicate safety glass.
  - BS EN 12337 for chemically strengthened soda lime silicate glass.
  - BS EN 13024 for thermally toughened borosilicate safety glass.
  - BS EN ISO 12543 for laminated glass and laminated safety glass.
- Panes/ sheets: Clean and free from obvious scratches, bubbles, cracks, rippling, dimples and other defects.
  - Edges: Generally undamaged. Shells and chips not more than 2 mm deep and extending not more than 5 mm across the surface are acceptable if ground out.

© Copyright protected

165 HEAT SOAKING OF THERMALLY TOUGHENED GLASS

- Standard: To BS EN 14179.
  - Holding period (minimum): 2 hours. For critical locations including but not limited to overhead canopies and skylights, use 8 hours.
  - Mean glass temperature: 290° ± 10°C.
- Certified evidence of treatment: Submit.
- Designated locations: where indicated on drawings.

180 BEAD FIXING WITH PINS

- Pin spacing: Regular at maximum 150 mm centres, and within 50 mm of each corner.
- Exposed pin heads: Punched just below wood surface.

181 BEAD FIXING WITH SCREWS

- Screw spacing: Regular at maximum 225 mm centres, and within 75 mm of each corner.

190A GLASS TO GLASS JOINTING

- Sealant: Silicone.
  - Standard: To BS EN ISO 11600 and BS EN 15651-2.
    Class: G-20LM.
  - Colour: Clear.
- Fire resistance rating, where indicated:
  - Standard: To BS 476-22.
  - Requirement: 60 minutes integrity and 60 minutes insulation, unless rating is otherwise indicated in the fire and life safety report.
- Joints:
  - Width: Consistent and suitable to receive sealant.
  - Gap between panes: Completely filled, leaving no voids or bubbles.
  - Surplus sealant: Removed to leave a clean, neatly finished weathertight joint.

TYPES OF GLAZING

230 BEAD FIXED SINGLE GLAZING WHERE INDICATED FOR INTERIOR GLASS PARTITIONS

- Pane material: Clear laminated safety glass.
- Surround/ bead: Aluminium.
  - Preparation: Sealant primer unless otherwise recommended by manufacturer.
  - Bead location: Inside and outside, unless otherwise indicated on drawings.
  - Bead fixing: stainless steel screws.
- Glazing compound: Two part rubberizing compound.
- Thermal performance (U-value maximum): Unrated.
- Glazing installation:
  - Glass: Located centrally in surround using setting and location blocks and distance pieces.
  - Finished thickness of back bedding after inserting glazing (minimum): 3 mm.
  - Front bedding: Applied to fill voids.
  - Beads: Bedded in glazing compound and fixed securely.
  - Visible edge of glazing compound: Finished internally and externally with a smooth chamfer.

370 BEAD FIXED INSULATING GLASS UNITS WHERE INDICATED ON DRAWINGS

- IGU: As clause 655.
  - Perimeter taping: Do not use.
- Surround/ bead: extruded Aluminium unless otherwise indicated on drawings.

© Copyright protected

  - Preparation: Sealant primer unless otherwise recommended by manufacturer and to Engineer's approval.
  - Bead location: Inside and outside unless otherwise indicated on drawings.
  - Bead fixing: as recommended by manufacturer and to Engineer's approval.
- Glazing system: Preformed gasket sections supplied by window manufacturer.
- Thermal performance (U-value maximum): 1.9 W/m²K for the total assembly including glass and frames.
- Glazing installation:
  - Insulating unit: Located centrally in surround using setting and location blocks.
  - Gaskets and beads: Installed as recommended by frame manufacturer.
    Gasket fit at corners: Tight, without gaps.
  - Drainage and ventilation holes: Unobstructed.

450A SINGLE GLAZING INTO GROOVES GENERALLY

- Pane material: minimum 22 mm with ionoplast laminated safety glass.
- Channel/ surround: powder coated aluminium unless otherwise indicated.
  - Preparation: Sealant primer unless otherwise recommended by manufacturer to the Engineer's approval.
- Beads:
  - Material: Aluminium.
  - Location: Inside and outside unless otherwise indicated on drawings.
  - Preparation: Sealant primer unless otherwise recommended by manufacturer to the Engineer's approval.
  - Fixing: as recommended by manufacturer to the Engineer's approval.
- Glazing system: Filler strip plus sealant capping.
- Glazing installation:
  - Glass: Located centrally in grooves using setting blocks and distance pieces of appropriate thickness.
  - Backing strip: Expanded polyethylene, inserted at head and jambs, ensuring a tight fit and allowing a minimum distance of 6 mm between strip and sight line.
  - Sill beads: Fixed securely with backing strip between bead and glazing.
  - Capping sealant: Applied to fill recesses on both sides of glass and finished to a smooth chamfer.

520 FIRE RATING

- Assessment of capability: Submit proposed construction details of designated items to a UKAS/ EA accredited laboratory or other approved authority for assessment of capability of achieving specified fire ratings.
  - Test standard: To BS 476-22.
- Assessment/ test results and reports: Submit immediately they are available, and before installing glazing.
- Designated items: fire resistant glazing where indicated on drawings.

530 INTERNAL TAPE GLAZING WHERE INDICATED FOR INTERNAL GLAZING

- Pane material: laminated safety glass.
- Surround/ bead: Aluminium.
  - Bead fixing: stainless steel screws.
- Tape/ Section: Extruded rubber.
- Glazing installation: Beads bedded dry to rebate and glazing tape/ section and fixed securely. Tape trimmed flush with sight line on both sides.

© Copyright protected

550 GLASS MIRRORS GENERALLY

- Standard: To BS EN 1036.
  - BS EN 1036-2 characteristics: fully tempered.
- Mirror material: Float glass, silvered to give maximum reflection, free from tarnishing, discoloration, scratches and other defects visible in the designed viewing conditions.
  - Thickness: 6 mm unless otherwise indicated on drawings.
  - Backing: Lead foil.
  - Edge treatment: Polished bevel.
- Background: 18 mm thick marine plywood board unless otherwise indicated on drawings.
- Fixing method: Dome top wood screws with polyethylene sleeves and washers at 600 mm centres unless otherwise indicated on drawings.
- Installation: Fixed accurately and securely without overtightening fasteners, to provide a flat surface giving a distortion free reflection.

560 BACK PAINTED GLASS DECORATIVE CLADDING

- General: Provide back painted glass wall cladding as indicated on drawings and finishes manual.
- Thickness: 10 mm toughened glass.
- Glass type: Low iron toughened safety glass with factory applied back paint.
- Standards: Comply with BS EN 12150/ BS EN 12600.
- Finish:
  - Even, opaque colour coating on rear face.
  - Colour and finish as indicated in finishes manual.
- Panels:
  - Sizes and layout as indicated on drawings.
  - All edges polished.
- Fixing: Mechanical supports as recommended by manufacturer.
- Installation:
  - Install plumb, level and aligned with uniform joints.
  - Provide proper backing support and allow for movement.
- Joints:
  - Seal with silicone sealant.
  - Colour as selected.

610 WINDOW FILM AND DECORATIVE GLAZED PARTITION FLIM

- Type: Privacy. Film tensile strength is 25,000 psi. Thickness not less than 200 micrometres. Light transmittance not less than 70%. Window film to comply with BS 476-6 and 7, class 0-surface spread of flame and ignitability. Warranty: 10 years on window film when internally applied by a certified installer..
- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Colour: Neutral unless otherwise indicated on drawings to match selected NCS colour.
- Application: Carried out by a firm approved by the film manufacturer in accordance with manufacturer's recommendations.
  - Evidence of applicator's competence and experience: Submit on request.
  - Sample area: Complete as part of the finished work, in an approved location and obtain approval of appearance before proceeding.
  - Ambient air temperature at time of application: Above 5°C.
- Installed film: Fully adhered to the glass with no peeling, and free from bubbles, wrinkles, cracks or tears.
- Further contact with applied films: Avoid until bonding adhesive has cured.
- Cleaning and maintenance instructions: Submit copies.

M10 CEMENT BASED LEVELLING/ WEARING SCREEDS

To be read with Preliminaries/General Conditions.

TYPES OF SCREED

110A BONDED CEMENT: SAND LEVELLING SCREEDS to substrate

- Substrate: concrete slab.
- Screed construction: Fully bonded.
- Thickness:
  - Nominal: as indicated but not less than 30 mm.
  - Minimum: 25 mm.
  - Maximum: 40 mm.
  - Provided unbonded screed when thickness exceeds 40 mm.
- Mix:
  - Proportions (cement:sand): To BS 8204-1.
- In situ crushing resistance (ISCR) category: A (3 mm maximum indentation).
- Flatness/ Surface regularity class: SR2.
- Finish: Smooth floated, as clause 530.
  - To receive: finishes indicated in the finish manual.
- Other requirements: Movement joints.

115 CEMENT: SAND LEVELLING SCREEDS generally

- Substrate: reinforced concrete slab.
- Screed construction: as indicated on drawings.
  - Reinforcement for crack control: Steel fabric, as clause 392.
- Thickness:
  - Nominal: Variable to achieve the slopes indicated on drawings.
  - Minimum: 50 mm.
- Mix:
  - Proportions (cement:sand): To BS 8204-1.
- In situ crushing resistance (ISCR) category: A (3 mm maximum indentation).
  - Mass of test weight: 4 kg.
- Flatness/ Surface regularity class: SR2.
- Finish: Smooth floated, as clause 530.
  - To receive: finishes indicated in the finish manual.
- Other requirements: Movement joints.

160 PROPRIETARY SELF SMOOTHING LEVELLING SCREEDS generally

- Substrate: reinforced concrete slab.
- Screed manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Screed construction: Bonded and reinforced with glass fibre mesh.
- Thickness:
  - Nominal: 10 mm.
  - Minimum: 6 mm.
  - Maximum: 25 mm.
- Standards: In accordance with BS 8204-7.
- In situ crushing resistance (ISCR) category: C (2.5 mm maximum indentation).
  - Mass of test weight: 2 kg.

© Copyright protected

- Flatness/ Surface regularity class: SR1.
- Finish to receive: finishes indicated in the finish manual.
- Other requirements: None.

195 PROPRIETARY SCREEDS TO BS EN 13813 generally

- Substrate: reinforced concrete slabs.
- Screed manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Screed construction: Fully bonded, as clause 260 unless otherwise indicated.
  - Reinforcement for crack control: fiber glass fibrous reinforcements.
- Performance to BS EN 13813:
  - Compressive strength: C35.
  - Flexural strength: F6.
  - Wear resistance: AR4.
- Thickness:
  - Nominal: 70 mm.
  - Minimum: 50 mm.
- Flatness/ Surface regularity class: SR2.
- Finish: Smooth floated, as clause 530.
  - To receive: finishes indicated in the finish manual.
- Other requirements: Movement joints.

GENERALLY/ PREPARATION

205 DESIGN LIFE OF SCREEDS

- Duration: 50 years.
  - Subject to reasonable wear and tear.
- Location: as indicated.
- Condition of use: Subject to correct loading and traffic usage throughout duration.

210 SUITABILITY OF SUBSTRATES

- General:
  - Suitable for specified levels and flatness/ regularity of finished surfaces. Consider permissible minimum and maximum thicknesses of screeds.
  - Sound and free from significant cracks and gaps.
- Concrete strength: In accordance with BS 8204-1, Table 2.
- Cleanliness: Remove plaster, debris and dirt.
- Moisture content: To suit screed type. New concrete slabs to receive fully or partially bonded construction must be dried out by exposure to the air for minimum six weeks.

215 SURFACE HARDNESS OF SUBSTRATES TO RECEIVE POLYMER MODIFIED WEARING SCREEDS

- General: Substrates must restrain stresses that occur during setting and hardening of wearing screeds.
- Test for surface hardness: To BS EN 12504-2 using a rebound hammer with compliance values as follows:
  - Rebound hammer value (minimum):
    Screed thickness 15 mm or less: 25.
    Screed thickness greater than 15 mm: 30.
- Report: Submit details of areas where substrate surface hardness does not comply with these values.

© Copyright protected

220 PROPRIETARY LEVELLING/ WEARING SCREEDS

- General: Materials, mix proportions, mixing methods, minimum/ maximum thicknesses and workmanship must be in accordance with recommendations of screed manufacturer.
- Standard: To BS EN 13813.

250 CONDUITS UNDER FLOATING SCREEDS

- Haunching: Before laying insulation for floating screeds, haunch up in 1:4 cement:sand on both sides of conduits.

251 CONDUITS CAST INTO OR UNDER SCREEDS

- Reinforcement: Overlay with reinforcement selected from:
  - 500 mm wide strip of steel fabric to BS 4483, reference D49, or
  - Welded mesh manufactured in rolls from mild steel wire minimum 1.5 mm diameter to BS 1052, mesh size 50 x 50 mm.
- Placing reinforcement: Mid depth between top of conduit and the screed surface.
  - Width of reinforcement (minimum): 300 mm.
- Screed cover over conduit (minimum): 25 mm.

255 PIPE DUCTS/ TRUNKING

- Preformed access ducts: Before laying screed, fix securely to substrates and level accurately in relation to finished floor surface.

260 FULLY BONDED CONSTRUCTION

- Preparation: Generally in accordance with BS 8204-1.
- Removing mortar matrix: Shortly before laying screed, expose coarse aggregate over entire area of hardened substrate.
- Texture of surface: Suitable to accept screed and achieve a full bond over complete area.
- Bonding coat: Manufacturer's standard.

275 CEMENT SLURRY BONDING

- Slurry type: SBR polymer modified cement.
- Application: Shortly before laying screed, thoroughly wash clean the surface and keep well wetted for several hours. Remove free water then brush in cement slurry bonding coat of creamy consistency.
- Screeding: While slurry is still wet.

280 UNBONDED CONSTRUCTION

- Separation: Lay screed over a suitable sheet dpm or a separating layer.
  - Type: Polyethylene sheet, minimum 125 micrometres thick (500 gauge).
- Installation of separating layer: Lay on clean substrate. Turn up for full depth of screed at abutments with walls, columns, etc. Lap 100 mm at joints.

295A FLOATING CONSTRUCTION (THIN SHEET IMPACT SOUND INSULATION)

- Substrate: Remove projections that may puncture the insulation.
- Type of acoustic underlay: as specified in section K11.
- Insulation:
  - Type: recycled rubber.
  - Installation: Lay on substrate. Turn up for full depth of screed at perimeter abutments. Lap 100 mm at joints and seal with tape.
  - Perimeter: Maintain isolation of screed.

© Copyright protected

BATCHING/ MIXING

302 CEMENTS

- Cement types: In accordance with BS 8204-1, clause 5.1.3.

305 AGGREGATES

- Sand: To BS EN 13139.
  - Grading limits: In accordance with BS 8204-1, Table B.1.
- Coarse aggregates for fine concrete levelling screeds:
  - Standard: To BS EN 12620.
  - Designation: 4/10.
- Lightweight aggregates: In accordance with BS 8204-1, Annex A.

306 PROPRIETARY POLYMER MODIFIED SCREEDS

- Cement types: In accordance with BS 8204-3.
- Sand: To BS EN 13139:
  - Grading limits: 0/2 mm (MP) category 1.
- Aggregates: In accordance with BS 8204-3.

307 ADMIXTURES

- Standard: In accordance with BS 8204-1, Table 1.
- Calcium chloride: Do not use in admixtures.

310 BATCHING WITH DENSE AGGREGATES

- Mix proportions: Specified by weight.
- Batching: Select from:
  - Batch by weight.
  - Batch by volume: Permitted on the basis of previously established weight:volume relationships of the particular materials. Use accurate gauge boxes. Allow for bulking of damp sand.

330 MIXING

- Water content: Minimum necessary to achieve full compaction, low enough to prevent excessive water being brought to surface during compaction.
- Mixing: Mix materials thoroughly to uniform consistency. Mixes other than no-fines must be mixed in a suitable forced action mechanical mixer. Do not use a free fall drum type mixer.
- Consistency: Use while sufficiently plastic for full compaction.
- Ready-mixed retarded screed mortar: Use within working time and site temperatures recommended by manufacturer. Do not retemper.

335 IN SITU CRUSHING RESISTANCE (ISCR)

- Standards and category: In accordance with BS 8204-1, table 4.
  - Testing of bonded and unbonded screeds: To Annex D.
  - Testing of floating levelling screeds: To Annex E.

340 ADVERSE WEATHER

- Screeds surface temperature: Maintain above 5°C for a minimum of four days after laying.
- Hot weather: Prevent premature setting or drying out.

© Copyright protected

LAYING

345 LEVEL OF SCREED SURFACES

- Permissible deviation: (allowing for thickness of coverings) ±5 mm from datum.

350 SCREEDING TO FALLS

- Minimum screed cover: Maintain at the lowest point.
- Falls: Gradual and consistent.
  - Gradient (minimum): as drawings.

351 SCREEDING TO RAMPS

- Screed cover: Thickness varies, screed to falls of 1 in 12.
- Falls: Gradual and consistent.

355 FLATNESS/ SURFACE REGULARITY OF FLOOR SCREEDS

- Standard: In accordance with BS 8204-1, Table 5.
- Test: In accordance with BS 8204-1, Annex C.
- Sudden irregularities: Not permitted.

365 FLATNESS/SURFACE REGULARITY OF ROOF SCREEDS

- Sudden irregularities: Not permitted.
- Deviation of surface: Measure from underside of a 2 m straightedge (between points of contact), placed anywhere on surface.
  - Permissible deviation (maximum): 6 mm.

375 COMPACTION OF SCREEDS

- General: Compact thoroughly over entire area.
- Screeds over 50 mm thick: Lay in two layers of approximately equal thickness. Roughen surface of compacted lower layer then immediately lay upper layer.

382 STAIR SCREEDS , (where indicated)

- Construction: Fully bonded to treads, risers and landings.
- Risers: Form using fine finish formwork.
- Wearing screed surfaces: Make good with compatible cement:sand mix. Wood float. When hardened remove laitance.

386 COVED IN SITU SKIRTINGS

- Background: Concrete blockwork as F10.
- Mix: In accordance with BS 8204-3, Table 2. Aggregate size adjusted as necessary to suit skirting thickness.
- Construction joint: Form at base.
- Rendering: Apply bonding agent. Render skirting while bonding agent is still wet. Achieve a good bond. Allow each coat to set before applying subsequent coats. Render to true lines with a fine finish and an even consistent appearance.
- Dimensions:
  - Thickness of each coat (maximum): 10 mm.
  - Height: 100 mm.
  - Cove radius: 30 mm.
  - Top edge: Rounded.

392 GENERAL REINFORCEMENT

- Steel fabric: To BS 4483.

© Copyright protected

  - Type: D49.
- Installation: In accordance with BS 8204-1.

395 STRIP REINFORCEMENT

- Location: Across day joints.
- Steel fabric: To BS 4483.
  - Type D49.
  - Width of strips: 400 mm.
- Installation: In accordance with BS 8204-1.

405 JOINTS IN LEVELLING SCREEDS GENERALLY

- Laying screeds: Lay continuously using 'wet screeds' between strips or bays. Minimize defined joints.
- Daywork joints: Form with vertical edge.

415 BAY JOINTS IN BONDED WEARING SCREEDS

- Bay sizes:
  - Area (maximum): 20 m².
  - Length: Breadth ratio (maximum): 3:2.
- Location of bay joints: Over construction/ movement joints in substrate slab.

435 FORMED JOINTS IN WEARING SCREEDS

- Temporary forms: Square edged with a steel top surface and in good condition.
- Placing screed: Compact thoroughly at edges to give level, closely abutted joints with no lipping.

440 CRACK INDUCING GROOVES IN LEVELLING SCREEDS

- Groove depth: At least half the depth of screed.
- Cutting grooves: Straight, vertical and accurately positioned. Select from the following:
  - Trowel cut as screed is laid.
  - Saw cut sufficiently early after laying to prevent random cracking.

445 CRACK INDUCING GROOVES IN WEARING SCREEDS

- Groove dimensions:
  - Depth: At least half the depth of wearing screed.
  - Width: 6 mm.
- Cutting grooves: Straight, vertical and accurately positioned. Saw cut sufficiently early after laying to prevent random cracking.

460 STRIP MOVEMENT JOINTS where indicated

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
  - Size: 5 mm.
- Installation: Set securely into screed to exact finished level of floor. Extend joints through to substrate.
  - Secure fixing to substrate: To manufacturer's recommendation.

468 SEALANT MOVEMENT JOINTS WITH METAL EDGINGS where indicated

- Edging material: Stainless steel angle.
  - Size: 75 x 50 x 5 mm as indicated.
  - Bedding: 1:3 cement:sand.
- Installation: Centre over joints in substrate. Set to exact finished level of floor.
  - Secure fixing to substrate: Manufacturer's standard.

© Copyright protected

- Joint width: Manufacturer's standard.
- Sealant:
  - Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
  - Colour: Manufacturer's standard colour range.
  - Preparation and application: As section Z22.

476A METAL SECTION MOVEMENT JOINTS where indicated

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
  - Bed fixed, 50 mm maximum joint width, 75 mm visible width, 170 mm overall width, unless otherwise indicated on drawings.
  - Colour of insert: Manufacturer's standard colour range.
- Bedding: 1:3 cement:sand.
- Installation: Centre over joint in substrate. Set to exact finished level of floor.
  - Secure fixing to substrate: Stainless steel screws and washers at 300 mm centres.
- Load bearing capacity: to resist car or foot traffic, as indicated on drawings for each particular location.
- Movement: up to 60 mm (±30 mm), unless otherwise indicated on drawings.

FINISHING/CURING

510 FINISHING GENERALLY

- Timing: Carry out all finishing operations at optimum times in relation to setting and hardening of screed material.
- Prohibited treatments to screed surfaces:
  - Wetting to assist surface working.
  - Sprinkling cement.

530 SMOOTH FLOATED FINISH

- Finish: Even texture with no ridges or steps.

600 POWER GROUND FINISH TO WEARING SCREEDS

- Floating: To an even surface with no ridges or steps. Immediately commence curing.
- Grinding: When concrete is sufficiently hard for sand particles not to be torn from surface, remove 1 - 2 mm from surface to give an even glass-paper texture, free from blemishes and trowel marks.
- Cleaning: Remove dust and wash down. Resume curing without delay.

650 CURING

- General: Prevent premature drying. Immediately after laying, protect surface from wind, draughts and strong sunlight. As soon as screed has set sufficiently, closely cover with polyethylene sheeting.
- Curing period (minimum): Keep polyethylene sheeting in position for: period recommended by screed manufacturer.
- Drying after curing: Allow screeds to dry gradually. Do not subject screeds to artificial drying conditions that will cause cracking or other shrinkage related problems.

670 ROOF SCREEDS

- Protection: Cover screeds during wet weather. When weathertight coverings are laid, screeds must be as dry as practicable.

680 SURFACE SEALER TO WEARING SCREEDS

- Manufacturer: Submit proposals.

© Copyright protected

  - Product reference: Submit proposals.
- Preparation: Clean cured screed surface to remove dirt, grease, oil and other surface contaminants.
- Moisture content of screed: As recommended by sealer manufacturer. Test relative humidity in accordance with BS 8203, Annex A if required to verify suitability to receive sealer.
- Application: Evenly to dry surfaces using sufficient coats to form an effective seal but without a glossy finish.

690 SLIP RESISTANCE TESTING OF WEARING SCREEDS

- Test:
  - To BS 7976-1, -2 and -3 using a TRL Pendulum.
  - Make arrangements for test to be witnessed/ certified by: Contract Administrator
- Report: Submit. Include slip resistance values in the wet and dry states.

700 ABRASION TESTING OF WEARING SCREEDS

- Test method: To BS EN 13892-4.

© Copyright protected

M12 RESIN FLOORING

To be read with Preliminaries/ General Conditions

TYPES OF FLOORING

110 RESIN FLOORING WHERE INDICATED

- Substrate: New polymer-modified cementitious screed.
  - Preparation: Required.
- Resin flooring system:
  - Manufacturer: Submit proposals.
  - Primer reference: As resin flooring manufacturer's recommendations.
  - Resin flooring reference: polyurethane high build floor coating.
  - Application: 4-6 mm nominal thickness.
  - Colour: As schedule.
  - Surface finish/ treatment: Not required, unless otherwise indicated.
- Flatness/ Surface regularity:
  - Sudden irregularities: Not permitted.
  - Classification of surface regularity to BS 8204-6: SR1.
- Slip resistance: Pendulum test value to BS 7976-2 or in accordance with BS 8204-6, Annex B: 40 (minimum) for wet and dry tests.
- Other requirements: None.

120 RESIN FLOORING WHERE INDICATED

- Substrate: New polymer-modified cementitious screed.
  - Preparation: Required.
- Resin flooring system:
  - Primer and detailing of features: Determined by resin flooring manufacturer/ contractor to adequately resist specified trafficking, loads and conditions.
  - Type: FerFA/ BS 8204-6 type 7 heavy duty flowable flooring.
  - Colour: As schedule.
  - Surface finish/ treatment: Not required.
- Flatness/ Surface regularity:
  - Sudden irregularities: Not permitted.
  - Classification of surface regularity to BS 8204-6: SR1 to 3 mm, SR2 elsewhere.
- Slip resistance: Pendulum test value to BS 7976-2 or in accordance with BS 8204-6, Annex B: 40 (minimum) for wet and dry tests.
- Durability:
  - Activities/ Trafficking: heavy traffic.
  - Materials in contact with flooring: resin flooring to be chemical and high temperature resistant.
  - Processes: as recommended by manufacturer.
  - Standing loads: as recommended by manufacturer.
  - Wheeled conveyors: forklift trucks, trolleys, etc.
- Water/ Vapour resistance: Impervious to water.
- Environmental conditions in service: as indicated on reports.
- Other requirements: None.

© Copyright protected

130 FLOORING MATERIALS SPECIFICATION BRE ENVIRONMENTAL ASSESSMENT METHOD (BREEAM) RATING

- Minimum BRE 'Green Guide to Specification Online' rating: As schedule.

PREPARATION OF SUBSTRATES

210 TESTING MOISTURE CONTENT OF SUBSTRATES

- Drying aids: Remove minimum four days prior to test.
- Test: To BS 8203, Annex A using an accurately calibrated hygrometer.
  - Location of readings: Corners, along edges, and at various points over the test area.
- Relative humidity before laying resin flooring (maximum): 75% or less.

220 SURFACE HARDNESS OF SUBSTRATES

- General: Substrates must restrain stresses that occur during setting and hardening of resin.
- Test for surface hardness: To BS EN 12504-2 using a rebound hammer.
- Test results: Submit.
- Areas of non-compliance: Submit remedial proposals.

230 PREPARATION OF SUBSTRATES GENERALLY

- Chases/ Saw cuts: Cut/ break out at skirtings, free edges, movement joints, etc. for termination of resin flooring.
- Blow holes, cavities, cracks, etc: Fill with repair product recommended by resin flooring manufacturer.
- Cleanliness: Remove surface contaminants, debris, dirt and dust.
- Surface texture: Suitable to accept resin flooring and achieve a full bond over the complete area.

LAYING FLOORING

310 WORKMANSHIP

- Operatives:
  - Trained/ Experienced in the application of resin floorings.
  - Evidence of training/ experience: Submit on request.
- Fillers and incorporated aggregates: Thoroughly mix in to ensure wetting. Avoid over-vigorous mixing resulting in excessive air entrainment.
- Scattered aggregates: Broadcast onto wet surface of resin.
  - Appearance: Consistent.
- Curing: Allow appropriate periods between coats and before surface treatments and trafficking/ use.

320 CONTROL SAMPLES

- Complete areas of finished work in the following locations: As drawing.
- Approval of appearance: Obtain before proceeding.

330 PRIMERS

- Application: Even to completely wet, penetrate and seal substrates.
- Coverage per coat (minimum): as recommended by manufacturer.
- Curing period (maximum): 48 hours at 15-20°C before application of resin flooring.

357 TROWEL APPLIED SCREEDED RESIN FLOORING

- Application: Even and thoroughly compacted, of uniform thickness, surface finish and colour.

360 SURFACE ABRADING/ POLISHING

- Surface on completion: Uniform, fine and dust free.

© Copyright protected

370 SURFACE GRINDING/ GROUTING/ ABRADING/ POLISHING

- Surface on completion:
  - Grinding: Regular appearance to exposed aggregate and dust free.
  - Grouting: Surface defects filled.
  - Abrading/ Polishing: Uniform, fine and dust free.

380 SURFACE SEALER

- Application: Even to completely wet resin surface.

390 SLIP RESISTANCE TESTING OF FINISHED RESIN FLOORING

- Standard: Pendulum test value to BS 7976-2 or in accordance with BS 8204-6, Annex B.
- Timing: Give notice.
  - Notice period (minimum): 5 days.
- Results: Submit pendulum test values, for both wet and dry states.

400 BOND STRENGTH OF RESIN FLOORING

- Contact surfaces: Substrate and fully cured resin flooring.
- Bond: In accordance with manufacturer's performance data.
- Test: To BS 8204-6, clause 11.4 and BS EN 1542.

410 RESIN SKIRTINGS/ UPSTANDS

- Quality: Render grade resin.
- Colour: As flooring.
- Profile: Radius cove.
- Top edge of skirting/ upstand: Tuck into chase.
- Transition with resin flooring: Abutment at chase in the slab.
- Other requirements: None.

420 FREE EDGES OF RESIN FLOORING

- Transition to abutting floor finishes: Straight and smooth.
- Retention of resin edges: Chamfered edge chase in slab.

430 SEALANT MOVEMENT JOINTS WHERE INDICATED

- Location: Centre over movement joints in substrate.
- Preparation and application: As section Z22.
- Retention of resin edges: Chase in slab.
- Joint width: as recommended by manufacturer.
- Sealant: As recommended by Manufacturer.
  - Colour: as selected by Engineer from manufacturer's full range.

440 STRIP MOVEMENT JOINTS WHERE INDICATED

- Location: Centre over movement joints in substrate.
- Retention of resin edges: Chase in slab.
- Joint width: as indicated.
- Strip:
  - Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
  - Insert: Synthetic rubber.
    Colour: as selected by Engineer from Manufacturer's full range.
  - Fixing: Cast into slab using NSS 60 anchors at 300 mm centres to exact finished level of resin flooring.

© Copyright protected

M20 PLASTERED/ RENDERED/ ROUGHCAST COATINGS

To be read with Preliminaries/ General Conditions.

TYPES OF COATING

110A CEMENT: SAND EXTERNAL AND INTERNAL PLASTER, WHERE INDICATED

- Substrate: Concrete blockwork, as section F10 or reinforced concrete as indicated on drawings.
  - Preparation: Spatterdash keying coat.
- Cement: lime: sand mortar:
  - Type: Ready-to-use mortar.
  - Pigment: Not required.
- Undercoats:
  - Mix (cement:sand): 1:4.
  - Do not use lime.
    Cement type: Sulfate resisting where indicated, otherwise contractor to submit choice for Engineer's approval.
  - Thickness (excluding dubbing out and keys): First coat 3–6mm mm (from face of lathing) and second coat 10–14 mm.
- Final coat:
  - Mix (cement:sand): 1:4 unless otherwise recommended by manufacturer.
    Cement type: Sulfate resisting only where indicated on drawings.
    Other requirements: Screen sand through 3 mm mesh sieve.
  - Thickness: 8–11 mm prior to scraping.
  - Finish: Plain. Where indicated on drawings, plaster to receive grooves using PVC plaster channels.
- Accessories: Stainless steel stops and beads for external applications and galvanized steel Z275 for internal applications.
- Provide PVC plastered beads and channels of colour as selected by Engineer from manufacturer's full range.

115 DECORATIVE CONCRETE FLOORING

- System Type: Seamless decorative concrete finish with concrete effect.
- Composition: Cement-based material combined with water-based compounds.
- Application: Multi-layer system consisting of three coats, including a protective top coat suitable for high-traffic and water protection areas.
- Thickness: As per manufacturer’s standard system (typically built-up coating; no fixed 5 mm requirement).
- Finish: Smooth decorative finish with concrete appearance; sheen level (matte to semi-gloss) as per approved sample.
- Slip Resistance: R12 rating for enhanced slip resistance (where applicable).
- Fire Performance: Classified as A2fl-s1.
- Durability: High resistance to abrasion, suitable for high-traffic areas.
- Water Resistance: Protective top coat provides water resistance.
- Colour: Grey, unless otherwise specified.
- Maintenance: Low maintenance; periodic cleaning recommended.

220A MULTICOAT PROPRIETARY PLASTER to concrete surfaces

- Substrate: Reinforced micro silica concrete columns, walls, beams and soffit of slabs.
  - Preparation: As clause 536 (the spatter dash keying mix shall be modified for micro silica containing concrete)..

© Copyright protected

- Manufacturer: Submit proposals.
- Undercoats:
  - Product reference: Dry pre-mixed cement/ sand plaster manufactured in factory to the requirements of BS 5492. The plaster is mixed at site with clean potable water and is then spray applied to the selected background.
  - Thickness (excluding dubbing out): 4 to 8 mm.
- Final coat:
  - Product reference: Dry pre-mixed cement/ sand plaster manufactured in factory to the requirements of BS 5492. The plaster is mixed at site with clean potable water and is then spray applied to the selected background.
  - Thickness: 5 to 8 mm to achieve an overall thickness of 13 mm (the overall thickness of plaster to concrete soffits should not exceed 10 mm).
  - Finish: Smooth as clause 777.
- Accessories: Provide proprietary plaster accessories as specified herein.

GENERAL

413 SAMPLES

- General: Provide representative samples of the following: Sands for undercoats and final coat for external render.

418 CONTROL SAMPLES

- Complete sample areas, being part of the finished work, in locations as follows: where indicated.

421 SCAFFOLDING

- General: Prevent putlog holes and other breaks in coatings.

MATERIALS AND MARKING OF MORTAR

430 READY-TO-USE CEMENT GAUGED RENDER MORTARS

- Time and temperature limitations: Use within limits prescribed by mortar manufacturer
  - Retempering: Restore workability with water only within prescribed time limits.

438 CEMENTS FOR MORTARS

- Cement: To BS EN 197-1.
  - Types: Portland cement, CEM I.
    Portland slag cement, CEM II.
    Portland fly ash cement, CEM II.
  - Strength class: 32.5, 42.5 or 52.5.
- White cement: To BS EN 197-1.
  - Type: Portland cement, CEM1.
  - Strength class: 52.5.
- Sulfate resisting Portland cement: To BS EN 197-1.
  - Strength class: 42.5.
- Masonry cement: To BS EN 998-1 and Kitemarked.

440 SAND FOR CEMENT GAUGED MORTARS

- Standard: To BS EN 13139.
  - Grading: 0/2 or 0/4 (CP or MP); Category 2 fines.
- Colour and texture: Consistent. Obtain from one source.

© Copyright protected

445 PIGMENT FOR COLOURED MORTARS

- Standard: To BS EN 12878.

450 CHLORIDE CONTENT OF MORTARS

- Chloride content (maximum): 0.1% by dry mass.

492 HAIR REINFORCEMENT

- Manufacturer/ Supplier: Submit proposals.
  - Product reference: Submit proposals.
- Proportions (approximate): 5 kg hair to 1 m^3 of coarse stuff.
- Condition: Clean, free from grease and other impurities. Well teased before adding to the mix.
- Distribution: Evenly throughout with no balling into lumps.
- Storage period for haired mortar (maximum): Four weeks.

495 MIXING

- Render mortars (site prepared):
  - Batching: By volume. Use clean and accurate gauge boxes or buckets.
  - Mix proportions: Based on damp sand. Adjust for dry sand.
  - Lime:sand: Mix thoroughly. Allow to stand, without drying out, for at least 16 hours before using.
- Mixes: Of uniform consistence and free from lumps. Do not retemper or reconstitute mixes.
- Contamination: Prevent intermixing with other materials.

497 COLD WEATHER

- General: Do not use frozen materials or apply coatings on frozen or frost bound substrates.
- External work: Avoid when air temperature is at or below 5°C and falling or below 3°C and rising. Maintain temperature of work above freezing until coatings have fully hardened.
- Internal work: Take precautions to enable internal coating work to proceed without detriment when air temperature is below 3°C.

PREPARING SUBSTRATES

510 SUITABILITY OF SUBSTRATES

- Soundness: Free from loose areas and significant cracks and gaps.
- Cutting, chasing, making good, fixing of conduits and services outlets and the like: Completed.
- Tolerances: Permitting specified flatness/ regularity of finished coatings.
- Cleanliness: Free from dirt, dust, efflorescence and mould, and other contaminants incompatible with coatings.

527 RAKING OUT FOR KEY

- Joints in existing masonry: Rake out to a depth of 13 mm (minimum).
  - Dust and debris: Remove from joints.

531 ROUGHENING FOR KEY

- Substrates: Roughen thoroughly and evenly.
  - Depth of surface removal: Minimum necessary to provide an effective key.

536 SPATTERDASH KEY

- Materials:
  - Cement: To BS EN 197-1.
  - Sand: Clean, coarse.
  - Admixtures: SBR bonding agent, Agrément certified.

© Copyright protected

- Mix proportions (cement:sand): 1:1.5-2.
- Consistency: Thick slurry, well stirred.
- Application: Throw onto dampened background and leave rough.
  - Thickness: 3-5 mm.
- Curing: Controlled to achieve a firm bond to substrate.

538 STIPPLE KEY

- Materials:
  - Cement: To BS EN 197-1.
  - Sand: Clean, coarse.
  - Admixture: SBR bonding agent, Agrément certified.
- Mix proportions (cement:sand): 1:1.5–2.
- Consistency: Thick slurry, well stirred.
- Application: Brushed and stippled to form deep, close textured key.
- Curing: Controlled to achieve a firm bond to substrate.

541 BONDING AGENT APPLICATION

- General: Apply evenly to substrate to achieve effective bond of plaster/ render coat. Protect adjacent joinery and other surfaces.

584 RECORD CASTINGS

- Timing: Make castings before commencing repair work, to enable accurate reproductions to be made.
- Items for casting: Obtain instructions.
- Identification: Mark clearly to identify original location.

BACKINGS/ BEADS/ JOINTS

600 ADDITIONAL FRAMING SUPPORTS FOR BACKINGS

- Framing: Accurately position and securely fix to give full support to fixtures, fittings and service outlets.
- Support board edges and perimeters: As recommended by board manufacturer to suit type and performance of board.

624 DAMP PROOF LATHING

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Fixing and sealing accessories: As recommended by damp proof lathing manufacturer.
- Fixing: Secure and firm to provide a continuous, keyed backing for coatings.
- Joints between lathing sheets and junctions with services, windows and other openings: Prevent penetration and bridging of cavity by coatings.
- Ventilation gaps:
  - Bottom of lath: Not required.
  - Top of lath: Not required.
  - Accessories: Preformed slotted stop beads.

630 BEADS/ STOPS FOR INTERNAL USE

- Material: Galvanized steel to BS EN 13658-1.

634 BEADS/ STOPS generally

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.

© Copyright protected

- Material: Stainless steel 1.4401 class 316 for external applications and Galvanized steel to BS EN 13658-2 Z275 for internal applications. Where indicated on drawings, PCV channels shall be used to form grooves in facades. PVC channels shall be UV resistant.

636 BEADS/ STOPS FOR EXTERNAL USE

- Material: Stainless steel to BS EN 10088-1, grade 1.4301.

638 ARCH FORM METAL LATHING

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Material: Stainless steel.

640 BEADS/ STOPS GENERALLY

- Location: External angles and stop ends except where specified otherwise.
- Corners: Neat mitres at return angles.
- Fixing: Secure, using longest possible lengths, plumb, square and true to line and level, ensuring full contact of wings with substrate.
  - Beads/ stops for external render: Fix mechanically.
- Finishing: After coatings have been applied, remove surplus material while still wet, from surfaces of beads/ stops exposed to view.

646 CRACK CONTROL AT JUNCTIONS BETWEEN DISSIMILAR SOLID SUBSTRATES

- Locations: Where defined movement joints are not required. Where dissimilar solid substrate materials are in same plane and rigidly bonded or tied together.
- Crack control materials:
  - Isolating layer: Building paper to BS 1521.
  - Metal lathing: Stainless steel ribbed expanded metal.
- Installation: Fix metal lathing over isolating layer. Stagger fixings along both edges of lathing.
- Width of installation over single junctions:
  - Isolating layer: 150 mm.
  - Lathing: 300 mm.
- Width of installation across face of dissimilar substrate material (column, beam, etc. with face width not greater than 450 mm):
  - Isolating layer: 25 mm (minimum) beyond junctions with adjacent substrate.
  - Lathing: 100 mm (minimum) beyond edges of isolating layer.

650A MOVEMENT JOINTS generally

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Installation: Centred over joint in substrate.
  - Fixing: Stainless steel screws.
- Accessories: Acoustic barrier, non-reinforced mass loaded vinyl which resists the passage of sound waves.
- Fire Barrier: provide a minimum of two hours integrity and insulation. System as recommended by manufacturer.

673 PLASTERING OVER CONDUITS/ SERVICE CHASES

- General: Prevent cracking over conduits and other services.
- Services chased into substrate: Isolate from coating by covering with galvanized metal lathing, fixed at staggered centres along both edges.

© Copyright protected

INTERNAL PLASTERING

710 APPLICATION GENERALLY

- Application of coatings: Firmly and in one continuous operation between angles and joints. Achieve good adhesion.
- Appearance of finished surfaces: Even and consistent. Free from rippling, hollows, ridges, cracks and crazing.
  - Accuracy: Finish to a true plane, to correct line and level, with angles and corners to a right angle unless specified otherwise, and with walls and reveals plumb and square.
- Drying out: Prevent excessively rapid or localized drying out.

715 FLATNESS/ SURFACE REGULARITY

- Sudden irregularities: Not permitted.
- Deviation of plaster surface: Measure from underside of a straight edge placed anywhere on surface.
  - Permissible deviation (maximum) for plaster not less than 13 mm thick: 3 mm in any consecutive length of 1800 mm.

720 DUBBING OUT

- General: Correct substrate inaccuracies.
- New smooth dense concrete and similar surfaces: Dubbing out prohibited unless total plaster thickness is within range recommended by plaster manufacturer.
- Thickness of any one coat (maximum): 10 mm.
- Mix: As undercoat.
- Application: Achieve firm bond. Allow each coat to set sufficiently before the next is applied. Cross scratch surface of each coat.

725 UNDERCOATS GENERALLY

- General: Rule to an even surface. Cross scratch to provide a key for the next coat.
- Undercoats on metal lathing: Work well into interstices to obtain maximum key.
- Undercoats gauged with Portland cement: Do not apply next coat until drying shrinkage is substantially complete.

742 THIN COAT PLASTER

- Preparation for plasters less than 2 mm thick: Fill holes, scratches and voids with finishing plaster.

747 PROJECTION PLASTER

- Application: Evenly and in one continuous operation between angles and joints.
- Finish: A level open textured surface before finishing manually.

777 SMOOTH FINISH

- Appearance: A tight, matt, smooth surface with no hollows, abrupt changes of level or trowel marks. Avoid water brush, excessive trowelling and over polishing.

EXTERNAL RENDERING

810 APPLICATION GENERALLY

- Application of coatings: Firmly and in one continuous operation between angles and joints. Achieve good adhesion.
- Appearance of finished surfaces: Even and consistent. Free from rippling, hollows, ridges, cracks and crazing.
  - Accuracy: Finish to a true plane, to correct line and level, with angles and corners to a right angle unless specified otherwise, and with walls and reveals plumb and square.

© Copyright protected

- Drying: Prevent excessively rapid or localized drying out.

815 FLATNESS/ SURFACE REGULARITY OF RENDERING TO RECEIVE CERAMIC TILES

- Sudden irregularities: Not permitted.
- Deviation of render surface: Measure from underside of a 2 m straight edge placed anywhere on surface.
  - Permissible deviation (maximum): 3 mm.

820 DUBBING OUT FOR RENDERING

- General: Correct substrate inaccuracies.
- Thickness of any one coat (maximum): 16 mm.
  - Total thickness (maximum): 20 mm, otherwise obtain instructions.
- Mix: As undercoat.
- Application: Achieve firm bond. Allow each coat to set sufficiently before the next is applied. Comb surface of each coat.

830 ANCHORED MESH REINFORCEMENT

- Application of first undercoat: Through and round mesh to fully bond with solid substrate.

840 UNDERCOATS GENERALLY

- General: Rule to an even surface. Comb to provide a key for the next coat. Do not penetrate the coat.
- Undercoats on metal lathing: Work well into interstices to obtain maximum key.

856 FINAL COAT - PLAIN FLOATED FINISH

- Finish: Even, open texture free from laitance.

880 CURING AND DRYING

- General: Prevent premature setting and uneven drying of each coat.
- Curing coatings: Keep each coat damp by covering with polyethylene sheet and/ or spraying with water.
  - Curing period (minimum): As the render manufacturer's recommendations.
  - Final coat: Hang sheeting clear of the final coat.
- Drying: Allow each coat to dry thoroughly, with drying shrinkage substantially complete before applying next coat.
- Protection: Protect from frost and rain.

© Copyright protected

M22 Sprayed monolithic coatings

To be read with Preliminaries/ General conditions.

TYPES OF COATING

120A SPRAYED FIRE PROTECTION WHERE INDICATED

- Sprayed Fire-Resistive Material: Manufacturer's standard, factory-mixed, dry formulation, complying with indicated fire-resistance design, and mixed with water at Project site to form a slurry or mortar before conveyance and application or conveyed in a dry state and mixed with atomized water at place of application.
- Application:
  - Interior applications: Medium density, Portland cement based, designated for interior use by a qualified testing agency acceptable to authorities having jurisdiction.
  - All exterior applications, and C5 environment classification: High density, Portland cement based, designated for exterior use by a qualified testing agency acceptable to authorities having jurisdiction.
- Bond Strength: Minimum 50 kPa cohesive and adhesive strength based on field testing in accordance with ASTM E736/E736M.
- Density: Not less than density specified in the approved fire-resistance design, in accordance with ASTM E605/E605M:
  - Medium density: Not less than 350 Kg/m3.
  - High density: Not less than 640 Kg/m3.
- Thickness: As required for fire-resistance design indicated, measured in accordance with requirements of fire-resistance design or ASTM E605/E605M, whichever is thicker, but not less than 12 mm.
- Combustion Characteristics: Noncombustible when tested to ASTM E136.
- Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
  - Flame-Spread Index: 0 or less.
  - Smoke-Developed Index: 0 or less.
- Compressive Strength: Minimum 1000 kPa for medium density, and 3000 kPa for high density in accordance with ASTM E761/E761M.
- Corrosion Resistance: No evidence of corrosion in accordance with ASTM E937/E937M.
- Deflection: No cracking, spalling, or delamination in accordance with ASTM E759/E759.
- Effect of Impact on Bonding: No cracking, spalling, or delamination in accordance with ASTM E760/E760M.
- Air Erosion: Maximum weight loss of 0.00 g/sq. m in 24 hours in accordance with ASTM E859/E859M.
- Fungal Resistance: Treat products with manufacturer's standard antimicrobial formulation to result in no growth on specimens per ASTM G21.
- Sound Absorption (where required): As per acoustic report, but NRC not less than 0.60 in accordance with ASTM C423 for Type A mounting in accordance with ASTM E795.
- Finish: As selected by Engineer from manufacturer's standard finishes
  - Color (where required): As indicated by manufacturer's designations and to match Engineer's sample.

120B AUXILIARY MATERIALS

- Provide auxiliary materials that are compatible with sprayed fire-resistive material and substrates and are approved by UL or another testing and inspecting agency acceptable to authorities having jurisdiction for use in fire-resistance designs indicated.

© Copyright protected

- Substrate Primers: Primers approved in writing by sprayed fire-resistive material manufacturer and complying with one or both of the following requirements:
  - Primer and substrate are identical to those tested in required fire-resistance design by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
  - Primer's bond strength in required fire-resistance design complies with specified bond strength for sprayed fire-resistive material and with requirements in UL's "Product iQ" online directory or in the listings of another qualified testing agency acceptable to authorities having jurisdiction, based on a series of bond tests in accordance with ASTM E736/E736M.
- Bonding Agent: Product approved in writing by sprayed fire-resistive material manufacturer and complying with requirements in UL's "Product iQ" online directory or in the listings of another qualified testing agency acceptable to authorities having jurisdiction.
- Metal Lath: Expanded metal lath fabricated from material of weight, configuration, and finish required, in accordance with fire-resistance designs indicated and sprayed fire-resistive material manufacturer's written instructions. Include clips, lathing accessories, corner beads, and other anchorage devices required to attach lath to substrates and to receive sprayed fire-resistive material.
- Reinforcing Fabric: Glass- or carbon-fiber fabric of type, weight, and form required to comply with fire-resistance designs indicated; approved and provided by sprayed fire-resistive material manufacturer.
- Reinforcing Mesh: Metallic mesh reinforcement of type, weight, and form required to comply with fire-resistance design indicated; approved and provided by sprayed fire-resistive material manufacturer. Include pins and attachment.
- Sealer (where required): Transparent-drying, water-dispersible, tinted protective coating recommended in writing by sprayed fire-resistive material manufacturer for each fire-resistance design.
- Topcoat (where required): Suitable for application over sprayed fire-resistive material; of type recommended in writing by sprayed fire-resistive material manufacturer for each fire-resistance design.
  - Cement-Based Topcoat: Factory-mixed, cementitious hard-coat formulation for trowel or spray application over SFRM.
  - Water-Based Permeable Topcoat: Factory-mixed formulation for brush, roller, or spray application over applied SFRM.
- Caulk: As per manufacturer recommendations and approved certified system.
- Cornerbead: As per manufacturer recommendations.
- Mix water shall be potable and free from such amounts of mineral or organic substances that would effect application or set of material.

PERFORMANCE REQUIREMENTS

160 RESISTANCE TO FIRE

- Assemblies: Provide applied fire protection, including auxiliary materials, in accordance with requirements of each fire-resistance design and manufacturer's written instructions.
- Fire-Resistance Design: Indicated on Drawings, tested in accordance with ASTM E119 or UL 263; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
  - Steel members are to be considered unrestrained unless specifically noted otherwise.
  - UL design listings must state that the loading was determined by Allowable Stress Design Method or Load and Resistance Factor Design Method. UL design listings requiring a load restriction factor are not allowed.

190 GENERAL PERFORMANCE REQUIREMENTS

- Product shall be non-corrosive.

© Copyright protected

- Submit manufacturer's written certification that product contains no asbestos, fiberglass or other manmade mineral fibres.
- Submit copy of manufacturer's ISO 9001 Certification.
- Product shall not contain any Urea-Formaldehyde Resins.

GENERAL REQUIREMENTS

205 WARRANTY

- Full System Warranty: Provide full system warranty in which Manufacturer, contractor and Installer are jointly and severally responsible and agree to repair or replace, without limitations, SFRM system that fails within the specified warranty period.
  - Failure includes but shall not be limited to the following:
    Peeling, debonding, erosion.
    Failure to protect against fire for the specified time.
    Cracking.
    Change in color of finish topcoat.
  - Warranty period for Fire Performance: 15 years from date of Substantial Completion.

210 SURFACES TO BE COATED

- Condition: Structurally sound, dry, frost free, free from contamination by dirt, dust, efflorescence or other deleterious substances, and in a suitable condition to receive specified coatings.

220 ENVIRONMENTAL CONDITIONS

- Environmental Limitations: Do not apply applied fire protection when ambient or substrate temperature is 7 deg Cor lower unless temporary protection and heat are provided to maintain temperature at or above this level for 24 hours before, during, and for 24 hours after product application.
- Ventilation: Ventilate building spaces during and after application of fire protection, providing complete air exchanges in accordance with manufacturer's written instructions. Use natural means or, if they are inadequate, forced-air circulation until fire protection dries thoroughly.

240 SEQUENCE OF WORK

- Hangers, supports, clips, sleeves and other attachments: Securely fixed before application of coating.
- Sprayed coating and sealer coats: Applied and cured before:
  - Installation of ductwork, piping, conduit and other suspended equipment.
  - Application of finishes to adjacent surfaces.

250 DIFFICULT ACCESS AREAS

- Requirement: Identify areas where difficulty of access may prejudice achievement of complete integrity of the coating or application of the specified coating thickness and submit proposals for applying coating to these areas. If necessary, seek advice from the coating manufacturer.

260 PROTECTION FROM OVERSPRAY

- Adjacent areas not to be coated: Protect using suitable shielding/ masking materials that will not damage the surface when removed.

© Copyright protected

De
Te

280 CONTROL SAMPLES

- General: Complete areas of finished work in designated locations. Obtain approval before proceeding.
  - Designated areas: as directed by Engineer.

290 INSPECTIONS

- Surface preparation and coating: Notify proposed starting dates.
- Coating manufacturer: Permit to:
  - Inspect the work in progress.
  - Inspect all quality control records.
  - Take dry coating thickness measurements and samples of coating products.
- Coating manufacturer's directions or requests: Submit proposals.
- Coating manufacturer's inspection reports: Submit copies without delay.

APPLICATION OF COATINGS

350 SPRAYED COATINGS GENERALLY

- Interior applications: Medium density, Portland cement based, designated for interior use by a qualified testing agency acceptable to authorities having jurisdiction.
- All exterior applications, and C5 environment classification: High density, Portland cement based, designated for exterior use by a qualified testing agency acceptable to authorities having jurisdiction.

380 CURING

- Fireproofing shall be free of asbestos, mineral fibers, polystyrene, or other known materials which may be considered hazardous either during mixing, application curing, or chemical release in a fire.

390 EXAMINATION

- All structural steel members to receive SFRM shall be provided with a suitable and compatible corrosion protection system, either by priming or by hot-dip galvanization. Refer to section Z11" for corrosion protection system and project corrosion category.
- Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for substrates and other conditions affecting performance of the Work and in accordance with each fire-resistance design.
  - Verify that substrates are free of dirt, oil, grease, release agents, rolling compounds, mill scale, loose scale, incompatible primers, paints, and encapsulants, or other foreign substances capable of impairing bond of applied fire protection with substrates under conditions of normal use or fire exposure.
  - Verify that objects penetrating applied fire protection, including clips, hangers, support sleeves, and similar items, are securely attached to substrates.
  - Verify that substrates receiving applied fire protection are not obstructed by ducts, piping, equipment, or other suspended construction that will interfere with fire protection application.
- Verify that concrete work on steel deck is complete before beginning Work.
- Verify that roof construction, installation of rooftop HVAC equipment, and other related work are complete before beginning Work.
- Conduct tests in accordance with sprayed fire-resistive material manufacturer's written instructions to verify that substrates are free of substances capable of interfering with bond.
- Verify that objects which will penetrate fireproofing such as clips, hangers, support sleeves, etc. are securely

© Copyright protected

attached to the substrate.
- Primed and Hot dip galvanized steel must follow the current UL application requirements for bond and/or mechanical attachment.
- Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- Proceed with installation only after unsatisfactory conditions have been corrected.
- Start of SFRM application will be construed as Applicator's acceptance of surfaces and conditions within a particular area.

400 PREPARATION

- Cover other work subject to damage from fallout or overspray of applied fire protection materials during application.
- Before SFRM application, clean substrates of substances that could impair bond of applied fire protection.
  - Schedule cleaning and painting application so dust and other contaminants will not fall on wet, newly fire protected surfaces.
  - Clean and prepare surfaces to be fire protected according to manufacturer's written instructions for each particular substrate condition and as specified.
- Prime substrates where included in fire-resistance design and where recommended in writing by sprayed fire-resistive material manufacturer unless compatible shop primer has been applied and is in satisfactory condition to receive applied fire protection.
- For applications visible on completion of Project, repair substrates to remove surface imperfections that could affect uniformity of texture and thickness in finished surface of applied fire protection. Remove minor projections and fill voids that would telegraph through applied fire protection after application.

410 APPLICATION

- Construct applied fire protection assemblies that are identical to fire-resistance design indicated and products as specified, tested, and substantiated by test reports; for thickness, primers, sealers, topcoats, finishing, and other materials and procedures affecting applied fire protection Work.
- Comply with sprayed fire-resistive material manufacturer's written instructions for mixing materials, application procedures, and types of equipment used to mix, convey, and apply fire protection; as applicable to particular conditions of installation and as required to achieve fire-resistance ratings indicated.
- Coordinate application of fire protection with other construction to minimize need to cut or remove applied fire protection.
  - Do not begin applying fire protection until clips, hangers, supports, sleeves, and other items penetrating fire protection are in place.
  - Defer installing ducts, piping, and other items that would interfere with applying fire protection until application of fire protection is completed.
- Metal Decks:
  - Do not apply fire protection to underside of metal deck substrates until concrete topping, if any, is completed.
  - Do not apply fire protection to underside of metal roof deck until roofing is completed; prohibit roof traffic during application and drying of fire protection.
- Install auxiliary materials as required, as detailed, and in accordance with fire-resistance design and sprayed fire-resistive material manufacturer's written instructions for conditions of exposure and intended use. For auxiliary materials, use attachment and anchorage devices of type recommended in writing by sprayed fire-resistive material manufacturer.
- Spray apply fire protection to maximum extent possible. After the spraying operation in each area, complete the coverage by trowel application or other placement method recommended in writing by sprayed fire-resistive material manufacturer.
- Extend applied fire protection in full thickness over entire area of each substrate to be protected.
- Install body of applied fire protection in a single course unless otherwise recommended in writing by sprayed

© Copyright protected

fire-resistive material manufacturer.

- For applications over encapsulant materials, including lockdown (post-removal) encapsulants, apply fire protection that differs in color from that of encapsulant over which it is applied.
- Where sealers are used, apply products that are tinted to differentiate them from applied fire protection over which they are applied.
- Provide a uniform finish complying with description indicated for each type of applied fire protection material and matching finish approved for required mockups.
- Cure applied fire protection in accordance with sprayed fire-resistive material manufacturer's written instructions.
- Do not install enclosing or concealing construction until after applied fire protection has been inspected, tested, and corrections have been made to deficient applications.
- Finishes: Where indicated and as approved by Engineer, apply fire protection to produce the following finishes:
  - Manufacturer's Standard Finishes: Finish in accordance with manufacturer's written instructions for each finish selected.
  - Spray-Textured Finish: Finish left as spray applied with no further treatment.
  - Rolled, Spray-Textured Finish: Even finish produced by rolling spray-applied finish with a damp paint roller to remove drippings and excessive roughness.
  - Skip-Troweled Finish: Even leveled surface produced by troweling spray-applied finish to smooth out the texture and neaten edges.
  - Skip-Troweled Finish with Corner Beads: Even, leveled surface produced by troweling spray-applied finish to smooth out the texture, eliminate surface markings, and square off edges.

415 FIELD QUALITY CONTROL

- Special Inspections: Engage a qualified special inspector to perform the following special inspections:
  - Test and inspect as required by the IBC chapter 17, and ASTM E605.
  - Upon the Engineer’s request, samples of the SFRM shall be randomly selected from approved production batches bearing the applicable classification for independent third-party testing.
  - Testing shall verify compliance with the specified fire-resistance rating and the applicable classification.
  - Any materials found non-compliant shall be removed and replaced at no additional cost to the Employer.
- Perform the tests and inspections of completed Work in successive stages. Do not proceed with application of fire protection for the next area until test results for previously completed applications of fire protection show compliance with requirements. Tested values must equal or exceed values as specified and as indicated and required for approved fire-resistance design.
- Quality Control: Wet and Dry Film Thickness (DFT) shall be checked regularly during applications at intervals as instructed by Engineer.
- Applied fire protection will be considered defective if it does not pass tests and inspections.
  - Remove and replace applied fire protection that does not pass tests and inspections, and retest.
  - Apply additional applied fire protection, in accordance with manufacturer's written instructions, where test results indicate insufficient thickness, and retest.
- Prepare test and inspection reports.

© Copyright protected

De
Te

420 CLEANING

- Immediately after completing spraying operations in each containable area of Project, remove material overspray and fallout from surfaces of other construction and clean exposed surfaces to remove evidence of soiling.

425 PROTECTION

- Protect applied fire protection from damage resulting from construction operations or other causes in accordance with manufacturer's and Installer's written instructions, so applied fire protection is without damage or deterioration at time of Substantial Completion.

430 REPAIRS

- As installation of other adjacent construction proceeds, inspect applied fire protection and repair damaged areas due to work of other trades before concealing it with other construction.
- Repair fire protection damaged by other work before concealing it with other construction.
- Repair applied fire protection using same method and materials as original installation or using manufacturer's recommended trowel-applied repair product.

© Copyright protected

M40 STONE/ CONCRETE/ QUARRY/ CERAMIC TILING/ MOSAIC

To be read with Preliminaries/ General Conditions.

TYPES OF TILING/ MOSAIC

110 UNGLAZED FULLY BODY PORCELAIN TILING TO FLOOR AND WHERE INDICATED ON DRAWINGS

- Tiles: stain resistant, acid resistant, slip resistant porcelain complying with BS EN ISO 13006, Group BIa.
  - Manufacturer/ Supplier: Submit proposals.
    Product reference: Submit proposals.
  - Colour: To the Engineer's selection from the manufacturer's standard range.
  - Finish: as indicated in finish manual.
  - Size: as indicated on drawings and finishes manual.
  - Thickness: As per structural verification for floor application and not less than 9.0 mm.
  - Hight for base: 100 mm, color/ finish matching with the adjacent floor finish.
  - Edge: rectified
  - Physical properties (to EN ISO standards)
    - Water absorption: Not more than 0.6% to EN ISO 10545-3.
    - Breaking strength: Not less than 1600 N to EN ISO 10545-4.
    - Flexural strength: Not less than 35 MPa to EN ISO 10545-4.
    - Abrasion resistance:
      - Unglazed tiles: Maximum 150 mm³ to EN ISO 10545-6.
      - Glazed tiles (if used): Class 5 to EN ISO 10545-7.
    - Stain resistance: To EN ISO 10545-14
      - Unglazed tiles: Minimum Class 3.
      - Glazed tiles: Minimum Class 4.
    - Chemical resistance: Class A to EN ISO 10545-13.
  - Slip potential:
    Slip resistance value (SRV) (minimum)/ Pendulum test value (PTV) (minimum) to BS 7976-1, -2, -3 or BS EN 14231 (natural stone only): Manufacturer's standard.
    Surface roughness (Rz) (minimum) to BS 1134: Manufacturer's standard.
    Ramp test class: R11.
  - Recycled content: Contractor's choice.
- Background/ Base: reinforced concrete base.
  - Preparation: acoustic underlay if required in acoustic report.
- Intermediate substrate: Not required.
- Bedding: thin set mortar.
  - Improved modified dry-set cementitious adhesive: Comply with EN 12004-1 / ISO 13007-1, Class C2 E S2.
- Joint width: As spacer lugs.
- Grout: Provide grout type based on location, colour to match tile with cementitious grout in dry areas and epoxy grout in wet, hygienic, and high-traffic areas, unless otherwise indicated on drawings or finishes schedule.
  - Cementitious grout Comply with BS EN ISO 13007-3, ISO 13007-3, and compliant with performance requirements of class CG 2WA (F).
  - Water-Cleanable prepackaged Epoxy grout ISO 13007-3, and compliant to performance requirements of class RG.
- Movement joints: As approved on the contractor's shop drawings.

© Copyright protected

- Accessories: None.

110 UNGLAZED FULLY BODY PORCELAIN WALL TILING

- Tiles: stain resistant, acid resistant, slip resistant porcelain complying with BS EN ISO 13006, Group BIa.
  - Manufacturer/ Supplier: Submit proposals.
    Product reference: Submit proposals.
  - Colour: To the Engineer's selection from the manufacturer's standard range.
  - Finish: as indicated in finish manual.
  - Size: as indicated on drawings and finishes manual.
  - Thickness: As indicated in finish manual and drawings.
  - Edge: rectified
  - Physical properties (to EN ISO standards)
    - Water absorption: Not more than 0.6% to EN ISO 10545-3.
    - Breaking strength: Not less than 1600 N to EN ISO 10545-4.
    - Flexural strength: Not less than 35 MPa to EN ISO 10545-4.
    - Stain resistance: To EN ISO 10545-14
      - Unglazed tiles: Minimum Class 3.
      - Glazed tiles: Minimum Class 4.
    - Chemical resistance: Class A to EN ISO 10545-13.
  - Slip potential:
    Slip resistance value (SRV) (minimum)/ Pendulum test value (PTV) (minimum) to BS 7976-1, -2, -3 or BS EN 14231 (natural stone only): Manufacturer's standard.
    Surface roughness (Rz) (minimum) to BS 1134: Manufacturer's standard.
    Ramp test class: R11.
  - Recycled content: Contractor's choice.
- Background/ Base: reinforced concrete base.
  - Preparation: acoustic underlay if required in acoustic report.
- Intermediate substrate: Not required.
- Bedding: thin set mortar.
  - Improved modified dry-set cementitious adhesive: Comply with EN 12004-1 / ISO 13007-1, Class C2 E S2.
  - For wall applications: Provide adhesive complying with non-slip (T) classification in addition to the above requirements.
- Joint width: As spacer lugs.
- Grout: Provide grout type based on location colour to match tile, with cementitious grout in dry areas and epoxy grout in wet, hygienic, and high-traffic areas, unless otherwise indicated on drawings or finishes schedule.
  - Cementitious grout Comply with BS EN ISO 13007-3, ISO 13007-3, and compliant with performance requirements of class CG 2WA (F).
  - Water-Cleanable prepackaged Epoxy grout ISO 13007-3, and compliant to performance requirements of class RG.
- Movement joints: As approved on the contractor's shop drawings.
- Accessories: None.

110A TILING TO WALLS WHERE INDICATED ON DRAWINGS

- Tiles: Glazed ceramic tiles, stain resistant and chemical resistant, complying with BS EN ISO 13006.
  - Interior wet areas: Group BIIa or better
  - Interior dry areas: Group BIIb or better
  - Manufacturer/ Supplier: To the Engineer's selection from the manufacturer's standard range.

© Copyright protected

Product reference: To the Engineer's selection from the manufacturer's standard range.
  - Colour and pattern: To the Engineer's selection from the manufacturer's standard range.
  - Finish: as indicated in finish manual.
  - Size: as indicated on drawings and in finish manual.
  - Thickness: As indicated in finish manual and drawings.
  - Recycled content: Contractor's choice.
  - Edge: Rectified.
  - Physical properties (to EN ISO standards):
    - Water absorption: Not more than 6% (wet areas) and 10% (dry areas) to EN ISO 10545-3.
    - Breaking strength: Not less than 1000 N to EN ISO 10545-4.
    - Stain resistance: Minimum Class 4 to EN ISO 10545-14.
    - Chemical resistance: Minimum Class A to EN ISO 10545-13.
- Background/ Base: Cement: sand rendering to section M20.
  - Preparation: as clause 380.
- Intermediate substrate: Not required.
- Bedding: thin set mortar.
  - Improved modified dry-set cementitious adhesive: Comply with EN 12004-1 / ISO 13007-1, Class C2 E S2.
  - For wall applications: Provide adhesive complying with non-slip (T) classification in addition to the above requirements.
- Joint width: As spacer lugs.
- Grout: Provide grout type based on location, with cementitious grout in dry areas and epoxy grout in wet, hygienic, and high-traffic areas, unless otherwise indicated on drawings or finishes schedule .
  - Cementitious grout Comply with BS EN ISO 13007-3, ISO 13007-3, and compliant with performance requirements of class CG 2WA (F).
  - Water-Cleanable prepackaged Epoxy grout ISO 13007-3, and compliant to performance requirements of class RG.
- Movement joints: As approved on the contractor's shop drawings.
- Accessories: As indicated on drawing.

110B CERAMIC SKIRTING WHERE INDICATED ON DRAWINGS

- Tiles: Glazed ceramic tiles, stain resistant and chemical resistant, complying with BS EN ISO 13006.
  - Interior wet areas: Group BIIa or better
  - Interior dry areas: Group BIIb or better
  - Manufacturer/ Supplier: To the Engineer's selection from the manufacturer's standard range.
    Product reference: To the Engineer's selection from the manufacturer's standard range.
  - Colour and pattern: To the Engineer's selection from the manufacturer's standard range.
  - Finish: as indicated in finish manual.
  - Size: as indicated on drawings and in finish manual.
  - Height: 200mm, unless otherwise indicated.
  - Thickness: As indicated in finish manual and drawings.
  - Recycled content: Contractor's choice.
  - Edge: Rectified.
  - Physical properties (to EN ISO standards):
    - Water absorption: Not more than 6% (wet areas) and 10% (dry areas) to EN ISO 10545-3.
    - Breaking strength: Not less than 1000 N to EN ISO 10545-4.
    - Stain resistance: Minimum Class 4 to EN ISO 10545-14.
    - Chemical resistance: Minimum Class A to EN ISO 10545-13.

© Copyright protected

- Background/ Base: Cement: sand rendering to section M20.
  - Preparation: as clause 380.
- Intermediate substrate: Not required.
- Bedding: thin set mortar.
  - Improved modified dry-set cementitious adhesive: Comply with EN 12004-1 / ISO 13007-1, Class C2 E S2.
  - For wall applications: Provide adhesive complying with non-slip (T) classification in addition to the above requirements.
- Joint width: As spacer lugs.
- Grout: Provide grout type based on location, with cementitious grout in dry areas and epoxy grout in wet, hygienic, and high-traffic areas, unless otherwise indicated on drawings or finishes schedule .
  - Cementitious grout Comply with BS EN ISO 13007-3, ISO 13007-3, and compliant with performance requirements of class CG 2WA (F).
  - Water-Cleanable prepackaged Epoxy grout ISO 13007-3, and compliant to performance requirements of class RG.
- Movement joints: As approved on the contractor's shop drawings.
- Accessories: As indicated on drawing.

115 MARBLE STONE FOR FLOORING AND WALL CLADDING WHERE INDICATED ON DRAWINGS

- Marble tiles/ slabs: Natural marble, sound, durable, free from cracks, vents, or other structural defects.
  - Manufacturer/ Supplier: Submit proposals.
    Product reference: Submit proposals.
  - Colour/ Veining/ Texture: As indicated on drawings and finishes manual, consistent across batch.
  - Finish: As indicated on drawings and finishes manual.
  - Size/ Format: As indicated on drawings and finishes manual.
  - Thickness: As per structural verification for floor application and not less than 20 mm.
  - Edge: Machine-cut, straight and true, arris slightly eased.
  - Slip resistance: Minimum R10.
  - Surface roughness (Rz) to BS 1134: Manufacturer’s standard.
- Comply with BS EN 12057 / BS EN 12058 and the following:
  - Water absorption: Max. 0.2% (BS EN 13755).
  - Density: Min. 2650 kg/m³ (BS EN 1936).
  - Compressive strength: Min. 55 MPa (BS EN 1926).
  - Flexural strength: Min. 7 MPa (BS EN 12372).
  - Abrasion resistance: As per BS EN 14157, suitable for heavy traffic.
  - Flexural strength (wet/dry): Min. 7 MPa (BS EN 12372 / 13161).
- Background/ Base: Reinforced concrete base or masonry wall, prepared and level.
- Bedding:
  - Flooring: Thick-bed cement: sand mortar or approved adhesive. or improved modified dry-set cementitious adhesive: Comply with EN 12004-1 / ISO 13007-1, Class C2 E S2
  - For wall applications: Provide adhesive complying with non-slip (T) classification in addition to the above requirements.
- Grout: Provide grout type based on location colour to match tile, with cementitious grout in dry areas and epoxy grout in wet, hygienic, and high-traffic areas, unless otherwise indicated on drawings or finishes schedule.
  - Cementitious grout Comply with BS EN ISO 13007-3, ISO 13007-3, and compliant with performance requirements of class CG 2WA (F).

© Copyright protected

  - Water-Cleanable prepackaged Epoxy grout ISO 13007-3, and compliant to performance requirements of class RG.
- Movement joints: Proprietary profiles or sealant joints as approved, located in accordance with BS 5385-1 (floors) and BS 5385-2 (walls).
- Sealing/ Protection:
  - Apply breathable impregnating sealer suitable for marble.
  - Protect installed marble from staining, scratching, and impact damage until Practical Completion.

115 A LIMESTONE FOR FLOORING AND WALL CLADDING WHERE INDICATED ON DRAWINGS

- Limestone tiles/slabs**:** Natural limestone, sound, durable, free from cracks, voids, or structural defects.
  - Manufacturer/ Supplier: Submit proposals.
    Product reference: Submit proposals.
  - Colour/ Veining/ Texture: As indicated on drawings and finishes manual, consistent across batch.
  - Finish: As indicated on drawings and finishes manual.
  - Size/ Format: As indicated on drawings and finishes manual.
  - Thickness: As per structural verification for floor application and not less than 20 mm.
  - Edge: Machine-cut, straight and true, arris slightly eased.
  - Slip resistance: Minimum R10.
  - Surface roughness (Rz) to BS 1134: Manufacturer's standard.
- Comply with BS EN 12057 / BS EN 12058 and the following:
  - Water absorption: Maximum 4%, tested to BS EN 13755.
  - Density: Minimum 2200 kg/m³, tested to BS EN 1936.
  - Compressive strength: Minimum 30 MPa, tested to BS EN 1926.
  - Flexural strength: Minimum 6 MPa, tested to BS EN 12372.
  - Abrasion resistance (for flooring): Tested to BS EN 14157; suitable for foot traffic.
- Background/ Base: Reinforced concrete base or masonry wall, prepared and level.
- Bedding:
  - Flooring: Thick-bed cement: sand mortar or approved adhesive. or improved modified dry-set cementitious adhesive: Comply with EN 12004-1 / ISO 13007-1, Class C2 E S2
  - For wall applications: Provide adhesive complying with non-slip (T) classification in addition to the above requirements.
- Grout: Provide grout type based on location colour to match tile, with cementitious grout in dry areas and epoxy grout in wet, hygienic, and high-traffic areas, unless otherwise indicated on drawings or finishes schedule.
  - Cementitious grout Comply with BS EN ISO 13007-3, ISO 13007-3, and compliant with performance requirements of class CG 2WA (F).
  - Water-Cleanable prepackaged Epoxy grout ISO 13007-3, and compliant to performance requirements of class RG.
- Movement joints: Proprietary profiles or sealant joints as approved, located in accordance with BS 5385-1 (floors) and BS 5385-2 (walls).
- Sealing/ Protection:
  - Apply breathable impregnating sealer suitable for marble.
  - Protect installed marble from staining, scratching, and impact damage until Practical Completion.

115B NATURAL STONE COVERING TO THRESHOLD

- Type: Slabs to BS EN 12058.
- Stone:

© Copyright protected

  - Name (traditional): marble.
  - Petrological family: Marble.
  - Colour: White, unless otherwise indicated on drawings and in finish manual.
  - Origin: as indicated in the finish's manual.
  - Finish: Polished unless otherwise indicated in the finish's manual.
  - Supplier: Submit proposals.
  - Quality: Free from vents, cracks, fissures, discoloration, or other defects deleterious to strength/ colour.
  - Size: as indicated in the finish's manual.
  - Thickness: as indicated in the finish's manual.
  - Slip potential:
    Slip resistance value (SRV) (minimum) to BS EN 14231: 35 wet.
    Surface roughness (Rz) (minimum) to BS 1134: Manufacturer's standard.
    Ramp test class: R11.
  - Other requirements: None.
- Background/ Base: Cement: sand rendering as section M20.
  - Preparation: Smoothing underlayment.

GENERAL

210 SUITABILITY OF BACKGROUNDS/ BASES

- Background/ base tolerances: To permit specified flatness/ regularity of finished surfaces given the permissible minimum and maximum thickness of bedding.
- New background drying times (minimum):
  - Concrete walls: 6 weeks.
  - Brick/ block walls: 6 weeks.
  - Rendering: 2 weeks.
  - Gypsum plaster: 4 weeks.
- New base drying times (minimum):
  - Concrete slabs: 6 weeks.
  - Cement: sand screeds: 3 weeks.

215 FALLS IN THE BASES

- General: Give notice if falls are inadequate.

250 SAMPLES

- General: Submit representative samples of the following:
  Each type of tile.

260 CONTROL SAMPLES

- General: Complete sample areas, being part of finished work, in locations as follows: As agreed with the Engineer.
  - Approval of appearance: Obtain before proceeding.
- Floor covering slip resistance testing: As clause 900.

PREPARATION

370 NEW IN SITU CONCRETE

- Backgrounds/ bases to be tiled: Remove mould oil, surface retarders and other materials incompatible with bedding.

© Copyright protected

380 NEW PLASTER

- Plaster: Dry, solidly bedded, free from dust and friable matter.
- Plaster primer: Apply if recommended by adhesive manufacturer.

400 BACKGROUNDS as indicated

- Boards: Dry, securely fixed and rigid with no protruding fixings.
- Surfaces to be tiled: Seal or prime if recommended by adhesive manufacturer.

410 HACKING FOR KEY

- Keying: Roughen backgrounds thoroughly and evenly to a depth of 3 mm.
- Backgrounds to be keyed: as indicated.

420 RAKING OUT FOR KEY

- Soft joints in existing masonry: Rake out to a depth of 13 mm (minimum).

430 SPATTERDASHING FOR KEY

- Spatterdash mix:
  - Cement: Portland to BS EN 197-1 type CEM I/42.5
  - Sand: Clean coarse.
  - Proportions (cement: sand): 1-1.5:2.
  - Admixture: BBA certified SBR bonding agent.
  - Consistency: Thick slurry with no segregation.
- Application/finish: Thrown.
  - Thickness: 3-5 mm.
- Curing/ drying: Keep damp until hardened. Dry out to provide securely bonded finish.

438 PREPARING CONCRETE BASES FOR FULLY BONDED BEDDING

- Surface cement: sand matrix: Remove to expose coarse aggregate.
- Surface preparation: Suitable to achieve a full bond with bedding. Select from:
  - Keep well wetted for several hours. Remove free water then brush in a slurry bonding coat.
    Slurry: SBR polymer modified cement.
  - Prepare, prime as necessary and apply a bonding agent.
    Bonding agent: BBA certified SBR bonding agent.

451 PREPARING CONCRETE BASES FOR UNBONDED BEDDING

- Separating layer: Polyethylene sheet.
  - Thickness: 125 micrometres (500 gauge).
  - Lap at joints: 100 mm.

460 SMOOTHING UNDERLAYMENT

- Type: Recommended by adhesive manufacturer.
- Condition: Allow to dry before tiling.

470 INTERMEDIATE SUBSTRATE

- Type: Tile backer board, where indicated on drawings.
  - Manufacturer: Submit proposals.
    Product reference: Submit proposals.
  - Thickness: 12.5 mm, unless otherwise indicated on drawings.
- Fixing system: Bonding mortar.
  - Manufacturer: Submit proposals.
    Product reference: Submit proposals.
  - Application: As recommended by manufacturer.

© Copyright protected

  - Substrate surface: Secure, true and even.
- Joints: Close butt.
  - Treatment: As recommended by manufacturer.
- Penetrations: Seal.
- Accessories: None.

FIXING

510 FIXING GENERALLY

- Colour/ shade: Unintended variations within tiles for use in each area/ room are not permitted.
  - Variegated tiles: Mix thoroughly.
- Adhesive: Compatible with background/ base. Prime if recommended by adhesive manufacturer.
- Use of admixtures with cementitious adhesives: Only admixtures approved by adhesive manufacturer.
- Cut tiles: Neat and accurate.
- Fixing: Provide adhesion over entire background/ base and tile backs.
- Final appearance: Before bedding material sets, make adjustments necessary to give true, regular appearance to tiles and joints when viewed under final lighting conditions.
- Surplus bedding material: Clean from joints and face of tiles without disturbing tiles.

540 LEVEL OF FLOOR TILING

- Permissible deviation in level from datum 3 mm.

550 FLATNESS/ REGULARITY OF TILING/ MOSAICS

- Sudden irregularities: Not permitted.
- Deviation of surface: Measure from underside of a 2 m straightedge with 3 mm thick feet placed anywhere on surface. The straightedge should not be obstructed by the tiles and no gap should be greater than 6 mm, i.e. a tolerance of + 3 mm.

560 LEVEL OF TILING ACROSS JOINTS

- Deviation (maximum) between tile surfaces either side of any type of joint:
  - 1 mm for joints less than 6 mm wide.
  - 2 mm for joints 6 mm or greater in width.

570 MORTAR BEDDING

- Bedding mix:
  - Cement: Portland to BS EN 197-1, type CEM I/42.5.
  - Sand for walls: Fine aggregate to BS EN 13139.
    Grading designation: 0/2 (CP or MP) category 2 fines.
  - Sand for floors: Fine aggregate to BS EN 13139.
    Grading designation: 0/4 (MP) category 1 fines and between 20%-66% passing a 0.5 sieve.
- Batching: Select from:
  - Batch by weight.
  - Batch by volume: Permitted on the basis of previously established weight: volume relationships of the particular materials. Use accurate gauge boxes. Allow for bulking of damp sand.
- Mixing: Mix materials thoroughly to uniform consistence. Use a suitable forced action mechanical mixer. Do not use a free fall type mixer.
- Application: At normal temperatures use within two hours. Do not use after initial set. Do not retemper.

© Copyright protected

578 CRACK CONTROL REINFORCEMENT

- Type to BS 4483: D98.
- Installation: Place centrally in depth of bed. Lap not less than 100 mm and securely tie together with steel wire.
- Corners: Avoid a four-layer build at corners.

590 COVED TILE SKIRTINGS

- Sequence: Bed solid to wall before laying floor tiles.
- Bedding: 1:4 cement: sand mortar.

600 SIT-ON TILE SKIRTINGS

- Sequence: Bed solid to wall after laying floor tiles.
- Bedding: 1:4 cement: sand mortar.

650 ADHESIVE BED - NOTCHED TROWEL METHOD (WALLS)

- Application: By 3 mm floated coat of adhesive to dry background in areas of approximately 1 m². Comb surface.
- Tiling: Press tiles firmly onto float coat.

651 ADHESIVE BED - NOTCHED TROWEL AND BUTTERING METHOD (WALLS)

- Application: By floated coat of adhesive to dry background in areas of about 1 m². Comb surface.
- Tiling: Apply thin even coat of adhesive to backs of dry tiles. Fill any ribbed, deep keyed or button profiles. Press tiles firmly onto float coat.
- Finished adhesive thickness: 3 mm or within the range allowed by the adhesive manufacturer.

652 ADHESIVE BED - BUTTERING METHOD (WALLS)

- Tiling: Apply even coat of adhesive to backs of dry tiles. Fill any ribbed, deep keyed or button profiles.
- Finished adhesive thickness: 3 mm or within the range allowed by the adhesive manufacturer.

690 CEMENT: SAND MORTAR BEDDING (WALLS)

- Preparation: Dampen background.
- Application: By floated coat to background: 1:3-4 cement: sand mortar bedding.
  - Thickness (maximum): 10 mm.
  - Finish: Equivalent to wood float. Before tiling allow to stiffen slightly.
- Tiling: Without delay, apply 2 mm thick coat of 1:1 cement: fine sand mortar to backs of tiles, filling keys. Press tiles firmly onto float coat. Tap firmly into position

710 ADHESIVE BED - NOTCHED TROWEL AND BUTTERING METHOD (FLOORS)

- Application: Floated coat of adhesive to dry base and comb surface.
- Tiling: Apply coat of adhesive to backs of dry tiles. Fill any ribbed, deep keyed or button profiles. Press tiles firmly onto float coat.
- Finished adhesive thickness: Within range allowed by manufacturer.

711 ADHESIVE BED - BUTTERING METHOD (FLOORS)

- Tiling: Apply even coat of adhesive to backs of dry tiles. Fill any ribbed, deep keyed or button profiles.
- Finished adhesive thickness: Within the range allowed by the adhesive manufacturer.

720 CEMENT: SAND MORTAR BEDDING (FLOORS)

- Mortar bedding mix: 1:3-4 cement: sand.
  - Consistency: Stiff plastic.

© Copyright protected

- Laying: Lay suitably small working areas of screeded bed. Compact thoroughly to level.
  - Finished bed thickness:
    For tiles up to 10 mm thick: 10-15 mm.
    For tiles greater than 10 mm thick: 15-20 mm.
- Tiling: Within two hours and before bedding sets, evenly coat backs of tiles with adhesive. Press tiles firmly into position.
- Finished adhesive thickness: Within range recommended by manufacturer.

740 EDGINGS AND COVER STRIPS

Manufacturer: Submit proposals.
Product reference: Submit proposals.
Material/ finish: Stainless steel Grade 316, as recommended by manufacturer.
Fixing: Secure with edge of covering gripped. Use matching fasteners where exposed to view

MOVEMENT JOINTS/ GROUTING/ COMPLETION

805 SEALANT MOVEMENT JOINTS WITH METAL EDGINGS WHERE INDICATED

- Edging material: Stainless steel angle.
  - Size: as indicated.
  - Bedding: Bed in 1:3 cement: sand.
- Installation: Centre over joints in base. Set to exact finished level of floor.
  - Fixing to base: Stainless steel screws and plugs at 300mm centres.
- Joint width: To match that of structural movement joint in base.
- Sealant: Multi-component, chemically curing, high performance polyurethane trafficable joint sealant.
  - Colour: To the Engineer's selection from the manufacturer's standard range.
  - Preparation and application: As section Z22.

815 SEALANT MOVEMENT JOINTS WHERE INDICATED

- Joints: Extend through tiles and bedding to base/ background. Centre over joints in base/ background.
  - Width: 6 mm.
- Sealant: Multi-component, chemically curing, high performance polyurethane trafficable joint sealant.
  - Colour: To the Engineer's selection from the manufacturer's standard range.
  - Preparation and application: As section Z22.

835A METAL SECTION MOVEMENT JOINTS IN TILING TO FLOORS

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
  - Colour: as selected by Engineer from manufacturer's full range.
- Bedding: Bed in 1:3 cement: sand.
- Installation: Centre over joints in base. Set to exact finished level of floor.
- Fixing to base: stainless steel screws, washers and plugs at 300 mm centres, unless otherwise indicated.
- Material: aluminium that shall be made of high-performance industrial grade, and to be developed for commercial applications, with two anchoring legs, polyurethane infill and a visible width of 11 mm. Joints shall provide effective lateral movement control in the specified traffic conditions. Joint infill shall offer high resistance to most commonly used chemicals and mechanical stresses.
  Movement: +/- 30%.
- Point load: 250 kg (25 mm diameter surface).

© Copyright protected

875 GROUTING

- Sequence: Grout when bed/adhesive has set sufficient to prevent disturbance of tiles.
- Joints: 6 mm deep (or depth of tile if less). Free from dust and debris.
- Grouting: Fill joints completely, tool to profile, clean off surface. Leave free from blemishes.
  - Profile: Slightly concave.
- Polishing: When grout is hard, polish tiling with a dry cloth.

885 COLOURED GROUTS

- Staining of tiles: Not permitted
- Evaluating risk of staining: Apply grout to a few tiles in a small trial area. If discoloration occurs apply a protective sealer to tiles and repeat trial.

PERFORMANCE

910 PENDULUM FLOOR COVERING SLIP RESISTANCE TESTING

- Natural stone floor covering(s) to be tested: M40/ porcelain and ceramic tiles.
- Testing authority: An approved laboratory.
- Test: To BS EN 14231.
  - Floor covering condition: Dry and wet.
  - Witnessing/ Certification: Arrange for tests to be witnessed/ certified by: Contract Administrator.
  - Report: Submit in addition to the requirements of the standard include:
    Location of the site and a drawing showing the positions of the tests.
    Description of the surface tested and its condition.
    Slider material used.
    PTV at each position tested.
    Temperature of the test surface.

M50 RUBBER/ PLASTICS/ CORK/ LINO/ CARPET TILING/ SHEETING

To be read with Preliminaries/ General Conditions.

TYPES OF COVERING

110B TILING STATIC CONDUCTIVE PLASTICS

- Location: as indicated.
- Base: smooth Trowelled screed.
  - Preparation: substrate to be smooth trowelled finish, free from debris and dust.
- Fabricated underlay: as indicated.
- Tiles: Homogeneous PVC to BS EN ISO 10581.
- PVC to be of high performance electrostatic and conductive floor covering. Static conductive flooring to be designed for full and unconditional ESD/ EMI control as well as for contamination sensitive clean room applications.
- Electrical resistance range: 5 x 10^4–1 x 10^6 ohm.
- Abrasion resistance (to BS EN 660-1): 0.15 mm.
- Static electrical propensity: to BS EN 1815: <2 kV.
  - Manufacturer: Submit proposals.
    Product reference: Not applicable.
  - BS EN ISO 10874 class: 43.
  - Slip potential:
    Slip resistance value (SRV) (minimum)/ Pendulum test value (PTV) (minimum) to BS 7976-1, -2 and -3: 36/ 25 dry/ wet.
    Surface roughness (Rz) (minimum) to BS 1134: 30 micrometres.
  - Recycled content: 25% (minimum to BS EN ISO 14021.
  - Size: 600 mm, unless otherwise indicated.
  - Thickness: not less than 2 mm.
  - Colour/ pattern: To the Engineer's selection from the manufacturer's standard range.
- Adhesive (and primer if recommended by manufacturer): As clause 640.
- Accessories: PVC skirtings.
- Finishing: Wash and test electrical resistance.
- Other requirements: A static conductive copper earth strip to be used in conjunction with static conductive primer and adhesive.
- Where high hygiene requirements are indicated on drawings, use a coved skirting system, as per manufacturer's recommendations.
- Pre-formed corners and skirting strips should be fitted after the main field tiles have been installed
- All joints to be hot welded in accordance with the manufacturer’s instructions.

120A HETEROGENEOUS VINYL SHEET

- Location: as indicated.
- Base: smooth Trowelled screed.
  - Preparation: substrate to be smooth trowelled finish, free from debris and dust.
- Fabricated underlay: as indicated.
- Tiles: Heterogeneous vinyl to BS EN ISO 10582.
  - Manufacturer: Submit proposals.
    Product reference: Not applicable.
  - BS EN ISO 10874 class: 43.
  - Slip potential:

© Copyright protected

Slip resistance value Minimum R10 to DIN 51130 (SRV) (minimum)/ Pendulum test value (PTV) (minimum) to BS 7976-1, -2 and -3: 36/ 25 dry/ wet.
Surface roughness (Rz) (minimum) to BS 1134: 30 micrometres.

- Recycled content: 25% (minimum to BS EN ISO 14021.
- Size: To the Engineer's selection from the manufacturer's standard range.
- Thickness: not less than 3 mm.
- Colour/ pattern: To the Engineer's selection from the manufacturer's standard range.

- Adhesive (and primer if recommended by manufacturer): as specified below.
- Accessories: PVC skirtings where indicated.
- Finishing: Welded joints, clean and finish to manufacturer's recommendations.
- Other requirements: None.

120B HOMOGENEOUS VINYL SHEET

- Location: as indicated.
- Base: smooth Trowelled screed.
  - Preparation: substrate to be smooth trowelled finish, free from debris and dust.
- Tiles: Heterogeneous vinyl to BS EN ISO 10582.
  - Manufacturer: Submit proposals.
    Product reference: Not applicable.
  - BS EN ISO 10874 class: 43.
  - Slip potential:
    Slip resistance value Minimum R19 to DIN 51130 (SRV) (minimum)/ Pendulum test value (PTV) (minimum) to BS 7976-1, -2 and -3: 36/ 25 dry/ wet.
    Surface roughness (Rz) (minimum) to BS 1134: 30 micrometres.
  - Recycled content: 25% (minimum to BS EN ISO 14021.
  - Size: To the Engineer's selection from the manufacturer's standard range.
  - Anti-bacterial: Required for medical areas
  - Thickness: not less than 2 mm.
  - Colour/ pattern: To the Engineer's selection from the manufacturer's standard range.
- Adhesive (and primer if recommended by manufacturer): as specified below.
- Accessories: PVC skirtings, where indicated.
- Finishing: Welded joints, clean and finish to manufacturer's recommendations.
- Other requirements: None.

130A CARPET TILING

- Location: where indicated on drawings.
- Base: Power floated concrete.
  - Preparation: As clause 460.
- Fabricated underlay: Not required unless recommended by manufacturer.
- Carpet tiles:
  - Manufacturer: Submit proposals.
    Product reference: Not applicable.
  - Type: Tufted structured loop pile, unless otherwise indicated in finishes manual.
  - Fibre: 100% solution dyed nylon with recycled content.
  - Backing: Manufacturer's standard backing system.
  - BS EN 1307 classification:
    Levels of use class: 33.
    Luxury rating class: LC5.
    Additional performance properties to BS EN 1307:
  - Castor chair suitability (Intensive use);

© Copyright protected

  - Castor chair suitability (Occasional use).
  - Antistatic behaviour.
  - Acoustic properties (Impact sound insulation, absorption).
  - Suitability occasional humid conditions (Dimensional stability).
  - Suitability occasional humid conditions (Colour fastness to wet/ dry rubbing).
  - Suitability occasional humid conditions (Resistance to rot).
  - Suitability for use on stairs (Intensive use).
  - Suitability for use on stairs (Occasional use); and
- Resistant to fraying.
  - Recycled content: Contractor's choice.
  - Size: as indicated in the finish's manual.
  - Colour/ pattern: To the Engineer's selection from the manufacturer's standard range.
- Pile height: As indicated in finishes manual.
- Total thickness: As indicated in finishes manual.
- Total weight: To the Engineer's selection from the manufacturer's standard range.
- Method of laying: Fully adhere all tiles with release adhesive recommended by tile manufacturer.
- Accessories: Edging strip at thresholds as clause 740.
- Other requirements: None.

170 CARPETING

- Location: where indicated.
- Base: Power floated concrete.
  - Preparation: Make good concrete.
- Fabricated underlay: none.
- Carpet underlay to BS 5808 and BS EN 14499:
  - Manufacturer: Submit proposals.
    Product reference: Not applicable.
  - Type: Cellular rubber.
  - Class: HC/U.
  - Recycled content: Contractor's choice.
- Underlay adhesive (and primer if recommended by manufacturer): as recommended by manufacturer.
- Carpet:
  - Manufacturer: submit proposals.
    Product reference: submit proposals.
  - Type: loop pile.
  - BS EN 1307 classification:
    Levels of use class: 33.
    Luxury rating class: LC3.
    Additional performance properties to BS EN 1307:
  - Castor chair suitability (Intensive use).
  - Electrical propensity (Static dissipative floor covering).
  - Acoustic properties (Impact sound insulation).
  - Acoustic properties (Sound absorption).
  - Suitability occasional humid conditions (Resistance to rot).
  - Suitability for use on stairs (Intensive use); and
- Resistant to fraying.
  - Recycled content: Contractor's choice.
  - Width: as indicated.

© Copyright protected

- Colour/ pattern: submit proposals.
- Carpet adhesive (and primer if recommended by manufacturer): recommended by manufacturer.
- Accessories: as recommended by manufacturer.
- Other requirements: None.

180 RESIN QUARTZ FLOOR TILES AND WHERE INDICATED

- Location: As indicated on drawings and finishes schedule.
- Substrate: Cementitious screed or concrete, clean, dry, level, and prepared in accordance with manufacturer's recommendations.
- Flooring:
  - Type: Resin quartz floor tiles (epoxy or polyurethane bound quartz aggregate as manufacturers standards) to BS 8204-6, with aggregates to BS EN 12620.
  - Size: As indicated in finish manuals and drawing.
  - Thickness: As per structural verification for floor application and not less than 9.0 mm.
  - Colour: Greige, or as selected by Engineer from manufacturer's standard range.
  - Finish: Honed / smooth matt, slip resistant.
- Performance:
  - Slip resistance: Slip resistance value (SRV) (minimum)/ Pendulum test value (PTV) (minimum) to BS 7976-1, -2, -3.
  - Surface roughness (Rz) (minimum) to BS 1134: Manufacturer's standard.
  - Ramp test class: R11.
- Fire classification: Minimum Bfl-s1 to EN 13501-1.
- Bond strength: Minimum 1.5 MPa adhesion to substrate.
- Installation:
  - Adhesive: Resin-based adhesive as recommended by manufacturer.
  - Joints: Close-jointed or resin-filled.
  - Movement joints: To align with substrate joints and as per BS 8204.
- Accessories: Edge trims, skirtings, and coves where indicated.
- Finishing: To the Engineer's selection from the manufacturer's standard range.

190 TERRAZZO TILE FLOORING

- Substrate: Cementitious screed to BS 8204.
- Preparation: Mechanically clean, dry, level and prepared to ensure adhesion.
- Terrazzo tiles:
  - Type: Factory-produced terrazzo tiles complying with BS EN 13748-1 (cementitious) or BS EN 13748-2 (resin-based).
    - Manufacturer: Submit proposals to Engineer's approval.
    - Product reference: As approved.
  - Binder: Cementitious or resin based as specified.
  - Aggregates: Natural marble, granite, or recycled glass.
  - Size: As indicated on drawings / finishes manual.
  - Thickness: As per structural verification for floor application and not less than 20 mm (cementitious) or 15 mm (resin-based).
  - Colour: As indicated in finishes manual.
  - Finish: To the Engineer's selection from the manufacturer's standard range.
- Bedding: Cementitious adhesive to EN 12004, Class C2.
- Jointing:
  - Joint width: 2–5 mm unless otherwise indicated.
  - Grout: Cementitious grout to BS EN ISO 13007-3, Class CG2 WA, or epoxy grout in wet areas.
- Divider strips: Stainless steel strip Grade 316, at movement joints or where indicated.

© Copyright protected

- Slip resistance: Minimum R11, unless othewise indicated.
- Durability:
  - Suitable for heavy-duty traffic including trolleys.
  - Abrasion resistance: To BS EN 13748.
  - Resistant to staining and cleaning chemicals.
- Water / Vapour resistance:
  - Tiles to be sealed and joints properly grouted.
- Other requirements:
  - Uniform colour and aggregate distribution.
  - Accurate alignment and consistent jointing.

200 RUBBER FLOORING WHERE INDICATED

- Location: As indicated on drawings and finishes schedule.
- Substrate: Cementitious screed or concrete to BS 8204.
  - Preparation: Mechanically clean, dry, level, and prepared to ensure adhesion.
- Flooring:
  - Type: Rubber sheet or tile flooring complying with BS EN 1817.
  - Manufacturer: Submit proposals to Engineer's approval.
    Product reference: As approved.
- Classification: Heavy-duty commercial use to BS EN ISO 10874, Class 34/43.
- Thickness: As indicated in finish manuals, but not less than 3.5mm.
- Finish: As indicated in finish manuals.
- Colour: As selected by the Engineer from manufacturer's standard range.
- Recycled content: Manufacturer's standard.
- Performance:
  - Slip resistance: Minimum R10 to DIN 51130 unless otherwise indicated.
  - Fire classification: Minimum Bfl-s1 to EN 13501-1.
  - Indentation resistance: To BS EN ISO 24343-1.
  - Abrasion resistance: To BS EN ISO 4649.
  - Acoustic performance: As indicated in acoustic report.
- Installation:
  - Adhesive: As recommended by manufacturer.
  - Joints: Close-butt joints, heat welded where required.
  - Movement joints: To align with substrate joints.
- Finishing: As selected by the Engineer from manufacturer's standard range
- Other requirements:
  - Low VOC emissions.
- Anti-bacterial properties where required.

GENERAL REQUIREMENTS

210 WORKMANSHIP GENERALLY

- Base condition after preparation: Rigid, dry, sound, smooth and free from grease, dirt and other contaminants.
- Finished coverings: Accurately fitted, tightly jointed, securely bonded, smooth and free from air bubbles, rippling, adhesive marks and stains.

220 SAMPLES

- Covering samples: Before placing orders, submit representative sample of each type.

230 CONTROL SAMPLES

- General: Complete areas of finished work in approved locations as follows and obtain approval of appearance before proceeding where indicated.

© Copyright protected

250 LAYOUT - ROLL MATERIALS

- Setting out of seams: Agree setting out for sheeting types M50/ where specified.

251 LAYOUT - SEAMS IN ROLL MATERIALS

- Setting out: Minimise occurrences of seams and cross seams.
- Cross seams: Not permitted in following locations: as indicated on drawings.

330 COMMENCEMENT

- Required condition of works prior to laying materials:
  - Building is weathertight and well dried out.
  - Wet trades have finished work.
  - Paintwork is finished and dry.
  - Conflicting overhead work is complete.
  - Floor service outlets, duct covers and other fixtures around which materials are to be cut are fixed.
- Notification: Submit not less than 48 hours before commencing laying.

340 CONDITIONING

- Prior to laying: Condition materials by unpacking and separating in spaces where they are to be laid. Maintain resilient flooring rolls in an upright position. Unroll carpet and keep flat on a supporting surface.
- Conditioning time and temperature (minimum): As recommended by manufacturer with time extended by a factor of two for materials stored or transported at a temperature of less than 10°C immediately prior to laying.

350 ENVIRONMENT

- Temperature and humidity: Before, during and after laying, maintain approximately at levels which will prevail after building is occupied.
- Ventilation: Before during and after laying, maintain adequate provision.

PREPARING BASES

410 NEW BASES

- Suitability of bases and conditions within any area: Commencement of laying of coverings will be taken as acceptance of suitability.

440 SUBSTRATES TO RECEIVE THIN COVERINGS

- Trowelled finishes: Uniform, smooth surface free from trowel marks and other blemishes. Abrade suitably to receive specified floor covering material.

460 SMOOTHING/ LEVELLING UNDERLAYMENT COMPOUND

- Type: As recommended by covering manufacturer.
- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.

470 BASES FROM WHICH EXISTING FLOOR COVERINGS HAVE BEEN REMOVED

- Substrate: Clear of covering and as much adhesive as possible. Skim with smoothing underlayment compound to give smooth, even surface.

LAYING COVERINGS

610 SETTING OUT TILES

- Method: Set out from centre of area/ room, so that wherever possible:

© Copyright protected

- Tiles along opposite edges are of equal size.
- Edge tiles are more than 50% of full tile width.

620 COLOUR CONSISTENCY

- Finished work in any one area/ room: Free from banding or patchiness.

640A ADHESIVE FIXING GENERALLY

- Adhesive type: As specified, as recommended by covering/ underlay, manufacturer or as approved.
- For conductive flooring, adhesive to be: A conductive polyurethane resin and hardener, water-resistant, low VOC-emission (EC1) two-component PU-adhesive.
- Primer: Type and usage as recommended by adhesive manufacturer.
- Application: As necessary to achieve good bond.
- Finished surface: Free from trowel ridges, high spots caused by particles on the substrate, and other irregularities.

650 SEAMS

- Patterns: Matched.
- Joints: Tight without gaps.

670 BORDERS/ AND FEATURE STRIPS IN SHEET MATERIAL

- Curl: Not acceptable.
- Corners: Mitre joints.

680 SEAM WELDING COVERINGS

- Commencement: At least 24 hours after laying, or after adhesive has set.
- Joints: Neat, smooth, strongly bonded, flush with finished surface.

720 DOORWAYS

- Joint location: On centre line of door leaf.

740 EDGINGS AND COVER STRIPS

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Material/ finish: Stainless steel Grade 316, as recommended by manufacturer.
- Fixing: Secure with edge of covering gripped. Use matching fasteners where exposed to view

750 STAIR NOSINGS AND TRIMS

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Material/ finish: as indicated on drawings and in finishes manual.
- Fixing: Secure, level and with mitred joints. Adjusted to suit thickness of covering with continuous packing strips of hardboard or plywood. Nosing's and packing strips bedded in gap-filling adhesive recommended by nosing manufacturer.
  - Screw fixing with matching plugs: Not required.

770 SKIRTINGS

- Types: PVC.
- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Fixing: Secure with top edge straight and parallel with floor.
  - Corners: Mitre joints.

© Copyright protected

780 TRAFFICKING AFTER LAYING

- Covering types: as indicated.
- Traffic free period: Until adhesive is set.

COMPLETION

820 FINISHING PLASTICS FLOORING

- Cleaning operations:
  - Wash floor with water containing neutral (pH 6-9) detergent. If necessary, lightly scrub heavily soiled areas.
  - Rinse with clean water, removing surplus to prevent damage to adhesive. Allow to dry.
- Emulsion polish: Two coats of a type recommended by covering manufacturer.

825 FINISHING NON-TEXTILE ANTISTATIC FLOORING

- Cleaning operations:
  - Wash floor with water containing neutral (pH 6-9) detergent. If necessary, lightly scrub heavily soiled areas.
  - Rinse with clean water, removing surplus to prevent damage to adhesive. Allow to dry for not less than 24 hours before testing.

860 TESTING ANTISTATIC FLOORING

- Floor covering to be tested: M50/ General antistatic 5 x 104 min, and 1 x 108 max.
- Test methods: In accordance with BS 2050, clause A.4.1.
- Required electrical resistance values:
  - Upper limit:
    Average value not more than 1 x 108 ohms.
    No individual reading more than 1 x 108 ohms.
  - Lower limit:
    Average value not less than 5 x 104 ohms.
    No individual reading less than 5 x 104 ohms.
- Electrical resistivity: Submit and agree date and time of test. Record and submit results.
- Floor covering details sign: Before fixing, agree location and submit details of a brass plate, size 50 x 75 mm, engraved with the following details:
  The words 'ANTISTATIC FLOOR'.
  Manufacturer and reference of flooring.
  Name of flooring contractor.
  Date when laid.

861 SLIP RESISTANCE TESTING

- Testing authority: A UKAS accredited laboratory or an approved laboratory.
- Floor covering(s) to be tested: dry and wet.
- Test: To BS 7976-1, -2 and -3.
  - Floor covering condition: Dry and wet.
  - Witnessing/ Certification: Arrange for tests to be witnessed/ certified by: third party testing agency.
- Report: Submit.

880 WASTE

- Spare covering material: Retain suitable material for patching. On completion submit pieces for selection. Hand over selected pieces to Employer.

© Copyright protected

M60 PAINTING/CLEAR FINISHING

To be read with Preliminaries/General Conditions.

COATING SYSTEMS

110 EMULSION PAINT GENERALLY

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Surfaces: as indicated on drawings.
  - Preparation: as clause 400.
- Initial coats: None.
- Number of coats: 1.
- Undercoats: As recommended by manufacturer.
  - Number of coats: 2.
- Finishing coats: Washable 100% pure acrylic paint.
  - Number of coats: 2 unless otherwise recommended by manufacturer.

110A HYGIENIC ACRYLIC BASED PAINT GENERALLY

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Surfaces: as indicated on drawings.
  - Preparation: as clause 400.
- Description: acrylic, water-based coating that cures to a tough, hard wearing, impact resisting and durable coating that resists the growth of mould or bacteria. Hygiene acrylic based emulsion paint to be with low VOC in order to insure good indoor air quality. It shall have very good opacity, outstanding washability and levelling. It shall free of Alkyl Phenol Ethoxylate (APEO) and formaldehyde.
  - Primer coat: one coat acrylic primer. Vol. solids: 25±2 %
  - Filler coat: two coats, as recommended by manufacturer.
  - Topcoat: Two coats as recommended by manufacturer. Vol. solids: 36±2 %
  - Minimum recommended physical Properties:
  - VOC content: 29.75 g/l (US EPA 24)
  - Crack Bridging ability: Up to 1mm according to Vinci method.
  - Resistance to household chemicals/Alkali Resistance: No change shall be observed when tested to relevant BS standard
  - Washability/Scrub Resistance: >15,000 scrubs (DIN 53778)
  - Hazardous Chemicals:
  - Free from:
    - Heavy Metals (ICP-AES)
    - Formaldehyde (UV Spectroscopy)
    - Pthalates (GCMS)
  - Anti-fungal Rating: Rating=1-2 after on average 56 days at exposure on 3 different substrates (BS 3900: Part G6)
  - Anti-microbial activity: Value = 4.8 to 6.3 (JIS Z 2801:2000)
  - Surface spread of Flame: Class 1 to BS 476
  - Smoke Density: Class A

110B PURE ACRYLIC PAINT GENERALLY

- Manufacturer: Submit proposals.

© Copyright protected

  - Product reference: Submit proposals.
- Surfaces: as indicated on drawings.
  - Preparation: as clause 400.
- Initial coats: one coat acrylic primer. Vol. solids: 25±2 %.
- Number of coats: 1.
- Filler Coat: As recommended by manufacturer Vol. solids: 38±2%.
  - Number of coats: 2.
- Finishing coats: pure acrylic as recommended by manufacturer. Vol. solids: 38±2%.
  - Number of coats: 2 coats.

175A PROTECTIVE COATING ANTI-CARBONATION PAINT

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Surfaces: walls and ceilings where indicated.
- Description: Elastomeric Anti-Carbonation Coating on smooth concrete vertical surfaces (walls and columns) and ceilings: Flexible two-coat system 100% acrylic coating required to provide protection against ingress of carbon dioxide and chloride ion ingress, with anti-fungal and anti-algae properties. Anti-carbonation coating should be breathable, with excellent durability, fade resistance and resistance to cracking, peeling and chipping while bridging hair line cracks.
- Where indicated, anti-carbonation paint to have high colour light reflective value (LRV) as recommended by manufacturer to meet requested light reflectance.
- Coating system shall comprise the following:
  - Primer: 1x Acrylic copolymer semi-pigmented penetrating Primer. DFT: 20- 30 µm.
  - Filler: Acrylic Copolymer Putty filler for concrete/render. Thickness: As needed, Vol. solids: 65 ±2 %.
  - Topcoat: Smooth finish: 2 x 100% pure acrylic anti-carbonation smooth finish shall be water borne VOC compliant cross-linked technology with superior UV resistance and minor crack resistant capability. DFT 30 µm/coat. Vol. solids: 42±2 %.
- Properties
  - VOC content: 30 g/l (US EPA 24).
  - Determination of Carbon Dioxide (BS EN 1062-6): Equivalent Air Layer ?Thickness: 600m, Equivalent of 400mm concrete: 155 cm
  - Determination of Moisture Resistance (EN ISO 7783-1): Equivalent Air Layer Thickness: 0.500m (avg).
  - Determination of Liquid Water Transmission (BS EN 1602-3): LW Transmission Rate: 0.006 kg/m².h0.5.
  - Determination of Chloride Ion Diffusion (Vinci Method): No penetration observed after more than 4000 days.
  - Crack bridging ability (to BS EN 1602-7): Up to 3.00mm (Class A1 as per Method A to BS EN 1062-7).
  - Reduction in Water Absorption: 100 %?
  - Determination of Colour Retention after 2500 hrs ?Accelerated weathering: No Colour change or visible defect, i.e: cracking, chalking or blistering
  - Abrasion Resistance (ASTM D4060): 20 mg/100 cycle (Grade C17 Wheel).
  - Elongation-Tensile strength at break (to ASTM C412): 2.85 N.mm², 50%.

195A HIGH BUILD SELF-LEVELLING, SOLVENT FREE, HEAVY-DUTY EPOXY COATING-ALSO SUITABLE FOR FOOD PREPARATION AREAS GENERALLY

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.

© Copyright protected

- Surfaces: as indicated on drawings.
  - Preparation: Wash down and degrease.
- First Coat:
  - One coat transparent, two component epoxy primer / sealer, vol. solids 98 ± 2% Thickness 150 microns DFT, VOC: 70 gm/L
- Top coat:
  - One coat Solvent Free, high solids epoxy based self-levelling coating, vol. solids 98 ± 2%,thickness 4000 microns dft (4mm),
- System minimum required physical properties:
  - Compressive Strength: 73 N/mm² (ASTM C579)
  - Tensile Strength: 14 N/mm² (ASTM C307)
  - Flexural Strength: 24 N/mm² (ATM C580)
  - Shore "A" Hardness: 96 average (ASTM D2240 - 1996)
  - Shore "D" Hardness: 75 (ASTM D2240 - 1996)
  - Bond Strength to concrete: 2N/mm² (ASTM D 4541)
  - Crack Bridgability : 1.4 mm (ASTM C836)
  - Water Absorption: 0.04% (ASTM C 413-01-1996)
  - Abrasion Resistance: 96mg (ASTM D4060/cs 17 1000 cycles)
  - Impact Resistance: No sign of cracks ASTM D 2794

195B HIGH BUILD, SOLVENT FREE, POLYURETHANE TRAFFIC DECK COATING AND WHERE INDICATED

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Surfaces: floor traffic coating.
  - Preparation: Wash down and degrease.
- Initial Coat/Primer: One coat of a transparent, two component epoxy primer / sealer, vol. solids 98 2%, Thickness 150 microns DFT, VOC: 70 gm/L (US EPA Method 24)
- Middle Coat: One coat of a Solvent Free, high solids Polyurethane coating, vol. solids 100 ± 2%, Thickness 1600 microns (800 microns per coat),
- Traction Layer: One layer of Non Slip Aggregates, washed, graded hard wearing, durable quartz aggregates.
- Finishing Coat:
- Ramp Areas: Two coats of a two component, high solids, flexible, aliphatic polyurethane topcoat, vol. solids 91 ± 2%, thickness 70 microns DFT per coat, VOC: 84 gm/L (US EPA Method 24)
  - One additional coat of a two component, high solids, flexible, aliphatic polyurethane topcoat, vol. solids 91 ± 2%, thickness 70 microns DFT, VOC: 84 gm/L
- Test Properties as per ASTM C 957:
  - Weight loss of base coat, max % 0.05 % (ASTM C1250)
  - Low temperature crack bridging 3 mm (ASTM C1305)
  - Chemical resistance, min, avg % tension retention (ASTM D471)
  - Water exposure 84%
  - Ethylene glycol exposure 100%
  - Mineral spirits exposure 49%.
  - Weathering resistance and recovery from elongation, min % (ASTM C957)
  - Recovery from elongation, initial 92%
  - Tensile retention- 100%
  - Elongation retention 93%
  - Abrasion resistance, 21 mg (ASTM C 501)

© Copyright protected

- Additional Test Properties:
  - Chemical resistance as per ASTM D 1308
  - Acid and Alkali resistance as per ASTM D 543 – 100%
  - Tear resistance as per ASTM D 624 – 52 N/m
  - Pull of strength as per ASTM D 4541 – 2 N/mm²
- ROAD MARKING (THERMOPLASTIC): Standard: Road Safety Markings Association standard specification document for road marking and road studs.
  - Colour: as selected by Engineer.
  - Retroreflectivity to BS EN 1436: Class R2.

195C HIGH BUILD, SOLVENT FREE, EPOXY BASED TOPCOAT FOR WALLS AND CEILINGS GENERALLY

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Surfaces: where indicated on drawings.
  - Preparation: Wash down and degrease.
- Initial Coat/Primer: One coat of a transparent, solvent free two component epoxy primer / sealer, vol. solids 98 ± 2%, Thickness 150 microns DFT.
- Finishing Coat: One finishing coat of a two component, high solids, solvent free coating, vol. solids 98 ± 2%, thickness 150 microns dft, Coating to be suitable for food preparation areas.
- Coating system to be independently tested for following properties: after 28 days curing
  - Compressive Strength: not less than 90 N/mm² (ASTM C579)
  - Tensile Strength: not less than 8 N/mm² (ASTM C307)
  - Crack bridging ability: 1.62(ASTM D 638-10/C1305)
  - Water Absorption: 0.0 (ASTM C413)

195D HYGIENIC POLYURETHANE COATING SYSTEM GENERALLY

- Polyurethane coating system shall withstand rigorous cleaning with fumigants, peroxides and other aggressive chemical cleaners. Highly durable, abrasion resistant and anti-microbial. Coating system shall control the growth and spread of microbes by incorporating non-leaching anti-microbial additives in all system layers. It shall tolerate thermal movement without cracking, splitting or flaking. Coating shall be easily cleaned and resistant to fumigants, peroxides and other aggressive cleaners, chemicals and abrasives. It need to be colour and UV stable.
- Usage:
  - Coating system to be categorized for cat. 3 or 4 ACDP clean rooms/laboratories.
- Fire performance:
  - BS 476–7: Class 1.
  - BS 476–6: Designated 0.
- Operational temperature:
  - Once applied and cured, coating shall be stable in temperatures between -15°C and +90°C.
- Primer: manufacturer's recommended White Primer, at 7-9 m²/ litre. Min. DFT 120 microns
- Undercoat: manufacturer's recommended Undercoat, at 9-11 m²/ litre - For application of the system on plaster and plasterboard in dry areas only. For other substrates and/or wet areas only two topcoats are required. Min. DFT90 microns.
- Topcoat: 2 coats each at 8-10 m²/litre. Min. DFT 180 microns
- Where indicated for heavy traffic and added durability, coating to receive fiberglass reinforcement at 1m²/litre, incorporating one layer of 150g/m² chop strand mat and one layer of 50 g/m² fiberglass standard tissue, followed by 1 midcoat at 4.5 m²/litre.
- Scrub and abrasion resistance:
  - Scrub resistance (tested to ASTM D2486) - 4000+ cycles.

© Copyright protected

- Abrasion resistance (tested to ASTM D1044, D3389) - 6000 cycles.

GENERALLY

210 COATING MATERIALS

- Manufacturers: Obtain materials from any of the following:
  As determined by Engineer.
- Selected manufacturers: Submit names before commencement of coating work.

215 HANDLING AND STORAGE

- Coating materials: Deliver in sealed containers, labelled clearly with brand name, type of material and manufacturer's batch number.
- Materials from more than one batch: Store separately. Allocate to distinct parts or areas of the work.

220 COMPATIBILITY

- Coating materials selected by contractor:
  - Recommended by their manufacturers for the particular surface and conditions of exposure.
  - Compatible with each other.
  - Compatible with and not inhibiting performance of preservative/fire retardant pretreatments.

240 SURFACES NOT TO BE COATED

- As indicated on drawings and finish schedule.

280 PROTECTION

- 'Wet paint' signs and barriers: Provide where necessary to protect other operatives and general public, and to prevent damage to freshly applied coatings.

320 INSPECTION BY COATING MANUFACTURERS

- General: Permit manufacturers to inspect work in progress and take samples of their materials from site if requested.

PREPARATION

400 PREPARATION GENERALLY

- Standard: In accordance with BS 6150.
- Refer to any pre-existing CDM Health and Safety File.
- Refer to CDM Construction Phase Plan where applicable.
- Suspected existing hazardous materials: Prepare risk assessments and method statements covering operations, disposal of waste, containment and reoccupation, and obtain approval before commencing work.
- Preparation materials: Types recommended by their manufacturers and the coating manufacturer for the situation and surfaces being prepared.
- Substrates: Sufficiently dry in depth to suit coating.
- Efflorescence salts: Remove.
- Dirt, grease and oil: Remove. Give notice if contamination of surfaces/ substrates has occurred.
- Surface irregularities: Remove.
- Joints, cracks, holes and other depressions: Fill flush with surface, to provide smooth finish.
- Dust, particles and residues from preparation: Remove and dispose of safely.
- Water based stoppers and fillers:
  - Apply before priming unless recommended otherwise by manufacturer.
  - If applied after priming: Patch prime.
- Oil based stoppers and fillers: Apply after priming.

© Copyright protected

- Doors, opening windows and other moving parts:
  - Ease, if necessary, before coating.
  - Prime resulting bare areas.

420 FIXTURES AND FITTINGS

- Removal: Before commencing work remove: Coverplates, grilles, wall clocks, and other surface mounted fixtures.
- Replacement: Refurbish as necessary, refit when coating is dry.

425 IRONMONGERY

- Removal: Before commencing work: Remove ironmongery from surfaces to be coated.
- Hinges: Remove.
- Replacement: Refurbishment as necessary; refit when coating is dry.

471 PREPRIMED WOOD

- Areas of defective primer: Take back to bare wood and reprime.

481 UNCOATED WOOD

- General: Provide smooth, even finish with arrises and moulding edges lightly rounded or eased.
- Heads of fasteners: Countersink sufficient to hold stoppers/fillers.
- Resinous areas and knots: Apply two coats of knotting.

490 PREVIOUSLY COATED STEEL

- Defective paintwork: Remove to leave a firm edge and clean bright metal.
- Sound paintwork: Provide key for subsequent coats.
- Corrosion and loose scale: Take back to bare metal.
- Residual rust: Treat with a proprietary removal solution.
- Bare metal: Apply primer as soon as possible.
- Remaining areas: Degrease.

500 PREPRIMED STEEL

- Areas of defective primer, corrosion and loose scale: Take back to bare metal. Reprime as soon as possible.

511 GALVANIZED, SHERARDIZED AND ELECTROPLATED STEEL

- White rust: Remove.
- Pretreatment: Apply one of the following:
  - Mordant solution to blacken whole surface.
  - Etching primer recommended by coating system manufacturer.

521 UNCOATED STEEL - MANUAL CLEANING

- Oil and grease: Remove.
- Corrosion, loose scale, welding slag and spatter: Remove.
- Residual rust: Treat with a proprietary removal solution.
- Primer: Apply as soon as possible.

531 UNCOATED STEEL - BLAST CLEANING

- Oil and grease: Remove.
- Blast cleaning:
  - Atmospheric conditions: Dry.
  - Abrasive: Suitable type and size, free from fines, moisture and oil.
  - Surface finish: To BS EN ISO 8501-1, preparation grade Sa 2½.

© Copyright protected

- Primer: Apply as soon as possible and within four hours of blast cleaning.

560 UNCOATED CONCRETE
- Release agents: Remove.

570 UNCOATED MASONRY/ RENDERING
- Loose and flaking material: remove.

580 UNCOATED PLASTER
- Nibs, trowel marks and plaster splashes: Scrape off.
- Overtrowelled 'polished' areas: Key lightly.

590 UNCOATED PLASTERBOARD
- Depressions around fixings: Fill with stoppers/ fillers

601 UNCOATED PLASTERBOARD - TO RECEIVE TEXTURED COATING
- Joints: Fill, tape and feather out with materials recommended by textured coating manufacturer.

611 WALL COVERINGS
- Retained wall coverings: Check that they are in good condition and well adhered to substrate.
- Previously covered walls: Wash down to remove paper residues, adhesive and size.

622 ORGANIC GROWTHS
- Dead and loose growths and infected coatings: Scrape off and remove from site.
- Treatment biocide: Apply appropriate solution to growth areas and surrounding surfaces.
- Residual effect biocide: Apply appropriate solution to inhibit re-establishment of growths.

645 SEALING OF INTERNAL MOVEMENT JOINTS
- General: To junctions of walls and ceilings with architraves, skirtings and other trims.
- Sealant: Water-borne acrylic.
  - Manufacturer: Submit proposals.
    Product reference: Submit proposals.
  - Preparation and application: As section Z22.

APPLICATION

711 COATING GENERALLY
- Application standard: In accordance with BS 6150, clause 9.
- Conditions: Maintain suitable temperature, humidity and air quality during application and drying.
- Surfaces: Clean and dry at time of application.
- Thinning and intermixing of coatings: Not permitted unless recommended by manufacturer.
- Overpainting: Do not paint over intumescent strips or silicone mastics.
- Priming coats:
  - Thickness: To suit surface porosity.
  - Application: As soon as possible on same day as preparation is completed.
- Finish:
  - Even, smooth and of uniform colour.
  - Free from brush marks, sags, runs and other defects.
  - Cut in neatly.
- Doors, opening windows and other moving parts: Ease before coating and between coats.

© Copyright protected

720 PRIMING JOINERY

- Preservative treated timber: Retreat cut surfaces with two flood coats of a suitable preservative before priming.
- End grain: Coat liberally allow to soak in, and recoat.

730 WORKSHOP COATING OF CONCEALED JOINERY SURFACES

- General: Apply coatings to all surfaces of components.

731 SITE COATING OF CONCEALED JOINERY SURFACES

- General: After priming, apply additional coatings to surfaces that will be concealed when fixed in place.
  - Components: as indicated on drawings.
  - Additional coatings: One undercoat.

740 CONCEALED METAL SURFACES

- General: Apply additional coatings to surfaces that will be concealed when component is fixed in place.
  - Components: as indicated on drawings.
  - Additional coatings: Black paint to BS 1070.

751 STAINING WOOD

- Primer: Apply if recommended by stain manufacturer.
- Application: Apply in flowing coats and brush out excess stain to produce uniform appearance.

760 VARNISHING WOOD

- First coat: Thin with white spirit.
  - Brush well in and lay off avoiding aeration.
- Subsequent coats: Provide light key and smooth along the grain between coats.

770 EXTERNAL DOORS

- Bottom edges: Prime and coat before hanging doors.

800 GLAZING

- Etched, sand blasted and ground glass: Treat or mask edges before coating to protect from contamination by oily constituents of coating materials.

810 WATER REPELLENT

- Application: Liberally flood surface, giving complete and even coverage.

© Copyright protected

M61 INTUMESCENT COATINGS FOR FIRE PROTECTION OF STEELWORK

To be read with Preliminaries/General Conditions.

PROTECTIVE COATING SYSTEMS

110 PERFORMANCE REQUIREMENTS

- Assemblies: Provide fire protection, including auxiliary materials, in accordance with requirements of each fire-resistance design and manufacturer's written instructions.

- Source Limitations: Obtain fire protection from single source.

- Fire-Resistance Characteristics: Provide intumescent paint system with the following fire resistance duration as determined by testing identical products in accordance with ASTM E119 or UL 263 by UL, Warnock Hersey, BRE, or Warrington Certifire or by another testing standard and inspecting agency acceptable to authorities having jurisdiction. Identify products with appropriate markings of applicable testing agency.

    1. Fire Resistance Rating: As indicated in FLS report.
    2. Steel members are to be considered unrestrained unless specifically noted otherwise.

111A INTUMESCENT PAINT SYSTEM

- GENERAL

- Intumescent Fire-Resistive Coating system: Manufacturer's standard, factory-mixed, multicomponent system consisting of primer, intumescent base coat and topcoat, and complying with indicated fire-resistance design.
    - Primers and topcoats should be approved and obtained from intumescent paint system manufacturer whose responsibility is to ensure that intumescent paint is compatible for use in respect of both ambient and fire conditions.
    - Corrosion resistant primers, topcoat and coating system shall be in compliance with ISO 12944, approved by intumescent fire protective coating manufacturer for the intended area of application, and complying with required fire-resistance design by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
    - Intumescent coating intended for C5 corrosion category shall be tested to UL 263 and UL 2431 by a qualified testing agency acceptable to authorities having jurisdiction and certified for Exterior use and classification category I-A, unless otherwise approved by Engineer.
    - Typical application:

        Water borne or better intumescent coatings designated for interior environments to ISO 12944 C3 corrosion category, and as per written instructions from manufacturer.
        Solvent borne or better intumescent coatings designated for interior environments to ISO 12944 C4 corrosion category, and as per written instructions from manufacturer.
        Two components epoxy intumescent coatings designated for interior/exterior environments to ISO 12944 C5 corrosion category, and as per written instructions from manufacturer.

    - Thickness: As required for fire-resistance design indicated, measured in accordance with requirements of fire-resistance design.
    - Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

© Copyright protected

Flame-Spread Index: 25 or less.
Smoke-Developed Index: 50 or less.

- Structural Steel: Provide the following intumescent paint system over new load-boarding structural steel construction. Intumescent paint system shall consist of the following coats:

  - Corrosion protection primer.
  - Intumescent coating in multiple-coat application according to required thickness.
  - Finish topcoat with high performance paint in the indicated or selected colour.

- Corrosion-Protection Prime Coat: Epoxy based, as per approved primers list from Intumescent paint manufacturer.

  - Primer is certified by manufacturer as compatible with intumescent coat material.
  - Dry film thickness: As per manufacturer's recommendations and complying with ISO12944-5, but not less 75 microns.
    Corrosion protection primer shall be factory applied.
    Application: Airless Spray.

- Intumescent Paint Layer: Thin-film intumescent fire resistive coating for load-bearing structural steel, compatible with primer specified and shall accept a wide range of topcoat finish coatings and comply with the following:

  - Asbestos and chlorine free
  - Activation: Thermal
  - Type: Self-destructive that expands to not less than 40 times film thickness
  - Dry film thickness: In accordance with manufacturer's certified loading data for given hp/a
    Hp: The perimeter of the steel section.
    A: The cross-section area of the steel section.
  - Number of coats: One or more coats based on required thickness and the recommended maximum thickness per coat, as per Intumescent paint manufacturer's recommendations.
  - Product should be listed by UL, Warnock Hersey, BRE, or Warrington Certifire, or any other agency approved by authorities having jurisdiction.

- Topcoat: Acrylic Aliphatic-Polyurethane: Two-Component acrylic resin-based enamel cured with aliphatic polyisocyante applicable on steel surfaces primed with epoxy-based primers and coated with intumescent paint basecoat. Dry enamel film shall exhibit excellent gloss and colour retention, durability, scratch and abrasion resistance and chemical resistance. Topcoat to comply with the following:

  - Corrosion environments to ISO 12944.
  - Binder: Acrylic aliphatic polyurethane.
  - Application: Airless spray.
  - Number of coats and dry Film Thicknesses: As per manufacturer's recommendations complying with ISO 12944-5.
    Color and Gloss: As selected by Engineer from manufacturer's full range.
  - Finish: As approved by Engineer from the following:
- Basic Finish: Definition: reasonably smooth and even. Orange peel, other texture, minor runs and similar minor defects are acceptable.
- Normal Decorative Finish: Definition: Good standard of cosmetic finish generally, when viewed from a distance of 5 meters or more. Minor orange peel or other texture is acceptable.
  High Decorative Finish: Definition: High standard of evenness, smoothness and gloss when viewed from a minimum distance of 2 meters.

© Copyright protected

111B AUXILIARY MATERIALS

- Provide auxiliary materials that are compatible with intumescent fire-resistive coating and substrates and are approved by UL or another testing and inspecting agency acceptable to authorities having jurisdiction for use in fire-resistance designs indicated.
- Substrate Primers: Primers approved by intumescent fire-resistive coating manufacturer and complying with required fire-resistance design by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
- Reinforcing Fabric: Glass- or carbon-fiber fabric of type, weight, and form required to comply with fire-resistance designs indicated; approved and provided by intumescent fire-resistive coating manufacturer.
- Reinforcing Mesh: Metallic mesh reinforcement of type, weight, and form required to comply with fire-resistance design indicated; approved and provided by intumescent fire-resistive coating manufacturer. Include pins and attachment.
- Topcoat: Suitable for application over intumescent fire-resistive coating; of type recommended in writing by intumescent fire-resistive coating manufacturer for each fire-resistance design.

GENERAL REQUIREMENTS

204 PROJECT CONDITIONS

- Do not apply intumescent paints in rain, fog or mist; when relative humidity exceeds 85 percent; if temperature is less than 3 deg C above the dew point; or to damp or wet surfaces.
- Steel temperature should not exceed 50 deg C. Manufacturer's current application guide lines should be followed for any application above these temperatures.

205 VALIDATION OF MATERIALS

- Project specific evaluation of intumescent coating materials:
  - Standard: In accordance with BS 8202-2, clause 4.
  - Test results: Submit on request.

210 WORKING PROCEDURES

- Standard: In accordance with BS 8202-2.
- Give notice: Before commencing surface preparation and coating application.
- Quality control: Record project specific procedures for surface preparation and coating application.

215 WORKING CONDITIONS

- Environmental Limitations: Do not apply fire protection when ambient or substrate temperature is 10 deg C or lower unless temporary protection and heat are provided to maintain temperature at or above this level for 24 hours before, during, and for 24 hours after product application.
- Steel temperature should not exceed 40 deg C. Manufacturer's current application guidelines should be followed for any application above these temperatures.
- Do not apply intumescent paints in rain, fog or mist; when relative humidity exceeds 85 percent; or to damp or wet surfaces.
- Ventilation: Ventilate building spaces during and after application of fire protection, providing complete air exchanges in accordance with manufacturer's written instructions. Use natural means or, if they are inadequate, forced-air circulation until fire protection dries thoroughly.
- Deliver Intumescent paint materials to the Project site in manufacturer's original, unopened packages and containers bearing manufacturer's name and label, and the following information:
  - Product name of material.
  - Manufacturer's stock number and manufacturing date.
  - Material shelf life should not exceed 6 months.

© Copyright protected

- Store materials not in use in tightly covered containers in a well-ventilated area at a minimum ambient temperature of 7 degrees Celsius & a maximum temperature of 30 degrees Celsius. If temperature at storage area is likely to exceed 30 degrees Celsius at any point, materials should be stored in air-conditioned storage area.

220 APPLICATOR'S PERSONNEL

- Operatives: Trained/ experienced in anticorrosive and intumescent coatings.
- Evidence of training/ experience: Submit on request.

250 SPRAYED COATING APPLICATION ON SITE

- Standard: In accordance with BS 8202-2.
- Spray drift: Minimize.
- Uncoated areas of steel: as indicated.
- Masking: Protect designated adjacent surfaces.
  - Designated surfaces: as indicated.

260 CONTROL SAMPLES

- General: Carry out sample areas of finished work as follows:
  One column and two adjoining beams as directed by Engineer.
- Approval of appearance: Obtain before commencement of general application.

270 INSPECTION

- Special Inspections: Engage a qualified special inspector to perform the following special inspections:
  - Upon the Engineer's request, samples of the applied intumescent fire protection material shall be randomly selected from approved production batches bearing the applicable classification for independent third-party testing.
  - Testing shall verify compliance with the specified fire-resistance rating and the applicable classification.
  - Any materials found non-compliant shall be removed and replaced at no additional cost to the Employer.

- Quality Control: Wet and Dry Film Thickness (DFT) shall be checked regularly during applications at intervals as instructed by Engineer:

  - To ensure the correct thickness is being applied, frequent measurements shall be taken using a wet film thickness gauge.
  - Take a DFT reading as soon as the Intumescent Paint is fully cured.
    Provide Elcometer 456 or equivalent electromagnetic and electronic gauge type to take DFT thickness. Ensure to deduct thickness of primer from measured thickness.
  - All paint inspection equipment should be calibrated daily at site and calibrated biannually by an approved third-party agency acceptable to authorities having jurisdiction. Calibration certificates should be available for inspection by the Engineer.

- Perform the tests and inspections of completed Work in successive stages as per authorities having jurisdiction and Engineer's requirements. Do not proceed with application of fire protection for the next area until test results for previously completed applications of fire protection show compliance with

© Copyright protected

requirements. Tested values must equal or exceed values as specified and as indicated and required for approved fire-resistance design.

- See Section 014000 "Quality Requirements" for retesting and reinspecting requirements and Section 017300 "Execution" for requirements for correcting the Work.
- Fire protection will be considered defective if it does not pass tests and inspections.

  - Remove and replace fire protection that does not pass tests and inspections, and retest.
  - Apply additional fire protection, per manufacturer's written instructions, where test results indicate insufficient thickness, and retest.

- Prepare test and inspection reports.

PREPARATION OF SURFACES

315 NEW STEEL - BLAST CLEANING

- Cleaning: Before applying coatings or other surface treatments, clean substrates of any substances that could impair adhesion of intumescent paint systems.
  - Schedule cleaning and painting application so dust and other contaminants will not fall on wet, newly painted surfaces
  - Clean and prepare surfaces to be painted according to manufacturer's written instructions for each particular substrate condition and as specified:
  - Prior to applying primer, the steel surfaces shall be blast cleaned to Swedish Standard SA 2.5 (ISO 8501-1) or SSPC-SP10 near white blast cleaning, and in compliance with ISO 12944-8.
  - For application to galvanized steel substrates, surface shall be brush off blast cleaned to SA 1 (ISO 8501-1) or SSPC-SP7 and as per paint system manufacturer recommendations.
- Cover other work subject to damage from fallout or overspray of fire protection materials during application.
- Clean substrates of substances that could impair bond of fire protection.
- Generally, retain first paragraph below.
- Prime substrates where included in fire-resistance design and where recommended in writing by intumescent fire-resistive coating manufacturer unless compatible shop primer has been applied and is in satisfactory condition to receive fire protection.
- Retain paragraph below unless fire protection is neither visible nor important to Project's appearance.
- For applications visible on completion of Project, repair substrates to remove surface imperfections that could affect uniformity of texture and thickness in finished surface of fire protection. Remove minor projections and fill voids that would telegraph through fire-resistive products after application.

APPLICATION OF COATINGS

495A EXAMINATION

- Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for substrates and other conditions affecting performance of the Work and in accordance with each fire-resistance design.

  - Verify that substrates are free of dirt, oil, grease, release agents, rolling compounds, mill scale, loose scale, incompatible primers, paints, and encapsulants, or other foreign substances capable

© Copyright protected

of impairing bond of fire protection with substrates under conditions of normal use or fire exposure.
  - Verify that objects penetrating fire protection, including clips, hangers, support sleeves, and similar items, are securely attached to substrates.
  - Verify that substrates receiving fire protection are not obstructed by ducts, piping, equipment, or other suspended construction that will interfere with fire protection application.
- Conduct tests in accordance with intumescent fire-resistive coating manufacturer's written instructions to verify that substrates are free of substances capable of interfering with bond.
- Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- Proceed with installation only after unsatisfactory conditions have been corrected and surfaces to receive paint are thoroughly dry.
- Start of painting will be construed as Applicator's acceptance of surfaces and conditions within a particular area.

495B APPLICATION

- Apply intumescent coating system in according with manufacturer's written current application guides. Use applicators and techniques best suited for substrate and type of material being applied.
- Material Preparation: Mix and prepare paint materials according to manufacturer's written instructions.
  - Maintain containers used in mixing and applying paint in a clean condition, free of foreign materials and residue.
  - Stir material before application to produce a mixture of uniform density, and as required during application. Do not stir surface film into material. If necessary, remove surface film and strain material before using.
- Construct fire protection assemblies that are identical to fire-resistance design indicated and products as specified, tested, and substantiated by test reports; for thickness, primers, topcoats, finishing, and other materials and procedures affecting fire protection Work.

- Comply with intumescent fire-resistive coating manufacturer's written instructions for mixing materials, application procedures, and types of equipment used to mix, convey, and apply fire

© Copyright protected

protection, as applicable to particular conditions of installation and as required to achieve fire-resistance ratings indicated.

- Coordinate application of fire protection with other construction to minimize need to cut or remove fire protection.

  - Do not apply coatings over dirt, rust, scale, grease, moisture, scuffed surfaces or conditions indicated as unacceptable in manufacturer's written instructions or to surfaces that are otherwise detrimental to forming an acceptable coating.
  - Do not begin applying fire protection until clips, hangers, supports, sleeves, and other items penetrating fire protection are in place.
  - Defer installing ducts, piping, and other items that would interfere with applying fire protection until application of fire protection is completed.
- Scheduling Painting: Apply first coat to surfaces that have been cleaned, pretreated, or otherwise prepared for painting as soon as practicable after preparation and before subsequent surface deterioration

  - Do not apply succeeding coats until the previous coat has cured as recommended by the manufacturer.
  - If intumescent coat shows through the finished topcoat, apply additional coats until paint film is of uniform finish, color and appearance.
  - Give special attention to ensure that edges, corners, crevices, welds and exposed fasteners receive a dry film thickness equivalent to that of flat surfaces.
  - Any damage to the factory applied priming coat shall be repaired and touched up, in compliance with recommendations of priming coat manufacturer. After the application of the prime coat, application of intumescent paint shall not commence without written approval by the Engineer.
  - Allow sufficient time between successive coats to permit proper drying. Do not recoat surfaces until paint has dried to where it feels firm, does not deform or feel sticky under moderate thumb pressure and where applying another coat of paint does not cause the undercoat to lose adhesion.
- Install auxiliary materials as required, as detailed, and in accordance with fire-resistance design and intumescent fire-resistive coating manufacturer's written instructions for conditions of exposure and intended use. For auxiliary materials, use attachment and anchorage devices of type recommended in writing by intumescent fire-resistive coating manufacturer.

- Spray apply fire protection to maximum extent possible. After the spraying operation in each area, complete the coverage by trowel application or other placement method recommended in writing by intumescent fire-resistive coating manufacturer.

- Extend fire protection in full thickness over entire area of each substrate to be protected.

- Install body of fire protection in a single course unless otherwise recommended in writing by intumescent fire-resistive coating manufacturer.

- Provide a uniform finish complying with description indicated for each type of fire protection material and matching finish approved for required mockups.

- Coating Thickness: Apply materials at not less and not more than manufacturer's recommended spreading rate for the surface to be coated. Provide the total dry film thickness of the entire system as recommended by the manufacturer to provide surface burning characteristics and fire resistance rating specified, but not less than thickness specified in this Section.

  - No topcoat should be applied until intumescent paint has achieved required DFT (dry film thickness) in accordance with HP/A on certified loading chart from manufacturer.

© Copyright protected

- For intumescent coatings, dry film thickness should be measured in accordance with the acceptance criteria outlined in section 4.7 Association for Specialist Fire Protection (ASFP) technical guidance document 11.

- Completed work: Match approved samples for color, texture and coverage. Remove, refinish or repaint work not complying with specified requirements.

- Do not install enclosing or concealing construction until after fire protection has been applied, inspected, and tested and corrections have been made to deficient applications.

- Finishes: Where indicated, apply fire protection to produce the following finishes:

- Manufacturer's Standard Finishes: Finish in accordance with manufacturer's written instructions for each finish selected.

- Spray-Textured Finish: Finish left as spray applied with no further treatment.

- Rolled, Spray-Textured Finish: Even finish produced by rolling spray-applied finish with a damp paint roller to remove drippings and excessive roughness.

495 WARRANTY

- General Warranty: The special warranty specified in this Article shall not deprive the Employer of other rights the Employer may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by the Contractor under requirements of the Contract Documents.
- Full System Warranty: Provide full system warranty in which Manufacturer, contractor and Installer are jointly and severally responsible and agree to repair or replace, without limitations, intumescent paint system that fails within the specified warranty period.
  Failure includes but shall not be limited to the following:

  - Peeling or blistering of paint.
  - Failure to protect against fire for the specified time.
  - Cracking of paint film.
  - Crazing of paint film.
  - Change in color of finish topcoat.
- Warranty period for Fire Performance: 20 years from date of Substantial Completion.

- Warranty for Corrosion Resistance: The fire-resistant paint system (including primer, intumescent paint and top finish coat) shall provide corrosion protection to first maintenance for the warranty period specified hereafter.

530 RECORDS OF INTUMESCENT APPLICATION

- On completion of intumescent work, submit:
  - Accurate surface preparation, coating and intumescent application records.
  - Fire resistance certificates.
  - Intumescent manufacturer's recommendations for maintenance and overcoating.

© Copyright protected

PART 3 SPECIFICATION CLAUSES SPECIFIC TO N10

100.010 QUALITY ASSURANCE

- Source Limitations: Obtain fire extinguishers and cabinets through one source from a single manufacturer.
- NFPA Compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Standard for Portable Fire Extinguishers."
- Fire Extinguishers: Listed and labeled for type, rating, and classification by an independent testing agency acceptable to Engineer and authorities having jurisdiction.
    - Provide extinguishers listed and labeled by FM Global.

100.020 COORDINATION

- Coordinate size of cabinets to ensure that type and capacity of fire extinguishers indicated and provided by Employer under separate Contract are accommodated.

110.000 PRODUCTS

110.010 MATERIALS

- Cold-Rolled Steel Sheet: Carbon steel, complying with ASTM A 1008/A 1008M, commercial steel (CS) Type B.
- Aluminum: Alloy and temper recommended by aluminum producer and manufacturer for type of use and finish indicated, and as follows:
    - Sheet: ASTM B 209M (ASTM B 209).
    - Extruded Shapes: ASTM B 221M (ASTM B 221).
- Stainless-Steel Sheet: ASTM A 666, Type SS304 / SS316.
- Copper-Alloy Sheet, Brass: ASTM B 36/B 36M, alloy UNS No. C26000 (cartridge brass, 70 percent copper).
- Copper-Alloy Sheet, Bronze: ASTM B 36/B 36M, alloy UNS No. C28000 (muntz metal, 60 percent copper).

110.020 PORTABLE FIRE EXTINGUISHERS

- General: Provide fire extinguishers of type, size, and capacity for each cabinet and other locations indicated.

- Multipurpose Dry-Chemical Type: UL-rated 4-A:60-B:C, 4.5-kg (10-lb) nominal capacity, in enameled-steel container.

- Carbon-Dioxide Type: UL-rated 10-B:C, 4.5-kg (10-lb) nominal capacity, in manufacturer's standard enameled-metal container.

- Class K type: Stored Pressure Design, wet chemical, UL Rating 2-A:K, capacity 1.6 gallon (6 l), all stainless steel cylinder and valve construction, exclusive crevice free, but welded cylinder, tested on commercial deep fat fryers to ANSI / UL, 711 test protocol and safe to use on class C fires, class 2A rated to meet fire code occupancy hazard requirements, temperature range +40°F to 120°F, and meets NFPA-10, class K standard. In addition, the following characteristics need to be included;
    - Clear instruction label using graphics to show steps required to operate extinguisher
    - Easy-to-pull safety pin
    - Tough impact resistant metal valve, handle & lever
    - UL approved wall hanger
    - Corrosion resistant cylinder & valve assembly

110.030 WHEELED FIRE EXTINGUISHERS

- General: Provide wheeled fire extinguishers of type, size, and capacity for locations indicated.

- Carriage: Fabricate from enameled-steel pipe, complete with hanger assembly, long-range nozzle, semipneumatic solid-rubber tires, and the following:

    - Hose: 4.6 m (15 feet).

- Pressurized, AFFF-Foam Type: UL-rated 20-A:160-B, 125- L (33-gal.) nominal capacity, in stainless-steel container with pressure-indicating gage.

110.040 ACCESSORIES

- Mounting Brackets: Manufacturer's standard steel, designed to secure extinguisher, of sizes required for types and capacities of extinguishers indicated, with plated or baked-enamel finish.

    - Provide brackets for extinguishers not located in cabinets.
    - Provide brackets for extinguishers located in cabinets.

- Identification: Provide lettering to comply with authorities having jurisdiction for letter style, color, size, spacing, and location. Locate as indicated by Engineer.

    - Identify bracket-mounted extinguishers with the words "FIRE EXTINGUISHER" in red letter decals applied to wall surface.
    - Identify fire extinguisher in cabinet with the words "FIRE EXTINGUISHER" applied to door.

        - Application Process: Vinyl letters.
        - Lettering Color: Red.

110.050 COLORS AND TEXTURES

- Colors and Textures: As selected by Engineer from manufacturer's full range for these characteristics.

110.060 FINISHES, GENERAL

- Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

- Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

- Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

- ALUMINUM FINISHES

  - Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.

  - Baked-Enamel Finish: AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid-chromate-fluoride-phosphate conversion coating; Organic Coating: as specified below). Apply baked enamel complying with paint manufacturer's specifications for cleaning, conversion coating, and painting.

    - Organic Coating: Thermosetting, modified-acrylic enamel primer/topcoat system complying with AAMA 603.8 except with a minimum dry film thickness of 0.04 mm, medium gloss.
    - Color: As selected by Engineer from manufacturer's full range.

  - Polyester Powder Coating: Approved type to meet the requirements of AAMA 603 or BS 6496 and BS EN 13438, consisting of powder particles of resinous material and additives to improve performance. The coating is to be electrostatically sprayed on to produce a hard, durable coating.

    - Minimum dry film thickness: 60 microns.
    - Color: As selected by Engineer from manufacturer's full range.
    - Surface finish: gloss.

110.070 STEEL FINISHES

- Surface Preparation: Clean surfaces of dirt, oil, grease, mill scale, rust, and other contaminants that could impair paint bond using manufacturer's standard methods.

- Factory Priming for Field-Painted Finish: Apply shop primer specified below immediately after surface preparation and pretreatment.

  - Shop Primer: Manufacturer's or fabricator's standard, fast-curing, lead- and chromate-free, universal primer, selected for resistance to normal atmospheric corrosion, for compatibility with substrate and field-applied finish paint system indicated, and for capability to provide a sound foundation for field-applied topcoats despite prolonged exposure.

- Baked-Enamel Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-enamel finish consisting of prime coat and thermosetting topcoat. Comply with paint manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of 0.05 mm.

- Color and Gloss: As selected by Engineer from manufacturer's full range.

- Polyester Powder Coating: Approved type to meet the requirements of AAMA 603 or BS 6496 and BS EN 13438, consisting of powder particles of resinous material and additives to improve performance. The coating is to be electrostatically sprayed on to produce a hard, durable coating.

  - Minimum dry film thickness: 60 microns.
  - Color: As selected by Engineer from manufacturer's full range.
  - Surface finish: gloss.

120.000 EXECUTION

120.010 EXAMINATION

- Examine walls and partitions for suitable framing depth and blocking where recessed and semirecessed cabinets are to be installed.

- Examine fire extinguishers for proper charging and tagging.

  - Remove and replace damaged, defective, or undercharged units.

- Proceed with installation only after unsatisfactory conditions have been corrected.

120.020 INSTALLATION

- Comply with manufacturer's written instructions for installing fire-protection specialties.

- Install in locations and at mounting heights indicated or, if not indicated, at heights acceptable to authorities having jurisdiction.

N10B GENERAL FIXTURES/ FURNISHINGS/ EQUIPMENT

To be read with Preliminaries/General Conditions.

PRODUCTS

110 PURPOSE MADE CABINETS, AND THE LIKE AS INDICATED ON DRAWINGS AND FURNITURE MANUAL

- Manufacturer: Submit proposals to Engineer's approval.
- Standard: To BS EN 13150.
- Timber: To BS EN 942.
  - Species: plastic laminate on MDF. High density fibreboard to receive natural wood veneer of species as indicated in finishes manual.
  - Appearance class: Not applicable.
  - Moisture content on delivery: 12 to 16%.
- Wood based boards: Medium density fibreboard to BS EN 622-5, type MDF H, formaldehyde class E1 to BS EN 622-1, 18 mm thick.
- Metal: Chrome finished hinges to cabinet doors and chrome finished handles, unless otherwise indicated in Finishes manual and on drawings.
  - Grade: N/A.
- Other materials: none.
- Finishes: as shown in manual.
- Adhesive: To BS EN 204, durability class D2.
- Fixings: as shown on drawings.
  - Fasteners: stainless steel 304.
- Joinery workmanship: As section Z10.
- Metalwork materials and workmanship: As section Z11.
- Other requirements: none.

170 BENCHES AND LINKED SEATS FOR CHANGING ROOMS

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Seat/ Back:
  - Material: Hardwood.
  - Finish/ Colour: Clear lacquer.
- Frame:
  - Material: Aluminium.
  - Finish/ Colour: Powder coated, black.
- Fixing: To manufacturer's specification.
- Fittings/ Other requirements: Not required.

171 FIXED SEATING where indicated

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Dimensions
  - Seat height: Manufacturer's standard.
  - Seat spacing (lateral): Manufacturer's standard.
  - Row spacing: Manufacturer's standard.
- Seat/ Back:
  - Material: Upholstered softwood.

© Copyright protected

  - Finish/ Colour: Clear lacquer.
- Frame:
  - Material: Steel.
  - Finish/ Colour: Powder coated, black.
- Fixing: To manufacturer's specification.
- Accessories/ Other requirements: Armrest and as indicated in the FF&E manual.

188 BATHROOM AND WASHROOM EQUIPMENT

- Item: Soap dispenser, toilet roll holder, towel rail and as indicated in the sanitary manual.
- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Material: Stainless steel unless otherwise indicated in the sanitary manual.
- Finish/ Colour: Brushed unless otherwise indicated in the sanitary manual.
- Fixing: Plugged and screwed to wall otherwise indicated in the sanitary manual.
- Other requirements: as indicated in the sanitary manual.

200A WORKTOPS WHERE INDICATED IN FINISHES MANUAL

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Material: Plastic Laminate covered particleboard.
- Finish/ Colour: as indicated.
- Dimensions: as indicated.
  - Plan size: as indicated.
  - Thickness: as indicated but not less than 18 mm.
  - Height: as indicated.
- Front edges Post formed.
  - Cut edges: Plastics 'T' section.
- Support: Legs
- Cutouts: Manufacturer's standard.
- Integral accessories: Support legs.

200C WORKTOPS WHERE INDICATED IN FINISHES MANUAL

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Material: Solid surface.
- Homogeneous, non-porous solid surface material manufactured from a blend of acrylic polymer and natural mineral fillers.
- Finish/ Colour: as indicated.
- Dimensions: as indicated.
  - Plan size: as indicated.
  - Thickness: as indicated but not less than 18 mm.
  - Height: as indicated.
- Front edges Radiused.
  - Cut edges: Stainless steel strip.
- Support: Legs
- Cutouts: Manufacturer's standard.
- Integral accessories: Support legs.
- Thermoformable, allowing fabrication into curved and complex shapes.

210 COAT RACKS TO LOCKER AREAS

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Arrangement: Double sided.
- Mounting: Wall fixed.
- Dimensions:
  - Overall length: as indicated.
  - Overall height: as indicated.
- Material: Steel frame.
  - Finish/ Colour: Powder coated, Grey.
- Integral accessories: Hangers.

220 LOCKERS GENERALLY

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Standard: To BS 4680.
  - Test level: Heavy duty.
- Dimensions:
  - Overall length: as indicated.
  - Overall height: as indicated.
- Arrangement: as indicated.
- Material: Sheet steel.
  - Finish/ Colour: Powder coated, white unless otherwise indicated.
- Lock type: Digital combination lock.
- Fittings: Coat hooks or shelves as indicated.
- Other requirements: None.

230 CURTAIN RAILS

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Dimensions:
  - Opening dimensions: as indicated.
  - Overall length: as indicated.
- Material: Aluminium.
- Finish/ Colour: Powder coated white RAL 9010 unless otherwise indicated.
- Fixing: Plugged and screwed to wall.
- Operation: Manual.
- Accessories: None.

235 CURTAINS WHERE INDICATED

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Standard: To BS 5867-1 and -2.
- Dimensions:
  - Width: as indicated.
  - Drop: as indicated.
- Heading style: Deep pleat.
- Material:
  - Fabric: Polyester and cotton blend.
  - Colour/ Pattern: as indicated.

© Copyright protected

- Lining:
  - Fabric: Polyester and cotton blend.
  - Colour: as indicated.
- Integral accessories: Pelmets.

242 BLINDS WHERE INDICATED

- Standard: To BS EN 13120.
- Type: Vertical louvre.
- Material: Fabric.
  - Finish/ Colour: as indicated in the finishes manual.
- Operation: Manual, stainless steel ball chain.
- Operating effort: Class 1.
- Testing: Solar transmittance and shall withstand misuse.
- Mechanism endurance: Class 1.
- Accessories/ Other requirements: Maintenance instructions.

270 MIRRORS WHERE INDICATED

- Dimensions:
  - Length: as indicated.
  - Width: as indicated.
  - Thickness: as indicated.
- Material: Silvered float glass to BS EN 1036-1.
- Quality: Free from tarnishing, discoloration, scratches and other defects visible in the designed viewing conditions. Reflection undistorted.
- Backing: Polypropylene safety film.
- Edges:
  - Treatment: Polished.
  - Profile: Bevelled, 12 mm.
- Fixing: Holes, 4 mm diameter, inset 50 x 50 mm from corners, for fixing screws.
- Installation: Accurately with sides vertical.

275 FRAMED MIRRORS WHERE INDICATED

- Overall dimensions:
  - Length: as indicated.
  - Width: as indicated.
  - Thickness: as indicated.
- Mirror:
  - Material: Silvered float glass to BS EN 1036-1.
- Quality: Free from tarnishing, discoloration, scratches and other defects visible in the designed viewing conditions. Reflection undistorted.
- Backing: Polypropylene safety film.
- Frame:
  - Material: Aluminium.
  - Finish/ Colour: Satin anodized, silver.

300 ENTRANCE MATTING TO FRONT ENTRANCE AND WHERE INDICATED

- Manufacturer: Submit proposals To Engineer's approval.
  - Product reference: Submit proposals To Engineer's approval.
- Arrangement: Inset external or loose laid as indicated.
- Material: Heavy-duty recycled rubber open ring matting.

© Copyright protected

- Type: Modular interlocking units with open structure for drainage.
- Pattern: Ribbed.
- Colour: as selected by Engineer from manufacturer's standard range.
- Size: as indicated on drawings to fit matwell.
- Installation: Loose-laid or recessed within matwell as indicated.
- Integral accessories: Extruded Aluminium matwell frame where recessed.

350 MISCELLANEOUS FITTINGS

- Item: Grab rails.
- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Size/ Capacity: as indicated.
- Material: stainless steel 1.4401 Class A4.
- Finish/ Colour: satin no. 4.
- Fixing: as indicated.
- Other requirements: none.

460 SEALANTS TO WORKTOPS

- Standard: To BS EN ISO 11600, class F20 HM.
- Type: One part silicone.
  - Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
  - Cure: Neutral.
- Colour: Clear
- Other requirements: Fungicidal.

EXECUTION

710 MOISTURE CONTENT OF WOOD AND WOOD-BASED BOARDS

- Standard: To BS EN 942
- Moisture content on delivery: 12-16%
- Temperature and humidity: During delivery, storage, fixing and to handover maintain conditions to suit specified moisture contents of timber components.

720 INSTALLATION GENERALLY

- General: As Preliminaries.
- Fixing and fasteners: As section Z20.
- Services: As Engineering Services specification.

760 SEALANT BEDDING AND POINTING

- Application: As section Z22.
- Bedding: Sinks to top of worktops.
- Pointing: Joints between worktop and splash backs.

770 TRIMS

- Lengths: Wherever possible, unjointed between angles or ends of runs.
- Running joints: Where unavoidable, obtain approval of location and method of jointing.
- Angle joints: Mitred.

© Copyright protected

COMPLETION

910 GENERAL

- Doors and drawers: Accurately aligned, not binding. Adjusted to ensure smooth operation.
- Ironmongery: Checked, adjusted and lubricated to ensure correct functioning.

920 APPLIANCES

- Test: Ensure that all functions and features work correctly.
- Documentation: Submit guarantees, instruction manuals, etc.

N13A - SANITARY APPLIANCES AND FITTINGS

To be read in parallel with section N13B (Architecture)

PART 3 SPECIFICATION CLAUSES SPECIFIC TO N13

300.000 GENERAL

300.010 SANITARY FITTING INSTALLATION:

- Supply, install, commission and set to work sanitary fitting installation in accordance with
- Standard
    - Comply with the services aspects of the code of practice for the design of sanitary facilities BS 6465-1.
    - On design and build projects comply with the space recommendations in BS 6465-2.
    - Select and install sanitary and associated appliances in accordance with BS 6465-3.
    - BS EN 806-4 and complimentary guidance in BS 8558
    - BS 8300-1.
    - BS 8300-2.
    - BS EN 12056-2.

300.030 SANITARY INSTALLATIONS FOR THE DISABLED:

- Ensure sanitary installations for the disabled are installed in accordance with BS 8300-1 and BS 8300-2.

300.040 SHOWER UNITS:

- Ensure shower unit installations are installed in accordance with BS EN 251 and BS 6340.

300.070 FINISHES:

- Ensure the finishes of all sanitary fittings comply with the interior architectural selections.

310.000 PRODUCTS/MATERIALS

310.010 W.C. PANS:

- Style
- As specified in the sanitary manual.
    - Arrangement
        - Vitreous china Wall hung to BS EN 33.

            BS EN 33 with independent water supply.
    - Method of operation
        - As per sanitary manual
    - Material
        - Vitreous china to BS 3402.

- Accessories
    - Flush pipe.
    - Flexible connector to BS 5627.
    - Connector.
- Characteristics
    - Finish and colour : subjected to engineer approval

- Seat
    - Type
        - BS 1254.
    - As per sanitary manual Seat and cover material
        - As per sanitary manual and subjected to engineer approval
    - Accessories
        - Seat pillars and hinges to BS 1254.
            - Protective washer between hinge fixings and both sides of the ceramic ware.
        - [Flush valve
        - Hand shower spray
    - Characteristics
        - Finish and colour: As per sanitary manual and subjected to engineer approval

310.040 SINKS:

- Style
- As per sanitary manual and subjected to engineer approval
- Arrangement
    - Floor mounted.
    - Wall-mounted.
    - Incorporated in fitment
    - As per sanitary manual and subjected to engineer approval
- Material
    - Stainless steel.
- Tap holes
- As per sanitary manual and subjected to engineer approval
- Characteristics
    - Finish and colour
    - As per sanitary manual and subjected to engineer approval

- Accessories
    - Support brackets.
    - Bucket grating.

- Standing tube overflow.
- Drainer.
- Faucet Mixer

310.050 WASH BASINS:

- Standard
  - [Ceramic wash basin and pedestal to BS 1188.]
  - As per sanitary manual and subjected to engineer approval
  - Material
    - Vitreous china to BS 3402.
  - Wall hung hand rinse basins to BS EN 111.
    - Type
      - As per sanitary manual and subjected to engineer approval
- Characteristics
  - Finish and colour : As per sanitary manual and subjected to engineer approval
- Accessories
  - Support brackets.
  - Faucet Mixer

310.090 SHOWER UNITS:

- Duty
  - Supply showers with nominal flow rate no greater than 9 litres per minute. Accomplish low flow rates using aerating/flow restrictor devices.
- Style
  - chrome plated bath mixer
  - 20 mm shower outlet, integrated non-return valve, with handles and fastening set
  - Shower hose 1700mm
  - chrome plated basket sponge /soap holder
  - chrome plated robe hook.
  - And as specified in the sanitary manual and subject to Engineer's approval.
- Shower controls
  - Combined flow and temperature control.

310.180 HOSE BIBB:

to consist of chrome plated metal bibcock, 15 mm male back inlet connection and 15 mm male, hose thread outlet, with 15 mm chrome plated metal hose union female threaded similar to kohler or approved equal. and as specified in the sanitary manual:

- HB-1: As per sanitary manual and subject to Engineer's approval.

310.230 WASTE FITTINGS:

- Appliance
  - Sink
  - Wash basin
- Standard
  - BS EN 274-1, BS EN 274-2, BS EN 274-3
- Type
  - Plug.
  - Plug, pop up
  - Grated.
  - Standing.
  - Strainer.
  - Overflow
- Accessories.
  - Plug and chain fixed
  - Coupling nuts.

310.240 TRAPS:

- Appliance
  - WC. pan
  - Sink
  - Wash basin
  - Shower unit
- Type
  - Integral with appliance.
  - Tubular.
- Form
  - [P.]

310.250 TAPS:

- Appliance
  - Sink
  - Wash basin
- Arrangement
  - On appliance
  - On wall or panel above appliance
- Standard
  - Performance of draw-off taps

- Spray taps to BS 5388.
- Spray mixing taps to BS 5779.
- Single and mixer taps to BS EN 200.
- Flow rate regulators to BS EN 246.
- Electrodeposited nickel chrome coatings to BS EN 248.

- Type
  - As per sanitary manual
- Characteristics
  - Thermostatic mixing valves to BS EN 1111 operating at dynamic pressure (1-5bar)
  - Mixing valves Finish and colour: as per sanitary manual

320.000 WORKMANSHIP

320.010 GENERAL:

- Carry out work in accordance with BS EN 12056-2.
- On delivery check that all components are in accordance with the requirements and are free from defects and damage. Reject any incorrect, defective or damaged items.
- Obtain all appliances and components from the same manufacturer.
- Store delivered components in secure weatherproof accommodation, as recommended by the manufacturer. Ensure that the storage method does not cause damage to the components.

320.020 INSTALLATION OF APPLIANCES:

- Assemble, install and fix the appliance so that services designed to falls will drain as intended, and as recommended by the manufacturer.
- Joint and bed all components using compounds and methods recommended by the manufacturer.
- Do not use or allow use of sanitary installation until directed.

320.030 INSPECTION AND CLEANING:

- After installation, inspect all appliances and components and reject and replace any defective or damaged items. Protect appliances until handover. Clean all sanitary appliances and installations:
  - On contract completion.
  - Before they are taken into use.

320.040 WORKS ON-SITE:

- Ensure that all building works and service connections are carried out in accordance with the requirements, before fixing the appliances

320.050 SHOWER UNITS:

- Install shower units in accordance with BS EN 251 and BS 6340.

320.070 INSTALLATION OF CISTERNS:

- Obtain all cistern operating components from the cistern manufacturer.
- Ensure that ball valve matches water supply head.
- Install cisterns in accordance with the manufacturer's recommendations.

320.075 WC PANS PIPE CONNECTIONS:

- Plastic
    - Connect all soil pipe spigots with plastic connectors in accordance with manufacturer's recommendations.

320.080 SEALANT:

- Seal between floor and wall and appliance with sealant with fungicide.
- Ensure colour of sealant,
    - Matches sanitary fittings.
    - complies with schedule of sanitary fittings and finishes
- Procedure
    - Check that joints are suitable and joint dimensions are within the limits indicated for the sealant by its manufacturer.
    - Clean surfaces to which sealant must adhere using methods and materials recommended by the sealant manufacturer.
    - Before applying primer and sealant, cover adjacent surfaces difficult to clean with masking tape.
    - Use backing strips, bond breaker and primer recommended for the purposes by the sealant manufacturer.
    - Use equipment and methods recommended by the sealant manufacturer.
    - Use the sealant within the application life of primer and sealant and within the air and surface temperature ranges recommended by the sealant manufacturer. Do not apply primer or sealant to damp surfaces.
    - Do not heat or raise the temperature of sealed joints to speed drying.
    - Fill joints completely, leaving no gaps, exclude all air and ensure firm adhesion of sealant to required joint surfaces.
    - Tool the sealant to a neat slightly concave profile unless otherwise indicated.
    - Protect the sealed joints until cured.

320.090 FIXING:

- Use only fixing and jointing methods, types, sizes, quantities and spacings which are suitable for,
    - Nature and compatibility of materials.
    - Recommendation of manufacturers of both fixing materials and sanitary components.
    - Components and loads to be supported.
    - Conditions of expected use.
    - Appearance.
- Floor mounted appliances
    - Ensure all floor mounted appliances are made to a secure base in an even manner.

- Material of fixings
    - Use only non-ferrous or stainless steel.
- Fixing through finishes
    - Ensure that fastening and plugs amply penetrate into the backing.
- Brackets
    - Use low carbon steel brackets or other supports only if they are galvanized to BS EN ISO 1461.
- Chases and ducts
    - Ensure all holes, chases and ducts required have been provided.
- Noggins and bearers
    - Ensure noggins and bearers fixings are accurately positioned and securely fixed.
- Tiled backgrounds
    - Ensure tiled backgrounds are complete before fixing appliances and that fixings do not overstress the tiles.
- Overflow pipes
    - Ensure overflow pipes are fixed to provide a fall to outlet.
    - Ensure overflow pipes are positioned as required.
- Taps
    - Fix taps securely with watertight seals.
    - Place hot tap on left of cold tap as viewed by user of appliance.
- Wastes
    - Bed wastes in waterproof jointing compound and fix with resilient washer between appliance and backnut.

N13B SANITARY APPLIANCES AND FITTINGS

To be read with Preliminaries/ General Conditions.

PRODUCTS

425 SANITARY ACCESSORIES GENERALLY

- Refer to the Sanitary Fixtures Manual
- Manufacturer: Submit proposals to Engineer's approval.
- Product reference: Submit proposals to Engineer's approval.

429 HOOKS GENERALLY

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Material: stainless steel 1.4401 316.
- Finish/ Colour: satin unless otherwise indicated on drawings.

436 GRAB BARS GENERALLY

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Diameter: 35 mm.
- Material: stainless steel 1.4401 grade 316.
- Finish/ Colour: satin unless otherwise indicated.
- Texture: As indicated in finish manuals.
- Dimension: As indicated in manuals.

438A TILT MIRRORS

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Material: stainless steel 1.4401 grade 316.
- Frame: stainless steel.
- Finish/ Colour: satin finish unless otherwise indicated.

438B MIRRORS

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Type: Wall-mounted mirror with aluminium frame and LED lighting.
- Mirror:
  - Clear mirror glass with safety backing.
  - Thickness: As indicated.
- Frame Material: Aluminium.
  - Finish/ Colour: satin finish unless otherwise indicated.

441 PAPER ROLL DISPENSERS

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Material: stainless steel 1.4401 grade 316.
  - Width: as shown on drawings and in sanitary manual.
  - Finish/ Colour : as shown in manual.

© Copyright protected

441A PAPER ROLL DISPENSERS

Manufacturer: Submit proposals to Engineer's approval.

- Product reference: Submit proposals to Engineer's approval.
  Material: stainless steel 1.4401 grade 316.
  Finish/ Colour: satin finish unless otherwise indicated in the sanitary manual.

442 PAPER TOWEL DISPENSERS

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Material: stainless steel 1.4401 grade 316.
- Finish/ Colour: as shown in manual.

446 SANITARY TOWEL DISPOSAL BINS GENERALLY

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Material: stainless steel 1.4401 grade 316.
- Finish/ Colour: as shown in manual.

458 SOAP DISPENSERS GENERALLY

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Material: stainless steel 1.4401 grade 316.
- Finish: as shown in manual.
- Mounting Type: Wall Mounted
- Dimension: As indicated in manuals.
- Operation: Electrically operated.
- Dispense Type: Foam Soap, Foam Sanitizer.
- Capacity: 800ml.

460 HAND DRYER

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Type: Wall-mounted hand dryer.
- Operation: Electrically operated, automatic sensor type.
- Material: stainless steel 1.4401 grade 316.
- Finish/ Colour: Satin-Finish, unless otherwise indicated.
- Dimension: As indicated in manuals.

462 TOILET PAPER HOLDERS GENERALLY

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Material/ finish: stainless steel 1.4401 grade 316.
- Finish/ Colour: as shown in manual.

462B DOUBLE TOILET ROLL HOLDERS

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Material/ finish: stainless steel 1.4401 grade 316.
- Finish/ Colour: Satin-Finish, unless otherwise indicated.
- Dimension: As indicated in manuals.
- Mounting Options: Wall mount.

© Copyright protected

474 AWASTE BINS GENERALLY

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Material: stainless steel 1.4401 grade 316.
- Finish/ Colour: as shown in manual.

474B UNDER COUNTER WASTE BIN

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Type: Under counter waste bin.
- Material: As indicated.
- Finish / Colour: As indicated in finishes manual.
- Capacity: As per manufacturer's standard.
- Operation: Pull-out type.
- Dimensions: As indicated on drawings.

475 BABY CHANGING STATION

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Type: Wall-mounted.
- Material:
  - High-density polyethylene (HDPE).
- Finish / Colour: As indicated in finishes manual.
- Operation: Fold-down type.
- Features:
  - Safety strap.
  - Smooth, easy to clean surface.
- Load capacity: As per manufacturer's standard.
- Dimensions: As indicated on drawings.

476 DIAPER VENDOR

- Manufacturer: Submit proposals to Engineer's approval.
- Product reference: Submit proposals to Engineer's approval.
- Type: Wall-mounted.
- Material: Powder coated steel.
- Finish / Colour: As indicated in finishes manual.
- Operation: As indicated.
- Capacity: As per manufacturer's standard.
- Dimensions: As indicated on drawings.

477 SANITARY NAPKIN DISPOSAL UNIT

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Type: Wall-mounted sanitary napkin disposal unit.
- Mounting: Surface mounted unless otherwise indicated on drawings.
- Material: As indicated.
- Finish / Colour: As indicated in finishes manual.
- Operation: Self-closing lid.
- Receptacle: Removable internal container.
- Dimensions: As indicated on drawings.

© Copyright protected

478 WALL-MOUNTED NAPKIN / TAMPON VENDOR

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Type: Wall-mounted napkin / tampon vending unit.
- Mounting: Surface mounted.
- Material: As indicated.
- Finish / Colour: As indicated.
- Operation: Coin operated or free issue.
- Capacity: As per manufacturer's standard.
- Lock: Key operated lock.
- Dimensions: As indicated on drawings.

EXECUTION

610 INSTALLATION GENERALLY

- Assembly and fixing: Surfaces designed to falls to drain as intended.
- Fasteners: Nonferrous or stainless steel.
- Supply and discharge pipework: Fix before appliances.
- Fixing: Fix appliances securely to structure. Do not support on pipework.
- Jointing and bedding compounds: Recommended by manufacturers of appliances, accessories and pipes being jointed or bedded.
- Appliances: Do not use. Do not stand on appliances.
- On completion: Components and accessories working correctly with no leaks.
- Labels and stickers: Remove.

613 COMPATIBILITY OF COMPONENTS

- General: Each sanitary assembly must consist of functionally compatible components, preferably obtained from a single manufacturer.
  - Exceptions: Wastes and traps.

755 SEALANT BEDDING AND POINTING

- Bedding: Bed and point basins to underside of vanity units.
- Pointing: Joints between appliances and splashbacks.

N14 GENERAL INTERNAL SIGNAGE SYSTEMS

To be read with Preliminaries/ General Conditions.

GENERAL

110 SIGNAGE SYSTEM GENERALLY

- System manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Layout and dimensions: As indicated in signage manual.
- Lettering:
  - Language: English and as indicated in the signage manual.
  - Font: Manufacturer's standard range as indicated in the signage manual.
  - Colour: Manufacturer's standard range as indicated in the signage manual.
  - Size: Manufacturer's standard range as indicated in the signage manual.
- Symbols and graphics: Manufacturer's standard range as indicated in the signage manual.
  - Colour: Manufacturer's standard range as indicated in the signage manual.
  - Size: Manufacturer's standard range as indicated in the signage manual.
- Background colour: Manufacturer's standard range as indicated in the signage manual.
- Sign type:
  - Aluminium letters;
  - Aluminium plate;
  - Plastics letters;
  - Plastics sheet;
  - UV printed letters;
  - Stove enamelled plate; and
- Submit proposals as indicated in the signage manual for Engineer's approval.
  - Inserts: Composite metal and plastics and as indicated in the signage manual.
  - Manufacturing process: Manufacturer's standard and as indicated in the signage manual.
- Supports/ Fixings: Submit proposals as indicated in the signage manual to Engineer's approval.
- Accessories: Not required.

120 POST AND MULTI-POST SIGNS GENERALLY

- Manufacturer: Submit proposals to Engineer’s approval.
  - Product reference: Submit proposals to Engineer’s approval.
  - Type: Freestanding post or multi-post signage system.
- Configuration:
  - Sign panels mounted between one or more vertical posts.
  - Panels to be of box or flat panel construction, as indicated in signage manual.
  - Provide smooth, uniform surfaces with clean edges and sharp profiles.
- Sign panels:
  - Material: Aluminium Composite Panel, as indicated in signage manual.
  - Thickness: As indicated in signage manual.
  - Size / layout: As indicated on drawings and signage manual.
  - Finish / colour: As indicated in signage manual.
  - Graphics: Translucent Vinyl cut out letters, arrows and pictograms or integral illuminated finish as indicated.
- Illumination (where applicable):
  - Internal or edge-lit LED system, as indicated.

© Copyright protected

  - Provide complete system including drivers, wiring, and accessories.
  - Ensure uniform illumination without light leakage.
  - Power supply as indicated on drawings.
- Frames (where applicable):
  - Material: As indicated (typically aluminium).
  - Profile / depth: As indicated in drawings and signage manual.
  - Corners: Radiused unless otherwise indicated.
  - Finish / colour: As indicated in signage manual.
  - Provide access panels for maintenance where required.
- Posts:
  - Material: As indicated.
  - Shape / size: As indicated in signage manual.
  - Finish / colour: As indicated in signage manual.
  - Arrangement: Single or multiple posts as indicated.
- Fixing / installation:
  - Method: Baseplate fixed to foundation or as indicated.
  - Install plumb, level, and securely fixed.
  - Coordinate with structural and civil works.
- Performance:
  - Complete system to BS 559.
- Text and graphics: Typeface, size, colour, and layout as indicated in drawings and signage manual.

120 INTERNALLY ILLUMINATED PYLON SIGNS GENERALLY

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Type: Freestanding internally illuminated pylon signage system.
- Configuration:
  - Sign panels integrated within vertical pylon structure.
  - Panels to be of box-type construction, as indicated in signage manual.
  - Provide smooth, uniform surfaces with clean edges and sharp profiles.
- Sign panels:
  - Material: Aluminium Composite Panel, as indicated in signage manual.
  - Thickness: As indicated in signage manual.
  - Size / layout: As indicated on drawings and signage manual.
  - Finish / colour: As indicated in signage manual.
  - Graphics: Translucent Vinyl cut out letters, arrows and pictograms or integral illuminated finish as indicated.
- Illumination:
  - Internally illuminated LED system.
  - Provide complete system including drivers, wiring, transformers, and accessories.
  - Ensure uniform illumination without light leakage or hotspots.
  - Power supply as indicated on drawings.
- Frames / Pylon structure:
  - Material: As indicated (typically aluminium or metal).
  - Profile / depth: As indicated in drawings and signage manual.
  - Corners: Radiused unless otherwise indicated.
  - Finish / colour: As indicated in signage manual.
  - Provide access panels for maintenance and replacement of internal components.
- Support structure:

© Copyright protected

  - Integrated structural pylon with internal framing.
  - Shape / size: As indicated in signage manual.
  - Finish / colour: As indicated in signage manual.
- Fixing / installation:
  - Method: Baseplate fixed to foundation or as indicated.
  - Install plumb, level, and securely fixed.
  - Coordinate with structural, electrical, and civil works.
- Performance:
  - Complete system to BS 559.
- Text and graphics:
  - Typeface, size, colour, and layout as indicated in drawings and signage manual.

SYSTEM PERFORMANCE

210 GENERAL REQUIREMENTS

- Signage system: Complete to BS 559, including facing information, components, inserts, accessories and fixings necessary to complete the system.
  - Comply with the requirements of:
  - Fire strategy report;
  - Building operation report; and
- Wayfinding strategy.
- Geometric shapes, colours and layout: In accordance with BS 8501.
- Design standard for disabled people: In accordance with BS 8300.
- Proposals: Submit drawings, schedules, technical information, calculations and manufacturer's literature.

240 FIRE REACTION OF SIGNAGE SYSTEM

- Non-flammable surface:
  - Standard: Class 1 to BS 476-7.

280 DESIGN LIFE OF SIGNAGE SYSTEM

- Duration: 10 years.
  - Subject to reasonable wear and tear.
- Condition of use: Subject to regular maintenance.

290 SIGNAGE SAMPLES

- Sign type: to the specified Signage system.
  - Action: Submit labelled samples.
  - Conformity: Retain samples on site for the duration of the contract or until instructed to remove.
  - Delivered product: To conform with labelled samples.

295 SIGNAGE SAMPLES BOARD

- Samples board: Submit.
  - Content: Selected labelled signs, showing methods of fixing.
  - Conformity: Retain samples on site for the duration of the contract or until instructed to remove.
  - Delivered product: To conform with labelled samples.

© Copyright protected

PRODUCTS

305 PRODUCTS GENERALLY

- Standard: To BS 559.

310 ADHESIVE VINYL GENERALLY

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Component thickness: 2 mm.
- Finish: Matt or gloss as indicated on drawings.

320 ALUMINIUM GENERALLY

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Component thickness: 6 mm, 2 mm facing on 4 mm backing panel unless otherwise indicated on drawings.
- Finish: Powder coated to BS 6496 unless otherwise indicated on drawings.
- Perimeters: Radiused corners unless otherwise shown on drawings.

350 PLASTICS GENERALLY

- Material: Acrylic.
- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Component thickness: 6 mm, 2 mm facing on 4 mm backing panel unless otherwise shown on drawings.
- Finish: Manufacturer's standard unless otherwise shown on drawings.
- Perimeters: Radiused corners unless otherwise shown on drawings.

370 STOVE ENAMELLED METAL PLATE GENERALLY

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Base material: Mild steel.
- Component thickness: 2 mm unless otherwise shown on drawings.
- Finish: Manufacturer's standard.
- Perimeters: Radiused corners unless otherwise shown on drawings.

EXECUTION

610 FIXING SIGNS GENERALLY

- Installation: To BS 559.
  - Secure, plumb and level.
- Strength of fasteners: Sufficient to support all live and dead loads.
- Fasteners and or adhesives: As section Z20.
- Fixings showing on surface of sign: Must not detract from the message being displayed.

620 FIXING SIGNS FOR THE VISUALLY IMPAIRED

- Protection of users:
  - Fasteners for tactile/ Braille signs must not have sharp edges or protrusions that would cause confusion or injury to users.

670 ELECTRICAL AND DATA SERVICES

- Services connection required: Power for lighting.

© Copyright protected

- Standard: To BS 7671.
- Coordinate with services trades.

COMPLETION

910 DOCUMENTATION

- Submit:
  - Manufacturer's maintenance instructions.
  - Guarantees, warranties, test certificates, record schedules and log books.

920 SPARES

- Supply as follows:
  - Type: Signage systems specified.
  - Quantity: 5 modular sets containing all alpha and numeral characters and as directed by Engineer.

930 SPECIALIST TOOLS

- Supply as follows: 2 sets of nameplate adjustment tools.

© Copyright protected

N20B - SPECIAL PURPOSE FIXTURES, FURNISHINGS AND EQUIPMENT – MECHANICAL

To be read in parallel with section N20A (Architecture)

PART 3 SPECIFICATION CLAUSES SPECIFIC TO N20B

300.000 PRODUCTS/MATERIALS

300.010 EQUIPMENT: LONG SPAN HEAVY DUTY SHELVES

Industrial shelving having the following features/components:

- Open type steel shelves, utilizing sway braces for stability of shelving unit.
- Ready to assemble. Boltless upright system
- Solid coated steel construction.
- Shall be used for the storage of non-palletized items such as boxes and smaller items.
- Dimensions of shelving unit: as per design drawings
- Shelving unit shall have shelves, and can be considered as a starter unit. Adder units shall be connected to it to create rows of shelving.
- Shelving units can be placed back to back, creating a double-faced shelving arrangement.
- These units shall be complete and freestanding.
- Capacity: 400 Kg/shelf, assuming evenly distributed loads on shelf.
- Shall be easily adjustable to fit specific needs.
- Shall utilize box beam shelves for high capacity and angle posts on all sides for easy shelf adjustment and assembly.
- Coating of steel shelves shall be factory applied, and according to manufacturer's standard.

300.020 HEAVY DUTY RACKS

These are coated steel racks made from hot dip galvanized steel used for storage; providing the most selectivity and flexibility, and having but not limited to the following features:

- Uprights, braces and beams constructed of high tensile steel.
- Steel Quality: Rolled steel for general structure (SS400, SS540)
- Type Steel plate in mother coil form
- Standard Number Class 2 (SS400), Class 3 (SS490)
- Grade SS400, SS540
- Tensile strength (min.) 400N/mm² (SS400), 540 N/mm² (SS540)
- Yield Strength (min.) 305 N/mm² (SS400), 450 N/mm² (SS540)

Rack End frames:

- Upright width 100mm
- Upright thickness 2.6mm
- Upright finish (painted / galvanized) galvanized
- Tensile strength (min.) 540 N/mm² (SS540)
- Shape of bracing section lipped channel (C shape)
- Dimension of bracing section 40x22mm (100post)
- Bracing section thickness 1.2mm
- Bracing colour finish (painted / galvanized) galvanized

Rack Longitudinal Beams:

- Dimension of beam std Box-beam 105/50/1.5 and 125/50/1.5
- Interlocking 'C' section formed from two interlocking 'C' section
- Tensile strength (min.) 400 N/mm² (SS400)
- Beam colour finish (painted) orange (RAL 2004)
- Paint finish (lead-free / normal) epoxy-polyester powder coating (lead-free)

- A lower beam is required for pallets positioned on floor.
- Rack dimensions: 1050x2900x1500 mm
- Ready to assemble, solid steel construction.
- Standard deflection shall be a maximum of 1/200 of the beam length.
- Beam Capacity:4000 Kg/pair of beam/level
- Beams to have special safety lock preventing the accidental beam removal.
- Racks can be placed back-to-back, creating a double-deep rack arrangement.
- Racks shall be used in standard aisle configuration and very narrow aisles.
- Coating of steel racks shall be factory applied, and according to manufacturer's standard.
- Ram rack column protection to be provided.
- Crash Barriers used to protect the exposed upright frames at the end of each aisle by forklift collusion.
- Mesh decking on the top of the beam on each level and section of the pallet racking storage. Mesh decking shall be 6mm diameter with reinforcing bar support.
- Provision for storage items identification system (barcode or labeling) to be provided.

310.000 WORKMANSHIP

310.010 INSTALLATION:

- Install and test equipment in accordance with manufacturer's recommendations.

N25 PERMANENT ACCESS AND SAFETY EQUIPMENT

To be read with Preliminaries/ General Conditions.

TYPES OF SYSTEM/ EQUIPMENT

110 PERMANENT SUSPENDED ACCESS SYSTEM GENERALLY

- Type: Telescopic crane on anchored track.
- Design/ Manufacture/ Installation: Generally to BS EN 1808 and in accordance with BS 6037-1.
- Manufacturer: Submit proposals to Engineer's approval.
  - System reference: Submit proposals to Engineer's approval.
- Position and dimensions: As drawings.
- Mode of operation: Electrically powered.
  - Power supply: 3 pH, 400 V, 50 Hz, neutral earth unless otherwise indicated.
- Cradle: To BS EN 1808 and in accordance with BS 6037-1.
  - Maximum vertical travel distance: as indicated.
  - Carrying capacity (persons): two persons unless otherwise indicated.
  - Rated load: as indicated.
  - Clear working width: as indicated.
  - Length: as indicated.
  - Material: Galvanized steel with polyurethane system protective coating.
  - Infill between guardrails: Galvanized steel Solid sheet with polyurethane system protective coating.
  - Attachment points: Provide at least one safety harness attachment point per person. Provide additional points for attaching platform restraint system, where fitted.
  - Lateral restraint system: As clause 115.
  - Fenders: Provide suitable protective cushions/ rollers to prevent cradle from damaging building.
- Finishes: polyurethane coating system as recommended by manufacturer to meet corrosive environment indicated in accordance with ISO 12944.
- Connection to building superstructure: as indicated on drawings.
- Other requirements: as indicated.

115 LATERAL RESTRAINT SYSTEM FOR SUSPENDED CRADLE

- System: Stabilization of cradle against lateral movement at all working locations to be provided by: suspension rope restraint.
- Vertical spacing of restraint system attachment points: Not more than 16 m, including the first drop from the jib.

140 TRAVELLING LADDER GENERALLY

- Type: Standard.
- Manufacturer: Submit proposals to Engineer's approval.
  - Reference: Submit proposals to Engineer's approval.
- Position and dimensions: As drawings.
- Mode of operation: Manual (push/ pull).
  - Power supply: Not required.
- Height, excluding any extension units: as drawings.
- Carrying capacity (persons): two persons unless otherwise indicated.
- Material: galvanized steel with polyurethane protective coating system.
  - Finish: polyurethane protective coating system.

© Copyright protected

- Tracks:
  - Upper: Roof mounted.
  - Lower: Integrated into façade.
- Working platform: Single sliding folding.
- Ancillary equipment: Telescopic extension unit with winch unless otherwise indicated.
- Connection to building superstructure: as drawings.

210A GUIDED TYPE FALL ARREST SYSTEM Portable Davit System

- Manufacturer: Submit proposals to Engineer's approval.
  - System reference: Submit proposals to Engineer's approval.
- Anchorage device: Vertical/ Horizontal aluminium rail with turntable.
- Overall system length: as drawings.
- Intermediate support spacing: as drawings.
- Accessories/ Other requirements: Fall arrest (EN 795: 2012) and personnel winching.
- Installation: In accordance with BS 7883 by the system manufacturer or a contractor approved by the system manufacturer.
- Structural anchors: Type recommended by the system manufacturer to suit the structure/ fabric into which they will be fixed.

220 SINGLE POINT ANCHORAGE DEVICES FOR CRADDLE RESTRAINT

- Standard: To BS EN 795.
- Type: flush mounted sockets.
- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Material/ Finish: stainless steel 1.4401 grade 316.
- Locations: as drawings.
- Installation: In accordance with BS 7883.
- Other requirements: Provide with each anchor:
  - A backing disc giving the manufacturer's name and telephone number and the date of installation.
  - A certificate of compliance with testing and examination requirements of BS EN 365.

DESIGN/ PERFORMANCE REQUIREMENTS

415A WIND LOADING TO BS EN 1991-1-4

- General: Design access/ safety system to withstand calculated wind loads with equipment in position of maximum exposure and in parked position.
- Design wind pressure: Calculate to BS EN 1991-1-4.
  - Wind loads shall be calculated according to BS EN 1991-1-4: 2005
  - Basic wind velocity is equal to 30 m/s 10 minute mean wind velocity with an annual risk of being exceeded of 0,02 which is equal to a mean return period 50 years. At a height of 10 m above flat open country terrain.
  - Terrain Category: II
  - Structural Factor, CsCd = 1.0

430 SAFETY

- General: The equipment as installed must have no irregularities/ projections capable of inflicting personal injury.
- Finished surfaces and edges of all accessible parts: Regular and smooth.

© Copyright protected

440 DESIGN LIFE/ MAINTENANCE PROGRAMME

- Design life of access/ safety system: Not less than 50 years.
- Schedule for maintenance and for replacement of components: Submit.

450 TESTING OF PERMANENT SUSPENDED ACCESS EQUIPMENT

- Pre-installation testing: Test roof rig at manufacturer's/ supplier's works. The rig must be capable of lifting and sustaining a proof load of 125% of the specified rated load without suffering damage or permanent deformation.
- Post-installation testing: Immediately on completion of installation, or when otherwise agreed, examine and test the complete installation in accordance with recommendations given in BS 6037-1, clause 14. Give adequate notice of testing arrangements.
- Certificates for works and site testing: Submit within 7 days of completion of satisfactory acceptance tests.

460 ASSESSMENT/ TESTING OF ANCHOR DEVICES

- Design and testing of anchors: To BS EN 795.

FABRICATION, ASSEMBLY AND INSTALLATION

510 FABRICATION AND ASSEMBLY GENERALLY

- Machine cutting, drilling and assembly: Carry out as much as possible in the workshop. Obtain approval for any reassembly on site.
- Dissimilar metal surfaces of assembly components/ supports/ fixings: Isolate to prevent electrolytic corrosion.

520 PROTECTION

- General: Do not deliver to site any components or assemblies that cannot be installed immediately or unloaded into a suitable well protected storage area.

530 SUITABILITY OF STRUCTURE/ FABRIC

- Visual and geometric survey of supporting structure and fabric: Carry out before commencing installation of access/ safety system. Report immediately if structure/ fabric will not allow required accuracy/ security of erection/ fixing.

535 EXECUTION GENERALLY

- Structural members: Do not modify, cut notch or make holes in structural members without permission.
- Frameworks: Assemble and brace, including temporary members required for installation.
  - Temporary support: Do not use access systems as temporary support or strutting for other work.
- Bolted joints:
  - Contact between dissimilar metals: Avoid.
  - Bolts and washers: Select types, sizes and quantities of fasteners or packings and spacings to retain supported components without distortion or loss of support.
- Welded joints: Comply with latest edition of National Structural Steelwork Specification (NSSS), Section 5.
- Finished components: Smooth, free from distortion, cracks, burrs and sharp arrises.

540 MECHANICAL FIXINGS

- Materials: Unless otherwise recommended by equipment manufacturer:
  - Connecting bolts and other fixings fully accessible for inspection: Carbon steel hot dip galvanized to BS 7371-6.

© Copyright protected

- Nuts: Tapped after galvanizing.
  - Cast-in anchors and other fixings not accessible for routine inspection: Austenitic stainless steel, grade 1.4401 (316) to BS EN 10088-1.

550 FASTENERS, INSERTS AND BOLTS FOR BUILDING IN

- Supplier: Equipment manufacturer/ supplier.

560 FIXINGS FOR SECURING EQUIPMENT

- Adjustment capability: Adequate three dimensional adjustment to accommodate building structure/ fabric irregularities.

570 FIXING ANCHOR INSTALLATION

- Site drilling or cutting into structure/ fabric: Permitted only in approved locations.
- Distance between all fixing devices and edges of supporting material: Not less than recommended by fixing manufacturer.

605 IDENTIFICATION AND REGISTRATION LABELS FOR SUSPENDED ACCESS SYSTEM

- Provision:
  - Suspension rig and any non-dedicated track systems: Provide and fix a permanent label giving:
    a) Manufacturer's name, address and telephone number.
    b) Name and/ or reference code of model.
    c) Serial number and year of manufacture.
    d) Rated load of suspended platform (where the platform is permanently attached to the system) or maximum total suspended load (where the platform can be derigged).
  - Suspended platform: As a), b) and c) above, plus
    d) Rated load and self-weight in kg of the platform.
    e) Maximum number of persons allowed on the platform.
    f) Identification mark or number of the suspension rig or rigs with which the platform is compatible (where the platform can be derigged).
  - Suspension and safety ropes (detachable): Marked with length and unique identification number.
- Location: In positions such that labels can be easily read.

610 IDENTIFICATION AND REGISTRATION LABELS FOR OTHER EQUIPMENT FOR BUILDING MAINTENANCE SYSTEM

- Provision: Provide and fix to each piece of equipment a permanent label giving:
  - Manufacturer's name, address and telephone number.
  - Name and/ or reference code of model.
  - Serial number and year of manufacture.
  - Maximum load (in kilograms) that may be sustained by the equipment.
- Location: In positions such that labels can be easily read.

615 CE MARKING AND DECLARATION OF CONFORMITY OF PERMANENTLY INSTALLED SUSPENDED ACCESS EQUIPMENT

- Marking: Equipment to be clearly labelled with a CE mark indicating conformity with the current edition of the Supply of Machinery (Safety) Regulations.
- Declaration of conformity: Provide for the complete installation a declaration of conformity with Machinery Directive 2006/42/EC together with certificates of incorporation for parts not supplied or installed by the main equipment manufacturer or supplier.

© Copyright protected

630 LIFTING EQUIPMENT CONFIGURATION

- General: Where the rated load of machinery for lifting depends on its configuration, the identification and registration labels and rated load notices must indicate the rated load for each configuration.

640 MARKING OF ANCHOR DEVICES

- Provision: Provide on or near each anchor device a label or other clear marking giving:
  - Manufacturer's name and telephone number.
  - Serial number and year of manufacture of device.
  - Maximum number of personnel that may be attached to the device at any one time.
  - Requirements for energy absorbers, ground clearance, etc.
- Anchor devices intended solely for use with personal protective equipment: Indicate restriction of use by pictogram or other suitable marking on or near the device.

710 ELECTRICAL INSTALLATION FOR THE BUILDING MAINTENANCE SYSTEM

- General: Install, test and commission electrical work forming part of the access equipment system up to and including wiring of isolating switch or switches provided by the electrical contractor, all in accordance with BS 7671.
- Components/ Fasteners: Use waterproof components and corrosion resisting fasteners throughout. Avoid contact between dissimilar metals.
- Control system: Designed so that an electrical supply failure, or the failure or malfunction of any electrical component, will cause the system to fail to safety.
- Failsafe provision: In the event of power failure the system must be capable of delivering the working platform to a position of safety either by hand winding or by a controlled gravity descent device.
- Isolating switches: Clearly labelled to identify purpose. Labels to display an emergency contact telephone number.

810 SERVICE/ MAINTENANCE FOR THE BUILDING MAINTENANCE SYSTEM

- General: Following acceptance of the completed installation, service and maintain the equipment for the period stated below as and at intervals recommended by the manufacturer. Such maintenance to include a ‘call-out’ service during normal working hours to maintain the equipment in an acceptable and safe condition.
- Service/ Maintenance period: 12 months.

820 OPERATING INSTRUCTIONS

- Equipment and accessories: Where appropriate, mark in such a way that it is possible to identify the correct mode of operation for their safe use.

830 OPERATING AND MAINTENANCE MANUAL

- General: Provide, for inclusion in the Building Manual, printed instructions and recommended procedures to be established by the Employer for operating and routinely maintaining the equipment. Provide diagrams where appropriate.
- Content:
  - Instructions for assembling/ erecting equipment for use.
  - Comprehensive operating instructions, including safety and emergency procedures, for all motions including upward, downward and lateral travel, and slew.
  - Servicing and planned maintenance procedures, including assembly instructions where maintenance necessitates dismantling of machinery parts.
  - List of replacement parts, with references.
  - Recommended procedures for testing equipment.

© Copyright protected

840 AS INSTALLED DRAWINGS

- General: After commissioning/ testing of the equipment provide as installed drawings for inclusion in the Building Manual.
  - Number of sets: 3.
- Drawing content:
  - Contractor's name and contract number.
  - Location and date of installation.
  - Manufacturer's name, model and type numbers.
  - General arrangement of the complete installation.
  - Electrical circuit wiring diagrams complete with details and ratings of all items of equipment.

© Copyright protected

P10 SUNDRY INSULATION/ PROOFING WORK

SUNDRY INSULATION/ PROOFING WORK

To be read with Preliminaries/ General Conditions.

TYPES OF INSULATION

170 INSULATION TO LOFT ACCESS HATCHES

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Material: Mineral wool mat to BS 13162.
- Recycled content: Contractor's choice.
- Thickness: as indicated.
  - Laying: Cut to fit, with no gaps, and fix securely.
- Edges of hatch: Sealed with an approved compressible draught excluder.

190 INSULATION FITTED BETWEEN STUDS

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Material: Mineral wool to BS EN 13162.
  - Facing: Metal foil laminate unless otherwise indicated.
- Recycled content: Contractor's choice.
- Thickness: minimum thickness indicated and to achieve the U value indicated.
- Installation requirements:
  - Joints: Butted, no gaps.
  - Fasteners: Use where necessary to retain insulation and/ or prevent slumping.

212 INSULATION FIXED ACROSS INNER FACE OF STUD WALLING

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Material: Mineral wool to BS EN 13162.
- Thickness: minimum thickness indicated and to achieve the U value indicated.
- Number of layers: as recommended by manufacturer to meet performance requirements.
- Installation requirements:
  - Fixing: Secure to inner face of studs, with vapour control facing (if provided) on warm side.
  - Fasteners: Staples.
  - Fixing centres: 300 mm.
  - Joints: Butt or overlap, as recommended by insulation manufacturer, with no gaps. Seal with vapour impermeable adhesive tape.

217 INSULATION SLABS FIXED TO BACKING WALL

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Material: Rock wool to BS EN 13162 unless otherwise indicated.
- Recycled content: Contractor's choice.
- Thickness: To achieve the U value indicated.
- Installation requirements:
  - Joints: Butted, no gaps. Fit insulation tightly between/ around cladding supports.
  - Fasteners: Stainless steel with minimum 70 mm diameter retaining head.

© Copyright protected

220A SOUND INSULATION WITHIN FRAMED SEPARATING WALL

- Location: In cavity between frames.
- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Material: Mineral wool BS EN 13162.
- Recycled content: Contractor's choice.
- Density (minimum): 80 kg/m³.
- Thickness: not less than that indicated on drawings.
- Width: Widest practical.
- Installation requirements:
  - Joints: Butted, no gaps.
  - Head fixing: Staples or large head nails.

240 INSULATION FITTED BETWEEN FLOOR JOISTS

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Material: Rock wool to BS EN 13162.
- Recycled content: Contractor's choice.
- Thickness: To achieve the U value indicated.
- Installation requirements:
  - Support: 20-25 mm square mesh polyethylene net draped over joists and stapled to sides of joists. unless otherwise indicated.
  - Joints: Butted, no gaps.
  - Service holes: Sealed, and debris removed before laying insulation.

250 INSULATION SUPPORTED BETWEEN FLOOR JOISTS

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Material: Rock mineral wool slabs.
- Thickness: as indicated.
- Supports: Saddle clips.
- Installation requirements:
  - Joints: Boards butted, no gaps.

310 VAPOUR CONTROL LAYER TO CONCRETE BLOCKWORK AND WHERE INDICATED

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Material: 1000 gauge virgin polyethylene. Polyurethane coating is utilised where indicated on drawings.
- Minimum vapour resistance: 250 MN s/g.
- Installation requirements:
  - Setting out: Joints minimized.
  - Method of fixing: Primer and adhesive to concrete blockwork.
  - Joints: At supports only, lapped 150 mm minimum.
  - Openings: Membrane fixed to reveals.
  - Joints and edges: Sealed with double sided tape with vapour resistivity not less than the vapour control layer.
- Penetrations: Sealed.
- Other requirements: Prime substrates as necessary.

© Copyright protected

410 FLEXIBLE CAVITY BARRIERS

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Material: Wired glass wool batts with density not less than 80 kg/m³.
- Fire resistance rating: To BS 476-20, matching ratings indicated in fire and life safety drawings for integrity/ insulation.
- Installation requirements:
  - Spacing: Installed in voids so the maximum unobstructed dimension in any direction is 10 m.
  - Fixing: Secure at perimeters and joints with no gaps, to provide a complete barrier to smoke and flame.

420 SLEEVED MINERAL WOOL SMALL CAVITY BARRIERS

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval considering that mineral wool density shall not be less than 80 kg/m³.
- Material: Mineral wool sleeved in polyethylene with flanges.
- Fire resistance rating: To BS 476-20, 60 integrity/ insulation.
- Size: As shown on the drawings.
- Installation requirements:
  - Fasteners: Staples at maximum 150 mm centres.
  - Vertical barriers: Fixed by both flanges.
  - Horizontal barriers: Fixed by upper flange only.
  - Joints and intersections: Butted, with barriers compressed along full length to give complete seal.

430 WIRED MINERAL WOOL SMALL CAVITY BARRIERS

- Material: Wire reinforced mineral wool minimum 50 mm thick.
- Fire resistance rating: To BS 476-20, 60 integrity/ insulation.
- Installation requirements:
  - Fasteners: Staples at maximum 150 mm centres. Fold cavity barrier if necessary to ensure a tight fit.
  - Joints and intersections: Butted, no gaps.

432 CAVITY BARRIERS

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Fire resistance rating: To BS 476-20, matching ratings indicated in fire and life safety drawings for integrity/ insulation.
- Thickness: 100 mm unless otherwise indicated.
  - Installation requirements: Continuous, with minimum joints.
  - Fasteners: Galvanized steel brackets at 500 mm centres.
- Other requirements: none.

435 VENTILATED CAVITY BARRIERS

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Material: mineral wool.
- Size: as indicated.
- Thickness: as indicated.

© Copyright protected

- Fire resistance rating: To BS 476-20, matching ratings indicated in fire and life safety drawings for integrity/ insulation.
- Free air provision: as indicated.
- Installation requirements: Continuous, with minimum joints.
  - Fasteners: Stainless steel self-drilling screws in selvage at 300 mm centres.
- Other requirements: none.

440 FIRE PROTECTION

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Material: mineral wool with density not less than 120 kg/m³.
- Thickness: as indicated.
- Fire resistance rating: To BS 476-21, matching ratings indicated in fire and life safety drawings for integrity/ insulation.
- Number of layers: as indicated to meet fire rating required.
- Installation requirements: Continuous, with minimum joints.
  - Fasteners: as indicated.
- Other requirements: none.

© Copyright protected

P12 FIRE STOPPING SYSTEMS

To be read with Preliminaries/ General Conditions.

GENERAL

110 FIRE STOPPING SYSTEM TO INDIVIDUAL SERVICE PENETRATIONS, TO MULTIPLE SERVICE PENETRATIONS, TO MOVEMENT JOINTS, TO EXTERNAL WALLS AND WHERE INDICATED

- Penetration seal/ Gap filler: Submit proposals.

130 FIRE STOPPING SYSTEM TO INDIVIDUAL SERVICES PENETRATIONS GENERALLY

- Fire resistance: As clause 240.
- Penetration seal: Pipe collar - surface mounted intumescent as clause 370.
  - Size: To match wall thickness.
- Capping sealant: Fire resisting silicone.
  - Colour: Submit proposals.

140 FIRE STOPPING SYSTEM TO MULTIPLE SERVICES PENETRATIONS GENERALLY

- Fire resistance: As clause 240.
- Board barrier:
  - Material: Mineral wool rigid batts - aluminium foil facing unless otherwise indicated.
    Thickness: as indicated to provide fire rating required.
    Number of layers: Two.
  - Framing: Not required.
  - Finish: Submit proposals.
- Capping sealant: Intumescent foams.
  - Colour: Submit proposals.

150 LOOSE FIRE STOPPING GENERALLY

- Fire resistance: As clause 240.
- Penetration seal: Mineral wool rigid batts - unfaced unless otherwise indicated.
  - Size: as indicated.

160 LINEAR GAP SEALING GENERALLY

- Fire resistance: As clause 240.
- Gap width or height (nominal): as indicated.
- Gap filler: Sealant backing material.
- Capping sealant: Fire resisting silicone.
  - Colour: Submit proposals.

SYSTEM PERFORMANCE

210 DESIGN

- Design: Complete the design of the fire stopping system.
- Proposals: Submit drawings, technical information, calculations and manufacturers' literature.

240 FIRE PERFORMANCE generally

- Resistance to fire: To BS 476-20 and -22, with integrity and insulation as indicated in the fire and life safety drawings and report.
- Reaction to fire: To BS EN 13501-1, class A1.
- Smoke resistance:

© Copyright protected

- Air leakage rate (maximum): 3 $m^3/m^2 \cdot hr$.

260 DESIGN LIFE

- Effective design life: 30 years.

PRODUCTS

305 PRODUCT CERTIFICATION

- Certification: For products specified generically, submit evidence of compliance with the specification.
- Acceptable evidence: Agrément certificate or other equivalent submitted to Engineer's approval.

335 INTUMESCENT FOAM

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.

338 INTUMESCENT MASTIC

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.

342 FIRE RESISTING MORTAR

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.

360 MINERAL WOOL RIGID BATTS

- Standard: To BS EN 13162.
- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Recycled content: Contractor's choice.

370 PIPE COLLAR - CONCEALED INTUMESCENT

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.

375 PIPE COLLAR - INSULATED WRAP

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.

380 PIPE COLLAR - SURFACE MOUNTED INTUMESCENT

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.

385 SEALANT BACKING MATERIAL

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.

390 SEALANT - FIRE RESISTING SILICONE

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: To BS EN ISO 11600, class F20LM.

395 SEALANT - ONE-PART FIRE RESISTING ACRYLIC

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: To BS EN ISO 11600. class F20LM.

© Copyright protected

EXECUTION

620 WORKMANSHIP GENERALLY

- Gaps: Seal gaps between building elements and services, to provide fire resistance and resist the passage of smoke.
- Adjacent surfaces: Prevent overrun of sealant or mortar on to finished surfaces.

640 INSTALLING BOARDING

- Position of boarding: Within opening and as indicated on drawings.
- Framing: Not required unless otherwise recommended by manufacturer.
- Bedding: Bed boarding on one-part fire resisting acrylic.
- Multiple board layers: Stagger joints between layers.
  - Joints: Seal with board adhesive.
- Fixing: Adhesive.
- Other requirements: Finish joint sealant flush with boards; rub down to receive paint finish.

660 APPLYING INTUMESCENT FOAM

- New joints: Remove builder's debris, mortar droppings, grease, and other contaminants.
- Old joints: Clean and remove existing sealant from each joint.
- Priming: Lightly moisten substrate with water.
- Application: Fill joint to approximately half its depth, and allow foam to expand to face of joint.
- Trimming: Trim excess foam to give a neat, flush appearance.

710 INSTALLING MINERAL WOOL BATTS

- Installing batts: Fit tight into void between the penetrating services and the surrounding construction to form a solid barrier.
  - Brackets: Impale batts on proprietary pressed steel brackets at 500 mm maximum centres and not greater than 250 mm from ends of batts.
    Bracket fixing: as indicated.
- Face of batts: Flush with the surface of wall, floor or soffit.
- Joints between batts: Close butt joints, seal with acoustic intumescent sealant.
- Gaps between services and barrier: Seal with fire resisting sealant.

730 FIXING PIPE COLLARS

- Collar fixing: Submit proposals.
- Gap around collar: Seal with intumescent foam.
- Length of wraps: Project 50 mm from each side of the element.

740 INSERTING SEALANT BACKING MATERIAL

- Preparation: Removed debris from service penetration.
- Installation: Insert joint filler to full depth of joint leaving sufficient depth to apply sealant.

745 APPLYING SEALANTS GENERALLY

- Application: As section Z22.

750 APPLYING CAPPING SEALANT

- Preparation: De-grease using cleaner recommended by sealant manufacturer.
- Priming: Primer recommended by sealant manufacturer.
- Depth of sealant: as recommended by manufacturer to meet required fire rating.
- Temperature: Do not apply water based sealants when they could be damaged by frost.

© Copyright protected

COMPLETION

910 CLEANING

- Masking tapes: Remove.
- Cleaning: Clean off splashes and droppings. Wipe down finishes.

920 INSPECTION

- Notice for inspection (minimum): 5 working days as directed by Engineer.

© Copyright protected

P20 UNFRAMED ISOLATED TRIMS/ SKIRTINGS/ SUNDRY ITEMS

To be read with Preliminaries/General Conditions

120 HARDWOOD SKIRTINGS GENERALLY

- Quality of wood and fixing: To BS 1186-3.
  - Species: as shown on drawings.
  - Class: 1.
- Moisture content at time of fixing: 13-19%.
- Preservative treatment: Water-based microemulsion as section Z12, service life 60 years.
- Fire rating: To BS 476-7, Class 1.
- Profile: As shown on drawings.
  - Finished size: As drawing.
- Finish as delivered: Prepared and primed as section M60.
- Fixing: Adhesive as section Z20.

170A CORNER GUARDS WHERE INDICATED

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Severe duty flush mounted corner guard.
- Shock absorbing cover over flush mounted continuous aluminium retainer
- Free-floating design flexes on impact.
- Continuous shock-absorbing cushion for added impact protection.
- Suitable for surface mounting.
- For plasterboard fixation, a two-stage fix product shall be installed, aluminium retainer is installed at the same time as plasterboard, then covers are installed as part of second fix works.
- Engineered PETG free of PVC and PBTs
- 5 year warranty

170D WALL GUARDS WHERE INDICATED

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Size: As drawings.
- Finish/ Colour: Black rubber, unless otherwise indicated..
- Description: Wall guard made of heavy-duty rubber, mechanically fixed with screws. The E-fender profiles can be installed onto practically any substrate, including concrete, brickwork, and blockwork. Suitable for both interior and exterior environments.
- Fire performance:
  - Sheet shall be classified as class B-s1, d0 in accordance with BS EN 13501-1: 2007+A1: 2009.
- Impact and abrasion resistance:
  - Rubber profile shall provide a tough, through-coloured and textured surface finish, which is resistant to impact and abrasion. Tested in accordance with ASTM D 4060-07 for abrasion resistance and to ASTM F 476-84 (Reapproved 2002) for resistance to impact.
- Chemical, fungal and bacterial resistance:
  - wall guard sheet shall be formulated to resist most commonly used chemical solutions and doesn't propagate the growth of bacteria on a clean surface. However, anti-bacterial properties of the product do not negate the need for a rigorous cleaning regime as recommended by manufacturer.
- Thermal performance:

© Copyright protected

- Wall guard sheet will expand and contract in the order of 0.09 mm/ m for every one degree Celsius rise or fall.

170E WALL GUARDS CLADDING WHERE INDICATED

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Size: 1/8" thick stainless steel; Inside corners: 50.8mm; Outside corners: 88.9mm.
- Finish/ Colour: Stainless Steel, Mill finish; Top trim: black flexible vinyl.
- Description: Stainless steel diamond plate system with inside/outside corners cut and bent. Includes a black flexible vinyl bumper top trim mounted on a continuous aluminum retainer. Suitable for waste areas and corridors.
- Fire performance:
  - Sheet shall be classified as class B-s1, d0 in accordance with BS EN 13501-1: 2007+A1: 2009.
- Impact and abrasion resistance:
  - 1/8" thick diamond plate shall provide a tough, textured surface finish resistant to impact and abrasion. Tested in accordance with ASTM D 4060-07 for abrasion resistance and to ASTM F 476-84 for resistance to impact.
- Chemical, fungal and bacterial resistance:
  - Stainless steel cladding can be exposed to chemicals and temperature extremes without adverse effect and doesn't propagate the growth of bacteria on a clean surface. However, anti-bacterial properties do not negate the need for a rigorous cleaning regime.
- Thermal performance:
  - Wall guard system will expand and contract in the order of 0.09 mm/ m for every one degree Celsius rise or fall.

170G CORNER GUARDS Stainless steel corner guard

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Dimensions: 75 x 75 mm, unless otherwise indicated in the finishes manual.
  With slightly cranked edges to provide approximately 1.5 mm void behind corner guards to accommodate wall irregularities.
  - Corner guard shall be fabricated from Type 304 or 430 stainless steel angles with radiused corners.
  - Thickness: As per manufacturer's standard.
  - Shall be Designed to offer heavy duty protection for 90° , 135°, or custom corners angles.
  - Finish: Satin stainless steel finish.
  - Corner guards shall have cranked edges to provide approx. 1.5 mm void behind guards to accommodate wall irregularities.
  - Corner guards shall be Installed with construction using mechanical fixing or adhesive fixing, as per manufacturer's recommendations.
  - Length: Continuous lengths up to 3000 mm (10 feet) maximum.

170I CORNER GUARDS CORNER GUARDS WHERE INDICATED

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Black EPDM rubber corner guards, with tapered profiles and radiused corners.
- Designed for heavy duty interior applications, offering protection against vehicular traffic, trolleys and carts.
- Excellent shock absorbing and weather resistant qualities.

© Copyright protected

- Can be fixed directly to concrete, steel, masonry and timber.
- 100C model is grooved on the internal surface to effect greater adhesion.
- Available in two sizes: 100C - 100 mm x 100 mm and 75C - 75 mm x 75 mm to be selected by Engineer.

410 LEG SUPPORTS FOR COUNTER TOP

- Material: Stainless steel .
  - Finish: Brushed .
  - Colour: natural .
- Dimensions:
  - Profile: As shown on drawings .
  - Height: As shown on drawings .
- Fixing: As shown on drawings .

420 BRACKET SUPPORTS FOR WORKTOPS AND SHELVES

- Material: stainless steel as indicated on drawings.
  - Finish: Brushed.
  - Colour: stainless steel natural colour.
- Size: As shown on drawings.
- Fixing: As shown on drawings.

510 INSTALLATION GENERALLY

- Joinery workmanship: As section Z10.
- Metal workmanship: As section Z11.
- Methods of fixing and fasteners: As section Z20 where not specified.
- Straight runs: To be in one piece, or in long lengths with as few joints as possible.
- Running joints: Location and method of forming to be agreed where not detailed.
- Joints at angles: Butt joints, unless shown otherwise.
- Position and level: To be agreed where not detailed.

© Copyright protected

P21 DOOR/ WINDOW IRONMONGERY

To be read with Preliminaries/ General Conditions.

PRE-TENDER

10 QUANTITIES AND LOCATIONS

- Quantities and locations of ironmongery are in the ironmongery schedule.
- Fixing: As sections L10 and L20.

GENERAL

120 IRONMONGERY RANGE SELECTED BY CONTRACTOR

- Source: Single co-ordinated range.
- Notification: Submit details of selected range, manufacturer and/ or supplier.
- Principal material/ finish: Satin stainless steel, grade 1.4401 (316).
- Items unavailable within selected range: Submit proposals.

140 SAMPLES

- General: Before placing orders with suppliers submit labelled samples of the following: as indicated by Engineer.
  - Conformity: Retain samples on site for the duration of the contract. Ensure conformity of ironmongery as delivered with labelled samples.

141 SAMPLE BOARDS

- General: Before placing orders with suppliers submit a sample board, containing labelled samples of ironmongery and showing methods of fixing.
- Range: Include as indicated by Engineer.
  - Conformity: Retain board on site in an approved location for the duration of the contract. Ensure conformity of ironmongery as delivered with labelled samples.

170 IRONMONGERIES FOR FIRE DOORS

- Relevant products: Ironmongery fixed to, or morticed into, the component parts of a fire resisting door assembly.
- Compliance: Ironmongery included in successful tests to BS 476-22 or BS EN 1634-1 on door assemblies similar to those proposed.
  - Certification: Submit evidence of successful testing by an accredited laboratory or submit CERTIFIRE certificates or submit to Engineer's approval.
- Melting point of components (except decorative non-functional parts): 800°C minimum.

180 STRENGTH CLASS OR CATEGORY OF DUTY FOR DOOR IRONMONGERY

- Requirement:
  - In accordance with DD 171, Heavy duty or severe duty where indicated in door hardware schedule.
  - To BS EN 1192, Class 3-4.
  - As schedule; and
- As drawings.
- General: Durability of ironmongery components to be compatible with stated category of duty of each door leaf.
  - Exclusions: Ironmongery with specific duty or 'category of use' defined elsewhere.
  - Documentation: Before placing orders with suppliers submit documentation showing product compliance with stated category of duty.

© Copyright protected

DOOR HANGING DEVICES

310 SINGLE AXIS DOOR HINGES as indicated

- Standard: To BS EN 1935.
  - Hinges to doors on escape routes and fire/ smoke control doors: CE marked.
- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Type: Double ball bearing butt.
- Size: As schedule.
- Material/ finish: Satin stainless steel, grade 1.4401 (316).
- Hinge grade: 13.
- Other requirements: Security dog bolt.

315 PERFORMANCE SPECIFICATION FOR SINGLE AXIS DOOR HINGES as indicated

- Standard: To BS EN 1935.
  - Hinges to doors on escape routes and fire/ smoke control doors: CE marked.
- Minimum classification grades:
  - Category of use: 3 and 4.
  - Durability: 7 for 200000 test cycles.
  - Test door mass: grade 6 for 120 Kg or grade 7 for 160 Kg.
  - Suitability for use on fire/ smoke doors: 1.
  - Safety: 1.
  - Corrosion resistance: 4.
  - Security - Burglar resistance: 1.
  - Hinge grade: 14.
- Type: As schedule.
- Size: As schedule.
- Material/ finish: Satin stainless steel, grade 1.4301 (304).
- Other requirements: Radiused corners or security dog bolt.

320 DOOR HINGES as schedule

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Type: As schedule.
- Size: As schedule.
- Material/ finish: Satin stainless steel, grade 1.4401 (316).
- Other requirements: None.

WINDOW HANGING DEVICES

365 SINGLE AXIS WINDOW HINGES GENERALLY

- Standard: To BS EN 1935.
- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Type: As schedule.
- Size: As schedule.
- Material/ finish: Satin stainless steel, grade 1.4401 (316).
- Hinge grade: not less than 9.
- Other requirements: None.

© Copyright protected

370 WINDOW HINGES GENERALLY

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Type: Plain bearing butt unless otherwise indicated on schedule.
- Size: As schedule.
- Material/ finish: Satin stainless steel, grade 1.4401 (316).

385 PIVOT HINGES GENERALLY

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Type: Reversible horizontal pivots with integral restrictor.
- Material/ finish: As schedule.

DOOR OPERATING DEVICES

410 OVERHEAD DOOR CLOSERS GENERALLY

- Standard: To BS EN 1154.
  - Door closing devices to fire/ smoke control doors: CE marked.
- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Type: Concealed except on fire doors.
- Power size: Adjustable 2-6.
- Other functions: Delayed closing.
- Casing finish: Powder coated; colour as indicated on schedule.
- Operational adjustment:
  - Variable power: Matched to size, weight and location of doors.
  - Latched doors: Override latches and/ or door seals when fitted.
  - Unlatched doors: Hold shut under normal working conditions.
  - Closing against smoke seals of fire doors: Positive. No gaps.

412 PERFORMANCE SPECIFICATION FOR OVERHEAD DOOR CLOSERS WHERE INDICATED

- Standard: To BS EN 1154.
  - Door closing devices to fire/ smoke control doors: CE marked.
- Minimum classification grades:
  - Category of use: 4.
  - Durability: 8.
  - Door closer power size: Adjustable 3-6.
  - Suitability for use on fire/ smoke doors: 1.
  - Safety: 1.
  - Corrosion resistance: 3 to 4.
- Type: Concealed except on fire doors.
- Other functions: Delayed closing.
- Casing finish: Powder coated; colour as indicated.
- Operational adjustment:
  - Variable power: Matched to the sizes and weights of doors.
  - Latched doors: Override latches and/ or door seals when fitted.
  - Unlatched doors: Hold shut under normal working conditions.
  - Closing against smoke seals of fire doors: Positive. No gaps.

© Copyright protected

452 PERFORMANCE SPECIFICATION FOR FLOOR SPRINGS GENERALLY

- Standard: To BS EN 1154.
  - Door closing devices to fire/ smoke control doors: CE marked.
- Minimum classification grades:
  - Category of use: 4.
  - Durability: 8.
  - Door closer power size: Adjustable 3-6.
  - Suitability for use on fire/ smoke doors: 1.
  - Safety: 1.
  - Corrosion resistance: 3.
- Other functions: Delayed closing.
- Material/ finish: Powder coated steel; colour as indicated.
  Operational adjustment:
  - Variable power: Matched to size, weight and location of doors.
  - Latched doors: Override latches and/ or door seals when fitted.
  - Unlatched doors: Hold shut under normal working conditions.

472 PERFORMANCE SPECIFICATION FOR ELECTROMAGNETIC HOLD OPEN/ SWING-FREE DEVICES (24 V) GENERALLY

- Standard: To BS EN 1155.
  - Electromagnetic devices to fire/ smoke control doors: CE marked.
- Type: Hold open, separate floor mounted, unless scheduled otherwise.
- Minimum classification grades:
  - Category of use: 3.
  - Durability: 8.
  - Hold open power size: 6.
  - Suitability for use on fire/ smoke doors: 1.
  - Safety: 1.
  - Corrosion resistance: 3.
- Material/ finish: As schedule.
- Means of release: Alarm system and/ or failure of power supply.
- Test switch: Located in a convenient position adjacent to door.
- Operational adjustment of integral closer:
  - Variable power: Matched to size, weight and location of doors.
  - Latched doors: Override latches and/ or door seals when fitted.
  - Unlatched doors: Hold shut under normal working conditions.

482 PERFORMANCE SPECIFICATION FOR DOOR COORDINATORS GENERALLY

- Standard: To BS EN 1158.
  - Door coordinators to fire/ smoke control doors: CE marked.
- Minimum classification grades:
  - Category of use: 3.
  - Durability: 8.
  - Door coordinator size: 6.
  - Suitability for use on fire/ smoke doors: 1.
  - Safety: 1.
  - Corrosion resistance: 3.
- Material/ finish: Powder coated steel; colour as indicated.
- Application: To all single swing double doors with rebated meeting stiles and fitted with self-closers.
- Selection criteria: Provide types that:

© Copyright protected

- Require the minimum amount of material to be removed from the door and frame.
- Are suitable for the size of rebates.

490 UNCONTROLLED DOOR CLOSERS GENERALLY

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Type: Concealed.
- Material/ finish: As schedule.
- Action: As schedule.
- Operation:
  - Power: To suit the size and weight of doors to which they are fitted.
  - Unlatched doors: Hold closed under normal conditions.

DOOR SECURING DEVICES

525 PERFORMANCE SPECIFICATION FOR DOOR LOCKS AND LATCHES GENERALLY

- Standard: To BS EN 12209.
- Minimum classification grades:
  - Category of use: 3.
  - Durability: W.
  - Door mass and closing force: 8.
  - Suitability for use on fire/ smoke doors: 1.
  - Safety: 0.
  - Corrosion resistance and temperature: E.
  - Security and drill resistance: 5.
  - Field of door application: N.
  - Type of key operation and locking: A.
  - Type of spindle operation: 4.
  - Key identification requirement: G.
- back set: As schedule.
- Material/ finish: As schedule.
- Keying: In master keyed suite.

540 DOOR LATCHES GENERALLY

- Standard: To BS EN 12209.
- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Type: As schedule.
- back set: As schedule.
- Material/ finish: Stainless steel faceplate.
- Latch spring strength: Select to prevent unsprung lever handles drooping.

566 PERFORMANCE SPECIFICATION FOR PADLOCKS GENERALLY

- Standard: To BS EN 12320.
- Minimum classification grades:
  - Category of use: – Grade 1.
  - Durability: 1
  - Corrosion resistance: 4.
  - Security: 5.
- Size: As schedule.

© Copyright protected

- Case: As schedule.
- Shackle: As schedule.
- Accessories: As schedule.
- Keying: In master keyed suite.

572 PERFORMANCE SPECIFICATION FOR EMERGENCY EXIT DEVICES GENERALLY

- Standard: To BS EN 179.
  - Emergency exit devices for locked doors on escape routes: CE marked.
- Minimum classification grades:
  - Category of use: 3.
  - Durability: 7.
  - Door mass: 6.
  - Suitability for use on fire/ smoke doors: 1.
  - Safety: 1.
  - Corrosion resistance: 4.
  - Security: 4.
  - Projection of operating element: 2.
  - Type of operation: B: Push pad operation.
- Material/ finish: Satin stainless steel.
- Additional requirements: Security alarmed.

578 PERFORMANCE SPECIFICATION FOR PANIC EXIT DEVICES GENERALLY

- Standard: To BS EN 1125.
  - Panic exit devices for locked doors on escape routes: CE marked.
- Minimum classification grades:
  - Category of use: 3.
  - Durability: 6.
  - Door mass: 6.
  - Suitability for use on fire/ smoke doors: 1.
  - Safety: 1.
  - Corrosion resistance: 4.
  - Security: 2.
  - Projection of bar: 2.
  - Type of bar operation: A: Push bar operation.
- Material/ finish: Satin stainless steel.
- Additional requirements: Security alarmed.

584 PERFORMANCE SPECIFICATION FOR DOOR BOLTS GENERALLY

- Standard: To BS EN 12051.
- Minimum classification grades:
  - Category of use: 3.
  - Number of test cycles: 4.
  - Door mass: - (no classification).
  - Fire safety: 1.
  - Safety in use: 1.
  - Corrosion resistance: 3.
  - Security: 4.
- Type: As schedule.
- Size: As schedule.
- Material/ finish: Satin stainless steel, grade 1.4401 (316).

© Copyright protected

- Additional requirements: None.

585 PERFORMANCE SPECIFICATION FOR CYLINDERS GENERALLY

- Standard: To BS EN 1303.
- Minimum classification grades:
  - Category of use: 1
  - Durability: 6 (100,000 cycles)
  - Door mass: Not graded
  - Fire resistance: 1 (suitable for fire/smoke doors)
  - Safety: 1
  - Corrosion resistance: 3
  - Security grade: 6 (for master keyed systems)
  - Attack resistance: 2
- Type: Thumb turn
- Size: As per schedule
- Material/finish: Satin stainless steel (Grade 316)
- Keying: In master keyed suite

586 PERFORMANCE SPECIFICATION FOR DUST PROOF STRIKES

- Standard: Manufacturer's tested product to match bolt
- Minimum classification grades:
  - Durability: Minimum 100,000 cycles
  - Corrosion resistance: Grade 3
- Type: Floor-mounted strike
- Size: Adjustable faceplate
- Material/finish: Satin stainless steel, Grade 316
- Additional requirements: Recessed flush finish

DOOR FURNITURE

610 LEVER HANDLES GENERALLY

- Standard: To BS EN 1906.
- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Style: As schedule.
- Size: As schedule.
- Material/ finish: Satin stainless steel, grade 1.4401 (316) As schedule.
- Mounting: As schedule.
- Additional requirements: None.

622 PERFORMANCE SPECIFICATION FOR LEVER HANDLE SETS GENERALLY

- Standard: To BS EN 1906.
- Minimum classification grades:
  - Category of use: Grade 4: High frequency with frequent violent usage.
  - Durability: Grade 7: 200 000 test cycles.
  - Door mass: - (no classification).
  - Fire resistance: Grade D1: For use on smoke control and fire resistant door assemblies with requirements for special core in the handle/ knob, tested with 200 000 cycles on a test door.
  - Safety: Grade 1: Safety applications.
  - Corrosion resistance: Grade 4: Very high resistance.
  - Security: Grade 2: Moderate burglary resistance.
  - Type of operation: Type B: Spring loaded furniture.

© Copyright protected

- Style: As schedule.
- Size: As schedule.
- Material/ finish: As schedule.
- Mounting: As schedule.
- Additional requirements: None.

625 PERFORMANCE SPECIFICATION FOR KNOBSETS GENERALLY

- Standard: To BS EN 1906.
- Minimum classification grades:
  - Category of use: 3.
  - Durability: 7.
  - Door mass: - (no classification).
  - Fire resistance: D.
  - Safety: 1.
  - Corrosion resistance: 4.
  - Security: 3.
  - Type of operation: B.
- Style: As schedule.
- Size: As schedule.
- Material/ finish: Satin stainless steel, grade 1.4401.
- Mounting: As schedule.
- Additional requirements: None.

651 PERFORMANCE SPECIFICATION FOR PULL HANDLES GENERALLY

- Standard: To BS 8424.
- Minimum classification grades:
  - Category of use: 3.
  - Durability: 2.
  - Door mass: - (no classification).
  - Suitability for use on fire/ smoke doors: 1.
  - Safety: 1.
  - Corrosion resistance: 3.
- Shape: As schedule.
- Diameter: As schedule.
- Distance between centres: As schedule.
- Material/ finish: Satin stainless steel, grade 1.4401 (316).
- Mounting: As schedule.
- Additional requirements none.

670 PUSH PLATES GENERALLY

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Size: As schedule.
- Material/ finish: Satin stainless steel, grade 1.4401 (316).
- Mounting: As schedule.
- Additional requirements: None.

690 KICK PLATES where indicated

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.

© Copyright protected

- Size: As schedule.
- Material/ finish: As schedule.
- Mounting: As schedule.
- Additional requirements: Rounded edges and radiused corners.

720 DOORSTOPS

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Type: As schedule.
- Usage: As schedule.

731 PERFORMANCE SPECIFICATION FOR LETTER PLATES where indicated

- Standard: To BS EN 13724.
- Minimum classification grades:
  - Type of aperture: 4.
  - Aperture size: 3, unless otherwise indicated.
  - Corrosion resistance: 3 to 4.
  - Security: 2.
- Operation: As schedule.
- Material/ finish: Satin stainless steel, grade 1.4401 (316), unless otherwise scheduled.
- Features: None.

760 DOOR HOLDERS WHERE INDICATED

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Type: Gravity hook.
- Size: As schedule.
- Material/ finish: Satin stainless steel, grade 1.4401 (316).

855 WEATHERSTRIP TO DOOR HEAD AND JAMBS WHERE INDICATED

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Type: Elastomeric compression strip in metal carrier.
- Size: to suit doors, as manufacturer's recommendations.
- Material/ finish: As schedule.

860 DOOR SEALS FOR locations indicated

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Type: Elastomeric compression strip in metal carrier.
- Size: to suit doors, as manufacturer's recommendations.
- Material/ finish: As schedule.

860A PERFORMANCE SPECIFICATION FOR AUTOMATIC DROP SEALS

- Standard:
  - Fire: BS EN 1634-1
  - Smoke: BS EN 1634-3
  - Acoustic: BS EN ISO 10140
- Minimum performance requirements:
  - Concealed, heavy duty
  - Fire rated: Minimum 60 minutes

© Copyright protected

  - Acoustic: ≥ 30 dB
- Type: Drop-down, spring-loaded
- Material/finish: Aluminium body with neoprene insert
- Additional requirements: Coordinate with sill detail

900 CASEMENT HANDLES GENERALLY

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Type: As schedule.
- Material/ finish: Satin stainless steel, grade 1.4401 (316).
- Features: None.

905 CASEMENT STAYS GENERALLY

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Type: As schedule.
- Size: As schedule.
- Material/ finish: Satin stainless steel, grade 1.4401 (316).
- Features: None.

910 WINDOW LEVER HANDLES WHERE INDICATED

- Manufacturer: Submit proposals to Engineer's approval.
  - Product reference: Submit proposals to Engineer's approval.
- Type: As schedule.
- Material/ finish: Satin stainless steel, grade 1.4401 (316).
- Features: None.

925 OVER CENTRE CASEMENT STAYS WHERE INDICATED

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Type: As schedule.
- Size: As schedule.
- Material/ finish: As schedule.
- Features: None.

930 FRICTION RESTRICTOR CASEMENT STAYS WHERE INDICATED

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Type: As schedule.
- Size: As schedule.
- Material/ finish: As schedule.
- Features: None.

940 SASH LIFT HANDLES WHERE INDICATED

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Type: As schedule.
- Size: As schedule.
- Material/ finish as schedule.

© Copyright protected

950 SASH EYES WHERE INDICATED

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Type: As schedule.
- Size: As schedule.
- Material/ finish: As schedule.

960 WEATHERSTRIP TO WINDOWS WHERE INDICATED

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Type: As schedule.
- Size: As schedule.
- Material/ Finish: As schedule.

P31 HOLES, CHASES, COVERS AND SUPPORTS FOR SERVICES

To be read with Preliminaries/ General Conditions.

PRODUCTS

370 ACCESS COVERS/ GRATINGS FOR FLOOR TRENCHES

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Covers/ Gratings: Gratings to be heavy duty Hot dip galvanized mild steel recessed pattern with granolithic topping Open gratings. Where indicated, sump pits to receive 6 mm thick aluminium sheets with diamond checkered pattern with stainless steel butt hinges and tamperproof stainless steel bolts and nuts.
  - Sizes: 6 mm thick plate and as drawings.
  - Loading grade: Class A, Class B, Class C, Class D, Class E, or Class F to BS EN 124.
- Frame/ Support/ Fixing: Frame cast in using integral anchors, covers fixed with corrosion resistant locking screws, or stainless steel class A2 where indicated on drawings.
- Accessories: as indicated.

370A CHECKERED PLATE COVERS FLOOR TRENCHES

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Covers/ Gratings: Hot dip galvanized mild steel checkered pattern. Where indicated, covers to be of cast iron to BS EN 1563.
  - Sizes: 6 mm thick plate and as drawings.
  - Loading grade: Class A, Class B, Class C, Class D, Class E, or Class F to BS EN 124.
- Frame/ Support/ Fixing: Frame cast in using integral anchors, covers fixed with corrosion resistant locking screws, or stainless steel class A2 where indicated on drawings.
- Accessories: as indicated.

370B ACCESS COVERS/ MANHOLE TOPS AND FRAMES generally

- Standard: To BS EN 124.
- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Material: Grey Iron or Ductile iron or Steel or Aluminium.
- Types: A15 for pedestrian use, or B125 for light traffic, or C250 for slow moving heavy traffic, or D400 for carriageway use, or E600 for loading dock use, or F900 for airport use.

370E MORTAR BEDDING

- Mix: 1:3 sulfate-resisting cement:sand.

370F WARNING MARKER TAPES

- Standard: To BS EN 12613.
- Type: Continuous colour coded, heavy gauge polyethylene identification tapes.
- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Width: 150 mm.
- Colour: Yellow with black lettering.
- Wire detection aid: Required.

© Copyright protected

370G WARNING MARKER TILES

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Material: Reinforced precast concrete tiles.
- Size: as indicated with pitched top.

EXECUTION

610 COORDINATION

- Locations and dimensions of holes and chases for services: Submit details as directed by Engineer.

620 HOLES, RECESSES AND CHASES IN IN SITU CONCRETE

- Cast in: Holes larger than 10 mm diameter, recesses and chases.
- Cutting and drilling:
  - Permitted for holes not larger than 10 mm diameter.
  - Not permitted for holes larger than 10 mm diameter except as indicated on drawings.

640 HOLES IN STRUCTURAL STEELWORK

- Cutting and drilling: Not permitted except as indicated on drawings.

650 HOLES, RECESSES AND CHASES IN MASONRY

- Locations: To maintain integrity of strength, stability and sound resistance of construction.
- Sizes: Minimum needed to accommodate services.
  - Holes (maximum): 300 mm².
- Walls of hollow or cellular blocks: Do not chase.
- Walls of other materials:
  - Vertical chases: No deeper than one third of single leaf thickness, excluding finishes.
  - Horizontal or raking chases: No longer than 1 m. No deeper than one sixth of the single leaf thickness, excluding finishes.
- Chases and recesses: Do not set back to back. Offset by a clear distance at least equal to the wall thickness.
- Cutting: Do not cut until mortar is fully set. Cut carefully and neatly. Avoid spalling, cracking and other damage to surrounding structure.

660 PREFORMED HOLES IN MASONRY

- Width of holes without bridging over (maximum): 460 mm.
  - Holes requiring bridging: Submit proposals.

690 INSTALLING PIPE SLEEVES

- Sleeves: Fit to pipes passing through building fabric.
- Material: Match pipeline.
- Size: One or two sizes larger than pipe to allow clearance.
- Finish: Install sleeves flush with building finish. In areas where floors are washed down, install protruding 100 mm above floor finish.
- Masking plates: Fit at visible penetrations, including through false ceilings of occupied rooms.

730 INSTALLING ACCESS COVERS/ GRATINGS AND FRAMES

- Seating: concrete and as indicated.
- Bedding and haunching of frames: Continuously.
  - Material: 1:3 cement:sand mortar.
  - Top of haunching: 30 mm below surrounding surfaces.
- Horizontal positioning of frames:

© Copyright protected

  - Centred over openings.
  - Install square with joints in surrounding surfaces: Wherever practicable.
- Vertical positioning of frames:
  - Level; or
  - Marry in with levels of surrounding surfaces.
- Permissible deviation in level of external covers and frames: +0 to -6 mm.

© Copyright protected

Q28 - TOPSOIL AND SOIL AMELIORANTS

To be read with Preliminaries/ General conditions.

TESTING OF MATERIALS

Preconstruction testing of **existing, on-site soil and imported soil** by **Contractor's** testing agency.

SYSTEM OUTLINE

110 PLANTING SOILS PRODUCED BY MODIFYING THE FOLLOWING SOIL SOURCES:

- Existing, On-Site Surface Soil **Stockpiled On-Site**
- Imported Soil
- Manufactured Soil:

120 PREPARATION OF UNAMENDED, ON-SITE SOIL BEFORE AMENDING

- Excavate soil to a depth of (**150 mm)** and stockpile until amended.
- Screen soil with a **(75-mm)** sieve to remove large materials.

130 PLACING AND MIXING PLANTING SOIL OVER EXPOSED SUBGRADE

- Till subgrade to depth of (**450 mm)**.
- Spread unamended soil to total depth of **(300 mm)** and amend in place.
- Compact each lift of planting soil.

140 PLACING MANUFACTURED PLANTING SOIL OVER EXPOSED SUBGRADE

- Till subgrade to depth of **(450 mm)**.
- Spread planting soil to total depth of **(300 mm)**.
- Compact each lift of planting soil.

150 BLENDING PLANTING SOIL IN PLACE.

- Till unamended, existing soil to depth of **(450 mm)**.
- Apply amendments and blend.
- Compact blended planting soil.

160 LAYERED SOIL ASSEMBLIES

- Layered Soil Assembly planting soil layers.

170 FIELD QUALITY CONTROL

- Testing Agency: **Contractor** engaged.

Q50B SITE/ STREET FURNITURE/ EQUIPMENT

To be read with Preliminaries/ General Conditions.

190 BOLLARDS Where Indicated

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Material: ,Stainless Steel Grade 316 or A4.
  - Finish as delivered:
  - Brushed;
  - Satin polished; unless otherwise indicated
- As manufactured.
  - Colour: To BS 4800, or RAL colour range, colour as selected by Engineer from Manufacturer's full range.
- Height above ground: As drawings.
- Sectional size: as drawings.
- Top: Angled or Domed or Flat or Pyramid.
- Special features:
  - Two eye bolts;
  - Single eye bolt;
  - Yellow reflective band, 150 mm high at top of bollard;
  - Red and white reflective band, 150 mm high at top of bollard;
  - Red reflective band, 150 mm high at top of bollard; and
- White reflective band, 150 mm high at top of bollard.
- Method of fixing: Base plate bolted to 400 x 400 x 400 mm concrete base 100 mm below paving surface or Base plate bolted to existing in situ concrete paving or Root, 300 mm below ground, set in concrete base.

196 REMOVABLE BOLLARDS GENERALLY

- Manufacturer: Submit proposals.
  - Product reference: Submit proposals.
- Material: Stainless Steel Grade 304 or A4.
  - Finish as delivered:
  - Satin polished; unless otherwise indicated.
- As manufactured.
  - Colour: To BS 4800, or to RAL colour range.
- Height above ground: As drawing.
- Sectional size: as drawing.
- Top: Angled or domed or flat or pyramid.
- Special features:
  - Recess cover plate;
  - Lifting handle ;
  - Lock;
  - Logo as drawing;
  - Two eye bolts;
  - Single eye bolt;
  - Yellow reflective band, 150 mm high at top of bollard;
  - Red and white reflective band, 150 mm high at top of bollard;
  - Red reflective band, 150 mm high at top of bollard; and

© Copyright protected

- White and red reflective band as drawing.
- Method of fixing: Concrete base with manufacturer's standard lockable socket or as indicated on drawings.

INSTALLATION

510 CONCRETE FOUNDATIONS GENERALLY

- Standard: To BS 8500-2.
- Concrete:
  - As section E10;
  - or Designated, not less than GEN 1; and
- Or Standard prescribed, not less than ST2.
- Admixtures: Do not use.
- Foundation holes: Neat vertical sides.
- Depth of foundations, bedding, haunching: Appropriate to provide adequate support and to receive overlying soft landscape or paving finishes.

515 SETTING COMPONENTS IN CONCRETE

- Holes: 250 x 250 x minimum 300 mm deep, unless otherwise indicated on drawings and as per manufacturer's recommendations.
- Components: Accurately positioned and securely supported.
- Concrete fill: Fully compacted as filling proceeds.
- Concrete foundations exposed to view: Compacted until air bubbles cease to appear on the upper surface, then weathered to shed water and trowelled smooth.
- Temporary component support: Maintain undisturbed for minimum 48 hours.

520 SETTING IN EARTH

- Holes: As small as practicable.
- Components being fixed: Accurately positioned and securely supported.
- Buried depth (minimum): 450 mm unless otherwise recommended by manufacturer.
- Earth refill: Well rammed as filling proceeds.

540 BUILDING IN TO MASONRY WALLS

- Components being built in: Accurately positioned and securely supported. Set in mortar and pointed neatly to match adjacent walling.
- Temporary support: Maintain for 48 hours (minimum) and prevent disturbance.

550 DAMAGE TO GALVANIZED SURFACES

- Minor damage in areas up to 40 mm² (including on fixings and fittings): Make good.
  - Material: Low melting point zinc alloy repair rods or powders made for this purpose or at least two coats of zinc-rich paint to BS 4652.
  - Thickness: Sufficient to provide a zinc coating at least equal to the original layer.

560 SITE PAINTING

- Timing: Prepare surfaces and apply finishes as soon as possible after fixing.

R10A - RAINWATER PIPEWORK AND GUTTERS

To be read in parallel with section R10B (Architecture)

PART 3 SPECIFICATION CLAUSES SPECIFIC TO R10

300.000 GENERAL / PRODUCT / MATERIALS

300.005 GENERAL:

- Install, commission and set to work a roof drainage system operating under gravity inside the building in accordance with BS EN 12056-3
- For siphonic drainage systems comply with the performance requirements in BS EN 12056-3 and the guidance given in BS 8490

300.090 ROOF OUTLETS:

- Standard
  - BS EN 1253-2
- Type : with emergency overflow
  - Material
  - Cast iron with large sump and flange, with removable non-clogging flush-mounted strainer and flashing clamp device to BS 416-1 Gratings
    - Domical.

300.110 BALCONY OUTLETS:

- Standards
  - BS EN 1253-2
- Material
- [Cast iron with large sump and flange, with removable non-clogging flush-mounted strainer and flashing clamp device to BS 416-1] Gratings

310.000 WORKMANSHIP

310.010 INSTALLATION GENERALLY:

- Install in accordance with BS 8000-13, BS EN 12056-5 and manufacturer's recommendations to ensure complete discharge of rainwater from building without leaking.
- Handle, store and securely fix all products and accessories in accordance with manufacturer's recommendations.
- Inspect components before fixing and reject any which are defective. Ensure cut ends are clean and square with burrs removed.
- Where not indicated otherwise use plated, sheradized, galvanized or non-ferrous fastenings, suitable for purpose and background, and compatible with material being fixed.

310.020 BEFORE COMMENCING WORK:

- Before commencing work ensure that below ground drainage is ready to receive rainwater or that the discharge can be dispersed by approved means to prevent damage or disfigurement of

the building fabric. Ensure any specific painting of surfaces which will be concealed or otherwise inaccessible, is completed.

310.130 ACCESS POINTS:

- Provide rodding and access points at all changes of direction to enable whole system to be maintained.
- Provide square door type access points as indicated on drawings at foot of all rainwater stacks, and at other locations on the stacks as indicated on the drawings.
- Fit covers, caps, etc. as work proceeds to prevent ingress of dirt and building materials.

310.140 RAINWATER OUTLETS:

- Fix a grating or cage to restrict entry of solids to system.

310.150 ROOF AND BALCONY OUTLETS:

- Ensure that outlets are securely fixed before connecting pipework.
- Ensure junctions between outlets and pipework can accommodate all movement in roof decking and pipework.

320.040 DOWNPIPE TERMINATION:

- Terminate downpipes to discharge freely at ground level 500mm above finished floor level through the external wall

320.050 DESIGN PARAMETERS:

- Rainfall intensity (mm/hr) 290
- Pipe pressure range
  - Between 4.0 and -0.8 bar gauge pressure.
- Water velocity
  - Above 1m/s and not in excess of 8m/s.

320.080 RAINWATER OUTLETS:

- Material
  - Galvanized mild steel.
- Gutter material
  - Galvanized mild steel.
- Provide all outlets with leaf guards.
- Use
  - Clamp ring outlet.
  - Suitable for heat bonding into membrane.
  - Suitable for welding into gutters.
  - Trafficable.
- Incorporate an upper flange for fixing; a baffle arrangement to inhibit the formation of vortices and entrainment of air into pipe system.
- On secondary outlets incorporate an upstand.

320.100 WORKMANSHIP:

- Fittings
  - Install eccentric reducers in horizontal flows so that the crown of the pipe is retained. Use T pieces with branches at 45^{o} in direction of flow.
- Joints
  - Ensure joints are capable of resisting longitudinal forces without sliding apart.
  - Ensure joints are restrained to prevent relative movement.
- Jointing
  - Make joints in accordance with manufacturer's recommendations
- Outlets
  - Ensure that outlets are fixed before connecting pipework. Position outlets to align with high level collection pipes. Connect the outlet spigot to the pipework in accordance with manufacturer's instructions using a proprietary connection.

320.110 PIPEWORK INSTALLATION:

- Fix high level collector pipes and downpipes in accordance with manufacturer's recommendations.
- Install polyethylene pipework using rail system to constrain thermal movement.
- Support horizontal or near-horizontal sections of rainwater outlet tail pipe greater than 1.5 metres long.
- Use additional supports on pipe collars, particularly at changes in direction.
- Do not make changes in direction in pipe runs unless they are shown on the drawing or otherwise approved.
- Provide rodding eyes as indicated.
- Ensure all pipe hangers, beam clamps, bolts, nuts and fittings used in the pipe support system are either hot dip galvanised or bright zinc phosphate finish. Fit an isolation strip within all supports to separate dissimilar metals.

320.120 TESTING:

- Inform CA in advance to give a reasonable opportunity to observe tests.
- Check all sections of installation are free from obstruction and debris before testing.
- Provide assistance and apparatus for testing.
- Carry out tests in accordance with BS EN 12056.
  - Air test
  - Water test
- Remedy all defects without delay and re-test as instructed.

R11 - FOUL DRAINAGE ABOVE GROUND

PART 3 SPECIFICATION CLAUSES SPECIFIC TO R11

300.000 GENERAL / PRODUCTS / MATERIALS

300.005 GENERAL:

- Install commission and set to work a gravity drainage system inside the building in accordance with BS EN 12056 as appropriate.

300.021 FLOOR DRAIN:

- Plastic floor drain FD-1
  - Standard
    - BS EN 1253
  - Material
    - [PVC
  - Outlet
    - Bottom
    - Side
  - Sediment Bucket
    - Required
  - Top or Strainer Material
    - Stainless steel
  - Top of Body and Strainer Finish
    - Stainless steel
  - Top Shape
    - linear as per sanitary manual
  - Trap Material
    - [Plastic drainage piping]
  - Trap Pattern
    - Standard P-trap

- Cast iron floor drain, FD-2
  - Standard
    - BS EN 1253
  - Pattern
    - Floor
    - Funnel floor
  - Body Material

- Gray iron

- Outlet
  - Bottom
- Backwater valve
  - Drain-outlet type
  - Integral, swing-check type
- Top or Strainer Material
  - Gray iron
- Top of Body and Strainer Finish
  - Nickel bronze
  - Polished bronze
  - Rough bronze
- Top Loading Classification
  - Heavy Duty
- Funnel
  - Required
- Trap Material
  - Bronze
  - Cast iron
- Trap Pattern
  - Standard P-trap
- Trap Features
  - Cleanout

300.022 CLEANOUT:

- Metal floor clean outs
  - BS EN 1253
- Type
  - Adjustable housing
  - Cast-iron soil pipe with cast-iron ferrule
  - heavy-duty, adjustable housing
  - threaded, adjustable housing
- Outlet
  - Bottom
- Body or Ferrule
  - Cast iron
- Outlet Connection
  - Inside calk

        - Spigot
        - Threaded.
    - Closure
        - cast-iron plug
        - plastic plug
    - Adjustable Housing Material
        - Cast iron
        - threads
        - set-screws or other device
    - Frame and Cover Material and Finish
        - Stainless steel
    - Top Loading Classification
        - Heavy
    - Housing
        - Stainless steel
    - Closure
        - Stainless steel with seal

- Plastic Floor Cleanouts
    - Standard
        - BS EN 1253
    - Body
        - PVC
    - Closure plug
        - PVC plug

300.023 TRENCH DRAIN:

- Metal trench Drain TD-1
    - Standard
        - BS EN 1253
    - Material
        - Ductile
        - Gray iron
    - Flange
        - Anchor
        - Seepage
    - Outlet
        - End
        - Side

- Grate Material
  - Ductile iron
  - Ductile iron or gray iron
- Top Loading Classification
  - Heavy Duty for waste rooms
- Trap Material
  - Same pipe material
- Trap Pattern
  - Standard P-trap

300.030 TRAPS:

- Form
  - P.
- Standard
  - Plastic to BS EN 274-1, BS EN 274-2, BS EN 274-3.
  - Cast iron
    - BS 416-1
    - BS EN 877

300.160 AIR ADMITTANCE VALVES:

- Standard - BS EN 12380
- Ensure that there is a change of gradient at stack connections. Use swept branches on small diameter pipes. Use swept inlet or 45° branch connections for pipe 75mm diameter or over.

300.161 VENT CAPS (VENT COWL):

- Material
  - uPVC Plastic Cowl conforming to BS EN 1329 and to BS 4514
- Size: Same as connected stack vent or vent stack.
- Install vent caps on each vent pipe passing through roof.

310.000 WORKMANSHIP

310.010 PERFORMANCE CRITERIA:

- Install pipework fittings and accessories to ensure that:
  - Appliances drain quickly, quietly and completely at all times without nuisance or risk to health.
  - Discharge is conveyed without crossflow, backfall, leakage or blockage.
  - Air from drainage system does not enter building.
  - Pressure fluctuations in pipework do not vary by more than plus or minus 38mm water gauge and traps retain a water seal of not less than 25mm.
  - System can be adequately tested, cleaned and maintained.

310.020 ROUTES:

- Ensure pipe routes are shortest practicable, with as few bends as possible and no bends in wet portion of soil stacks, unless indicated otherwise on drawings.

310.030 COATED PIPES:

- Make good damaged coatings and cut ends, or recoat, as recommended by manufacturer.

310.040 INSTALLATION GENERALLY:

- Install pipes, fittings and accessories in accordance with BS 8000-13, BS EN 12056-5 and manufacturer's recommendations.
- Install thermoplastic piping systems in accordance with PD CEN/TR 13801
- Obtain all components for each type of pipework from the same manufacturer, unless otherwise indicated.
- Inspect components carefully before fixing and reject any which are defective.
- Ensure cut ends of pipes to be clean and square with burrs removed.
- Allow for thermal and building movement when jointing and fixing.
- Form junctions using fittings intended for the purpose, ensuring that jointing material does not project into bore of pipes, fittings and appliances.
- Avoid contact between dissimilar metals and other materials which would result in electrolytic corrosion.
- Provide access covers and cleaning eyes as necessary in convenient locations, to permit adequate testing and cleaning of pipework.
- Prevent entry of foreign matter into any part of system by sealing openings during construction. Fit all access covers and cleaning eyes as work proceeds.

310.070 WASTES:

- Bed in waterproof jointing compound and fix with resilient washer between appliance and backnut.

310.080 WASTE CONNECTORS:

- Join to traps as manufacturer's recommendations.

310.100 TRAP TEST REQUIREMENTS:

- Ensure there is a retention of a minimum of 25mm water seal in every trap, and that no air is blown through the trap seal when performance is tested.

310.110 ACCESS POINTS:

- Provide rodding and access points at all changes of direction to enable whole system to be maintained.
- Provide square door type access points as indicated on drawings at foot of all soil and ventilation pipes and at any subsequent floor levels as indicated on the drawings and/or as directed by building control. Where practicable, locate access points and horizontal anti-syphon pipes above fitment flood level a minimum of 1200mm above the respective finished floor level.
- In general make WC connections to drain points and soil pipes via flexible connectors.

R12A - DRAINAGE BELOW GROUND - UTILITIES

PART 1 SYSTEM OBJECTIVES

100.000 OBJECTIVES

100.010 SUMMARY

A. This Section includes storm drainage outside the building.

110.000 DESIGN PARAMETERS

110.010 PROJECT/SITE CONDITIONS

A. Site Information: Perform site survey, research public utility records, and verify existing utility locations.

B. Locate existing structures and piping, if any, to be closed and abandoned.

C. Existing Utilities: Do not interrupt or interfere with utilities serving facilities on the Project site or on adjoining property unless permitted by the Engineer under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated or directed.

D. Notify the Engineer not less than 72 hours in advance of proposed utility interruptions.

E. Do not proceed with utility interruptions without the Engineer's written permission.

F. Coordinate connection to drainage main with concerned authorities

110.020 DEFINITIONS AND ABBREVIATIONS

A. The following are industry abbreviations for used materials:

1. PE: Polyethylene plastic.
2. uPVC: Unplasticized Polyvinyl chloride plastic.
3. GRP: Glass-Fiber Reinforced Plastic.
4. VC: Vitrified Clay.

PART 2 REFERENCES

200.000 RELATED DOCUMENTS

A. General

1. Drawings and general provisions of the Contract, including Conditions of Contract and Division A Specification Sections, apply to this Section.

B. Related Sections

1. Section D20 "Excavating and Filling" for excavating, trenching and backfilling.
2. Sections E05 "In Situ Concrete Construction Generally", E10 "Mixing, Casting and Curing In Situ Concrete", E20 "Formwork for In Situ Concrete" and E30 "Reinforcement for In Situ Concrete" for concrete structures.
3. Section J40 "Flexible Sheet Waterproofing and Damp Proofing".

PART 3 MATERIALS AND WORKMANSHIP

300.000 MATERIALS

300.010 PIPES, FITTINGS AND ACCESSORIES

A. CONCRETE PIPE

B. PIPES AND FITTINGS: THERMOPLASTIC PIPE

1. uPVC GRAVITY PIPE
2. POLYETHELENE (PE) GRAVITY PIPE
3. SUB-DRAIN TILE PIPE
    a) .
4. SUB-DRAIN PERFORATED PIPE

C. PIPES AND FITTINGS: GRP PIPE FOR DRAINAGE

D. PIPE ACCESSORIES: TAPPING SADDLES:

1. CAST IRON

E. SERVICE CONNECTIONS

1. This work shall consist of the provision and installation of the pipes from the manhole or main pipe up to the inspection or valve chamber or stubout to be located at the property line all as indicated on the Drawings.
2. Building or house connection can be single or grouped as indicated on the Drawings.
3. Unless otherwise indicated on drawings, the material of pipes and fittings for service connections shall be similar to those used for the secondary pipe and conforming to the requirements of this Section
4. Work on service connection shall be carried out as specified in sub-sections 330.000 below.

F. COMPRESSIBLE BOARD

1. CONSTRUCTION JOINT MATERIAL

300.020 VALVES

A. GATE VALVES

B. BUTTERFLY VALVES

C. CHECK VALVES

D. AIR VALVES

1. AIR VALVES FOR PRESSURIZED MAINS

300.030 VALVES: JOINTING MATERIALS

A. GENERAL

1. GASKETS:
2. RINGS:
3. BOLTS AND NUTS:
4. WASHERS:.
5. DIELECTRIC JOINTS:

300.040 VALVE ACCESSORIES AND OPERATORS

A. VALVE ACCESSORIES

1. HANDWHEELS
2. VALVE CAPS
3. OPERATION KEYSInsert rate, normally 1 in 5.
4. EXTENSION SPINDLES FOR GATE VALVES
5. PROTECTION TUBES:
6. SURFACE BOXES:
7. LIFTING KEY SETS
8. Operating Wrenches:

300.050 MANHOLES, GULLIES, INLETS, CHAMBERS AND INTERCEPTORS: COATINGS

A. COATING for internal surfaces of concrete manholes and chambers

B. COATING for external surfaces of concrete manholes and chambers

or other equal and approved.

C. WATERPROOFING external surfaces

300.060 MANHOLES & CHAMBERS: COMPONENTS

A. CAST IN SITU UNITS

B. PRECAST UNITS

C. BRICKS:

D. COVERS AND FRAMES:

1. For apron and graded area of the runway strips and taxiway strip (Taxiway and Shoulder): Class F900 ultra heavy-duty non-rock type for aircraft wheel loads. minimum test load 900 kN.
2. for Roadways: Class D400, Heavy duty, minimum test load 400 KN.
3. for sidewalks: Class C250, Medium duty, minimum test load 250 KN
4. for footpaths: Class B125, Light duty, minimum test load 125 KN.

E. Manhole Cover Inserts: Manufactured, GRP form, of size to fit between manhole frame and cover and designed to prevent stormwater inflow. Include handle for removal and gasket for gastight sealing.

1. Type: Solid.
2. Type: With drainage and vent holes.
3. Type: With valve.

F. ROAD GULLY GRATINGS: non-rocking to BS EN 124, coated to BS 3416. Minimum thickness 250 microns. Types to be as follows:

a) for Roadways: Class D400, Heavy duty, minimum test load 400 KN.
b) for sidewalks: Class C250, Medium duty, minimum test load 250 KN
c) for footpaths: Class B125, Light duty, minimum test load 125 KN.

G. GRP ladders:

H. SAFETY CHAINS:

I. GUARDRAILING:

J. GEOTEXTILE FILTER MEMBRANE

310.000 QUALITY MANAGEMENT

310.010 GENERAL REQUIREMENTS

1. MANUFACTURER'S CERTIFICATE: materials are to be supplied with a certificate, in respect of each delivery, stating that products comply with and have been factory tested in accordance with specified Standards.
2. MARKING: unless otherwise specified in the relevant Standard products are to have legibly cast, stamped or indelibly painted on, the following marks, as appropriate:

a) manufacturer's name, initials and identification mark
b) nominal diameter
c) class designation
d) initials and number of relevant Standard
e) length of pipe if shorter than standard length
f) angle of bends in degrees
g) date of manufacture.

3. SPECIAL TESTS: whenever required by the Engineer, supply and transport to a testing laboratory samples of materials selected by the Engineer. Number of samples is not to be more than 0.5% of total supplied, with at least one from each class, diameter and manufacturer.

Failure of any sample is to be followed by a second and if necessary a third test from the same batch. A third test failure will result in all material from that manufacturer being rejected and replaced by material from a different manufacturer, subject to approval and satisfactory tests. Provide laboratory test report in an approved form.

320.000 SUBMITTALS

A. Product Data: Submit manufacturer's technical product data and installation instructions for system materials and products.

B. Include plans, elevations, details, and attachments for the following:

1. Drainage pipe network, including pipe diameters and gradients
2. Manholes and other structures, including invert levels, frames, covers, and grates.

C. Coordination Drawings: Show manholes and other structures, pipe sizes, locations, and elevations. Include details of underground structures and connections. Show other piping in same trench and clearances from drainage system piping. Indicate interface and spatial relationship between piping and proximate structures.

D. Coordination Profile Drawings: Show system piping in elevation. Draw profiles at horizontal scale of not less than 1:1000 and vertical scale of not less than 1:100. Indicate underground structures and pipe. Show types, sizes, materials, and elevations of other utilities crossing system piping.

E. As-Built Drawings: At project close-out, submit record drawings of installed pipework and products, in accordance with requirements of the Specification, Division A.

F. Maintenance Data: Submit maintenance data and parts lists for system materials and products. Include this data, product data, Shop Drawings, and submit drawings in maintenance manual; in accordance with requirements of the Specification, Division A.

G. Certificate of Compliance.

H. Field Test Reports: Indicate and interpret test results for compliance with performance requirements.

330.000 EXECUTION

330.010 PIPES, FITTINGS AND ACCESSORIES

A. GENERAL

1. MANUFACTURER'S RECOMMENDATIONS on handling, repairing, laying, jointing, anchoring, testing and other works for pipes, fittings, valves and accessories are to be strictly followed.
2. LOADING AND UNLOADING: use cranes, hoists or skidways as directed by the Engineer. Use hooks, spreader beams, ropes, band or wire slings etc. as recommended by manufacturer for each type of pipe and as approved by the Engineer.
3. STACK pipes on level surface. Do not rest pipes on sockets or jointing fairlings. Securely chock end pipes in bottom row. Height of stack is to be to manufacturer's instructions.
4. HANDLE material with care to avoid damage whether moved by hand, skidways or hoists.
5. STORING: provide safe storage for material. Interior of pipes, fittings etc. are to be kept free from dirt and foreign matter. Provide shade for materials as required by manufacturer's instructions and to the Engineer's approval.
6. CUTTING: use hacksaws, manually operated wheel cutter or pipe cutting machine as per manufacturer's instructions. If, in the opinion of the Engineer, special precautions are to be taken to eliminate airborne particles, use methods and equipment as directed by the Engineer. Prepare ends according to type of joint used and follow manufacturer's recommendations. Take care not to damage lining, if any. Repair on site, minor damage, if permitted.
7. REPAIR DAMAGED COATING, SHEATHING OR LINING in accordance with the Specification and manufacturer's instructions. Use material compatible with that originally used. Repair is to be approved by the Engineer before incorporating materials into the work.

B. EXCAVATION AND EARTHWORK

1. EXCAVATION AND EARTHWORK including but not limited to pipe trenches, earthwork support, backfilling, disposal, and surface reinstatement are to be in accordance with the requirements of Division D20 of the Specification.

C. PIPE LAYING AND JOINTING

1. GENERAL

a) LOWERING: do not lower pipe into trench until pipe bed is brought to grade and approved.
b) LOWERING: use ropes, wire slings, band slings, spreader beams etc. as recommended by manufacturer for each type of pipe and as approved.
c) EXAMINE MATERIAL carefully for damage. Test for soundness in accordance with manufacturer's instructions before laying.
d) EXAMINE MATERIAL: ensure internal coating or lining and outer coating or sheathing are undamaged. If damaged, make good or dispose of as directed.
e) PIPE CLEANLINESS: remove dirt and foreign matter before lowering.
f) PIPE CLEANLINESS: clear construction debris from inside of pipe before making joint.
g) PIPE PLACEMENT: lay pipe on an even formation true to grade and line, with sockets (if any) facing up the gradient.
h) PIPE ON SOLID GROUND: cut holes in bottom of trench to allow proper jointing and for barrel of pipe to bear evenly on solid ground for its full length.
i) PIPE ON GRANULAR BEDDING: scoop out locally at sockets/couplings to enable pipe to rest uniformly on barrel and adjust to exact line and level. After testing lay and compact further granular material in 100 mm layers to levels shown on the Drawings.
j) PIPE ON CONCRETE BED OR SURROUND: provide rectangular blocks of concrete as per Section E10, made in approved moulds at least 14 days before use, and approved hardwood folding wedges. Provide two concrete blocks for each pipe, set and bone into correct level on formation bottom and lay pipe properly centred and socketed. Insert two hardwood folding wedges, of width equal to width of concrete block, between body of pipe and block and drive together until pipe is brought to exact level required. Leave blocks and wedges undisturbed while pipes are being jointed and concrete bed and haunch or surround are being placed. Ensure blocks and wedges are of sufficient size and strength to prevent settlement of pipes. Leave sufficient space to enable joints to be made, tested and inspected.
k) PIPE PLUGS: when pipe laying is not in progress, close open ends of pipes with properly fitted temporary wooden plugs or standard caps as directed.

2. JOINTING

a) MANUFACTURER'S INSTRUCTIONS are to be followed regarding cleanliness of joint surfaces, lubricant used, correct location of components, provision of correct gaps between end of spigot and back of socket for flexible joints etc.
b) DEFLECTION OF JOINT: do not deflect flexible joints beyond maximum permissible angles given by manufacturer and/or relevant Standard.
c) PATENT DETACHABLE AND FLEXIBLE JOINTS: strictly comply with special instructions issued by manufacturers of proprietary joints when laying and jointing.
d) DIFFERING PIPE AND FITTING MATERIAL: joint with adaptors as recommended by pipe manufacturer.
e) LINE AND GRADIENT

1) IN OPEN EXCAVATION: provide and maintain sight rails and boning rods properly painted to ensure correct alignment of pipe runs. Sight rails are to be positioned either vertically above the lines of pipes or immediately adjacent thereto. At no time are there to be less than three sight rails in position on each length of pipeline under construction to any one gradient.
2) IN HEADING: provide and maintain marks to establish line and level of pipeline. Marks are to be fixed in each working shaft and two further marks established in each length of heading.

3. TOLERANCES

a) GRAVITY PIPES

4.

a) PREVENTION
b) REMOVE

5. PIPES BUILT INTO STRUCTURES

a) TREATMENT OF EXTERNAL SURFACE
b) FLEXIBLE JOINTS

D. IDENTIFICATION:

1. Use warning tape or detectable warning tape over ferrous piping.
2. Use detectable warning tape over nonferrous piping and over edges of underground structures.

E. FIELD TESTING

1. GENERAL

a) PROVIDE pumping equipment, pressure gauges, instruments and water needed for hydrostatic testing.
b) CARRY OUT TESTS in the presence of the Engineer.
c) FITTINGS AND JOINTS: permanently anchor fittings before testing and leave all joints exposed for checking.
d) TEST SECTIONS: limit test sections to not more than 500 m.
e) TEST SECTIONS: test pressure lines between valve chambers whenever possible.
f) TEST SECTIONS: test gravity sewers in sections between manholes.
g) TEST PLUG: secure end of main and test plug by struts.
h) CLOSED VALVE: do not test against a closed valve unless there is no acceptable alternative.
i) APPLY PRESSURE by manually operated test pump or, in the case of large diameter mains, by power driven test pump, if approved.
j) EXAMINE exposed joints and repair visible leaks.
k) FAILURE: should a test fail, locate leak and replace or make good defective pipe or replace and make good faulty joint. Retest main.
l) RECORDS: keep test records in an approved form. Hand original copy to the Engineer immediately after completion of test.
m) PRESSURE LINES: carry out hydrostatic test while pipeline is partially backfilled.
n) NON-PRESSURE LINES not exceeding 900 mm diameter are to be air tested before backfilling and hydrostatic tested after backfilling.
o) NON-PRESSURE LINES over 1000 mm diameter are to be visually inspected from the inside and tested at joints by hydraulic individual joint test.
p) NON-PRESSURE LINES: Carry out infiltration tests where crown of pipe at high part of length under test is more than 1.2 m below water table.

2. HYDROSTATIC TESTING OF PRESSURE PIPELINES

a) FILL PIPE slowly with water from lowest point. Do not use power-driven pump unless approved.
b) FILL ABSORBANT PIPES with water and allow to stand for at least 24 hours to allow complete absorption.
c) ENTRAPPED AIR is to be bled before pressurizing.
d) PRESSURIZING is to continue until specified test pressure is reached in lowest part of section under test. Bleed further quantities of entrapped air while raising pressure.
e) MAINTAIN TEST PRESSURE for specified test duration with pumping stopped.
f) REPRESSURIZE to original test pressure and record respective volumes of water pumped.
g) FAILURE: pipeline will be deemed to have failed test if:

1) visible leaks are detected, regardless of leakage being within specified limits.
2) volume of water lost during period when pumping was stopped exceeds allowable leakage.

h) TEST PRESSURE: Unless otherwise specified, the test pressure shall be equal to 1.5 times the maximum working pressure of the pipeline as shown on the Drawings or as determined by the Engineer on Site, but shall in no case exceed 75% of the factory hydrostatic test pressure.

i) TEST PERIOD: 2 hrs.

j) ALLOWABLE LEAKAGE: 0.02 liters/mm dia/km length/day/10 m head of applied pressure.

3. HYDROSTATIC TESTING OF NON-PRESSURE PIPELINES

a) PROCEDURE is to be as described for pressure pipes.
b) TEST PRESSURE: 1.0 m head of water above pipe soffit at highest point and not greater than 6 m head of water at lowest point of section under test. If maximum head is exceeded, test section in stages.
c) TEST PERIOD: 1 hour.
d) ALLOWABLE LEAKAGE FOR PIPELINES: 0.12 litres/km length metre/metre diameter/hr.
e) ALLOWABLE LEAKAGE FOR PIPELINES INCLUDING STRUCTURES OR FOR STRUCTURES ALONE: As specified in BS EN 1610.

4. Air Testing of Pipelines

a) Test procedure to BS EN 1610.

5. Infiltration Test for Gravity Pipes

a) Timing: Carry out test after total backfilling of length under test.
b) Plug effectively all inlets to system as directed.
c) Measure residual flow by approved method i.e. weir or other.
d) Infiltration limits: The following limits are not to be exceeded:

1) Pipelines not exceeding 700 mm: 0.02 litres/hour/100 linear metres/mm diameter,
2) Pipelines over 700 mm: 0.03 litres/hour/100 linear metres/mm diameter.

e) Failure: Test will be deemed to have failed if allowable infiltration water is exceeded. Locate source of excessive infiltration by approved means i.e. traversing light and mirrors or inflated rubber plug etc. and make good. Repeat test until successful.

6. VISUAL INSPECTION TEST

a) TIMING: carry out test after total backfilling of length under test.
b) LIMIT of length to be tested at one time is three full-length pipes unless otherwise approved.
c) APPARATUS: use rubber tired bogies which do not damage lining of pipe and an adequate supply of electric lamps.
d) CHECK joints by means of feelers to ensure rubber rings are correctly located.
e) CHECK pipe barrel for visible cracks.

7. Hydraulic Individual Joint Test for Pipes Exceeding 1000 mm:

a) Test Procedure to BS EN 1610

8. DEFLECTION TESTS FOR GRP PIPES

a) CONDUCT: deflection tests for GRP pipes as required by the Engineer at 3 stages. Deflection shall be measured at the spigot end at midpoint and at socket end.
b) STAGE 1: at completion of primary backfill (deflection at this stage should be below 0.5%).
c) STAGE 2: at final backfill (Maximum allowable deflection 2.5%).
d) STAGE 3: six months after final backfill (maximum allowable deflection 4.0%).
e) PIPES not passing the deflection tests at stage 2 or stage 3 will be removed and replaced.

F. BUILDING CONNECTIONS

1. Location: The Contractor shall agree location and invert level of connections with the Engineer before starting construction.

2. The Contractor shall programme connections to follow closely construction of sewer.
3. Execution: Connection to sewer shall be at manhole, where possible, or by T or Y junction subject to the Client approval.
4. Minimum Grade: The Contractor shall lay connections at minimum grade of 0.75 per 1000 unless otherwise approved.
5. The Contractor shall install, bed and test connections in same manner as main sewers.
6. Records: The Contractor shall maintain accurate records of location of connection to main drainage pipe.

    a) Location, description and elevation of obstructions and method of protection.

7. Survey Log Book: The Contractor shall keep records in an approved survey log book, made available for inspection and handed to the Employer on completion. The Contractor shall transfer information to sketches and tables as agreed with the Engineer, provide three bound copies and hand to the Employer.

G. CLEANING AND INSPECTION OF DRAINAGE NETWORKS

1. CLEANING: clean pipeline of silt and debris after backfilling pipe trenches and completing manholes, hatch boxes etc. but before surfaces are permanently reinstated and make ready for inspection by the Engineer.
2. INSPECTION: pipelines of 900 mm diameter and over are, where practicable, to be inspected from the inside and when necessary a suitable trolley is to be provided for this purpose.
3. INSPECTION: pipelines less than 900 mm diameter and larger pipelines which cannot be inspected from the inside, are to be inspected by passing a cylinder of diameter 25 mm less than the internal diameter of the pipe and length not less than the internal diameter of the pipe through each pipeline.

H. BEDDING, HAUNCHING, ENCASEMENT AND THRUST BLOCKS

1. GENERAL

    a) CONCRETE WORK generally is to comply with the appropriate requirements of Sections E05 "In Situ Concrete Construction Generally", E10 and "Mixing, Casting and Curing In Situ Concrete", E20 "Formwork for In Situ Concrete" and E30 "Reinforcement for In Situ Concrete".

2. PLACING CONCRETE

    a) AFTER PLACING PIPE place concrete in trench and thoroughly work under pipe to provide solid and uniform bedding.
    b) AFTER PIPE JOINT IS COMPLETED place balance of concrete or haunching and work into place on both sides simultaneously.
    c) FORM VERTICAL CONSTRUCTION JOINTS in concrete beds, surrounds etc. at face of pipe joints with compressible board and finish to profile of concrete and pipe. Fill any gap between spigot and socket with approved resilient material.

3. PLACING MATERIAL OTHER THAN CONCRETE

    a) PLACE BEDDING MATERIAL in bottom of prepared trench and carefully hand tamp to minimum thicknesses.
    b) AFTER PIPE HAS BEEN LAID, place additional material or haunching in successive layers not exceeding 150 mm thick on both sides simultaneously. Completely fill spaces between pipe and side of trench and carefully hand tamp without disturbing pipe.

4. THRUST BLOCKS

    a) GENERAL: provide thrust blocks at bends and junctions on pressure pipelines. Additional excavation required is to be made after pipeline has been jointed. No pressure is to be applied to the thrust block until concrete has matured for at least 3 days.

330.020 VALVES & ACCESSORIES

A. GENERAL

1. PRIOR TO INSTALLATION, inspect for cleanliness of bores, seating surfaces etc. and for handling damage, cracks, missing parts and tightness of pressure-containing bolting.
2. ENSURE valves, gates and hydrants are in closed position before installation.
3. OPERATE valves and hydrants through one complete opening and closing cycle in the position in which they are to be installed to ensure proper functioning.

B. INSTALLATION

1. VALVES

a) SET AND JOINT valves to pipe in manner specified for laying and jointing pipe and/or to manufacturer's instructions.
b) CONCRETE PADS: provide valves with concrete pads, as specified in Section E10 and as shown on the Drawings so that pipe does not support weight of valve.
c) VALVES WITHOUT CONCRETE PADS: place on firm footing to prevent settling and excessive strain on connection to pipe.
d) DO NOT use valve to bring misaligned pipe into alignment during installation.
e) INSPECT all pressure-containing bolting (bonnet, seal plate and end connections) for adequate tightness after installation but prior to field testing.

C. FIELD PROTECTION

1. VALVES: protect valves against action of external agents by a coat of approved bituminous compound applied cold by brush after pressure tests on pipelines have been completed.
2. GATES: protect against action of external agents with one coat of approved bituminous compound applied cold by brush after installation.
3. BOLTS: protect buried bolts against corrosion with approved paint or by polyethylene wrapping.

330.030 MANHOLES & CHAMBERS

A. GENERAL

1. EXCAVATION AND BACKFILLING generally are to comply with the appropriate requirements of Division D20 of the Specification.

a) CONCRETE WORK generally is to comply with the appropriate requirements of Sections E05 "In Situ Concrete Construction Generally", E10 and “Mixing, Casting and Curing In Situ Concrete”, E20 "Formwork for In Situ Concrete" and E30 "Reinforcement for In Situ Concrete".

B. MANHOLES AND INSPECTION CHAMBERS

1. PRECAST UNITS: if used, shall have been cast at least 3 weeks before sections are used. Bed lowest unit on in situ concrete base and bed and haunch in cement mortar. Liberally coat joints of units with approved bituminous material of troweling grade prior to fixing. Ensure joints are filled solid and neatly strike off surplus compound. Do not disturb work for 7 days thereafter. Alternatively seal joints with approved preformed jointing strip in accordance with manufacturer's instructions. Bed precast concrete cover slab on top unit in cement mortar.
2. CHANNELS in bottom of manhole are to be smooth, semi- circular and size equal to diameter of adjacent sewers. For straight through manholes, construct channels of half pipe sections. Make changes in direction of flow with smooth curves as large as manholes permit. Changes in size and grade of channels are to be gradual and even.
3. BENCHING: form in sulphate resisting concrete, as specified in Section E10, to rise vertically from top of channels to a height not less than soffit of outlet pipe, then slope upwards 1 in 10 to walls. Within 3 hours, float with coat of sulphate resisting cement-sand mortar 1:2 and finish smooth with steel trowel.
4. EXTERNAL COATING: cover faces of manholes and chambers with three coats applied by brush in accordance with manufacturer's instructions.
5. INTERNAL COATING: cover faces of manholes and chambers with four coats applied by brush in accordance with manufacturer's instructions.
6. ADJUSTMENT FOR LEVEL: build top courses of brickwork or blockwork after completion of surrounding levels. Adjust as necessary to give accurate and even final levels.

7. COVERS AND GRATINGS: bed frame solidly in mortar with cover in position to prevent twisting. Position centrally over opening and level and square with surrounding finishes.
8. TESTING OF MANHOLES: plug manhole inlets and outlets, fill manhole with water and allow to stand for at least 24 hours or such longer period to allow for complete absorption. Re-top with water. Allowable leakage over 24 hours is not to exceed 1% of total volume of manhole, otherwise make good and retest.

C. VALVE CHAMBERS

1. CONSTRUCTION: to be in situ concrete, precast concrete or blockwork as shown on the Drawings.
2. EXTERNAL COATING: cover faces of chambers with two to three coats applied by brush in accordance with manufacturer's instructions.
3. COVERS: bed frame solidly in mortar with cover in position to prevent twisting. Position centrally over opening and level and square with surrounding finishes.

R12B - DRAINAGE BELOW GROUND

PART 3 SPECIFICATION CLAUSES SPECIFIC TO R12

300.000 GENERAL

300.010 GENERAL:

- Install, commission and set to work a below ground gravity drainage system
    - Inside the building the system shall be in accordance with BS EN 12056 as appropriate.
    - Outside buildings the system shall be in accordance with BS EN 752
- Include all civil works.

300.030 LOCATION OF EXISTING DRAINS:

- Prior to commencement, confirm invert levels and positions of existing drains, sewers and inspection chambers against information shown on drawings and report discrepancies.
- Protect existing drains and maintain normal operation during construction.

300.040 CONDITION OF EXISTING DRAINS

- Test existing drainage to establish condition.

310.052 METAL BANDED FLEXIBLE COUPLINGS ADAPTORS AND BUSHES:

- Type
    - Flexible coupling without shear band.
    - Flexible coupling with shear band.
    - Flexible adaptor for use with pipes of different outside diameter.
- Application
    - Connecting pipes of different materials
    - Connecting pipes of different diameter
    - Jointing short / cut lengths of pipe
    - Jointing post-inserted performed junctions
- Standard - BS EN 16397-1 and BS EN 16397-2
- Materials
    - Sleeve - rubber to BS EN 681-1
    - Clamping bands
        - 316 stainless steel.

310.100 WORKMANSHIP

- Pipes and fittings of common type to be procured from same manufacturer. Joint pipes and fittings with adaptors as recommended by particular manufacturer.

- Lay pipes to line and even gradient and on even bed for full length of the pipe with any sockets facing towards direction of flow.
- Use recommended lubricants for joints. Leave recommended gaps at end of spigots to allow for movement.
- Protect pipelines from ingress of debris. Seal all exposed ends of pipes during construction.
- Minimise time between laying and testing. Backfill after successful testing.

310.110 PIPES PASSING THROUGH STRUCTURES

- Provide short length (or rocker pipe) near external face where it is necessary to cast in or fix pipes to structures (including inspection chambers and catch pits). Install flexible joint at each end.

Pipe Size (DN)	Distance to first joint from structure (mm)	Short Length (mm)
100 X 150	150	600
225	225	600

- Where it is not necessary to cast in or fix pipes to structures (e.g. walls to footings) provide
- Short length or rocker pipes as above.
- Openings in the structure: ensure 50mm minimum clearance all round pipe: closely fit a rigid sheet to each side of the opening, preventing ingress of soil or vermin.

330.000 FITTINGS, TERMINALS, ACCESSORIES

330.010 GENERAL:

- Ensure each complete assembly of fittings, traps, etc., including appropriate couplings, is procured from a common manufacturer. Check compatibility components with each other and with the pipe system.

330.030 CONNECTORS:

- Kitemark Compliant.
- CE certified.

330.040 GREASE TRAPS (GREASE INTERCEPTOR):

- Standard
  - BS EN 1825-2.
  - Kitemark Compliant.
  - CE certified.
- Body Material:
  - Cast iron
  - Cast iron or steel
- Interior Lining:
  - Corrosion-resistant enamel
- Exterior Coating:

- Corrosion-resistant enamel

- End Connections
  - Flanged
  - Hub
  - Threaded
- Clean out
  - Integral
  - Field installed on outlet
- Mounting:
  - Recessed, flush with floor
- Operation:
  - Manual cleaning
  -

330.041 LINT INTERCEPTOR:

- Standard
  - Kitemark Compliant.
  - CE certified.
- Factory-fabricated interceptor made for removing and retaining lint
- Body Material:
  - Cast iron
  - Stainless steel
- Interior Separation Device
  - Baffles
  - Screens
- Interior Lining:
  - Corrosion-resistant enamel
- Exterior Coating:
  - Corrosion-resistant enamel
- End Connections
  - Threaded.
- Mounting:
  - Inline

330.050 SADDLE CONNECTORS:

- Kitemark Compliant.
- CE certified.

330.060 AIR RELEASE VALVES TO PRESSURE PIPES:

- Application: Forced main pipes.
- Install where shown on drawings at highest points.

330.070 WASH-OUT VALVES TO PRESSURE PIPES:

- Install at lowest points.

330.080 ANCHORS TO PRESSURE PIPES:

- Install anchors
- Horizontal thrusts
    - Cast cradle around half of pipe up to undisturbed trench side.
- Vertical or inclined thrusts
    - Clamp pipe/fitting to concrete block under with two 6 mm galvanized steel straps.
- Pipe inclines in excess of 16.5%
    - Cast concrete blocks across pipe and set into undisturbed ground.

330.090 FLEXIBLE COUPLINGS:

- Standard
    - BS EN 295-4
    - WIS 4-41-01.
- Ensure that the ends of pipes are cleanly cut, square, with clean and smooth outer surfaces prior to jointing.
- On concrete or iron pipes, smooth out mould lines.
- Apply a cement grout over the sealing area.

330.100 PRIVATE SEWAGE PACKAGED PUMPING STATION (SEWAGE SUMP PUMP):

- Type
    - Wet-Pit-Mounted, Quick-disconnect-system, submersible sewage pumps, grinder sewage pumps
- Application [sewage pumps for the building sanitary drainage systems
- Kitemark Compliant.
- CE certified.
- Factory-assembled and tested
- Motor:
    - Manufacturer's standard construction
    - Permanently sealed, oil-filled, and watertight
- Bolts, nuts and washers: Stainless Steel
- Pump shaft: corrosion-resistant steel
- Pump Arrangement

- Duplex

- Liquid-Level Control
  - Electrical and mechanical devices. (For duplex unit)
- Finish: Manufacturer's standard paint applied
- Casing:
  - Cast iron, with open inlet
  - Cast iron, with cast-iron legs
- Impeller
  - Statically and dynamically balanced
  - Impeller material
    - Cast bronze
    - Abrasion-resistant cast iron
    - Stainless Steel
- Control panel
    - Mounting
      - External, free-standing.
    - IP rating
      - IP54
- Controller interface
  - On-off status of each pump.
  - Alarm status.
- Cable ducts
  - Install cable ways for control panel supply and from control panel to tank, complete with draw wires.
  - Black PVC-U to BS 3506
  - Black PVC-U, Class B, to BS 4660
- Commission system, inspect and check the entire installation.

340.000 WORKMANSHIP FOR FITTINGS, TERMINALS, ACCESSORIES:

340.010 INSTALLATION OF FITTINGS:

- Fittings must be square and tightly jointed. Align with building constructions. Request instructions where doubt prevails.
- Allowable deviation in level of gully gratings +0 to -10mm.
- Cover exposed ends with purpose made caps. Protect from site traffic.

340.020 BENDS AT BASE OF SOIL STACK:

- Use a 90.5^{o} nominal rest bend with a minimum radius of 200mm to centreline of the pipe.
- Form with two 45^{o} bends with a minimum radius of 200mm to centreline of the pipe.
- Ensure pipe is not less than the following depth.
- Up to building height of 3 storeys: distance below lowest branch 450mm.

340.030 DIRECT CONNECTION OF GROUND FLOOR WCS:

- Drop from crown of WC trap to invert of drain not to exceed 1.5m.
- Horizontal distance from drop to ventilated drain not to exceed 6m.

340.040 INSTALLATION OF DRAINAGE CHANNELS:

- Install drainage channels in accordance with the manufacturers recommendations.

350.000 INSPECTION CHAMBERS/ACCESS/TANKS/SOAKAWAYS:

350.040 CONCRETE INSPECTION CHAMBERS:

- Kitemark Compliant.
- CE certified.
- Base
    - In situ concrete, mix as clause as per structural specifications
    - Thickness **[...]**
- Inspection chamber
    - To BS 5911-4 and BS EN 1917 all components from same manufacturer.
    - Cement type
        - Class 42.5 to BS EN 197-1
    - Chamber sections
        - Rectangular.
- Shaft sections - as chamber sections.
- Cover slabs
    - Square, 50mm thick.
- Joints
    - Bituminous sealing strip.
    - Cement mortar.
    - As recommended by inspection chamber manufacturer.
- In situ concrete surround
    - Not required.
    - 150mm minimum thickness, mix as clause as per structural speciications
- Access covers and seating to be cast iron.

350.150 PETROL INTERCEPTOR UNIT / OIL INTERCEPTOR:

- Type: Factory-fabricated interceptor for separating and removing of oil
- Kitemark Compliant.
- CE certified.
- Oil Type
    - Generator diesel and lubricating oil.
- Vent pipes

- Manifolded above ground, terminating at least 2.4m above ground level.
- Material
    - PVC-U
- Body Material:
    - Cast iron
- Interior Lining:
    - Corrosion-resistant enamel
- Exterior Coating:
    - Corrosion-resistant enamel
- End Connections
    - Suitable to connect to PVC-U piping.
- Clean out
    - Integral
- Mounting:
    - Recessed, flush with floor

350.180 CAST IRON ACCESS COVERS AND SEATING TO BS EN 124:

- Standard - Grey iron or ductile iron to relevant parts of BS EN 124
- Type
    - Class reference
        - B125, for light traffic use.
    - Size
        - 600mm x 450mm.
    - Duty
        - Heavy.
- Seating
    - Make-up in engineering bricks to BS EN 772-3 and BS EN 772-7 Class B, laid in 1:3 cement:sand mortar, or precast concrete cover frame units, Type 1 or Type 2 to suit cover shape.
    - Bed and haunch frame solidly in 1:3 cement:sand mortar over entire area, centrally over opening, level and square with joints in surrounding finishes. Cut back top of haunching to 30mm below top of surface material.

350.210 LIFTING KEYS:

- Provide lifting keys for each type of access cover and hand over at Practical Completion.

360.000 CLEANING/TESTING/INSPECTION

360.030 WATER/AIR TESTING OF GRAVITY DRAINS AND PRIVATE SEWERS UP TO DN 300:

- Immediately after completion of bedding/surround, air test short lengths of pipe to BS EN 752 all pipes from terminals and connections to inspection chambers and between inspection chambers.

360.070 WATER TESTING OF PRIVATE PRESSURE PIPELINES:

- Test pipes to BS EN 752 and following paragraphs. Test to be undertaken within 24 hours of completions of joints and installation of anchors.
- Commission pumping system, and check operation of complete installation is correct under normal working conditions.

R15 - SANITARY SEWERAGE

PART 1 SYSTEM OBJECTIVES

100.000 OBJECTIVES

100.010 SUMMARY

A. This Section includes sanitary sewerage outside the building

110.000 DESIGN PARAMETERS

110.010 PROJECT/SITE CONDITIONS

A. Site Information: Perform site survey, research public utility records, and verify existing utility locations.

B. Locate existing structures and piping, if any, to be closed and abandoned.

C. Existing Utilities: Do not interrupt or interfere with utilities serving facilities on the Project site or on adjoining property unless permitted by the Engineer under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated or directed:

D. Notify the Engineer not less than 72 hours in advance of proposed utility interruptions.

E. Do not proceed with utility interruptions without the Engineer's written permission.

F. Coordinate connection to sewer main with concerned authorities.

110.020 DEFINITIONS AND ABBREVIATIONS

A. The following are industry abbreviations for pipe materials:

1. PE: Polyethylene plastic.
2. uPVC: Unplasticized Polyvinyl chloride plastic.
3. GRP: Glass-Fiber Reinforced Plastic

PART 2 REFERENCES

200.000 RELATED DOCUMENTS

A. General

1. Drawings and general provisions of the Contract, including Conditions of Contract and Division A Specification Sections, apply to this Section.

B. Related Sections

1. Section D20 "Excavating and Filling “for excavating, trenching and backfilling.
2. Section R16 "Utility Septic Tanks" for septic tank system structures and piping.
3. Sections E05 "In Situ Concrete Construction Generally", E10 and "Mixing, Casting and Curing In Situ Concrete", E20 "Formwork for In Situ Concrete" and E30 "Reinforcement for In Situ Concrete" for concrete structures.
4. Section J40 "Flexible Sheet Waterproofing and Damp Proofing".

PART 3 MATERIALS AND WORKMANSHIP

300.000 MATERIALS

300.010 PIPES, FITTINGS AND ACCESSORIES

A. PIPES AND FITTINGS: CONCRETE PIPE

1. GRAVITY PIPE

B. PIPES AND FITTINGS: THERMOPLASTIC PIPE

1. uPVC GRAVITY PIPE
2. uPVC PRESSURE PIPE
3. POLYETHELENE (PE) PRESSURE PIPE
4. POLYETHELENE (PE) GRAVITY PIPE

.

C. PIPES AND FITTINGS: GRP PIPE FOR SEWERAGE

1. TESTING ON GRP PIPES

a) Short-term hydraulic failure strength: to ASTM D1599.

D. PIPE ACCESSORIES: TAPPING SADDLES:

1. CAST IRON

E. SERVICE CONNECTIONS

F. COMPRESSIBLE BOARD

G. FILLING MATERIALS UNDER AND AROUND PIPES

300.020 VALVES

A. GATE VALVES

B. BUTTERFLY VALVES

C. CHECK VALVES

D. AIR VALVES FOR PRESSURIZED SEWAGE MAINS

1. GENERAL
2. SINGLE AIR VALVES
3. DOUBLE AIR VALVES (OR COMBINATION AIR VALVES)

300.030 VALVES: JOINTING MATERIALS

A. GENERAL

1. GASKETS
2. RINGS
3. BOLTS AND NUTS
4. WASHERS
5. DIELECTRIC JOINTS

B. FLEXIBLE COUPLINGS

C. DISMANTLING COUPLINGS

300.040 VALVE ACCESSORIES AND OPERATORS

A. VALVE ACCESSORIES

1. HANDWHEELS
2. VALVE CAPS:
3. EXTENSION SPINDLES FOR GATE VALVES:
4. PROTECTION TUBES
5. SURFACE BOXES:
6. LIFTING KEY SETS:
7. Operating Wrenches:

300.050 MANHOLES & CHAMBERS: COATINGS

A. COATING for internal surfaces of concrete manholes and chambers:

1. Four coats of solvent free 100% solid content polyamine based pure Epoxy 300mm thick and primer. or
2. GRP liners to the approval of the Engineer
3. or other equal and approved.

B. COATING for external surfaces of concrete manholes and chambers: 600 microns minimum thickness of asphaltic composition.

or other equal and approved.

C. WATERPROOFING external surfaces

1. Waterproofing for external surfaces shall be sheet tanking membrane with protective board as specified in Division J and other related sections.
2. Apply APP-Modified Bituminous sheet, single-ply, smooth surfaced, polyester reinforced, with according to ASTM D 5147

300.060 MANHOLES & CHAMBERS: COMPONENTS

A. CAST IN SITU UNITS

B. PRECAST UNITS.

C. BRICKS

D. COVERS AND FRAMES: to BS EN 124, coated to BS 3416 minimum thickness 250 microns, non-rocking, locking, solid top of circular pattern unless otherwise indicated on Drawings. Wording on cover to indicate type of network, approved on Site. Frames to be bolted to manhole to ensure proper fixity. Grades to be as follows:

1. For apron and graded area of the runway strips and taxiway strip (Taxiway and Shoulder): Class F900 ultra heavy-duty non-rock type for aircraft wheel loads. minimum test load 900 kN.
2. for Roadways: Class D400, Heavy duty, minimum test load 400 KN.
3. for sidewalks: Class C250, Medium duty, minimum test load 250 KN
4. for footpaths: Class B125, Light duty, minimum test load 125 KN.

E. Manhole Cover Inserts: Manufactured, GRP form, of size to fit between manhole frame and cover and designed to prevent stormwater inflow. Include handle for removal and gasket for gastight sealing.

1. Type: Solid.
2. Type: With drainage and vent holes.
3. Type: With valve.

F. GRP ladders: .

G. SAFETY CHAINS:

H. GUARDRAILING

310.000 QUALITY MANAGEMENT

310.010 GENERAL REQUIREMENTS

1. MANUFACTURER'S CERTIFICATE: materials are to be supplied with a certificate, in respect of each delivery, stating that products comply with and have been factory tested in accordance with specified Standards.
2. MARKING: unless otherwise specified in the relevant Standard products are to have legibly cast, stamped or indelibly painted on, the following marks, as appropriate:

a) manufacturer's name, initials and identification mark
b) nominal diameter
c) class designation
d) initials and number of relevant Standard

e) length of pipe if shorter than standard length
f) angle of bends in degrees
g) date of manufacture.

3. SPECIAL TESTS: whenever required by the Engineer, supply and transport to a testing laboratory samples of materials selected by the Engineer. Number of samples is not to be more than 0.5% of total supplied, with at least one from each class, diameter and manufacturer. Failure of any sample is to be followed by a second and if necessary a third test from the same batch. A third test failure will result in all material from that manufacturer being rejected and replaced by material from a different manufacturer, subject to approval and satisfactory tests. Provide laboratory test report in an approved form.

320.000 SUBMITTALS

A. Product Data: Submit manufacturer's technical product data and installation instructions for system materials and products.

B. Include plans, elevations, details, and attachments for the following:

1. Sewage pipe network, including pipe diameters and gradients
2. Manholes and other structures, including invert levels, frames, covers, and grates.

C. Coordination Drawings: Show manholes and other structures, pipe sizes, locations, and elevations. Include details of underground structures and connections. Show other piping in same trench and clearances from sewerage system piping. Indicate interface and spatial relationship between piping and proximate structures.

D. Coordination Profile Drawings: Show system piping in elevation. Draw profiles at horizontal scale of not less than 1:1000 and vertical scale of not less than 1:100. Indicate underground structures and pipe. Show types, sizes, materials, and elevations of other utilities crossing system piping.

E. As-Built Drawings: At project close-out, submit record drawings of installed pipework and products, in accordance with requirements of the Specification, Division A.

F. Maintenance Data: Submit maintenance data and parts lists for system materials and products. Include this data, product data, Shop Drawings, and submit drawings in maintenance manual; in accordance with requirements of the Specification, Division A.

G. Certificate of Compliance.

H. Field Test Reports: Indicate and interpret test results for compliance with performance requirements.

330.000 EXECUTION

330.010 PIPES, FITTINGS & ACCESSORIES

A. GENERAL

1. MANUFACTURER'S RECOMMENDATIONS on handling, repairing, laying, jointing, anchoring, testing and other works for pipes, fittings, valves and accessories are to be strictly followed.
2. LOADING AND UNLOADING: use cranes, hoists or skidways as directed by the Engineer. Use hooks, spreader beams, ropes, band or wire slings etc. as recommended by manufacturer for each type of pipe and as approved by the Engineer.
3. STACK pipes on level surface. Do not rest pipes on sockets or jointing fairlings. Securely chock end pipes in bottom row. Height of stack is to be to manufacturer's instructions.
4. HANDLE material with care to avoid damage whether moved by hand, skidways or hoists.
5. STORING: provide safe storage for material. Interior of pipes, fittings etc. are to be kept free from dirt and foreign matter. Provide shade for materials as required by manufacturer's instructions and to the Engineer's approval.
6. CUTTING: use hacksaws, manually operated wheel cutter or pipe cutting machine as per manufacturer's instructions. If, in the opinion of the Engineer, special precautions are to be taken to eliminate airborne particles, use methods and equipment as directed by the Engineer.

Prepare ends according to type of joint used and follow manufacturer's recommendations. Take care not to damage lining, if any. Repair on site, minor damage, if permitted.

7. REPAIR DAMAGED COATING, SHEATHING OR LINING in accordance with the Specification and manufacturer's instructions. Use material compatible with that originally used. Repair is to be approved by the Engineer before incorporating materials into the work.

B. EXCAVATION AND EARTHWORK

1. EXCAVATION AND EARTHWORK including but not limited to pipe trenches, earthwork support, backfilling, disposal, and surface reinstatement are to be in accordance with the requirements of Section D20 of the Specification.

C. PIPE LAYING AND JOINTING

1. GENERAL

a) LOWERING: do not lower pipe into trench until pipe bed is brought to grade and approved.
b) LOWERING: use ropes, wire slings, band slings, spreader beams etc. as recommended by manufacturer for each type of pipe and as approved.
c) EXAMINE MATERIAL carefully for damage. Test for soundness in accordance with manufacturer's instructions before laying.
d) EXAMINE MATERIAL: ensure internal coating or lining and outer coating or sheathing are undamaged. If damaged, make good or dispose of as directed.
e) PIPE CLEANLINESS: remove dirt and foreign matter before lowering.
f) PIPE CLEANLINESS: clear construction debris from inside of pipe before making joint.
g) PIPE PLACEMENT: lay pipe on an even formation true to grade and line, with sockets (if any) facing up the gradient.
h) PIPE ON SOLID GROUND: cut holes in bottom of trench to allow proper jointing and for barrel of pipe to bear evenly on solid ground for its full length.
i) PIPE ON GRANULAR BEDDING: scoop out locally at sockets/couplings to enable pipe to rest uniformly on barrel and adjust to exact line and level. After testing lay and compact further granular material in 100 mm layers to levels shown on the Drawings.
j) PIPE ON CONCRETE BED OR SURROUND: provide rectangular blocks of concrete, as per section E10, made in approved moulds at least 14 days before use, and approved hardwood folding wedges. Provide two concrete blocks for each pipe, set and bone into correct level on formation bottom and lay pipe properly centred and socketed. Insert two hardwood folding wedges, of width equal to width of concrete block, between body of pipe and block and drive together until pipe is brought to exact level required. Leave blocks and wedges undisturbed while pipes are being jointed and concrete bed and haunch or surround are being placed. Ensure blocks and wedges are of sufficient size and strength to prevent settlement of pipes. Leave sufficient space to enable joints to be made, tested and inspected.
k) PIPE PLUGS: when pipe laying is not in progress, close open ends of pipes with properly fitted temporary wooden plugs or standard caps as directed.

2. JOINTING

a) MANUFACTURER'S INSTRUCTIONS are to be followed regarding cleanliness of joint surfaces, lubricant used, correct location of components, provision of correct gaps between end of spigot and back of socket for flexible joints etc.
b) DEFLECTION OF JOINT: do not deflect flexible joints beyond maximum permissible angles given by manufacturer and/or relevant Standard.
c) PATENT DETACHABLE AND FLEXIBLE JOINTS: strictly comply with special instructions issued by manufacturers of proprietary joints when laying and jointing.
d) DIFFERING PIPE AND FITTING MATERIAL: joint with adaptors as recommended by pipe manufacturer.

3. LINE AND GRADIENT

a) IN OPEN EXCAVATION: provide and maintain sight rails and boning rods properly painted to ensure correct alignment of pipe runs. Sight rails are to be positioned either vertically above the lines of pipes or immediately adjacent thereto. At no time are there to

be less than three sight rails in position on each length of pipeline under construction to any one gradient.

b) IN HEADING: provide and maintain marks to establish line and level of pipeline. Marks are to be fixed in each working shaft and two further marks established in each length of heading.

4. TOLERANCES

a) GRAVITY SEWERS: tolerances are to be 6 mm in level and 25 mm in line between manholes or access points unless otherwise specified. Where pipe is to be constructed in straight lines between manholes or lampholes the length will not be accepted if a light at each manhole or lamphole cannot be seen from adjacent manholes.

5. FLOATATION

a) PREVENTION: whenever water is excluded from interior of pipe, place sufficient backfill above pipe to prevent floatation.

b) REMOVE any pipe that has floated, correct bedding and relay.

6. PIPES BUILT INTO STRUCTURES

a) TREATMENT OF EXTERNAL SURFACE: thoroughly clean outside surface of pipes to be built-in immediately before installation. Remove protective coating to metal pipes, where ordered. Roughen clay and concrete pipes as directed. Paint plastic pipes with appropriate solvent cement and sprinkle with dry coarse sand whilst wet. Cut away sheathing from sections to be built-in and after installation restore protection up to external face of structure with approved bituminous material.

b) FLEXIBLE JOINTS: provide two flexible joints or flexible patented joints adjacent to structures. Place first joint not more than one pipe diameter from face of structure and second not more than the following distances away from first:

1) pipelines not exceeding 450 mm: 2 pipe diameters.

D. IDENTIFICATION: Arrange for installing green warning tapes directly over piping and at outside edges of underground structures.

1. Use warning tape or detectable warning tape over ferrous piping.
2. Use detectable warning tape over nonferrous piping and over edges of underground structures.

E. FIELD TESTING

1. GENERAL

a) PROVIDE pumping equipment, pressure gauges, instruments and water needed for hydrostatic testing.

b) CARRY OUT TESTS in the presence of the Engineer.

c) FITTINGS AND JOINTS: permanently anchor fittings before testing and leave all joints exposed for checking.

d) TEST SECTIONS: limit test sections to not more than 500 m.

e) TEST SECTIONS: test pressure lines between valve chambers whenever possible.

f) TEST SECTIONS: test gravity sewers in sections between manholes.

g) TEST PLUG: secure end of main and test plug by struts.

h) CLOSED VALVE: do not test against a closed valve unless there is no acceptable alternative.

i) APPLY PRESSURE by manually operated test pump or, in the case of large diameter mains, by power driven test pump, if approved.

j) EXAMINE exposed joints and repair visible leaks.

k) FAILURE: should a test fail, locate leak and replace or make good defective pipe or replace and make good faulty joint. Retest main.

l) RECORDS: keep test records in an approved form. Hand original copy to the Engineer immediately after completion of test.

m) PRESSURE LINES: carry out hydrostatic test while pipeline is partially backfilled.

n) NON-PRESSURE LINES not exceeding 900 mm diameter are to be air tested before backfilling and hydrostatic tested after backfilling.

o) NON-PRESSURE LINES OVER 1000 mm diameter are to be visually inspected from the inside and tested at joints by hydraulic individual joint test.
p) NON-PRESSURE LINES: Carry out infiltration tests where crown of pipe at high part of length under test is more than 1.2 m below water table.

2. HYDROSTATIC TESTING OF PRESSURE PIPELINES

a) FILL PIPE slowly with water from lowest point. Do not use power-driven pump unless approved.
b) FILL ABSORBANT PIPES with water and allow to stand for at least 24 hours to allow complete absorption.
c) ENTRAPPED AIR is to be bled before pressurizing.
d) PRESSURIZING is to continue until specified test pressure is reached in lowest part of section under test. Bleed further quantities of entrapped air while raising pressure.
e) MAINTAIN TEST PRESSURE for specified test duration with pumping stopped.
f) REPRESSURIZE to original test pressure and record respective volumes of water pumped.
g) FAILURE: pipeline will be deemed to have failed test if:

1) visible leaks are detected, regardless of leakage being within specified limits
2) volume of water lost during period when pumping was stopped exceeds allowable leakage.

h) TEST PRESSURE: Unless otherwise specified, the test pressure shall be equal to 1.5 times the maximum working pressure of the pipeline as shown on the Drawings or as determined by the Engineer on Site, but shall in no case exceed 75% of the factory hydrostatic test pressure.

i) TEST PERIOD: 2 hrs.

j) ALLOWABLE LEAKAGE: 0.02 liters/mm dia/km length/day/10 m head of applied pressure.

3. HYDROSTATIC TESTING OF NON-PRESSURE PIPELINES

a) PROCEDURE is to be as described for pressure pipes.
b) TEST PRESSURE: 1.0 m head of water above pipe soffit at highest point and not greater than 6 m head of water at lowest point of section under test. If maximum head is exceeded, test section in stages.
c) TEST PERIOD: 1 hour.
d) ALLOWABLE LEAKAGE FOR PIPELINES: 0.12 litres/km length metre/metre diameter/hr.
e) ALLOWABLE LEAKAGE FOR PIPELINES INCLUDING STRUCTURES OR FOR STRUCTURES ALONE: As specified in BS EN 1610.

4. Air Testing of Pipelines

a) Test procedure to BS EN 1610.

5. Infiltration Test for Gravity Pipes

a) Timing: Carry out test after total backfilling of length under test.
b) Plug effectively all inlets to system as directed.
c) Measure residual flow by approved method i.e. weir or other.
d) Infiltration limits: The following limits are not to be exceeded:

1) Pipelines not exceeding 700 mm: 0.02 litres/hour/100 linear metres/mm diameter,
2) Pipelines over 700 mm: 0.03 litres/hour/100 linear metres/mm diameter.

e) Failure: Test will be deemed to have failed if allowable infiltration water is exceeded. Locate source of excessive infiltration by approved means i.e. traversing light and mirrors or inflated rubber plug etc. and make good. Repeat test until successful.

6. VISUAL INSPECTION TEST

a) TIMING: carry out test after total backfilling of length under test.
b) LIMIT of length to be tested at one time is three full-length pipes unless otherwise approved.

c) APPARATUS: use rubber tired bogies which do not damage lining of pipe and an adequate supply of electric lamps.
d) CHECK joints by means of feelers to ensure rubber rings are correctly located.
e) CHECK pipe barrel for visible cracks.

7. Hydraulic Individual Joint Test for Pipes Exceeding 1000 mm:

a) Test Procedure to BS EN 1610

8. DEFLECTION TESTS FOR GRP PIPES

a) CONDUCT: deflection tests for GRP pipes as required by the Engineer at 3 stages. Deflection shall be measured at the spigot end at mid point and at socket end.
b) STAGE 1: at completion of primary backfill (deflection at this stage should be below 0.5%).
c) STAGE 2: at final backfill (Maximum allowable deflection 2.5%).
d) STAGE 3: six months after final backfill (maximum allowable deflection 4.0%).
e) PIPES not passing the deflection tests at stage 2 or stage 3 will be removed and replaced.

F. SEWER BUILDING CONNECTIONS

1. Location: The Contractor shall agree location and invert level of connections with the Engineer before starting construction.
2. The Contractor shall programme connections to follow closely construction of sewer.
3. Execution: Connection to sewer shall be at manhole, where possible, or by T or Y junction subject to the Client approval.
4. Minimum Grade: The Contractor shall lay connections at minimum grade of 0.75 per 1000 unless otherwise approved.
5. The Contractor shall install, bed and test connections in same manner as main sewers.
6. Records: The Contractor shall maintain accurate records of location of connection to main sewer. Record details of the following:

a) Connection number.
b) Type of connection.
c) Diameter.
d) Downstream manhole number.
e) Distance from manhole.
f) Position (left or right) when facing upstream of street sewer.
g) Distance from centre line of sewer to end lateral.
h) Invert of street sewer.
i) Lateral invert at end point.
j) Number of inspection chambers.
k) Cover type.
l) Location, description and elevation of obstructions and method of protection.

7. Survey Log Book: The Contractor shall keep records in an approved survey log book, made available for inspection and handed to the Employer on completion. The Contractor shall transfer information to sketches and tables as agreed with the Engineer, provide three bound copies and hand to the Employer.

G. CLEANING AND INSPECTION OF SEWERS

1. CLEANING: clean pipeline of silt and debris after backfilling pipe trenches and completing manholes, hatch boxes etc. but before surfaces are permanently reinstated and make ready for inspection by the Engineer.
2. INSPECTION: pipelines of 900 mm diameter and over are, where practicable, to be inspected from the inside and when necessary a suitable trolley is to be provided for this purpose.
3. INSPECTION: pipelines less than 900 mm diameter and larger pipelines which cannot be inspected from the inside, are to be inspected by passing a cylinder of diameter 25 mm less than the internal diameter of the pipe and length not less than the internal diameter of the pipe through each pipeline.

H. BEDDING, HAUNCHING, ENCASEMENT AND THRUST BLOCKS

1. GENERAL

    a) CONCRETE WORK generally is to comply with the appropriate requirements of Sections E05 "In Situ Concrete Construction Generally", E10 "Mixing, Casting and Curing In Situ Concrete", E20 "Formwork for In Situ Concrete" and E30 "Reinforcement for In Situ Concrete".

2. PLACING CONCRETE

    a) AFTER PLACING PIPE place concrete in trench and thoroughly work under pipe to provide solid and uniform bedding.
    b) AFTER PIPE JOINT IS COMPLETED place balance of concrete or haunching and work into place on both sides simultaneously.
    c) FORM VERTICAL CONSTRUCTION JOINTS in concrete beds, surrounds etc. at face of pipe joints with compressible board and finish to profile of concrete and pipe. Fill any gap between spigot and socket with approved resilient material.

3. PLACING MATERIAL OTHER THAN CONCRETE

    a) PLACE BEDDING MATERIAL in bottom of prepared trench and carefully hand tamp to minimum thicknesses.
    b) AFTER PIPE HAS BEEN LAID, place additional material or haunching in successive layers not exceeding 150 mm thick on both sides simultaneously. Completely fill spaces between pipe and side of trench and carefully hand tamp without disturbing pipe.

4. THRUST BLOCKS

    a) GENERAL: provide thrust blocks at bends and junctions on pressure pipelines. Additional excavation required is to be made after pipeline has been jointed. No pressure is to be applied to the thrust block until concrete has matured for at least 3 days.

330.020 VALVES & ACCESSORIES

A. GENERAL

1. PRIOR TO INSTALLATION, inspect for cleanliness of bores, seating surfaces etc. and for handling damage, cracks, missing parts and tightness of pressure-containing bolting.
2. ENSURE valves, gates and hydrants are in closed position before installation.
3. OPERATE valves and hydrants through one complete opening and closing cycle in the position in which they are to be installed to ensure proper functioning.

B. INSTALLATION

1. VALVES

    a) SET AND JOINT valves to pipe in manner specified for laying and jointing pipe and/or to manufacturer's instructions.
    b) CONCRETE PADS: provide valves with concrete pads as per Section E10 and as shown on the Drawings so that pipe does not support weight of valve.
    c) VALVES WITHOUT CONCRETE PADS: place on firm footing to prevent settling and excessive strain on connection to pipe.
    d) DO NOT use valve to bring misaligned pipe into alignment during installation.
    e) INSPECT all pressure-containing bolting (bonnet, seal plate and end connections) for adequate tightness after installation but prior to field testing.

C. FIELD PROTECTION

1. VALVES: protect valves against action of external agents by a coat of approved bituminous compound applied cold by brush after pressure tests on pipelines have been completed.
2. GATES: protect against action of external agents with one coat of approved bituminous compound applied cold by brush after installation.
3. BOLTS: protect buried bolts against corrosion with approved paint or by polyethylene wrapping.

330.030 MANHOLES & CHAMBERS

A. GENERAL

1. EXCAVATION AND BACKFILLING generally are to comply with the appropriate requirements of Division D20 of the Specification.
2. CONCRETE WORK generally is to comply with the appropriate requirements of Sections: Sections E05 "In Situ Concrete Construction Generally", E10 and "Mixing, Casting and Curing In Situ Concrete", E20 "Formwork for In Situ Concrete" and E30 "Reinforcement for In Situ Concrete".

B. MANHOLES AND INSPECTION CHAMBERS

1. PRECAST UNITS: if used, shall have been cast at least 3 weeks before sections are used. Bed lowest unit on in situ concrete base and bed and haunch in cement mortar. Liberally coat joints of units with approved bituminous material of troweling grade prior to fixing. Ensure joints are filled solid and neatly strike off surplus compound. Do not disturb work for 7 days thereafter. Alternatively seal joints with approved preformed jointing strip in accordance with manufacturer's instructions. Bed precast concrete cover slab on top unit in cement mortar.
2. CHANNELS in bottom of manhole are to be smooth, semi- circular and size equal to diameter of adjacent sewers. For straight through manholes, construct channels of half pipe sections. Make changes in direction of flow with smooth curves as large as manholes permit. Changes in size and grade of channels are to be gradual and even.
3. BENCHING: form in sulphate resisting concrete as per Section E10 to rise vertically from top of channels to a height not less than soffit of outlet pipe, then slope upwards 1 in 10 to walls. Within 3 hours, float with coat of sulphate resisting cement-sand mortar 1:2 and finish smooth with steel trowel.
4. EXTERNAL COATING: cover faces of manholes and chambers with three coats applied by brush in accordance with manufacturer's instructions.
5. INTERNAL COATING: cover faces of manholes and chambers with four coats applied by brush in accordance with manufacturer's instructions.
6. ADJUSTMENT FOR LEVEL: build top courses of brickwork or blockwork after completion of surrounding levels. Adjust as necessary to give accurate and even final levels.
7. COVERS AND GRATINGS: bed frame solidly in mortar with cover in position to prevent twisting. Position centrally over opening and level and square with surrounding finishes.
8. TESTING OF MANHOLES: plug manhole inlets and outlets, fill manhole with water and allow to stand for at least 24 hours or such longer period to allow for complete absorption. Re-top with water. Allowable leakage over 24 hours is not to exceed 1% of total volume of manhole, otherwise make good and retest.

C. VALVE CHAMBERS

1. CONSTRUCTION: to be in situ concrete, precast concrete or blockwork as shown on the Drawings.
2. EXTERNAL COATING: cover faces of chambers with two to three coats applied by brush in accordance with manufacturer's instructions.
3. COVERS: bed frame solidly in mortar with cover in position to prevent twisting. Position centrally over opening and level and square with surrounding finishes.

R32A - COMPACTORS AND MACERATORS - MECHANICAL

- To be read in parallel with section R32B (Utilities)

PART 3 SPECIFICATION CLAUSES SPECIFIC TO R32A.

305.000 SUMMARY:

- This Section includes:
    1. Wheelie Waste Bins
    2. Chemical Waste Cabinet
    3. Hook lift container
    4. Bunded waste oil drum
    5. Standard pallet
- Drawings and general provisions of the Contract, including Conditions of Contract and Division 1 Specification Sections, apply to this Section.
- Comply, with applicable clauses relating to; workmanship, installation, work on site, fixing, access, marking, identification, labelling, accessories, testing and inspection, commissioning, operation and maintenance, training, system demonstration, notifications, spare parts and tools, quality control, safety, delivery, storage, protection, certification, programming, documentation, submittals, installation records, surveys, guarantee and warranty etc. as detailed in this section.
- Comply with the requirements of the infrastructure. The building services MEP contractor shall ensure that all building interfaces and tie in with the site wide infrastructure utilities is thoroughly coordinated in all aspects including setting out plans, coordinates, levels, type and finish of valve chambers, meter box, hand hole, etc.
-

310.000 PRODUCTS/MATERIALS:

310.001 WHEELIE WASTE BINS

- HDPE wheelie bins with solid colors stabilized against combined effect of water and UV rays.
- Different colors for different types of waste collected.
- Manufactured in accordance with UNE EN 840 European legislation.
- Capacity: 360 Liters and 1100 Liters.
- Medical waste bins shall have different color and labeled.
- Bins shall be compatible with IoT fill level sensor

310.002 CHEMICAL WASTE CABINET

- Double wall 18-gauge steel.
- 160 Kg. 350 lb. shelf capacity. Adjustable shelves.
- Sloped shelves safely direct spills away from containers.
- Recessed paddle handle can be used with padlock.
- Continuous piano hinge provides smooth closure.
- Self-closing doors.
- Adjustable leveling feet for uneven surfaces.
- Meets NFPA, OSHA and FM standards.
- Cabinet dimensions (LxWxH): 915mm x 450mm x 1830mm

310.003 HOOK LIFT CONTANIER

- Steel hook lift container used for storage of all types of dry waste and mixed recyclables.

- The container shall have a capacity of 15 cubic meters.
- The Structure shall be made of high-grade steel sheet, 6mm thickness welded to reinforcements for flooring.
- The dimensions shall be as shown on drawings, if different the contractor should ensure that the container is compatible with its space allocation, and its operation does not disturb any projected utilities and shall submit drawings and calculations that prove the latter.
- The container shall be compatible with standard multi-lifters.
- Paint shall consist of at least 2 coats of epoxy primer and at least 2 coats of epoxy exterior finish.
- Manufactured according to DIN standard.

310.004 BUNDED WASTE OIL DRUM

- These containers used for oily waste, oily and aqueous mud waste storage until waste collection period.
- Capacity: 55 Gallon
- Dimensions: (Dia x H) 980 x 1090 mm
- Material: premium grade, oil resistant Medium Density Polyethylene (MDPE)
- Lockable manhole access
- Meet all relevant regulatory requirements and are fully CE marked where appropriate.
- Conform to OFS T100 and hold an ERA2 rating.
- Can be forklifted from either side for ease of handling.
- Lifting eyes fitted for crane/hiab handling (empty only)
- Standard fitting includes tank contents gauge, 2" filler cap and 2" vent cap.
- Fittings enclosed under lockable lid for additional security.
- Bunded spill pallet Dimensions (L x W x H): 1200 x 1200 x 285 mm
- Bunded spill pallet Material: (Polyethylene) Robust HDPE Construction, corrosion resistant and UV protected.
- Bunded spill pallet Containment capacity: 200 L.
- Bunded spill pallet Maximum loading weight: 2722 kg
- Bunded spill pallet shall be Provided with 4-way entry for a Forklift or Pallet Jack.
- Bunded spill pallet shall be Dual Heavy Duty Removable Grates for easy access to the sump with a sump drain outlet.

310.005 STANDARD PALLET

- The basic storage unit for the cardboard bales shall be the standard pallet
- Standard dimensions: 1200 mm deep x 1000 mm wide x 200 mm high
- Empty weight: 23-25 Kg
- Preferred materials: wood.
- Type: full four-way entry, non-reversible, nine block style
- Shall have the greatest versatility with regard to handling mechanical equipment.
- Shall have a full perimeter base style.
- Shall be in accordance with ISO6780.
- Shall be able to carry cardboard bales.

320.000 WORKMANSHIP

320.010 WORK ON-SITE:

- Ensure all civil engineering, building works and service connections and installations are carried out.

320.020 INSTALLATION:

- Install, commission and set to work the waste volume reduction system in accordance with the manufacturer's recommendations, BS 5906 and the requirements of the local waste disposal authority.

320.030 QUALITY CONTROL:

- Handle, store and fix equipment and components of the waste volume reduction system in accordance with the manufacturer's recommendations so as to meet the design performance requirements.
- Inspect all components on delivery, before fixing and after installation and reject and replace any which are defective.
- Allow for thermal and building movement when fixing and jointing components.

S10A - COLD WATER - UTILITIES

PART 1 SYSTEM OBJECTIVES

100.000 OBJECTIVES

100.010 SUMMARY

A. This Section includes water-distribution piping and specialties outside the building for the following:

1. Combined water service and fire-service mains.
2. Fire Service mains
3. Water service

110.000 DESIGN PARAMETERS

110.010 PROJECT/SITE CONDITIONS

A. Existing Utilities: Do not interrupt or interfere with utilities serving facilities on the Project site or on adjoining property unless permitted by the Engineer under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated or directed:

B. Notify the Engineer not less than 72 hours in advance of proposed utility interruptions.

C. Do not proceed with utility interruptions without the Engineer's written permission.

D. Coordinate connection to sewer main with concerned authorities.

110.020 DEFINITIONS AND ABBREVIATIONS

A. The following are industry abbreviations for pipe materials:

1. PE: Polyethylene plastic.
2. PVC: Polyvinyl chloride plastic.
3. GRP: Glass-Fiber Reinforced Plastic

PART 2 REFERENCES

200.000 RELATED DOCUMENTS

A. General

1. Drawings and general provisions of the Contract, including Conditions of Contract and Division A Specification Sections, apply to this Section.

B. Related Sections

1. Section D20 "Excavating and Filling" for excavating, trenching and backfilling.
2. Sections E05 "In Situ Concrete Construction Generally", E10 and "Mixing, Casting and Curing In Situ Concrete", E20 "Formwork for In Situ Concrete" and E30 "Reinforcement for In Situ Concrete" for concrete structures.
3. Section J40 "Flexible Sheet Waterproofing and Damp Proofing".

PART 3 MATERIALS AND WORKMANSHIP

300.000 MATERIALS

300.010 PIPES, FITTINGS AND ACCESSORIES

A. PIPES AND FITTINGS: IRON PIPE

1. PIPE: to BS EN 545.

2. FITTINGS: to BS EN 545, pressure rating suitable for type of pipe and with end combinations as shown on the Drawings.
3. JOINTS: spigot and socket ended pipes are to have rubber gasket joints.
4. JOINTS: flanged pipes are to have screwed-on or cast-on flanges to sustain working pressure of 16 bars.
5. FLANGES: to BS EN 1092, Part 2.
6. FACTORY PROTECTION FOR WATER SUPPLY PIPE:
    a) internally: cement lined to BS EN 545 with ordinary Portland cement to BS EN 197-1 to specified thicknesses.
    b) externally: coated with metallic Zinc to BS EN 545 and followed by a coat bitumen coat to BS 3416 min. thickness 150 microns.
7. FACTORY PROTECTION FOR FITTINGS:
    a) coated internally and externally by dipping, or other method, using bitumen coat to BS 3416 minimum thickness 250 microns.

B. PIPES AND FITTINGS: THERMOPLASTIC PIPE
1. POLYETHELENE (PE) PRESSURE PIPE
2. GRP PIPE

C. PIPES AND FITTINGS: STEEL PIPE

D. PIPE ACCESSORIES: TAPPING SADDLES:
1. CAST IRON

E. SERVICE CONNECTIONS

F. COMPRESSIBLE BOARD

G. FILLING MATERIALS UNDER AND AROUND PIPES

300.020 VALVES

A. GATE VALVES

B. BUTTERFLY VALVES

C. AIR VALVES
1. AIR VALVES FOR WATER MAINS

D. FLOW METERS

E. FIRE HYDRANTS
1. POST TYPE
2. UNDERGROUND TYPE

F. FERRULE COCKS AND STOP VALVES FOR SERVICE CONNECTIONS
1. FERRULE COCKS

2. UNDERGROUND STOP VALVES

G. JOINTING MATERIALS
1. FLEXIBLE COUPLINGS
    a) TYPE: gasketed sleeve type, to allow angular deflection and axial movement of two joined pipe ends and to maintain permanent, leak-tight joint.
    b) COMPONENTS comprise one centre sleeve, two end followers or flanges, two rubber-compounded wedge-section gaskets and sufficient draw bolts and nuts to properly compress gaskets. Tightening of bolts to draw end followers together is to compress gaskets in recess between centre sleeve and followers onto pipe ends to effect positive seal.

2. DISMANTLING COUPLINGS

a) .

300.030 VALVE ACCESSORIES AND OPERATORS

A. VALVE ACCESSORIES

300.040 CHAMBERS

A. COATING for internal surfaces of concrete chambers

.

B. COATING for external surfaces of concrete chambers

C. COMPONENTS

310.000 QUALITY MANAGEMENT

310.010 GENERAL REQUIREMENTS

1. MANUFACTURER'S CERTIFICATE: materials are to be supplied with a certificate, in respect of each delivery, stating that products comply with and have been factory tested in accordance with specified Standards.
2. MARKING: unless otherwise specified in the relevant Standard products are to have legibly cast, stamped or indelibly painted on, the following marks, as appropriate:

   a) manufacturer's name, initials and identification mark
   b) nominal diameter
   c) class designation
   d) initials and number of relevant Standard
   e) length of pipe if shorter than standard length
   f) angle of bends in degrees
   g) date of manufacture.

3. SPECIAL TESTS: whenever required by the Engineer, supply and transport to a testing laboratory samples of materials selected by the Engineer. Number of samples is not to be more than 0.5% of total supplied, with at least one from each cl ass, diameter and manufacturer. Failure of any sample is to be followed by a second and if necessary a third test from the same batch. A third test failure will result in all material from that manufacturer being rejected and replaced by material from a different manufacturer, subject to approval and satisfactory tests. Provide laboratory test report in an approved form.

310.020 REGULATORY REQUIREMENTS

A. Comply with requirements of the utility company supplying water. Include tapping of water mains and backflow prevention.

B. Comply with standards of authorities having jurisdiction for potable-water-service piping, including materials, installation, testing, and disinfection.

C. Comply with standards of authorities having jurisdiction for fire-suppression water-service piping, including materials, hose threads, installation, and testing.

D. COMPLY with FM's "Approval Guide" or UL's "Fire Protection Equipment Directory" for fire-service-main products whenever requested by Fire Department.

E. Compliance:

1. Comply with NSF 61, or approved equivalent, for materials for water-service piping and specialties for domestic water.

320.000 SUBMITTALS

A. Product Data: Submit manufacturer's technical product data and installation instructions for system materials and products.

B. Shop Drawings: Include plans, elevations, details, and attachments for the following:

1. Water pipe network, including pipe diameters and gradients.
2. Chambers and other structures, including invert levels, frames, covers, and grates.

C. Coordination Drawings: For piping and specialties including relation to other services in same area. Show piping and specialty sizes and valves, meter and specialty locations, and elevations.

D. As-Built Drawings: At project close-out, submit record drawings of installed pipework and products, in accordance with requirements of the Specification, Division 1.

E. Maintenance Data: Submit maintenance data and parts lists for system materials and products. Include this data, product data, Shop Drawings, and submit drawings in maintenance manual; in accordance with requirements of the Specification, Division A.

F. Certificate of Compliance.

G. Field Quality-Control Test Reports: From Contractor.

H. Operation and Maintenance Data: For specialties to include in emergency, operation, and maintenance manuals. In addition to items specified in Division A include the following:

1. Water meters.
2. Valves.
3. Fire hydrants.

330.000 EXECUTION

330.010 PIPES, FITTINGS & ACCESSORIES

A. GENERAL

1. MANUFACTURER'S RECOMMENDATIONS on handling, repairing, laying, jointing, anchoring, testing and other works for pipes, fittings, valves and accessories are to be strictly followed.
2. LOADING AND UNLOADING: use cranes, hoists or skidways as directed by the Engineer. Use hooks, spreader beams, ropes, band or wire slings etc. as recommended by manufacturer for each type of pipe and as approved by the Engineer.
3. STACK pipes on level surface. Do not rest pipes on sockets or jointing fairlings. Securely chock end pipes in bottom row. Height of stack is to be to manufacturer's instructions.
4. HANDLE material with care to avoid damage whether moved by hand, skidways or hoists.
5. STORING: provide safe storage for material. Interior of pipes, fittings etc. are to be kept free from dirt and foreign matter. Provide shade for materials as required by manufacturer's instructions and to the Engineer's approval.
6. CUTTING: use hacksaws, manually operated wheel cutter or pipe cutting machine as per manufacturer's instructions. If, in the opinion of the Engineer, special precautions are to be taken to eliminate airborne particles, use methods and equipment as directed by the Engineer. Prepare ends according to type of joint used and follow manufacturer's recommendations. Take care not to damage lining, if any. Repair on site, minor damage, if permitted.
7. REPAIR DAMAGED COATING, SHEATHING OR LINING in accordance with the Specification and manufacturer's instructions. Use material compatible with that originally used. Repair is to be approved by the Engineer before incorporating materials into the work.

B. EXCAVATION AND EARTHWORK

1. EXCAVATION AND EARTHWORK including but not limited to pipe trenches, earthwork support, backfilling, disposal, and surface reinstatement are to be in accordance with the requirements of Section D20 of the Specification.

C. PIPE LAYING AND JOINTING

1. GENERAL

a) LOWERING: do not lower pipe into trench until pipe bed is brought to grade and approved.
b) LOWERING: use ropes, wire slings, band slings, spreader beams etc. as recommended by manufacturer for each type of pipe and as approved.
c) EXAMINE MATERIAL carefully for damage. Test for soundness in accordance with manufacturer's instructions before laying.
d) EXAMINE MATERIAL: ensure internal coating or lining and outer coating or sheathing are undamaged. If damaged, make good or dispose of as directed.
e) PIPE CLEANLINESS: remove dirt and foreign matter before lowering.
f) PIPE CLEANLINESS: clear construction debris from inside of pipe before making joint.
g) PIPE PLACEMENT: lay pipe on an even formation true to grade and line, with sockets (if any) facing up the gradient.
h) PIPE ON SOLID GROUND: cut holes in bottom of trench to allow proper jointing and for barrel of pipe to bear evenly on solid ground for its full length.
i) PIPE ON GRANULAR BEDDING: scoop out locally at sockets/couplings to enable pipe to rest uniformly on barrel and adjust to exact line and level. After testing lay and compact further granular material in 100 mm layers to levels shown on the Drawings.
j) PIPE ON CONCRETE BED OR SURROUND: provide rectangular blocks of concrete as per Section E10 for concrete bedding, made in approved moulds at least 14 days before use, and approved hardwood folding wedges. Provide two concrete blocks for each pipe, set and bone into correct level on formation bottom and lay pipe properly centred and socketed. Insert two hardwood folding wedges, of width equal to width of concrete block, between body of pipe and block and drive together until pipe is brought to exact level required. Leave blocks and wedges undisturbed while pipes are being jointed and concrete bed and haunch or surround are being placed. Ensure blocks and wedges are of sufficient size and strength to prevent settlement of pipes. Leave sufficient space to enable joints to be made, tested and inspected.
k) PIPE PLUGS: when pipe laying is not in progress, close open ends of pipes with properly fitted temporary wooden plugs or standard caps as directed.

2. JOINTING

a) MANUFACTURER'S INSTRUCTIONS are to be followed regarding cleanliness of joint surfaces, lubricant used, correct location of components, provision of correct gaps between end of spigot and back of socket for flexible joints etc.
b) DEFLECTION OF JOINT: do not deflect flexible joints beyond maximum permissible angles given by manufacturer and/or relevant Standard.
c) PATENT DETACHABLE AND FLEXIBLE JOINTS: strictly comply with special instructions issued by manufacturers of proprietary joints when laying and jointing.
d) DIFFERING PIPE AND FITTING MATERIAL: joint with adaptors as recommended by pipe manufacturer.

3. LINE AND GRADIENT

a) IN OPEN EXCAVATION: provide and maintain sight rails and boning rods properly painted to ensure correct alignment of pipe runs. Sight rails are to be positioned either vertically above the lines of pipes or immediately adjacent thereto. At no time are there to be less than three sight rails in position on each length of pipeline under construction to any one gradient.
b) IN HEADING: provide and maintain marks to establish line and level of pipeline. Marks are to be fixed in each working shaft and two further marks established in each length of heading.

4. FLOATATION

a) PREVENTION: whenever water is excluded from interior of pipe, place sufficient backfill above pipe to prevent floatation.
b) REMOVE any pipe that has floated, correct bedding and relay.

5. PIPES BUILT INTO STRUCTURES

a) TREATMENT OF EXTERNAL SURFACE: thoroughly clean outside surface of pipes to be built-in immediately before installation. Remove protective coating to metal pipes, where ordered. Roughen clay and concrete pipes as directed. Paint plastic pipes with

appropriate solvent cement and sprinkle with dry coarse sand whilst wet. Cut away sheathing from sections to be built-in and after installation restore protection up to external face of structure with approved bituminous material.

b) FLEXIBLE JOINTS: provide two flexible joints or flexible patented joints adjacent to structures. Place first joint not more than one pipe diameter from face of structure and second not more than the following distances away from first:

1) pipelines not exceeding 450 mm: 2 pipe diameters.

D. IDENTIFICATION: Arrange for installing green warning tapes directly over piping and at outside edges of underground structures.

1. Use warning tape or detectable warning tape over ferrous piping.
2. Use detectable warning tape over nonferrous piping and over edges of underground structures.

E. FIELD TESTING

1. GENERAL

a) PROVIDE pumping equipment, pressure gauges, instruments and water needed for hydrostatic testing.
b) CARRY OUT TESTS in the presence of the Engineer.
c) FITTINGS AND JOINTS: permanently anchor fittings before testing and leave all joints exposed for checking.
d) TEST SECTIONS: limit test sections to not more than 500 m.
e) TEST SECTIONS: test pressure lines between valve chambers whenever possible.
f) TEST SECTIONS: test gravity sewers in sections between manholes.
g) TEST PLUG: secure end of main and test plug by struts.
h) CLOSED VALVE: do not test against a closed valve unless there is no acceptable alternative.
i) APPLY PRESSURE by manually operated test pump or, in the case of large diameter mains, by power driven test pump, if approved.
j) EXAMINE exposed joints and repair visible leaks.
k) FAILURE: should a test fail, locate leak and replace or make good defective pipe or replace and make good faulty joint. Retest main.
l) RECORDS: keep test records in an approved form. Hand original copy to the Engineer immediately after completion of test.
m) PRESSURE LINES: carry out hydrostatic test while pipeline is partially backfilled.

2. HYDROSTATIC TESTING OF PRESSURE PIPELINES

a) FILL PIPE slowly with water from lowest point. Do not use power-driven pump unless approved.
b) FILL ABSORBANT PIPES with water and allow to stand for at least 24 hours to allow complete absorption.
c) ENTRAPPED AIR is to be bled before pressurizing.
d) PRESSURIZING is to continue until specified test pressure is reached in lowest part of section under test. Bleed further quantities of entrapped air while raising pressure.
e) MAINTAIN TEST PRESSURE for specified test duration with pumping stopped.
f) REPRESSURIZE to original test pressure and record respective volumes of water pumped.
g) FAILURE: pipeline will be deemed to have failed test if:

1) visible leaks are detected, regardless of leakage being within specified limits
2) volume of water lost during period when pumping was stopped exceeds allowable leakage.

h) TEST PRESSURE: Unless otherwise specified, the test pressure shall be equal to 1.5 times the maximum working pressure of the pipeline as shown on the Drawings or as determined by the Engineer on Site, but shall in no case exceed 75% of the factory hydrostatic test pressure.

i) TEST PERIOD: 2 hrs.

j) ALLOWABLE LEAKAGE: 0.02 liters/mm dia/km length/day/10 m head of applied pressure.

3. Air Testing of Pipelines

    a) Test procedure to BS EN 1610.

4. VISUAL INSPECTION TEST

    a) TIMING: carry out test after total backfilling of length under test.
    b) LIMIT of length to be tested at one time is three full-length pipes unless otherwise approved.
    c) APPARATUS: use rubber tired bogies which do not damage lining of pipe and an adequate supply of electric lamps.
    d) CHECK joints by means of feelers to ensure rubber rings are correctly located.
    e) CHECK pipe barrel for visible cracks.

5. Hydraulic Individual Joint Test for Pipes Exceeding 1000 mm:

    a) Test Procedure to BS EN 1610.

6. DEFLECTION TESTS FOR GRP PIPES

    a) CONDUCT: deflection tests for GRP pipes as required by the Engineer at 3 stages. Deflection shall be measured at the spigot end at mid-point and at socket end.
    b) STAGE 1: at completion of primary backfill (deflection at this stage should be below 0.5%).
    c) STAGE 2: at final backfill (Maximum allowable deflection 2.5%).
    d) STAGE 3: six months after final backfill (maximum allowable deflection 4.0%).
    e) PIPES not passing the deflection tests at stage 2 or stage 3 will be removed and replaced.

F. WATER SUPPLY HOUSE CONNECTIONS

1. LOCATION: agree location of tapping with the Engineer before starting construction.
2. PROGRAMME connections to follow closely construction of main network.
3. TAPPING: drill, thread and tap ferrule cocks to manufacturer's instructions.
4. EXCAVATE, INSTALL, BED AND BACKFILL in same manner as main network.
5. TEST with main network but excluding water meter.
6. RECORDS: maintain accurate records of location of house connections to main network. Record details of the following:

    a) diameter
    b) length
    c) location
    d) stop valves.

7. SURVEY LOG BOOK: keep records in an approved survey log book, made available for inspection and handed to the Employer on completion. Transfer information to sketches and tables as agreed with the Engineer, provide three bound copies and hand to the Employer.

G. FLUSHING AND DISINFECTION OF WATER MAINS

1. PROCEDURE: to AWWA C651.
2. PROVIDE equipment, gauges, temporary connections, chlorine and water needed for flushing and disinfection.
3. PROVIDE equipment, gauges, temporary connections and chlorine needed for flushing and disinfection. Arrange with the Employer to draw water from existing sources.
4. SECTIONS: flush and disinfect mains in sections as directed by the Engineer.
5. DRAINING: use washout valves and fire hydrants to drain flushing and disinfecting water.
6. FIRST FLUSHING: before commencing disinfection, flush main until effluent is clean and then clean as directed. 1 to 2 times volume of pipe is usually required for such flushing.
7. TYPE OF CHLORINE: disinfect with chlorine gas or solutions of calcium hypochlorite or sodium hypochlorite and agree with the Engineer on method of application.
8. INITIAL DOSING is to be 40-50 ppm.
9. CONTACT PERIOD is to be 24 hours.
10. RESIDUAL CHLORINE: measure residual chlorine by orthotolidin test. Residual chlorine is not to be less than 5 ppm or test is to be repeated as directed.

11. FINAL FLUSHING: after disinfection, reflush network until chlorine concentration in water leaving main is less than 1 ppm.
12. TESTS: perform bacteriological tests to AWWA C651, Section 9. Number of samples is to be one per 1 km of main feeders and one per 0.25 km of distribution lines.
13. PROCEDURE AFTER CUTTING INTO EXISTING MAIN: generally to AWWA C651, Section 11.

H. FLUSHING AND DISINFECTION OF WATER STORAGE TANKS

1. Disinfect water storage tanks in accordance to AWWA C652: Chlorination with water having a free chlorine residual of 2mg/L after 24hr. At least one sample shall be analysed to indicate microbiologically satisfactory water before the facility is placed into operation.

I. FIELD PROTECTION AND COATING

1. IRON PIPES: polyethylene encasement is to be to ISO 8180 or in accordance with the manufacturer's instructions. Sleeving shall be heavy duty blue color polyethylene with a minimum thickness of 225 microns.
2. PATENTED DETACHABLE AND FLEXIBLE JOINTS: protect metal joints with mastic compound and protective tape in accordance with the manufacturer's instructions. Minimum overlap of tape is to be 25 mm. Press out firmly all folds and irregularities.

J. BEDDING, HAUNCHING, ENCASEMENT AND THRUST BLOCKS

1. GENERAL

a) CONCRETE WORK generally is to comply with the appropriate requirements of Sections: E05 "In Situ Concrete Construction Generally", E10 and “Mixing, Casting and Curing In Situ Concrete", E20 “Formwork for In Situ Concrete" and E30 "Reinforcement for In Situ Concrete".

2. PLACING CONCRETE

a) AFTER PLACING PIPE place concrete in trench and thoroughly work under pipe to provide solid and uniform bedding.
b) AFTER PIPE JOINT IS COMPLETED place balance of concrete or haunching and work into place on both sides simultaneously.
c) FORM VERTICAL CONSTRUCTION JOINTS in concrete beds, surrounds etc. at face of pipe joints with compressible board and finish to profile of concrete and pipe. Fill any gap between spigot and socket with approved resilient material.

3. PLACING MATERIAL OTHER THAN CONCRETE

a) PLACE BEDDING MATERIAL in bottom of prepared trench and carefully hand tamp to minimum thicknesses.
b) AFTER PIPE HAS BEEN LAID, place additional material or haunching in successive layers not exceeding 150 mm thick on both sides simultaneously. Completely fill spaces between pipe and side of trench and carefully hand tamp without disturbing pipe.

4. THRUST BLOCKS

a) GENERAL: provide thrust blocks at bends and junctions on pressure pipelines. Additional excavation required is to be made after pipeline has been jointed. No pressure is to be applied to the thrust block until concrete has matured for at least 3 days.

330.020 VALVES & ACCESSORIES

A. GENERAL

1. PRIOR TO INSTALLATION, inspect for cleanliness of bores, seating surfaces etc. and for handling damage, cracks, missing parts and tightness of pressure-containing bolting.
2. ENSURE valves, gates and hydrants are in closed position before installation.
3. OPERATE valves and hydrants through one complete opening and closing cycle in the position in which they are to be installed to ensure proper functioning.

B. INSTALLATION

1. VALVES

    a) SET AND JOINT valves to pipe in manner specified for laying and jointing pipe and/or to manufacturer's instructions.
    b) CONCRETE PADS: provide valves with concrete pads as specified in Section E10 and as shown on the Drawings so that pipe does not support weight of valve.
    c) VALVES WITHOUT CONCRETE PADS: place on firm footing to prevent settling and excessive strain on connection to pipe.
    d) DO NOT use valve to bring misaligned pipe into alignment during installation.
    e) INSPECT all pressure-containing bolting (bonnet, seal plate and end connections) for adequate tightness after installation but prior to field testing.

2. HYDRANTS

    a) JOIN hydrants to pipe in manner specified for laying and jointing pipe and/or to manufacturer's instructions.
    b) SET hydrants to established grades as directed by the Engineer.
    c) SET hydrants plumb with nozzles parallel with or at right angles to the curb. Where hydrants have a pumper nozzle, set the latter facing the curb. Where hydrants have two hose nozzles 90 deg. apart, set with each nozzle facing the curb at 45 deg. angle.
    d) Wet-barrel Fire Hydrants: provide for a breakaway flange.

3. ANCHORAGE

    a) Install anchorages for tees, plugs and caps, bends, crosses, valves, and hydrant branches.
    b) Apply full coat of asphalt or other acceptable corrosion-resistant material to surfaces of installed ferrous anchorage devices.

4. WATER METER

    a) Install water meters, piping, and specialties according to the utility company's written requirements.
    b) Water Meters: Install detector-type water meters in meter vault according to :). Include shutoff valves on water meter inlets and outlets and full-size valves bypass around meters. Support meters, valves, and piping on brick or concrete piers.

C. FIELD PROTECTION

1. VALVES: protect valves against action of external agents by a coat of approved bituminous compound applied cold by brush after pressure tests on pipelines have been completed.
2. HYDRANTS: apply one coat of paint, of colour specified by the Engineer, after backfilling and surface restoration is completed.
3. GATES: protect against action of external agents with one coat of approved bituminous compound applied cold by brush after installation.
4. BOLTS: protect buried bolts against corrosion with approved paint or by polyethylene wrapping.

330.030 CHAMBERS

A. GENERAL

1. EXCAVATION AND BACKFILLING generally are to comply with the appropriate requirements of Division D20 of the Specification.
2. CONCRETE WORK generally is to comply with the appropriate requirements of Sections: E05 "In Situ Concrete Construction Generally", E10 "Mixing, Casting and Curing In Situ Concrete", E20 "Formwork for In Situ Concrete" and E30 "Reinforcement for In Situ Concrete".

B. VALVE CHAMBERS

1. CONSTRUCTION: to be in situ concrete, precast concrete or blockwork as shown on the Drawings.
2. EXTERNAL COATING: cover faces of chambers with two to three coats applied by brush in accordance with manufacturer's instructions.
3. COVERS: bed frame solidly in mortar with cover in position to prevent twisting. Position centrally over opening and level and square with surrounding finishes.

S10B - COLD WATER

PART 3 SPECIFICATION CLAUSES SPECIFIC TO S10

300.000 PRODUCTS/MATERIALS

300.002 PRESSURE EQUIPMENT DIRECTIVE/PRESSURE EQUIPMENT REGULATIONS:

- All equipment and assemblies which fall within the scope of the Pressure Equipment Directive (PED) 2014/68/EU must be tested by the manufacturers, and be certified as compliant with the Directive. Such compliance shall be evidenced by displaying the appropriate CE Mark on the equipment and assemblies.
- Only relevant equipment and assemblies certified as compliant will be permitted under this specification, and any substitution put forward must also be compliant with the Directive.

300.005 COMPLIANCES:

- Ensure all water fittings and materials are in compliance with WRAS.

300.012 WATER METERS :

- Type
  - Turbine.
  - Electromagnetic.
    - Application
    - Install a water meter to the incoming mains supply. Locate the meter to allow for easy access for meter reading by the building's supervisor.
    - Standards - BS EN ISO 4064-1, BS EN ISO 4064-2, BS EN ISO 4064-3, BS EN ISO 4064-4
    - Meters for potable water to be compliant with WRc.
    - Meter connections
      - Flanged.
      - Screwed.
    - Maximum working pressure (bar) :as per design
    - Maximum water temperature (°C) :as per design
    - Minimum water temperature (°C) :as per design
    - Maximum flow rate (m^3/hr) :as per design
    - Minimum flow rate (m^3/hr) :as per design
    - Meter accuracy class to BS EN ISO 4064-1
      - For mechanical analogue cumulative meters provide a dial indicator to record quantity of water passed. Enclose mechanism of each meter within a cast iron body. Incorporate, as an integral part of each meter, a water guide at inlet to direct water evenly on to the meter. Provide each meter with a zeroing device.
      - Mechanical/electrical meters or meters with a digital indicating device and other types of electronic or magnetic meter, to be complete with all necessary components and facilities. These shall include transducer, sensor, adjustment and correction facilities, indicating device to display volume continuously or periodically on demand and facilities for interface with a BMS.
      - Ancillary (additional functionality) device complying with BS EN 14154-4 for Smart Metering
    - Device type

- Additional functionality device integrated into the meter (AFD1).
- Additional functionality device directly attached to the meter (AFD2).
- Additional functionality device remotely connected to the meter (AFD3).

- Ancillary device description:
  - Zero-setting device
  - Price-indicating device
  - Repeating indicating device
  - Printing device
  - Memory device
  - Tariff control device
  - Pre-setting device
  - Self-service device
  - Low sensor movement detector (for detecting movement of the flow sensor before this is clearly visible on the indicating device)
  - Remote reading device (which may be incorporated permanently or added temporarily
- Details
  - Provide isolating valves on either side of each meter, and full-bore valved bypass installed around meter assembly.
  - Provide facility for remote monitoring through pulsed output.
  - Electrical supply
  - 24V dc.
- Degree of protection to BS EN 60529
- A pulsed water meter must be installed to the mains water supply to each building, this includes instances where water is supplied via a borehole or other private source.
- The water meter must be connected to the building management system (BMS), if a BMS is installed.
- Sub-meters must be installed on any large water consuming plant or building area
- Comply with Issue ID Wat 02 Water Monitoring.

300.020 ORIFICE DISCS:

- Install orifice discs at connections to taps.

300.059 PRESSURISATION UNITS:

- Supply fully automatic pre-wired packaged unit on common base plate.
- Components
  - Covered suction tank with ball float valve and overflow connections.
  - Direct coupled centrifugal pressurisation booster pump as per section Z220b.
  - Standby pump with auto changeover.
  - Motor starter.
  - Non-return valve.
  - Pressure control switch.
  - Pressure gauge.
  - Pressure limit switches.
  - Interconnecting piping and isolating valve.
  - Use plant/pipework arrangement with re-circulating circuits to avoid stagnant water in pressurisation unit expansion vessel.

- Accessories
    - Supply manual fill unit for initial filling and routine maintenance.
    - Hours run meter.

310.000 WORKMANSHIP

310.005 INSTALLATION AND COMMISSIONING GENERALLY:

- Install, test and commission systems to comply with BS EN 806-4 and complimentary guidance in BS 8558, Water Supply (Water Fittings) Regulations or Bylaws and equipment manufacturer's recommendations.
- Flushing and disinfection of services supplying water for domestic use to be carried out in accordance with BS EN 806-4 and following the guidance in BS 8558 and PD 855468. Refer to the pipework cleaning and chemical treatment section of this specification for details.
- Construct the system to ensure it is safe and without risks to health and where applicable incorporate in the final design/installation recommendations given in HSG274 Part 2.
- Locate sampling points following the guidance and recommendations in the code of practice for sampling and monitoring of hot and cold water services, BS 8554 and document these in a sampling plan prepared in accordance with BS EN ISO 5667-1.
- Undertake sampling following construction completion in accordance with the guidance and recommendations in BS 8554.
- Undertake microbiological tests on samples and provide the results as part of the handover documentation to demonstrate that the systems are clear of organisms of concern. Preserve and handle samples in accordance with BS EN ISO 5667-3.
- Install thermoplastics pipework in accordance with BS 5955-8.

310.010 CONNECTIONS TO TAPS AND APPLIANCES:

- Make final connections to taps and appliances.
- For electrical appliances connected to water mains, comply with the manufacturer's recommendations and requirements of BS EN 61770 as below:
- To prevent the back siphonage of non-potable water into the water mains
- Flexible hose assemblies intended to be used as integral parts of appliances, to be in accordance with the standard
- Flexible hose assemblies designed for connecting appliances to drinking water installations to be in accordance with BS EN 13618.

310.022 INSTALLATION OF WATER METERS:

- Install water meters in accordance with manufacturer's instructions and BS EN ISO 4064-5
- Comply with the requirements of BS EN 14154-4 for additional functionality devices associated with Smart Metering.

310.030 INSTALLATION OF PRESSURE BOOSTER SETS:

- Install, test and commission pressure booster sets in accordance with manufacturer's recommendations.
- Install double check valves on quick fill connections.
- On healthcare projects comply with HTM 04-01 Part A.

310.070 EXCAVATION:

- Excavate in a clean and organised manner. Schedule with other site activities to provide controlled access and minimal tracking of soil over the site.
- Set out and use sight boards to ensure uniform falls.
- Separate top soil and set aside for later use.
- Excavate trench width to a minimum of 300mm above the top of the pipe barrel within indicated limits.
- Keep available materials for adequate shoring when excavation depth over 1.2m is intended in accordance with The Construction (General Provision) Regulations.
- Where rock is encountered in trench bottoms designed as Class D bedding further excavate to the depth necessary to receive Class F.
- Backfill over-excavation, whether intentional at soft spots or accidental with rubble.
- Spoil, which is either in excess of or does not fulfil the requirements for selected fill.
- Place in spoil heaps.
- Take off site as directed.

S11 - HOT WATER

PART 3 SPECIFICATION CLAUSES SPECIFIC TO S11

300.000 PRODUCTS / MATERIALS:

- Comply with EU Regulation 814/2013 with regard to ecodesign requirements for water heaters with rated heat output of up to 400kW and hot water storage tanks with a storage volume of up to 2000 litres regarding limiting standing loss and product information. Manufacturers to comply with the test methods in BS EN 50440 to measure the performance of electric storage water heaters.

300.002 PRESSURE EQUIPMENT DIRECTIVE/PRESSURE EQUIPMENT REGULATIONS:

- All equipment and assemblies which fall within the scope of the Pressure Equipment Directive (PED) 2014/68/EU, must be tested by the manufacturers, and be certified as compliant with the Directive. Such compliance shall be evidenced by displaying the appropriate CE Mark on the equipment and assemblies.
- Only relevant equipment and assemblies certified as compliant will be permitted under this specification, and any substitution put forward must also be compliant with the Directive.

300.005 APPROVALS:

- Ensure all water fittings and materials are compliant with WRAS.

300.030 STORAGE WATER HEATER(S):

- Type
  - Electric
- Supply and install
  - For appliances not exceeding 70kW and hot water storage capacity not exceeding 500 litres, manufacturer to have undertaken an assessment of performance of hot water delivery to BS EN 13203-1 and energy consumption to BS EN 13203-2.
  - Safety of electric storage water heater to BS EN 60335-2-21.
  - Safety of fixed electric immersion heater to BS EN 60335-2-73.
- Service
  - Single point.
- Water supply
  - Mains.
- Casing finish
  - White vitreous enamel.
- Heating element
  - Supply immersion heater complete with thermostat and heating element

300.040 ORIFICE DISCS:

- Install orifice discs at connections to taps.

300.050 THERMOSTATIC MIXING VALVES:

- Application : hot water system
  - (mixed water temperature 41°C).

- Valves to be compliant with WRAS.
- All non-metallic parts in contact with water shall meet WRAS requirements or comply with relevant parts of BS 6920 and BS EN 15768
- Valves to be independently tested and approved to BuildCert scheme:
  - TMV3.
- Standard/type
  - BS EN 1111 for high operating pressure (1-5bar)
  - For care establishments comply with:
    - HTM 04-01 supplement: performance specification D 08 - thermostatic mixing valves (healthcare premises)
    - BS 7942 (which complements BS EN 1111 and BS EN 1287 where a particular risk of scalding exists to the user)
      - Type C, without flow control and with pre-set temperature.
      - Category 1 - with electronic temperature adjustment, mixed water temperature changed progressively.
- Material
  - Body - DZR brass.
- Finish
  - Chrome plated

300.055 THERMAL CIRCULATION VALVES:

- Type
  - Thermostatically controlled self-balancing.
- Application
  - Thermostatic regulation of return water temperature in HWS systems with circulation pump.
  - Thermal disinfection at temperatures above 70°C.
- Location
  - In return pipework at bottom of each riser.
  - In return pipework from each run of fittings.
- Standard
  - To be compliant with WRAS
- Materials

- Body - bronze to BS EN 1982.
- Bonnet and associated parts - DZR brass.
- Stem - stainless steel.
- O-Ring seals - EPDM rubber, meeting WRAS requirements.
- Body seat - PTFE.

- Duty
  - Design flow (I/s) :as per design
  - Differential pressure (kPa) :as per design
  - Pressure rating: PN16.
  - Max temperature: (°C) :as per design
- Accuracy
  - +/- 2°C at set temperature.
- Features
  - Temperature gauge access point.
  - Adjustable temperature setting facility.
  - Additional thermostatic insert to increase flow when temperature of 70°C to effect disinfection.
  - Integral isolation valve.

300.060 MECHANICAL MIXING VALVES:

- Standard
  - BS EN 1286
    - Single control for adjusting flow rate and temperature.
      - Other mixing valves with separate control devices for adjusting flow rate and temperature.

300.080 EXPANSION VESSELS:

- Type
  - Diaphragm
  - Bladder
- Materials
  - Body material welded carbon steel
- Mounting details
  - Unit to be floor mounted.
  - Unit to be wall-mounted.
- Standards
  - BS 6144
  - Relevant parts of BS 6920
  - Supply expansion vessels with built in diaphragm for sealed hot water heating systems in accordance with BS EN 13831. For applications where the vessel water temperature is normally outside the range of 5 °C to 70 °C the test methods in this standard shall be

adapted in such a way that the test temperature corresponds to the temperature to which the diaphragm will be subject during operation.

- Application, selection and installation of expansion vessels to be in accordance with BS 7074-2.

310.000 WORKMANSHIP

310.005 INSTALLATION AND COMMISSIONING GENERALLY:

- Install, test and commission systems to comply with equipment manufacturer's recommendations, BS EN 806-4, complimentary guidance in BS 8558 and relevant Water Supply (Water Fittings) Regulations or Byelaws and equipment manufacturer's recommendations
- Flushing and disinfection of services supplying water for domestic use to be carried out in accordance with BS EN 806-4 and following the guidance in BS 8558 and PD 855468. Refer to the pipework cleaning and chemical treatment section of this specification for details.
- Construct the system to ensure it is safe and without risks to health and where applicable incorporate in the final design/installation recommendations given in HSG274 Part 2.
- Locate sampling points following the guidance and recommendations in the code of practice for sampling and monitoring of hot and cold water services, BS 8554 and document these in a sampling plan prepared in accordance with BS EN ISO 5667-1.
- Undertake sampling following construction completion in accordance with the guidance and recommendations in BS 8554.
- Undertake microbiological tests on samples and provide the results as part of the handover documentation to demonstrate that the systems are clear of organisms of concern. Preserve and handle samples in accordance with BS EN ISO 5667-3.
- Install thermoplastics pipework in accordance with BS 5955-8.
- Undertake thermal balancing of HWS and CWS systems in accordance with European standards.

310.020 CONNECTIONS TO TAPS AND APPLIANCES:

- Make final connections to taps and appliances.
- For electrical appliances connected to water mains, comply with the manufacturer's recommendations and requirements of BS EN 61770 as below:
- To prevent the backsiphonage of non-potable water into the water mains
- Flexible hose assemblies intended to be used as integral parts of appliances, to be in accordance with the standard
- Flexible hose assemblies designed for connecting appliances to drinking water installations to be in accordance with BS EN 13618.

310.040 INSTALLATION AND COMMISSIONING OF THERMOSTATIC MIXING VALVES:

- Install and commission thermostatic mixing valves and mechanical mixing valves in accordance with manufacturer's recommendations.
- On healthcare projects comply with HTM 04-01 Part A: design, installation and commissioning, and HTM 04-01 supplement: performance specification D 08 - thermostatic mixing valves (healthcare premises).
- For TMV3 approved valves comply with the scheme's installation and maintenance documentation requirements.

FOR TMV3 APPROVED VALVES COMPLY WITH THE SCHEME ONSITE TESTING REQUIREMENTS.

310.050 INSTALLATION OF WATER METERS:

- Install water meters in accordance with manufacturer's instructions and BS EN ISO 4064-5
- Comply with the requirements of BS EN 14154-4 for additional functionality devices associated with Smart Metering.

320.060 PRESSURISATION UNITEXPANSION TANK INSTALLATION:

- Install expansion vessels and ancillary equipment for systems including safety valve for low and medium temperature hot water heating systems in accordance with BS 7074-2.

S20A - TREATED WATER - MECHANICAL

PART 3 SPECIFICATION CLAUSES SPECIFIC TO S20A

300.000 GENERAL

300.002 PRESSURE EQUIPMENT DIRECTIVE/PRESSURE EQUIPMENT REGULATIONS:

- All equipment and assemblies which fall within the scope of the Pressure Equipment Directive (PED) 2014/68/EU must be tested by the manufacturers, and be certified as compliant with the Directive. Such compliance shall be evidenced by displaying the appropriate CE Mark on the equipment and assemblies.
- Only relevant equipment and assemblies certified as compliant will be permitted under this specification, and any substitution put forward must also be compliant with the Directive.

300.010 SYSTEM REQUIREMENTS:

- Select plant and equipment suitable to meet system objectives requirements.

300.030 STATUTORY AUTHORITIES:

- Ensure treatment complies with statutory authority and health and safety regulations.

300.040 MAINS WATER ANALYSIS:

- Obtain an analysis of mains water taken from site supply point. Check with local water authority to ensure analysis results are typical for site area and report variances for instruction.
- Submit a sample of water to water treatment specialist.
- The following analysis shall be done onsite by contractor for water in main tank before purchasing any water treatment equipment :-
    - Conductivity (uS/cm)
    - Total Dissolved Solids (mg/1)
    - pH
    - Chloride Cl (mg/1)
    - Calcium Ca (mg/1)
    - Magnesium Mg (mg/1)
    - Sodium Na (mg/1)
    - Potassium K (mg/1)
    - Total Hardness CaC03 (mg/1)
    - Alkalinity CaC03 (mg/1)
    - Total Iron Fe (ug/1)
    - Copper Cu (ug/1)

300.050 WATER TREATMENT METHODS:

- Scale control
    - Pre-treatment
        - Base exchange softening plant.

        - Reverse osmosis plant.
    - Control of microbiological fouling
        - Chemical
            - Biocides.
            - Biodispersants.
            - Biocides and biodispersants.

310.000 PRODUCTS/MATERIALS

310.070 FILTRATION EQUIPMENT:

- Multimedia Sand Filters
    - Application: Cold water system.
    - Factory-fabricated and tested, multimedia, sand-filter system of filter tank(s), media, piping, and controls for removing sediment particles from water.
    - Configuration
        - Duplex
        - Triplex
    - Filter Tank.
        - Corrosion resistant with distribution system and media
        - Construction
            - Steel filter tanks
            - FRP filter tanks
        - Service Valve
            - Diaphragm type hydraulically operated.
        - Piping
            - Stainless-steel pipe, stainless-steel fittings
            - PVC pipe and fittings with solvent-cemented joints
        - Joints
            - Flanged
            - Grooved
            - Threaded
        - Control
            - [For Duplex and Triplex Tank System: Automatic, electric time clock for control of filter system flow and backwash cycles; factory-wired for single, external electrical connection. System operation shall be continuous with bypass piping and not more than one tank in backwash cycle at same time.]
        - Support.
            - Skid Mounting.
    - Filtration efficiency

        - 98 percent removal of suspended particles 2 micrometers and larger from feedwater of listed filtrate design concentrations
    - Media Tank
        - Multiple with manifolded inlet, outlet, and drain piping and controls.
    - Media Tank Material
        - Carbon steel with lining material
        - FRP
    - Filter media
        - Graded Silica sand
- Carbon Filters
    - Application: As needed for softener / RO tank.
    - Simplex carbon filter, with media tank, media, and automatic backwash for:
        - Removing chlorine from water
        - Improving color, odor, and taste of water
    - Media Tank.
        - Construction
            - Steel filter tanks
            - FRP filter tanks
        - Media tank Material
            - Carbon steel
            - Stainless steel
            - FRP
        - Media
            - Activated charcoal
            - Ground charcoal
        - Control
            - Automatic for control of backwash; factory wired for single, external electrical connection.
        - Filtration efficiency
            - 98 percent removal of suspended particles 20 micrometers and larger from feedwater of listed filtrate design concentrations
- Freestanding Cartridge Filters
    - Simplex floor-mounted housing with replaceable element(s) for:
        - Removing suspended particles from water
    - Housing
        - Corrosion resistant; designed to separate feedwater from filtrate and to direct feedwater through water filter element(s); with element support(s) and base, feet, or skirt
        - Housing Material

        - Stainless steel tanks
    - Element
        - Replaceable; of shape to fit housing.
        - Media
            - Activated charcoal
            - Ground charcoal
            - Pleated polyester
            - Pleated PP
            - Wound polyester
            - wound PP
        - Filtration efficiency
            - [98] percent removal of suspended particles [10] micrometers and larger from feedwater of listed filtrate design concentrations
- Off-Floor Cartridge Filters
    - Simplex, wall-mounted housing with replaceable element for:
        - Removing suspended particles from water
    - Housing
        - Corrosion resistant; designed to separate feedwater from filtrate and to direct feedwater through water filter element; with element support.
        - Housing Material
            - Stainless steel tanks
            - PE or PP
            - Plastic
        - Housing Seal
            - NBR
    - Element
        - Replaceable; of shape to fit housing.
        - Media
            - Activated charcoal
            - Ground charcoal
            - Pleated polyester
            - Pleated PP
            - Wound polyester
            - wound PP
        - Filtration efficiency
            - [98] percent removal of suspended particles [10] micrometers and larger from feedwater of listed filtrate design concentrations

310.090 ULTRAVIOLET DISINFECTION:

- The UV disinfection facility shall form an integral part of the building management regime for the control of Legionella in water systems in accordance with CIBSE TM13: Minimising the

Risk of Legionnaires' Disease, and HSE Approved Code of Practice L8 and associated guidance HSG274 Part 2:The Control of Legionella Bacteria in Hot and Cold Water Systems, providing protection against Legionella, Cryptosporidium and Pseudomonas bacteria within the water system.

- Unit to comply with WRAS requirements.
- Type of system/lamp
    - Low pressure.
    - Low pressure amalgam.
    - Medium pressure.
- Application/system
    - Domestic water supply treatment.
    - Mains water treatment.
- Treatment cycle
    - Single pass.
    - Recirculating flow.
- Materials
    - UV chamber material - 316L stainless steel.
    - High purity quartz lamp sleeve/thimble
        - Synthetic/fused.
        - Doped.
- Design and finish
    - Fixed flanged
    - Loose flanged
    - Connections
        - BSP male/female
        - Flanged (PN)
    - Internal polish
        - 0.8Ra
        - 1.6Ra
- Duty
    - System sizing method
        - Wall dose to provide minimum level of UV intensity at the furthest location from the UV lamp (mJ/cm^2)
        - Average dose taking account of the wall dose (furthest distance from the UV lamp) and the area immediately in front of the UV lamp (mJ/cm^2)
    - Log reduction dose to result in a log reduction in the organism population (mJ/cm^2)
    - Peak flow rate (I/s) : as per design
    - Water velocity through system
        - No greater than 3m/s.
    - Ultraviolet transmittance
        - Assumed (90% UVT) T10.
    - Chamber pressure rating
        - 10 bar.

- System power requirements: 230V 1ph (A)

- Installation and mounting
  - Vertical (medium pressure systems)
    - Lamps on horizontal axis.
  - Horizontal.
  - Install unit and control panel in accordance with the manufacturer's recommendations.
  - All interconnecting wiring between control panel and UV unit to be by the manufacturer.
- Safety considerations
  - Mechanical lamp interlock for electrical connection for lamps.
- Control panel requirements and details
  - Material
    - Mild steel epoxy coated.
    - 304 stainless steel.
    - 316L stainless steel.
  - Degree of protection to BS EN 60529
    - IP54.
  - Fit over temperature protection device with volt free contacts.
  - Provide electronic ballast control lamp drivers.
  - Features and functions
    - UV intensity display.
    - Low dose alarm.
    - Lamp hour counter.
    - System running indication.
    - Push button membrane display.
- Ancillaries and accessories
  - Wiper
    - Manual.
    - Automatic
      - Utilise optical source counting.
      - Motor to be 24V dc.
      - Do not use limit switches and magnets.
  - UV intensity monitor to measure UV dose in mJ/cm^2
    - Analogue output.
    - 4-20mA output.
  - Temperature probe.
- Commissioning
  - System to be commissioned by the manufacturer.

310.110 BASE EXCHANGE WATER SOFTENER:

- Provide complete water softening plant, fully packaged, pre-assembled and pre-wired and factory tested as indicated
- Softener and the following ancillaries to be skid mounted

- Standards and regulations
    - BS EN 806
    - BS 8558
    - Regulation 31 of the Water Supply (Water Quality) Regulations 2001
    - BS EN 14743 - operation and testing of softeners for drinking water permanently connected to the mains supply.
    - BS EN 15161 - installation, commissioning, operation and maintenance of softeners permanently connected to the mains supply.
- Method of water supply
    - From booster pump.
- Feed water details
    - refer to section 300.040
- Arrangement
    - Double column (duty/standby).
- Softener sizing method
    - Capacity limited.
    - Flow rate limited.
    - Efficiency limited.
    - Regeneration interval limited.
- Regeneration initiation method
    - Time.
    - Water throughput.
    - Water quality.
    - Resin sensor.
- Regeneration type
    - Co-current.
    - Counter current.
    - Proportional brining.
- Salt type
    - Granular.
    - Tablets (pillows).
    - Pure vacuum dried (PVD).
- Salt handling method
    - 25kg bags.
- BMS interface is required
- Ancillaries to be provided by manufacturer
    - Softened water storage tank
    - Mains water break tank and booster set
    - Brine recovery system
- Distribution system details
    - Upper distribution Pipe material
        - Single, point type, fabricated from galvanized-steel pipe and fittings
    - Lower distribution Pipe material

        - nonmetallic pipe and fittings with individual, fine-slotted, nonclogging plastic strainers
    - System pressure rating (PN): as designed.
- Prefabrication, installation, testing and commissioning
    - Comply with WRAS IGN 9-07-01.
    - Comply with British Water Code of Practice for the installation of salt regenerated ion exchange water softeners for direct connection to the mains water supply Ref BW:COP 3/00.
    - Prefabrication/factory assembly

320.000 WORKMANSHIP

320.005 INSTALLATION GENERALLY:

- Install, test and commission systems to comply with equipment and equipment manufacturer's recommendations, BS EN 806-4 and complimentary guidance in BS 8558,
- Install thermoplastics pipework in accordance with BS 5955-8.

320.010 INSTALLATION OF PLANT:

- Install treated water plant in accordance with manufacturer's recommendations.

S31 - INSTRUMENT AIR

PART 3 SPECIFICATION CLAUSES SPECIFIC TO S31

300.000 GENERAL

300.002 PRESSURE EQUIPMENT DIRECTIVE/PRESSURE EQUIPMENT REGULATIONS:

- All equipment and assemblies which fall within the scope of the Pressure Equipment Directive (PED) 2014/68/EU must be tested by the manufacturers, and be certified as compliant with the Directive. Such compliance shall be evidenced by displaying the appropriate CE Mark on the equipment and assemblies.
- Only relevant equipment and assemblies certified as compliant will be permitted under this specification, and any substitution put forward must also be compliant with the Directive.

300.005 COMPRESSED AIR QUALITY (PURITY):

- Supply compressed air at pressures and in quantities as schedule ref **[...]**
- Compressed air purity classification leaving the central plant in accordance with BS ISO 8573-1 for aerosol solid particulates, humidity and oil content shall be as follows
  - Solid particulates
    - 4
  - Water vapour pressure dewpoint/liquid water
    - 4
  - Total oil (aerosol liquid and vapour)
    - 4
- Compressed air purity classification for specific applications after local filters and/or dryers in accordance with BS ISO 8573-1 (Particles:Water:Oil) shall be as follows
  - Purity class to BS ISO 8573-1
- Test methods for the range of contaminants to be in accordance with Parts 2-9 of BS ISO 8573.

300.030 INFORMATION PLATES:

- Provide non-ferrous metal information plates with complete data on compressor, motor and receiver.

300.040 WORKS INSPECTION:

- Include for inspection at manufacturer's works by Insurance Company inspector or other person appointed in accordance with applicable regulations.

300.050 PERFORMANCE TESTS:

- Standards
  - Carry out performance tests displacement for compressors in accordance with BS ISO 1217 and BS EN 286-1 for air receivers when part of a packaged unit.

- Carry out performance tests for air receivers in accordance with BS EN 286-1.
- Undertake acoustic tests in accordance with BS EN ISO 3746 to determine sound power levels.

300.060 PRESSURE LIMITATIONS:

- Limit main distribution pressure to 6.0 bar gauge and branch distribution pressure to 1.5 bar gauge.

300.070 HIGH PRESSURE MAINS IN OCCUPIED SPACES:

- Do not install exposed high pressure mains in occupied spaces.

310.000 PRODUCTS/MATERIALS

310.010 AIR COMPRESSORS:

- Duty
  - Compressed air quality class to BS ISO 8573-1
- Compressor type
  - Reciprocating.
- Assembly
  - Single unit.
- Compressor lubrication
  - Oil lubricated.
- Compressor drive
  -
  - Belt.
- Cooling
  - Air cooled.
- Motor - Provide air intake filter and silencer.
- Mode of operation of compressor plant
  - Continuous.

310.020 AFTER COOLERS:

- Supply after coolers complete with moisture separator. Ensure discharge air temperature does not exceed 12°C above cooling medium temperature.
- Cooling medium
  - Air.
- Drain
  - Automatic drain cock.

310.040 COMPRESSED AIR DRYERS:

- Standard - test in accordance with BS ISO 7183
- Type of compressed air dryer
    - Refrigeration dryer
        - Refrigerant
            - R134a.
            - R410a.
            -
- Accessories
    - Hygrometer.
    - Integrated activated carbon pack and outlet membrane filters.
- Location
    - After air receiver.
    - Indoors.

310.050 AIR FILTERS:

- Standard
    - Test coalescing filters for removal of oil aerosols in accordance with BS ISO 12500-1
    - Test adsorption filters for removal of oil vapours and odours in accordance with BS ISO 12500-2
    - Test coalescing and dust removal filters for removal of solid particulates in accordance with BS ISO 12500-3
    - Comply with the requirements of the relevant parts of BS ISO 5782 for the characteristics of filters to be included in product literature and product marking requirements.
- Material
    - Fabricated steel.
- Connections
    - Flanged to BS EN 1092-3 PN
    - Fabricated steel to BS EN 1092-1
    - Screwed to relevant parts of BS EN 10226.
- Protection
    - General purpose.
    - Oil free.
    - Odour and vapour removal.
- Ancillaries
    - Differential pressure monitoring gauge.
    - Automatic drain trap.
- Specialty Installation
    - Install coalescing filters in compressed-air piping at or near air compressors and upstream from mechanical filters.

- Install mechanical filters in compressed-air piping at or near air compressors and downstream from coalescing filters.

310.055 WATER SEPARATORS:

- Standard – test in accordance with BS ISO 12500-4.
- Material
  - Cast aluminium alloy.
- Connections
  - Flanged to BS EN 1092-3 PN
  - Fabricated steel to BS EN 1092-1
  - Screwed to relevant parts of BS EN 10226.
- Ancillaries
  - Differential pressure monitoring gauge.
  - Float operated automatic drain trap.

310.060 AIR RECEIVERS:

- Standard - BS EN 286-1.
- Class
  - Class 1
- Spare capacity
  - Provide one spare receiver equal in capacity to the largest receiver fitted initially.
- Components
  - Safety valve.
  - Pressure gauge.
  - Condensate drain cock.
  - Inspection openings.
  - Control pressure switch.
  - Standby pressure switch.
  - Automatic drain.
  - Inlet isolating valves.
  - Outlet isolating valves.
  - Supporting feet.
- Accessories
  - Matching flanges.
- Regulations - Comply with statutory regulations.

310.070 INSTRUMENT AND CONTROL PANEL:

- Enclosure
- House control and instruments in protective enclosure. Protection in accordance with BS EN 60529 IP
- Functions - Start/stop button.
  - Programme change.
  - Auto start/stop with run-on timer.

- Output display
    - Digital.
- Output information
    - Discharge pressure.
    - Intermediate pressure.
    - Air temperature.
    - Oil temperature.
    - Filter condition - air.
    - Filter condition - oil.
    - Timed drainer intervals.

310.080 PNEUMATIC RELAYS:

- Provide electro-pneumatic relays for interlocking purposes.
- Provide electro-pneumatic relays so that on plant failure or shutdown, the control returns to its zero position.

310.090 AVERAGING RELAYS:

- Provide averaging relays for:
    - averaging two control signals.
    - reversing the control signal and pressure.
    - selecting the lower or higher of two pressures to give selection control.

310.100 THERMOSTATIC CHANGEOVER SWITCH:

- Use snap action changeover switch rated at 5 amps full load at 240volt AC actuated by the pressure of liquid filled remote bulb and capillary tubing on a bellow. Provide means of adjustment on front cover via a temperature setting knob.

310.110 PNEUMATIC SENSORS - DISCHARGE CONTROL:

- Use pneumatic sensors consisting of a liquid filled averaging type sensor for discharge air control.

310.120 PNEUMATIC SENSORS - EXTRACT AIR CONTROL:

- Use rod and tube insertion element sensors for extract air control. Use sensors suitable for continuous temperature indication with a calibrated gauge.

310.130 PNEUMATIC SENSORS - HUMIDITY CONTROL:

- Sensing element
    - Foil dielectric gold coated.
    - Control range 20 to 90% RH.

310.140 PNEUMATIC ROOM SENSORS - DIRECT ACTING ROOM SENSORS:

- Sensor type
  - Direct acting.
- Range
  - Use thermostats with a range set point of 15- 30°C and a throttling range of 1.1 to 5.5°C.
- Cover
  - Metal cover with display of temperature set point.

310.160 PNEUMATIC CONTROLLERS:

- Use pneumatic controllers with all sensors factory calibrated and with adjustments, calibrations etc on receiver controllers located
  - in cabinets adjacent to plant being controlled.
- Indication
- Incorporate means of indication of temperature, humidity and pressure on controllers.
- Operation
  - Proportional operation.
- Accessories
  - Provided with a remote control point adjustment (CPA).
- Range
- Ensure range of pneumatic receiver controllers cover dual input controllers for
  - low limit.
  - high limit.
  - compensated winter schedules.
  - compensated summer schedules.

310.166 FLEXIBLE THERMOPLASTIC HOSES:

- Flexible hoses to be textile-reinforced and in accordance with BS EN ISO 5774 and be suitable for the maximum working pressure / temperature of the system.
- Hoses to be complete with suitable and correctly fitted couplings and end fitted end fittings to form hose assemblies. End fittings to be either quick-release / quick acting type, screw threaded or socket and spigot type to suit the application.
- Install flexible hoses:
  - Where indicated on drawings.
  - At final connections to equipment.

310.180 SAFETY VALVES:

- Standard - fit pop type valves to BS EN ISO 4126-1 and BS EN ISO 4126-7.
- Material
  - Bronze bodies with bronze trim.
- Connections

- Male screwed bottom inlet.

310.190 PILOT OPERATED SAFETY VALVES:

- Standard
  - Fit pilot controlled diaphragm operated type valves with single seat to BS EN ISO 4126-4 and BS EN ISO 4126-7.
- Materials
  - Steel bodies.
- Connections - flanged to BS EN 1092-1 PN 16
- Accessories
  - Provide an external tapping to sense upstream pressure.
  - Ensure variation of set pressure in either direction is possible while valves are in service.

310.200 PRESSURE REDUCING VALVES - INTEGRAL SENSOR TYPE:

- Components and materials
  - Copper alloy body screwed to relevant parts of BS EN 10226.
  - Stainless steel valve and seat and return spring.
  - Phosphor bronze bellows.
  - Control spring and handwheel.
  - Integral sensor with an alpha/numeric pressure set-point indicator and locking facility.

310.210 PRESSURE REDUCING VALVES - PILOT OPERATED TYPE:

- Components
  - Stainless steel valve and seat and return spring.
  - Stainless steel diaphragm.
  - Control spring.
  - Single seat design for tight shut off.
  - Pressure control pipe with stop cock.
  - Pressure setting handwheel with padlock.
  - **[...]**
- Material
  - Cast iron body.
- Connections
  - Screwed to relevant parts of BS EN 10226.

310.220 PRESSURE CONTROL VALVES - DIRECT ACTING TYPE:

- Components
  - Copper alloy body screwed to relevant parts of BS EN 10226.
  - Stainless steel valve and seat and return spring.
  - Phosphor bronze bellows.
  - Control spring and handwheel.
  - Integral sensor with an alpha/numeric pressure set-point indicator and locking facility.

310.230 SAFETY PRESSURE RELIEF VALVE:

- Install a safety pressure relief valve which actuates an audible alarm on downstream side of each pressure reducing valve.

320.000 WORKMANSHIP

320.005 SAFETY OF INSTALLATION:

- Ensure controls comply with BS EN 1012-1
- Safety devices
    - High air discharge temperature lock out switch.
    - Cooling water failure lock out switch.
    - Low oil pressure cut out

320.010 PIPEWORK INSTALLATION:

- Install pneumatic piping for complete pneumatic controls installation.
- Carry out a pneumatic leak test followed by a pneumatic pressure test as described in TR/6 Site pressure testing of pipework. Building Engineering Services Association. Guide to Good Practice.
- Install piping concealed from view and protected from physical contact by building occupants, unless otherwise indicated and except in equipment rooms and service areas.
- Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited, unless otherwise indicated.
- Install piping above accessible ceilings to allow sufficient space for ceiling panel removal and to coordinate with other services occupying that space.
- Install fittings for changes in direction and branch connections.
- Install piping free of sags and bends.
- Where installing piping adjacent to machine, allow space for service and maintenance.
- Install piping to permit valve servicing.

320.015 EQUIPMENT INSTALLATION:

- Maintain manufacturer's recommended clearances for service and maintenance.
- Install compressed-air equipment anchored to substrate.
- Arrange equipment so controls and devices are accessible for servicing.
- Install the following devices on compressed-air equipment:
    - Thermometer, Pressure Gage, and Safety Valve: Install on each compressed-air receiver.
    - Pressure Regulators: Install downstream from air compressors and dryers.
    - Automatic Drain Valves: Install on aftercoolers, receivers, and dryers. Discharge condensate over nearest floor drain.

320.020 SUPPORTS:

- Clip pipework at maximum intervals of 1.0m.
    - Support horizontal piping within 12 inches (300 mm) of each fitting and coupling.

320.030 DISTRIBUTION:

- Lay out compressed air distribution lines to follow services routes and to group similar plant items.

320.040 MULTIPLE RUNS:

- Ensure all multiple runs of tube in plant areas and false ceilings and ducts are in trunking or on perforated sheet steel cable tray.

320.050 CONNECTION TO VALVES:

- Use copper pipework where connections are made to valves and sensing elements.

320.060 SLEEVES:

- Provide sleeves where pneumatic piping is run through walls or other members.
- Install sleeve seals for piping penetrations of concrete walls and slabs

320.060 ESCUTCHEONS:

- Install escutcheons for piping penetrations of walls, ceilings, and floors

320.070 PIPELINES WITHIN BUILDING FINISHES:

- Where run within building finishes protect pneumatic tubes from accidental damage during installation. Where run in walls or columns install pneumatic tubes with PVC conduit (high impact).

320.080 ISOLATION:

- Provide means of isolation
    - at all branches.

320.090 ISOLATING VALVES AND PRESSURE GAUGES:

- Install isolating valves and pressure gauges on upstream and downstream side of each component.

320.100 VALVES AND SAFETY DEVICES GENERAL:

- Mount vents, safety valves and fusible plugs so that they discharge safely. Comply with the manufacturer's installation and commissioning requirements.
- Provide safety valves in accordance with BS EN ISO 4126-1 and BS EN ISO 4126-7 and fusible plugs in accordance with BS 1123.
- Install safety devices in accordance with BS ISO 4126-9.
- Install check valves to maintain correct direction of compressed-air flow to and from compressed-air piping specialties and equipment.

- Install shutoff valves and unions or flanged joints at compressed-air piping to air compressors.
- Install shutoff valve at inlet to each automatic drain valve, filter, lubricator, and pressure regulator.
- Install safety valves in receiver tanks, in quantity and size to relieve capacity not less than that of connected compressor.

320.110 FALLS:

- Ensure the mains system falls to proper drain points and that fall is at least 25mm in 120 metres in direction of air flow.

320.120 BRANCH LINES:

- Take all branch lines off mains from top of the main.
- Provide drain leg and drain trap at end of each main and branch and at low points.

320.130 DRAIN POINTS:

- Provide drain points complete with strainer, air trap and discharge pipe.
- Install air and drain piping with 1 percent slope downward in direction of flow
- Install automatic drain valves on intercoolers, aftercoolers, separators, receivers, dryers, and other locations indicated. Discharge condensate over nearest floor drain.

320.140 PRESSURE REDUCING AND CONTROL VALVES:

- Install valves in horizontal pipelines and include moisture traps, strainers, pressure gauges and safety valves according to application and to manufacturer's recommendation.
- Install air-main pressure regulators in compressed-air piping at or near air compressors.
- Install air-line pressure regulators in branch piping to equipment and tools.

320.150 SAFETY REQUIREMENTS:

- Ensure controls comply with BS EN 1012-1
- Safety devices
    - High air discharge temperature lock out switch.
    - Cooling water failure lock out switch.
    - Low oil pressure cut out.

S33 - LIQUEFIED PETROLEUM GAS

PART 3 SPECIFICATION CLAUSES SPECIFIC TO S33

300.000 GENERAL

300.005 REGULATIONS:

- Supply and install equipment in accordance with NFPA 58 and NFPA 54, and the health and safety recommendations and requirements of the Local Authorities having jurisdiction. Where system components are not covered by NFPA standards, BS/EN standards shall be followed.

300.020 STANDARDS:

- Store and use LPG in accordance with all relevant NFPA 58, and requirements of local authorities.
- Design, install, test and commission LPG service pipework in both the liquid phase and at full vapour pressure from cylinders or bulk storage vessels to the emergency control valve outside the building in accordance with NFPA 58.
- For installation of low pressure pipework up to 35mm, downstream of the final regulator / primary meter installation or emergency control valve on the outside of the property associated with the service pipework, comply with NFPA 58.
- For the installation and maintenance of low pressure gas installation pipework of up to 35mm in domestic premises, comply with NFPA 58.
- Install in accordance with NFPA 58 and NFPA 54.

310.000 PRODUCTS/MATERIALS

310.010 STORAGE VESSELS:

- Type: Fixed type Underground
    - Vessel standards
        - NFPA 58
        - ASME Boiler and Pressure Vessel Code and bearing the ASME label.
    - Ancillaries standards
        - Pressure relief valves for LPG pressure vessels to NFPA 58
- Accessories and Fittings
    - Pressure Relief Valve connected to the vapor space.
    - Drain valve.
    - Maximum Level Fill Stop Valve.
    - LPG tank level gage to indicate current level.
    - LPG tank pressure gage.
    - Filling connection.
    - Service outlet connection
    - Shut-off and emergency valves
    - Excess flow valves

- Check Valves
- Temperature gauge

310.015 GAS VAPORISERS:

- Assembly shall be FMG labeled and comply with NFPA 58 and NFPA 70.
- Type: Indirect-Type, Direct-Fired Heat Exchanger
    - Description: LPG, vaporizer vessel with a replaceable, immersion-type, electric heating element.
    - Heating Element Operating Controls:
        - Safe operating conditions.
            - Microprocessor-based control system integrates safety and operating controls.
        - Operating Vapor-Pressure Control.
        - High-Pressure Cutoff.
        - Alarm Bell and Rotary Beacon.
- Vessel standards
- Ancillaries standards
    - Tank valves and fittings.
    - Pressure relief valves for LPG pressure vessels to NFPA 58 as applicable.
- Building Management System Interface:
    - Factory-installed hardware and software
    - Monitor and control set points
    - Display vaporizer status and alarms.

310.030 GAS PRESSURE REGULATORS AND AUTOMATIC CHANGE-OVER DEVICES:

- Application Service Pressure Regulators
- Type of pressure reduction
    - Single stage installation.
    - Two stage installation.
    - Three stage installation
- Standards
    - NFPA 58
- Duty
    - Maximum supply pressure as per design.
- Application (Line/Installation Pressure Regulators)
- Type of pressure reduction
    - Single stage installation.
    - Two stage installation.
- Standards
    - NFPA 58

310.031 GAS DISTRIBUTION PIPING:

- LPG distribution piping and joints and fittings to conform to NFPA 58 and ASTM standards

310.032 GAS METERS:

- Standards
  - Gas meter unions and adaptors in accordance with BS 746
  - BS EN 1359 - Diaphragm type gas meters
  - BS EN 14236 - Ultrasonic (domestic application) gas meters
  - Install, test and commission small natural gas meters for systems up to 6m^3/h and max operating pressure up to 2bar in accordance with BS 6400-3
  - PD CEN/TR 16061 - Smart meters
  - Low pressure meter installations to IGEM/GM/6
    - Diaphragm
    - Rotary displacement
  - Where a meter is used to measure the amount of energy supplied for billing purposes, the meter and associated volume/energy conversion device must be approved under the European Measuring Instruments Directive (MID) 2014/32/EU - Annex IV (MI-002): Gas meters and volume conversion devices; or approved by the Local Authorities having jurisdiction.
- Accessories
  - Filtration to at least 200 micron
  - Remote reading facility
  - Provide pulsed output for BMS monitoring
  - Volume conversion device to BS EN 12405-1
  - Energy conversion device to BS EN 12405-2
  - Flow computers that are intended to operate with gas turbine meter to BS EN 12261 to comply with BS EN 12405-3

310.040 TERMINAL CONTROL EQUIPMENT AND CONNECTIONS TO APPLIANCES:

- Regulators
  - First stage.
  - Second stage.
- Rubber and plastics hoses, tubing and assemblies for connection of appliances from regulator to comply with BS EN 16436.

310.050 GAS DETECTION AND ALARM EQUIPMENT:

- Detectors:
  - Inflammable Gas Detector: Combustible gas detector shall be diffusion type catalytic sensor in housing suitable for the environment.
  - Oxygen Detector: Oxygen detector shall be a paramagnetic cell. Minimum shelf life shall be 6 months. Measurement shall be adjustable through a range of 0 to 25 percent oxygen-in-air, and actuation level shall be set at 19.5 percent oxygen.
- Power Supply:

- Primary power supply.
- Alternate source of power, arranged to become energized automatically within at least ten seconds upon loss of normal power, in accordance with NFPA 110 shall be provided.

- Standards
  - BS EN 50271.
- Details
  - Control Unit
    - General Requirements:
      - Control unit shall be 4 channel, operating over a temperature range of 0 to 51 degrees C.
      - Each control unit shall be capable of monitoring 4 detectors.
      - Control unit shall be housed in a weatherproof cabinet suitable for wall mounting.
      - Relays shall be solid state type.
      - Rectifiers shall be solid state type.
    - Control Circuits: Circuits shall be solid state, with plug-in type circuit boards, in housing suitable for non-hazardous locations.
    - Power Supply component shall be incorporated in the control unit, with charger and batteries.
    - Indicator Light and Reset:
      - Each control unit shall have buttons for test, and indicator lights for Power, Malfunction, and Alarm.
      - Indicator lamps shall be color coded as follows: Power (green), Malfunction (yellow) and Alarm (red).
      - Zero, Alarm, and Calibration settings shall be adjustable.
    - Malfunction Circuits.
    - Alarm Unit shall be rotating alarm beacon.

310.055 GAS SAMPLING SYSTEM:

- Detectors:
  - Inflammable Gas Detector: inflammable gas detector shall be Galvanic cell method type. Measuring accuracy shall be within ±5% of full scale.
  - Oxygen Detector: Oxygen detector shall be Catalytic combustion method type. Measuring accuracy shall be within ±0.7% of oxygen concentration.
- Power Supply:
  - Primary power supply.
  - An alternate source of power, arranged to become energized automatically within at least ten seconds upon loss of nor-mal power.
- Standards
  - BS EN 50271.
- Details
  - A sequential sampling system for detection of LPG in the different spaces. The system shall detect inflammable gas and oxygen in air by applying the detection principle of

catalytic combustion method and galvanic cell method respectively and transmits representative alarm by means of re-lay contacts

310.070 EXTRA MATERIALS:

- Portable multi-gas detector; Provide two portable multi-gas detectors at any LPG distribution site to be used for periodic testing at the facility. As a minimum, the following characteristics need to be ensured;
    - Simultaneously monitor and display up to five atmospheric hazards.
    - Adaptable to a variety of applications, with an extensive selection of user-settable field options
    - Passcode function to prevent unauthorized modifications of the instrument's settings
    - Characteristics;
        - Temperature: -4 to +122°F / -20 to +50°C
        - 14 to +104°F / -10 to +40°C (PID)
        - Alarms:
            - Visual, vibrating, audible (95 dB)
            - Low, High, STEL, TWA, OL (over limit)
        - Tests: Sensor integrity, circuitry, battery and audible/visual alarms on activation, battery (continuous)
        - Ratings:
            - EMI/RFI: Complies with EMC Directive 89/336/EEC
            - IP 65/66
        - Certifications and Approvals: CE certified.

320.000 WORKMANSHIP

320.010 INSTALLATION:

- Install all electrical equipment in the storage area to BS EN 60079
- Install LPG system including bulk storage pipework distribution system to the building and appliances in accordance with NFPA 58 and NFPA 54, and the requirements and recommendations of the Local Authorities having jurisdiction.

S41 - FUEL OIL STORAGE AND DISTRIBUTION

PART 3 SPECIFICATION CLAUSES SPECIFIC TO S41

300.000 PRODUCTS/MATERIALS

300.005 STANDARDS AND REGULATIONS:

- Comply with NFPA 30 and the relevant requirements and recommendations of the Local Authorities having jurisdiction. Where system components are not covered by NFPA standards, BS/EN standards shall be followed.

300.006 GENERAL (FUEL PUMPS):

- Description: Comply with UL 79, UL 87, and UL 343.
- Comply with general clauses below
    - Pumps generally - reference Y20.1010
    - Pump selection for efficiency/EC ecodesign requirements - reference Y20.1020
    - Safety guards - reference Y20.1030
    - Pump testing - reference Y20.1040
- Comply with section Y92A for specifications of starters and VSD.
- Controls: Pump controller panel complying with UL 353 and UL 508C and with interlock and terminals for connections to diesel-driven emergency generators

300.007 FUEL OIL CHARACTERISTICS:

- Diesel oil

300.030 BELOW GROUND STEEL OIL STORAGE TANKS:

- Standard - UL 58 and STI P3
- Tank type
    - Fabricated double skinned tank
    - Containment Method: STI-P3, Type II, with interstitial space.
- Cathodic protection against external corrosion, and electrical isolation.
- Accessories
    - Leak detection system to UL 1238
    - Automatic tank contents gauge in accordance with UL 180, to provide:
        - Level measurement
            - Class C - (max permissible error ± 1% of measuring range)
        - Water detection
        - Temperature measurement
    - Drain valves.

- Install one piece bronze ball valve with hose end connection at low points in fuel oil piping.

- Filling pipes and connections.
- Vent pipes.
- Outlet valves and pipes.
- Oil return pipes.
- Pressure relief valve
  - Install pressure relief valves in distribution piping between supply and return lines.
- Manual air vents
  - Install manual air vents at high points in fuel oil piping.
- Inlet valve box.
  - Including Fill box
  - Including Locable Fill box
  - Including Spill-Containment Fill box
- Manual shut-off valve
  - Install manual fuel-oil shutoff valves on branch connections to fuel-oil appliance.
- High level alarm.
- Overfill prevention device to be complete with closure device to automatically stop the delivery, preventing the liquid level in the tank exceeding a final closure level.
- Overflow warning pipe.
- Level float switch.
- Containment sump.
  - Fiberglass or PE with sump base, add-on extension pieces as required, sump top, lid, and gasket-seal joints. Include sump entry boots for pipe penetrations through sidewalls.
- Ladder

300.060 OIL LEVEL INDICATORS AND AUTOMATIC TANK CONTENTS GAUGES:

- Automatic tank contents gauge in accordance with UL 180, to provide:
  - Level measurement
    - Class C - (max permissible error ± 1% of measuring range)
  - Water detection
  - Temperature measurement
- Type
  - Float gauge - consisting of float attached to cable, chain, rod or metal tape passing through tank top.
  - Float gauge - consisting of float imparting a movement to magnetic coupling.
  - Hydrostatic type - sealed.
  - Electronic gauge.
  - Mounting
    - Centre end - horizontal cylinders.
    - Centre side or end - rectangular or vertical cylinders.
    - Centre line fitting on side of horizontal cylinder.
    - Centre mounted - side swing float arm where space is restricted.

- Top or bottom.
- Top mounting incorporating extended float pivot.

- Ancillaries
  - Mild steel mounting flanges.
  - Bell.
  - Buzzer.
  - Muting switch.
  - Intrinsically safe relay.
  - Wall box.
  - Warning or signal light.
  - Treated for corrosive situations.
  - Remote indicator with cable.
  - Selector switches for multi-tank installations.
  - Electronic switching units.
  - Power unit - Input single-phase AC 110-240 volts.
  - Power unit - Input single-phase DC 12-240 volts.
  -

300.070 FIRE VALVE SYSTEMS AND THEIR INSTALLATION:

- Standards
  - Comply with NFPA 30.
- Hold open the automatically operated quick closing valve by one of the following methods:
  - by means of tension of wire on which are one or more fusible links.
  - electrically; operated by one or more heat-sensitive devices.
  - pneumatically; the air system sealed by one or more fusible plugs.
  - by means of a sealed system incorporating a sensitive phial placed over firing point.
- Refer to section W60 for BMS interface requirements.

300.080 FUEL OIL DISTRIBUTION PIPING:

- Fuel oil distribution piping and joints and fittings should conform to NFPA 30 and ASTM standards.
  - Black Steel pipes to ASTM A53

300.085 LEAK DETECTION SYSTEM:

  - Relevant parts of UL 1238
- Supply and install a leak detection system in the fuel oil storage/distribution system. Link the system to an integral alarm system.
- Install an automatic shut-off system to ensure no further fuel oil is delivered.

300.090 SCREEN FILTERS:

- Body - Mild steel.
- Filter screen
  - Steel frame with stainless steel filtering medium.

- Ancillaries
    - Differential pressure gauge.
    - Matching flanges.
    - Drain valve.

300.100 SINGLE FILTERS:

- Material
    - Body
        - Cast stainless steel.
        - Cast stainless steel, jacketed.
    - Filter basket - 316 Stainless steel
- Connections
    - Screwed,.
    - Steel, flanged

300.120 CARTRIDGE TYPE STRAINERS:

- Duty
    - Supply cartridge type strainers on oil meters.

300.130 Y TYPE STRAINERS:

- Details
    - Strainer Screen: 60-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
    - Cold woeking pressure: 960 kPa.

300.140 OIL METERS:

- Provide volumetric rotary-piston meters.
- Material
    - Meter
        - Brass
        - Anodised aluminium alloy
    - Working chamber
        - Brass
        - Bronze
- Ancillaries
    - Batching unit
    - Percentage flow indicator
    - Remote total indicator
    - Combined rate of flow and total indicator

300.150 CATHODIC PROTECTION OF BURIED METALLIC TANKS:

- Cathodic protection of buried metallic tanks and related piping to be provided in accordance with electrical specifications.

300.160 FUEL PUMPS:

- Description: Comply with UL 343, and HI M109.
- Motor operating conditions
  - Standard operating conditions - reference Y92.2010A
- Surge suppressors
  - Manufacturer fitted - reference Y92.1040#
- Motor type
  - Induction (asynchronous).
  - Asynchronous induction with VSD.
- Standards - reference Y92.1010
- General - reference Y92.2020
  - Provide protected enclosures against external mechanical impacts in accordance with BS EN 62262
    - IK08.
- Motor efficiency
  - For VSD motors: Efficiency class IE2, reference Y92.2025A;
  - For constant speed motors: Efficiency class IE3, reference Y92.20205B
- Degree of protection in accordance with BS EN 60034-5
  - IP55
- Method of motor cooling in accordance with BS EN 60034-6, reference Y92.2020
- Motors - over temperature protection
  - Thermistors - reference Y92.2060A
- Guards -Reference Y92.2090A
- Accessories
  - Casing thermal insulation.
- Valves and fittings
  - Provide isolation valves on suction and discharge side of pumps.
  - Provide non-return valves on discharge side of each pump.
  - Provide pressure gauge in discharge manifold.
  - Alarms and indication
- Audiable alarm is not required when there is a BMS interface for the Pumps.
  - For interface points to the BMS, refer to BMS control diagrams and specs.
  - Pump run and trip for each pump.
  - Low water cut off.

- Control panel
    - Factory installed and connected as an integral part of unit.
    - Panel IP rating 55
- Accessories
    - Additional control module to provide surge protection on start-up or when power is restored by allowing only one pump to be enabled and pulsed for a pre-set time until a pre-set pressure is reached.
    - Combined anti-vacuum, automatic air vent and surge protection valve supplied loose for fitting at top of risers

310.000 WORKMANSHIP

310.005 GENERAL SAFETY REQUIREMENTS AND TESTS:

- As appropriate to the particular project, comply with the requirements of NFPA 30 for the safety and corresponding tests for plant, equipment and pipework within an oil supply installation to burners.

310.010 INSTALLATION OF OIL STORAGE TANKS:

- Install oil storage tanks in accordance with the following as applicable:
    - The requirements of NFPA 30 and the manufacturer's recommendations.

310.020 INSTALLATION OF OIL DISTRIBUTION SYSTEMS:

- Install oil distribution systems in accordance with equipment manufacturers' recommendations, the standards and relevant legislation listed in clause 300.005.

310.030 INSTALLATION OF PUMPS:

- General - reference Y20.4010
- Pipeline connections - reference Y20.4020
- Alignment - reference Y20.4040
- Access - reference Y20.4050
- Install test and commission systems to comply with equipment manufacturer's recommendations, and NFPA 30.

S60 - FIRE HOSE REELS

PART 3 SPECIFICATION CLAUSES SPECIFIC TO S60

300.000 GENERAL

300.010 SUMMARY

- Section Includes:
    - Fire protection cabinets for the following:
        - Portable fire extinguishers.
        - Fire hose valves.
        - Fire hoses and racks.
        - Fire hose reels.

300.020 QUALITY ASSURANCE

- Fire-Rated, Fire Protection Cabinets: Listed and labeled to comply with requirements in ASTM E 814 for fire-resistance rating of walls where they are installed.
- Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- Preinstallation Conference: Conduct conference at Project site.
    - Review methods and procedures related to fire protection cabinets including, but not limited to, the following:
        - Schedules and coordination requirements.

- COORDINATION
    - Coordinate size of fire protection cabinets to ensure that type and capacity of fire extinguishers indicated are accommodated.
    - Coordinate size of fire protection cabinets to ensure that type and capacity of fire hoses, hose valves, and hose racks indicated are accommodated.
    - Coordinate sizes and locations of fire protection cabinets with wall depths.

310.000 PRODUCTS/MATERIALS

310.010 MATERIALS

- Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B.
- Tempered Float Glass: ASTM C 1048, Kind FT, Condition A, Type I, Quality q3, 3 mm thick, Class 1 (clear).

310.020 FIRE PROTECTION CABINET LVC-1

- Cabinet Type: Suitable for fire hose valve.

- Cabinet Construction: Nonrated for surface mounted cabinets and 1 or 2-hour fire rated as applicable to match wall fire rating as whown on Drawings.

    - Fire-Rated Cabinets: Construct fire-rated cabinets with double walls fabricated from 1.1-mm-thick, cold-rolled steel sheet lined with minimum 16-mm- thick, fire-barrier material. Provide factory-drilled mounting holes.

- Cabinet Material: Steel sheet.

    - Shelf: Same metal and finish as cabinet.

- Recessed Cabinet: Cabinet box recessed in walls of sufficient depth to suit style of trim indicated.

    - Trimless with Concealed Flange: Surface of surrounding wall finishes flush with exterior finished surface of cabinet frame and door, without overlapping trim attached to cabinet. Provide recessed flange, of same material as box, attached to box to act as plaster stop.

- Semirecessed Cabinet: Cabinet box partially recessed in walls of sufficient depth to suit style of trim indicated; with one-piece combination trim and perimeter door frame overlapping surrounding wall surface with exposed trim face and wall return at outer edge (backbend). Provide where walls are of insufficient depth for recessed cabinets but are of sufficient depth to accommodate semirecessed cabinet installation.

    - Square-Edge Trim: 32- to 38-mm backbend depth.
    - Rolled-Edge Trim: 64-mm backbend depth.

- Surface-Mounted Cabinet: Cabinet box fully exposed and mounted directly on wall with no trim. Provide where walls are of insufficient depth for semirecessed cabinet installation.

- Cabinet Trim Material: Steel sheet.

- Door Material: Steel sheet.

- Door Style: Center glass panel with frame.

- Door Glazing: Tempered float glass (clear).

- Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.

    - Provide recessed door pull and friction latch.
    - Provide concealed hinge permitting door to open 180 degrees.

- Accessories:
    - Lettered Door Handle: One-piece, cast-iron door handle with the word "FIRE" embossed into face.
    - Door Lock: Cam lock that allows door to be opened during emergency by pulling sharply on door handle.
    - Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate as directed by Engineer.

- Alarm: Manufacturer's standard alarm that actuates when fire protection cabinet door is opened and that is powered by batteries.

- Finishes:

  - Manufacturer's standard baked-enamel paint for the following:

    - Exterior of cabinet, door, and trim except for those surfaces indicated to receive another finish.
    - Interior of cabinet and door.

  - Steel: Baked enamel or powder coat.

310.030 FIRE PROTECTION CABINET FHC-1

- Cabinet Type: Suitable for fire hose valve, fire hose reel, and fire extingusher.

- Cabinet Construction: Nonrated for surface mounted cabinets and 1 or 2-hour fire rated as applicable to match wall fire rating as whown on Drawings.

  - Fire-Rated Cabinets: Construct fire-rated cabinets with double walls fabricated from 1.1-mm-thick, cold-rolled steel sheet lined with minimum 16-mm- thick, fire-barrier material. Provide factory-drilled mounting holes.

- Cabinet Material: Steel sheet.

  - Shelf: Same metal and finish as cabinet.

- Recessed Cabinet: Cabinet box recessed in walls of sufficient depth to suit style of trim indicated.

  - Trimless with Concealed Flange: Surface of surrounding wall finishes flush with exterior finished surface of cabinet frame and door, without overlapping trim attached to cabinet. Provide recessed flange, of same material as box, attached to box to act as plaster stop.

- Semirecessed Cabinet: Cabinet box partially recessed in walls of sufficient depth to suit style of trim indicated; with one-piece combination trim and perimeter door frame overlapping surrounding wall surface with exposed trim face and wall return at outer edge (backbend). Provide where walls are of insufficient depth for recessed cabinets but are of sufficient depth to accommodate semirecessed cabinet installation.

  - Square-Edge Trim: 32- to 38-mm backbend depth.
  - Rolled-Edge Trim: 64-mm backbend depth.

- Surface-Mounted Cabinet: Cabinet box fully exposed and mounted directly on wall with no trim. Provide where walls are of insufficient depth for semirecessed cabinet installation.

- Cabinet Trim Material: Steel sheet.

- Door Material: Steel sheet.

- Door Style: Center glass panel with frame.

- Door Glazing: Tempered float glass (clear).

- Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.

    - Provide recessed door pull and friction latch.
    - Provide concealed hinge permitting door to open 180 degrees.

- Accessories:

    - Mounting Bracket: Manufacturer's standard steel, designed to secure fire extinguisher to fire protection cabinet, of sizes required for types and capacities of fire extinguishers indicated, with plated or baked-enamel finish.
    - Lettered Door Handle: One-piece, cast-iron door handle with the word "FIRE" embossed into face.
    - Door Lock: Cam lock that allows door to be opened during emergency by pulling sharply on door handle.
    - Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate as directed by Engineer.

        - Identify fire extinguisher in fire protection cabinet with the words "FIRE EXTINGUISHER."

            - Location: Applied to cabinet door.
            - Application Process: Pressure-sensitive vinyl letters.
            - Lettering Color: Red.
            - Orientation: Vertical or Horizontal.

    - Alarm: Manufacturer's standard alarm that actuates when fire protection cabinet door is opened and that is powered by batteries.

- Finishes:

    - Manufacturer's standard baked-enamel paint for the following:

        - Exterior of cabinet, door, and trim except for those surfaces indicated to receive another finish.
        - Interior of cabinet and door.

    - Steel: Baked enamel or powder coat.

310.040 FABRICATION

- Fire Protection Cabinets: Provide manufacturer's standard box (tub) with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated.

    - Weld joints and grind smooth.
    - Provide factory-drilled mounting holes.
    - Prepare doors and frames to receive locks.
    - Install door locks at factory.

- Cabinet Doors: Fabricate doors according to manufacturer's standards, from materials indicated and coordinated with cabinet types and trim styles selected.

    - Fabricate door frames with tubular stiles and rails and hollow-metal design, minimum 13 mm thick.

- Miter and weld perimeter door frames.

- Cabinet Trim: Fabricate cabinet trim in one piece with corners mitered, welded, and ground smooth.

310.050 GENERAL FINISH REQUIREMENTS

- Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

- Protect mechanical finishes on exposed surfaces of fire protection cabinets from damage by applying a strippable, temporary protective covering before shipping.

- Finish fire protection cabinets after assembly.

- Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

310.060 STEEL FINISHES

- Surface Preparation: Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning" or SSPC-SP 8, "Pickling". After cleaning, apply a conversion coating suited to the organic coating to be applied over it.

- Factory Prime Finish: Apply manufacturer's standard, fast-curing, lead- and chromate-free, universal primer immediately after surface preparation and pretreatment.

- Baked-Enamel or Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of 0.05 mm.

    - Color and Gloss: As selected by Engineer from manufacturer's full range.

320.000 WORKMANSHIP

320.010 EXAMINATION

- Examine roughing-in for hose valves, racks, and reels and cabinets to verify actual locations of piping connections before cabinet installation.

- Examine walls and partitions for suitable framing depth and blocking where recessed and semirecessed cabinets will be installed.

- Proceed with installation only after unsatisfactory conditions have been corrected.

320.020 PREPARATION

- Prepare recesses for recessed and semirecessed fire protection cabinets as required by type and size of cabinet and trim style.

320.030 INSTALLATION

- General: Install fire protection cabinets in locations and at mounting heights indicated or, if not indicated, at heights indicated below:
    - Fire Protection Cabinets: 1372 mm above finished floor to top of cabinet.
- Fire Protection Cabinets: Fasten cabinets to structure, square and plumb.
    - Unless otherwise indicated, provide recessed fire protection cabinets. If wall thickness is not adequate for recessed cabinets, provide semirecessed fire protection cabinets.
    - Provide inside latch and lock for break-glass panels.
    - Fasten mounting brackets to inside surface of fire protection cabinets, square and plumb.
    - Fire-Rated, Hose-Valve Cabinets and Hose Reel Cabinets:
        - Install cabinet with not more than 1.6-mm tolerance between pipe OD and knockout OD. Center pipe within knockout.
        - Seal through penetrations with firestopping sealant as specified in architectural specification sections
- Identification: Apply vinyl lettering at locations indicated.

320.040 ADJUSTING AND CLEANING

- Remove temporary protective coverings and strippable films, if any, as fire protection cabinets are installed unless otherwise indicated in manufacturer's written installation instructions.
- Adjust fire protection cabinet doors to operate easily without binding. Verify that integral locking devices operate properly.
- On completion of fire protection cabinet installation, clean interior and exterior surfaces as recommended by manufacturer.
- Touch up marred finishes, or replace fire protection cabinets that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by fire protection cabinet and mounting bracket manufacturers.
- Replace fire protection cabinets that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

S62 - WET RISERS

100.000 GENERAL

100.010 SYSTEM PERFORMANCE REQUIREMENTS

- Verify the design of standpipes for compliance with NFPA, and obtain approval from Engineer and authorities having jurisdiction. Include minimum residual pressures at hydraulically remote outlets according to the following:

  - DN40 (NPS 1-1/2) Hose Connections: 450 kPa (65 psig).
  - DN65 (NPS 2-1/2) Hose Connections: 690 kPa (100 psig).

- Components and Installation: Capable of producing piping systems with 1200-kPa (175-psig) minimum working-pressure rating, unless otherwise indicated.

- Seismic Performance: Fire-suppression standpipes shall withstand the effects of earthquake motions determined according to NFPA 13 and ASCE/SEI 7.

100.020 QUALITY ASSURANCE

- Installer Qualifications: An experienced installer who has designed, installed and obtained approvals for fire-suppression piping similar to that indicated for this Project.

- Engineering Responsibility: Preparation of working plans, calculations, and field test reports by a qualified professional engineer. Base calculations on results of fire-hydrant flow test.

- Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of fire-suppression piping that are similar to those indicated for this Project in material, design, and extent.

- Manufacturer Qualifications: Firms whose equipment, specialties, and accessories are listed by product name and manufacturer in UL's "Fire Protection Equipment Directory" and FM's "Fire Protection Approval Guide" and that comply with other requirements indicated.

- Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code Section IX.

- Standpipe Components: Listing/approval stamp, label, or other marking by a testing agency acceptable to Engineer and authorities having jurisdiction.

- Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to Engineer.

- NFPA Standard: Equipment, specialties, accessories, installation, and testing complying with NFPA 14, "Standpipe and Hose Systems."

200.000 PRODUCTS

200.010 SYSTEM DESCRIPTIONS

- Automatic Wet-Type, Class I Standpipe System: Includes NPS 2-1/2 (DN 65) hose connections. Has open water-supply valve with pressure maintained and is capable of supplying water demand.

- Automatic Wet-Type, Class III Standpipe System: Includes NPS 1-1/2 (DN 40) hose stations and NPS 2-1/2 (DN 65) hose connections. Has open water-supply valve with pressure maintained and is capable of supplying water demand.

200.020 PIPES

- Ductile-Iron Pipe: AWWA C151, push-on-joint type; with cement-mortar lining and seal coat according to AWWA C104. Include rubber gasket according to AWWA C111.

- Ductile-Iron Pipe: AWWA C151, mechanical-joint type; with cement-mortar lining and seal coat according to AWWA C104. Include gland, rubber gasket, and bolts and nuts according to AWWA C111.

- Ductile-Iron Pipe: AWWA C115 or AWWA C151, with cement-mortar lining and seal coat according to AWWA C104 and ends factory or field, radius-cut grooved according to AWWA C606.

- Standard-Weight Steel Pipe: ASTM A 53/A 53M, ASTM A 135/A 135M, or ASTM A 795/A 795M; Schedule 40 in DN150 (NPS 6) and smaller, and Schedule 30 in DN200 (NPS 8) and larger.

- Schedule 30 Steel Pipe: ASTM A 135/A 135M or ASTM A 795/A 795M, with wall thickness less than Schedule 40 and equal to or greater than Schedule 30 or ASTM A 795/A 795M and ASME B36.10M, Schedule 30 wrought-steel pipe.

200.030 PIPE FITTINGS

- Ductile-Iron Fittings: AWWA C110, ductile-iron or cast-iron type; or AWWA C153, ductile-iron, compact mechanical-joint type. Include cement-mortar lining and seal coat according to AWWA C104 and glands, rubber gaskets, and bolts and nuts according to AWWA C111.

- Ductile-Iron Fittings: ASTM A 47/A 47M, malleable-iron or ASTM A 536, ductile-iron casting complying with AWWA pipe size; with ends factory grooved according to AWWA C606.

- Cast-Iron Threaded Flanges: ASME B16.1.

- Cast-Iron Threaded Fittings: ASME B16.4.

- Malleable-Iron Threaded Fittings: ASME B16.3.

- Steel, Threaded Couplings: ASTM A 865/A 865M.

- Steel Welding Fittings: ASTM A 234/A 234M, ASME B16.9, or ASME B16.11.

- Steel Flanges and Flanged Fittings: ASME B16.5.

- Steel, Grooved-End Fittings: UL-listed and FM-approved, ASTM A 47/A 47M, malleable iron or ASTM A 536, ductile iron; with dimensions matching steel pipe and ends factory grooved according to AWWA C606.

200.040 JOINING MATERIALS

- Ductile-Iron, Keyed Couplings: UL 213 and AWWA C606, for ductile-iron pipe dimensions. Include ASTM A 536, ductile-iron housing, rubber gaskets, and steel bolts and nuts.

- Ductile-Iron, Flanged Joints: AWWA C115, ductile-iron or gray-iron pipe flanges, rubber gaskets, and steel bolts and nuts.

- Steel, Keyed Couplings: UL 213 and AWWA C606, for steel-pipe dimensions. Include ASTM A 536, ductile-iron housing, rubber gaskets, and steel bolts and nuts. Include listing for dry-pipe service for couplings for dry piping.

- Pipe-Flange Gasket Materials: AWWA C110, rubber, flat face, 1/8 inch (3.2 mm) thick.

    - Class 125, Cast-Iron Flanges and Class 150, Bronze Flat-Face Flanges: Full-face gaskets.
    - Class 250, Cast-Iron Flanges and Class 300, Steel Raised-Face Flanges: Ring-type gaskets.

- Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

- Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

200.050 POLYETHYLENE ENCASEMENT

- Polyethylene Encasement for Ductile-Iron Piping: ASTM A 674 or AWWA C105, film, 0.20-mm minimum thickness, tube or sheet.

200.060 FIRE-PROTECTION-SERVICE VALVES

- General: UL listed and FM approved, with minimum 1200-kPa (175-psig) nonshock working-pressure rating. Valves for grooved-end piping may be furnished with grooved ends instead of type of ends specified.

- Gate Valves, DN50 (NPS 2) and Smaller: UL 262; cast-bronze, threaded ends; solid wedge; OS&Y; and rising stem.

- Gate Valves, DN65 (NPS 2-1/2) and Larger: UL 262, iron body, bronze mounted, taper wedge, OS&Y, and rising stem. Include replaceable, bronze, wedge facing rings and flanged ends.

- Swing Check Valves, DN50 (NPS 2) and Smaller: UL 312 or MSS SP-80, Class 150; bronze body with bronze disc and threaded ends.

- Swing Check Valves, DN65 (NPS 2-1/2) and Larger: UL 312, cast-iron body and bolted cap, with bronze disc or cast-iron disc with bronze-disc ring and flanged ends.

- Split-Clapper Check Valves, DN100 (NPS 4) and Larger: UL 312, cast-iron body with rubber seal, bronze-alloy discs, and stainless-steel spring and hinge pin.

200.065 SPECIALTY VALVES

- Deluge Valves: UL 260, cast-iron body, 1200-kPa (175-psig) working pressure; hydraulically operated, differential-pressure type. Include flanged inlet and outlet, bronze seat with O-ring seals, trim sets for bypass, drain, electric sprinkler alarm switch, pressure gages, drip cup assembly piped without valves and separate from main drain line, fill-line attachment with strainer, and push-rod chamber supply connection.

    - Option: Grooved-end connections for use with grooved-end piping.
    - Wet, Pilot-Line Trim Set: Include gage to read push-rod chamber pressure, globe valve for manual operation of deluge valve, and connection for actuation device.

- Pressure-Regulating Valves: UL 1468, 2760-kPa (400-psig) minimum rating, brass. Include DN40 or DN65 (NPS 1-1/2 or NPS 2-1/2), female NPS inlet and outlet; adjustable setting feature; and straight or 90-degree angle pattern design as indicated.

    - Finish: Rough chrome-plated.

- Ball Drip Valves: UL 1726, automatic drain valve, DN20 (NPS 3/4), ball check device with threaded ends.

200.070 MANUAL CONTROL STATIONS

- Manual Control Stations: Hydraulic operation, with union, DN15 (NPS 1/2) pipe nipple, and bronze ball valve. Include metal enclosure labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.

200.080 HOSE CONNECTIONS

- Description: UL 668, 2070-kPa (300-psig) minimum pressure rating, brass, hose valve for connection of fire hose. Include 90-degree angle pattern design; female NPS inlet and male hose outlet; and lugged cap, gasket, and chain. Include DN40 or DN65 (NPS 1-1/2 or NPS 2-1/2) as indicated, and hose valve threads according to NFPA 1963 and matching local fire department threads.

    - Valve Operation: Nonadjustable type, unless pressure-regulating type is indicated.
    - Finish: Rough brass.
    - Finish: Rough chrome-plated.

200.085 HOSE STATIONS

- DN65 and DN40 (NPS 2-1/2 and NPS 1-1/2) Hose Stations: DN65 (NPS 2-1/2) hose valve with male threaded outlet, cap, and chain and DN40 (NPS 1-1/2) hose valve; hose rack with water-retention device and pins for folded, DN40 (NPS 1-1/2) lined hose; and DN40 (NPS 1-1/2) lined hose with swivel inlet coupling and nozzle.

    - Hose-Rack Finish: Red enamel.
    - Hose Valve and Trim Finish: Polished chrome-plated.
    - Fire Hose: Lined, 30-m (100-foot) length.
    - Nozzle: Brass, adjustable from shutoff to fog spray or straight stream.

- FIRE DEPARTMENT CONNECTIONS

  - Wall, Fire Department Connections: UL 405; cast-brass body with brass, wall, escutcheon plate; brass, lugged caps with gaskets and brass chains; and brass, lugged swivel connections. Include inlets with threads according to NFPA 1963 and matching local fire department sizes and threads, outlet with pipe threads, extension pipe nipples, check devices or clappers for inlets, and escutcheon plate with marking "STANDPIPE."

    - Type: Flush mounting.
    - Escutcheon Plate: Rectangular.
    - Finish: Polished chrome-plated.

200.090 ALARM DEVICES

- General: Types matching piping and equipment connections.

- Water-Flow Indicators: UL 346; electrical-supervision, vane-type water-flow detector; with 1725-kPa (250-psig) pressure rating; and designed for horizontal or vertical installation. Include two single-pole, double-throw, circuit switches for isolated alarm and auxiliary contacts, 7 A, 125-V ac and 0.25 A, 24-V dc; complete with factory-set, field-adjustable retard element to prevent false signals and tamperproof cover that sends signal if removed.

- Pressure Switches: UL 753; electrical-supervision-type, water-flow switch with retard feature. Include single-pole, double-throw, normally closed contacts and design that operates on rising pressure and signals water flow.

- Valve Supervisory Switches: UL 753; electrical; single-pole, double throw; with normally closed contacts. Include design that signals controlled valve is in other than fully open position.

- Indicator-Post Supervisory Switches: UL 753; electrical; single-pole, double throw; with normally closed contacts. Include design that signals controlled indicator-post valve is in other than fully open position.

200.095 PRESSURE GAGES

- Pressure Gages: UL 393, 90- to 115-mm diameter dial with dial range of 0 to 1725 kPa (0 to 250 psig).

200.100 CONTROL PANELS

- Description: Single-area, two-area, or single-area cross-zoned type as indicated. Control panel includes NEMA ICS 6, Type 1 enclosure, detector, alarm, and solenoid-valve circuitry for operation of deluge valves. Panels contain power supply; battery charger; standby batteries; field-wiring terminal strip; electrically supervised solenoid valves and polarized fire alarm bell; lamp test facility; single-pole, double-throw auxiliary alarm contacts; and rectifier.

  - Panels: UL listed and FM approved when used with thermal detectors and Class A detector circuit wiring. Electrical characteristics are 220-V ac, 50 Hz, with 24-V dc rechargeable batteries.
  - Manual Control Stations: Electric operation, metal enclosure, labeled "MANUAL CONTROL STATION" with operating instructions and a cover held closed by breakable strut.
  - Manual Control Stations: Hydraulic operation, with union, DN15 (NPS 1/2) pipe nipple, and bronze ball valve. Include metal enclosure labeled "MANUAL CONTROL STATION" with operating instructions and a cover held closed by breakable strut.

300.000 EXECUTION

300.010 PREPARATION

- Perform fire-hydrant flow test according to NFPA 291. Use results for system design calculations required in "Quality Assurance" Article in Part 1 of this Section.

- Report test results promptly and in writing.

300.015 EXAMINATION

- Examine roughing-in for hose connections and stations to verify actual locations of piping connections before installation.

- Examine walls and partitions for suitable thickness, fire- and smoke-rated construction, framing for hose-station cabinets, and other conditions where hose connections and stations are to be installed.

- Proceed with installation only after unsatisfactory conditions have been corrected.

300.020 PIPING APPLICATIONS

- Do not use welded joints with galvanized steel pipe.

- Do not use galvanized or black steel pipes in underground applications.

- Flanges, unions, and transition and special fittings with pressure ratings the same as or higher than system's pressure rating may be used in aboveground applications, unless otherwise indicated.

- Piping between Fire Department Connections and Check Valves, and other dry-type fire-suppression standpipe piping: Use galvanized, standard-weight steel pipe with threaded ends; cast- or malleable-iron threaded fittings; and threaded joints.

- Piping between Fire Department Connections and Check Valves, and other dry-type fire-suppression standpipe piping: Use galvanized, standard-weight steel pipe with grooved ends; steel, grooved-end fittings; steel, keyed couplings; and grooved joints.

- Underground Service-Entrance Piping: Use ductile-iron, mechanical-joint pipe and fittings and restrained joints.

- Standpipes: Use the following:

    - DN100 (NPS 4) and Smaller: Standard-weight steel pipe with threaded ends, cast- or malleable-iron threaded fittings, and threaded joints.
    - DN125 and DN150 (NPS 5 and NPS 6): Standard-weight steel pipe with grooved ends; steel, grooved-end fittings; steel, keyed couplings; and grooved joints.
    - DN200 (NPS 8) and Larger: Standard-weight steel pipe with grooved ends; steel, grooved-end fittings; steel, keyed couplings; and grooved joints.

300.025 VALVE APPLICATIONS

- Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:
    - Fire-Protection-Service Valves: UL listed and FM approved for applications where required by NFPA 14.
        - Shutoff Duty: Use gate valves.
    - General-Duty Valves: For applications where UL-listed and FM-approved valves are not required by NFPA 14.
        - Shutoff Duty: Use gate, ball, or butterfly valves.
        - Throttling Duty: Use globe, ball, or butterfly valves.

300.030 JOINT CONSTRUCTION

- Ductile-Iron-Piping, Grooved Joints: Use ductile-iron pipe with radius-cut-grooved ends; ductile-iron, grooved-end fittings; and ductile-iron, keyed couplings. Assemble joints with couplings, gaskets, lubricant, and bolts according to coupling manufacturer's written instructions.
- Steel-Piping, Grooved Joints: Use Schedule 40 steel pipe with cut or roll-grooved ends and Schedule 30 or thinner steel pipe with roll-grooved ends; steel, grooved-end fittings; and steel, keyed couplings. Assemble joints with couplings, gaskets, lubricant, and bolts according to coupling manufacturer's written instructions. Use gaskets listed for dry-pipe service for dry piping.

300.040 SERVICE-ENTRANCE PIPING

- Connect standpipe piping to water-service piping of size and in location indicated for service entrance to building.
- Install shutoff valve, backflow preventer, pressure gage, drain, and other accessories indicated at connection to water-service piping.

300.045 PIPING INSTALLATION

- Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated, as far as practical.
    - Deviations from approved working plans for piping require written approval from Engineer and authorities having jurisdiction. File written approval with Engineer before deviating from approved working plans.
- Install underground service-entrance piping according to NFPA 24 and with restrained joints.
- Use approved fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.

- Install unions adjacent to each valve in pipes DN50 (NPS 2) and smaller. Unions are not required on flanged devices or in piping installations using grooved joints.

- Install flanges or flange adapters on valves, apparatus, and equipment having DN65 (NPS 2-1/2) and larger connections.

- Install drain valves on standpipes.

- Install ball drip valves to drain piping between fire department connections and check valves. Drain to floor drain or outside building.

- Install alarm devices in piping systems.

- Hangers and Supports: Comply with NFPA 13 for hanger materials. Install according to NFPA 14.

- Earthquake Protection: Install piping according to NFPA 13 to protect from earthquake damage.

- Install piping with grooved joints according to manufacturer's written instructions. Construct rigid piping joints, unless otherwise indicated.

- Install pressure gages on riser or feed main, at each sprinkler test connection, and at top of each standpipe. Include pressure gages with connection not less than DN8 (NPS 1/4) and with soft metal seated globe valve, arranged for draining pipe between gage and valve. Install gages to permit removal, and install where they will not be subject to freezing.

300.050 VALVE INSTALLATION

- Install fire-protection specialty valves, trim, fittings, controls, and specialties according to NFPA 13 and NFPA 14, manufacturer's written instructions, and authorities having jurisdiction.

- Gate Valves: Install fire-protection-service valves supervised-open, located to control sources of water supply except from fire department connections. Provide permanent identification signs indicating portion of system controlled by each valve.

- Valves for Wall Fire Hydrants: Install gate valve with nonrising stem in supply pipe.

- Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water supply sources.

- Deluge Valves: Install in vertical position, in proper direction of flow, in main supply to deluge system.

300.060 HOSE-CONNECTION INSTALLATION

- Install hose connections adjacent to standpipes, unless otherwise indicated.

- Install freestanding hose connections for access and minimum passage restriction.

- Install DN65 (NPS 2-1/2) hose connections with quick-disconnect DN65 to DN40 (NPS 2-1/2 by NPS 1-1/2) reducer adapter and flow-restricting device, unless otherwise indicated.

- Install wall-mounting-type hose connections in cabinets. Include pipe escutcheons, with finish matching valves, inside cabinet where water-supply piping penetrates cabinet. Install valves at angle required for connection of fire hose. Refer to Section "Fire-Protection Specialties" for cabinets.

300.065 HOSE-STATION INSTALLATION

- Install DN40 (NPS 1-1/2) hose-station valves with flow-restricting device, unless otherwise indicated.
- Install wall-mounting, rack-type hose stations in cabinets. Include pipe escutcheons, with finish matching valves, inside cabinet where water-supply piping penetrates cabinet. Install valves at angle required for connection of fire hose. Cabinets are specified in Division 10 Section "Fire Extinguisher Cabinets."
- Install hose-reel hose stations on wall with bracket attached to substrate.

300.070 CONNECTIONS

- Connect water-supply piping and standpipes to fire pumps. Include backflow preventers.
- Install ball drip valves at each check valve for fire department connection. Drain to floor drain or outside building.
- Connect piping to specialty valves, hose valves, specialties, fire department connections, and accessories.
- Connect alarm devices to fire alarm.

300.080 LABELING AND IDENTIFICATION

- Install labeling and pipe markers on equipment and piping according to requirements in NFPA 14 and in Section "Identification for Fire-Suppression Piping and Equipment."

300.090 FIELD QUALITY CONTROL

- Flush, test, and inspect standpipes according to NFPA 14, "System Acceptance" Chapter.
- Replace piping system components that do not pass test procedures and retest to demonstrate compliance. Repeat procedure until satisfactory results are obtained.
- Report test results promptly and in writing to Engineer and authorities having jurisdiction.

300.100 COMMISSIONING

- Verify that specialty valves, trim, fittings, controls, and accessories are installed and operate correctly.
- Verify that air compressors and their accessories are installed and operate correctly.
- Verify that specified tests of piping are complete.
- Verify that potable-water supplies have correct types of backflow preventers.
- Verify that hose connections and fire department connections have threads compatible with local fire department equipment.
- Drain dry-type standpipe piping.

- Pressurize and check dry-pipe valve air-pressure maintenance devices and air compressors.
- Fill wet-pipe standpipe piping with water.
- Verify that hose connections are correct type and size.
- Verify that hose stations are correct type and size.
- Energize circuits to electrical equipment and devices.
- Adjust operating controls and pressure settings.
- Coordinate with fire alarm tests. Operate as required.

300.110 DEMONSTRATION

- Demonstrate equipment, specialties and accessories, and train Employer's maintenance personnel to adjust, operate, and maintain standpipes and hoses.

S63 - SPRINKLERS

PART 3 SPECIFICATION CLAUSES SPECIFIC TO S63

300.000 GENERAL

300.010 SUMMARY

- This Section includes fire-suppression sprinklers, piping, and equipment for the following building systems:
    - Wet-pipe, fire-suppression sprinklers, including piping, valves, specialties, and automatic sprinklers.

300.020 DEFINITIONS

- Working Plans: Documents, including drawings, calculations, and material specifications prepared according to NFPA 13 for obtaining approval from Engineer and authorities having jurisdiction.
- High-Pressure Sprinkler Piping: Wet-pipe sprinkler system piping designed to operate at working pressure higher than standard 175 psig (1200 kPa), but not higher than 300 psig (2070 kPa).
- Standard-Pressure Sprinkler Piping: Wet-pipe sprinkler system piping designed to operate at working pressure of 175 psig (1200 kPa) maximum.

300.030 SYSTEM DESCRIPTIONS

- Wet-Pipe Sprinkler System: Automatic sprinklers are attached to piping containing water and that is connected to water supply through alarm valve. Water discharges immediately from sprinklers when they are opened. Sprinklers open when heat melts fusible link or destroys frangible device. Hose connections are included if indicated.
- Deluge Sprinkler System: Open sprinklers are attached to piping connected to water supply through deluge valve. Fire-detection system, in same area as sprinklers, opens valve. Water flows into piping system and discharges from attached sprinklers when valve opens.

300.040 SYSTEM PERFORMANCE REQUIREMENTS

- Verify the design of sprinklers for conformance with NFPA 13, and obtain approval from Engineer and authorities having jurisdiction.
- Verify the design of sprinkler piping according to the following and obtain approval from Engineer and authorities having jurisdiction:
    - Include 10 percent margin of safety for available water flow and pressure.
    - Include losses through water-service piping, valves, and backflow preventers.
    - Sprinkler Occupancy Hazard Classifications: As per NFPA 13 requirements.
    - Minimum Density for Automatic-Sprinkler Piping Design: As follows:

- Residential (Dwelling) Occupancy: 3.15 mL/s over 37.2-sq. m (0.05 gpm over 400-sq. ft.) area.
- Light-Hazard Occupancy: 6.3 mL/s over 139-sq. m (0.10 gpm over 1500-sq. ft.) area.
- Ordinary-Hazard, Group 1 Occupancy: 9.5 mL/s over 139-sq. m (0.15 gpm over 1500-sq. ft.) area.
- Ordinary-Hazard, Group 2 Occupancy: 12.6 mL/s over 139-sq. m (0.20 gpm over 1500-sq. ft.) area.
- Extra-Hazard, Group 1 Occupancy: 18.9 mL/s over 232-sq. m (0.30 gpm over 2500-sq. ft.) area.
- Extra-Hazard, Group 2 Occupancy: 25.2 mL/s over 232-sq. m (0.40 gpm over 2500-sq. ft.) area.

- Minimum Density for Deluge-Sprinkler Piping Design: As follows:

  - Ordinary-Hazard, Group 1 Occupancy: 9.5 mL/s (0.15 gpm) over entire area.
  - Ordinary-Hazard, Group 2 Occupancy: 12.6 mL/s (0.20 gpm) over entire area.
  - Extra-Hazard, Group 1 Occupancy: 18.9 mL/s (0.30 gpm) over entire area.
  - Extra-Hazard, Group 2 Occupancy: 25.2 mL/s (0.40 gpm) over entire area.

- Maximum Protection Area per Sprinkler: As per NFPA 13 requirements.

- Components and Installation: Capable of producing piping systems with 1200-kPa (175-psig) minimum working-pressure rating, unless otherwise indicated.

- Seismic Performance: Sprinkler piping shall withstand the effects of earthquake motions determined according to NFPA 13 and.

300.050 QUALITY ASSURANCE

- Installer Qualifications: An experienced installer who has designed, installed and obtained approvals for fire-suppression piping similar to that indicated for this Project.

- Engineering Responsibility: Preparation of working plans, calculations, and field test reports by a qualified professional engineer. Base calculations on results of fire-hydrant flow test.

- Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of fire-suppression piping that are similar to those indicated for this Project in material, design, and extent.

- Manufacturer Qualifications: Firms whose equipment, specialties, and accessories are listed by product name and manufacturer in UL's "Fire Protection Equipment Directory" and FM's "Fire Protection Approval Guide" and that comply with other requirements indicated.

- Sprinkler Components: Listing/approval stamp, label, or other marking by a testing agency acceptable to Engineer and authorities having jurisdiction.

- Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to Engineer.

- NFPA Standards: Equipment, specialties, accessories, installation, and testing complying with the following:

  - NFPA 13, "Installation of Sprinkler Systems."

- NFPA 24, "Installation of Private Fire Service Mains and Their Appurtenances."
- NFPA 230, "Standard for the Fire Protection of Storage."

300.060 EXTRA MATERIALS

- Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

    - Sprinkler Cabinets: Finished, wall-mounting steel cabinet and hinged cover, with space for a minimum of six spare sprinklers plus sprinkler wrench. Include the number of sprinklers required by NFPA 13 and wrench for sprinklers. Include separate cabinet with sprinklers and wrench for each type of sprinkler on Project.

310.000 MATERIALS / PRODUCTS

310.010 PIPES

- Ductile-Iron Pipe: AWWA C151, push-on-joint type; with cement-mortar lining and seal coat according to AWWA C104. Include rubber gasket according to AWWA C111.

- Ductile-Iron Pipe: AWWA C151, mechanical-joint type; with cement-mortar lining and seal coat according to AWWA C104. Include gland, rubber gasket, and bolts and nuts according to AWWA C111.

- Ductile-Iron Pipe: AWWA C115 or AWWA C151, with cement-mortar lining and seal coat according to AWWA C104 and ends factory or field, radius-cut grooved according to AWWA C606.

- Standard-Weight Steel Pipe: ASTM A 53/A 53M, ASTM A 135/A 135M, or ASTM A 795/A 135M hot-dip galvanized-steel pipe where indicated; Schedule 40 in DN150 (NPS 6) and smaller, and Schedule 30 in DN200 (NPS 8) and larger.

- Schedule 30 Steel Pipe: ASTM A 135/A 135M or ASTM A 795/A 795M hot-dip galvanized-steel pipe where indicated, with wall thickness less than Schedule 40 and equal to or greater than Schedule 30 or ASTM A 795/A 795M and ASME B36.10M, Schedule 30 wrought-steel pipe.

310.020 PIPE FITTINGS

- Ductile-Iron Fittings: AWWA C110, ductile-iron or cast-iron type; or AWWA C153, ductile-iron, compact mechanical-joint type. Include cement-mortar lining and seal coat according to AWWA C104 and glands, rubber gaskets, and bolts and nuts according to AWWA C111.

- Ductile-Iron Fittings: ASTM A 47/A 47M, malleable-iron or ASTM A 536, ductile-iron casting complying with AWWA pipe size; with ends factory grooved according to AWWA C606.

- Cast-Iron Threaded Flanges: ASME B16.1.

- Cast-Iron Threaded Fittings: ASME B16.4.

- Malleable-Iron Threaded Fittings: ASME B16.3.

- Steel, Threaded Couplings: ASTM A865/A865M.

- Steel Welding Fittings: ASTM A 234/A 234M, ASME B16.9, or ASME B16.11.

- Steel Flanges and Flanged Fittings: ASME B16.5.

- Steel, Grooved-End Fittings: UL-listed and FM-approved, ASTM A 47/A 47M, malleable iron or ASTM A 536, ductile iron; with dimensions matching steel pipe and ends factory grooved according to AWWA C606.

- Steel, Press-Seal Fittings: UL 213 and FM-approved, 1200-kPa (175-psig) pressure rating; with steel housing, butylene O-rings, and pipe stop; for use with Schedule 5, plain-end, steel pipe. Include manufacturer's pressure-sealing tools.

310.030 JOINING MATERIALS

- Ductile-Iron, Keyed Couplings: UL 213 and AWWA C606, for ductile-iron pipe dimensions. Include ASTM A 536, ductile-iron housing, rubber gaskets, and steel bolts and nuts.

- Ductile-Iron, Flanged Joints: AWWA C115, ductile-iron or gray-iron pipe flanges, rubber gaskets, and steel bolts and nuts.

- Steel, Keyed Couplings: UL 213 and AWWA C606, for steel-pipe dimensions. Include ASTM A 536, ductile-iron housing, rubber gaskets, and steel bolts and nuts.

- Pipe-Flange Gasket Materials: AWWA C110, rubber, flat face, 1/8 inch (3.2 mm) thick.

    - Class 125, Cast-Iron Flanges and Class 150, Bronze Flat-Face Flanges: Full-face gaskets.
    - Class 250, Cast-Iron Flanges and Class 300, Steel Raised-Face Flanges: Ring-type gaskets.

- Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

- Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

310.040 POLYETHYLENE ENCASEMENT

- Polyethylene Encasement for Ductile-Iron Piping: ASTM A 674 or AWWA C105, film, 0.20-mm minimum thickness, tube or sheet.

310.050 FIRE-PROTECTION-SERVICE VALVES

- General: UL listed and FM approved, with minimum 1200-kPa (175-psig) nonshock working-pressure rating. Valves for grooved-end piping may be furnished with grooved ends instead of type of ends specified.

- Gate Valves, DN50 (NPS 2) and Smaller: UL 262; cast-bronze, threaded ends; solid wedge; OS&Y; and rising stem.

- Indicating Valves, DN65 (NPS 2-1/2) and Smaller: UL 1091; butterfly or ball-type, bronze body with threaded ends; and integral indicating device.

- Gate Valves, DN65 (NPS 2-1/2) and Larger: UL 262, iron body, bronze mounted, taper wedge, OS&Y, and rising stem. Include replaceable, bronze, wedge facing rings and flanged ends; and integral indicating device.

- Indicating Device: Electrical 220-V ac, prewired, single-circuit, supervisory switch.

- Swing Check Valves, DN50 (NPS 2) and Smaller: UL 312 or MSS SP-80, Class 150; bronze body with bronze disc and threaded ends.

- Swing Check Valves, DN65 (NPS 2-1/2) and Larger: UL 312, cast-iron body and bolted cap, with bronze disc or cast-iron disc with bronze-disc ring and flanged ends.

- Split-Clapper Check Valves, DN100 (NPS 4) and Larger: UL 312, cast-iron body with rubber seal, bronze-alloy discs, and stainless-steel spring and hinge pin.

310.060 SPECIALTY VALVES

- General Requirements:

    - Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
    - Pressure Rating:

        - Standard-Pressure Piping Specialty Valves: 175 psig (1200 kPa) minimum.
        - High-Pressure Piping Specialty Valves: 250 psig (1725 kPa) minimum.

    - Body Material: Cast or ductile iron.
    - Size: Same as connected piping.
    - End Connections: Flanged or grooved.

- Alarm Check Valves: UL 193, 1200-kPa (175-psig) working pressure, designed for horizontal or vertical installation, with cast-iron flanged inlet and outlet, bronze grooved seat with O-ring seals, and single-hinge pin and latch design. Include trim sets for bypass, drain, electric sprinkler alarm switch, pressure gages, retarding chamber, and fill-line attachment with strainer.

    - Option: Grooved-end connections for use with keyed couplings.
    - Drip Cup Assembly: Pipe drain without valves, and separate from main drain piping.
    - Drip Cup Assembly: Pipe drain with check valve to main drain piping.

- Zone/Floor Control Valves:

    - Floor control valves assembly consisting of UL listed FM approved indicating-type floor control valve with supervisory switch, pressure gauge, water flow switch , test drain valve assembly and check valve; installation and piping arrangement to be as per NFPA 13 appendix A
    - Floor control valves rated for minimum of 1200 Pa (175psi) working pressure
    - Check valve is optional: check valve is used when valve is connected to combined sprinklers/ stand by riser; if separate risers check valve may not be installed as per NFPA 13 appendix A.
    - Floor control valve shall be provided with a drain connection having a minimum size as determined in NFPA 13 to drain that portion of the system controlled by the sectional valve.
    - A pressure gauge with a connection not smaller than 1⁄4 in. (6 mm) shall be installed at each main drain associated with a floor control valve.

- Floor control valves, should be accessible to authorized persons during emergencies.

- Deluge Valves: UL 260, cast-iron body, 1200-kPa (175-psig) working pressure; hydraulically operated, differential-pressure type. Include flanged inlet and outlet, bronze seat with O-ring seals, trim sets for bypass, drain, electric sprinkler alarm switch, pressure gages, drip cup assembly piped without valves and separate from main drain line, fill-line attachment with strainer, and push- rod chamber supply connection.

  - Option: Grooved-end connections for use with grooved-end piping.
  - Wet, Pilot-Line Trim Set: Include gage to read push-rod chamber pressure, globe valve for manual operation of deluge valve, and connection for actuation device.
  - Dry, Pilot-Line Trim Set: Include dry, pilot-line actuator; air- and water-pressure gages; low-air-pressure warning switch; air- relief valve; and actuation device. Dry, pilot-line actuator includes cast-iron, 1200-kPa (175-psig) working-pressure, air- operated, diaphragm-type valve with resilient facing plate, resilient diaphragm, and replaceable bronze seat. Valve includes threaded water and air inlets and water outlet. Loss of air pressure on dry, pilot-line side allows pilot-line actuator to open and causes deluge valve to open immediately.

- Pressure-Regulating Valves: UL 1468, 2760-kPa (400-psig) minimum rating, brass. Include DN40 or DN65 (NPS 1-1/2 or NPS 2-1/2), female NPS inlet and outlet; adjustable setting feature; and straight or 90-degree angle pattern design as indicated.

  - Finish: Rough chrome-plated.

- Ball Drip Valves: UL 1726, automatic drain valve, DN20 (NPS 3/4), ball check device with threaded ends.

310.070 SPRINKLERS

- General Requirements:

  - Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
  - Pressure Rating for Residential Sprinklers: 175 psig (1200 kPa) maximum.
  - Pressure Rating for Automatic Sprinklers: 175 psig (1200 kPa) minimum.
  - Pressure Rating for High-Pressure Automatic Sprinklers: 250 psig (1725 kPa) minimum.

- Automatic Sprinklers: With heat-responsive element complying with the following:

  - UL 199, for applications except residential.
  - UL 1626, for residential applications.
  - UL 1767, for early suppression, fast-response applications.

- Sprinkler Types and Categories: Nominal 12.7-mm (1/2-inch) orifice with Discharge Coefficient K of 5.6, and for "Ordinary" temperature classification rating, unless otherwise indicated or required by application.

- Open Sprinklers with Heat-Responsive Element Removed: UL 199.

  - Characteristics:

    - Nominal 1/2-inch (12.7-mm) Orifice: With Discharge Coefficient K between 5.3 and 5.8.
    - Nominal 17/32-inch (13.5-mm) Orifice: With Discharge Coefficient K between 7.4 and 8.2.

- Sprinkler types, features, and options include the following, as shown in the sprinklers schedule on Drawings:

    - Concealed ceiling sprinklers, including cover plate.
    - Extended-coverage sprinklers.
    - Flow-control sprinklers, with automatic open and shutoff feature.
    - Flush ceiling sprinklers, including escutcheon.
    - Institution sprinklers, made with small, breakaway projection.
    - Pendent sprinklers.
    - Quick-response sprinklers.
    - Recessed sprinklers, including escutcheon.
    - Sidewall sprinklers, including escutcheon.
    - Upright sprinklers.

- Sprinkler Finishes: Chrome-plated, bronze, and painted.

- Special Coatings: Wax, lead, and corrosion-resistant paint.

- Sprinkler Escutcheons: Materials, types, and finishes for the following sprinkler mounting applications. Escutcheons for concealed, flush, and recessed-type sprinklers are specified with sprinklers.

    - Ceiling Mounting: Chrome-plated steel, one piece, flat.
    - Ceiling Mounting: Chrome-plated steel, two piece, with 25-mm vertical adjustment.
    - Sidewall Mounting: Chrome-plated steel, one piece, flat.

- Sprinkler Guards: UL 199, Wire-cage type, including fastening device for attaching to sprinkler.

310.080 SPECIALTY SPRINKLER FITTINGS

- Specialty Fittings: UL listed and FM approved; made of steel, ductile iron, or other materials compatible with piping.

- Press-Seal Fittings: UL 213, steel housing with butylene O-rings and pipe stop.

- Locking-Lug Fittings: UL 213, ductile-iron body with locking-lug ends.

- Mechanical-T Fittings: UL 213, ductile-iron housing with pressure-responsive gasket, bolts, and threaded or locking-lug outlet.

- Mechanical-Cross Fittings: UL 213, ductile-iron housing with pressure-responsive gaskets, bolts, and threaded or locking-lug outlets.

- Drop-Nipple Fittings: UL 1474, with threaded inlet, threaded outlet, and seals; adjustable.

- Sprinkler, Drain and Alarm Test Fittings: UL-listed, cast- or ductile-iron body; with threaded inlet and outlet, test valve, and orifice and sight glass.

- Sprinkler, Branch-Line Test Fittings: UL-listed, brass body; with threaded inlet and capped drain outlet and threaded outlet for sprinkler.

- Sprinkler, Inspector's Test Fittings: UL-listed, cast- or ductile-iron housing; with threaded inlet and drain outlet and sight glass.

- Flexible Sprinkler Hose Fittings:

- Standard: UL 1474.
- Type: Flexible hose for connection to sprinkler, and with bracket for connection to ceiling grid.
- Pressure Rating: 175-psig (1200-kPa) minimum.
- Size: Same as connected piping, for sprinkler.

310.090 FIRE DEPARTMENT CONNECTIONS

- Wall, Fire Department Connections: UL 405; cast-brass body with brass, wall, escutcheon plate; brass, lugged caps with gaskets and brass chains; and brass, lugged swivel connections. Include inlets with threads according to NFPA 1963 and matching local fire department sizes and threads, outlet with pipe threads, extension pipe nipples, check devices or clappers for inlets, and escutcheon plate with marking "AUTO SPKR."

  - Type: Flush mounting.
  - Escutcheon Plate: Rectangular.
  - Finish: Polished chrome-plated.

310.100 ALARM DEVICES

- General: Types matching piping and equipment connections.

- Water-Motor-Operated Alarms: UL 753, mechanical-operation type with pelton-wheel operator with shaft length, bearings, and sleeve to suit wall construction and 250-mm diameter, cast-aluminum alarm gong with red-enamel factory finish. Include DN20 (NPS 3/4) inlet and DN25 (NPS 1) drain connections.

- Water-Flow Indicators: UL 346; electrical-supervision, vane-type water-flow detector; with 1725-kPa (250-psig) pressure rating; and designed for horizontal or vertical installation. Include two single-pole, double-throw, circuit switches for isolated alarm and auxiliary contacts, 7 A, 125-V ac and 0.25 A, 24-V dc; complete with factory-set, field-adjustable retard element to prevent false signals and tamperproof cover that sends signal if removed.

- Pressure Switches: UL 753; electrical-supervision-type, water-flow switch with retard feature. Include single-pole, double-throw, normally closed contacts and design that operates on rising pressure and signals water flow.

- Valve Supervisory Switches: UL 346; electrical; single-pole, double throw; with normally closed contacts. Include design that signals controlled valve is in other than fully open position.

- Indicator-Post Supervisory Switches: UL 346; electrical; single-pole, double throw, with normally closed contacts. Include design that signals controlled indicator-post valve is in other than fully open position.

310.110 PRESSURE GAGES

- Pressure Gages: UL 393, 90- to 115-mm diameter dial with dial range of 0 to 1725 kPa (0 to 250 psig).

310.120 CONTROL PANELS

- Description: Single-area, two-area, or single-area cross-zoned type as indicated. Control panel includes NEMA ICS 6, Type 1 enclosure, detector, alarm, and solenoid-valve circuitry for operation of deluge valves. Panels contain power supply; battery charger; standby batteries; field-wiring

terminal strip; electrically supervised solenoid valves and polarized fire alarm bell; lamp test facility; single-pole, double-throw auxiliary alarm contacts; and rectifier.

- Panels: UL listed and FM approved when used with thermal detectors and Class A detector circuit wiring. Electrical characteristics are 220-V ac, 50 Hz, with 24-V dc rechargeable batteries.
- Manual Control Stations: Electric operation, metal enclosure, labeled "MANUAL CONTROL STATION" with operating instructions and a cover held closed by breakable strut.

320.000 WORKMANSHIP

320.010 PREPARATION

- Perform fire-hydrant flow test according to NFPA 13 and NFPA 291. Use results for system design calculations required in "Quality Assurance" Article in Part 300.000 of this Section.

- Report test results promptly and in writing.

320.020 PIPING APPLICATIONS

- Do not use welded joints with galvanized steel pipe.

- Do not use galvanized or black steel pipes in underground applications.

- Flanges, unions, and transition and special fittings with pressure ratings the same as or higher than system's pressure rating may be used in aboveground applications, unless otherwise indicated.

- Piping between Fire Department Connections and Check Valves: Use galvanized, standard-weight steel pipe with threaded ends; cast- or malleable-iron threaded fittings; and threaded joints.

- Piping between Fire Department Connections and Check Valves: Use galvanized, standard-weight steel pipe with grooved ends; steel, grooved-end fittings; steel, keyed couplings; and grooved joints.

- Sprinkler Feed Mains and Risers: Use the following:

    - DN100 (NPS 4) and Smaller: Standard-weight steel pipe with threaded ends, cast- or malleable-iron threaded fittings, and threaded joints.
    - DN125 and DN150 (NPS 5 and NPS 6): Standard-weight steel pipe with grooved ends; steel, grooved-end fittings; steel, keyed couplings; and grooved joints.

- Wet-Pipe, Sprinkler Branch Piping: Use the following:

    - DN40 (NPS 1-1/2) and Smaller: Standard-weight steel pipe with threaded ends, cast- or malleable-iron threaded fittings, and threaded joints.
    - DN50 (NPS 2): Standard-weight steel pipe with threaded ends, cast- or malleable-iron threaded fittings, and threaded joints.
    - DN65 to DN75 (NPS 2-1/2 to NPS 3): Standard-weight steel pipe with grooved ends; steel, grooved-end fittings; steel, keyed couplings; and grooved joints.
    - DN100 (NPS 4): Standard-weight steel pipe with grooved ends; steel, grooved-end fittings; steel, keyed couplings; and grooved joints.

320.030 VALVE APPLICATIONS

- Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:
    - Fire-Protection-Service Valves: UL listed and FM approved for applications where required by NFPA 13.
        - Shutoff Duty: Use gate valves.
    - General-Duty Valves: For applications where UL-listed and FM-approved valves are not required by NFPA 13.
        - Shutoff Duty: Use gate, ball, or butterfly valves.
        - Throttling Duty: Use globe, ball, or butterfly valves.

320.040 JOINT CONSTRUCTION

- Ductile-Iron-Piping, Grooved Joints: Use ductile-iron pipe with radius-cut-grooved ends; ductile-iron, grooved-end fittings; and ductile-iron, keyed couplings. Assemble joints with couplings, gaskets, lubricant, and bolts according to coupling manufacturer's written instructions.
- Steel-Piping, Grooved Joints: Use Schedule 40 steel pipe with cut or roll-grooved ends and Schedule 30 or thinner steel pipe with roll-grooved ends; steel, grooved-end fittings; and steel, keyed couplings. Assemble joints with couplings, gaskets, lubricant, and bolts according to coupling manufacturer's written instructions.Press-Seal-Fitting Joints: Use UL-listed tool and procedure and follow fitting manufacturer's written instructions. Include use of specific equipment, pressure-sealing tool, and accessories.
- Locking-Lug-Fitting, Twist-Locked Joints: Follow fitting manufacturer's written instructions.
- Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system's pressure rating for aboveground applications unless otherwise indicated.
- Install unions adjacent to each valve in pipes NPS 2 (DN 50) and smaller.
- Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 (DN 65) and larger end connections.
- Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.
- Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with gasket and bolts according to ASME B31.9.
- Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
    - Apply appropriate tape or thread compound to external pipe threads.
    - Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.

- Steel-Piping, Pressure-Sealed Joints: Join lightwall steel pipe and steel pressure-seal fittings with tools recommended by fitting manufacturer.

- Welded Joints: Construct joints according to AWS D10.12M/D10.12, using qualified processes and welding operators according to "Quality Assurance" Article.

    - Shop weld pipe joints where welded piping is indicated. Do not use welded joints for galvanized-steel pipe.

320.050 SERVICE-ENTRANCE PIPING

- Connect sprinkler piping to water-service piping of size and in location indicated for service entrance to building.

- Install shutoff valve, backflow preventer, pressure gage, drain, and other accessories indicated at connection to water-service piping.

320.060 PIPING INSTALLATION

- Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated, as far as practical.

    - Deviations from approved working plans for piping require written approval from Engineer and authorities having jurisdiction. File written approval with Engineer before deviating from approved working plans.

- Install underground service-entrance piping according to NFPA 24 and with restrained joints.

- Use approved fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.

- Install unions adjacent to each valve in pipes DN50 (NPS 2) and smaller. Unions are not required on flanged devices or in piping installations using grooved joints.

- Install flanges or flange adapters on valves, apparatus, and equipment having DN65 (NPS 2-1/2) and larger connections.

- Install "Inspector's Test Connections" in sprinkler piping, complete with shutoff valve, sized and located according to NFPA 13.

- Install sprinkler piping with drains for complete system drainage.

- Install sprinkler zone control valves, test assemblies, and drain risers adjacent to sprinkler risers when sprinkler branch piping is connected to sprinkler risers.

- Install ball drip valves to drain piping between fire department connections and check valves. Drain to floor drain or outside building.

- Install alarm devices in piping systems.

- Hangers and Supports: Comply with NFPA 13 for hanger materials and installation.

- Earthquake Protection: Install piping according to NFPA 13 to protect from earthquake damage.

- Install piping with grooved joints according to manufacturer's written instructions. Construct rigid piping joints, unless otherwise indicated.

- Install pressure gages on riser or feed main and at each sprinkler test connection. Include pressure gages with connection not less than DN8 (NPS 1/4) and with soft metal seated globe valve, arranged for draining pipe between gage and valve. Install gages to permit removal, and install where they will not be subject to freezing.

320.070 SPECIALTY SPRINKLER FITTING INSTALLATION

- Install specialty sprinkler fittings according to manufacturer's written instructions.

320.080 VALVE INSTALLATION

- Install listed fire-protection specialty valves, trim, fittings, controls, and specialties according to NFPA 13, manufacturer's written instructions, and authorities having jurisdiction.

- Gate Valves: Install listed fire-protection-service valves supervised-open, located to control sources of water supply except from fire department connections. Provide permanent identification signs indicating portion of system controlled by each valve.

- Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water supply sources.

- Specialty Valves:

    - General Requirements: Install in vertical position for proper direction of flow, in main supply to system.
    - Alarm Valves: Include bypass check valve and retarding chamber drain-line connection.
      Deluge Valves: Install in vertical position, in proper direction of flow, and in main supply to deluge system. Install trim sets for drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.

320.090 SPRINKLER APPLICATIONS

- General: Use sprinklers according to the following applications:

    - Rooms without Ceilings: Upright and pendent sprinklers, as indicated.
    - Rooms with Suspended Ceilings: Pendent, recessed, flush, and concealed sprinklers, as indicated.
    - Wall Mounting: Sidewall sprinklers.
    - Deluge-Sprinkler Systems: Upright and pendent, open sprinklers.
    - Special Applications: Use extended-coverage, flow-control, and quick-response sprinklers where indicated.
    - Sprinkler Finishes: Use sprinklers with the following finishes:

        - Upright, Pendent, and Sidewall Sprinklers: Chrome-plated in finished spaces exposed to view; rough bronze in unfinished spaces not exposed to view; wax coated where exposed to acids, chemicals, or other corrosive fumes.
        - Concealed Sprinklers: Rough brass, with factory-painted white cover plate.
        - Flush Sprinklers: Bright chrome, with painted white escutcheon.

- Recessed Sprinklers: Bright chrome, with bright chrome escutcheon.
- Residential Sprinklers: Dull chrome.

320.100 SPRINKLER INSTALLATION

- Install sprinklers in patterns indicated.
- Install sprinklers in suspended ceilings in center of acoustical panels and tiles.
- Do not install pendent or sidewall, wet-type sprinklers in areas subject to freezing.

320.110 CONNECTIONS

- Connect water-supply piping and sprinklers to fire pumps. Include backflow preventers.
- Install ball drip valves at each check valve for fire department connection. Drain to floor drain or outside building.
- Connect piping to specialty valves, specialties, fire department connections, and accessories.
- Electrical Connections: Power wiring as specified in Electrical specification sections.
- Connect alarm devices to fire alarm.
- Connect excess-pressure pumps to the following piping and wiring:
    - Sprinkler system, hydraulically.
    - Pressure gages and controls, hydraulically.
    - Electrical power system.
    - Alarm device accessories for pump.
    - Fire alarm system.

320.120 LABELING AND IDENTIFICATION

- Install labeling and pipe markers on equipment and piping according to requirements in NFPA 13 and in Section Z254.

320.130 FIELD QUALITY CONTROL

- Flush, test, and inspect sprinkler piping according to NFPA 13, "Systems Acceptance" Chapter.
- Replace piping system components that do not pass test procedures and retest to demonstrate compliance. Repeat procedure until satisfactory results are obtained.
- Report test results promptly and in writing to Engineer and authorities having jurisdiction.

320.140 CLEANING

- Clean dirt and debris from sprinklers.
- Remove and replace sprinklers having paint other than factory finish.

320.150 PROTECTION

- Protect sprinklers from damage until Substantial Completion.

320.160 COMMISSIONING

- Verify that specialty valves, trim, fittings, controls, and accessories are installed and operate correctly.
- Verify that excess-pressure pumps and accessories are installed and operate correctly.
- Verify that specified tests of piping are complete.
- Verify that damaged sprinklers and sprinklers with paint or coating not specified are replaced with new, correct type.
- Verify that sprinklers are correct types, have correct finishes and temperature ratings, and have guards as required for each application.
- Verify that potable-water supplies have correct types of backflow preventers.
- Verify that fire department connections have threads compatible with local fire department equipment.
- Fill wet-pipe sprinkler piping with water.
- Energize circuits to electrical equipment and devices.
- Start and run excess-pressure pumps.
- Adjust operating controls and pressure settings.
- Coordinate with fire alarm tests. Operate as required.

320.170 DEMONSTRATION

- Demonstrate equipment, specialties and accessories, and train Employer's maintenance personnel to adjust, operate, and maintain fire-suppression sprinklers.

S70 - GAS FIRE FIGHTING

PART 3 SPECIFICATION CLAUSES SPECIFIC TO S70

300.000 GENERAL

300.010 SUBMITTALS

- Shop Drawings: Prepare in accordance with requirements of NFPA 2001, to include, but not be limited to, design calculations.

- Delegated-Design Submittal: For clean-agent fire-extinguishing systems indicated to comply with performance and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

300.020 MAINTENANCE MATERIAL SUBMITTALS

- Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Deliver extra materials to Employer.

    - Detection Devices: Not less than 20 percent of amount of each type installed.
    - Container Valves: Not less than 10 percent of amount of each size and type installed.
    - Nozzles: Not less than 20 percent of amount of each type installed.
    - Extinguishing Agent: Not less than 100 percent of amount installed in largest hazard area. Include pressure-rated containers with valves.

300.030 QUALITY ASSURANCE

- Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of clean-agent extinguishing systems that are similar to those indicated for this Project in material, design, and extent.

- Product Options: Drawings indicate size, profiles, and dimensional requirements of clean-agent extinguishing systems and are based on the specific system selected. Other manufacturers' systems with equal performance characteristics may be considered. Refer to Division 1 Section "Product Requirements."

- Pipe and Pressure-Vessel Welding Qualifications: Qualify procedures and operators in accordance with ASME Boiler and Pressure Vessel Code.

- ASME Compliance: Fabricate piping to comply with ASME B31.1, "Power Piping."

- NFPA Compliance: Fabricate and label clean-agent extinguishing systems to comply with NFPA 2001, "Clean Agent Fire Extinguishing Systems."

310.000 PRODUCTS/MATERIALS

310.010 PERFORMANCE REQUIREMENTS

- Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.

- FM Global Compliance: Provide components that are FM Approved and that are listed in FM Approvals' "Approval Guide."

- UL Compliance: Provide equipment components complying with UL 1058, "Halogenated Agent Extinguishing System Units," and are UL listed for clean-agent extinguishing system units in UL's "Fire Protection Equipment Directory."

- Seismic Performance: Fire-suppression piping shall withstand the effects of earthquake motions determined in accordance with NFPA 13.

    - The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
    - Component Importance Factor: 1.5.

310.020 CLEAN-AGENT SYSTEMS

- Source Limitations: Obtain clean-agent systems from single source from single manufacturer.

- Description: Clean-agent fire-extinguishing system shall be an engineered system for total flooding of the hazard area including the room cavity above the ceiling, below the ceiling, and below the raised floor. System includes separate zones above and below the ceiling and beneath the raised floor. If smoke is detected below the raised floor, extinguishing agent shall be discharged in the underfloor zone only. If smoke is detected below the ceiling, extinguishing agent shall be discharged in zones above and below the ceiling and below the floor. If smoke is detected above the ceiling, extinguishing agent shall be discharged in the zone above the ceiling only.

- Delegated Design: Design clean-agent fire-extinguishing system and obtain approval from authorities having jurisdiction. Design system for Class A, Class B, or Class C fires as appropriate for areas being protected, and include safety factor. Use clean agent indicated and in concentration suitable for normally occupied areas.

- Performance Requirements: Discharge IG-100 within 60 seconds and maintain 41.9 percent design concentration by volume at 21 deg C for 10-minute holding time in hazard areas.

    - IG-100 concentration in hazard areas greater than 40 percent immediately after discharge or less than 36 percent throughout holding time will not be accepted without written authorization from Employer and authorities having jurisdiction.
    - System Capabilities: Minimum 16.575-MPa calculated working pressure upstream from orifice union, minimum 6895-kPa calculated working pressure downstream from orifice union, and 16.575-MPa initial charging pressure.

- Cross-Zoned Detection: Devices located in two separate zones. Sound alarm on activating single-detection device, and discharge extinguishing agent on actuating single-detection device in another zone.

- Verified Detection: Devices located in single zone. Sound alarm on activating single-detection device, and discharge extinguishing agent on actuating second-detection device.

- System Operating Sequence:

    - Actuating First Detector: Visual indication on annunciator panel. Energize audible and visual alarms (slow pulse), shut down air-conditioning and ventilating systems serving protected area, close doors in protected area, and send signal to fire-alarm system.
    - Actuating Second Detector: Visual indication on annunciator panel. Energize audible and visual alarms (fast pulse), shut down power to protected equipment, start time delay for extinguishing-agent discharge for 30 seconds, and discharge extinguishing agent.
    - Extinguishing-agent discharge will operate audible alarms and strobe lights inside and outside the protected area.

- A pressure relief vent shall be provided where required based on the enclosure test evaluation as per NFPA 2001 & FSSA guide to maintain pressure within specified enclosure pressure limit.

- Manual stations shall immediately discharge extinguishing agent when activated.

- Operating abort switches will delay extinguishing-agent discharge while being activated, and switches must be reset to prevent agent discharge. Release hand pressure on the switch to cause agent discharge after the time delay has expired.

- EPO: Will terminate power to protected equipment immediately on actuation.

- Low-Agent Pressure Switch: Initiate trouble alarm if sensing less than set pressure.

- Power Transfer Switch: Transfer from normal to standby power source.

310.030 PIPE AND FITTINGS

- See "Inert Gas Agent Piping Applications" Article for applications of pipe, tube, fitting, and joining materials.

- Piping, Valves, and Discharge Nozzles: Comply with types and standards listed in NFPA 2001, Section "Distribution," for charging pressure of system.

- Steel Pipe: ASTM A53/A53M, Type S, Grade B or ASTM A106/A106M, Grade B; Schedule 40, seamless pipe, unless Schedule 80 or Schedule 160 is indicated.

    - Threaded Fittings:

        - Malleable-Iron Fittings: ASME B16.3, Class 300.
        - Flanges and Flanged Fittings: ASME B16.5, Class 300 unless Class 600 is indicated.
        - Fittings Working Pressure: To match minimum system working pressure.
        - Flanged Joints: Class 300 minimum.

    - Forged-Steel Welding Fittings: ASME B16.11, Class 3000, socket pattern.
    - Steel, Grooved-End Fittings: FM Approved and NRTL listed, ASTM A47/A47M malleable iron or ASTM A536 ductile iron, with dimensions matching steel pipe and ends factory grooved in accordance with AWWA C606.

- Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.

- ASME B16.21, nonmetallic, flat, asbestos-free, 3.2-mm- maximum thickness unless thickness or specific material is indicated.

- Flange Bolts and Nuts: ASME B18.2.1, carbon steel.

- Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

- Steel, Keyed Couplings: UL 213, AWWA C606, approved or listed for clean-agent service, and matching steel-pipe dimensions. Include ASTM A536, ductile-iron housing, rubber gasket, and steel bolts and nuts.

310.040 VALVES

- General Valve Requirements:

  - UL listed or FM Approved for use in fire-protection systems.
  - Compatible with type of clean agent used.

- Container Valves: With rupture disc or solenoid and manual-release lever, capable of immediate and total agent discharge and suitable for intended flow capacity.

- Valves in Sections of Closed Piping and Manifolds: Fabricate to prevent entrapment of liquid, or install valve and separate pressure relief device.

- Valves in Manifolds: Check valve; installed to prevent loss of extinguishing agent when container is removed from manifold.

- Selector Valves; To be installed in the supply piping branch for the hazard being protected. Depending on the size of the selector valve, the valve is either threaded in place, or bolted to the piping flanges. Constructed of bronze material, the valve is a pressure differential type that blocks the flow of agent through the piping until it is activated. Valve actuation is accomplished either manually with the manual release lever, or by the pilot Nitrogen Cylinder that is part of the selector valve assembly.

310.050 EXTINGUISHING-AGENT CONTAINERS

- Description: Steel tanks complying with ASME Boiler and Pressure Vessel Code: Section VIII, for unfired pressure vessels. Include minimum working-pressure rating that matches system charging pressure, valve, pressure switch, and pressure gage.

  - Finish: Manufacturer's standard color, enamel or epoxy paint.
  - Manifold:

    - Fabricate with valves, pressure switches, and connections for multiple storage containers, as indicated.
    - Fabricate with valves, pressure switches, selector switch, and connections for main- and reserve-supply banks of multiple storage containers.

  - Storage-Tank Brackets: Factory- or field-fabricated retaining brackets consisting of steel straps and channels; suitable for container support, maintenance, and tank refilling or replacement.

310.060 FIRE-EXTINGUISHING CLEAN AGENT

- IG-100 Clean Agent: Nitrogen inert gas.
    - Source Limitations: Obtain clean agents from single source from single manufacturer.

310.070 DISCHARGE NOZZLES

- Description: Equipment manufacturer's standard one-piece brass or aluminum alloy of type, size, discharge pattern, and capacity required for application.
- Material: Corrosion-resistant metal.
- Stamped with orifice size and type.

310.080 MANIFOLD AND ORIFICE UNIONS

- Description: NRTL-listed device with minimum 15-MPa pressure rating, to control flow and reduce pressure of inert gas in piping.
    - DN 50 and Smaller: Piping assembly with orifice, sized for system design requirements.
    - DN 65 and Larger: Piping assembly with nipple, sized for system design requirements.

310.090 FIRE CONTROL PANELS

- Description: FM Approved or NRTL listed, including equipment and features required for testing, supervising, and operating fire-extinguishing system.
- Power Requirements: 120/240 V ac; with electrical contacts for connection to system components and fire-alarm system, and transformer or rectifier as needed to produce power at voltage required for accessories and alarm devices.
- Enclosure: NEMA ICS 6, Type 1, enameled-steel cabinet.
    - Mounting: Surface.
- Supervised Circuits: Separate circuits for each independent hazard area.
    - Detection circuits equal to required number of zones, or addressable devices assigned to required number of zones.
    - Manual pull-station circuit.
    - Alarm circuit.
    - Release circuit.
    - Abort circuit.
    - EPO circuit.
- Control-Panel Features:
    - Electrical contacts for shutting down fans, activating dampers, and operating system electrical devices.
    - Automatic switchover to standby power at loss of primary power.
    - Storage container, low-pressure indicator.

- Service disconnect to interrupt system operation for maintenance with visual status indication on the annunciator panel.
- Control interface capability with Building Control System, if applicable, and Fire Alarm System for general alarm, control panel fault and cylinder low pressure

- Annunciator Panel: Graphic type showing protected, hazard-area plans, as well as locations of detectors and abort, EPO, and manual stations. Include lamps to indicate device-initiating alarm, electrical contacts for connection to control panel, and stainless steel or aluminum enclosure.

- Standby Power: Sealed, valve-regulated, recombinant lead acid, or Vented, wet-cell pocket, plate nickel cadmium batteries with capacity to operate system for 24 hours and alarm for minimum of 15 minutes. Include automatic battery charger that has a varying charging rate between trickle and high depending on battery voltage, and that is capable of maintaining batteries fully charged. Include manual voltage control, dc voltmeter, dc ammeter, electrical contacts for connection to control panel, automatic transfer switch, and suitable enclosure.

310.100 DETECTION DEVICES

- Description: Comply with NFPA 2001, NFPA 72, and UL 268; 24 V dc, nominal.

- Ionization Detectors: Dual-chamber type, having sampling and referencing chambers, with smoke-sensing element.

- Photoelectric Detectors: LED light source and silicon photodiode receiving element.

- Remote Air-Sampling Detector System: Includes air-sampling pipe network, laser-based photoelectric detector, sample transport fan, and control unit.

  - Pipe Network: CPVC tubing connects control unit with calibrated sampling holes.
  - Smoke Detector: Particle-counting type with continuous laser beam. Sensitivity adjustable to a minimum of four preset values.
  - Sample Transport Fan: Centrifugal type, creating a minimum static pressure of 12.5 Pa at all sampling ports.
  - Control Unit: Multizone unit as indicated on Drawings. Provides same system power supply, supervision, and alarm features as specified for the control panel plus separate trouble indication for airflow and detector problems.

- Signals to the Central Fire-Alarm Control Panel: Any type of local system trouble is reported to central fire-alarm control panel as a composite "trouble" signal. Alarms on each system zone are individually reported to central fire-alarm control panel as separately identified zones.

310.110 MANUAL STATIONS

- Description: Surface FM Approved or NRTL listed, with clear plastic hinged cover, 220-V ac or low-voltage compatible with controls. Include contacts for connection to control panel.

- Manual Release: "MANUAL RELEASE" caption, and red finish. Unit can manually discharge extinguishing agent with operating device that remains engaged until unlocked.

- Abort Switch: "ABORT" caption, momentary contact, with green finish.

- EPO Switch: "EPO" caption, with yellow finish.

310.120 SWITCHES

- Description: FM Approved or NRTL listed, where available, 220-V ac or low-voltage compatible with controls. Include contacts for connection to control panel.

    - Low-Agent Pressure Switches: Pneumatic operation.
    - Power Transfer Switches: Key-operation selector, for transfer of release circuit signal from main supply to reserve supply.
    - Abort Switches: Dead-man type, requiring constant pressure, for delay of system discharge.
    - Door Closers: Magnetic retaining and release device or electrical interlock to cause door operator to drive the door closed.

310.130 ALARM DEVICES

- Description: FM Approved or NRTL listed, low voltage, and surface mounting.

- Bells: Minimum 150-mm diameter.

- Horns: 90 to 94 dBA.

- Strobe Lights: Translucent lens, with "FIRE" or similar caption.

- Oxygen Deficiency Monitor.

    - Sampling Method and Range: Diffusion, zero to 25 percent O_2.
    - 24 V dc.
    - Wall mounted with bracket.
    - Built-in audible alarm 90 dBA.
    - Backlit LCD.
    - 10-year no-calibration sensor.
    - No maintenance required.
    - Signal Outputs: Standard 4- to 20-mA analog.
    - Connections for system control data acquisition system and/or programmable logic controller.
    - Plus or minus 1 percent accuracy of full scale.
    - Operating temperature of minus 40 to plus 50 deg C.

320.000 WORKMANSHIP

320.010 EXAMINATION

- Examine areas and conditions, with Installer present, for compliance with enclosure integrity requirements, installation tolerances, and other conditions affecting performance of the Work in accordance with NFPA 2001.

- Proceed with installation only after unsatisfactory conditions have been corrected.

320.020 INERT GAS NITROGEN GAS (IG-100) AGENT PIPING APPLICATIONS

- Piping between Storage Containers and Orifice Union: Schedule 80, steel pipe; forged-steel welding fittings; and welded joints.

- Flanged pipe and fittings and flanged joints may be used to connect to specialties and accessories and where required for maintenance.
- Fittings Working Pressure: 13.8 MPa minimum.
- Flanged Joints: Class 600 minimum.

- Piping Downstream from Orifice Union: Schedule 80, steel pipe; forged-steel welding fittings; and welded joints.

  - Flanged pipe and fittings and flanged joints may be used to connect to specialties and accessories and where required for maintenance.
  - Fittings Working Pressure: 6900 kPa minimum.
  - Flanged Joints: Class 300 minimum.

320.030 CLEAN-AGENT SYSTEM INSTALLATION

- Install clean-agent containers, piping, and other components level and plumb, in accordance with manufacturers' written instructions.

- Clean-Agent Container Mounting:

  - Install clean-agent containers on cast-in-place concrete equipment bases.

- Grooved Piping Joints: Groove pipe ends in accordance with AWWA C606 dimensions. Assemble grooved-end steel pipe and steel, grooved-end fittings with steel, keyed couplings and lubricant in accordance with manufacturer's written instructions.

- Install pipe and fittings, valves, and discharge nozzles in accordance with requirements listed in NFPA 2001, Section "Distribution."

  - Install valves designed to prevent entrapment of liquid, or install pressure relief devices in valved sections of piping systems.
  - Support piping using supports and methods in accordance with NFPA 13.
  - Install seismic restraints for extinguishing-agent piping systems.
  - Install control panels, detection system components, alarms, and accessories, in accordance with requirements listed in NFPA 2001, Section "Detection, Actuation, and Control Systems," as required for supervised system application.

320.040 PIPING CONNECTIONS

- Drawings indicate general arrangement of piping, fittings, and specialties.

- Where installing piping adjacent to equipment, allow space for service and maintenance.

320.050 ELECTRICAL CONNECTIONS

- Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.

- Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

- Connect electrical devices to control panel and to building's fire-alarm system.

320.060 CONTROL CONNECTIONS

- Install control and electrical power wiring to field-mounted control devices.

320.070 IDENTIFICATION

- Identify system components and equipment. Comply with requirements for identification specified in Section Z254
- Identify piping, extinguishing-agent containers, other equipment, and panels in accordance with NFPA 2001.
- Install signs at entry doors for protected areas to warn occupants that they are entering a room protected with a clean-agent fire-extinguishing system.
- Install signs at entry doors to advise persons outside the room the meaning of horn(s), bell(s), and strobe light(s) outside the protected space.

320.070 FIELD QUALITY CONTROL

- Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- Perform tests and inspections with the assistance of a factory-authorized service representative.
- Tests and Inspections:
    - After installing clean-agent fire-extinguishing system and after electrical circuitry has been energized, test for compliance in accordance with requirements listed in NFPA 2001, Section "Approval of Installation."
    - Clean-agent fire-extinguishing system and associated protected enclosure will be considered defective if either does not pass required tests and inspections.
    - Prepare test and inspection reports in accordance with requirements listed in NFPA 2001, Section "Installation Acceptance."
- Comply with operating instructions and procedures of NFPA 2001, Section "Approval of Installations." Include the following inspections and tests to demonstrate compliance with requirements:
    - Check mechanical items.
    - Inspect extinguishing-agent containers and extinguishing agent, and check mountings for adequate anchoring to substrate.
    - Check electrical systems.
    - Check enclosure integrity. Comply with NFPA 2001, Section "Enclosure Inspection," and Appendix C, "Enclosure Integrity Procedure."
    - Perform functional predischarge test.
    - Perform system functional operational test.
    - Check remote monitoring operations.
    - Check control-panel primary power source.
    - Perform "puff" test on piping system, using nitrogen.
- Perform field-acceptance tests of each clean-agent extinguishing system when installation is complete. Perform system testing only after hazard-area enclosure construction has been completed and openings sealed. Comply with operating instructions and procedures of NFPA 2001, Section "Approval of Installations." Include the following to demonstrate compliance with requirements:

- Perform functional predischarge test.
- Perform system functional operational test.
- Check remote monitoring operations.
- Check control-panel primary power source.
- Perform "puff" test on piping system, using nitrogen.

- Correct malfunctioning equipment, then retest to demonstrate compliance. Replace equipment that cannot be corrected or does not perform as specified and indicated, then retest to demonstrate compliance. Repeat procedure until satisfactory results are obtained.

320.080 CLEANING

- Each pipe section shall be cleaned internally after preparation and before assembly by means of swabbing, using a suitable nonflammable cleaner. Pipe network shall be free of particulate matter and oil residue before installing nozzles or discharge devices.

320.090 OPERATIONAL CONDITION SYSTEM FILLING

- Preparation:

  - Verify that clean-agent fire-extinguishing system and protected enclosure have passed all required tests and inspections in accordance with NFPA 2001.
  - Verify that clean-agent fire-extinguishing piping system installation is completed and cleaned.
  - Verify complete enclosure integrity.
  - Verify operation of ventilation and exhaust systems.

- Filling Procedures:

  - Fill clean-agent fire-extinguishing containers with extinguishing agent, and pressurize to indicated charging pressure.
  - Install filled containers.
  - Energize circuits.
  - Adjust operating controls.

320.100 DEMONSTRATION

- Engage a factory-authorized service representative to train Employer's maintenance personnel to adjust, operate, and maintain clean-agent fire-extinguishing systems.

S71 FOAM FIRE FIGHTING

PART 3 SPECIFICATION CLAUSES SPECIFIC TO S71

300.000 GENERAL

300.010 SYSTEM DESCRIPTION

- Description: Engineered, fixed, wet-pipe deluge, automatically actuated, low-expansion, AFFF fire-extinguishing system for flammable-liquid fires. System includes diaphragm proportioning tanks and devices as described in NFPA 11.

300.020 SUBMITTALS

- Delegated-Design Submittal: For foam-water systems indicated to comply with performance and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

300.030 MAINTENANCE MATERIAL SUBMITTALS

- Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Deliver extra materials to Owner.
    - Discharge Devices: Not less than 20 percent of amount of each type installed.
    - Foam Concentrate: Not less than 200 percent of amount installed.

300.040 QUALITY ASSURANCE

- Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of kind indicated. Engineering services are defined as those performed for installations of low-expansion, AFFF fire-extinguishing systems that are similar to those indicated for this Project in material, design, and extent.

- Source Limitations: Obtain foam concentrate, proportioning tanks, and major accessories through one source.

- Product Options: Drawings indicate size, profiles, and dimensional requirements of foam fire-extinguishing systems and are based on the specific system selected. Other manufacturers' foam fire-extinguishing systems complying with requirements may be considered. Refer to Division 1 Section "Product Requirements."

- Pipe and Pressure-Vessel Welding Qualifications: Qualify procedures and operators in accordance with ASME Boiler and Pressure Vessel Code.

310.000 PRODUCTS/MATERIALS

310.010 PERFORMANCE REQUIREMENTS

- Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.

- NFPA Compliance: Fabricate and label AFFF fire-extinguishing systems to comply with NFPA 11and NFPA 11.

- ASME Compliance: Fabricate piping to comply with ASME B31.1.

- FM Global Compliance: Provide components that are FM Approved and that are listed in FM Approvals' "Approval Guide."

- UL Compliance: Provide foam concentrate and equipment complying with UL 162, "Foam Equipment and Liquid Concentrates," and equipment listed in UL's "Fire Protection Equipment Directory."

- Standard Working Pressure of Piping-System Component: Listed for a minimum of 1200 kPa (175 psig).

- Unless authorities having jurisdiction have stricter requirements, minimum design parameters are as follows:

    - Solution: 3 percent foam-water solution.
    - Sprinkler Spacing: Maximum of 9.5 sq. m (100 sq. ft.) per sprinkler, and maximum 3.7-m (12-foot) spacing.
    - Design Density: Minimum 0.108 L/s per sq. m (0.16 gpm/sq. ft.).
    - Foam Supply: Minimum 10-minute discharge time.
    - Water Supply: Minimum 60 minutes.
    - Remote Area: Minimum 476-sq. m (5000-sq. ft.) design area for closed-sprinkler systems. Open-sprinkler systems shall discharge over the entire system area.
    - Sprinkler Temperature Rating: Maximum 121 to 149 deg C (250 to 300 deg F) at a roof or ceiling, and 57 to 77 deg C (135 to 170 deg F) for intermediate sprinklers.

- Seismic Performance: Fire-suppression piping shall withstand the effects of earthquake motions determined in accordance with NFPA 13.

    - The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
    - Component Importance Factor: 1.5.

310.020 CONCENTRATE PIPING MATERIALS

- Comply with requirements specified in Section S63 for pipes, fittings, joining materials, and valves.

- Schedule 40, Black Steel Pipe: ASTM A53/A53M, Type E or Type S, Grade B or ASTM A795/A795M, Type E or Type S. Pipe ends may be factory or field formed to match joining method.

    - Gray Iron Threaded Fittings, Classes 125 and 250: ASME B16.4.
    - Gray Iron Pipe Flanges and Flanged Fittings: ASME B16.1.
    - Malleable Iron Threaded Fittings, Classes 150 and 300: ASME B16.3.

310.030 FOAM SOLUTION PIPING MATERIALS

- Comply with requirements specified in Section S63 for pipes, fittings, joining materials, and valves.

- Schedule 40, Black Steel Pipe: ASTM A53/A53M, Type E or Type S, Grade B or ASTM A795/A795M, Type E or Type S. Pipe ends may be factory or field formed to match joining method.

    - Gray Iron Threaded Fittings, Classes 125 and 250: ASME B16.4.
    - Gray Iron Pipe Flanges and Flanged Fittings: ASME B16.1.
    - Malleable Iron Threaded Fittings, Classes 150 and 300: ASME B16.3.

- Galvanized-Steel Pipe: ASTM A 53/A 53M, Type E or Type S; Grade B, Schedule 40.

    - Gray Iron Threaded Galvanized Fittings, Classes 125 and 250: ASME B16.4.
    - Malleable Iron Galvanized Threaded Fittings, Classes 150 and 300: ASME B16.3.

310.040 VALVES

- Comply with requirements specified in Section S63

    - UL listed or FM Approved for use in fire-protection systems.
    - Compatible with type of foam concentrate used.

310.050 SYSTEM COMPONENTS

- Source Limitations: Obtain system components from single source from single manufacturer.

- System components to be in accordance with NFPA 11, be compatible with the foam concentrate, and be designed to be drained and cleaned.

- Foam-Concentrate Storage Tanks:

    - Buna-N, bladder-type proportioning tank complying with UL 162 and ASME Boiler and Pressure Vessel Code: Section VIII; designed for use with foam-concentrate pumps and for specific type of foam concentrate used. Include bladder, internal piping, fill and drain, glass sight gage, piping, and valves. Contain concentrate in the bladder.

        - Orientation: Vertical design with skirt support.

- Foam-Concentrate Pumps: Listed for use in foam-water systems in accordance with NFPA 20. Include supply-side pressure relief valve and drain cock or valve.

- Proportioning Controllers: Venturi type complying with UL 162 and of capacity to match design at minimum and maximum flow.

- Concentrate Control Valves: Water-operated ball or deluge valve designed to open with flow through the proportioning controller.

- Concentrate Strainers: Bronze body and stainless steel mesh strainer with minimum 3.2-mm (0.125-inch) perforations to remove solids that would block system components.

- Pressure Gauges: Comply with UL 393; with 90-mm (3-1/2-inch) minimum-diameter dial, 0- to 2070-kPa (0- to 300-psig) dial range, and caption "WATER" or "CONCENTRATE" on dial face.

310.060 FOAM CONCENTRATE

- Description: AFFF liquid concentrate, complying with NFPA 11 and UL 162, for making foam-water fire-extinguishing foam solution.

310.070 DISCHARGE DEVICES

- Discharge devices shall be UL listed or FM Approved.
- Sprinklers: Openair-aspirating type; UL listed or FM Approved and listed for use with type of foam concentrate used.
- Spray Nozzles: For foam water; include foam generator and distributing deflector to distribute foam or water.

310.080 MONITORING DEVICES

- Valve Supervisory Switches: Single pole, double throw, with normally closed contacts complying with UL 753. Switch shall signal an alarm condition at fire-alarm panel or releasing panel when valve is in other than fully open position.
- Pressure Switches: Single pole, double throw, UL listed or FM Approved and complying with UL 753. Switch shall signal an alarm condition at fire-alarm panel or releasing panel when switch is in other than fully open position.
- Flow Switches: Single pole, double throw, UL listed or FM Approved and complying with UL 753. Switch shall signal an alarm condition at fire-alarm panel or releasing panel when switch is in other than fully open position.
- Comply with NFPA 11 and NFPA 72.

310.090 ALARM DEVICES

- Description: UL listed or FM Approved, low voltage, and surface mounting, unless otherwise indicated.

320.000 WORKMANSHIP

320.010 CONCENTRATE STORAGE TANK INSTALLATION

- Equipment Mounting:
    - Install concentrate storage tanks on cast-in-place concrete equipment bases.
- Install concentrate storage tanks anchored to substrate in accordance with tank manufacturer's written instructions.
- Install tanks level and plumb, in accordance with layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.
- Install seismic restraints for tanks. Anchor tanks to substrate.

320.020 PIPING INSTALLATION

- Install piping and components level and plumb.

- Install pipe and fittings, valves, and discharge devices in accordance with requirements listed in NFPA 11, "Installation of Foam-Water Sprinkler and Foam-Water Spray Systems."

    - Support piping using supports and methods in accordance with NFPA 13.
    - Install seismic restraints for concentrate storage tanks and piping systems.
    - Install monitoring and alarm devices in accordance with NFPA 11 and NFPA 72.

- Install flanges, flange adapters, or couplings for grooved-end piping on piping, valves, apparatus, and equipment having DN 65 (NPS 2-1/2) and larger end connections.

- Ream ends of pipes and tubes and remove burrs.

- Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.

- Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for foam concentrate. Join flanges with gasket and bolts in accordance with ASME B31.9.

- Threaded Joints: Thread pipe with tapered pipe threads in accordance with ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

    - Apply appropriate tape or thread compound to external pipe threads.
    - Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.

- Steel-Piping, Cut-Grooved Joints: Cut square-edge groove in end of pipe in accordance with AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings in accordance with AWWA C606 for steel-pipe joints.

- Steel-Piping, Roll-Grooved Joints: Roll rounded-edge groove in end of pipe in accordance with AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings in accordance with AWWA C606 for steel-pipe grooved joints.

- Welded Joints: Construct joints in accordance with AWS D10.12M/D10.12, using qualified processes and welding operators in accordance with "Quality Assurance" Article.

    - Shop weld pipe joints where welded piping is indicated.

- Dissimilar-Material Piping Joints: Make joints using adapters compatible with materials of both piping systems and with foam concentrate.

320.030 PIPING CONNECTIONS

- Comply with requirements for piping specified in Section S63 Drawings indicate general arrangement of piping, fittings, and specialties.

- Provide concentrate control and drain valves with piping to permit maintenance of foam concentrate with continuous sprinkler-system service.

- Install proportioning controller in fire-suppression piping to provide coverage to area indicated on Drawings.

- Where installing piping adjacent to equipment, allow space for service and maintenance.

320.040 ELECTRICAL CONNECTIONS

- Connect electrical devices to building's fire alarm system.
- Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.
- Install a fire-department connection on the supply side of the proportioning controller when required.

320.050 LABELING

- Install labeling on piping, equipment, and panels in accordance with NFPA 11, and Section Z254.

320.060 CHARGING SYSTEM

- Fill proportioning tanks with foam concentrate after field quality-control testing is complete and satisfactory results have been achieved.

320.070 FIELD QUALITY CONTROL

- Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- Tests and Inspections: Comply with operating instructions and procedures in NFPA 11, Chapter "Acceptance Tests." Include the following tests and inspections to demonstrate compliance with requirements:
    - Engage the services of a qualified professional engineer to inspect installed fire-extinguishing systems, prepare installation report, and certify that installation complies with the Contract Documents, calculations, and requirements of authorities having jurisdiction.
    - Check mechanical items.
    - Inspect equipment and check mountings for adequate anchoring to substrate.
    - Check electrical systems.
    - Flush supply piping.
    - Perform hydrostatic pressure test.
    - Perform acceptance test.
    - Perform proportioning system test.
    - Perform discharge test.
    - Flush system piping.
    - Correct malfunctioning equipment; retest to demonstrate compliance. Replace equipment that cannot be satisfactorily corrected or does not perform as specified and indicated; retest to demonstrate compliance. Repeat procedure until satisfactory results are obtained.
    - After installing foam-water fire-extinguishing piping system and after electrical circuitry has been energized, test for compliance with NFPA 11.
    - Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
    - Operational Test: After electrical circuitry has been energized, start systems to confirm proper unit operation.
    - Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

- Foam fire-extinguishing piping system will be considered defective if it does not pass tests and inspections.

- Prepare test and inspection reports.

320.080 DEMONSTRATION

- Demonstrate equipment, specialties and accessories, and train Employer's maintenance personnel to adjust, operate, and maintain fire-extinguishing foam piping and equipment.

T60 - CENTRAL REFRIGERATION PLANT

PART 3 SPECIFICATION CLAUSES SPECIFIC TO T60

300.000 GENERAL:

300.001 PRESSURE EQUIPMENT DIRECTIVE/PRESSURE EQUIPMENT REGULATIONS:

- All equipment and assemblies which fall within the scope of the Pressure Equipment Directive (PED) 2014/68/EU, must be tested by the manufacturers and be certified as compliant with the Directive. Such compliance shall be evidenced by displaying the appropriate CE Mark on the equipment and assemblies.
- Only relevant equipment and assemblies certified as compliant will be permitted under this specification, and any substitution put forward must also be compliant with the Directive.

300.030 WORKS INSPECTION AND TESTING:

- Include for inspection at manufacturer's works.
- Plant shall be witness tested in the presence of the client's representative and a certified test report shall be provided. Allow for cost of the test and the cost for travel and accommodation, as necessary, to take the project team to the test facility
- Thermal performance/capacity testing
    - Conduct capacity test in a purpose built test chamber with all facilities, instruments and equipment in order to operate and record the chiller performance at the specified conditions. The test facility shall be independently certified and quality assured to BS EN ISO 9001. Provide copies of all calibration certificates used in testing. Provide a method statement for the test work 2 weeks prior to test including how the specified design ambient temperature will be achieved and maintained during the test.
    - Operating conditions to be recorded during testing
- Acoustic testing
    - Measure maximum sound pressure level measurements around all sides of the plant, not the average level.
    - Establish any tonal character from the chiller. This is defined as, "no 1/3 octave band sound pressure level measured at 1m shall differ from it's two adjacent 1/3 octaves by more than 5dB".
    - Low noise air cooled chillers shall be used; Contractor to conduct an acoustical study to ensure selected chiller does not cause noise level to rise above the expected noise during normal operation or as requested by Authorities whichever is more stringent.

300.035 SITE PERFORMANCE TESTING AND COMMISSIONING:

- Chillers
    - Field Quality Control
        - Manufacturer's Field Service: Engage a factory-authorized service representative to inspect field-assembled components and chiller installation, including piping and electrical connections. Report results in writing.
            - Test and adjust controls and safeties.
            - Replace damaged or defective and malfunctioning components, controls and equipment.

- Correct deficiencies identified by observations and tests; retest until specified requirements and satisfactory results are obtained.

- Cleaning
  - After completing installation, including outlet fittings and devices, inspect unit components.
  - Remove paint splatters and other spots, dirt, and debris.
  - Repair damaged finish to match original finish.
- Commissioning
  - Verify that installation complies with Contract requirements.
  - Complete installation and startup checks according to manufacturer's written instructions and check for the following items:
    - No physical damage to unit.
    - Unit is level.
    - Chiller vibration isolation and flexible pipe connections are installed.
    - Clearances have been maintained and piping is installed for easy removal for service and tube cleaning.
    - Chilled water pipes have been connected to correct ports.
    - Labels and safety instructions are clearly visible.
    - Oil levels are as recommended by the manufacturer.
    - Refrigerant charge is sufficient and chiller has been leak tested.
    - Shipping skids, blocks, and straps are removed.
    - Refrigerant pressure relief is vented to outside.
    - Thermometers and pressure gages are installed.
    - Controls and safety interlocks are installed and connected.
    - Pumps are installed, connected, and operational.
  - Start-up: Chiller manufacture to provide a factory-trained representative to perform the following services:
    - Leak testing.
    - Refrigerant pressure testing.
    - Evacuation.
    - Dehydration.
    - Charging the chiller with refrigerant.
    - Check and record performance of chiller protection devices.
    - Check and record performance of chilled- and condenser-water flow and low-temperature interlocks.
    - Operate chiller for run-in period as recommended by the manufacturer.
    - Check static deflection of vibration isolators, including deflection during chiller startup and shutdown.
    - Check refrigerant charge.
    - Check oil level.
  - After the above services have been performed, the same factory-trained representative shall be available for fifteen days to instruct the owner's personnel in the proper operation and maintenance of the chiller.
  - The Contractor shall supply the owner with the following literature as furnished by the manufacturer prior to start-up:

- One complete set of installation drawings
- Wiring diagrams
- Installation instructions
- Start-up instructions
- Operation and maintenance instructions.

- Guarantee the main electric motor starters shall be furnished and guaranteed by the chiller manufacturer who will be responsible for the refrigeration system performance and its control.

- Final Assembly, testing and start-up

  - Manufacturer shall be responsible for supervising the installation of the ship loose components of the chiller on-site.
  - Manufacturer is responsible for the reconnection of all control wiring from the chiller to the chiller control panel and starter.
  - Manufacturer shall perform the onsite pre-commissioning, commissioning and startup of the new chiller.

    - These activities include the 48 hour pressure test of refrigerant side components at factory specified test pressures, dehydration, and evacuation of refrigerant side components.
    - Manufacturer must provide two evacuations & dehydration tests, to be signed off by the Owner/Engineer, before charging of system.
    - The pressure level achieved by each evacuation shall not exceed 100 milli-bar absolute.
    - Charging of refrigerant and oil to be performed by manufacturer.

  - Manufacturer shall reconfirm the proper operation of the chillers control system in all modes of operation, including all shutdowns.

- Acoustic testing

  - Measure maximum sound pressure level measurements around all sides of the plant, not the average level.

- Seasonal performance test: During the Defects Liability Period, when instructed by the Engineer, engage a factory-authorized service representative to conduct a seasonal performance test according to requirements of the Engineer. Report results in writing.

300.050 MAINTENANCE:

- Provide full installation and commissioning instructions including:

  - Normal operation and emergency procedures.
  - Fault analysis guide.
  - Manufacturer's test and commissioning certificates.
  - Recommended maintenance instructions.
  - Daily, weekly, monthly, 6 monthly and annual maintenance schedules.
  - List of recommended spares, including cost and anticipated operational life.

- Ensure that major components are readily accessible for maintenance without dismantling or removing other components.

300.060 SAFETY STANDARDS AND REGULATIONS:

- Comply with BS EN ISO 12100, BS EN 378 and BS EN 12693.
- Comply with F-Gas Regulations.

- Comply with HSC ACOP L8 and associated technical guidance HSG274 Part 1 as appropriate.
- Provide sample points in the cooling system pipework to enable sampling to be undertaken in accordance with local authority regulations
- Pipe discharges from safety valves to be located at a safe point away from any fresh air intakes or openable windows (external to the building for plant in enclosed plant rooms). The discharge point shall be such that persons and property are not endangered by a release of the refrigerant and be well away from any fresh air intakes or openable windows.

300.070 EQUIPMENT:

- Equipment to be certified with CE mark in accordance with The Energy Related Products Regulations 2010 as amended.
- Ecodesign requirements
    - Cooling Only Chillers
        - Chillers to comply with EU Regulation 2016/2281 with regard to ecodesign requirements, including seasonal space cooling (or heating), energy efficiency (SSCEE / SSHE) and product information.
- Fans incorporated into plant with electric input between 125W and 500kW to comply with EC Regulation 327/2011 with regard to ecodesign requirements.
- The full load Energy Efficiency Ratio (EER) of plant shall be in accordance with BS EN 14511.
- The Seasonal Space Cooling Energy Efficiency (SSCEE) of plant shall be in accordance with BS EN 14825.
- Provide interface to BMS. Comply with requirements of section W60
- Comply with the following standards:
    - Refrigerating compressors
        - Performance testing in accordance with BS EN 13771-1 and BS EN 12900
        - Use lubricating oils in accordance with BS ISO 6743-3 and manufacturer's recommendations.
        - Safety of motor-compressors to BS EN 60335-2-34
    - Refrigerating condensers
        - Performance testing in accordance with BS EN 13771-2 and BS EN 13215
    - Motors
        - BS EN 60034-30-1 and BS EN 50347 as applicable to 3-phase cage-induction motors.
        - Starter
            - Type - Soft starter
            - Comply with section Y92A for specifications of starters and VSD
            - For motors less than 50 HP, may be proposed by the manufacturer subject to compliance with Y92A and Engineer approval.
    - Pressure vessels to relevant parts of BS EN 13445 and BS EN 14276-1 for general requirements for material, design, manufacturing, testing and documentation.

300.076 REFRIGERANTS:

- CFC and HCFC refrigerants are prohibited and must not be used.

- Provide each chiller with automatic shutdown and pump down of refrigerant on the detection of refrigerant leakage/charge loss. Provide automatic isolation valves to contain the refrigerant once fully pumped down.
- The Contractor shall provide the complete charge of refrigerant in accordance with manufacturer's recommendations. Any refrigerant that has been lost from the system shall be replaced.
- All refrigerants must have global warming potential (GWP) of less than 10 or Direct Effect Life Cycle CO_2 equivalent emissions of 100kgCO_{2e}/kW cooling capacity.
- All refrigerants must have Direct Effect Life Cycle CO_2 equivalent emissions of 1000kgCO_{2e}/kW cooling capacity.

310.000 PRODUCTS/MATERIALS:

310.020 PACKAGED AIR COOLED LIQUID CHILLER - SCREW COMPRESSOR:

- Type
  - Cooling Only
    - Supply air cooled packaged liquid chiller complete with motors, semi-hermetic twin screw compressors, condenser, evaporator, heat rejection fans, starting and control equipment, and all auxiliary and ancillary items, to complete refrigeration cycle.
- Capacity, testing, unit rating and functional testing
  - To be in accordance with conditions, requirements, methodologies, definitions, calculations and measurement approaches to be set out in the standards below. Unit efficiency ratings to account for the fraction of internal or external pump power to overcome internal static pressure difference:
    - BS EN 14511-1 - Terms and definitions
    - BS EN 14511-2 - Test conditions
    - BS EN 14511-3 - Test methods
    - BS EN 14511-4 - Operating requirements
    - BS EN 14825 for testing and rating at part load conditions and calculation of seasonal performance.
- Duty
  - Minimum Seasonal Space Cooling Energy Efficiency (SSCEE)
    - Minimum value in accordance with EU Eco-Design Requirements]
  - Refrigerant
    - R134a
    - Normal operating pressure (2070 kPa)
  - Chilled water
    - Normal operating pressure (1035 kPa)
  - Evaporator
    - Type
      - Shell and tube type

- Shell – Carbon-steel plate
- Tubes - Seamless copper; expanded into tube sheets; individually replaceable; externally finned; with standard, removable, carbon-steel, marine type, water boxes.
- Internal Finish - Internally ribbed or smooth tubes

- Class O/UV stable insulation.
- Evaporator fouling factor 0.0001

- Condenser
  - Micro channel aluminium.
  - Casing
    - Weatherproof, constructed of hot-dip galvanized steel with factory-painted finish
  - Condenser fans
    - Propeller type, statically and dynamically balanced.
    - Fan Motor
      - Electronically Commutated/DC motor
      - Direct drive, weatherproof, with bearings permanently lubricated, and having built-in current- and thermal-overload protection.
    - Provide modulating head pressure control to control fan speed to maintain constant condensing pressure.
- Capacity control
  - Speed changing by frequency inverter.
- Safety devices
  - Comply with BS EN 378, BS EN 12693 and provide protection against high pressure.
  - 3-way dual shut-off valve assembly incorporating 2 relief valves per circuit to allow maintenance of individual pressure relief valves without the need for refrigerant evacuation.
  - Reverse rotation on normal or emergency stops.
  - Failure of lubricating system (auto-stop).
  - Low chilled water flow.
  - Low chilled water temperature.
  - High oil temperature.
  - Low oil temperature.
  - Over or under voltage.
  - Phase reversal.
  - Frequent starting.
  - Power interruption.
- Ancillaries
  - Differential oil pressure switch.
  - Oil heater.
  - Filter drier with isolating valves.
  - Oil filter/strainer with isolating valves.
  - Evaporator differential pressure sensor to monitor pressure drop and raise alarm.
- Accessories
  - Economiser comprising dedicated EEV and plate heat exchanger.
  - Oil pressure gauge.

- Oil level sight glass to BS EN 12178
- Refrigerant suction and discharge stop valves.
- Flow switch supplied loose for site mounting in chilled water pipework.
- Acoustically lined compressor enclosure.
- Condenser fan discharge air plenum extension
    - Construct from galvanised sheet steel coated with epoxy baked powder paint. Plenum to direct discharge air vertically to limit air re-circulation and provide a degree of acoustic reduction in the horizontal plane.
- Anti-vibration mountings
    - **Pad type supplied loose for site fitting.**
- Fixed, automatic leak detection system fitted within the compressor enclosure
- Automatic shutdown and pump down of refrigerant on the detection of the refrigerant leakage/charge loss. Provide automatic isolation valves to contain the refrigerant once fully pumped down.
- Remote chilled water set point adjust facility to enable chilled water temperature to be adjusted via a 0-10V signal.
- Sequence control facility for multiple chiller installation with common chiller inlet and outlet temperature sensors (in addition to each chillers' outlet temperature control and protection sensor). System to provide capacity control sensor selection, allow control in all possible sequence permutations, optimise chiller and compressor run and load sequence by varying control parameters to maintain common fluid outlet temperature and facility to carry out automatic compressor and chiller lead/lag selection to balance compressor and chiller run hours.
- Heat recovery facilities including all necessary controls and fittings for hot water production
- Marking, technical data sheets and instructions

- Mark units and provide technical data sheets and instructions for control, installation and maintenance in accordance with BS EN 14511-4 - Operating requirements

320.000 WORKMANSHIP:

320.010 GENERAL:

- Install equipment in accordance with equipment manufacturer's requirements.
- Comply with statutory and Local Authority requirements and by-laws.

320.020 CONNECTIONS:

- Observe manufacturer's requirements and instructions.

320.030 ACCESS:

- Ensure plant is located to allow access for operation and maintenance as required by manufacturer.

320.040 CLEANSING:

- Observe manufacturer's requirements and instructions. Provide valved flushing connections adjacent to plant.

320.050 EXPANSION TANK INSTALLATION:

- Install expansion vessels and ancillary equipment for systems including safety valve for chilled water and condenser systems in accordance with BS 7074-3.

T62 - VRF SYSTEM

PART 3 SPECIFICATION CLAUSES SPECIFIC TO T62

300.000 PLANT AND EQUIPMENT

300.001 PRESSURE EQUIPMENT DIRECTIVE/PRESSURE EQUIPMENT REGULATIONS:

- All equipment and assemblies which fall within the scope of the Pressure Equipment Directive (PED) 2014/68/EU must be tested by the manufacturers, and be certified as compliant with the Directive. Such compliance shall be evidenced by displaying the appropriate CE Mark on the equipment and assemblies.
- Only relevant equipment and assemblies certified as compliant will be permitted under this specification, and any substitution put forward must also be compliant with the Directive.

300.015 SAFETY AND ENVIRONMENTAL REQUIREMENTS:

- Comply with the relevant parts of BS EN 378 in the design, construction, testing, marking and documentation of the equipment and the system installation

300.016 ECODESIGN / EER REQUIREMENTS FOR AIR CONDITIONERS:

- Equipment to be certified with CE mark in accordance with The Energy Related Products Regulations 2010 as amended.
- Fans incorporated into plant with electric input between 125W and 500kW to comply with EC Regulation 327/2011.
- Ecodesign Requirements
    - Heating or Cooling/Heating Units
        - Units with a rated capacity of up to 12kW to comply with EU Regulation 206/2012.
        - Other units with a rated heat output up to 400kW to comply with EU Regulation 813/2013 with regard to ecodesign requirements.
        - Units greater than 400kW to comply with EU Regulation 2016/2281 with regard to ecodesign requirements, including seasonal space cooling (or heating), energy efficiency (SSCE / SSHE) and product information / instruction manuals information on disassembly, recycling and/or disposal.
- The full load Energy Efficiency Ratio (EER) of plant shall be in accordance with BS EN 14511.

300.020 INDOOR UNITS:

- **Type**
    - Provide indoor units capable of cooling or heating the space and suitable for connection to a single external unit and operating under the variable refrigeration volume system. All units connected to a single external unit would cool or heat in unison.
- Mounting
    - Ceiling mounted cassette double flow.
    - Ceiling mounted cassette multi flow.
    - Concealed horizontal.
    - Concealed vertical.

    - Cased horizontal.
    - Cased vertical low level.
    - Cased vertical high level (down flow).
- Duty
    - Refrigerant
        - R410A
        - R407C
        - R32
- Standard
    - BS EN 14511-1
    - BS EN 14511-2
    - BS EN 14511-3
    - BS EN 14511-4
    - BS EN 60335-2-40 and BS EN 60335-1 - safety requirements
- Casing
    - Galvanized steel
    - Removable panels for service
- Finish
    - Manufacturer's standard.
- Refrigerant Coil
    - Direct expansion coil with capillary restrictor
    - Seamless copper tubes mechanically expanded into aluminum fins
- Access - Provide access to filter, fan and motor.
- Roomside fan
    - Centrifugal with direct coupled motor.
- Filter
    - Washable.
- Grille type
    - Adjustable.
- Insulation - Provide thermal and acoustic insulation.
- Controls
    - Display
        - Operating.
        - Program dry function.
        - Defrost/hot start.
        - Filter dirty.
        - Temperature setting.
        - Timer.
        - Air flow.
        - Fault.
    - Auxiliary contacts to wire to external source

        - Normally open contacts.
        - Momentary open contactor.
        - Alarm/fault.
        - Temperature setting.
        - Start/stop.
        - Temperature monitoring.
        - Monitor all unit functions.
    - Condensate drainage
        - Natural.
    - Controls
        - Function
            - Start/stop.
            - Temperature setting.
            - Timer settings (units of 1 hr to 72 hr).
            - Air flow setting.
            - Air flow direction adjustment.
        - Control panel with motor starters by same VRF manufacturer
        - Availability of interface with BMS system. Comply with requirements of section W60.

300.050 DISTRIBUTOR CONTROLLERS:

- Provide distribution controllers to link between external unit and internal units
- Provide spare connections for future units

300.060 EXTERNAL UNIT:

- Provide external unit with minimum of 2 scroll compressors, coil and fan. Provide compressor complete with heater, suction and delivery valves, service connection and high and low safety switches. Incorporate receiver. All compressors shall be inverter driven.
- Fan
    - Propeller type
    - Material – Plastic
    - Motor
        - Direct drive
        - DC inverter type motor
- Coil
    - Multi-pass, cross-finned tube type
    - Tubes - Copper
    - Fins
        - Aluminum
        - Covered by anti-corrosion resin film
- Casing
    - Provide weatherproof casing constructed from
        - Galvanised sheet steel.

- Finish
    - Baked enamel
- Internal pipework
    - Seamless, round copper tube to BS EN 12449.
    - Seamless, round copper capillary tube to BS EN 12450
- Internal pipework insulation
    - Manufacturer's standard.
- Control
    - Control panel with motor starters by same VRF manufacturer
    - Availability of interface with BMS system. Comply with requirements of section W60.

300.070 VIBRATION ISOLATION:

- Provide vibration isolation to manufacturer's standard vibration isolation.
- Include heavy base for unit support.

300.080 REFRIGERANT PIPING SYSTEM:

- Pipe Material
    - Seamless copper tube to BS EN 12735-1
        - Material condition (or temper)
            - Soft (R220) coiled.
            - Half hard (R250) straight lengths.
            - Hard (R290) straight lengths.
        - To be selected by the equipment manufacturer or the specialist pipework installer to suit the application, maximum operating temperature and pressure and refrigerant.
- Comply with the requirements of the BS EN 14276-2 and relevant parts of BS EN 378
- Jointing
    - High temperature 'silver' solder
- Support
    - Support all pipework and controls cabling throughout their length using cable tray, firmly fixed to the building fabric.
    - Perforated cable tray
        - Flanged.
        - Return.
    - Perforations and thickness - Manufacturer's standard.
- Fittings
    - Use factory made fittings throughout of same material type, pattern, finish and thickness as tray.

300.100 PIPEWORK INSULATION

- Insulate entire length of pipework for thermal insulation and to avoid contact between copper and galvanising of support tray.
- Closed cell nitrile rubber preformed flexible sections
    - CFC free.
    - Fire rating (class): B-S2-d0
    - Install un-split wherever possible.
    - Use manufacturer's standard glue for jointing.
    - Ensure vapour barrier is maintained on
        - All pipework.
- Protection
    - Paint
        - Manufacturer's standard colour.
    - Wrap fittings and valves with same insulation as pipework.
    - Provide aluminium valve boxes.
- Insulation thickness (mm): 25

300.105 SPARE PARTS FOR INDOOR UNITS:

- Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
    - **[Filters: Furnish [1] spare filter[s] for each filter installed.]**
    - **[Fan Belts: Furnish [1] spare fan belt[s] for each unit installed.]**

310.000 PLANT AND EQUIPMENT WORKMANSHIP

310.010 PLANT AND EQUIPMENT INSTALLATION:

- Install equipment in accordance with manufacturer's recommendations.

U12 - KITCHEN VENTILATION

PART 3 SPECIFICATION CLAUSES SPECIFIC TO U12

300.000 GENERAL

300.001 PRESSURE EQUIPMENT DIRECTIVE/PRESSURE EQUIPMENT REGULATIONS:

- All equipment and assemblies which fall within the scope of the Pressure Equipment Directive (PED) 2014/68/EU must be tested by the manufacturers, and be certified as compliant with the Directive. Such compliance shall be evidenced by displaying the appropriate CE Mark on the equipment and assemblies.
- Only relevant equipment and assemblies certified as compliant will be permitted under this specification, and any substitution put forward must also be compliant with the Directive.

300.010 SPECIALIST:

- Use a specialist to manufacture, supply and install kitchen canopy equipment.

310.000 PRODUCTS/MATERIALS

310.010 KITCHEN CANOPIES:

- Electricity safety to BS EN 60335-2-99.
- Supply kitchen canopies in accordance with DW/172.
- Types of canopy - DW/172.
    - Overhead wall type canopy
        - Wall-mounted.
        - Island mounted.
    - Integral make-up air facility
        - Front face perforated diffuser.
        - Internal slot - induction, entrainment capture, compensating or short circuit.
    - Materials
        - Stainless steel.
            - Finish
                - As chosen by Engineer.
    - Construction
        - In accordance with DW/172.
    - Grease filtration - DW/172.
        - Mesh or impingement filters. (Secondary filtration)
        - Baffle filters.
        - Water wash.
    - Internal lighting - DW/172.

- Fire suppression – to NFPA 17A.
    - Description: Engineered distribution piping designed for automatic detection and release or manual release of fire-suppression agent by hood operator. Fire-suppression system shall be listed and labeled for complying with NFPA 17A, "Wet Chemical Extinguishing Systems," by a qualified testing agency acceptable to authorities having jurisdiction.
        - Steel Pipe, NPS 2 (DN 50) and Smaller: ASTM A 53/A 53M, Type S, Grade A, Schedule 40, plain ends.
        - Malleable-Iron Threaded Fittings: ASME B16.3, Classes 150 and 300.
        - Piping, fusible links and release mechanism, tank containing the suppression agent, and controls shall be factory installed. Controls shall be in stainless-steel control cabinet mounted on hood or wall. Furnish manual pull station for wall mounting. Exposed piping shall be covered with chrome-plated aluminum tubing. Exposed fittings shall be chrome plated.
        - Liquid Extinguishing Agent: Noncorrosive, low-pH liquid.
        - Furnish electric-operated gas shutoff valve with clearly marked open and closed indicator for field installation.
        - Fire-suppression system controls shall be integrated with controls for fans, lights, and fuel supply and located in a single cabinet for each group of hoods immediately adjacent.
        - Wiring shall have color-coded, numbered terminal blocks and grounding bar. Spare terminals for fire alarm, optional wiring to start fan with fire alarm, red pilot light to indicate fan operation, and control switches shall all be factory wired in control cabinet with relays or starters. Include spare terminals for fire alarm, and wiring to start fan with fire alarm.

310.020 GREASE FILTERS:

- Filter Media
    - Corrugated aluminium sheet with expanded aluminium protective face.
- Filter frame
    - Stainless steel.
- Filter Housing
    - Incorporate method of retaining media cell and collecting tray within housing.
    - Material
        - Stainless steel.
    - Access
        - Top.
- Cleaning Tank
    - Provide sheet metal cleaning tank with detergent cleaning compartment with drainage grids and dipping compartment.
- Cleaning materials
    - Provide bottles of cleaning detergent.

310.021 KITCHEN VENTILATION GAS SAFETY INTERLOCK FACILITIES:

- Standards
  - Provide an interlock between all kitchen gas appliances and supply and extract ventilation to kitchens, such that the ventilation system operation must be proved before the gas appliance can be used, in accordance with BS 6173.
  - Comply with IGEM/UP/19 for the design and application of interlock devices and associated systems used with gas appliance installations in commercial catering establishments.
- Scope
  - Control panel, pressure switch or sensing device, gas isolation control valve and all interconnecting power and control wiring.
- Supply and install interlock system in accordance with the manufacturer's recommendations.
- Required interlocks
  - Primary interlock between ventilation system and appliances using differential pressure switch to shut gas isolation valve and lock out appliance on low pressure failure.
  - Primary interlock between ventilation system and appliances by monitoring power used by fans to shut automatic gas isolation valve and lock out appliance on low absorbed power.
  - Secondary interlock to shut gas isolation valve and lock out appliance on sensing high CO_2.
  - Secondary interlock to shut gas isolation valve and lock out appliances on fan failure or trip.
  - Interlock with fire detection system
  - Interlock with gas detection system
- BMS interface requirements as shown on Drawings.
- Where appliances do not have flame failure devices provide a pipework integrity system (formerly referred to as weep by-pass system) in accordance with Appendix 12 in IGEM/UP/2 Edition 3.

310.022 KITCHEN ECOLOGY UNIT:

- Supply ecology unit complete with casing and filtration elements from a single manufacturer
- Casing – Reference Z240.020
- Fan and motor
  - Single inlet single width, airfoil centrifugal fan statically and dynamically balanced
  - Comply with general clauses under Z240.030
- Filters
  - Pre-Filter
    - 2” thick
    - Stainless steel
    - Class to BS EN ISO 16890-1
    - Washable type
    - With drain tray for grease collection
  - Electrostatic Precipitator
    - Suitable for kitchen smoke control
    - To have charging section and collection section

        - With drip tray and oil drain point
        - Minimum efficiency 95%
    - Bag Filter
        - 15” thick
        - Compact rigid box type
        - Glass fibre media
        - Mini pleated construction
        - Class to BS EN ISO 16890-1
            - ISO ePM10 90-95% efficiency
    - HEPA Filter
        - 12” thick
        - Compact rigid box
        - Galvanized metallic cell sides
        - Glass fibre media
        - Mini pleated construction
        - Class to BS EN 1822
            - H14
- Odor control module
    - Pellets
        - Metal cells filled with activated alumna pellets impregnated with potassium permanganate
        - Odor media to be non-toxic and non-flammable
        - Pellets to be contained in perforated cells located in a separate odour reduction section normally located between the filter box and the tan box
        - All of the exhaust air is drawn over the pellets whenever the fan is operating.
        - The cells are removed through a side access door on the odor section.
    - UV-module
        - Self-cleaning inner surface.
        - High output lamps designed to run for 13,000 hrs at optimum capacity.
        - Ozone regulation technology shall control ozone production in line with cooking activity.
        - Allows increases in air speed without significant effect on performance.
    - Carbon panels
        - Rigid, bonded, activated carbon panels shall be furnished to remove both base and acid odor molecules.
        - Carbon mass shall be applied at a minimum of 100 lbs. per 1,000 cfm (45.2 kg. per 472 l/s) of exhaust air volume.
        - Panels shall be held in place by gasketed, extruded aluminum tracks arranged in a v-bank configuration.

320.000 WORKMANSHIP

320.010 GREASE FILTER INSTALLATION:

- Install grease filters in accordance with manufacturer's recommendations.

320.020 KITCHEN CANOPY INSTALLATION:

- Install kitchen canopies in accordance with DW/172.

U41 - FAN COIL AIR CONDITIONING

PART 3 SPECIFICATION CLAUSES SPECIFIC TO U41

300.000 PRODUCTS/MATERIALS

300.001 PRESSURE EQUIPMENT DIRECTIVE/PRESSURE EQUIPMENT REGULATIONS:

- All equipment and assemblies which fall within the scope of the Pressure Equipment Directive (PED) 2014/68/EU must be tested by the manufacturers and be certified as compliant with the directive. Such compliance shall be evidenced by displaying the appropriate CE Mark on the equipment and assemblies.
- Only relevant equipment and assemblies certified as compliant will be permitted under this specification and any substitution put forward must also be compliant with the directive.

300.015 ECODESIGN REQUIREMENTS FOR FAN COIL UNITS:

- Provide product information / instruction manuals in accordance with EU Regulation 2016/2281 including information on disassembly, recycling and/or disposal.

300.020 FAN COIL UNIT NOISE LEVELS:

- Sound power level measurements
    - Determine the sound power levels of fan coil units in accordance with:
        - BS EN 16583
            - Acoustic test facilities / measurement in accordance with BS EN ISO 3741 or BS EN ISO 3744 or BS EN ISO 3745 or relevant parts of BS EN ISO 3743, or relevant parts of BS EN ISO 9614.

300.030 FAN COIL UNITS:

- Comply with section Y92A for specifications of starters and VSD
- Performance - ensure manufacturer's ratings comply with
    - BS EN 1397 for the thermal and volumetric performance of air free delivery and air ducted cooling units.
    - Eurovent standard 6/3 Thermal Test Method for Fan Coil Units.
    - Eurovent standard 8/2 Acoustical Testing of Fan Coil Units in Reverberation Room.
    - Eurovent standard 6/10 Air Flow Test Method for Ducted Fan Coil Units.
    - Eurovent standard 6/11 Thermal Test Method for Ducted Fan Coil Units.
    - Eurovent standard 8/12 Sound Test Method for Ducted Fan Coil Units.
- Casings
    - Fabricate from galvanized mild steel sheets and stiffeners without sharp edges. Incorporate fixing lugs. Protect against corrosion internally and externally. Do not use self tapping screws.
    - Provide space within casing for pipework, ductwork and valves.
- Mounting
    - Concealed
- Finish
    - Stoved primer.
- Insulation

- Use thermal and acoustic insulation with surface finish to protect against product migration and all edges positively sealed. Thermal and acoustic insulation to be class O to BS 476 and BS ISO 5660-1, installed internally to casing and integral discharge plenum.

- Access - provide ready access to filter, fan and motor and any valves and controls.
- Fan coil unit components
    - Fans
        - Type
            - Double inlet, double width forward curved centrifugal fan with direct coupled motor and aluminium impellers statically balanced and isolated from casing by AV mounts.
            - Single inlet, single width forward curved centrifugal fan with direct coupled motor and aluminium impellers statically balanced and isolated from casing by AV mounts.
        - Scrolls manufactured from galvanised mild steel, complete with forward curved multi-bladed aluminium or galvanized steel impellers.
    - Motor
        - Permanent split capacitor
        - Electronically commutated direct current type EC/DC, rated for continuous operation with inbuilt overload protection devices and shall be capable of performance control via a 0-10 Volt dc signal to give infinitely variable speed control
            - Provide pressure independent operation facilities
    - Filter
        - Return air filter of nylon or other synthetic filter media in a metal frame, tested to BS EN 779.
        - Filter removal/withdrawal details
        - Filter Classification to BS EN ISO 16890-1
    - Coils
        - Form cooling batteries of copper tube with aluminum fins. Minimum tube thickness 0.3mm, minimum fin thickness 0.1mm.
    - Fix cooling batteries to prevent air leakage around coil.
    - Fit a manual air vent and drain cock on each coil
    - Drip-tray
        - Drip-tray under coil and under control valve where fitted, fabricated from non-corrosive material or protected against corrosion with external faces insulated to prevent condensation with class O material to BS 476 and BS ISO 5660-1
    - Drain Connections
        - Ensure connection to drip tray is flush with bottom of drip tray.
        - Fit a screwed plug connection to drip-tray.
        - Fit a drain line
    - Accessories
        - Controls and commissioning valves
            - 2 port full stroke Pressure Independent Control Valves (PICV)

- Condensate pump
- Anti-vibration mountings
- Flexible hoses for flow and return connections with push fit quick release connections at each end.

310.000 WORKMANSHIP

310.010 INSTALLATION:

- Store fan coil units on-site in a clean, dry environment and seal/cap duct and pipe connections and filters.
- Install in accordance with manufacturer's recommendations to give a neat appearance, with supports out of view.
- Ensure equipment is firmly fixed and level.
- Ensure the fan coil unit is level or angled slightly towards the condensate tray outlet connection to facilitate correct condensate removal from the unit.
- Ductwork installation
    - Flexible ductwork should be in accordance with BS EN 13180 and only be used for the final connections to diffusers. Installation to comply with BSRIA BG 43/2013 and clause Y30.4015.
- Connect pipework to fan coil units using suitable flexible hoses of the same size as the installation pipework. Hoses to be in accordance with BSRIA BG 4/2004: Flexible Hoses Standard and installed in accordance with BSRIA COP 11/2002.
- Installation pipework should be supported independently from the fan coil unit.

U60 - AIR CONDITIONING UNITS

300.000 PLANT AND EQUIPMENT

300.001 PRESSURE EQUIPMENT DIRECTIVE/PRESSURE EQUIPMENT REGULATIONS:

- All equipment and assemblies which fall within the scope of the Pressure Equipment Directive (PED) 2014/68/EU must be tested by the manufacturers, and be certified as compliant with the Directive. Such compliance shall be evidenced by displaying the appropriate CE Mark on the equipment and assemblies.
- Only relevant equipment and assemblies certified as compliant will be permitted under this specification, and any substitution put forward must also be compliant with the Directive.

300.003 SAFETY STANDARDS AND REGULATIONS:

- Comply with BS EN ISO 12100, BS EN 378 and BS EN 12693.
- Comply with F-Gas Regulations and relevant DEFRA guidance documents.
- Pipe discharges from safety valves to be located at a safe point away from fresh air intakes or openable windows (external to building for plant in enclosed plant rooms). The discharge point shall be such that persons and property are not endangered by a release of the refrigerant and be well away from any fresh air intakes or openable windows.

300.004 EQUIPMENT FOR REFRIGERATION PLANT:

- Comply with the following standards for equipment that make up the packaged plant:
  - Refrigerating compressors
    - Performance testing in accordance with BS EN 13771-1 and BS EN 12900.
    - Use lubricating oils in accordance with BS 2626, BS ISO 6743-3 and manufacturer's recommendations.
    - Safety of motor-compressors to BS EN 60335-2-34
  - Heat exchangers - Tubing for heat exchangers and their internal connecting to be round copper tubes, smooth or inner finned to BS EN 12735-2
  - Refrigerating condensers - Performance testing in accordance with BS EN 13771-2 and BS EN 13215
  - Motors
    - Comply with EC Regulation 640/2009 and amendment EU Regulation 4/2014 with regard to ecodesign requirements for electric motors.
    - BS EN 60034-30-1 and BS EN 50347 as applicable to 3-phase cage-induction motors.
    - Comply with section Y92A for specifications of starters and VSD
    - Efficiency
      - For VSD motors: Efficiency class IE2, reference Y92.2025A
  - Pressure vessels to relevant parts of BS EN 13445 and BS EN 14276-1 for general requirements for material, design, manufacturing, testing and documentation

300.015 ECODESIGN / EER REQUIREMENTS FOR AIR CONDITIONERS:

- Equipment to be in accordance with The Energy Related Products Regulations 2010 as amended.

- Fans incorporated into plant with electric input between 125W and 500kW to comply with EU Regulation 327/2011.
- Ecodesign Requirements
    - Cooling Only Units
        - Units with a rated capacity of up to 12kW to comply with EU Regulation 206/2012. Other plant to comply with EU Regulation 2016/2281, including Seasonal Space Cooling (or Heating) Energy Efficiency (SCEE / SHEE) and product information / instruction manuals information on disassembly, recycling and/or disposal.
    - Heating or Cooling/Heating Units
        - Units with a rated capacity of up to 12kW to comply with EU Regulation 206/2012.
- The full load Energy Efficiency Ratio (EER) of plant shall be in accordance with BS EN 14511.

300.030 ROOF MOUNTED AIR CONDITIONING UNIT:

- Provide packaged roof mounted air conditioning unit complete with integral condenser.
- Type
    - Cooling Only
- Duty
    - Refrigerant
        - R407C or R410A.
- European / British standards
    - Relevant parts of BS EN 378 for safety and environmental requirements of refrigerating systems.
    - BS EN 12693 for safety and environmental requirements of positive displacement refrigerant compressors.
    - BS EN 60335-2-40 for safety of air-conditioners and heat pumps.
    - Classification, testing / operating requirements, marking and instructions.
        - BS EN 14511-1 for terms and conditions
        - BS EN 14511-2 for test conditions
        - BS EN 14511-3 for test methods
        - BS EN 14511-4 for requirements
- International standards
    - BS ISO 13253 for ducted air-cooled air conditioners and air-to-air heat pumps
- Casing - Manufacturer's standard weatherproof construction
- Finish
    - Corrosion-protection coating
- Condensate drain pan
    - Stainless steel
- Access - Provide access to filter, fan and motor.
- Coil
    - Refrigerant coil

        - Direct expansion coil with equalizing-type vertical distributor
        - Seamless copper tubes in galvanized steel casing with aluminum fins
        - Coil shall have epoxy coating
    - Electric heating coil - Manufacturer's standard construction, factory wired for single-point wiring connection, with overcurrent and overheat protection devices. Provide 3-way modulating control valve.
- Filter indoor to BS ISO 16890-1
    - ISO ePM2.5, $E_m \geq 65\%$
- Filter outdoor
    - Washable.
- Insulation - Provide thermal and acoustic insulation.
- Controls
    - On/off switch.
    - Remote checking and adjusting.
    - Variable speed setting.
    - Variable temperature.
- Integral Compressor
    - Supply an inverter type fully hermetic compressor and fan mounted within the casing of the air conditioning unit.
    - Provide compressor complete with suction and delivery valves, service connections and high and low pressure switches.
    - Mount compressor on anti-vibration mountings to prevent the transmission of vibration.
    - Fit a crankcase heater to prevent migration of refrigerant.

300.035 SPLIT COIL ROOM AIR CONDITIONING UNIT:

- Provide room unit as part of split coil air conditioning system.
- Type
    - Cooling Only
    - Heat Pump
- For outdoor unit specification, refer to clause 300.050
- Mounting
    - Concealed horizontal.
- Duty
    - Refrigerant
        - R410A.
- European / British standards
    - Relevant parts of BS EN 378 for safety and environmental requirements of refrigerating systems.
    - BS EN 12693 for safety and environmental requirements of positive displacement refrigerant compressors.
    - BS EN 60335-2-40 for safety of air-conditioners and heat pumps.
    - Classification, testing / operating requirements, marking and instructions.

        - BS EN 14511-1 for terms and conditions
        - BS EN 14511-2 for test conditions
        - BS EN 14511-3 for test methods
        - BS EN 14511-4 for requirements
- International standards
    - BS ISO 5151 for non-ducted air-cooled air conditioners and air-to-air heat pumps.
    - BS ISO 15042 for multi-split systems, modular multi-split systems and modular heat recovery multi-split systems.
- Casing
    - Manufacturer's standard.
    - Removable panels for service
- Finish
    - Manufacturer's standard.
- Coil
    - Refrigerant coil
        - Direct expansion coil with capillary restrictor
        - Seamless copper tubes mechanically expanded into aluminum fins
- Access - Provide access to filter, fan and motor.
- Room side fan
    - Tangential with direct coupled motor.
- Filter
    - Washable.
- Grille type
    - Manufacturer's standard.
    - Motorised paddle in exit air stream.
- Insulation - Provide thermal and acoustic insulation.
- Controls
    - Display
        - Operating.
        - Program dry function.
        - Defrost/hot start.
        - Filter dirty.
        - Temperature setting.
        - Timer.
        - Air flow.
        - Fault.
    - Auxiliary contacts to wire to external source
        - Alarm/fault.
        - Temperature setting.
        - Start/stop.
    - Controls type

- Temperature setting.
- Timer settings (units of 1 hr to 72 hr).
- Air flow setting.
- Air flow direction adjustment.

- Condensate drainage
  - Condensate pump within unit.

300.065 COMPUTER ROOM AIR CONDITIONING UNITS:

- For outdoor unit specification, refer to clause 300.070
- Type
  - 2 independent cooling circuits type
  - Classification, testing / operating requirements, marking and instructions.
    - BS EN 14511-1 for terms and conditions
    - BS EN 14511-2 for test conditions
    - BS EN 14511-3 for test methods
    - BS EN 14511-4 for requirements
- Controls
  - Units to include all necessary controls and control valves to operate as a self-contained fully functioning plant.
  - Close control
  - BMS interface
- Casing
  - Provide manufacturer's standard casing.
- Finish
  - Manufacturer's standard finish.
- Access
  - Provide access to components requiring regular maintenance via
    - Access panels with special locks.
    - Hinged access doors.
- Mounting - Floor.
- Components
  - Fans
    - Provide fans, motor and drive assembly mounted on a base frame. Provide anti-vibration mounts to prevent transmission of vibration to unit
    - Supply direct drive backward curved plug fan with EC motor.
  - Cooling section
    - Provide cooling coil manufactured from copper tube with aluminium fins.
    - Provide stainless steel condensate drain pan with drain connection. Provide each coil section with separate drain pan and drain connection.
  - Chilled water systems

- Provide cooling coils complete with isolating valves.
- Provide cooling coils complete with control valves.
- Provide coils with air vent and drain.

- DX refrigerant based systems
  - Provide scroll compressors.
  - Compressor details
    - Supply a fully hermetic compressor and fan mounted within the casing of the air conditioning unit. Provide compressor complete with suction and delivery valves, service connections and high and low pressure switches. Mount compressor on anti-vibration mountings to prevent the transmission of vibration. Fit a crankcase heater to prevent migration of refrigerant.
    - Provide inverter motor drive for compressor
  - Refrigerant
    - R32.
    - R410A.
- Humidifier
  - Provide a packaged steam generator humidifier complete with safety controls and automatic blow down cycle.
  - Provide ultrasonic humidifier.
- Filters
  - Tested to BS EN ISO 16890-2, 16890-3 and 16890-4.
  - Filter class to BS EN ISO 16890-1

- Ancillaries and accessories
  - Isolation valves
  - Air shut off dampers
  - Water leak detection
  - Condensate pump with high level and fault alarms for BMS monitoring
  - Base stand for false floor depth

300.071 SPARE PARTS FOR INDOOR UNITS:

- Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - Filters: Furnish 1 spare filter[s] for each filter installed.
  - Fan Belts: Furnish 1 spare fan belt[s] for each unit installed.

300.110 REFRIGERANT PIPING SYSTEM:

- Pipe Material
  - Seamless copper tube to BS EN 12735-1
    - Material condition (or temper)
    - To be selected by the equipment manufacturer or the specialist pipework installer to suit the application, maximum operating temperature and pressure and refrigerant.

- Comply with the requirements of the BS EN 14276-2 and relevant parts of BS EN 378
- Jointing
    - Brazing - comply with British Refrigeration Association (BRA): Jointing of Copper Pipework for Refrigeration Systems - Specification & Procedures for Manual Torch Brazing and Brazer Assessment.
- Support
    - Support all pipework and controls cabling throughout their length using cable tray, firmly fixed to the building fabric.
    - Perforated cable tray
        - Flanged.
        - Return.
    - Perforations and thickness - Manufacturer's standard.
- Fittings
    - Use factory made fittings throughout of same material type, pattern, finish and thickness as tray.

300.130 PIPEWORK INSULATION

- Insulate entire length of pipework for thermal insulation and to avoid contact between copper and galvanising of support tray.
- Closed cell nitrile rubber preformed flexible sections
    - CFC free.
    - Install un-split wherever possible.
    - Use manufacturer's standard glue for jointing.
    - Ensure vapour barrier is maintained on
        - All pipework.
- Protection
    - Paint
        - Manufacturer's standard colour.
    - Wrap fittings and valves with same insulation as pipework.
    - Provide aluminium valve boxes.
- Insulation thickness (mm) : Manufacturer's standard

310.000 PLANT AND EQUIPMENT WORKMANSHIP

310.010 PLANT AND EQUIPMENT INSTALLATION:

- Install equipment in accordance with manufacturer's recommendations.
- Heat Pumps
    - Install heat pump system in accordance with manufacturer's recommendations and BS EN 14336.

310.020 REFRIGERANT PIPEWORK INSTALLATION:

- Arrange all exposed pipe runs to present neat appearance, parallel with other pipe or service runs and building structure.
- Ensure all vertical pipes are plumb or follow building line. Provide lifting loops where called for by system manufacturer.
- Space pipe runs in relation to one another, other services runs and building structure, allow for specified thickness of thermal insulation and ensure adequate space for access to pipe joints etc.
- Take precautions to prevent the discharge of refrigerant gases to atmosphere.
- All refrigerant pipework insulation at low level or in locations where mechanical damage could occur or which could be damaged by UV radiation shall be suitably protected.

320.000 COMMISSIONING

320.010 COMMISSIONING REQUIREMENTS:

- Put the system to work.
- Demonstrate that specified air quantities are attained plus or minus: 10%
- Keep a systematic record of commissioning results.
- Heat Pumps
    - Commission plant and systems served in accordance with manufacturer's recommendations and Section 6 of BS EN 15450

V0 - BASIC ELECTRICAL MATERIALS AND METHODS

PART 1 SYSTEM OBJECTIVES

100.000 PERFORMANCE OBJECTIVES

100.010 SUMMARY

A. This Section includes the following:

1. General provisions applicable to Division V, W and Y work and other Sections of the Specification that refer to this Section.
2. Supporting devices for electrical components.
3. Electrical identification.
4. Covers, brackets and supports.
5. Electricity-metering components.
6. Concrete equipment bases.
7. Cutting and patching for electrical construction.
8. Touchup painting.

B. Electrical Work, unless otherwise specified, includes the supply, installation, testing and commissioning of the complete electrical systems, equipment and materials shown on the Drawings and/or described in the Specification together with all associated ancillary work, support work and builder's work required to achieve full functionality as per the design intent.

110.000 DESIGN PARAMETERS

110.010 REFERENCE STANDARDS

A. Regulations: Carry out electrical work in accordance with the current issue of the local codes of practice, local power authority regulations and Requirements for Electrical Installations – IET Wiring Regulations (BS 7671) as published by the Institution of Engineering and Technology and IEC 60364 Standards where not in contradiction with the local codes of practice and regulations, herein referred to collectively as 'the Regulations'.

B. Conflict: Should an instance occur in this Specification or on the Drawings in which material or construction methods called for is less than minimum requirement of the Regulations, immediately inform the Engineer in writing. Consequent to Engineer's approval, supply the materials and perform the work as though called for to minimum code standards.

C. Standards: Unless otherwise specified, equipment and materials shall be manufactured and installed in compliance with the relevant recommendations of the following or other equal and approved standards:

1. IEC: The International Electro-technical Commission.
2. ISO: The International Standardization Organization.
3. CENELEC: European Committee for Electrotechnical Standardization.
4. CCITT: The International Telephone and Telegraph Consultative Committee.
5. CCIR: The International Radio Consultative Committee.
6. CISPR: The International Special Committee on Radio Interference.
7. IET: The Institution of Engineering and Technology.
8. BS: British Standards.
9. ENDE: Empresa Nacional de Distribuição de Electricidade.
10. CIE: International Commission of Illumination.
11. ITU: International Telecommunication Unit.
12. NEBS: Network Equipment Building System.

D. In case of contradiction between enforced and relevant local regulations and International Standards, the most stringent requirements shall prevail.

© Copyright protected

110.020 PROJECT/SITE CONDITIONS

A. Climatic Conditions at Project's Site:

1. Altitude: 100 m above sea level.
2. Maximum ambient temperature: 35 degrees C (in the shade).
3. Minimum ambient temperature: 14 degrees C.
4. Maximum relative humidity: 85 %.
5. Equipment shall be capable of withstanding the project environmental conditions specified here below encountered at the installed location without mechanical or electrical damage or degradation of operating capability, unless otherwise specified. For devices located in harsh environments such as interior uncontrolled or exterior environments, the Contractor shall provide the necessary housings or enclosures to ensure proper equipment operation and performance.

    a) Interior Environment: System components, installed in interior environments shall be rated for continuous operation in ambient conditions of 10 to 40 deg C dry bulb and 20 to 90 percent relative humidity, noncondensing.
    b) Exterior Environment, Under Direct Sunlight: System components installed in locations exposed to weather shall be rated for continuous operation in ambient conditions of 5 to 55 deg C dry bulb and 10 to 100 percent relative humidity, condensing, when exposed to winds up to 160 km/h.
    c) Exterior Environment, Under Shade: System components installed in locations exposed to weather shall be rated for continuous operation in ambient conditions of 5 to 40 deg C dry bulb and 10 to 100 percent relative humidity, condensing, when exposed to winds up to 160 km/h.

6. All electrical equipment including transformers, switchgears, cables, relays, lighting fixtures, motors, etc. shall be designed or derated for continuous and trouble-free service under the following climatic conditions:

    a) Interior Environment – where installed indoors.
    b) Exterior Environment – where installed outdoors.

7. Where design and operating conditions, different from the above are required for particular equipment, they are described in the specification of the equipment concerned.
8. Equipment, apparatus, material accessories installed outdoors shall be corrosion and salinity proof. UV stabilized requirement shall be applied for outdoor installations and their surface finish and due certification shall be provided by manufacturer as necessary.

120.000 SYSTEM DESCRIPTION

120.010 SCOPE OF WORK

A. The scope of electrical works shall include, but shall not be necessarily limited to the following:

1. Power Service and Distribution consisting of:

    a) Medium voltage distribution:

        1) MV switchgear & MV cabling.
        2) Power Transformers.
        3) Utility metering.
        4) Low voltage distribution network:

    b) Main distribution boards.
    c) Distribution panels.
    d) Final branch circuit panelboards (LPs, PPs, etc.).
    e) Automatic transfer switches.
    f) Motor control centers / panels.
    g) Power factor correction capacitors.
    h) Feeders, sub-feeders and wires.

© Copyright protected

i) Conduits, cable trays, wireways and supporting systems.
j) Underground ducts and raceways.

2. Standby emergency power plant:

a) Diesel generator sets.
b) Synchronizing boards.

3. Lighting and small power installations:

a) Functional and decorative indoor lighting.
b) Building facade lighting.
c) Landscape lighting.
d) Exterior lighting.
e) Emergency lighting and exit signs.
f) Lighting control and dimming systems.
g) Emergency Central Battery System (ECBS).
h) Wiring devices & miscellaneous equipment.

4. Other electrical systems:

a) Uninterruptible Power Supply,
b) Earthing & Lightning protection systems.

5. Communication, life safety and security systems consisting of:

a) Structured Cabling Network.
b) Data Communications Network.
c) Wireless Data Network.
d) IP-Based Telephony (VoIP).
e) Audiovisual Systems and Equipment.
f) IP Television System (IPTV).
g) IP Public Address System (PAS).
h) Master Clock System.
i) Security Systems:

1) Access and Security Control System (SACS).
2) Security Screening Equipment.
3) Parking Control Equipment.
4) Video Surveillance (CCTV).
5) Fire Detection and Alarm system.

j) Horizontal and Vertical Transportation Systems (HVTS) consisting of:

1) Passenger and service elevators.

120.020 GENERAL

A. POWER SUPPLY

1. The Local Power Authority will provide incoming power supply and connection at 15kV to the location shown on the Drawings.
2. Power Supply: Liaise with the Local Power Authority to confirm:

a) Characteristics of supply and system earthing.
b) Location of incoming supply shown on the Drawings.
c) Space requirements and associated builder's work for the Authority's installations.
d) Make necessary arrangements at the earliest opportunity to ensure connection as and when required, and inform the Engineer in the event of any foreseen delay.

3. kWH-metering: Liaise with the Local Power Authority and provide necessary instrumentation, enclosures and accessories required by them to effect a complete kWH-metering installation.
4. kWH-metering will be at medium voltage unless otherwise shown on the Drawings.
5. Nominal characteristics of power supply and distribution are as follows:

a) Medium voltage: 15 kV, 3-phase, 3 wire .
b) Low voltage: 400 V, 3- phase, 4- wire, solidly earthed neutral.

© Copyright protected

c) Frequency: 50 Hz.

6. Distribution systems shall be supplied or derived from the voltage system previously described, as shown on the Drawings, or as otherwise specified.
7. The Contractor shall ensure that system's upstream protection device settings are re-calculated by competent agency and changed as necessary to be compatible with the final approved load conditions.

B. TELEPHONE PUBLIC EXCHANGE LINES

1. The Local Telephone Authority will bring telephone public exchange lines into the premises to the location shown on the Drawings and/or to be agreed with the Authority. Liaise with the Local Telephone Authority to confirm location of connection of public telephone exchange lines into the premises.

C. MOTORS AND OTHER ELECTRICALLY OPERATED EQUIPMENT

1. All electrical work from and including motor control centers / panels to motors and other electrically operated equipment, which is included in Division Y Section "Motor Control Centers", form part of the Electrical Work.
2. Power supply to motors and other electrically operated equipment, which are not connected to a motor control center / panels, is included in the Electrical Work and comprises power supply to terminal box on equipment or nearby disconnecting or starting device, and includes the disconnecting device, if individually provided, including the starting device or combination starter.

D. EQUIPMENT

1. Equipment Spaces and Rooms: Verify that dimensions, structure, ventilating and cooling arrangements and other provisions in equipment spaces and rooms are suitable for installation, operation and maintenance of proposed equipment. Note any discrepancies on the shop and construction drawings.
2. Equipment shall be designed for the system voltage and frequency previously described, unless otherwise specified. Special provisions shall be made for equipment sensitive to power supply frequency and voltage variations and for equipment operated at other voltages/frequencies or by direct current sources.

PART 2 REFERENCES

200.000 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including Conditions of Contract and Division 01 Specification Sections, apply to this Section.

B. Drawings

1. Equipment locations shown on the Drawings indicate approximate locations and general layout of equipment. Exact and final locations and layouts together with dimensions, weights, mounting methods and accessories, where relevant, shall be shown on Contractor's shop and construction drawings.
2. Symbols: In order to provide sufficient detail and a minimum degree of clarity on the Drawings, the symbols used for various electrical devices, particularly wall mounted devices, take up more space on the Drawings than the device does on the wall. Because of drafting limitations these locations must be considered as being indicative rather than exact physical locations of the devices. The devices shall be installed with prime regard for convenience of operation and the proper usage of the wall space rather than to coincide with the scaled locations of the symbols. In locating the outlets, follow the criteria provided on detail Drawings where provided, and coordinate with furniture. Do not scale from design Drawings.

© Copyright protected

3. Wiring layouts shown on the Drawings shall be used as a guide only to defining basic positions, circuiting, loading and switching arrangements. Actual layouts and details of routing of circuits shall be shown on the Contractor's shop and construction drawings.
4. Wiring layouts shown on the Drawings for work not included in the Electrical Work are shown for convenience and reference only.

PART 3 PRODUCTS AND WORKMANSHIP

300.000 MATERIALS

300.010 EQUIPMENT AND MATERIALS

A. Availability: Confirm availability of equipment and materials proposed for use in the work prior to submission for approval. If, after approval, equipment or materials cease to be available, submit alternative items of equal quality and type for approval.

B. Acceptance by Authority: Confirm that proposed equipment and material characteristics where required are compatible with the requirements of the Local Power Authority or other Authorities having jurisdiction and are acceptable to them. Inform Engineer of any modifications necessary to comply with the Local Power Authority's requirements.

C. Manufacturers' Standards: Equipment shall be the latest standard product of the manufacturer. Component parts shall be the product of a single manufacturer, unless otherwise approved and provided that components made by other manufacturers are of a standard design and are interchangeable.

D. Approved Manufacturers: Listing of approved manufacturers in the Specification does not necessarily constitute approval of their standard products as equal to those specified. Ascertain that listed manufacturers are able to supply equipment and material in conformity with the Specification.

E. Factory Assembly: Equipment generally shall be supplied in complete factory assembled units ready for installation on site. Dis-assembly necessary for transportation or other purposes shall be arranged to limit site work to simple re- assembly and inter-wiring of control and power cabling.

F. Storage of Materials: Equipment and materials shall be stored in an approved location, under cover, free from humidity, dust, debris and rodents. Equipment sensitive to heat and humidity shall be kept in climatically conditioned areas until installed and handed over.

G. Defective Equipment: The Employer reserves the right to operate operable defective equipment during the Defects Liability Period until it can be removed from service for repair or replacement.

H. Warranty: Where required by the Specification, provide a warranty, signed by the manufacturer (including his agreement to replace promptly, defective equipment or parts thereof, as instructed by the Engineer) covering materials and workmanship for the period stated in the Specification, starting at substantial completion. Assign the benefits of such warranty to the Employer.

I. Spare Parts: Not later than the date of substantial completion, provide spare parts required by the Specification, together with suitable means of identifying, storing and securing same.

J. Tools and Instruments: Not later than the date of substantial completion, provide sets of tools and instruments required by the Specification, together with suitable means of identifying, storing and securing same.

K. Label and identify all equipment, instruments, control and electrical devices etc. to indicate duty, service or function, to the satisfaction of Engineer. Labels shall be laminated anodized aluminum discs with black surface and white core with incised lettering in English and Portuguese. Alternative methods of labelling may be submitted for approval. Fix labels with non-corrodible screws to equipment, or to adjacent permanent surfaces or as approved by Engineer.

L. Systems used before substantial completion shall have all consumable elements, such as lamps etc. and defective equipment replaced by new, within 7 days prior to the date of substantial completion.

© Copyright protected

M. All panels and electrical boards shall have designs permitting easy access of internal components for maintenance and replacement without disturbing other components. All equipment shall be designed for easy and simple operation.

N. Contractor shall be responsible to define the necessary power supplies, taking into account the installed load of chosen equipment and final condition of installation, as well as any other considerations as to allow the proper operation and maintenance of equipment.

300.020 PRODUCTS

A. SUPPORTING DEVICES

1. Material: Cold-formed steel, with corrosion-resistant coating.
2. Metal Items for Use Outdoors or in Damp Locations: Hot-dip galvanized steel.
3. Slotted-Steel Channel Supports: Flange edges turned toward web, and 14-mm diameter slotted holes at a maximum of 50-mm centers in webs.

    a) Channel Thickness: Selected to suit structural loading.
    b) Fittings and Accessories: Products of the same manufacturer as channel supports.

4. Nonmetallic Channel and Angle Systems: Structural-grade, factory-formed, glass-fiber-resin channels and angles with 14-mm diameter holes at a maximum of 200-mm centers in at least one surface.

    a) Fittings and Accessories: Products of the same manufacturer as channels and angles.
    b) Fittings and Accessory Materials: Same as channels and angles, except metal items may be stainless steel.

5. Raceway and Cable Supports: Manufactured clevis hangers, riser clamps, straps, threaded C-clamps with retainers, ceiling trapeze hangers, wall brackets, and spring-steel clamps or click-type hangers.
6. Pipe Sleeves: Schedule 40, galvanized steel, plain ends for indoor installations from both sides and flanged for outdoor installation from any side or penetration of water tanks or similar.
7. Cable Supports for Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug for non-armored electrical cables in riser conduits. Plugs have number and size of conductor gripping holes as required to suit individual risers. Body constructed of malleable-iron casting with hot-dip galvanized finish.
8. Expansion Anchors: Carbon-steel wedge or sleeve type.
9. Toggle Bolts: All-steel springhead type.

B. ELECTRICAL IDENTIFICATION

1. Identification Devices: A single type of identification product for each application category. Use colors prescribed by these Specifications.
2. Raceway and Cable Labels: Minimum size of letters for legend and minimum length of color field for each raceway and cable size to meet IEC Standards.

    a) Type: Pre-tensioned, wraparound plastic sleeves. Flexible, preprinted, color-coded, acrylic band sized to suit the diameter of the item it identifies.
    b) Type: Pre-printed, flexible, self-adhesive, vinyl. Legend is over-laminated with a clear, weather- and chemical-resistant coating.
    c) Color: Black letters on orange background.
    d) Legend: Indicates voltage.

3. Colored Adhesive Marking Tape for Raceways, Wires, and Cables: Self-adhesive vinyl tape, not less than 25 mm wide by 0.08 mm thick.
4. Underground Warning Tape: Permanent, bright-colored, continuous-printed, vinyl tape with the following features:

    a) Not less than 150 mm wide by 0.102 mm thick.
    b) Compounded for permanent direct-burial service.
    c) Embedded continuous metallic strip or core.
    d) Printed legend that indicates type of underground line.

© Copyright protected

5. Tape Markers for Wire: Vinyl or vinyl-cloth, self-adhesive, wraparound type with preprinted numbers and letters.
6. Equipment Nameplates: Non-corroding, robust metal, inscribed in English and Portuguese, and firmly fixed to equipment at factory. Nameplates shall indicate name and address of manufacturer, model, serial number, basic characteristics and ratings of equipment and shall include elementary diagrams etc., all in accordance with the Standards. Equipment shall also be further identified after location at site, indicating the nomenclature number as per approval. As a general practice, the identification labels shall be suitably located on adjoining surface or on separate support and not on the electrical device which could be removed and replaced.
7. Color-Coding Cable Ties: Nylon, self-locking type. Colors to suit coding scheme.
8. Engraved-Plastic Labels, Signs, and Instruction Plates: Engraving stock, melamine plastic laminate punched or drilled for mechanical fasteners 1.6-mm minimum thickness for signs up to 129 sq. cm and 3.2-mm minimum thickness for larger sizes. Engraved legend in black letters on white background.
9. Interior Warning and Caution Signs: Preprinted, aluminum, baked-enamel-finish signs, punched or drilled for mechanical fasteners, with colors, legend, and size appropriate to the application.
10. Exterior Warning and Caution Signs: Weather-resistant, non-fading, preprinted, cellulose-acetate butyrate signs with 1-mm, galvanized-steel backing, with colors, legend, and size appropriate to the application. 6-mm grommets in corners for mounting.
11. Fasteners for Nameplates and Signs: Self-tapping, stainless steel screws or No. 10/32 stainless-steel machine screws with nuts and flat and lock washers.

C. COVERS FOR TRENCHES

1. Covers in electrical rooms and the like, unless otherwise specified or shown on the Drawings, shall be flanged checkered steel plates with angle or channel- section frames, suitably reinforced to support anticipated loads, and finished with zinc chromate primer and two coats gray enamel.

D. BRACKETS, SUPPORTS, RAILS AND TRACKS

1. Brackets, supports, rails and tracks for supporting electrical installations shall be galvanized steel, fixed with expansion bolts of approved size and material. Plastic inserts and lead anchors are not acceptable unless approved for specific light duty installations.
2. Covers shall be suitably dimensioned and matched to provide perfect level surface with flush-mounted lifting handles. Cut edges of trench covers shall be provided with neoprene trims to avoid sharp edges. Cable trench covers shall be supported with additional members at wide spaces.
3. All supports used in external locations, cable trenches and manholes shall be provided with an additional coat of U.V resistant paint, of a color to Engineer’s approval.
4. All fixing hardware used in non-air-conditioned spaces, shall be made of non-corrosive material.

E. CONCRETE BASES

1. Concrete Forms and Reinforcement Materials: As specified in Division E Section " Accessories Cast Into In Situ Concrete."
2. Equipment Foundations and Bases: Reinforced concrete, as approved by Engineer after submission of design calculations. Dimensions, levels and surface finishes shall be suitable for equipment installed, as shown on the Drawings or in accordance with approved shop and construction drawings.
3. Alternatively and where concrete bases are not possible, equipment can be anchored to steel-channel sills 100 mm high (min and as necessary), arranged and sized according to manufacturer's written instructions. Attach by tack welding or bolting. Level and grout sills flush with equipment mounting surface.

F. EQUIPMENT FOR ELECTRICITY METERING BY EMPLOYER

1. Meter: Electronic kilowatt-hour measuring to record electricity used.
2. Meter: Electronic kilowatt-hour/demand measuring to record electricity used and highest peak demand over a time period according to electric utility. Meter is designed for use on the type and rating of circuit indicated for its application.

© Copyright protected

a) Kilowatt-Hour Display: Digital liquid crystal.
b) Kilowatt-Demand Display: Digital, liquid crystal type to register highest peak demand.
c) Enclosure to have hasp for padlocking or sealing.
d) Memory Backup: Self-contained to maintain memory throughout power outages of 72 hours, minimum.
e) Sensors: Current-sensing type, with current or voltage output, selected for optimum range and accuracy for the ratings of the circuits indicated for this application.

1) Type: Split core.

G. ANTI-CONDENSATION HEATERS AND VENTILATORS

1. Any major items of electrical equipment which are liable to suffer or be affected in the long term, from internal condensation due to atmospheric or load variations shall be equipped with heating devices suitable for electrical operation at 400 V A.C 50 Hz, single phase of sufficient capacity to raise the internal ambient temperature by 5 deg. C.
2. A humidistat shall be included in the heater circuit. The protected electrical apparatus shall be designed such that the maximum permitted rise in temperature is not exceeded if the heaters are energized while the apparatus is in operation. Where fitted, a suitable terminal box and control switch, with indicating lamp shall be provided and mounted in a convenient accessible position.
3. All such equipment, whether fitted with a heating device or not, shall be provided with suitable drainage and shall be free from pockets in which moisture can collect.

H. ELECTRICAL CONTROL LOCATIONS

1. Equipment may be electrically controlled from a number of different control points as specified in the appropriate sections of the Specification. The control positions shall be designated as follows:

a) Local Control: Located within or adjacent to the item of plant to facilitate maintenance, inspection and emergency operation.
b) Remote Control: Located at a substation control room where specified items of Plant are monitored and controlled by direct wire connection.
c) Supervisory Control: Located at a System Control Centre where principal items of plant at a number of substations are remotely controlled via a telecontrol system.

I. TOUCHUP PAINT

1. For Equipment: Equipment manufacturer's paint selected to match installed equipment finish.
2. Galvanized Surfaces: Zinc-rich paint recommended by item manufacturer.

310.000 QUALITY MANAGEMENT

310.010 QUALITY ASSURANCE

A. Comply with related Standards, specified therein.

B. Installations shall be carried out by qualified personnel.

310.020 DELIVERY, STORAGE AND HANDLING

A. Install equipment only in dust-free environment and maintain the condition with protective covering as necessary. If air-conditioning is required, ensure it is available by installation time. In general, ensure that locations are complete and ready to receive equipment.

B. Ensure that rooms where equipment are installed are provided with lockable doors.

310.030 WARRANTY

A. Where required by the Specification, provide a warranty, signed by the manufacturer (including his agreement to replace promptly, defective equipment or parts thereof, as instructed by the Engineer)

© Copyright protected

covering materials and workmanship for the period stated in the Specification, starting at substantial completion. Assign the benefits of such warranty to the Employer.

310.040 SPARE PARTS AND EXTRA MATERIAL

A. Not later than the date of Substantial Completion, provide spare parts required by the Specification, together with suitable means of identifying, storing and securing same.

320.000 SUBMITTALS

A. Generally: Submit for approval, manufacturers' technical literature, shop and construction drawings and other information required by the Specification, before ordering equipment or materials and before executing any related work on site.

B. Product Data: Submit for approval detailed product data such as model no., all relevant ratings, country of manufacture, interface details as necessary, covers and supports.

C. Calculations: Submit for approval the manufacturer/supplier calculations for the following systems, prior to ordering/manufacturing the material:

1. Indoor and outdoor lighting distribution, with necessary supporting documents and photometric data of the lighting fixtures proposed and approved by the Contractor.
2. Circuit breakers selectivity and discrimination calculation study for a full selective and discriminated distribution scheme.
3. Voltage drop and short circuit calculations after verification of cable and breaker sizes.
4. Generators sizing calculations.
5. Power factor correction capacitors sizing based on the final approved loads.
6. Battery bank calculations to fulfill the specification requirements provided for the specific equipment.
7. Rating / derating calculations for the specified equipment.
8. Lightning risk assessment and energy coordination studies for surge protection.
9. Harmonic analysis.
10. Earthing.
11. Relay settings.
12. Design calculations associated with communications and security systems engineering, power consumption and heat dissipation, link budget, fiber count, Quality of Service (QoS), redundancy, reliability and service availability.
13. Any required calculation necessary to define component/equipment sizes for the proper operation of the electrical and ELV systems, and to confirm compliance with specified Regulations and Standards.

D. Shop and Construction Drawings:

1. Dimensioned plans and sections or elevation layouts of electrical equipment, as applicable.
2. Shop and construction drawings must demonstrate that the design requirements are understood by indicating all equipment and material proposed to be supplied and installed and by detailing fabrication and installation methods proposed to be used. Shop and construction drawings shall clearly state the name and location of the work, the names of Engineer and Contractor, submission date, cross-references to the Drawings and Specification and the specific reference number, location, service and function of each item.
3. Shop and construction drawings shall be submitted at a scale of 1:50 for general layout plans, and 1:10, or 1:20 as approved by the Engineer for sections, details, elevations, congested layouts, etc. Drawings shall include but not be limited to the following:

    a) Details of electrical installations in conjunction with all trades concerned, showing sleeves and openings for passage through floor structure.
    b) Composite construction drawings fully dimensioned, in metric, showing locations of cables, conduits, bus ducts, shafts, mechanical and electrical equipment rooms, ceiling spaces and all other critical locations

© Copyright protected

c) Plans showing equipment layouts including all details pertaining to clearances, access, sleeves, electrical connections, location and elevation of pipes, ducts, conduits, etc.
d) Plans, sections and elevations of electrical spaces to illustrate compliance with Standards for allocation of spaces for maintenance, movement, installation, etc.

4. Single Line Diagrams: Detailed single line diagrams and control schematics clearly indicating all equipment ratings, frame sizes, cable sizes, nomenclature/identification number shall be submitted for the Engineer's approval. The SLD's shall include the MV network as applicable.
5. Field Test Reports: Indicate and interpret test results for compliance with performance requirements.
6. Electrical installation shall be fully rated for the power source and load characteristics as also for the fault conditions expected and protection selectively coordinated for full discrimination, considering the different manufacturers products used in the system.
7. Technical Literature: Include detailed manufacturers' specifications and original catalogues or catalogue cuts, characteristics, model number, application and operating criteria of all equipment and materials, together with other information necessary to satisfy Engineer that proposed equipment and systems are suitable and adequate.
8. List of Proposed Manufacturers: Of all equipment and materials, including all items for which choice of manufacturer is at own discretion, shall be submitted for approval.
9. Assembled Equipment: Any assembled equipment to be supplied for the project shall be assembled by the manufacturer or his authorized assembler. Submit the necessary documents to substantiate the above including the assembler staff training, quality control, etc. The Engineer reserves the right to reject any local assembler if the information submitted is not sufficient. The Engineer's rejection in that respect is final and not subject to discussion.
10. Test Certificates and Reports: Submit manufacturer's type and routine test certificates and reports for equipment and devices. Complete test results shall be submitted in clearly identified and organised booklets, indicating item of equipment, make, model, type, date of tests, type of tests, descriptions and procedures. Include in the test reports the Quality Assurance Certification, the standards to which the equipment comply, and the standards to which the equipment was tested.
11. Factory Testing: Locally manufactured/assembled equipment shall comply with the relevant standards recommendations and shall be witnessed by Engineer, where required in the relevant Specifications Section. If the manufacturer's test certificates/tests are not complying with the standards, then independent laboratory tests shall be carried out on equipment in accordance with the Specification and the Standards, and as required by Engineer. The Engineer's requirements in that respect are final and not subject to discussion.
12. Factory Witness testing: for imported equipment, where specified in the relevant specification sections of the various electrical materials and equipment, is to be witnessed by the Engineer. Selection of equipment for witness test is to be randomly carried out by the Engineer and is to cover all ratings/types to be delivered. Witness test is to include complete routine and function testing along with any other special/ type tests if specified, on all units to be witnessed. Test procedure and program are to be submitted for approval prior to test conduction. Factory witness test is to include for business class air tickets, five stars Hotel full accommodation, transportation and all test expenses for the number of engineers/client representatives as specified in the relevant section.
13. Spare Parts Schedules: Submit with the Tender itemised schedules of spare parts to be provided, as required by the Specification, and state against each item the manufacturer's unit price including packaging and delivery to site.
14. Tools And Instruments Schedules: Submit with the Tender itemised schedules of tools and instruments to be provided, as required by the Specification, and state against each item the manufacturer's unit price including packaging and delivery to site.
15. Labeling Schedule: Submit for approval, prior to installation, a schedule of all equipment and devices to be labeled and the suggested details, lettering, position and fixing methods of each label indicating its application.
16. Samples: Submit samples of all equipment and materials for approval. Major items of equipment for which samples cannot be submitted shall be demonstrated in existing installations or by manufacturer's information, test certificates and reports.
17. As-Built (Record) Drawings: Prior to Substantial Completion, submit Record Drawings certified by the Engineer on installed electrical systems, in accordance with requirements of the

Specification, Division 01. The As-Built (Record) Drawings, where applicable, shall include data on existing works. The As-Built Records shall be made progressively as the Work proceeds.

18. Submit CVs of electrical Engineers, electrical personnel, and quality personnel, for Engineer's review and approval.

330.000 EXECUTION

330.010 ELECTRICAL EQUIPMENT INSTALLATION

A. Installations Generally:

1. Carry out Electrical Work in accordance with the Drawings, Specification and Regulations, ensuring compliance with design and performance requirements, to provide safe and protected systems with equipment readily accessible for operation, maintenance and repair.
2. Installations shall be complete, ready for operation and fully integrated and coordinated with all other work.
3. Provide accessories necessary to complete the installations, of the types specified or recommended for the purpose by the manufacturer of the equipment or accessories.

B. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange and install components and equipment to provide the maximum possible headroom.

C. Materials and Components: Install level, plumb, and parallel and perpendicular to other building systems and components, unless otherwise indicated.

D. Equipment: Install to facilitate service, maintenance, and repair or replacement of components. Connect for ease of disconnecting, with minimum interference with other installations.

E. Right of Way: Give to raceways and piping systems installed at a required slope. Generally, all cabling, power conductor routing shall be located above any piping, unless specifically approved otherwise.

330.020 ELECTRICAL SUPPORTING DEVICE APPLICATION

A. Damp Locations and Outdoors: Hot-dip galvanized materials or nonmetallic, U-channel system components.

B. Dry Locations: Steel materials.
